Attention: Mr. M.W. Ho

29 September, 2008

Dear Mr Ho,

MTR Lai Chi Kok Station Pedestrian Subway and Entrance Works Environmental Permit No. EP-253/2006 Environmental Permit Conditions – Monthly EM&A Report

In compliance of Environmental Permit Item 4.3, attached please find three hard copies and one electronic copy of 13<sup>th</sup> monthly EM&A Report for your reference and retention.

Yours sincerely,

nn frommer

Dr. Glenn Frommer Head of Sustainability Development

## **EXECUTIVE SUMMARY**

This is the 13th Monthly Environmental Monitoring and Audit (EM&A) Report for "MTRC Lai Chi Kok Station Pedestrian Subway and Entrance Works". The Report concludes the impact monitoring and audit works for the construction works undertaken during the period of 16 August to 15 September 2008. The major construction activities in this reporting month include 1800mm dia sewer diversion works, sheetpiling and temporary support for subway construction, utility diversion works and temporary road diversion.

Impact monitoring for the construction noise impact was conducted in this reporting period. There was no exceedance of action and limit levels recorded at the agreed sensitive receivers. There were no formal public concerns or complaints on environmental issues received during this reporting period. The Contractor's performance on environmental issues was considered to be satisfactory in general.

## **1 INTRODUCTION**

This is the 13<sup>th</sup> Monthly Environmental Monitoring and Audit (EM&A) Report for "MTRC Lai Chi Kok Station Pedestrian Subway and Entrance Works" (Environmental Permit No. EP-253/2006). The Report concludes the impact monitoring and audit works for the construction works undertaken during the period of 16 August to 15 September 2008.

## **2 PROJECT INFORMATION**

## **2.1 Construction Program**

Civil construction of the whole subway would take approximately 30 months to complete. The construction sites are mainly located at Cheung Lai Street, a section of Lai Chi Kok road near West Kowloon Corridor and a section of Cheung Sha Wan Road. The overall construction works of the project are currently on progress.

Construction of the subway would be carried out simultaneously by cut and cover method. Vertical open cut areas would be provided in phases to suit the project progress and laterally supported by sheetpile walls for temporary road decks construction. In order to maintain existing traffic flows at Lai Chi Kok Road, Cheung Sha Wan Road and Cheung Lai Street, temporary road decks would be provided as soon as possible. This would also act as a screen to minimize the nuisance to the public and pedestrian during construction of the subway structures. All excavation and construction of the subway and its ancillary underground structures would be carried out underneath the road decks thereby minimizing environmental impacts. At-grade access points would be provided for transportation of material/spoil and workers' access during implementation of the underground subway construction works. Once the construction of the subway structure is completed, the work areas would be backfilled and the road surface for the temporary works sites will be reinstated.

Site location plan is shown in Appendix 1. The construction programme is shown below.

| - Decoration Works  |                 |               |               |                  |               |                     |
| - Backfilling & Reinstatement                                   |                 |               |               |                  |               |                     |
| Construction of smoke extraction air shaft                      |                 |               |               |                  |               |                     |
| Construction of fresh air intake shaft                          |                 |               |               |                  |               |                     |
| Construction of subway entrance D1                              |                 |               |               |                  |               |                     |
| Construction of subway entrance D2                              |                 |               |               |                  |               |                     |
| Construction of subway entrance D3 inside Liberte               |                 |               |               |                  |               |                     |
| Construction of subway entrance D4 inside The Pacifica          |                 |               |               |                  |               |                     |

## 2.2 Construction Activities in the Past Month

Major construction activities carried out by the contractor during this reporting period include:

## Site under West Kowloon Corridor

- a) 1800 dia sewer diversion of Lai Chi Kok Sewer
- Continue the remaining works of new manhole FM-1.
- Continue removal of the existing abandoned section.
- b) Construction of ventilation ducts and shafts
- No significant progress in this reporting month.

