Keys Assumptions for EmFAC-HK

1. General

In accordance with EIA Study Brief, the applicant shall assess the expected air pollutant impacts at the identified ASRs based an assumed reasonably worst-case scenario under the normal operating conditions. The selected assessment year of should represent the highest emission scenario, given the combination of emission factors and traffic flow for the selected year.

EmFAC-HK is used to calculate the vehicular tailpipe emission. The latest EmFAC-HK model v2.6 has been employed. This appendix has summarized the key model assumptions adopted in all the model scenarios.

2. Assessment Year

Construction Phase

According to Section 5(iii) of Appendix A of the EIA Study Brief of the Project, the applicant shall calculate the overall cumulative air quality impact at ASRs identified and compare the results against the criteria set out in Section 1 of Annex 4 in the TM.

As stipulated in the **Section 4.6** of the EIA Report, the highest dust emission is found in Year 2017. Therefore, one scenario (i.e. Year 2017) has been carried out using the EmFAC-HK model to determine the vehicular emission factors for construction phase assessment.

Operational Phase

According to Section 4(i) of Appendix A of the EIA Study Brief for the Project, the applicant shall assess the expected air pollutant impacts at the identified ASRs based an assumed reasonably worst-case scenario under the normal operating conditions. The highest emission strength from road within the next 15 years upon full population intake year was used for assessing the air pollutant impacts from the future road traffic. The selected assessment year of should represent the highest emission scenario, given the combination of emission factors and traffic flow for the selected year.

Based on the implementation schedule, the ARQ will be implemented in 2 stages, with completion of the 1st stage for operation in Year 2022 and the 2nd stage for operation in Year 2026. The following sensitivity scenarios have been carried out using the EmFAC-HK model to determine the worst assessment years given the combination of vehicular emission factors and the projected traffic flow:

Scenario 1 – Year 2022 (i.e. Completion of the 1st stage development)

Scenario 2 – Year 2025 (i.e. 1 year before completion of the 2nd stage development)

Scenario 3 – Year 2026 (i.e. Completion of the 2nd stage development)

Scenario 4 – Year 2027 (i.e. 1 year after completion of the 2nd stage development)

Scenario 5 – Year 2031 (i.e. 5 years after operation of 2nd stage development)

Scenario 6 – Year 2036 (i.e. 10 years after operation of 2nd stage development)

Scenario 7 – Year 2041 (i.e. 15 years after operation of 2nd stage development)

3. Model Year

The calculation of EMFAC-HK includes vehicle model for 45 years. The starting model year is 45 years preceding the assessment year and the final model year is the same as the assessment year. The following table summarises the starting and final model years for assessment year in EMFAC-HK:

Table 1: Starting and final model year in EMFAC-HK

Phase	Scenario Year	Starting Model Year	Final Model Year
Construction Phase	2017	1972	2017
Operational Phase	2022	1977	2022
	2025	1980	2025
	2026	1981	2026
	2027	1982	2027
	2031	1986	2031
	2036	1991	2036
	2041	1995 [1]	2040 [1]

Note:
[1] Due to the limitation of the EMFAC model, the calendar year could be only be Year 2040. Hence, the final model year of 2040 is assumed as a worst-case scenario, and as a result the starting model year would be 1995 accordingly.

4. Road Groupings

For operational phase, the worst assessment year has been determined based on the highest total vehicular emission scenario. The emission refers to the combination of the following vehicular emissions:

- Vehicular emission from the Project's proposed new roads; and
- Vehicular emission from the existing and planned road networks within the study area.

The segment ID and road grouping of the road networks of both construction and operational phases covered in EmFAC-HK model are shown in **Annex 1** and **Annex 2**, respectively. It should be noted that some roads outside 500m are also included for continuity.

EMFAC-HK models have been separately run for different road categories of similar nature and driving pattern. Roads of similar nature and driving patterns are grouped into categories as shown in the table below regards to the following characteristics.

