Expansion of Hong Kong International Airport into a Three-Runway System

Construction Phase Monthly EM&A Report No.35
(For November 2018)

December 2018

This Monthly EM&A Report No. 35 has been reviewed and certified by

the Environmental Team Leader (ETL) in accordance with

Condition 3.5 of Environmental Permit No. EP-489/2014.

Certified by:

A handwritten signature in black ink, appearing to read 'Terence Kong', written in a cursive style.

Attn: Mr. Lawrence Tsui, Principal Manager

14 December 2018

Dear Sir,

Contract No. 3102
3RS Independent Environmental Checker Consultancy Services

Submission of Monthly EM&A Report No. 35 (November 2018)

Reference is made to the Environmental Team's submission of the Monthly EM&A Report No. 35 under Condition 3.5 of the Environmental Permit No. EP-489/2014 certified by the ET Leader on 14 December 2018.

We write to verify the captioned submission in accordance with the requirement stipulated in Condition 3.5 of EP-489/2014.

Should you have any query, please feel free to contact the undersigned at 3922 9376.

Yours faithfully,
AECOM Asia Co. Ltd.

Jackel Law
Independent Environmental Checker

Executive Summary

The “Expansion of Hong Kong International Airport into a Three-Runway System” (the Project) serves to meet the future air traffic demands at Hong Kong International Airport (HKIA). On 7 November 2014, the Environmental Impact Assessment (EIA) Report (Register No.: AEIAR-185/2014) for the Project was approved and an Environmental Permit (EP) (Permit No.: EP-489/2014) was issued for the construction and operation of the Project.

Airport Authority Hong Kong (AAHK) commissioned Mott MacDonald Hong Kong Limited (MMHK) to undertake the role of Environmental Team (ET) for carrying out the Environmental Monitoring & Audit (EM&A) works during the construction phase of the Project in accordance with the Updated EM&A Manual (the Manual).

This is the 35th Construction Phase Monthly EM&A Report for the Project which summarizes the monitoring results and audit findings of the EM&A programme during the reporting period from 1 to 30 November 2018.

Key Activities in the Reporting Period

The key activities of the Project carried out in the reporting period included reclamation works and land-side works. Reclamation works included deep cement mixing (DCM) works, marine filling, seawall construction, and prefabricated vertical drain (PVD) installation. Land-side works involved mainly foundation and substructure work for Terminal 2 expansion, modification and tunnel work for Automated People Mover (APM) and Baggage Handling System (BHS), and preparation work for utilities, with activities include site establishment, site office construction, road and drainage works, cable ducting, demolition, piling, and excavation works.

EM&A Activities Conducted in the Reporting Period

The monthly EM&A programme was undertaken in accordance with the Manual of the Project. Summary of the monitoring activities during this reporting period is presented as below:

| Monitoring Activities | Number of Sessions |
|---|---------------------------|
| 1-hour Total Suspended Particulates (TSP) air quality monitoring | 30 |
| Noise monitoring | 16 |
| Water quality monitoring | 13 |
| Vessel line-transect surveys for Chinese White Dolphin (CWD) monitoring | 2 |
| Land-based theodolite tracking survey effort for CWD monitoring | 5 |
| Terrestrial ecology monitoring | 1 |

Environmental auditing works, including weekly site inspections of construction works conducted by the ET and bi-weekly site inspections conducted by the Independent Environmental Checker (IEC), audit of SkyPier High Speed Ferries (HSF), audit of construction and associated vessels, and audit of implementation of Marine Mammal Watching Plan (MMWP) and Dolphin Exclusion Zone (DEZ) Plan, were conducted in the reporting period. Based on information including ET's observations, records of Marine Surveillance System (MSS), and contractors' site records, it is noted that environmental pollution control and mitigation measures were properly implemented and construction activities of the Project in the reporting period did not introduce adverse impacts to the sensitive receivers.

Snapshots of EM&A Activities in the Reporting Period

| | | |
|---|---|--|
|  |  |  |
| <p>Noise Monitoring Conducted by ET</p> | <p>Checking of Chemical Waste Storage during Site Inspection</p> | <p>Environmental Management Meeting for EM&A Review with Works Contracts</p> |

Results of Impact Monitoring

The monitoring works for construction dust, construction noise, water quality, construction waste, landscape & visual, terrestrial ecology, and CWD were conducted during the reporting period in accordance with the Manual.

Monitoring results of construction dust, construction noise, construction waste, and CWD did not trigger the corresponding Action and Limit Levels in the reporting period.

The water quality monitoring results for dissolved oxygen (DO), total alkalinity, and chromium obtained during the reporting period were within the corresponding Action and Limit Levels stipulated in the EM&A programme. Relevant investigation and follow-up actions will be conducted according to the EM&A programme if the corresponding Action and Limit Levels are triggered. For turbidity, suspended solids (SS), and nickel, some of the testing results triggered the relevant Action or Limit Levels, and the corresponding investigations were conducted accordingly. The investigation findings concluded that the cases were not related to the Project. To conclude, the construction activities in the reporting period did not introduce adverse impact to all water quality sensitive receivers.

Summary of Upcoming Key Issues

Advanced Works:

Contract P560 (R) Aviation Fuel Pipeline Diversion Works

- Trench backfilling;
- Shoreline reinstatement next to the new pipe; and
- Stockpiling of excavated materials from previous HDD operation.

DCM Works:

Contract 3201, 3203, and 3205 DCM Works

- DCM works

Reclamation Works:

Contract 3206 Main Reclamation Works

- PVD installation;
- Seawall construction;
- Marine filling; and
- DCM works.

Airfield Works:

Contract 3301 North Runway Crossover Taxiway

- Cable ducting works;
- Subgrade works;
- Operation of aggregate mixing facility; and
- Precast of duct bank and fabrication of steel works.

Terminal 2 Expansion Works:

Contract 3501 Antenna Farm and Sewage Pumping Station

- Excavation works; and
- Pipe installation.

Contract 3502 Terminal 2 Automated People Mover (APM) Depot Modification Works

- Site clearance;
- Plant mobilization
- Cable duct installation; and
- Brick wall construction.

Contract 3503 Terminal 2 Foundation and Substructure Works

- Site establishment;
- Drainage, utility, and road work;
- Piling and structure works; and
- Demolition of footbridge.

Contract 3505 Terminal 2 Spectrum Lighting Mock-ups

- Re-fixing of ceiling panels.

Automated People Mover (APM) works:

Contract 3602 Existing APM System Modification Works

- Site establishment;
- Site office construction
- Drilling dowel bars; and
- Construction of concrete plinth.