## Site at Cheung Lai Street

- a) Construction of subway
- Drive sheet piles and decking bean installation between Cheung Shun Street Cheung and Cheung Sha Wan Road.
- •
- Install temporary road deck panels between Chung Shun Street and Cheung Yee Street.
- Carry out grouting works and pumping test for subway construction below West Kowloon Corridor.

## 2.3 Construction Activities for the Coming Month

Major construction activities by the contractor anticipated for the coming month include:

## Site under West Kowloon Corridor

- a) 1800 dia sewer diversion of Lai Chi Kok Sewer
- To complete the proposed sewer diversion works.
- To complete the removal of the existing abandoned pipes for the diversion.
- b) Construction of ventilation ducts and shafts
- To construct and complete the extract smoke ventilation shaft.

## Site at Cheung Lai Street

- b) Construction of subway
- Continue decking beam installation between Cheung Shun Street and Cheung Sha Wan Road.
- Continue pumping test between Cheung Shun Street and Lai Chi Kok Road.
- To excavate for subway construction below West Kowloon Corridor.

- To install temporary road deck panels at Lai Chi Kok Road Westbound.

## **3** Noise Monitoring

## 3.1 Monitoring Methodology

In accordance with the EM&A Manual, the construction noise level is measured in terms of A-weighted equivalent continuous sound pressure level ( $L_{Aeq}$ ). During normal construction working hours (0700-1900 Monday to Saturday), monitoring of  $L_{Aeq, 30min}$  noise levels (as six consecutive  $L_{Aeq, 5min}$  readings) was carried out once every week.

## **3.2 Equipment Used and Calibration Details**

Impact noise monitoring was conducted using SVAN sound analysis equipment – SVAN 949, which complied with the International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1 985 (Type 1) Specifications as referred to in the Technical Memorandum to the Noise Control Ordinance. The equipment were calibrated and verified by certified laboratory or manufacturer every two years to ensure they perform to the same level of accuracy as stated in the manufacturer's specification. Before and after each measurement, the reading of sound level meter was checked with the acoustic calibrator and the measurement agreed to within 1.0 dB. Free field and weatherproof microphone was extended 1m from the exterior of the sensitive receivers building façade and with an unobstructed field of view of the proposed construction site. Measurements were recorded to the nearest 0.1 dB.

## **3.3 Monitoring Station**

In accordance with the EM&A Manual, monitoring stations were established at 2 locations, which are summarized in Table 3.1 and depicted in Appendix 1.

| Sensitive Receiver No. | Location                      |
|------------------------|-------------------------------|
| R1                     | Podium, Block 7, Liberte      |
| R2                     | Podium, Tower 1, The Pacifica |

Table 3.1 – Noise Monitoring Stations

## **3.4 Monitoring Results**

The results are presented in the Table 3.2. Relevant details of the noise monitoring results, graphic plots calculation reference are presented in Appendix 2 and 3. The corrected LAeq results, ranged between 67.1dB(A) and 72.2 dB(A), were within the limit levels and therefore, no exceedance was found.

| Location | Parameter | Time  | Date            | Measured<br>Leq | Ba | seline<br>se Level | Correc<br>LAeq |       | Limit    | Exceedance |
|----------|-----------|-------|-----------------|-----------------|----|--------------------|----------------|-------|----------|------------|

 Table 3.4 - Event/Action plan for construction noise

## 3.5 Monitoring Schedule for Next Reporting Period

Noise monitoring in the next reporting period is scheduled for 17<sup>th</sup>, 22<sup>nd</sup> and 29<sup>th</sup> Sept 2008, as well as 6<sup>th</sup>, 13<sup>th</sup> October 2008.

Site inspection schedule for the next reporting period is designated on 17<sup>th</sup>, 29<sup>th</sup> September 2008 and 6<sup>th</sup> October 2008.

## **4** ACTION TAKEN IN EVENT OF EXCEEDENCE

There were no exceedance recorded during this reporting period, therefore no actions were taken.