- Highway with different road design speed;
- With or without cold start trips. It is assumed that there are no cold starts on expressway, trunk road, primary distributors and district distributors.

Table 2: Road categories to be assumed in EMFAC-HK

Group	Roads	
Group 1	Roads with design speed of 70km/hr and without cold start	• Design speed of 70kph • No cold start trips
Group 2	Roads with design speed of 70km/hr and with cold start	• Design speed of 70kph • With cold start trips
Group 3	Roads with design speed of 50km/hr and with cold start	• Design speed of 50kph • With cold start trips
Group 4	Roads with design speed of 50km/hr and without cold start	• Design speed of 50kph • No cold start trips

5. Vehicle Emission Standard Implementation Programme and Technology Fraction

All motor vehicles seeking first registration in Hong Kong must comply with the requirements of the Air Pollution Control (Vehicle Design Standards) (Emission) Regulations. Since there is no program on policy review, it is assumed that the first registration policy is still applicable for this assessment.

The latest implementation programme of the vehicle emission standards in Hong Kong as published and available in EPD's website will be adopted in the assessment. The exhaust technology fractions will be made reference to the latest 2010 licensed vehicle by age and technology group fractions for various vehicle classes that are available in EPD's website (http://www.epd.gov.hk/epd/english/environmentinhk/air/guide_ref/emfac.html). It is assumed that the fuel properties will also be in line with the implementation of these standards.

The latest implementation programme and technology fractions adopted in the EMFAC-HK are given in **Annex 3**.

6. Vehicle Population

In EMFAC-HK v2.6, a vehicle population forecast function has been incorporated in the model with 2010 as its base year. The Year 2010 HK licensed vehicle population data are available in EPD's website (http://www.epd.gov.hk/epd/english/ environmentinhk/air/guide_ref/emfac.html) and given in **Annex 4**. The default vehicle populations forecast in EMFAC-HK v2.6 have been used for assessment purpose in this Project.

7. Vehicle Accrual

There is no project specific information on accrual data and hence the default "Vehicle Accrual" is therefore adopted assuming the same pattern for the study region.

8. Vehicle Mile Travelled (VMT)

VMT is calculated by multiplying the number of vehicles by the length of road travelled in the study area. The peak traffic flow and the daily traffic profile have been provided by the Traffic engineer. Traffic Impact Assessment has been submitted to Transport Department (TD) for agreement on the methodology of traffic forecast for the future years. The vehicle classification in the traffic model is not identified as exhaustive as the classes required in EmFAC-HK. The vehicle classes from the traffic model was regrouped into the 16 vehicle classes in EMFAC-HK based on vehicle composition to be derived from the latest available Year 2010 HK vehicle population. The regrouping of vehicle composition is shown in the tables below.

Table 3: Regrouping of 10 vehicle classes into 16 vehicle classes in EmFAC-HK

Vehicle class from traffic forecast	Vehicle class in EmFAC-HK
Motor Cycles (MC)	Motor Cycles (MC)
Private Cars (PC)	Private Cars (PC)
Taxi	Taxi
Private Light Buses (PrLB)	Private Light Buses (>3.5t) (PV4)
	Private Light Buses (>3.5t) (PV5)
Public Light Buses (PLB)	Public Light Buses (PLB)
Light Goods Vehicles (LGV)	Light Goods Vehicles (<=2.5t) (LGV3)
	Light Goods Vehicles (2.5-3.5t) (LGV4)
	Light Goods Vehicles (3.5-5.5t) (LGV6)
Medium & Heavy Goods Vehicles (M&HGV)	Medium & Heavy Goods Vehicles (5.5-15t) (HGB7)
	Medium & Heavy Goods Vehicles (>=15t) (HGB8)
Non-franchised Buses/Coach (NFB)	Non-franchised Buses (<6.4t) (NFB6)
	Non-franchised Buses (6.4-15t) (NFB7)
	Non-franchised Buses (>15t) (NFB8)
Single Deck Franchised Buses (FBSD)	Single Deck Franchised Buses (FBSD)
Double Deck Franchised Buses (FBDD)	Double Deck Franchised Buses (FBDD)

Based on the latest available Year 2010 HK vehicle population, the proposed vehicle composition percentage used for splitting the 10 vehicle classes into 16 vehicle types is calculated in the table below.