Baggage Handling System (BHS) works:

Contract 3603 3RS Baggage Handling System

- Site establishment; and
- BHS modification work at Terminal 1.

Airport Support Infrastructure & Logistic Works:

Contract 3801 APM and BHS Tunnels on Existing Airport Island

- Site establishment;
- Diversion of underground utilities;
- Piling and foundation works; and
- Demolition of footbridge.

Summary Table

The following table summarizes the key findings of the EM&A programme during the reporting period:

| | Yes | No | Details | Analysis / Recommendation / Remedial Actions |
|--|-----|----|--|--|
| Breach of Limit Level [^] | | √ | No breach of Limit Level was recorded. | Nil |
| Breach of Action Level [^] | | √ | No breach of Action Level was recorded. | Nil |
| Complaint Received | √ | | A complaint regarding dust nuisance from sand barges in Tuen Mun was received on 6 Nov 2018. | ET found that there was one contractor deployed sand delivery vessels for the Project in recent months. Photo records provided by the contractor confirmed that dust mitigation measures were implemented during stopover/anchored at Tuen Mun Anchorage Area. ET will keep reminding contractors to continue the implementation of dust mitigation measures and conduct regular training for all frontline staff. |
| Notification of any summons and status of prosecutions | | √ | No notification of summons or prosecution was received. | Nil |
| Change that affect the EM&A | | √ | There was no change to the construction works that may affect the EM&A | Nil |

Note:

[^] Only triggering of Action or Limit Level found related to Project works is counted as Breach of Action or Limit Level.

1 Introduction

1.1 Background

On 7 November 2014, the Environmental Impact Assessment (EIA) Report (Register No.: AEIAR-185/2014) for the “Expansion of Hong Kong International Airport into a Three-Runway System” (the Project) was approved and an Environmental Permit (EP) (Permit No.: EP-489/2014) was issued for the construction and operation of the Project.

Airport Authority Hong Kong (AAHK) commissioned Mott MacDonald Hong Kong Limited (MMHK) to undertake the role of Environmental Team (ET) for carrying out the Environmental Monitoring & Audit (EM&A) works during the construction phase of the Project in accordance with the Updated EM&A Manual (the Manual) submitted under EP Condition 3.1¹. AECOM Asia Company Limited (AECOM) was employed by AAHK as the Independent Environmental Checker (IEC) for the Project.

The Project covers the expansion of the existing airport into a three-runway system (3RS) with key project components comprising land formation of about 650 ha and all associated facilities and infrastructure including taxiways, aprons, aircraft stands, a passenger concourse, an expanded Terminal 2, all related airside and landside works and associated ancillary and supporting facilities. The submarine aviation fuel pipelines and submarine power cables also require diversion as part of the works.

Construction of the Project is to proceed in the general order of diversion of the submarine aviation fuel pipelines, diversion of the submarine power cables, land formation, and construction of infrastructure, followed by construction of superstructures.

The updated overall phasing programme of all construction works was presented in Appendix A of the Construction Phase Monthly EM&A Report No. 7 and the contract information was presented in Appendix A of the Construction Phase Monthly EM&A Report No. 32.

1.2 Scope of this Report

This is the 35th Construction Phase Monthly EM&A Report for the Project which summarizes the key findings of the EM&A programme during the reporting period from 1 to 30 November 2018.

1.3 Project Organisation

The Project’s organization structure presented in Appendix B of the Construction Phase Monthly EM&A Report No.1 remained unchanged during the reporting period. Contact details of the key personnel are presented in **Table 1.1**.

¹ The Manual is available on the Project’s dedicated website (accessible at: <http://env.threerunwaysystem.com/en/index.html>).

1.4 Summary of Construction Works

The key activities of the Project carried out in the reporting period included reclamation works and land-side works. Reclamation works included deep cement mixing (DCM) works, marine filling, seawall construction, and prefabricated vertical drain (PVD) installation. Land-side works involved mainly foundation and substructure work for Terminal 2 expansion, modification and tunnel work for Automated People Mover (APM) and Baggage Handling System (BHS) systems, and preparation work for utilities, with activities include site establishment, site office construction, road and drainage works, cable ducting, demolition of existing facilities, piling, and excavation works.

The locations of the works area are presented in **Figure 1.1** to **Figure 1.2**.

1.5 Summary of EM&A Programme Requirements

The status for all environmental aspects are presented in **Table 1.2**. The EM&A requirements remained unchanged during the reporting period and details can be referred to Table 1.2 of the Construction Phase Monthly EM&A Report No. 1.

Table 1.2: Summary of status for all environmental aspects under the Updated EM&A Manual

| Parameters | Status |
|----------------------|---|
| Air Quality | |
| Baseline Monitoring | The baseline air quality monitoring result has been reported in Baseline Monitoring Report and submitted to EPD under EP Condition 3.4. |
| Impact Monitoring | On-going |
| Noise | |
| Baseline Monitoring | The baseline noise monitoring result has been reported in Baseline Monitoring Report and submitted to EPD under EP Condition 3.4. |
| Impact Monitoring | On-going |
| Water Quality | |

| Parameters | Status |
|--|---|
| General Baseline Water Quality Monitoring for reclamation, water jetting and field joint works | The baseline water quality monitoring result has been reported in Baseline Water Quality Monitoring Report and submitted to EPD under EP Condition 3.4. |
| General Impact Water Quality Monitoring for reclamation, water jetting and field joint works | On-going |
| Initial Intensive Deep Cement Mixing (DCM) Water Quality Monitoring | The Initial Intensive DCM Monitoring Report was submitted and approved by EPD in accordance with the Detailed Plan on DCM. |
| Regular DCM Water Quality Monitoring | On-going |
| Waste Management | |
| Waste Monitoring | On-going |
| Land Contamination | |
| Supplementary Contamination Assessment Plan (CAP) | The Supplementary CAP was submitted to EPD pursuant to EP condition 2.20. |
| Contamination Assessment Report (CAR) for Golf Course | The CAR for Golf Course was submitted to EPD. |
| Terrestrial Ecology | |
| Pre-construction Egret Survey Plan | The Egret Survey Plan was submitted and approved by EPD under EP Condition 2.14. |
| Ecological Monitoring | On-going |
| Marine Ecology | |
| Pre-Construction Phase Coral Dive Survey | The Coral Translocation Plan was submitted and approved by EPD under EP Condition 2.12. |
| Coral Translocation | The coral translocation was completed. |
| Post-Translocation Coral Monitoring | The post-translocation monitoring programme according to the Coral Translocation Plan was completed in April 2018. |
| Chinese White Dolphins (CWD) | |

| Environmental Log Book | On-going |

Taking into account the construction works in this reporting period, impact monitoring of air quality, noise, water quality, waste management, landscape & visual, terrestrial ecology, and CWD were carried out in the reporting period.

