## **EXECUTIVE SUMMARY**

This is the 37<sup>th</sup> Monthly Environmental Monitoring and Audit (EM&A) Report for “MTRC Lai Chi Kok Station Pedestrian Subway and Entrance Works”. The Report concludes the impact monitoring and audit works for the construction works undertaken during the period of 16 August 2010 to 15 October 2010. The major construction activities in this reporting period include construction of subway box and escalator at Entrance D3, the above ground decoration and reinstatement works under separated project managed by the Developer Sung Hung Kei at Entrance D3, station entrance installation at Entrance D4, road reinstatement at Cheung Lai Street and Lai Chi Kok Road West and E&M works inside the completed subway box sections.. Noise impact monitoring for construction maintained and conducted at the agreed NSRs with no exceedance recorded. The Contractor's performance on environmental issues was considered to be satisfactory in general.

The project construction programme as shown on Section 2.1 has been extended to suit progress of the project works due to longer time taken for the utility diversion works and resolving site constraints as well as the pervious 1800 mm dia sewer diversion of Lai Chi Kok Sewer. In general, all civil engineering and E&M works of the subway within the location of Designated Project as shown on Fig 1 of Environmental Permit No. EP- 253/2006 have been substantially completed.

## **1 INTRODUCTION**

This is the 37<sup>th</sup> Monthly Environmental Monitoring and Audit (EM&A) Report for “MTRC Lai Chi Kok Station Pedestrian Subway and Entrance Works” (Environmental Permit No. EP-253/2006). The Report concludes the impact monitoring and audit works for the construction works undertaken during the period of 16 August 2010 to 15 October 2010.

## **2 PROJECT INFORMATION**

### **2.1 Construction Program**

Civil construction of the whole subway would take totally approximate 40 months to complete for opening. The project construction programme has been extended to suit progress of the project works due to longer time taken for the utility diversion works and resolving site constraints as well as the pervious 1800 mm dia sewer diversion of Lai Chi Kok Sewer. The construction sites are mainly located at Cheung Lai Street, a section of Lai Chi Kok road near West Kowloon Corridor and a section of Cheung Sha Wan Road. The overall construction works of the project are currently on progress.

Construction of the subway would be carried out simultaneously by cut and cover method. Vertical open cut areas would be provided in phases to suit the project progress and laterally supported by sheetpile walls for temporary road decks construction. In order to maintain existing traffic flows at Lai Chi Kok Road, Cheung Sha Wan Road and Cheung Lai Street, temporary road decks would be provided as soon as possible. This would also act as a screen to minimize the nuisance to the public and pedestrian during construction of the subway structures. All excavation and construction of the subway and its ancillary underground structures would be carried out underneath the road decks thereby minimizing environmental impacts. At-grade access points would be provided for transportation of material/spoil and workers' access during implementation of the underground subway construction works. Once the construction of the subway structure is completed, the work areas would be backfilled and the road surface for the temporary works sites will be reinstated.

Activities	Month								
	Aug - Dec 07	Jan-May 08	Jun-Oct 08	Nov08 - Mar09	Apr-Aug 09	Sept 09 - Jan 10	Feb - Jun 10	Jul - Oct 10	
1800 $\Phi$ Sewer Diversion of Lai Chi Kok Sewer	█								
<b>Construction of Subway</b>									
- Sheet Piling works & Temporary Support	█								
- Excavation works			█						
- Formwork & Concreting				█					
- Decoration Works						█			
- Backfilling & Reinstatement shaft						█			
Construction of fresh air intake shaft		█							
Construction of subway entrance D1					█				
Construction of subway entrance D2					█				
Construction of subway entrance D3 inside Liberte			█						
Construction of subway entrance D4 inside The Pacifica			█						

## 2.2 Construction Activities in the Past Month

Major construction activities carried out by the contractor during this reporting period include:

### Site under West Kowloon Corridor

- Replanting works under the corridor;
- Construction of connection portion to Liberte;
- E&M installation inside completed subway sections

### Site under Lai Chi Kok Road Westbound

- Construction of the subway box sections;
- E&M installation inside completed subway sections

Site at Cheung Lai Street

- Road reinstallation by phases;
- E&M works inside subway box sections.

Site at Entrance D3

- Complete the accessible landings and lift shafts;
- Connection between Liberte and completed subway constructed under the project,.
- Above ground reinstatement and decoration works by others.