Table 4: Breakdown percentage of splitting the 10 vehicle classes into 16 classed defined in EmFAC-HK

EMFAC vehicle class	Fuel type	MC	Car	Taxi	PrLB	PLB	LGV	M&HGV	NFB	FBSD	FBDD

Total		100.00%	100.00%	100.00%	100.00%	100.00%	100.00%	100.00%	100.00%	100.00%	100.00%

Taking PC-petrol as an example, it can be seen from the table above that 99.54% of PC are PC– petrol. When calculating the VMT for PC-petrol, the following formula shall be used.

VMT for PC-petrol = 99.54% x VMT for PC

The traffic flow data provided by traffic model is the peak hour traffic (i.e. 08:00-09:00). The VMT for each class for each type of fuel at each hour is estimated based on the respective daily profile. Due to the limitation of traffic model, it is not possible to forecast the future daily profile. The average daily profiles for different road types, i.e. Urban Truck (UT), Primary Distributor (PD), District Distributor (DD), Local Distributor (LD) and Rural Road (RR) have been based on the Traffic Impact Assessment. Since the profile could not be identified exhaustively for each vehicle class as required in EMFAC-HK, the same daily profile is assumed to all vehicle classes. The daily traffic profile for different roads is presented in **Annex 5**. The hourly VMT could be estimated using the following formula:

$$VMT_{(Hour\ 1)} = VMT_{(08:00\ to\ 09:00)} \times \%\ of\ VMT\ for\ Hour\ 1\ /\ \%\ of\ VMT\ (08:00\ to\ 09:00)$$

The VMTs are calculated for each road link for the same road category. The sum of the VMTs is the input of the EMFAC-HK. **Annexe 6** presents the calculated VMT for different road categories for the in different EmFAC assessment years.

9. Trips

The trip in EMFAC-HK is referred to the cold start trip. The number of trip is dependent on vehicle population. The default value of trip in the EMFAC-HK model is the number of trips within HKSAR given a defined vehicle population. Since there is no project-specific vehicle population data, it is proposed to estimate the number of trips within the assessment area with respect to the project-specific Vehicle Kilometres Travelled (VKT) given the assumption that the VKT is related to vehicle population.

It is assumed that there are no cold start on expressway, trunk roads, primary distributors and district distributors and hence the number of trip is zero for all vehicle classes for all hours of the day. For local and rural roads within the assessment area, the number of trips has been estimated by scaling the number of trip for vehicle class within the entire HKSAR using the ratio of VKT for local and rural roads within the assessment area to VKT for local and rural roads within the entire HKSAR.

Trip for local and rural roads within assessment area

$$= \boldsymbol{Trip}\ for\ local\ and\ rural\ roads\ within\ HKSAR \times \frac{VKT\ for\ local\ and\ rural\ roads\ within\ assessment\ area}{VKT\ for\ local\ and\ rural\ roads\ within\ HKSAR}$$

Note: For particular vehicle class and particular hour

The estimation of VKT for local and rural road within SAR is given in **Annex 7**. **Annex 8** presents the estimated trips for local and rural roads for all eight scenarios.

10. Speed Fraction

The speed fraction is defined as the percentage of the VMT at each speed bin defined in the EMFAC-HK for each vehicle classes at each hour. The actual speed will be calculated based on the Volume/Capacity (V/C) ratio and provided by the Traffic Engineer. It is assumed that all vehicle classes will have the same speed profile except for medium goods vehicles, heavy goods vehicles, buses and PLB.