The EM&A programme also involved weekly site inspections and related auditing conducted by the ET for checking the implementation of the required environmental mitigation measures recommended in the approved EIA Report. To promote the environmental awareness and enhance the environmental performance of the contractors, environmental trainings and regular environmental management meetings were conducted during the reporting period, which are summarized as below:

- One dolphin observer training provided by ET: 9 November 2018
- Two skipper trainings provided by ET: 14 and 28 November 2018
- Seven environmental management meetings for EM&A review with works contracts: 1, 14, 19, 21 and 28 November 2018
- EPD sharing on key issues of waste management and construction dust control: 21 November 2018

The EM&A programme has been following the recommendations presented in the approved EIA Report and the Manual. A summary of implementation status of the environmental mitigation measures for the construction phase of the Project during the reporting period is provided in **Appendix A**.

2 Air Quality Monitoring

Air quality monitoring of 1-hour Total Suspended Particulates (TSP) was conducted three times every six days at two representative monitoring stations in the vicinity of air sensitive receivers in Tung Chung and villages in North Lantau in accordance with the Manual. **Table 2.1** describes the details of the monitoring stations. **Figure 2.1** shows the locations of the monitoring stations.

Table 2.1: Locations of Impact Air Quality Monitoring Stations

| Monitoring Station | Location |
|--------------------|--------------------------|
| AR1A | Man Tung Road Park |
| AR2 | Village House at Tin Sum |

2.1 Action and Limit Levels

In accordance with the Manual, baseline air quality monitoring of 1-hour TSP levels at the two air quality monitoring stations were established as presented in the Baseline Monitoring Report. The Action and Limit Levels of the air quality monitoring stipulated in the EM&A programme for triggering the relevant investigation and follow-up procedures under the programme are provided in **Table 2.2**.

Table 2.2: Action and Limit Levels of Air Quality Monitoring

| Monitoring Station | Action Level ($\mu\text{g}/\text{m}^3$) | Limit Level ($\mu\text{g}/\text{m}^3$) |
|--------------------|---|--|
| AR1A | 306 | 500 |
| AR2 | 298 | |

2.2 Monitoring Equipment

Portable direct reading dust meter was used to carry out the air quality monitoring. Details of equipment used in the reporting period are given in **Table 2.3**.

Table 2.3: Air Quality Monitoring Equipment

| Equipment | Brand and Model | Last Calibration Date | Calibration Certificate Provided in |
|---|------------------------------------|-----------------------|-------------------------------------|
| Portable direct reading dust meter (Laser dust monitor) | SIBATA LD-3B-1 (Serial No. 597337) | 2 Oct 2018 | Appendix D |
| | SIBATA LD-3B-2 (Serial No. 296098) | 16 Oct 2018 | |

2.3 Monitoring Methodology

2.3.1 Measuring Procedure

The measurement procedures involved in the impact air quality monitoring can be summarised as follows:

- a. The portable direct reading dust meter was mounted on a tripod at a height of 1.2 m above the ground.

- b. Prior to the measurement, the equipment was set up for 1 minute span check and 6 second background check.
- c. The one hour dust measurement was started. Site conditions and dust sources at the nearby area were recorded on a record sheet.
- d. When the measurement completed, the “Count” reading per hour was recorded for result calculation.

2.3.2 Maintenance and Calibration

The portable direct reading dust meter is calibrated every year against high volume sampler (HVS) to check the validity and accuracy of the results measured by direct reading method. The calibration record of the HVS and portable direct reading dust meters are provided in **Appendix D**.

2.4 Summary of Monitoring Results

The air quality monitoring schedule involved in the reporting period is provided in **Appendix B**.

The air quality monitoring results in the reporting period are summarized in **Table 2.4**. Detailed impact monitoring results are presented in **Appendix C**.

Table 2.4: Summary of Air Quality Monitoring Results

| Monitoring Station | 1-hr TSP Concentration Range ($\mu\text{g}/\text{m}^3$) | Action Level ($\mu\text{g}/\text{m}^3$) | Limit Level ($\mu\text{g}/\text{m}^3$) |
|--------------------|---|---|--|
| AR1A | 18 – 215 | 306 | 500 |
| AR2 | 29 – 197 | 298 | |

The monitoring results were within the corresponding Action and Limit Levels at all monitoring stations in the reporting period.

General meteorological conditions throughout the impact monitoring period were recorded. Wind data including wind speed and wind direction for each monitoring day were collected from the Chek Lap Kok Wind Station.

2.5 Conclusion

No dust emission source from Project activities was observed during impact air quality monitoring. Major sources of dust observed at the monitoring stations during the monitoring sessions were local air pollution and nearby traffic emissions. It is considered that the monitoring work in the reporting period is effective and there was no adverse impact attributable to the Project activities.

3 Noise Monitoring

Noise monitoring in the form of 30-minute measurements of L_{eq} , L_{10} , and L_{90} levels was conducted once per week between 0700 and 1900 on normal weekdays at five representative monitoring stations in the vicinity of noise sensitive receivers in Tung Chung and villages in North Lantau in accordance with the Manual. **Table 3.1** describes the details of the monitoring stations. **Figure 2.1** shows the locations of the monitoring stations.

Table 3.1: Locations of Impact Noise Monitoring Stations

| Monitoring Station | Location | Type of measurement |
|---------------------|--|---------------------|
| NM1A | Man Tung Road Park | Free field |
| NM2 ⁽¹⁾ | Tung Chung West Development | To be determined |
| NM3A ⁽²⁾ | Site Office | Facade |
| NM4 | Ching Chung Hau Po Woon Primary School | Free field |
| NM5 | Village House in Tin Sum | Free field |
| NM6 | House No. 1, Sha Lo Wan | Free field |

Note:

- (1) As described in Section 4.3.3 of the Manual, noise monitoring at NM2 will only commence after occupation of the future Tung Chung West Development.
- (2) According to Section 4.3.3 of the Manual, the noise monitoring at NM3A was temporarily suspended starting from 1 Sep 2018 and would be resumed with the completion of the Tung Chung East Development.

3.1 Action and Limit Levels

In accordance with the Manual, baseline noise levels at the noise monitoring stations were established as presented in the Baseline Monitoring Report. The Action and Limit Levels of the noise monitoring stipulated in the EM&A programme for triggering the relevant investigation and follow-up procedures under the programme are provided in **Table 3.2**.

