Executive Summary

This is the sixth monthly Environmental Monitoring and Audit (EM&A) Report for Proposed Road Improvement Works in West Kowloon Reclamation Development – Phase 1. The project commenced on 6th February 2016. This report documents the finding of EM&A Works conducted from 1st July 2016 to 31st July 2016.

Environmental Monitoring and Audit Progress

Air Quality Monitoring

1-hr Total Suspended Particulates (TSP) monitoring and 24-hr TSP monitoring were carried out on 5th, 11th, 15th, 21st, and 27th July 2016.

Noise Monitoring

30-min LEQ noise monitoring was carried out on 5th, 11th, 15th, 21st, and 27th July 2016.

Waste Management

According to Contractor's waste flow data, 5031.54 tonnes of inert C&D materials and 17.12 tonnes of general refuse were generated and disposed of.

Landscape and Visual Impact

Bi-weekly inspections were conducted on 12th and 29th July 2016. Most of the necessary mitigation measures have been implemented. Details of the audit findings and implementation status are presented in Section 6.

Environmental Site Inspection

Joint weekly inspections were conducted by representatives of the Contract Administrator, Engineer, Contractor and ET on 4th, 11th, 20th and 25th July 2016. The representative of the IEC joined the site inspection on 20th July 2016. Details of the audit findings and implementation status are presented in Section 6.

<u>Environmental Exceedance / Non-conformance / Compliant / Summons and Successful Prosecution</u>

No exceedance of action level and limit level was recorded for TSP. Six exceedances were recorded at NM2 on 21st July 2016 and NM4 on 5th, 11th, 15th, 21st and 27th July

2016 for Noise. No Non-compliance event, environmental complaint, notification of summons and successful prosecution against the Project were received in this reporting month.

Variation in Construction Method

No variation in construction method from the proposed construction programme was made and affected the EM&A.

Future Key Issues

The major construction works to be undertaken in the next reporting month include:

- Portion I Underground Investigation Works
- Portion I Utilities Diversion Works
- Portion HA Underground Investigation Works
- Portion HA Utilities Diversion Works
- Portion J Utilities Diversion Works
- Portion J Construction of Retaining Walls
- Portion Q Road Works (excavation, drainage construction and utilities diversion)

1 Introduction

1.1 The Project

This is a road improvement project in West Kowloon Reclamation Development (WKRD) for completing the developments and the commissioning of the new transport facilities.

Apart from the additional traffic impacts arising from the major development and transport facilities in WKRD, several major junctions in the area are currently operating with insufficient capacity causing serious congestion to some existing major road corridors such as Jordan Road (JRD), Ferry Street (FST) and Canton Road (CRD).

To enhance the road network of the area, Transport Department commissioned the "West Kowloon Reclamation Development Traffic Study" which identified and recommended Core and Additional Schemes together with the improvement works at the junction of CRD/FST/JRD. Implementation of these schemes would enable most of the key road junctions in the study area to operate with spare capacity, and the traffic queue length would also be reduced avoiding blockage to the upstream junctions

The Environmental Team (ET), Environmental Pioneers & Solutions Limited (EPSL), was appointed by Vibro Construction Co. Ltd. to undertake the Environmental Monitoring and Audit (EM&A) programme during construction phase of the Proposed Road Improvement Works in West Kowloon Reclamation Development – Phase 1. The project proponent is Highways Department. This is a Designated Project under the Environmental Impact Assessment Ordinance (Cap.499). The No. of Environment Permit is EP-455/2013.

The construction works and EM&A programme of this project was commenced on 6th February 2016. The construction programme and project layout plan are shown in **Appendix A**.

1.2 Construction Programme and Activities

A summary of the major construction activities undertaken in this reporting period is shown as follows.

- Portion I Underground Investigation Works
- Portion I Utilities Diversion Works
- Portion HA Underground Investigation Works
- Portion HA Utilities Diversion Works
- Portion J Utilities Diversion Works
- Portion J Construction of Retaining Walls
- Portion Q Road Works (excavation, drainage construction and utilities diversion)

1.3 Project Organization

The project organization chart and contact details are shown in **Appendix B**.

1.4 Status of Environmental Licences, Notification and Permits

A summary of the relevant permits, licences, and notifications on environmental protection for this Project is presented in Table 1.5.1.

Table 1.5.1 Summary of the Status of Environmental Licences, Notification and Permits

D	Valid 1	Period	G4.4	D 1		
Permit / License No.	From	То	Status	Remark		
Notification pursuant to Air Pollution Control (Construction Dust) Regulation						
Ref. No. 386894	23/03/2015	N/A	Valid	/

2 Air Quality Monitoring

2.1 Monitoring Locations

According to the EM&A Manual Section 3.5, four impact monitoring locations have been established for air quality monitoring, which are summarized in Table 2.1.1.

Table 2.1.1 Air Quality Monitoring Locations

Identification	Monitoring Location	Description	Parameter
No.			
AM1	Marine Department New	Ground Floor	1-hr TSP
	Yau Ma Tei Public Cargo	Face to Hoi Po Road	24-hr TSP
	Working Area		
	Administrative Building		
AM2	Garden Building	Ground Floor	1-hr TSP
		Face to Canton Road	24-hr TSP
AM3	The Cullinan I	Ground Floor	1-hr TSP
		Face to Nga Cheung Road	24-hr TSP
AM4	Lai Chack Middle School	Ground Floor	1-hr TSP
		Face to Canton Road	24-hr TSP

Due to the rejection from the representatives/ property management of the premises, high volume samplers are not feasible to be installed at AM3 and AM4 for the 24-hr TSP monitoring. Alternative locations AM3-A and AM4-A are proposed accordingly. Installation of high volume sampler at AM4-A is completed after the coordination with the representatives of premises. 24-hr TSP monitoring at AM4-A will be started in August 2016. The monitoring locations are summarized in Table 2.1.2. The details of monitoring location plan are shown in **Appendix C**.

Table 2.1.2 Air Quality Monitoring Locations

	Station	Face to Canton	114°10'04.0"E	
		Road		

^{*}Remark: 24-hr TSP monitoring at AM4-A will be started in August 2016.

2.2 Monitoring Frequency

For 1-hr TSP monitoring, the sampling frequency is at least three times in every six days when the highest dust impact occurs.

For 24-hr TSP monitoring, the sampling frequency is once in every six days when the highest dust impact occurs.

Monitoring was carried out on 5^{th} , 11^{th} , 15^{th} , 21^{st} , and 27^{th} July 2016.

2.3 Monitoring Equipment

1-hr TSP monitoring was carried out by the portable dust meters. A comparison test for the portable dust meters with the HVS was carried out to ensure the accuracy for direct reading of the portable dust meter. 24-hr TSP monitoring was carried out by the high volume samplers. The monitoring equipment is listed in Table 2.3.1 and Calibration Certificates of the equipment are shown in **Appendix D**.

Table 2.3.1 Air Quality Monitoring Equipment

2.4 Monitoring Methodology and Parameters

1-hr TSP and 24-hr TSP air quality monitoring has been carried out during the reporting period.

Measurements of 1-hr TSP monitoring were taken by a Dust Trak aerosol monitor or its equivalent that is a portable and battery-operated laser photometer capable of performing real time 1-hr TSP measurements.

Field monitoring procedures are as follows:

- The monitoring station was set at a point 1m from the exterior of the sensitive receivers building façade and set at a position 1.2m above the ground.
- The battery condition was checked to ensure good functioning of the dust monitor.

- Zero Cal was conducted to the dust monitor to each test for ensuring more accurate data.
- Logging setup and Instrument setup such as log interval, test length, number of test and impactor adaptor will set as follows:

log interval : 1mintest length : 60minsnumber of test : 3

- Impactor adaptor: 10μ (PM₁₀)

- Start the monitoring lasting 3 hours for each monitoring location
- At the end of the monitoring period, the Average, Maximum and Minimum of each TSP test shall be recorded. In addition on a standard record sheet.

Measurements of 24-hr TSP monitoring were taken by High Volume Samplers (HVSs).

HVSs fitted with appropriate sampling inlets were employed for air quality monitoring. Each sampler was composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50).

Installation of HVSs:

- A horizontal platform with appropriate support to secure the samplers against gusty wind should be provided;
- No two samplers should be placed less than 2 meters apart;
- The distance between the sampler and an obstacle, such as buildings, must be at least twice the height that the obstacle protrudes above the sampler;
- A minimum of 2 meters of separation from walls, parapets and penthouses is required for rooftop samplers;
- A minimum of 2 meters separation from any supporting structure, measured horizontally is required;
- No furnace or incinerator flue is nearby;
- Airflow around the sampler is unrestricted;
- The sampler is more than 20 meters from the dripline;
- Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring;
- Permission must be obtained to set up the samplers and to obtain access to the monitoring stations; and
- A secured supply of electricity is needed to operate the samplers.