Site at Entrance D4

- Complete the accessible staircases and entrance.

**2.3 Construction Activities for the Coming Month**

Major construction activities by the contractor anticipated for the coming month include:

Site under West Kowloon Corridor

- Complete the remaining replanting works.

Site at Cheung Lai Street

- Complete the remaining road reinstatement works on ground;
- Open the completed subway sections between the existing Lai Chi Kok Station to Entrance D4 at Pacifica.

Site at Entrance D3

- Complete the remaining above ground reinstatement and decoration works by others.

Site at Entrance D4

- No construction activities.

### 3 NOISE MONITORING

#### 3.1 Monitoring Methodology

In accordance with the EM&A Manual, the construction noise level is measured in terms of A-weighted equivalent continuous sound pressure level ( $L_{Aeq}$ ). During normal construction working hours (0700-1900 Monday to Saturday), monitoring of  $L_{Aeq, 30min}$  noise levels (as six consecutive  $L_{Aeq, 5min}$  readings) was carried out once every week.

#### 3.2 Equipment Used and Calibration Details

Impact noise monitoring was conducted using SVAN sound analysis equipment – SVAN 949, which complied with the International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1 985 (Type 1) Specifications as referred to in the Technical Memorandum to the Noise Control Ordinance. The equipment were calibrated and verified by certified laboratory or manufacturer every two years to ensure they perform to the same level of accuracy as stated in the manufacturer's specification. Before and after each measurement, the reading of sound level meter was checked with the acoustic calibrator and the measurements were accepted as valid if the calibration levels before and after the noise measurement agreed to within 1.0 dB. Free field and weatherproof microphone was extended 1m from the exterior of the sensitive receivers building façade and with an unobstructed field of view of the proposed construction site. Measurements were recorded to the nearest 0.1 dB.

#### 3.3 Monitoring Station

In accordance with the EM&A Manual, monitoring stations were established at 2 locations, which are summarized in Table 3.1 and depicted in Appendix 1.

**Table 3.1 – Noise Monitoring Stations**

Sensitive Receiver No.	Location
R1	Podium, Block 7, Liberte
R2	Podium, Tower 1, The Pacifica

### 3.4 Monitoring Results

The results are presented in the Table 3.2. Relevant details of the noise monitoring results, graphic plots calculation references are presented in Appendix 2 and 3. The corrected LAeq results, ranged between 58.0 dB(A) and 70.8 dB(A), were within the limit levels and therefore, no exceedance was found.

**Table 3.2 – Noise monitoring results for the reporting month**

Location	Parameter	Time	Date	Measured Leq	Baseline Noise Level	Corrected LAeq*	Limit	Exceedance
R1	Leq30min	9:41	19-Aug-10	73.2 dB(A)	74 dB(A)	# dB(A)	75 dB(A)	N

<b>Limit Level</b>	<ol style="list-style-type: none"> <li>1. Identify the source.</li> <li>2. Notify IEC, RE, EPD and the Contractor.</li> <li>3. Repeat measurement to confirm findings.</li> <li>4. Increase monitoring frequency.</li> <li>5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented.</li> <li>6. Inform IEC, RE, and EPD the causes &amp; actions taken for the exceedances.</li> <li>7. Assess effectiveness of the Contractor's remedial actions and keep IEC, EPD and RE informed of the results.</li> <li>8. If exceedance stops, cease additional monitoring</li> </ol>	<ol style="list-style-type: none"> <li>1. Discuss amongst RE, ET Leader and the Contractor on the potential remedial actions.</li> <li>2. Review the Contractor's remedial actions whenever necessary to assure their effectiveness and advise RE accordingly.</li> <li>3. Supervise the implementation of remedial measures.</li> </ol>	<ol style="list-style-type: none"> <li>1. Confirm receipt of notification of exceedance in writing.</li> <li>2. Notify the Contractor.</li> <li>3. Require the Contractor to propose remedial measures for the analysed noise problem.</li> <li>4. Ensure remedial measures are properly implemented.</li> <li>5. If exceedance continues, consider what activity of the work is responsible and instruct the Contractor to stop that activity of work until the exceedance is abated.</li> </ol>	<ol style="list-style-type: none"> <li>1. Take immediate action to avoid further exceedance.</li> <li>2. Submit proposals for remedial actions to RE and IEC within 3 working days of notification.</li> <li>3. Implement the agreed proposals.</li> <li>4. Resubmit proposals if problem still not under control.</li> <li>5. Stop the relevant activity of works as determined by the RE until the exceedance is abated.</li> </ol>

### **3.5 Monitoring Schedule for Next Reporting Period**

Noise monitoring in the next reporting period is scheduled for 21<sup>st</sup> and 27<sup>th</sup> October and 4<sup>th</sup> and 10<sup>th</sup> November 2010.