Table 3.2: Action and Limit Levels for Noise Monitoring

| Monitoring Stations | Time Period | Action Level | Limit Level, $L_{eq(30mins)}$ dB(A) |
|-----------------------------------|------------------------------------|---|-------------------------------------|
| NM1A, NM2, NM3A, NM4, NM5 and NM6 | 0700-1900 hours on normal weekdays | When one documented complaint is received from any one of the sensitive receivers | 75 dB(A) ⁽¹⁾ |

Note:

- (1) Reduced to 70dB(A) for school and 65dB(A) during school examination periods for NM4.

3.2 Monitoring Equipment

Noise monitoring was performed using sound level meter at each designated monitoring station. The sound level meters deployed comply with the International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications. Acoustic calibrator was used to check the sound level meters by a known sound pressure level for field measurement. Details of equipment used in the reporting period are given in **Table 3.3**.

Table 3.3: Noise Monitoring Equipment

| Equipment | Brand and Model | Last Calibration Date | Calibration Certificate Provided in |
|------------------------------|--|-----------------------|-------------------------------------|
| Integrated Sound Level Meter | NTi XL2-M2211 (Microphone Serial No.7681; Capsule Serial No.72079) | 28 Aug 2018 | Appendix D |
| | Rion NL-31 (Serial No. 01262786) | 7 Aug 2018 | |
| Acoustic Calibrator | Castle GA607 (Serial No. 040162) | 7 Aug 2018 | |
| | Casella CEL-120/1 (Serial No. 2383737) | 17 Oct 2018 | |

3.3 Monitoring Methodology

3.3.1 Monitoring Procedure

The monitoring procedures involved in the noise monitoring can be summarised as follows:

- a. The sound level meter was set on a tripod at least a height of 1.2 m above the ground for free-field measurements at monitoring stations NM1A, NM4, NM5 and NM6. A correction of +3 dB(A) was applied to the free field measurements.
- b. Façade measurements were made at the monitoring station NM3A.
- c. Parameters such as frequency weighting, time weighting and measurement time were set.
- d. Prior to and after each noise measurement, the meter was calibrated using the acoustic calibrator. If the difference in the calibration level before and after measurement was more than 1 dB(A), the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- e. During the monitoring period, L_{eq} , L_{10} and L_{90} were recorded. In addition, site conditions and noise sources were recorded on a record sheet.
- f. Noise measurement results were corrected with reference to the baseline monitoring levels.
- g. Observations were recorded when high intrusive noise (e.g. dog barking, helicopter noise) was observed during the monitoring.

3.3.2 Maintenance and Calibration

The maintenance and calibration procedures are summarised below:

- a. The microphone head of the sound level meter was cleaned with soft cloth at regular intervals.
- b. The meter and calibrator were sent to the supplier or laboratory accredited under Hong Kong Laboratory Accreditation Scheme (HOKLAS) to check and calibrate at yearly intervals.

Calibration certificates of the sound level meters and acoustic calibrators used in the noise monitoring listed in **Table 3.3** are still valid.

3.4 Summary of Monitoring Results

The noise monitoring schedule involved in the reporting period is provided in **Appendix B**.

The noise monitoring results in the reporting period are summarized in **Table 3.4**. Detailed impact monitoring results are presented in **Appendix C**.

Table 3.4: Summary of Construction Noise Monitoring Results

| Monitoring Station | Noise Level Range, dB(A) | Limit Level, dB(A) |
|---------------------|--------------------------|--------------------|
| | Leq (30 mins) | Leq (30 mins) |
| NM1A ⁽¹⁾ | 67 – 73 | 75 |
| NM4 ⁽¹⁾ | 65 – 68 | 70 ⁽²⁾ |
| NM5 ⁽¹⁾ | 57 – 61 | 75 |
| NM6 ⁽¹⁾ | 66 – 74 | 75 |

Notes:

- (1) +3 dB(A) Façade correction included;
- (2) Reduced to 65 dB(A) during school examination periods at NM4. School examination took place from 9 to 15 November in this reporting period.

No complaints were received from any sensitive receiver that triggered the Action Level. All monitoring results were also within the corresponding Limit Levels at all monitoring stations in the reporting period.

3.5 Conclusion

As the construction activities were far away from the monitoring stations, major sources of noise dominating the monitoring stations observed during the construction noise impact monitoring were traffic and aircraft noise near NM1A, school activities at NM4, and aircraft and helicopter noise near NM5 and NM6 during this reporting period. It is considered that the monitoring work during the reporting period was effective and there was no adverse impact attributable to the Project activities.

4 Water Quality Monitoring

Water quality monitoring of DO, pH, temperature, salinity, turbidity, suspended solids (SS), total alkalinity, chromium, and nickel was conducted three days per week, at mid-ebb and mid-flood tides, at a total of 23 water quality monitoring stations, comprising 12 impact (IM) stations, 8 sensitive receiver (SR) stations and 3 control (C) stations in the vicinity of water quality sensitive receivers around the airport island in accordance with the Manual. The purpose of water quality monitoring at the IM stations is to promptly capture any potential water quality impact from the Project before it could become apparent at sensitive receivers (represented by the SR stations). **Table 4.1** describes the details of the monitoring stations. **Figure 3.1** shows the locations of the monitoring stations.

Table 4.1: Monitoring Locations and Parameters of Impact Water Quality Monitoring

| Monitoring Station | Description | Coordinates | | Parameters |
|---------------------|--|-------------|----------|--|
| | | Easting | Northing | |
| C1 | Control Station | 804247 | 815620 | <u>General Parameters</u> |
| C2 | Control Station | 806945 | 825682 | DO, pH, Temperature, Salinity, Turbidity, SS |
| C3 ⁽³⁾ | Control Station | 817803 | 822109 | |
| IM1 | Impact Station | 807132 | 817949 | <u>DCM Parameters</u> |
| IM2 | Impact Station | 806166 | 818163 | Total Alkalinity, Heavy Metals ⁽²⁾ |
| IM3 | Impact Station | 805594 | 818784 | |
| IM4 | Impact Station | 804607 | 819725 | |
| IM5 | Impact Station | 804867 | 820735 | |
| IM6 | Impact Station | 805828 | 821060 | |
| IM7 | Impact Station | 806835 | 821349 | |
| IM8 | Impact Station | 808140 | 821830 | |
| IM9 | Impact Station | 808811 | 822094 | |
| IM10 | Impact Station | 809794 | 822385 | |
| IM11 | Impact Station | 811460 | 822057 | |
| IM12 | Impact Station | 812046 | 821459 | |
| SR1A ⁽¹⁾ | Hong Kong-Zhuhai-Macao Bridge Hong Kong Boundary Crossing Facilities (HKBCF) Seawater Intake for cooling | 812586 | 820069 | <u>General Parameters</u> DO, pH, Temperature, Salinity, Turbidity, SS |
| SR2 ⁽³⁾ | Planned marine park / hard corals at The Brothers / Tai Mo To | 814166 | 821463 | <u>General Parameters</u> DO, pH, Temperature, Salinity, Turbidity, SS <u>DCM Parameters</u> Total Alkalinity, Heavy Metals ⁽²⁾⁽⁴⁾ |
| SR3 | Sha Chau and Lung Kwu Chau Marine Park / fishing and spawning grounds in North Lantau | 807571 | 822147 | <u>General Parameters</u> DO, pH, Temperature, Salinity, Turbidity, SS |
| SR4A | Sha Lo Wan | 807810 | 817189 | |