Data of wind speed and wind direction was extracted from King's Park Meteorological Station of Hong Kong Observatory. The collection of wind data meets the prescribed criteria in S.3.4.3 of the EM&A Manual.

Other relevant data such as monitoring location, time, weather conditions and any other special phenomena at the construction site were recorded during the measurement period.

2.5 Maintenance and Calibration

Dust Trak aerosol monitors were calibrated by the manufacturer or a HOKLAS Laboratory for every year and on-site Zero Cal before every monitoring. HVSs were calibrated after installation and re-calibrated on bi-monthly basis.

2.6 Quality Assurance / Quality Control Results and Detection Limits

The portable dust meter was calibrated annually by the manufacturer or a HOKLAS laboratory. HVSs were first been calibrated after installation and repeated on bi-monthly basis. Calibration Kit for HVSs was calibrated annually by the manufacturer or a HOKLAS laboratory. The detection limits of the HVSs meet with the prescribed standard. Calibration details and current Calibration Certificates are shown in **Appendix D**.

2.7 Action and Limit Level for 1-hr TSP and 24-hr TSP

The Action and Limit levels for air quality impact monitoring results at all monitoring locations are summarized in Table 2.7.1, which would be applied for compliance assessment of air quality for this project. If the air quality monitoring results at any monitoring stations exceeded the criteria, the actions in accordance with the Event and Action Plan in Table 2.7.2 shall be taken.

Table 2.7.1 Established TSP Actions and Limit Level

Monitoring Locations	Monitoring Parameter	Action Level (µg/m³)	Limit Level (µg/m³)
AM1		288	500
AM2	1-hr TSP	299	500
AM3		299	500
AM4		303	500
AM1	24-hr TSP	157	260
AM2		183	260
AM3-A		177	260

	monitoring.			

2.8 Monitoring Results and Observations

24-hr TSP monitoring was conducted at four monitoring locations. The monitoring results are summarized in Table 2.8.1. 24-hr TSP monitoring was conducted at three monitoring locations. The monitoring results are summarized in Table 2.8.2. Detailed impact monitoring data of 1-hr TSP, 24-hr TSP and meteorological data are shown in **Appendix E**.

Table 2.8.1 Summary of average 1-hr TSP monitoring data

Monitoring Locations	Average 1-hr TSP (µg/m³)	Range 1-hr TSP (µg/m³)	Action Level (μg/m³)	Limit Level (µg/m³)
AM1	44	27 – 62	288	500
AM2	32	16 – 62	299	500
AM3	39	28 - 57	299	500
AM4	43	17 – 67	303	500

Table 2.8.2 Summary of average 24-hr TSP monitoring data

Monitoring Locations	Average 24-hr TSP (µg/m³)	Range 24-hr TSP (µg/m³)	Action Level (μg/m³)	Limit Level (µg/m³)
AM1	28	15 – 42	157	260
AM2	81	36 – 152	183	260
AM3-A	61	40 – 90	177	260

In accordance with the established action and limited levels for impact monitoring, there was no exceedance recorded in the reporting period.

During the monitoring period, vehicle emissions were identified as one of the dust sources for AM1, AM2, AM3, AM4 and AM3-A. TSP levels of AM2 and AM4 may be affected by the construction activities from other construction sites near Canton Road. TSP level of AM3-A may be affected by construction activities from other construction sites near Nga Cheung Road.

2.9 Monitoring Schedule for Next Reporting Month

The monitoring schedule for next reporting month is scheduled on 2nd, 8th, 13th, 19th, 25th and 31st August 2016.

3 Noise Monitoring

3.1 Monitoring Locations

According to the EM&A Manual Section 4.5, five impact monitoring locations have been established for noise impact monitoring during the construction phase of the project, which are summarized in Table 3.1.1. The details of monitoring location plan are shown in **Appendix C**.

Table 3.1.1 Noise Monitoring Locations

Identification No.	Noise Monitoring Location	Description	Measurement Type	
NM1	Sorrento - Tower 1	Podium Level	Façade	
		Face to Nga Cheung Road	1 uçuac	
NM2	Yau Ma Ti Catholic	Ground Floor		
	Primary School (Hoi	Face to Hoi Ting Road	Façade	
	Wang Road)			
NM3	The Cullinan I	Ground Floor	Façade	
		Face to Nga Cheung Road	raçade	
NM4	Lai Chack Middle	Ground Floor	Facada	
	School	Face to Canton Road	Façade	
NM5	Yue Tak Building	Ground Floor	Foods	
		Face to Jordan Road	Façade	

3.2 Monitoring Frequency

The regular monitoring for each location was performed on a weekly basis.

Monitoring was carried out on 5th, 11th, 15th, 21st, and 27th July 2016.

3.3 Monitoring Equipment

Noise monitoring was conducted by using BSWA 806 which complied with the International Electrotechnical Commission Publications 61672:2002 (Type 1), 60651:1979 (Type 1) and 60804:1985 (Type 1) Specifications as referred to the Technical Memorandum to the Noise Control Ordinance. The equipment was calibrated and verified by certified laboratory to ensure they can perform to the same level of accuracy as stated in the manufacturer's specification. Before and after the baseline

measurement, the reading of sound level meter was checked with the acoustic calibrator and the measurements were accepted as valid if the calibration levels before and after the noise measurement agreed to within 1.0 dB. The measurement equipment is listed in Table 3.3.1 and Calibration Certificates of the equipment are shown in **Appendix D**.

Table 3.3.1 Equipment List for Noise Monitoring

Equipment	Manufacturer	Precision	Serial	Latest	Next
	& Model No.	Grade	No.	Calibration	Calibration Date
				Date	
Sound level	SVANTEK	IEC61672	34350	28/12/2015	27/12/2016
meter	971	Type 1			
Acoustical	SVANTEK	IEC 942	29085	28/12/2015	27/12/2016
calibrator	SV30A	Type 1			

3.4 Monitoring Methodology and Parameters

The construction noise level was measured in terms of the A-weighted equivalent continuous sound pressure level, L_{Aeq} . L_{Aeq} (30minutes) was used as the monitoring parameter for the impact monitoring in the time period between 0700 to 1900 hours on normal weekdays.

In case of non-compliance with the construction noise criteria, more frequent monitoring, as specified in the Action plan in Table 3.6.2, shall be carried out. This additional monitoring shall be carried out until the recorded noise levels are rectified or proved to be irrelevant to the construction activities.

Field monitoring procedures are as follows:

- The monitoring station was set at a point 1m from the exterior of the sensitive receivers building façade and set at a position 1.2m above the ground.
- The battery condition was checked to ensure good functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time will set as follows:
 - frequency weighting: A
 - time weighting: Fast
- Prior to and after noise measurement, the meter shall be calibrated using the calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement is more than 1.0 dB, the measurement will

- considered invalid and repeat of noise measurement is required after re-calibration or repair of the equipment.
- The wind speed at the monitoring station shall be checked with the portable wind meter.
- Noise monitoring should be cancelled in the presence of fog, rain, and wind with
 a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s. Noise
 measurement should be paused during periods of high intrusive
 noise if possible and observation shall be recorded when intrusive noise is not
 avoided.
- At the end of the monitoring period, the Leq, L₁₀ and L₉₀ shall be recorded. In addition, site conditions and noise sources should be recorded on a standard record sheet.

3.5 Maintenance and Calibration

Monitoring equipment was calibrated by the HOKAS Laboratory for every year and on-site calibrated before and after every monitoring.

3.6 Quality Assurance / Quality Control Results and Detection Limits

The sound level meter and calibrator were calibrated annually by the HOKLAS laboratory. The detection limits of the sound level meter meet with the prescribed standard. Calibration details and current Calibration Certificates are shown in **Appendix D**.

3.7 Action and Limit Level for Construction Noise

The Action and Limit levels for construction noise are defined in Table 3.7.1. Should exceedance of the criteria occur, action in accordance with the Action Plan in Table 3.7.2 shall be carried out.

Table 3.7.1 Action and Limit Levels for Construction Noise at all Sensitive Receivers

Monitoring Locations	Building Type	Time Period	Action Level	Limit Level
NM1	Residential	Daytime 0700 – 1900	When one	75 dB(A)

3.8 Monitoring Results and Observations

Noise impact monitoring was conducted at five monitoring locations. The monitoring results are summarized in Table 3.8.1. Detailed impact monitoring data of noise are shown in **Appendix F1**.