Site inspection schedule for the next reporting period is designated on 27<sup>th</sup> October and 10<sup>th</sup> November 2010.

#### **4 ACTION TAKEN IN EVENT OF EXCEEDENCE**

There were no exceedance recorded during this reporting period, therefore no actions were taken.

## 5 CONSTRUCTION WASTE DISPOSAL

Dumping locations for disposal of C&D wastes from the construction site were appointed and allocated by EPD/CEDD. The contractor has implemented the delivery trip ticket system for recording the waste disposal to the public fill and landfill areas. Excavated materials are reused as back-fill material to balance cut and fill and hence reduce the generation of materials. Table 5.1 is a summary of updated figures of the construction wastes disposal provided by the Contractor. The relevant disposal records are kept in Contractor's site office for inspection.

**Table 5.1 Summary of Construction Waste Disposal**

## 7 STATUS OF PERMITS AND LICENSES OBTAINED

Table 7.1 is the updated status of environmental related permits/ license obtained for the construction activities. Construction Noise Permit is renewed in the reporting month.

**Table 7.1 Status of Permits and Licenses Obtained**

Description	License / Permit No.#	Date of Issue	Date of Expiry	Remarks
Environmental Permit	EP-253/2006	11 Aug 2006	--	
Registration of C&D Waste Producer	7005542	1 Jun 2007	--	
Chemical Waste Producer	5214-264-K2869-08	08-May 2007	--	
Construction Noise Permit	GW-RW0093-10	9 March 2010	8 September 2010	
Effluent Discharge License	EP760/264/0124051	24 July 2007	31 July 2012	

## 8 SITE INSPECTION AND AUDITS

During the reporting period, regular bi-weekly joint site inspections led by senior staffs from MTR, Residential Engineer, Contractor and the ET were carried out. The Contractor’s performance on the environmental matters was assessed and concerned items were raised for rectification. Inspection findings from the reporting period are summarized as follows:

Table 8.1 Summary of inspection findings

Item	Observations/ Description	Status
1	The Contractor was reminded to have regular check on site to ensure the compliance of relevant environmental regulations, permits and licenses.	Ongoing
2	The Contractor was reminded to ensure all required construction noise mitigation measures to be followed properly.	Ongoing
3	The Contractor was reminded to keep the site works area and site office tidy as good housekeeping to an acceptable standard, particularly inside the completed subway box sections.	The Contractor still need to pay attention on site housekeeping.
4	The Contractor was reminded to implement proper noise mitigation measures to shield the noise parts of circular saw and handheld breaker during construction.	Ongoing
5	The Contractor should regularly review the condition of hoardings or equivalent approved for Cheung Lai Street site area. In order to reduce any air pollution impact to the nearby public.	Ongoing
6	The Contractor was reminded to have regular view on potential oil leak from fuel containers and the stationery plants on site by providing proper drip trays or similar.	Ongoing
7	The Contractor was reminded to have regular check on the potential black smoke from working plants.	Ongoing
8	The Contractor should implement properly required dust mitigation measures at the progressing work sites..	Ongoing
9	The Contactor should regularly check any ponding site water in order to prevent mosquito breeding problems and working condition of the working de-silting tanks.	The Contractor still need to pay attention on site ponding water

## **9 CONCLUSION**

In this reporting month, construction activities for this project “MTRC Lai Chi Kok Station Pedestrian Subway and Entrance Works” include backfilling and utility reinstatement under West Kowloon Corridor and Lai Chi Kok Road Westbound; the backfilling, road reinstatements and E&M installation of the completed subway boxes under Cheung Lai Street; construction of station entrances at the Liberta and Pacifica. Regular monthly meetings and weekly site audits, led by the seniors and attended by representatives of RE, ET, IEC and the Contractor, were held for discussing site environmental related issues. Concerned site environmental items raised during the audits were generally followed up by the Contractor for rectification. The overall environmental pollution control measures provided by the Contractor were considered satisfactory. Noise levels recorded during the monitoring period were within limits. The ET will continue to execute the environmental monitoring and audit programme in accordance with the EM&A Manual and Environmental Permit requirements.