| Monitoring Station | Description | Coordinates | Parameters |
|--------------------|---|-------------|------------|
| SR5A | San Tau Beach SSSI | 810696 | 816593 |
| SR6 | Tai Ho Bay, Near Tai Ho Stream SSSI | 814663 | 817899 |
| SR7 | Ma Wan Fish Culture Zone (FCZ) | 823742 | 823636 |
| SR8 ⁽⁵⁾ | Seawater Intake for cooling at Hong Kong International Airport (East) | 811418 | 820246 |

Notes:

- (1) With the operation of HKBCF, water quality monitoring at SR1A station was commenced on 25 Oct 2018.
- (2) Details of selection criteria for the two heavy metals for regular DCM monitoring refer to the Detailed Plan on Deep Cement Mixing available on the dedicated 3RS website (<http://env.threerunwaysystem.com/en/ep-submissions.html>). DCM specific water quality monitoring parameters (total alkalinity and heavy metals) were only conducted at C1 to C3, SR2, and IM1 to IM12.
- (3) According to the Baseline Water Quality Monitoring Report, C3 station is not adequately representative as a control station of impact/ SR stations during the flood tide. The control reference has been changed from C3 to SR2 from 1 September 2016 onwards.
- (4) Total alkalinity and heavy metals results are collected at SR2 as a control station for regular DCM monitoring.
- (5) The monitoring location for SR8 is subject to further changes due to silt curtain arrangements and the progressive relocation of this seawater intake.

4.1 Action and Limit Levels

In accordance with the Manual, baseline water quality levels at the abovementioned representative water quality monitoring stations were established as presented in the Baseline Water Quality Monitoring Report. The Action and Limit Levels of general water quality monitoring and regular DCM monitoring stipulated in the EM&A programme for triggering the relevant investigation and follow-up procedures under the programme are provided in **Table 4.2**. The control and impact stations during ebb tide and flood tide for general water quality monitoring and regular DCM monitoring are presented in **Table 4.3**.

Table 4.2: Action and Limit Levels for General Water Quality Monitoring and Regular DCM Monitoring

| Parameters | Action Level (AL) | | Limit Level (LL) | | |
|---|---|---|---------------------|---|---------------------|
| Action and Limit Levels for general water quality monitoring and regular DCM monitoring (excluding SR1A & SR8) | | | | | |
| General Water Quality Monitoring | DO in mg/L (Surface, Middle & Bottom) | Surface and Middle | | Surface and Middle | |
| | | 4.5 mg/L | | 4.1 mg/L 5 mg/L for Fish Culture Zone (SR7) only | |
| | Suspended Solids (SS) in mg/L | Bottom | | Bottom | |
| | | 3.4 mg/L | | 2.7 mg/L | |
| Turbidity in NTU | 23 | or 120% of upstream control station at the same tide of the same day, | 37 | or 130% of upstream control station at the same tide of the same day, | |
| Regular DCM Monitoring | Total Alkalinity in ppm | 95 | whichever is higher | 99 | whichever is higher |
| | Representative Heavy Metals for regular DCM monitoring (Chromium) in µg/L | 0.2 | | 0.2 | |
| | Representative Heavy Metals for regular DCM | 3.2 | | 3.6 | |

| Parameters | Action Level (AL) | Limit Level (LL) |
|-------------------------------------|-------------------|------------------|
| monitoring (Nickel) in µg/L | | |
| Action and Limit Levels SR1A | | |
| SS (mg/l) | 33 | 42 |
| Action and Limit Levels SR8 | | |
| SS (mg/l) | 52 | 60 |

Notes:

- (1) For DO measurement, non-compliance occurs when monitoring result is lower than the limits.
- (2) For parameters other than DO, non-compliance of water quality results when monitoring results is higher than the limits.
- (3) Depth-averaged results are used unless specified otherwise.
- (4) Details of selection criteria for the two heavy metals for regular DCM monitoring refer to the Detailed Plan on Deep Cement Mixing available on the dedicated 3RS website (<http://env.threerunwaysystem.com/en/ep-submissions.html>)
- (5) The Action and Limit Levels for the two representative heavy metals chosen will be the same as that for the intensive DCM monitoring.

Table 4.3: The Control and Impact Stations during Flood Tide and Ebb Tide for General Water Quality Monitoring and Regular DCM Monitoring

| Control Station | Impact Stations |
|--------------------|---|
| Flood Tide | |
| C1 | IM1, IM2, IM3, IM4, IM5, IM6, IM7, IM8, SR3 |
| SR2 ⁽¹⁾ | IM7, IM8, IM9, IM10, IM11, IM12, SR1A, SR3, SR4A, SR5A, SR6, SR8 |
| Ebb Tide | |
| C1 | SR4A, SR5A, SR6 |
| C2 | IM1, IM2, IM3, IM4, IM5, IM6, IM7, IM8, IM9, IM10, IM11, IM12, SR1A, SR2, SR3, SR7, SR8 |

Note:

- (1) As per findings of Baseline Water Quality Monitoring Report, the control reference has been changed from C3 to SR2 from 1 Sep 2016 onwards.

4.2 Monitoring Equipment

Table 4.4 summarises the equipment used in the reporting period for monitoring of specific water quality parameters under the water quality monitoring programme.