Table 3.8.1 Summary of average noise monitoring data

Monitoring Locations	Monitoring Date	Baseline Level	L _{Aeq} *1 (dB(A))	Re-M* ² L _{Aeq}	Action Level	Limit Level (dB(A))
		(dB(A))	(* ())	(dB(A))	(dB(A))

	21/7/2016		72.3	N/A	complaint is received	
	27/7/2016		71.0	N/A	received	

Remark:

^{*1} Measured result would be rounded down before comparison with the limit level

^{*2} Repeat noise measurement when exceedance is recorded

In accordance with the established action and limited levels for impact monitoring, six exceedances were recorded at NM2 on 21st July 2016 and NM4 on 5th, 11th, 15th, 21st and 27th July 2016. Noise measurement was repeated for confirming the findings and identifying the noise source for each exceedance according to the event and action plan.

The noise source for causing exceedances at NM2 was from other construction site, Design and Construction of West Kowloon Government Offices (DCWKGO), which located at No.11 Hoi Ting Road. The construction site of DCWKGO is located between Portion J and the NM2 and close to the NM2. The NM2 was directly affected by the noise generated from the construction site of DCWKGO. The exceedances were not caused by this project construction works.

The noise source for causing exceedances at NM4 was from the traffic of Canton Road. The NM4 was directly affected by the noise generated from the traffic. The recorded monitoring results at the NM4 were near the baseline noise level. The exceedances were not caused by this project construction works.

During the monitoring period, traffic noise was identified as one of the noise source for NM1, NM2, NM3, NM4 and NM5. Noise levels of NM1 and NM3 may be influenced by the construction activities from other construction sites near Nga Cheung Road. Noise level of NM2 may be influenced by construction activities from other construction sites near Hoi Ting Road. Noise levels of NM4 and NM5 may be influenced by the construction activities from other construction sites near Canton Road.

3.9 Monitoring Schedule for Next Reporting Month

The monitoring schedule for next reporting month is scheduled on 2nd, 8th, 13th, 19th, 25th and 31st August 2016.

4 Solid and Liquid Waste Management Status

With reference to relevant handling records and trip tickets of this Project, the quantities of different types of waste generated in the reporting month are summarised

^{*3 70}dB(A) for schools during normal teaching periods. School schedule is shown in **Appendix F2**

^{*4 65}dB(A) for schools examination periods. School schedule is shown in **Appendix F2**

in Table 4.1. During this reporting month, inert C&D materials and general refuse were generated and disposed. No mixed waste was generated. No chemical waste was generated and collected by licensed collector. No paper, plastic and metal was recycled. Detail of waste management data is presented in **Appendix G**.

Table 4.1 Quantities of Waste Disposed from the Project

	Quantity							
	Cen		C&D Materials (non-inert) (b)					
Donauting	C&D Materials (inert) (a)	Cananal	Missad		Recyc	led materi	ials	
Reporting Month		General Refuse	Mixed Waste		Paper/cardboard	Plastics	Metals	
	(in	(in	(in	(in	(in	(in	(in	
	'000kg)	'000kg)	'000kg)	'000kg)	'000kg)	'000kg)	'000kg)	
July 2016	5031.54	17.12	0	0	0	0	0	

Notes:

- (a) Inert C&D materials include bricks, concrete, building debris, rubble and excavated soil.
- (b) Non-inert C&D materials include steel, paper/cardboard packaging waste, plastics and other wastes such as general refuse and vegetative wastes. Steel metal generated from the Project are grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials.

Waste materials were generated during this reporting period, such as excavated waste, demolition waste and general refuse. Contractor handled, stored and disposed in accordance with good waste management practice and EPD's regulation and requirements.

5 Landscape and Visual Impact

In accordance with the EM&A Manual, the landscape and visual mitigation measures shall be implemented to minimize the landscape and visual impacts during the construction works. The proposed monitoring program for landscape and visual impact is detailed in Table 5.1.

Table 5.1 Proposed Monitoring Program

Stage	Monitoring Task	Frequency	Report	Approval
Construction	Mitigation measures	Bi-weekly	Landscape and	Registered
stage	implementation		Visual Impact	Landscape
			Assessment	Architect &
			Checklist	ET Leader

Bi-weekly site inspections were conducted by representatives of the Engineer, Contractor and ET on 12th and 29th July 2016. The observations, reminders and recommendations made during the site inspections are summarized in Section 6, Table 6.1.

The implementation status of the proposed mitigation measures for landscape and visual impacts is given in **Appendix H**. Should non-conformity on one occur, action in accordance with the Action Plan in Table 5.2 shall be carried out.

Table 5.2 Event / Action Plan for Landsscape and Visual Impact

	completed	5. Supervise implementation of remedial						
	6. If non-conformity stops, cease additional monitoring	measures.						

6 Environmental Site Inspection

6.1 Site Audit

Site audit was carried out by ET on weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures in the Project site.

Joint weekly inspections were conducted by representatives of the Contract Administrator, Engineer, Contractor and ET on 4th, 11th, 20th and 25th July 2016. The representative of the IEC joined the site inspection on 20th July 2016. Observations were recorded and summarized in table 6.1.

During site inspection in the reporting month, no non-compliance was identified.

6.2 Implementation Status of Environmental Mitigation Measures

According to the EM&A Manual of the Project, the mitigation measures detailed in the documents shall be implemented during the construction phase. Updated status summary of the Environmental Mitigation Implementation Schedule is provided in **Appendix H**.

The observations, reminders and recommendations made during the audit sessions are summarized in table 6.1.

Table 6.1 Summary results of site inspections findings.

	ore ori builling results	<u></u>			
Date	Findings	Identification	Advice from ET	Action taken	Closing date
22 Jun 16	Exposed surface and unpaved areas appeared dry. (Scheme I & Scheme J)	Observation	Contractor was advised to frequently implement the water spraying and cover the exposed surface as possible.	Exposed areas were sprayed with water for dust control or cover with tarpaulin as possible.	4 Jul 16
	Stagnant water was accumulated in areas of underground works (Scheme J).	Observation	Contractor was advised to set up the pumps and drainage system for collecting and directing the water from the underground areas.	Pumps were set up for collecting and directing the water from underground areas.	11 Jul 16
22 Jun 16	Sand and silt were accumulated in the drip tray of the generator near the slope (Scheme J)	Observation	Contractor was advised to remove the sand and silt from the drip tray and also relocate the generator for preventing close to the slope.	The generator was relocated. The sand and silt from the drip tray was removed.	4 Jul 16
27 Jun 16	A bag of cement was exposed (Scheme Q)	Observation	Contractor was advised to remove the cement and properly store the dusty materials.	The exposed cement was removed.	4 Jul 16
11 Jul 16	Wet season was being started.	Reminder	Contractor was reminded to frequently remove the stagnant water during wet season for prevention and control of mosquito and keeping the site clean and tidy.	N/A	N/A
20 Jul 16	The tarpaulin sheets covering the exposed slope were eroded. (Scheme J)	Observation	Contractor was advised to replace the tarpaulin sheets and properly protect the slope.	Exposed slope were properly covered.	25 Jul 16
	There is inadequate interception along the edge of excavation. (Scheme Q)	Observation	Contractor was advised to provide sandbags along the edge of the excavation area such to prevent the dust from entering the neighbouring roads.	The edge of the excavated area was properly intercepted by using the sandbags.	25 Jul 16
	A stockpile of waste materials due to illegal dumping from others was observed near out of the site boundary.	Reminder	Contractor was reminded to remove the waste materials as these materials fall within the site area.	N/A	N/A
	and Visual Impact				
10 Jun 16	Construction materials were piled within TPZ (Scheme HA)	Observation	Contractor was reminded to relocate the construction materials which were piled within the TPZ	status will be reported in the next reporting period.	N/A
24 Jun 16	TPZ was collapsed (Scheme J)	Observation	Contractor was reminded to properly maintain the TPZ.	TPZ was proved for the retained trees.	12 Jul 16

7 Environmental Non-Conformance

7.1 Summary of Environmental Exceedances

No exceedance of action level and limit level was recorded for TSP. Six exceedances were recorded at NM2 on 21st July 2016 and NM4 on 5th, 11th, 15th, 21st and 27th July 2016 for Noise.

7.2 Summary of Environmental Non-Compliance

No environmental non-compliance was recorded in the reporting month.

7.3 Summary of Environmental Complaint

No environment project-related complaint was received in the reporting period.

7.4 Summary of Notification of Summons and Successful Prosecution

There was no successful environmental prosecution or notification of summons received since the Project commencement.

The cumulative log for environmental exceedance, non-compliance, complaint and summon and successful prosecution since the commencement of the Project is presented in **Appendix I**.