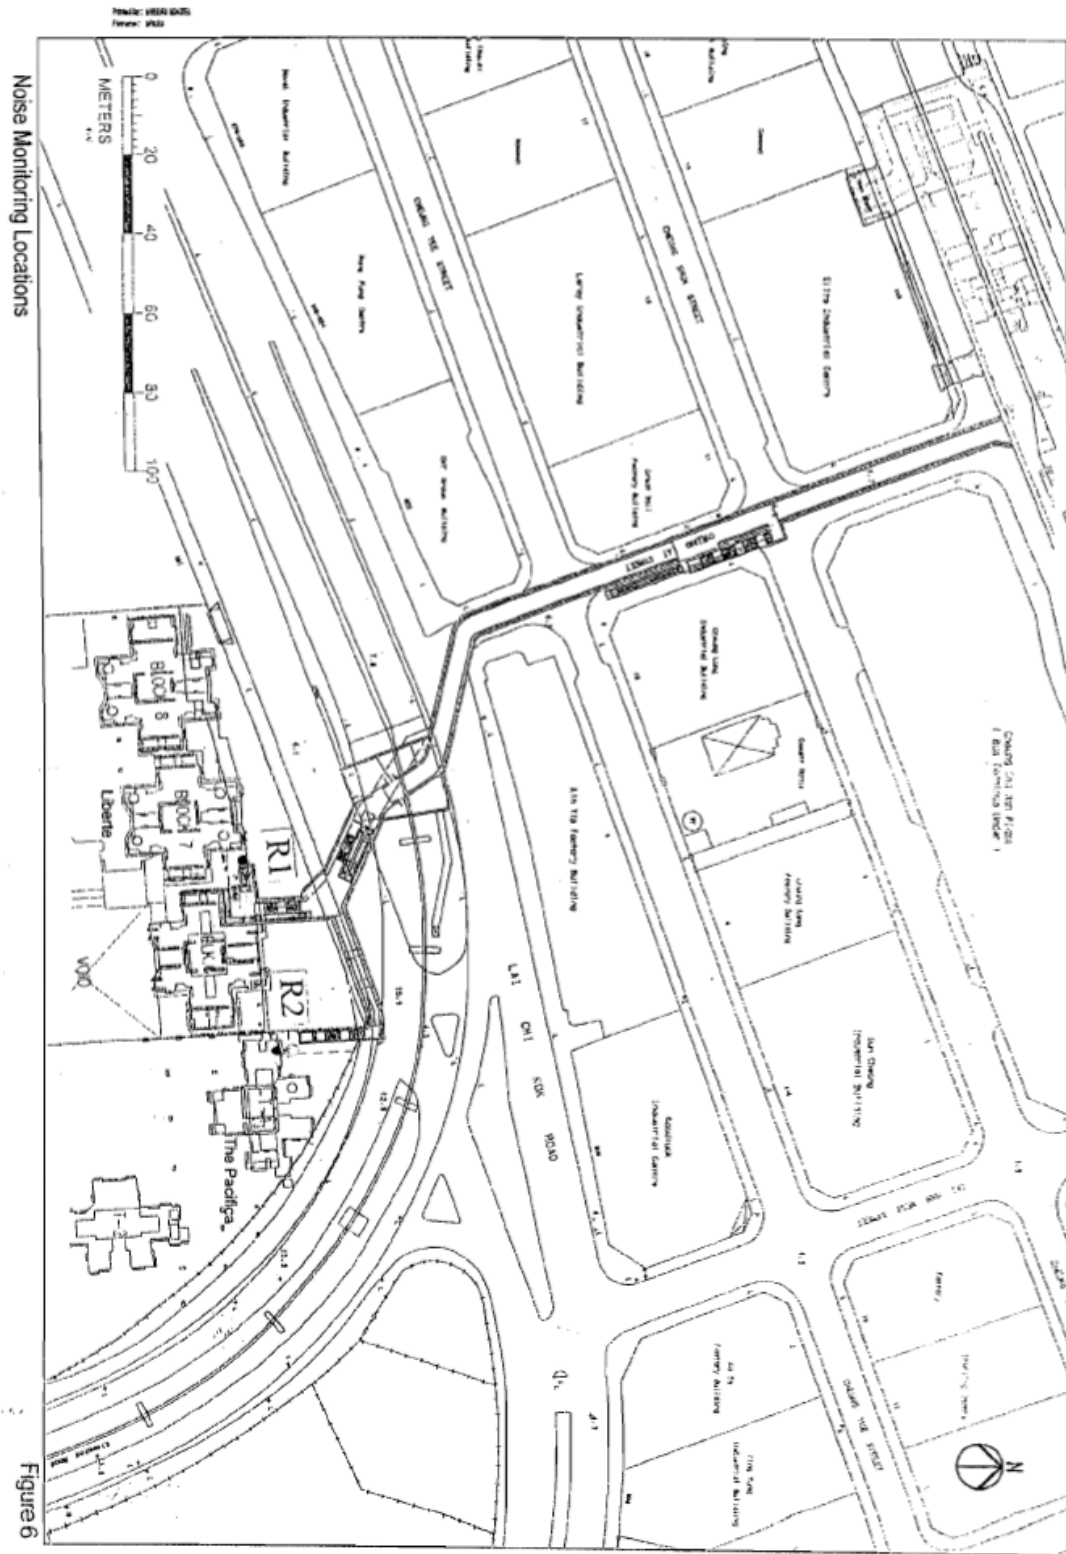

## **APPENDIX 1 – REFERENCE FIGURES**

**Figure 1 Project Construction Area**

**Figure 2 Noise Monitoring Stations**

Figure 2 Noise Monitoring Stations R1 and R2

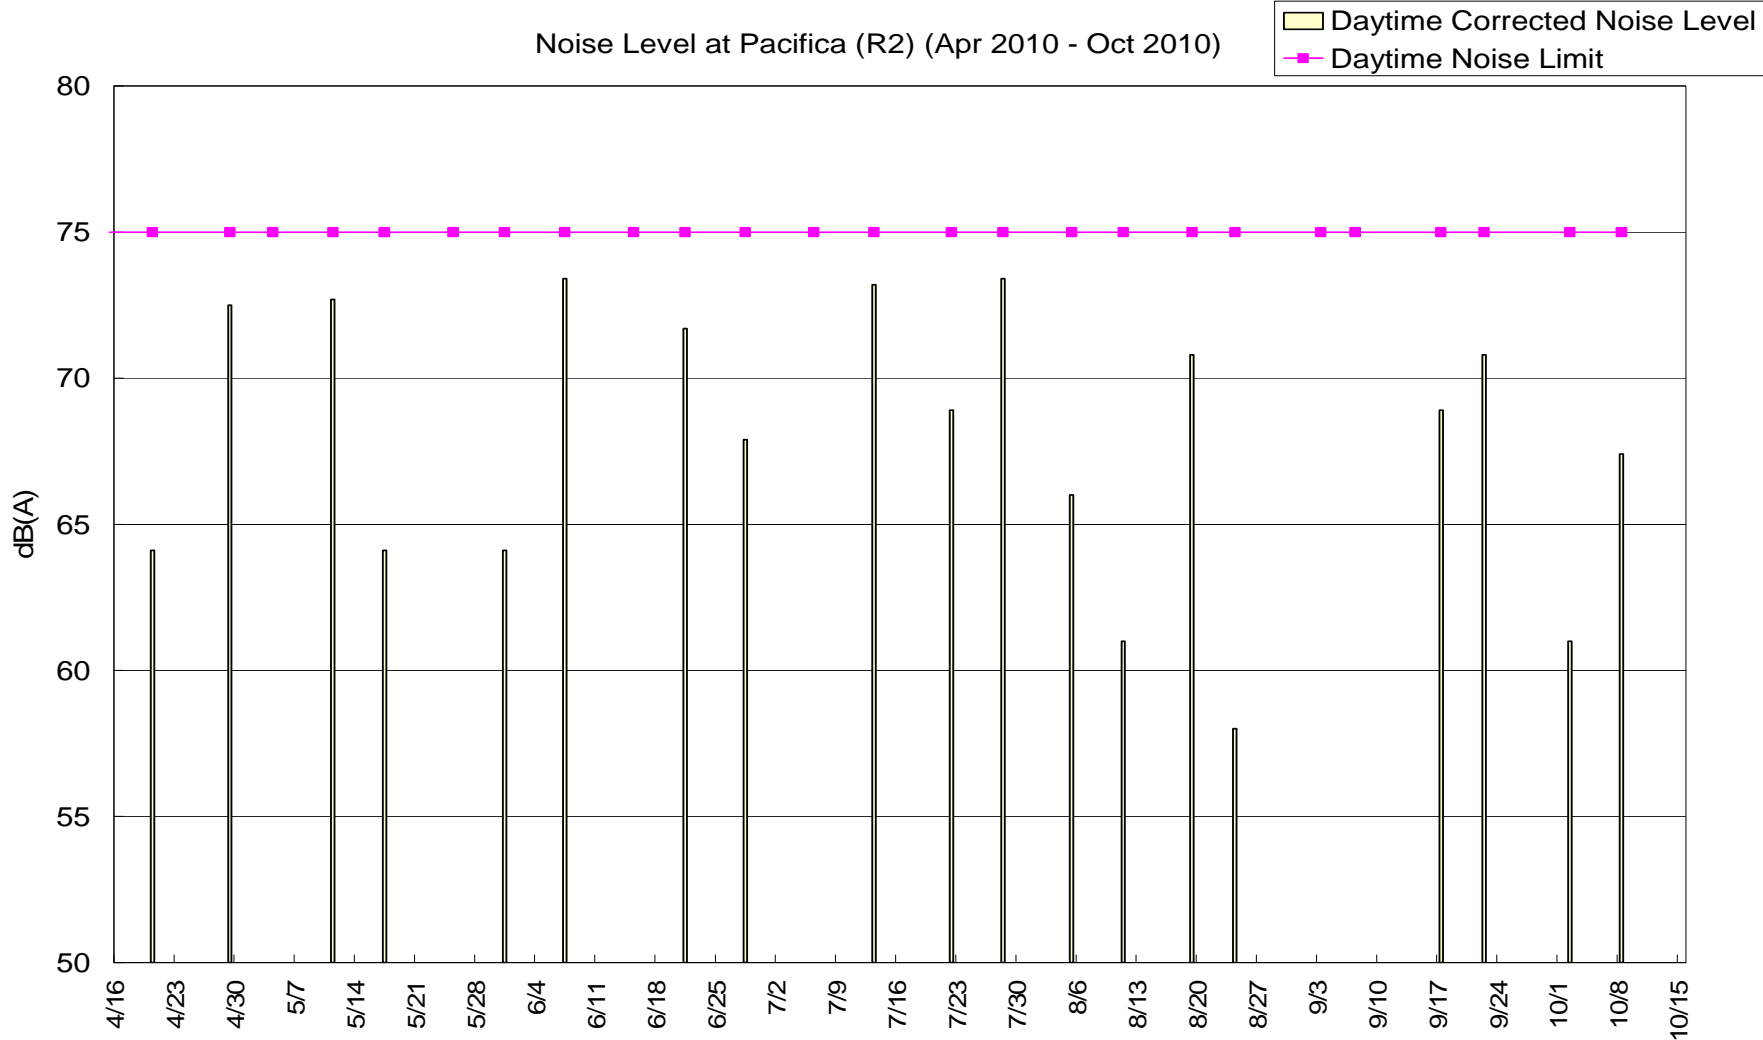

Noise Monitoring Locations

Figure 6

**APPENDIX 2 – Environmental Monitoring Data / Charts**

**APPENDIX 3 – Noise Monitoring Data Sheet and Calculation**

**Calculations and Equations:**

The 30minutes A-weighted equivalent continuous sound pressure level ( $L_{Aeq, 30min}$ ) is calculated by geometric mean from 6 consecutive  $L_{Aeq, 5min}$  readings:

$$L_{Aeq, 30min} = 6^{th} \text{ root of } (L1)(L2)\dots(L6)$$

Where: L1~6 is the 6consecutive  $L_{Aeq, 5min}$  readings

And the equation of the Baseline correction:

$$10\log (10^{L_{aeq}/10} - 10^{L_b/10})$$

Where:

$L_{aeq}$  is the  $L_{Aeq, 30min}$  from the geometric mean of 6 consecutive  $L_{eq5min}$  results

$L_b$  is the baseline noise level.

<b>Calibration before Measurement</b>	<b>dB(A)</b>	94.0
<b>Calibration after Measurement</b>	<b>dB(A)</b>	94.0
<b>Observation(s)</b> Hammering noise by (Hammer x 1) Transportation noise by public transportation		
<b>Remarks</b>		

With Baseline Correction : 70.8 dB(A)

# Note: The measurement level is lower than the baseline noise level.  
 Therefore, no baseline correction is calculated