Table 4.4: Water Quality Monitoring Equipment

| Equipment | Brand and Model | Last Calibration Date | Calibration Certificate Provided in |
|--|---|----------------------------|--|
| Multifunctional Meter (measurement of DO, pH, temperature, salinity and turbidity) | YSI ProDSS (Serial No. 16H104234) | 26 Oct 2018 | Monthly EM&A Report No. 34, Appendix D |
| | YSI ProDSS (Serial No. 17H105557) | 26 Oct 2018 | |
| | YSI ProDSS (Serial No. 17E100747) | 3 Oct 2018 | Appendix D |
| | YSI ProDSS (Serial No. 16H104233) | 3 Oct 2018 | |
| | YSI 6920 V2 (Serial No. 00019CB2) | 19 Nov 2018 | |
| | YSI 6920 V2 (Serial No. 0001C6A7) | 20 Aug 2018 ⁽¹⁾ | Monthly EM&A Report No. 32, Appendix E |
| Digital Titrator (measurement of total alkalinity) | Titrette Digital Burette 50ml Class A (Serial No. 10N64701) | 18 Sep 2018 | Monthly EM&A Report No. 33, Appendix D |

Note:

- (1) The monitoring equipment was not used in the reporting period after the calibration certificate expiry date.

Other equipment used as part of the impact water quality monitoring programme are listed in **Table 4.5**.

Table 4.5: Other Monitoring Equipment

| Equipment | Brand and Model |
|---|------------------------|
| Water Sampler | Van Dorn Water Sampler |
| Positioning Device (measurement of GPS) | Garmin eTrex Vista HCx |
| Current Meter (measurement of current speed and direction, and water depth) | Sontek HydroSurveyor |

4.3 Monitoring Methodology

4.3.1 Measuring Procedure

Water quality monitoring samples were taken at three depths (at 1m below surface, at mid-depth, and at 1m above bottom) for locations with water depth >6m. For locations with water depth between 3m and 6m, water samples were taken at two depths (surface and bottom). For locations with water depth <3m, only the mid-depth was taken. Duplicate water samples were taken and analysed.

The water samples for all monitoring parameters were collected, stored, preserved and analysed according to the Standard Methods, APHA 22nd ed. and/or other methods as agreed by the EPD. In-situ measurements at monitoring locations including temperature, pH, DO, turbidity, salinity, alkalinity and water depth were collected by equipment listed in **Table 4.4** and **Table 4.5**. Water samples for heavy metals and SS analysis were stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4 °C without being frozen), delivered to the laboratory within 24 hours of collection.

4.3.2 Maintenance and Calibration

Calibration of In-situ Instruments

All in-situ monitoring instrument were checked, calibrated and certified by a laboratory accredited under HOKLAS before use. Responses of sensors and electrodes were checked with certified standard solutions before each use.

Wet bulb calibration for a DO meter was carried out before commencement of monitoring and after completion of all measurements each day. Calibration was not conducted at each monitoring location as daily calibration is adequate for the type of DO meter employed. A zero check in distilled water was performed with the turbidity probe at least once per monitoring day. The probe was then calibrated with a solution of known NTU. In addition, the turbidity probe was calibrated at least twice per month to establish the relationship between turbidity readings (in NTU) and levels of SS (in mg/L). Accuracy check of the digital titrator was performed at least once per monitoring day.

Calibration certificates of the monitoring equipment used in the reporting period listed in **Table 4.4** are still valid.

4.3.3 Laboratory Measurement / Analysis

Analysis of SS and heavy metals have been carried out by a HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (Reg. No. HOKLAS 066). Sufficient water samples were collected at all the monitoring stations for carrying out the laboratory SS and heavy metals determination. The SS and heavy metals determination works were started within 24 hours after collection of the water samples. The analysis of SS and heavy metals have followed the standard methods

summarised in **Table 4.6**. The QA/QC procedures for laboratory measurement/ analysis of SS and heavy metals were presented in Appendix F of the Construction Phase Monthly EM&A Report No.8.

Table 4.6: Laboratory Measurement/ Analysis of SS and Heavy Metals

| Parameters | Instrumentation | Analytical Method | Reporting Limit |
|---------------------|--------------------|-------------------|-----------------|
| SS | Analytical Balance | APHA 2540D | 2 mg/L |
| Heavy Metals | | | |
| Chromium (Cr) | ICP-MS | USEPA 6020A | 0.2 µg/L |
| Nickel (Ni) | ICP-MS | USEPA 6020A | 0.2 µg/L |

4.4 Summary of Monitoring Results

The water quality monitoring schedule for the reporting period is updated and provided in **Appendix B**. Flood tide monitoring session on 1 November 2018 was cancelled due to typhoon. It should be noted that Super Typhoon Yutu affected Hong Kong from 1 to 2 November 2018 and water quality monitoring results might be affected by this weather event.

The water quality monitoring results for DO, total alkalinity and chromium obtained during the reporting period were within their corresponding Action and Limit Levels.

For turbidity, SS and nickel, some of the testing results triggered the corresponding Action and Limit Level, and investigations were conducted accordingly.

Table 4.7 presents a summary of the turbidity compliance status at IM and SR stations during mid-flood tide for the reporting period.

Table 4.7: Summary of Turbidity Compliance Status (Mid-Flood Tide)

| | IM1 | IM2 | IM3 | IM4 | IM5 | IM6 | IM7 | IM8 | IM9 | IM10 | IM11 | IM12 | SR3 | SR4A | SR5A | SR6 | SR7 |
|---|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|-----|------|------|-----|-----|
| 3/11/2018 | | | | | | | | | | | | | | | | | |
| 6/11/2018 | | | | | | | | | | | | | | | | | |
| 8/11/2018 | | | | | | | | | | | | | | | | | |
| 10/11/2018 | | | | | | | | | | | | | | | | | |
| 13/11/2018 | | | | | | | | | | | | | | | | | |
| 15/11/2018 | | | | | | | | | | | | | | | | | |
| 17/11/2018 | | | | | | | | | | | | | | | | | |
| 20/11/2018 | | | | | | | | | | | | | | | | | |
| 22/11/2018 | | | | | | | | | | | | | | | | | |
| 24/11/2018 | | | | | | | | | | | | | | | | | |
| 27/11/2018 | | | | D | D | | | | | | | | | | | | |
| 29/11/2018 | | | | | | | | | | | | | | | | | |
| No. of results triggering Action or Limit Level | 0 | 0 | 1 | 1 | 1 | 1 | 0 | 0 | 0 | 0 | 1 | 1 | 0 | 0 | 0 | 0 | 0 |

Note: Detailed results are presented in **Appendix C**.

| | |
|---------|---|
| Legend: | |
| | The monitoring results were within the corresponding Action and Limit Levels |
| | Monitoring result triggered the Action Level at monitoring station located upstream of the Project based on dominant tidal flow |
| D | Monitoring result triggered the Action Level at monitoring station located downstream of the Project based on dominant tidal flow |
| | Upstream station with respect to the Project during the respective tide based on dominant tidal flow |

Action Level was triggered on 27 November 2018. Cases at IM3, IM4, IM11 and IM12 were recorded upstream of the Project during flood tide and would unlikely be affected by the Project.