In accordance with the Road Traffic Ordinance, for any road with design speed limit of 70 kph or above, the maximum speed limit for medium goods vehicles, heavy goods vehicles and buses shall be limited to 70 kph. For input to EMFAC-HK, the fractions for speed bins > 70 kph for HGV(7), HGV(8), all NFB, FBSD and FBDD will be combined into the corresponding speed bin 68.8 – 70.4 kph (i.e. limited to 70 kph). Similar to PLB, the maximum speed limit shall be limited to 80 kph. The fractions for speed bins > 80 kph for PLB will be combined into the corresponding speed bin 78.4 – 80 kph (i.e. limited to 80 kph).

The speed is the space average speed which is determined for each road using the following formula:

Average speed for road A = Total distance for road A / Total travel time for road A

where Road A might be divided into different road segments A1, A2, A3, etc and so

Total distance for road A = Distance for road segment A1 + Distance for road segment A2 + Distance for road segment A3 + ….

Total travel time for road A = Distance for road segment A1 / Speed for road segment A1 + Distance for road segment A2 / Speed for road segment A2 + Distance for road segment A3 / Speed for road segment A3 ….

The VMTs and average speed for different roads are determined for each vehicle class for each hour. The speed fractions for each speed bins could then be calculated. Below shows a hypothetical example:

Assuming there are 3 roads in the category with different road segments

Road	Road Segments	Road Length (km)	VMT at hour 0800-0900	Speed (kph)	Average speed (kph)
A	A1	139.1	2.5	44.0	44.5 (i.e. speed bin 43.2—44.8)
	A1	77.6	0.8	44.7	
	A1	58.1	0.6	44.7	
B	B1	59.7	8.5	33.4	33.4 (i.e. speed bin 32—33.6)
	B2	85.6	12.2	33.4	
C	C1	51.7	16.7	41.2	41.2 (i.e. speed bin 40—41.6)
	C2	30.1	9.7	41.2	

Based on the calculation above the speed fraction to be input to EmFAC-HK for this hour for this vehicle type is:

Speed Bin (kph)	VMT at Hour 0800-0900	Fraction (%)
0 - 1.6	0	0
1.6 - 3.2	0	0
3.2 - 4.8	0	0
	:	
30.4 - 32	0	0
32 - 33.6	20.7 (i.e. 8.5 + 12.2)	40.6 (i.e. 20.7/51.0 x 100%)
33.6 - 35.2	0	0
35.2 - 36.8	0	0
36.8 - 38.4	0	0
38.4 - 40	0	0
40 - 41.6	26.4 (i.e. 16.7 + 9.7)	51.8 (i.e. 26.4/51.0 x 100%)
41.6 - 43.2	0	0
43.2 - 44.8	3.9 (i.e. 2.5+0.8+0.6)	7.6 (i.e. 3.9/51.0 x 100%)
	:	
139.2 - 140.8	0	0
140.8 - 142.4	0	0
142.4 - 144	0	0
Total	51.0	100.0

Annex 9 presents the speed fractions for different road categories for different assessment years.

11. Temperature and Humidity Profile

It is not practical to forecast the future meteorological data. Using a recent and representative (>90% validity) set of data is the reasonable and practicable assumption and approach for purpose of assessment. As no temperature and humidity data is available from the Kai Tak Weather Station (i.e. the nearest weather station). The temperature and humidity data of Year 2011 from King's Park Weather Station is adopted.

Annex 10 presents the calculated hourly temperature and humidity.

12. Vehicular Emission Factor

The EmFAC-HK calculates the hourly vehicular emission for each road category. The hourly emission rates for each vehicle class (in gram per mile per vehicle) are obtained by dividing the hourly emission calculated in the EmFAC-HK by the VKT for the respective hour.

Annex 11 presents the hourly NO_x, RSP and FSP emission rates for each vehicle class for scenario years.