8 Future Key Issues

The major construction activities in the coming month will include:

- Portion I Underground Investigation Works
- Portion I Utilities Diversion Works
- Portion HA Underground Investigation Works
- Portion HA Utilities Diversion Works
- Portion J Utilities Diversion Works
- Portion J Construction of Retaining Walls
- Portion Q Road Works (excavation, drainage construction and utilities diversion)

Potential environmental impacts arising from the above construction activities are mainly associated with dust, construction noise, water quality and waste management. The Contractor has been reminded to properly implement dust, construction noise and water quality control measures as well as proper waste management in order to minimize the potential environmental impacts due to the construction works of the Project.

9 Comment, Recommendations and Conclusions

9.1 Comment

The recommended mitigation measures accordance with the EM&A Manual had been effectively implemented to minimize the environmental impacts due to the construction. The contractor had implemented the mitigation measures to control the dust and noise impacts. No dust and noise impacts obviously affected to the environment and sensitive receivers. The environmental performance during the reporting period was considered satisfactory.

9.2 Recommendations

According to the environmental audit performed in the reporting month, the following recommendation was made:

- To frequently implement the water spraying and cover the exposed surface as possible;
- To set up the pumps and drainage system for collecting and directing the water from the underground areas;
- To remove the sand and silt from the drip tray and also relocate the generator for preventing close to the slope;
- To remove the cement and properly store the dusty materials;
- To frequently remove the stagnant water during wet season for prevention and control of mosquito and keeping the site clean and tidy;
- To replace the tarpaulin sheets and properly protect the slope;
- To provide sandbags along the edge of the excavation area such to prevent the dust from entering the neighbouring roads;
- To remove the waste materials as these materials fall within the site area;
- To relocate the construction materials which were piled within the TPZ;
- No properly maintain the TPZ;
- To provide TPZ with robust fence at the dripline of all retained and to-be-transplanted trees;
- To provide sufficient stabilization system and mulching to the transplanted trees.
- To remove the ties;
- To conduct crown pruning for the existing tree which next to T24.

9.3 Conclusions

This is the monthly Environmental Monitoring and Audit (EM&A) Report presenting the EM&A works undertaken during 1st July 2016 to 31st July 2016 in accordance with the EM&A Manual.

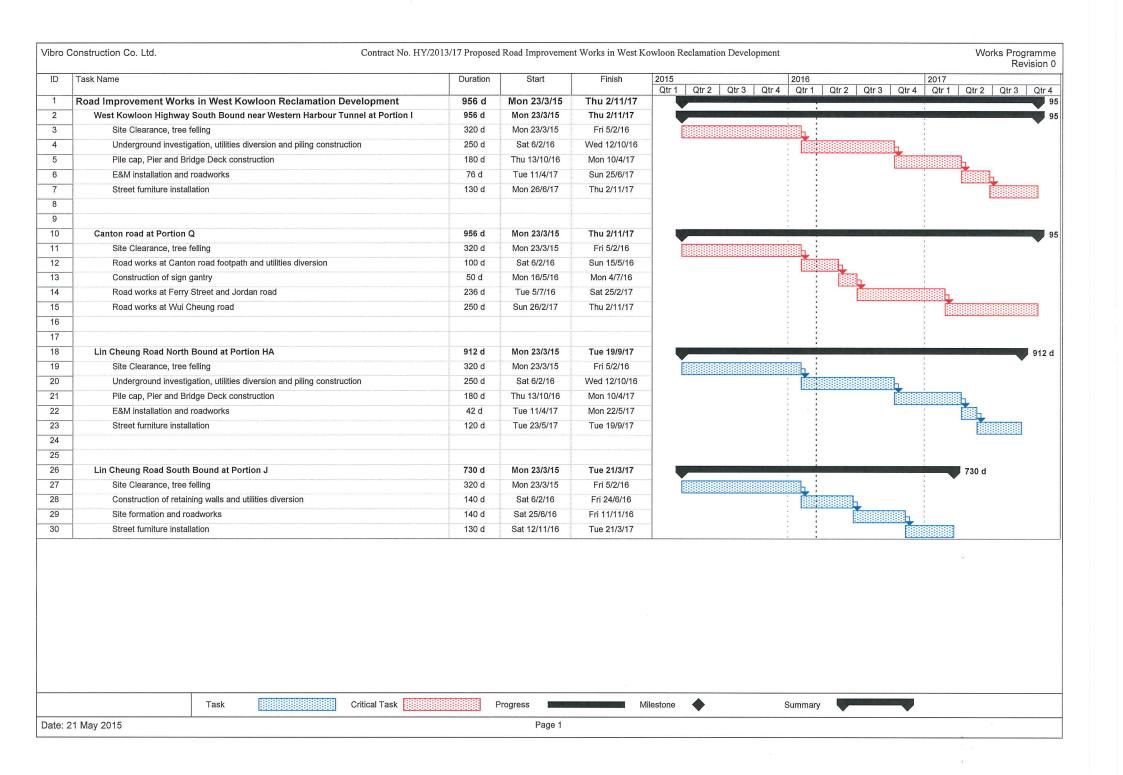

No exceedance of action level and limit level was recorded for TSP. Six exceedances were recorded at NM2 on 21st July 2016 and NM4 on 5th, 11th, 15th, 21st and 27th July 2016 for Noise. No Non-compliance event, environmental complaint, notification of summons and successful prosecution against the Project were received in this reporting month.

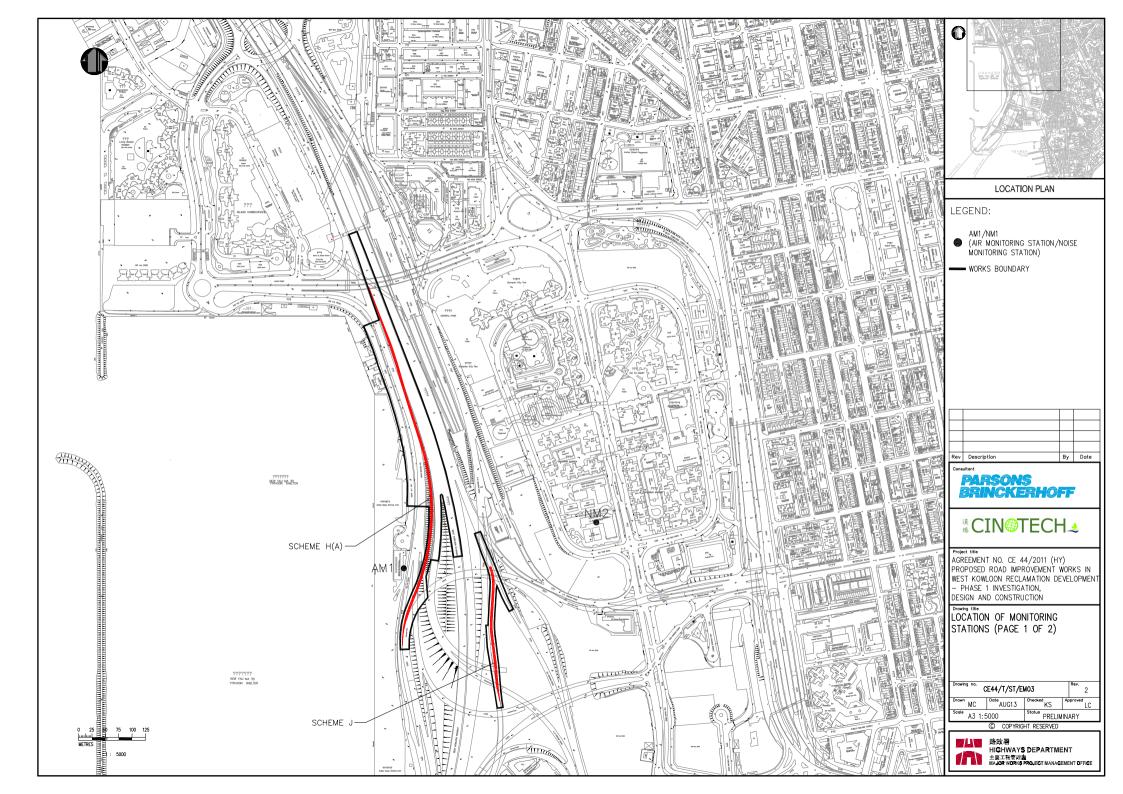

4 nos. of environmental site inspections and 2 nos. of landscape and visual inspections were carried out in this reporting month. Recommendations on remedial actions were given to the Contractor for the deficiencies identified during the site audit.