Investigation focusing on the cases that occurred at monitoring stations located downstream of the Project was carried out. Details of the Project’s marine construction activities on the concerned monitoring day was collected and findings are summarized in **Table 4.8**.

Table 4.8: Summary of Findings from Investigation of Turbidity Monitoring Results (Mid-Flood Tide)

| Date | Marine construction works nearby | Approximate distance from marine construction works | Status of water quality measures (if applicable) | Construction vessels in the vicinity | Turbidity / Silt plume observed near the monitoring station | Action or Limit Level triggered due to Project |
|------------|---|---|--|--------------------------------------|---|--|
| 27/11/2018 | Marine filling, seabed regulation works and DCM works | Around 1 km | Localised and enhanced silt curtain deployed | No | No | No |

The investigation confirmed that marine filling, seabed regulation and DCM works were operating normally with localised and enhanced silt curtains deployed. The localised and enhanced silt curtains were maintained properly and checked by ET regularly. Contractor had followed up and carried out silt curtain maintenance when defects were identified by ET or Contractor.

Turbidity results recorded at IM5 and IM6 on 27 November 2018 were within the baseline range and Action Level was also triggered at IM3 and IM4, which were located upstream of IM5 and IM6 during flood tide. Repeat measurement was carried out on 28 November 2018, where no Action or Limit Level was triggered at all monitored stations. Consider above observations and the fact that mitigation measures were properly implemented, these two cases were not due to Project.

Table 4.9 presents a summary of the SS compliance status at IM and SR stations during mid-flood tide for the reporting period.

Table 4.9: Summary of SS Compliance Status (Mid-Flood Tide)

| | IM1 | IM2 | IM3 | IM4 | IM5 | IM6 | IM7 | IM8 | IM9 | IM10 | IM11 | IM12 | SR1A | SR3 | SR4A | SR5A | SR6 | SR7 | SR8 | |

| No. of result triggering Action or Limit Level | 0 | 0 | 0 | 1 | 2 | 0 | 0 | 0 | 1 | 1 | 1 | 1 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 |

Note: Detailed results are presented in **Appendix C**.

| | |
|---------|---|
| Legend: | |
| | The monitoring results were within the corresponding Action and Limit Levels |
| | Monitoring result triggered the Action Level at monitoring station located upstream of the Project based on dominant tidal flow |

| | |
|---|---|
| D | Monitoring result triggered the Action Level at monitoring station located downstream of the Project based on dominant tidal flow |
| | Upstream station with respect to the Project during the respective tide based on dominant tidal flow |

Monitoring result triggered the corresponding Action Levels on 8, 10, 27, and 29 November 2018. Some cases on 10 and 27 November 2018 were recorded at locations upstream of the Project during flood tide and would unlikely be affected by the Project. For the case at SR3 on 8 November 2018, all results at impact monitoring stations were within their Action and Limit Levels and therefore it was considered not related to the Project.

Investigation focusing on the cases that occurred at monitoring stations located downstream of the Project was carried out. Details of the Project's marine construction activities on the concerned monitoring days were collected and findings are summarized in **Table 4.10**.

Table 4.10: Summary of Findings from Investigation of SS Monitoring Results (Mid-Flood Tide)

| Date | Marine construction works nearby | Approximate distance from marine construction works | Status of water quality measures (if applicable) | Construction vessels in the vicinity | Turbidity / Silt plume observed near the monitoring station | Action or Limit Level triggered due to Project |
|------------|---|---|--|--------------------------------------|---|--|
| 10/11/2018 | Marine filling and DCM works | Around 1 km | Localised and enhanced silt curtain deployed | No | No | No |
| 27/11/2018 | Marine filling, seabed regulation works and DCM works | Around 1 km | Localised and enhanced silt curtain deployed | No | No | No |
| 29/11/2018 | Marine filling, seabed regulation works and DCM works | Around 500 m | Localised and enhanced silt curtain deployed | No | No | No |

The investigation confirmed that marine filling, seabed regulation and DCM works were operating normally with localised and enhanced silt curtains deployed. The localised and enhanced silt curtains were maintained properly and checked by ET regularly. Contractor had followed up and carried out silt curtain maintenance when defects were identified by ET or Contractor..

For SS results recorded at IM5 and IM10 on 10 November 2018, it is observed that the corresponding Action Level was also triggered at IM4 and IM12, which were located upstream of IM5 and IM10 respectively during flood tide. With no observable silt plume during marine works and mitigation measures implemented properly, cases at both stations were considered not caused by Project.

SS result recorded at IM5 on 27 November 2018 and that at IM9 on 29 November 2018 were considered an isolated case with no spatial trend to indicate any effect due to Project. The former was also found to be within the baseline range at that location during mid-flood tide. As mitigation measures were implemented properly and no silt plume was observed, cases on both days were considered not related to Project.

Table 4.11 presents a summary of the nickel compliance status at IM stations during mid-ebb tide for the reporting period.

Table 4.11: Summary of Nickel Compliance Status (Mid-Ebb Tide)

| 24/11/2018 | | | | | | | | | | | | |
| 27/11/2018 | | | | | | | | | | | | |
| 29/11/2018 | | | | | | | | | | | | |
| No. of result triggering Action or Limit Level | 1 | 1 | 0 | 1 | 0 | 0 | 1 | 1 | 0 | 1 | 0 | 0 |

| | |
|---|---|
| Note: Detailed results are presented in Appendix C . | |
| Legend: | |
| | The monitoring results were within the corresponding Action and Limit Levels |
| | Monitoring result triggered the Action Level at monitoring station located upstream of the Project based on dominant tidal flow |
| D | Monitoring result triggered the Action Level at monitoring station located downstream of the Project based on dominant tidal flow |
| | Upstream station with respect to the Project during the respective tide based on dominant tidal flow |

Monitoring results triggered the corresponding Action Levels on 17 November 2018. Cases occurred at IM7, IM8 and IM10 were located upstream of the Project during ebb tide and would unlikely be affected by the Project.

Details of the Project's marine construction activities on the concerned monitoring day was collected and findings are summarized in **Table 4.12**.