13. Determination of Assessment Year (Operational Phase)

In order to determine the worst assessment year, the total vehicular emissions based on the calculated emission factors and the projected traffic flow in the assessment years are calculated and are summarised in the table below. As shown in **Table 5 – Table 7**, the highest vehicular emissions are found in Year 2026. Hence, Year 2026 is selected as the worst assessment year for the operation air quality assessment.

Table 5: Summary of Annual NOx emissions

Assessment Year	Daily Emission (g/day)				Daily Total (g/day)	Annual Total (kg/year)
	Road Group 1	Road Group 2	Road Group 3	Road Group 4		
2022	61,233	4,830	42,043	90,591	198,697	72,525
2025	70,831	7,033	51,867	105,983	235,714	86,036
2026	80,252	8,012	61,236	120,668	270,169	98,612

		>1305			
	> 3.5 t	--	1.6.2017	1.6.2017	1.6.2017
Taxi	--	--	1.1.2016	1.1.2016	NA
Motorcycle					

* For diesel passenger cars,
HK adopted California Tier I Standards in April 1998.
HK adopted California LEV 1Standards in January 2001.
HK adopted California LEV 2 Standards in January 2006
HK adopted California LEV 2 Standards or Euro V Standard for passenger car with positive ignition engine in June 2012
California LEV 3 Standards or Euro VI Standard for passenger car with positive ignition engine tentatively in Jan 2016

NA = Not applicable

Note : *While Hong Kong adopts EU's emission standards and implementation timetable, US or Japan standards of similar stringency are accepted as equivalent standards where*

#1 For ULP Private Cars registered on or after 1 January 1992 are equipped with catalytic converters.

#2 Petrol private cars are divided into two categories (max. mass<=2.5t and max. mass >2.5t) with different implementation dates and different emission requirements. However, very few private cars are under the category of max. mass >2.5 t.

#3 Different implementation dates for Euro III and IV goods vehicles with GVW <=1.7 tonne but the total number for goods vehicles <= 1.7tonne is very small (25 for petrol as of end 2010)

#4 Different implementation dates for Euro II diesel goods vehicles and buses with GVW of 3.5-4 tonne but the total number of diesel goods vehicles and buses in this range is very small (16 as of end 2010)

#5 Different implementation dates for Euro III & IV light buses with GVW <=1.7 tonne and petrol pre-Euro light buses 1.7-2.5t, but no light buses of that weight as of end 2010.

#6 All new taxis supplied to the local market are Euro I models from 1 January 1996.

#7 The implementation dates for Euro VI emission standards are for the purpose of assessment only.

#8 All new motorcycle models are required to comply with Euro III emission standards on this date. From 1 January 2009, all motorcycles are required to meet Euro III emission standards.

Annex 6

Vehicle Miles Travelled (VMT)