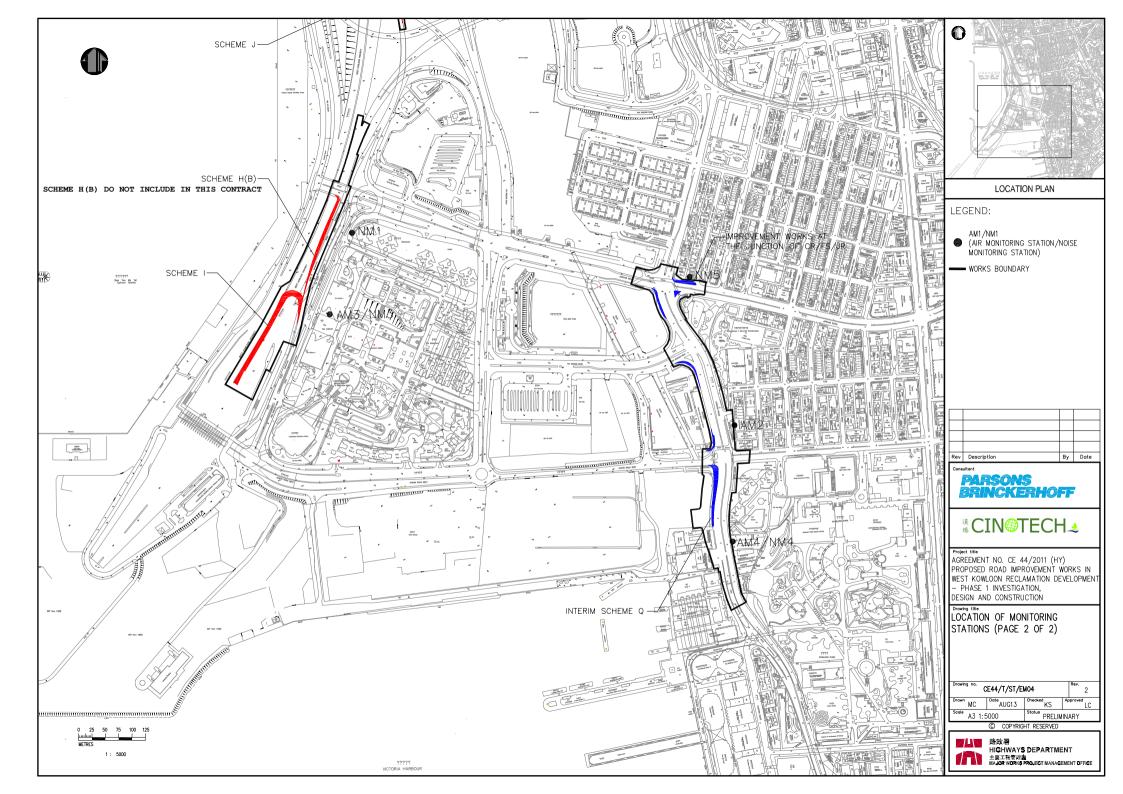

ET has reminded the contractor to provided environmental pollution control measures, waste management measures and good site practice

The ET will keep tracking of the EM&A programme to ensure compliance of environmental requirements and the proper implementation of all the necessary mitigation measures.

Test specifications

- The Sound Level Meter has been calibrated in accordance with the requirements as specified in BS 7580: Part 1: 1997 and the lab calibration procedure SMTP004-CA-152.
- 2, The electrical tests were performed using an electrical signal substituted for the microphone which was removed and replaced by an equivalent capacitance within a tolerance of ±20%.
- 3 The acoustic calibration was performed using an B&K 4226 sound calibrator and corrections was applied for the difference between the free-field and pressure responsess of the Sound Level Meter.

Test results

This is to certify that the Sound Level Meter conforms to BS 7580: Part 1: 1997 for the conditions under which the test was performed.

Details of the performed measurements are presented on page 2 of this certificate.

Huang Jian Min/Feng Jun Qi

Actual Measurement data are documented on worksheets.

Approved Signatory:

Date:

04-Jan-2016

Company Chop:

The results reported in this certificate refer to the condition of the instrument on the date of calibration and carry no implication regarding the long-term stability of the instrument.

2

1, Electrical Tests

The electrical tests were performed using an equivalent capacitance substituted for the microphone. The results are given in below with test status and the estimated uncertainties. The "Pass" means the result of the test is inside the tolerances stated in the test specifications. The "-" means the result of test is outside these tolerances.

			Expanded	Coverage
Test:	Subtest:	Status:	Uncertanity (dB)	Factor
Calf annual advanta	٥		0.0	
Self-generated noise	A	Pass	0.3	
	С	Pass	0.6	
No. of the state o	Lin	Pass	1.0	
Linearity range for Leq	At reference range, Step 5 dB at 4 kHz	Pass	0.3	
	Reference SPL on all other ranges	Pass	0.3	
	2 dB below upper limit of each range	Pass	0.3	
	2 dB above lower limit of each range	Pass	0.3	
Linearity range for SPL	At reference range, Step 5 dB at 4 kHz	Pass	0.3	
Frequency weightings	A	Pass	0.3	
	С	Pass	0.3	
	Lin	Pass	0.3	
Time weightings	Single Burst Fast	Pass	0.3	
	Single Burst Slow	Pass	0.3	
Peak response	Single 100µs rectangular pulse	Pass	0.3	
R.M.S. accuracy	Crest factor of 3	Pass	0.3	
Time weighting I	Single burst 5 ms at 2000 Hz	Pass	0.3	
	Repeated at frequency of 100 Hz	Pass	0.3	
Time averaging	1 ms burst duty factor 1/10 ³ at 4kHz	Pass	0.3	
	1 ms burst duty factor 1/10 ⁴ at 4kHz	Pass	0.3	
Pulse range	Single burst 10 ms at 4 kHz	Pass	0.4	
Sound exposure level	Single burst 10 ms at 4 kHz	Pass	0.4	
Overload indication	SPL	Pass	0.3	
	Leq	Pass	0.4	

2, Acoustic tests

The complete sound level meter was calibrated on the reference range using a B&K 4226 acoustic calibrator with 1000Hz and SPL 94 dB. The sensitivity of the sound level meter was adjusted. The test result at 125 Hz and 8000 Hz are given in below with test status and the estimated uncertainties.

Test:	Subtest	Status	Expanded Uncertanity (dB)	Coverage Factor
Acoustic response	Weighting A at 125 Hz	Pass	0.3	
	Weighting A at 8000 Hz	Pass	0.5	

3, Response to associated sound calibrator

N/A

The expanded uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95%. A coverage factor of 2 is assumed unless explicitly stated.

Calibrated by:

fung Chi Yip 28-Dec-2015 End -

Checked by:

Date:

Lam Tze Wai 04-Jan-2016

The standard(s) and equipment used in the calibration are traceable to national or international recognised standards and are calibrated on a schedule to maintain the required accuracy level.

Serial No.

54635

Report: 15CA1228 01-01

SELF GENERATED NOISE TEST

The noise test is performed in the most sensitive range of the SLM with the microphone replaced by an equivalent impedance.

Noise level in A weighting 11.9 dB
Noise level in C weighting 11.9 dB
Noise level in Lin (Z) 16.9 dB

LINEARITY TEST

The linearity is tested relative to the reference sound pressure level using a continuous sinusoidal signal of frequency 4 kHz. The measurement is made on the reference range for indications at 5 dB intervals starting from the 94 dB reference sound pressure level. And until within 5 dB of the upper and lower limits of the reference range, the measurements shall be made at 1 dB intervals.(SLM set to LEQ/SPL)

Measurements on all level ranges for indications 2 dB below the upper limit and 2 dB above the lower limit

Ranges	Reference/Expected level	Actual level	Tolerance	Deviation
dB	dB	dB	+/- dB	dB
40-140	42.0	42.0	0.7	0.0
40-140	138.0	138.0	0.7	0.0
25-120	28.0	27.3	0.7	-0.7
25-120	118.0	118.0	0.7	0.0

FREQUENCY WEIGHTING TEST

The frequency response of the weighting netwoks are tested at octave intervals over the frequency ranges 31.5 Hz to 12500 Hz. The signal level at 1000 Hz is set to give an indication of the reference SPL. Frequency weighting A:

Frequency	Ref. level	Expected level	Actual level	Tolerar	nce(dB)	Deviation
Hz	dB	dB	dB	+	-	dB
1000.0	94.0	94.0	94.0	0.0	0.0	0.0
31.6	94.0	54.6	54.7	1.5	1.5	0.1
63.1	94.0	67.8	67.9	1.5	1.5	0.1
125.9	94.0	77.9	77.9	1.0	1.0	0.0

12590.0	94.0	94.0	93.9	3.0	6.0	-0.1

TIME WEIGHTING FAST TEST

Time weighting F is tested on the reference range with a single sinusoidal burst of duration 200 ms at a frequency 2000 Hz and an amplitude which produces an indication 4 dB below the upper limit of the primary indicator range when the signal is continuous. (Weight A, Maximum hold)

Ref. level	Expected level	Actual level	Tolera	nce(dB)	Deviation
dB	dB	dB	+	-	dB
81.0	80.0	80.0	1.0	1.0	0.0

TIME WEIGHTING SLOW TEST

Time weighting S is tested on the reference range with a single sinusoidal burst of duration 500 ms at a frequency 2000 Hz and an amplitude which produces an indication 4 dB below the upper limit of the primary indicator range when the signal is continuous. (Weight A, Maximum hold)

Ref. level	Expected level	Actual level	Tolera	nce(dB)	Deviation
dB	dB	dB	+	_	dB
81.0	76.9	76.9	1.0	1.0	0.0

PEAK RESPONSE TEST

The onset time of the peak detector is tested on the reference range by comparing the response to a 100 us rectangular test pulse with the response to a 10 ms reference pulse of the same amplitude. The amplitude of the 10 ms reference pulse is such as to produce an indication 1 dB below the upper limit of the primary indicator range. Positive polarities: (Weighting Z, set the generator signal to single, Lzpeak)

RMS ACCURACY TEST

The RMS detector accuracy is tested on the reference range for a crest factor of 3.