## 5 CONSTRUCTION WASTE DISPOSAL

Dumping locations for disposal of C&D wastes from the construction site were appointed and allocated by EPD/CEDD. The contractor has implemented the delivery trip ticket system for recording the waste disposal to the public fill and landfill areas. Excavated materials are reused as back-fill material to balance cut and fill and hence reduce the generation of materials. Table 5.1 is a summary of updated figures of the construction wastes disposal provided by the Contractor. The relevant disposal records are kept in Contractor's site office for inspection.

|                                     | Amount                    | of Construction Waste d | isposed        |

## 8 SITE INSPECTION AND AUDITS

During the reporting period, regular bi-weekly joint site inspections led by senior staffs from MTR, Residential Engineer, Contractor and the ET were carried out. The Contractor's performance on the environmental matters was assessed and concerned items were raised for rectification. Inspection findings from the reporting period are summarized as follows:

| Item | Observations/ Description   | Status               |
|------|---|----------------------|
| 1    | The Contractor was reminded to have regular check on site<br>to ensure the compliance of relevant environmental<br>regulations, permits and licenses.                                 | Ongoing              |
| 2    | The Contractor was reminded to ensure all required<br>construction noise mitigation measures to be followed<br>properly.  | Ongoing              |
| 3    | The Contractor was reminded to keep the site works area and site office tidy as good housekeeping.  | Ongoing              |
| 4    | The Contractor was reminded to implement proper noise<br>mitigation measures to shield the noise parts of circular saw,<br>handheld breaker and vibratory hammer during construction. | Ongoing              |
| 5    | The Contractor should regularly review the condition of<br>hoardings for Cheung Lai Street site area. in order to reduce<br>any air pollution impact to the nearby public.            | Ongoing              |
| 6    | The Contractor was reminded to have regular view on<br>potential oil leak from fuel containers and the stationery<br>plants on site by providing proper drip trays or similar.        | Ongoing              |
| 7    | The Contractor was reminded to have regular check on the potential black smoke from working plants  | Ongoing              |
| 8    | The Contractor should strictly follow up the required noise mitigation measures at the progressing work sites.  | Contractor to follow |
| 9    | The Contractor should reinstate the missing oil drip pans at<br>Cheung Lai Street site,   | Contractor to follow |
| 10   | The Contractor should have close monitoring on the noise labels on the working air compressors and hand breakers.   | Contractor to follow |

## Table 8.1 Summary of inspection findings

•

## 9 CONCLUSION

In this reporting month, construction activities for this project "MTRC Lai Chi Kok Station Pedestrian Subway and Entrance Works" included 1800mm dia sewer diversion works, sheetpiling and temporary support for subway construction, temporary road panels installation, utility diversion works and temporary road diversion. Regular monthly meetings and weekly site audits, led by the seniors and attended by representatives of RE, ET, IEC and the Contractor, were held for discussing site environmental related issues. Concerned site environmental items raised during the audits were generally followed up by the Contractor for rectification. The overall environmental pollution control measures provided by the Contractor were considered satisfactory. Noise levels recorded during the monitoring period were within limits. The ET will continue to execute the environmental monitoring and audit programme in accordance with the EM&A Manual and Environmental Permit requirements.

## **Calculations and Equations:**

The 30minutes A-weighted equivalent continuous sound pressure level ( $L_{Aeq, 30min}$ ) is calculated by geometric mean from 6 consecutive  $L_{Aeq, 5min}$  readings:

$$L_{Aeq, 30min} = 6^{th} root of (L1)(L2)...(L6)$$

Where: L1~6 is the 6consecutive  $L_{Aeq, 5min}$  readings

And the equation of the Baseline correction:

$$10\log(10^{\text{Laeq}/10} - 10^{\text{Lb}/10})$$

Where:

 $L_{aeq}$  is the  $L_{Aeq, 30min}$  from the geometric mean of 6 consecutive  $L_{eq5min}$  results Lb is the baseline noise level.