Project: ARQ
Scenario:
Title: Legend

Name	Description
RDID	ID for a individual road
SEGID	ID for individual segment of a road
RDLEN	Length of road
PCP	Private Cars(Petrol)
PCD	Private Cars(Diesel)
PCL	Private Cars(LPG)
TAXIP	Taxi(Petrol)
TAXID	Taxi(Diesel)
TAXIL	Taxi(LPG)
LGV3P	Light Goods Vehicles(<=2.5t)(Petrol)
LGV3D	Light Goods Vehicles(<=2.5t)(Diesel)
LGV3L	Light Goods Vehicles(<=2.5t)(LPG)
LGV4P	Light Goods Vehicles(2.5-3.5t)(Petrol)
LGV4D	Light Goods Vehicles(2.5-3.5t)(Diesel)
LGV4L	Light Goods Vehicles(2.5-3.5t)(LPG)
LGV6P	Light Goods Vehicles(3.5-5.5t)(Petrol)
LGV6D	Light Goods Vehicles(3.5-5.5t)(Diesel)
LGV6L	Light Goods Vehicles(3.5-5.5t)(LPG)
HGV7P	Medium & Heavy Goods Vehicles(5.5-15t)(Petrol)
HGV7D	Medium & Heavy Goods Vehicles(5.5-15t)(Diesel)
HGV7L	Medium & Heavy Goods Vehicles(5.5-15t)(LPG)
HGV8P	Medium & Heavy Goods Vehicles(>=15t)(Petrol)
HGV8D	Medium & Heavy Goods Vehicles(>=15t)(Diesel)
HGV8L	Medium & Heavy Goods Vehicles(>=15t)(LPG)
PLBP	Public Light Buses(Petrol)
PLBD	Public Light Buses(Diesel)
PLBL	Public Light Buses(LPG)
PV4P	Private Light Buses(<=3.5t)(Petrol)
PV4D	Private Light Buses(<=3.5t)(Diesel)
PV4L	Private Light Buses(<=3.5t)(LPG)
PV5P	Private Light Buses(>3.5t)(Petrol)
PV5D	Private Light Buses(>3.5t)(Diesel)
PV5L	Private Light Buses(>3.5t)(LPG)
NFB6P	Non-franchised Buses(<6.4t)(Petrol)
NFB6D	Non-franchised Buses(<6.4t)(Diesel)
NFB6L	Non-franchised Buses(<6.4t)(LPG)
NFB7P	Non-franchised Buses(6.4-15t)(Petrol)
NFB7D	Non-franchised Buses(6.4-15t)(Diesel)
NFB7L	Non-franchised Buses(6.4-15t)(LPG)
NFB8P	Non-franchised Buses(>15t)(Petrol)
NFB8D	Non-franchised Buses(>15t)(Diesel)
NFB8L	Non-franchised Buses(>15t)(LPG)
FBSDP	Single Deck Franchised Buses(Petrol)
FBSDD	Single Deck Franchised Buses(Diesel)
FBSDL	Single Deck Franchised Buses(LPG)
FBDDP	Double Deck Franchised Buses(Petrol)
FBDDD	Double Deck Franchised Buses(Diesel)
FBDDL	Double Deck Franchised Buses(LPG)
MCP	Motor Cycles(Petrol)
MCD	Motor Cycles(Diesel)
MCL	Motor Cycles(LPG)
EX	Expressway
UT	Urban Trunk
PD	Primary Distributor
DD	District Distributor
LD	Local Distributor
RR	Rural Road

Annex 7

Estimation of VKT for Local
and Rural Roads within HKSAR

Calculation of % of Daily vehicle-km for local and rural roads in Hong Kong

	Average Daily Vehicle-km in Year 2010		
Region	**Major road network**	**Minor road network**	**All road**
HK Island	4641009	1113552	5754561
Kowloon	7489516	961791	8451307
New Territories	16609652	2099719	18709371
Total	28740177	4175062	32915239
%	87%	**13%**	100.0%

Assumed % of daily vehicle-km for local and rural roads in Hong Kong = 13%

Note:

1) Average Daily Vehicle-km in 2010 are extracted from The Annual Traffic Census (ATC) 2010 published by Transport Department

2) According to ATC 2010, almost all (>99.7%) of the trafficable lengths of minor road networks in Hong Kong belong to local distributors or rual roads with possible cold start trips, whereas the remaining minority <1% of the minor road networks belong to district distributors with stopping/parking restrictions and hence no cold start trips. For major road networks in Hong Kong, a small portion (about 26%) of the trafficable length belong to local distributors or rural roads with possible cold start trips, whereas the remaining large portion (about 74%) belong to expressways, trunk roads, primary or district distributors, all of which have stopping/parking restrictions and hence no cold start trips. Therefore, the % of daily vehicle-km for local and rural roads in Hong Kong can be approximated by the % of daily vehicle-km for minor road networks in Hong Kong, which would be conservative estimates for the number of trips.

Annex 8

Trips

Project: ARQ
Scenario: Group 2 - Year 2017
Title: Trip for Input to EmFAC
