### **EXECUTIVE SUMMARY**

This is the eighth monthly Environmental Monitoring and Audit (EM&A) Report for the Drainage Services Department Contract No. DE/2005/03 entitled "Supply and Installation of Electrical and Mechanical Equipment for Expansion of Shek Wu Hui Sewage Treatment Works". This report contains the results of the environmental monitoring for verification of mitigation implementation conducted by the Environmental Team (ET) of the E&M Contractor as required in the contract.

For the environmental monitoring activities, Action and Limit (A/L) Levels are defined levels of impact recorded which represent levels at which a prescribed response is required. Action Limit is an indication of a deteriorating ambient environment for which appropriate remedial actions are likely to be necessary to prevent environmental quality from falling outside the Limit Levels. If these are exceeded, construction works should not be preceded without appropriate remedial action, including critical review of the methods. Baseline monitoring was conducted by the Civil Contractor in December 2005 (Report No. 01284R0012).

The work activities this month consisted of testing and commissioning of E&M equipment at pH Control System. Note that the pH Control System was handed over to DSD for operation on 8 January 2007.

Site inspections by an Environmental Team were carried out on 2, 8, 9, 16, 24 and 29 of January 2007 with the representatives of the Engineer.

No deficiency was found during the site inspections for January 2007. Work activities and mitigation measures were in compliance with the environmental protection regulations, contract requirement and environmental permit.

The monthly EM&A meeting was held on 9 January 2007 with all of the parties (DSD, Civil and E&M contractors, ETs, and the IEC) involved.

There was no complaint received or notification of summons or successful prosecution during January 2007.

There was no reporting change during the reporting month.

The planned activities for February – April 2007 as regards E&M equipment are mainly to carry out 1) outstanding works for pH Control System and 2) modification work of scrapper for density current baffles at Final Sedimentation Tank Nos. 5, 7 and 8.

#### 1 Introduction

This is the eighth monthly Environmental Monitoring and Audit (EM&A) Report for the Drainage Services Department Contract No. DE/2005/03 entitled "Supply and Installation of Electrical and Mechanical Equipment for Expansion of Shek Wu Hui Sewage Treatment Works". The report was prepared by the Environmental Team, Kingsford Environmental (H.K.) Ltd., of the E&M Contractor, Biwater Man Lee Limited. This report is submitted to the Client, the Drainage Services Department, and her Independent Environmental Checker, CH2M HILL Hong Kong Limited, for the project. In addition, this report is to be submitted to EPD in accordance with the requirement of the environmental permit (EP218-2005) and EM&A manual of the project.

This report only presents the results of the environmental auditing of the project activities regarding the E&M equipment installation conducted in the month of January 2007. The auditing works include regular site inspections for verification of the mitigation measures implementation as recommended in the EM&A Manual and as detailed in the Project Profile for the project.

The contact information for the key personnel is shown in Appendix 1.

The job nature of the E&M contractor is mainly for installation of E&M equipment, all hand-held's breakers, bulldozer, concrete lorry mixer, dump truck and hand-held's poker, vibratory would not be used so that the impact from noise and dust would be low. Also, the distance to the nearest sensitive receivers is large. Therefore, the potential environmental impact imposed to the sensitive receivers would be low. Routine environmental monitoring would be considered when deficiency is found or complaint is received.

The sensitive receivers, locations of monitoring and control stations, action and limited levels and event/action plan are shown in Appendix 2.

#### 2 Work Activities during the Month

The work activities this month consisted of testing and commissioning of E&M equipment at pH Control System. Note that the pH Control System was handed over to DSD for operation on 8 January 2007.

The activities and dates of occurrence of each activity are summarized below in Table 1. The Construction Programme is shown in Appendix 3.

#### Table 1:Work Activities for January 2007

pH Control System	
Testing and Commissioning of E&M equipment	27 Nov '06 – 8 Jan '07

#### 3 Status of Environmental Protection

#### Air Quality

Appropriate mitigation measures for the activities are in place. Plastic covers with stakes/weights are readily available and used for covering of exposed material for control of dust. Water spray is available for dust suppression, if necessary.

#### Water Quality

The plastic covers for exposed soil, etc. are available for minimization of silt in the run-off water during rainstorms, if necessary. Note that wastewater generated from the off-site project office was collected in a storage tank and tanker-away regularly by a licensed collector.

Anti-mosquito preventive measures, e.g. regular removal of stagnant water (if possible) and/or spraying larvicide (if necessary) at any site area, are taken for mosquito control and prevention, particularly for control of Dengue Fever and Japanese Encephalitis diseases.