Test frequency:

2000 Hz

Amplitude:

2 dB below the upper limit of the primary indicator range.

Burst repetition frequency: 40

40 Hz

Tone burst signal:

11 cycles of a sine wave of frequency 2000 Hz. (Set to INT)

	Ref. Level	Expected level	Tone burst signal	Tolerance	Deviation
Time wighting	dB	dB	indication(dB)	+/- dB	dB
Slow	83.0+6.6	83.0	83.0	0.5	0.0

TIME WEIGHTING IMPULSE TEST

Time weighting I is tested on the reference range (Set the SLM to LAImax)

Test frequency:

2000 Hz

Amplitude:

The upper limit of the primary indicator range.

Single sinusoidal burst of duration 5 ms:

Ref. Level	Single burst	t indication	Tolerance	Deviation
dB	Expected (dB)	Actual (dB)	+/- dB	dB
85.0	76.2	76.1	2.0	-0.1

Repeated at 100 Hz

Ref. Level	Repeated burst indication		Tolerance	Deviation
dB	Expected (dB)	Actual (dB)	+/- dB	dB
85.0	82.3	82.2	1.0	-0.1

TIME AVERAGING TEST

This test compares the SLM reading for continuous sine signals with readings obtained from a sine tone burst sequence having the same RMS level. The test level is 30 dB below the upper limit of the linearity range and repeated for Type 1 SLM with 40 dB below the upper limit of the linearity.

Frequency of tone burst:

4000 Hz

Duration of tone burst:

1 ms

Repetition T		vel of burst	Expected Leq	Actual Leg	Tolerance	Deviation	Remarks

Ambient conditions

Temperature:

21 ± 1 °C

Relative humidity:

55 ± 5 %

Air pressure:

1005 ± 5 hPa

Test specifications

- The Sound Calibrator has been calibrated in accordance with the requirements as specified in IEC 60942 1997 Annex B
 and the lab calibration procedure SMTP004-CA-156.
- 2, The calibrator was tested with its axis vertical facing downwards at the specific frequency using insert voltage technique.
- 3, The results are rounded to the nearest 0.01 dB and 0.1 Hz and have not been corrected for variations from a reference pressure of 1013.25 hectoPascals as the maker's information indicates that the instrument is insensitive to pressure changes.

Test results

Details of the performed measurements are presented on page 2 of this certificate.

Approved Signatory:

Date:

04-Jan-2016

Company Chop:

Huang Jian Min/Feng Jun Qi

Comments: The results reported in this certificate refer to the condition of the instrument on the date of calibration and carry no implication regarding the long-term stability of the instrument.

CERTIFICATE OF CALIBRATION

(Continuation Page)

Certificate No.:

15CA1228 01-02

Page:

Measured Sound Pressure Level

The output Sound Pressure Level in the calibrator head was measured at the setting and frequency shown using a calibrated laboratory standard microphone and insert voltage technique. The results are given in below with the estimated uncertainties

			(Output level in dB re 20 µPa)
Frequency Shown	Output Sound Pressure Level Setting	Measured Output Sound Pressure Level	Estimated Expanded Uncertainty
Hz	dB	dB	dB
1000	94.00	93.67	0.10

2, Sound Pressure Level Stability - Short Term Fluctuations

The Short Term Fluctuations was determined by measuring the maximum and minimum of the fast weighted DC output of the B&K 2610 measuring amplifier over a 20 second time interval as required in the standard. The Short Term Fluctuation was found to be:

At 1000 Hz

STF = 0.001 dB

Estimated expanded uncertainty

0.005 dB

3, **Actual Output Frequency**

The determination of actual output frequency was made using a B&K 4180 microphone together with a B&K 2673 preamplifier connected to a B&K 2610 measuring amplifier. The AC output of the B&K 2610 was taken to an universal counter which was used to determine the frequency averaged over 20 second of operation as required by the standard. The actual output frequency at 1 KHz was:

At 1000 Hz

Actual Frequency = 1000.0 Hz

Estimated expanded uncertainty

0 1 Hz

Coverage factor k = 2.2

Total Noise and Distortion 4,

For the Total Noise and Distortion measurement, the unfiltered AC output of the B&K 2610 measuring amplifier was connected to an Agilent Type 8903 B distortion analyser. The TND result at 1 KHz was:

At 1000 Hz

TND = 0.4 %

Estimated expanded uncertainty

0.7%

The expanded uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95%. A coverage factor of 2 is assumed unless explicitly stated.

Calibrated by:

Date:

Fung Chi Yip

Checked by:

Lam Tze Wai

28-Dec-2015

Date:

04-Jan-2016

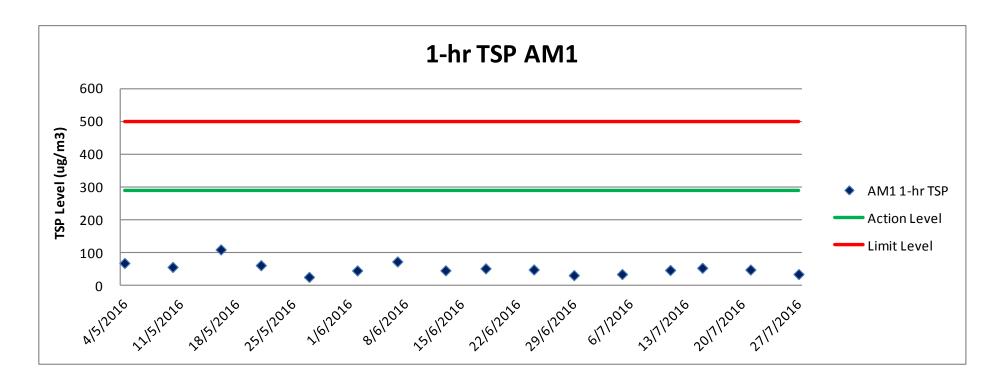

The standard(s) and equipment used in the calibration are traceable to national or international recognised standards and are calibrated on a schedule to maintain the required accuracy level.

General Comments

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release. When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes. The completion date of analysis is: 28-JUL-2016

Key: LOR = Limit of reporting; CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

Specific Comments for Work Order: HK1625964

Sample(s) were received in an ambient condition.

Sample(s) analysed and reported on an as received basis.

This report may not be reproduced except with prior written approval from the testing laboratory.

						phase		
Water I	mpact (Con	struction Phase)			•			
5.8	W1	Recirculate settled water for ground boring	To minimize	HyD's	Whole	Throughout	ProPECC PN	~
		and drilling	wastewater	Contractor	construction	construction	1/94, EIAO-TM	
		during site investigation or rock/soil	generation		site	phase		
		anchoring.						
5.8	W2	Set up sedimentation tank for settling	To reduce the amount	HyD's	Whole	Throughout	ProPECC PN	V
		suspended solids in wastewater before	of suspended solid in	Contractor	construction	construction	1/94, EIAO-TM	
		discharge into storm drains. Sand/silt	wastewater		site	phase		

		removal facilities such as sand traps, silt						
		traps and sedimentation basin should be						
		provided with adequate capacity.						
5.8	W3	Pave the construction road between the	To prevent soil and	HyD's	Whole	Throughout	ProPECC PN	✓
		wheel washing bay and the public road with	site	Contractor	construction	construction	1/94, EIAO-TM	
		backfall	runoff from leaving		site	phase		
			the site					
5.8	W4	Follow ProPECC PN 1/94 "Construction	To minimize surface	HyD's	Whole	Throughout	ProPECC PN	V
		Site Drainage" as far as practicable	runoff and chance of	Contractor	construction	construction	1/94, EIAO-TM	
			erosion		site	phase		
5.8	W5	Provide perimeter channels at site	To stop offsite storm	HyD's	Whole	Throughout	ProPECC PN	~
		boundaries.	runoff from entering	Contractor	construction	construction	1/94, EIAO-TM	
			the site		site	phase		
5.8	W6	Construct catchpits and perimeter channels	To stop runoff from	HyD's	Whole	Throughout	ProPECC PN	*
		prior to commencement of site formation	flowing across the site	Contractor	construction	construction	1/94, EIAO-TM	
		works and earthworks.			site	phase		
5.8	W7	Maintain silt removal facilities, channels,	To prevent failure that	HyD's	Whole	Throughout	ProPECC PN	✓
		manholes before and after rainstorm.	may lead to flooding	Contractor	construction	construction	1/94, EIAO-TM	
					site	phase		
5.8	W8	Remove sediment from silt and grit at	To prevent blockage	HyD's	Whole	Throughout	ProPECC PN	~
		regular interval.	the may lead to	Contractor	construction	construction	1/94, EIAO-TM	
			flooding		site	phase		
5.8	W9	Consider environmental requirements when	To ensure adequate	HyD's	Whole	Throughout	ProPECC PN	~
		diverting or realigning drainage.	hydraulic capacity of	Contractor	construction	construction	1/94, EIAO-TM	
			all drains		site	phase		

5.8	W10	Maintain a minimum distance of 100m between discharge point of construction site runoff and the existing saltwater intakes. No effluent will be discharged into typhoon	To prevent mixing	HyD's Contractor	Whole construction site	Throughout construction phase	ProPECC PN 1/94, EIAO-TM	~
		shelter. (for loations of seawater intakes, please refer to Figure 5.1 in EIA Report)						
5.8	W11	Arrange soil excavation works outside rainy seasons (April to September) as far as possible. If this cannot beachieved, the following measures should be implemented:	To minimize surface runoff and chance of erosion	HyD's Contractor	Whole construction site	Throughout construction phase	ProPECC PN 1/94, EIAO-TM	
		-Cover temporary exposed slope surfaces with impermeable materials, e.g. tarpaulin						~
		- Protect temporary access roads by crushed stone or gravel						N/A
		- Proved intercepting channels along crest/edge of excavation						N/A
		- Carry out adequate surface protection measures well before the arrival of a rainstorm						N/A
5.8	W12	Compact soil after earthwork. Provide permanent work or surface protection with appropriate drainage channels immediately after forming the final surfaces.	To prevent soil erosion under rainstorm	HyD's Contractor	Whole construction site	Throughout construction phase	ProPECC PN 1/94, EIAO-TM	•
5.8	W13	Prevent rainwater from entering trenches. Excavation of trenches should be dug and backfilled in short sections during rainy	To prevent soil erosion under rainstorm	HyD's Contractor	Whole Construction site	Throughout construction phase	ProPECC PN 1/94, EIAO-TM	N/A

		seasons. Remove silt in rainwater collected						
		from the trenches or foundation excavations						
		prior to discharge to storm drains.						
5.8	W14	Cover open stockpiles of construction	To prevent soil erosion	HyD's	Whole	Throughout	ProPECC PN	V
		materials (e.g. aggregates, sand and fill	under rainstorm	Contractor	construction	construction	1/94, EIAO-TM	
		materials) with impermeable materials such			site	phase		
		as tarpaulin during rainstorms.						
5.8	W15	Cover and temporary seal manholes	To prevent	HyD's	Whole	Throughout	ProPECC PN	~
		(including newly constructed ones) to	overloading of foul	Contractor	construction	construction	1/94, EIAO-TM	
		prevent silt, construction materials or debris	sewers		site	phase		
		and surface runoff from entering foul						
		sewers.						
5.8	W16	Remove waste from the site regularly.	To prevent waste	HyD's	Whole	Throughout	ProPECC PN	V
			accumulation	Contractor	construction	construction	1/94, EIAO-TM	
					site	phase		
5.8	W17	Apply discharge license for effluent	To ensure compliance	HyD's	Whole	Throughout	WPCO,TM-DSS,	~
		discharge. Treat the discharge to comply	with effluent discharge	Contractor	construction	construction	EIAO-TM	
		with the requirement in TM-DSS.	requirement		site	phase		
5.8	W18	Reuse treated effluent onsite, e.g. dust	To minimize	HyD's	Whole	Throughout	Waste Disposal	✓
		suppression, wheel washing and general	wastewater	Contractor	construction	construction	Ordinance,	
		cleaning.	generation		site	phase	EIAO-TM	
5.8	W19	Monitor effluent water quality.	To ensure compliance	HyD's	Whole	Throughout	WPCO,	~
			with effluent discharge	Contractor	construction	construction	EIAO-TM	
			requirement		site	phase		
5.8	W20	Register as chemical waste producer if	To control chemical	HyD's	Whole	Throughout	Waste Disposal	~
		chemical waste will be generated.	waste	Contractor	construction	construction	(Chemical	
					site	phase	Waste) (General)	

							Regulation,	
							EIAO-TM	
5.8	W21	Perform maintenance of vehicles and	To prevent oil leakage	HyD's	Whole	Throughout	Waste Disposal	~
		equipment that have oil leakage and spillage	or spillage	Contractor	construction	construction	(Chemical	
		potential on hard standings within a bunded			site	phase	Waste) (General)	
		area with sumps and oil interceptors.					Regulation,	
							EIAO-TM	
5.8	W22	Dispose chemical waste in accordance to	To avoid accident in	HyD's	Whole	Throughout	Waste Disposal	V
		Waste Disposal Ordinance. Follow the Code	waste storage and	Contractor	construction	construction	Ordinance,	
		of Practice on the Packaging, Labelling and	handling		site	phase	EIAO-TM	
		Storage of Chemical Wastes ,examples as						
		follows:						
		- Store chemical wastes with suitable						
		containers to avoid						
		leakage or spillage during storage, handling						
		and transport						
		- Label chemical waste containers according						
		to the CoP to notify and warn the waste						
		handlers						
		- Store chemical wastes at designated safe						
		location with						
		adequate space						

5.8	W23	Provide sufficient chemical toilets with regular maintenance by licensed chemical waste collector	To proper collection of taskforce waste	HyD's Contractor	Whole construction site	Throughout construction phase	Waste Disposal Ordinance, EIAO-TM	'
Water I	mpact (Oper	rational Phase)				1		<u> </u>
5.8	W24	Direct surface runoff for silt removal through silt trap before flowing to public storm water drainage system	To remove silt in surface runoff	HyD	Whole construction site	Throughout construction phase	WPCO, EIAO-TM	~
5.8	W25	Regularly maintain the silt traps	To prevent blockage	HyD	Whole construction site	Throughout construction phase	WPCO, EIAO-TM	V
Waste I	Management	t (Construction Phase)			•	1		-
6.5	WM1	Allocate an area for waste sorting and storage of C&D materials into the following categories for reuse, recycle or disposal: - excavated material suitable for reuse - inert C&D material for disposal offsite - non-inert C&D materials for disposal at landfills - chemical waste - general refuse	To minimize waste generation	HyD's Contractor	Whole construction site	Throughout construction phase	Waste Disposal Ordinance, EIAO-TM	~
6.5	WM2	Adopt good site practice as follows: - Provide training to workers on site cleanliness, waste management (waste	To proper handling of waste	HyD's Contractor	Whole construction site	Throughout construction phase	Waste Disposal Ordinance, EIAO-TM	V

		reduction, reuse and recycle) and chemical handling procedures - Provide sufficient waste collection points and regular removal - Cover waste materials with tarpaulin or in enclosure during transportation - Maintain drainage systems, sumps and oil interceptors - Sort out chemical waste for proper handling and treatment						
6.5	WM3	Adopt waste reduction measures as follows: - Allocate area/containers for sorting, recovering and storing waste for reuse, recycle or disposal (e.g. demolition debris and excavated materials, general refuse like aluminium cans) - Allocate area for proper storage of construction materials to prevent contamination - Minimize wastage through careful planning and avoiding over-purchase of construction materials	To minimize waste generation	HyD's Contractor	Whole construction site	Throughout construction phase	Waste Disposal Ordinance, EIAO-TM	•
6.5	WM4	Prepare and implement a site specific Waste Management Plan (WMP) as part of Environmental Management Plan (EMP) in accordance with ETWB TCW No. 19/25. Detail waste management method in the form of avoidance, reuse, recoverery,	To provide guidance to waste management	HyD's Contractor	Whole construction site	Throughout construction phase	ETWB TCW No. 19/2005, EIAO-TM	•

		recycling, storage, collection, treatment and disposal according to the recommendations on the EIA						
		and EM&A Manual. It should be approved by the ER and						
6.5	WM5	Store waste materials properly as follows:	To properly store	HyD's	Whole	Throughout	ProPECC PN	~
		- Avoid contamination by proper handling	waste	Contractor	construction	construction	1/94, EIAO-TM	
		and storing waste			site	phase		
		- Prevent erosion by covering waste or						
		applying water spray						
		- Maintain and clean storage area regularly						
		- Sort and stockpile different materials at						
		designated location to enhance reuse						
6.5	WM6	Apply for relevant waste disposal permits in	To properly dispose	HyD's	Whole	Throughout	Waste Disposal	·
		accordance with the Waste Disposal	waste	Contractor	construction	construction	Ordinance	
		Ordinance (Cap. 354), Waste			site	phase	(Cap. 354),	
		Disposal (Charges for Disposal of					Waste Disposal	
		Construction Waste)					(Charges for	
		Regulation (Cap. 345) and the Land					Disposal of	
		(Miscellaneous					Construction	
		Provisions) Ordinance (Cap. 28).					Waste)	
							Regulation	
							(Cap. 345) and	
							the Land	
							(Miscellaneous	
							Provisions)	
							Ordinance (Cap.	
							28), EIAO-TM	