#### <u>Noise</u>

Plants with low noise emittance are preferred and are operated/maintained to reduce noise. In this reporting month, work was carried out during normal working hours (7am - 7pm Monday to Saturday) or otherwise specified in the contract. In the event of a schedule change such that construction work would be performed during the restricted hours (11pm - 7am and during general public holidays including Sundays), a Construction Noise Permit would be required.

#### Waste / Chemical Management

The construction waste materials are preferred to be removed promptly from the site. Recyclable hard inert C&D materials should be taken to a public filling area (Tuen Mun Area 38) whereas the non-inert C&D waste should be disposed of to NENT landfill at Ta Kwu Ling or other disposal site approved by the control authority. Note that the inert C&D materials should be reduced, reused and recycled if possible, before disposal. Any substance identified as chemical waste would be disposed of properly by a licensed collector. A trip ticket system for the disposal of C&D waste should be conducted as required by the Waste Management Plan. Rubbish bins are provided on-site for collecting general refuses as necessary. The general refuse would be removed regularly and disposed to landfills by a licensed collector. A proper record of each waste disposal, including the new bar-coded disposal delivery form, would be kept to verify proper handling and disposal.

The status of permits and licenses is summarized in Table 2.

#### Table 2: Status of Permits and Licenses

Description	Permit No.	Valid Period		Ref.	Status	
		From	То			
Environmental Permit	EP-218/2005	16/06/05	End of Project	PS1.39*	Granted	

\* Particular Specification of Contract No. DE/2005/03

The implementation status of mitigation measures from EM&A Manual is attached in Appendix 4.

#### 4 Site Inspections

For this month, site inspections by an ET technician were carried out on 2, 8, 9, 16, 24 and 29 of January 2007 with the representatives of the Engineer.

The site locations inspected were marked on a site layout plan and the location code was recorded on the checklist. The site layout plan is shown in Appendix 5.

The work activities this month consisted of testing and commissioning of E&M equipment at pH Control System. Note that the pH Control System was handed over to DSD for operation on 8 January 2007.

No deficiency was found during this month. Inspection checklists are annexed in Appendix 5. Whereas all of the environmental aspects were inspected in the work areas, the most applicable descriptions are addressed below.

#### <u>Air Quality</u>

No dusty material was found from the site areas or activities this month.

#### Water Quality

No accumulation of rainwater was observed in the site area. Note that the regular inspections and preventive measures for the mosquitoes are being conducted and recorded at least weekly by the Contractor.

#### <u>Noise</u>

During this month, the work activities and equipment used did not generate significant noise. In this reporting month, no work was carried out during general public holidays including Sundays.

#### Waste / Chemical Management

Refuse bins and waste storage/sorting area were provided for the collection of general refuse and sorting the C&D materials.

No packaging waste or construction waste was disposed of to landfill by the licensed waste collector this month.

The type and quantity of waste for final disposal during January 2007 is shown in Table 3. Note that a record of each disposal is being kept.

Table 3:	Type and Quantity of Waste Disposed of in January 200'	7

Types of Waste	Quantity
Inert C&D Material	Nil
Non-inert C&D Waste	Nil
Chemical Waste	Nil
General Refuse*	1320L

\* Included the site office

### 5 Summary of Deficiencies and Remedial Actions

There were no deficiencies noted from the site inspections of January 2007.

#### 6 Summary of Complaints and Remedial Actions

No complaints were received in January 2007. In the event of complaints, the procedure for handling of the complaints is detailed in the EM&A Manual.

#### 7 Summary of Summons and Prosecutions

No notification of summons and no prosecutions occurred in January 2007.

#### 8 Monthly Environmental Auditing for the Coming Months

The planned activities for the coming three months (February – April 2007) as regards E&M equipment are to carry out outstanding works for the following system/area:-

- pH control System
- Final Sedimentation Tank Nos. 5, 7 and 8

The anticipated environmental issues for February - April 2007 will be as follows:-

- pH control System
  - The anticipated environmental issues will be related to:-
    - the waste disposal from E&M equipment installation.
    - the stagnant water, as testing/ commissioning of equipment/system will be involved.
    - the chemical handling (if any) during the T&C period.
- Final Sedimentation Tank Nos. 5, 7 and 8
  - The anticipated environmental issues will be related to the waste disposal from the E&M equipment installation.

#### 9 Conclusions and Comments

The required weekly site inspections have been conducted. No deficiency was noted.

olfactory senses to detect any odour.