6.5	WM7	Hire licensed waste disposal contractors for waste collection and removal. Dispose waste at licensed waste disposal facilities	To properly dispose waste	HyD's Contractor	Whole construction site	Throughout construction phase	Waste Disposal Ordinance, EIAO-TM	~
6.5	WM8	Implement trip-ticket system for recording the amount of waste generated, recycled and disposed, including chemical wastes	To monitor movement of waste	HyD's Contractor	Whole construction site	Throughout construction phase	Waste Disposal (Chemical Waste) (General) Regulation, Waste Disposal Ordinance, EIAO-TM	~
6.5	WM9	Provide wheel washing bay at site exit to clean the vehicle body and wheel	To prevent dust from being brought offsite	HyD's Contractor	Whole construction site	Throughout construction phase	ProPECC PN 1/94, EIAO-TM	~
6.5	WM10	Reduce water content in wet spoil generated from piling work by mixing with dry materials. Only dispose treated spoil with less than 25% dry density to Public Fill Reception Facilities	To minimize load to reception facilities	HyD's Contractor	Whole construction site	Throughout construction phase	Waste Disposal Ordinance, EIAO-TM	~
6.5	WM11	Dispose dry waste or waste with less than 70% water content by weight to landfill	To minimize load to reception facilities	HyD's Contractor	Whole construction site	Throughout construction phase	Waste Disposal Ordinance, EIAO-TM	~
6.5	WM12	Follow the Code of Practice on the Packaging, Labelling and Storage of Chemical Waste as follows: - Store chemical wastes with suitable	To avoid accident in waste storage and handling	HyD's Contractor	Whole construction site	Throughout construction phase	Waste Disposal Ordinance, EIAO-TM	~

		containers. Seal and maintain the container						
		to avoid leakage or spillage during						
		storage, handling and transport						
		- Label chemical waste containers in both						
		English and Chinese with instructions in						
		accordance to Schedule 2 of						
		the Waste Disposal (Chemical Waste)						
		(General) Regulation						
		- The container capacity should be smaller						
		than 450 litres						
		unless agreed by the EPD						
6.5	WM13	Comply with the requirement of the	To ensure proper	HyD's	Whole	Throughout	Waste Disposal	V
		chemical storage area:	storage of chemical	Contractor	construction	construction	Ordinance,	
		- Store only chemical waste and label	waste		site	phase	EIAO-TM	
		clearly the chemical characters of the waste						
		- Have at least 3 sides enclosed and						
		protected from rainfall with cover						
		- Provide sufficient ventilation						
		- Have impermeable floor and has bunds to						
		contain 110% of the capacity of the largest						
		container or 20% of the total volume of the						
		stored waste in the area, whichever is larger						
		- Adequately spaced incompatible materials						
6.5	WM14	Transfer used lubricants, waste oils and	To ensure proper	HyD's	Whole	Throughout	Waste Disposal	N/A
		other chemicals to oil recycling companies,	disposal of	Contractor	construction	construction	(Chemical	
		if possible, and empty oil drums for reuse or	chemical waste		site	phase	Waste) (General)	
		refill. No direct or indirect discharge is					Regulation,	
		permitted					EIAO-TM	

6.5	WM15	Hire licensed chemical waste disposal	To ensure proper	HyD's	Whole	Throughout	Waste Disposal	N/A
		contractors for waste collection and	disposal of	Contractor	construction	construction	(Chemical	
		removal. Dispose chemical waste at the	chemical waste		site	phase	Waste) (General)	
		approved CWTC at Tsing Yi or other					Regulation,	
		licensed facility					EIAO-TM	
6.5	WM16	Hire reputable waste collector to separately	To ensure proper	HyD's	Whole	Throughout	Waste Disposal	·
		collect and dispose general refuse from	disposal of	Contractor	construction	construction	(Chemical	
		other wastes. Cover the waste to prevent	general refuse		site	phase	Waste) (General)	
		being blown away					Regulation,	
							EIAO-TM	
6.5	WM17	Provide recycling bins for sorting out	To ensure proper	HyD's	Whole	Throughout	Waste Disposal	'
		recyclables for collection by recycling	recycling	Contractor	construction	construction	Ordinance,	
		companies. Non-recyclables should be	and disposal of general		site	phase	EIAO-TM	
		removed to designated landfills every day	refuse					
		by licensed collectors to prevent						
		environmental and health nuisance.						
6.5	WM18	Organize training and reminders to site staff	To ensure proper	HyD's	Whole	Throughout	EIAO-TM	~
		on waste minimization through avoidance	management of	Contractor	construction	construction		
		and reduction, reusing and recycling	general		site	phase		
			refuse					
6.5	WM19	Carry out testing to verify sediment quantity	To verify the	HyD's GI	Drillholes	Throughout	ETWB TC(W)	N/A
		and quality	categories of sediment	Contractor	CB1 to 5 as shown	construction	No. 34/2002

			accordance with		Sampling and			
			ETWB		Testing Plan			
			TC(W) No. 34/2002					

Landscap	e and Vis	ual						
7.9.3	CM1	Shorten the construction period	To minimize duration of landscape and visual impact	HyD's Contractor	Whole construction site	Throughout construction phase	EIAO-TM	N/A
7.9.3	CM2	Limit work within site area without encroaching into the landscape resources offsite.	To minimize landscape and visual impact	HyD's Contractor	Whole construction site	Throughout construction phase	EIAO-TM	V
7.9.3	CM3	Protect retained trees from damage during construction work according to the recommended in the detailed tree assessment report and the approval of Tree Removal Application under ETWB TCW No. 3/2006 Tree Preservation	To maintain and minimize damage to existing greenery	HyD's Contractor	Whole construction site	Throughout construction phase	ETWB TCW 3/2006, EIAOTM	#
7.9.3	CM4	Transplant unavoidably affected trees wherever possible in accordance with ETWB TCW No. 3/2006 Tree Preservation. Maintain transplanted trees to ensure healthy development during the establishment period	To minimize tree loss and ensure survival of transplanted trees	HyD's Contractor	Whole construction site	Throughout construction phase	ETWB TCW 3/2006, EIAOTM	N/A
7.9.2.6	OM1	Carry out compensatory planting in areas proposed in the Tree Survey and Landscape and Greening Study Report in accordance to ETWB TCW 3/2006, which will be subjected to refinement in detailed design stage. Compensatory planting of a ratio no less than 1:1 in terms of quality and quantity will be provided for any potential tree	To compensate for loss greenery	HyD's Contractor	Whole construction site/Offsite	Construction phase	ETWB TCW 3/2006, EIAOTM	N/A

		felling within the site. Offsite planting may be required due to land constraint. 410 nos. of compensatory trees have been proposed						
7.9.2.6	OM2	Provide vertical greening at piers of elevated	To soften hard	HyD's	Whole	Construction	ETWB TCW	N/A
		roads and shrub planting near amenity	landscape	Contractor	construction	phase	36/2004	
		planting strips to soften the hard landscape			site			
		(e.g. climber and shrub for hiding central						
		divider and enclosures). Early comments						
		from the ACABAS and relevant						
		departments, implementation and						
		maintenance agents shall be sought at the						
		earlier stage.						
7.9.2.6	OM3	Match the design and materials of road	To match with existing	HyD's	Whole	Construction	ETWB TCW	N/A
		structure with the surrounding environment	landscape character	Contractor	construction	phase	36/2004	
		and with the schematic theme			site			
		paving of the future West Kowloon						
		Reclamation Development and the Advisory						
		Committee on the Appearance of Bridges						
		and Associated Structures (ACABAS)						

Remarks:

✓ Compliance of mitigation measure

X Non-compliance of mitigation measure

• Non-compliance but rectified by the contractor

* Recommendation was made during site audit but improved/rectified by the contractor

Waiting for improving/rectifying by the contractor