- 2.6.9 The observer should bring along a log book to record the findings. The log book should be kept in the plant office where it can be inspected when necessary. The findings should include the following:
  - the prevailing weather condition;
  - the wind direction;
  - location where odour is spotted;
  - possible source of odour;
  - perceived intensity of the odour; and
  - duration of odour.
- 2.6.10 The perceived intensity is to be divided into 5 levels which are ranked in the descending order as follows:
  - Extreme
  - Strong
  - Moderate
  - Slight
  - Not detectable

#### 2.7 <u>Compliance Assessment</u>

→ 2.7.1 Action and Limit (A/L) levels that provide an appropriate framework for the interpretation of monitoring results have to be agreed between ET, IEC, EPD and the Engineer before commencement of the air quality monitoring. The air quality monitoring data shall be checked against the agreed A/L levels. Recommended A/L levels are listed in Table 2.5.

Table 2.5 F	roposed Action and Limit Levels for Impact Monitoring
	in the stand when the stand the stand of the

Damager	//>	
Parameter	Action Level <sup>(1)</sup>	Limit Level
TSP	• $BL \le 200$ g m <sup>-3</sup> , $AL = (BL * 1.3 + LL)/2$	
(24 hour average)	• $BL > 200 \text{ g m}^{-3}$ , $AL = LL$	260 g m <sup>-3</sup>
TSP (1 hour average)	• BL $\leq 384$ g m <sup>-3</sup> , AL = (BL * 1.3 + LL)/2 • BL $> 384$ g m <sup>-3</sup> , AL = LL	500 g m <sup>-3</sup>
H <sub>2</sub> S (at ASRs only)	<ul> <li>BL ≤ 1.92 ppb, AL = (BL * 1.3 + LL)/2</li> <li>BL &gt; 1.92 ppb, AL = LL</li> </ul>	2.5 ppb
Incidence of odour complaints	Any incidence of odour complaint received through the Odour Complaint Register	Two or more complaints through the Odour Complaint Register within three months

(1) BL = Baseline level, AL = Action level, LL = Limit level.

### Event and Action Plan (EAP) for Air Quality

2.7.2 The EAP is based on the prescription of procedures and actions associated with the measurement of certain defined levels of air pollution recorded by the environmental monitoring process and the agreed A/L levels. In case TSP A/L level exceedances occur, the ET, the IEC, the Engineer and the Contractor shall observe the relevant actions of the respective EAP listed in Tables 2.6 whereas relevant sections in DSD shall be responsible for the implementation of the EAP as listed in Table 2.7 in the event of odour exceedance/complaint for construction and operational phase respectively.

#### Impact Monitoring for Construction Noise 5.6

- 5.6.1 Noise monitoring shall be carried out at all designated monitoring stations. The monitoring frequency shall depend on the scale of the construction activities. The following is an initial guide on the regular monitoring frequency for each station on a weekly basis when noise generating activities are underway: .
  - one set of measurements between 0700 and 1900 hours on normal weekdays.
- 5.6.2 If construction works are extended to include works during the hours of 1900 0700. Applicable permits under NCO shall be obtained by the Contractor.
- 5.6.3 In case of non-compliance with the construction noise criteria, more frequent monitoring, as specified in the Action Plan in Table 5.3, shall be carried out. This additional monitoring shall be continued until the recorded noise levels are rectified or proved to be irrelevant to the construction activities.
- 5.6.4 Before commencement of impact monitoring, the ET Leader shall inform IEC of the impact monitoring programme such that the IEC can conduct an on-site audit to ensure the accuracy of

#### Event and Action Plan (EAP) for Construction Noise ♦ 5.7

5.7.1 The Action and Limit levels for construction noise are defined in Table 5.2. Shall non-compliance of the criteria occur, action in accordance with the Action Plan in Table 5.3 shall be implemented.

# **Environmental Requirements**

### and

## Implementation Status

#### APPENDIX B IMPLEMENTATION SCHEDULE OF MITIGATION MEASURES

### Implementation Schedule for Air Quality Control

PP Ref <sup>#</sup>	Environmental Protection Measures	Location /	Implementation Agent	Implementation Stages *			Relevant Legislation &
		Timing		D	С	0	Guidelines
Annex 1 S1.7.1	Dust mitigation measures stipulated in the <i>Air Pollution Control</i> ( <i>Construction Dust</i> ) Regulation shall be incorporated to control dust emission from the Site. Notice shall be given to the authority prior to commencement of works.	Work sites / during construction period	Contractor		V		Air Pollution Control (Construction Dust) Regulation
Annex 1 S1.7.6 – S1.7.9	Exposed area of inlet screw pumping station excluding its inlet chamber; and sludge holding tanks should be covered, with the foul air drawn through deodourizers and discharged after treatment. Exposed area of grit channels, flume channels and effluent launder channels of primary sedimentation tanks should be covered.	SWHSTW / during design and operation stage	DSD	1			

# The section number in the Project Profile for Expansion of Shek Wu Hui Sewage Treatment Works (Application No. DIR-121/2005) \*

D = Design, C = Construction and O = Operation

### Implementation Schedule for Water Quality Control

PP Ref <sup>#</sup>	Environmental Protection Measures	Location / Timing	Implementation Agent	Implementatio Stages *			Relevant Legislation &
				D	С	0	Guidelines
Annex 2 S2.4.4	The practices outlined in Practice Note for Professional Persons on Construction Site Drainage, Professional Persons Environmental Protection Department, 1994 (ProPECC PN 1/94) including the use of sediment traps, wheel washing facilities for vehicles leaving the site, adequate maintenance of drainage systems to prevent flooding and overflow, sewage collection and treatment, and comprehensive waste management (collection, handling, transportation, disposal) procedures should be adopted to minimize the potential water quality impact from construction site runoff and various construction activities.		Contractor		V		ProPECC PN 1/94; WPCO, Waste Disposal Ordinance

Expansion of Shek Wu Hui Sewage Treatment Works EM&A Manual

PP Ref <sup>#</sup>	Environmental Protection Measures	Location / Timing	Implementation Agent	Imple St	ages		Relevant Legislation &
-		8		D	C	0	Guidelines
Annex 2 S2.4.4	<ul> <li>Construction Runoff and Drainage</li> <li>At the start of site establishment, perimeter cut-off drains to direct off-site water around the site should be constructed and internal drainage works and erosion and sedimentation control facilities implemented. Channels, earth bunds or sand bag barriers should be provided on site to direct stormwater to silt removal facilities. The design of the temporary on-site drainage system will be undertaken by the contractor prior to the commencement of construction.</li> <li>The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC PN 1/94, which states that the retention time for silt/sand traps should be 5 minutes under</li> </ul>	Work site / During the construction period	Contractor		V		ProPECC PN 1/94; WPCO, Waste Disposal Ordinance
	maximum flow conditions. Sizes may vary depending upon the flow rate, but for a flow rate of $0.1 \text{m}^3 \text{s}^{-1}$ a sedimentation basin of $30 \text{m}^3$ would be required and for a flow rate of $0.5 \text{m}^3 \text{s}^{-1}$ the basin would be $150 \text{m}^3$ . The detailed design of the sand/silt traps will be undertaken by the contractor prior to the commencement of construction.						
	surface excavation works during the rainy season (April to September). All exposed earth areas should be compacted and vegetated as soon as possible after earthworks have been completed, or alternatively, within 14 days of cessation of earthworks where practicable. If excavation of soil cannot be avoided during the rainy season, or at any time of year when rainstorms are likely, exposed slope surfaces should be covered by tarpaulin or other means.						
	• The overall slope of the site should be kept to a minimum to reduce the erosive potential of surface water flows, and all trafficked areas and access roads protected by coarse stone ballast. An additional advantage accruing from the use of crushed stone is the positive traction gained during prolonged periods of inclement weather and the reduction of surface sheet flows.

Annex 2 S2.4.4	<ul> <li>Construction Runoff and Drainage (Cont'd)</li> <li>All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly following rainstorms. Deposited silt and grit should be removed regularly and disposed of by spreading evenly over stable, vegetated areas.</li> <li>Measures should be taken to minimize the ingress of site drainage into excavations. If the excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from trenches or foundation excavations should be discharged into storm drains via silt removal facilities.</li> <li>Open stockpiles of construction materials (for example, aggregates, sand and fill material) of more than 50m<sup>3</sup> should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.</li> <li>Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and storm runoff being directed into foul sewers.</li> <li>Precautions to be taken at any time of year when rainstorms are likely, actions to be taken during or after rainstorms are summarized in Appendix A2 of ProPECC PN 1/94. Particular attention should be paid to the control of silty surface runoff during storms events, especially for areas located near steep slopes.</li> </ul>	Work site / During the construction period	Contractor		7		ProPECC PN 1/94; WPCO, Waste Disposal Ordinance