Table 4.12: Summary of Findings from Investigation of Nickel Monitoring Results (Mid-Ebb Tide)

| Date | Marine construction works nearby | Approximate distance from marine construction works | Status of water quality measures (if applicable) | Construction vessels in the vicinity | Turbidity / Silt plume observed near the monitoring station | Action or Limit Level triggered due to Project |
|------------|---|---|--|--------------------------------------|---|--|
| 17/11/2018 | Marine filling, seabed regulation works and DCM works | Around 500m | Localised and enhanced silt curtain deployed. | No | No | No |

According to the investigation findings, it was confirmed that DCM, seabed regulation and marine filling works were operating normally with localised and enhanced silt curtains deployed. The localised and enhanced silt curtains were maintained properly and checked by ET regularly. Contractor had followed up and carried out silt curtain maintenance when defects were identified by ET or Contractor.

Nickel is a representative heavy metal that indicates the potential for release of contaminants from contaminated mud pits due to the disturbance of marine sediment within the pits by DCM activities, and elevated nickel concentration due to these activities should be associated with similar elevated SS levels. Since SS results at IM1, IM2 and IM4 on 17 November 2018 were within their Action and Limit Levels, this implies that active DCM works had limited influence on water quality in that period. With mitigation measures properly implemented and no observable silt plumes, these cases were considered due to external factors and not related to the Project.

4.5 Conclusion

During the reporting period, it is noted that the vast majority of monitoring results were within their corresponding Action and Limit Levels, while only a minor number of results triggered their corresponding Action Levels, and investigations were conducted accordingly.

Based on the investigation findings, all results that triggered the corresponding Action Levels were not due to the Project. Therefore, the Project did not cause adverse impact at the water quality sensitive receivers. All required actions under the Event and Action Plan were followed. These cases appeared to be due to natural fluctuation or other sources not related to the Project.

Nevertheless, the non-project related triggers have been attended to and have initiated corresponding actions and measures. As part of the EM&A programme, the construction methods and mitigation measures for water quality will continue to be monitored and opportunities for further enhancement will continue to be explored and implemented where possible, to strive for better protection of water quality and the marine environment.

In the meantime, the contractors were reminded to implement and maintain all mitigation measures during weekly site inspection and regular environmental management meetings. These include maintaining mitigation measures properly for reclamation works including DCM works, marine filling, seawall construction, and sand blanket laying works as recommended in the Manual.

5 Waste Management

In accordance with the Manual, the waste generated from construction activities was audited once per week to determine if wastes are being managed in accordance with the Waste Management Plan (WMP) prepared for the Project, contract-specific WMP, and any statutory and contractual requirements. All aspects of waste management including waste generation, storage, transportation and disposal were assessed during the audits.

5.1 Action and Limit Levels

The Action and Limit Levels of the construction waste are provided in **Table 5.1**.

Table 5.1: Action and Limit Levels for Construction Waste

| Monitoring Stations | Action Level | Limit Level |
|---------------------|---|---|
| Construction Area | When one valid documented complaint is received | Non-compliance of the WMP, contract-specific WMPs, any statutory and contractual requirements |

5.2 Waste Management Status

Weekly monitoring on all works contracts were carried out by the ET to check and monitor the implementation of proper waste management practices during the construction phase.

Recommendations made included provision and maintenance of proper chemical waste storage area, as well as handling, segregation, and regular disposal of general refuse. The contractors had taken actions to implement the recommended measures.

Based on updated information provided by contractors, construction waste generated in the reporting period is summarized in **Table 5.2**.

There were no complaints, non-compliance of the WMP, contract-specific WMPs, statutory and contractual requirements that triggered Action and Limit Levels in the reporting period.

Table 5.2: Construction Waste Statistics

| | C&D ⁽¹⁾ Material Transferred to Temporary Stockpiling Area (m ³) ⁽²⁾ | C&D Material Reused in to the Project (m ³) | C&D Material Reused in other Projects (m ³) | C&D Material Transferred to Public Fill (m ³) | Chemical Waste (kg) | Chemical Waste (L) | General Refuse (tonne) |
|----------------------------|--|---|--|---|------------------------|--------------------------|------------------------------|
| Sep 2018 ⁽³⁾⁽⁴⁾ | - | 3,330 | - | 5,688 | - | - | - |
| Nov 2018 ⁽⁴⁾ | 3,005 | 3,333 | 1,035 | 8,841 | 180 | 8,240 | 500 |

Notes:

- (1) C&D refers to Construction and Demolition.
- (2) The stockpiled material will be reused in the Project.
- (3) Only updated figures are presented.
- (4) Metals and paper were recycled in the reporting period.

6 Chinese White Dolphin Monitoring

In accordance with the Manual, CWD monitoring by small vessel line-transect survey supplemented by land-based theodolite tracking survey and passive acoustic monitoring should be conducted during construction phase.

The small vessel line-transect survey as proposed in the Manual should be conducted at a frequency of two full surveys per month while land-based theodolite tracking survey should be conducted at a frequency of one day per month per station during the construction phase. In addition to the land-based theodolite tracking survey required for impact monitoring as stipulated in the Manual, supplemental theodolite tracking surveys have also been conducted during the implementation for the SkyPier HSF diversion and speed control in order to assist in monitoring the effectiveness of these measures, i.e. in total twice per month at the Sha Chau station and three times per month at the Lung Kwu Chau station.

6.1 Action and Limit Levels

The Action and Limit Levels for CWD monitoring were formulated by the action response approach using the running quarterly dolphin encounter rates STG and ANI derived from the baseline monitoring data, as presented in the CWD Baseline Monitoring Report. The derived values of Action and Limit Levels for CWD monitoring were summarized in **Table 6.1**.

Table 6.1: Derived Values of Action and Limit Levels for Chinese White Dolphin Monitoring
NEL, NWL, AW, WL and SWL as a Whole

| | |
|-----------------------------|--|
| Action Level ⁽³⁾ | Running quarterly ⁽¹⁾ STG < 1.86 & ANI < 9.35 |
| Limit Level ⁽³⁾ | Two consecutive running quarterly ⁽²⁾ (3-month) STG < 1.86 & ANI < 9.35 |

Notes: (referring to the baseline monitoring report)

- (1) Action Level – running quarterly STG & ANI will be calculated from the three preceding survey months. For CWD monitoring for November 2018, data from 1 September 2018 to 30 November 2018 was used to calculate the running quarterly encounter rates STG & ANI;
- (2) Limit Level – two consecutive running quarters mean both the running quarterly encounter rates of the preceding month October 2018 (calculated by data from August 2018 to October 2018) and the running quarterly encounter rates of this month (calculated by data from September 2018 to November 2018).
- (3) Action Level and/or Limit Level will be triggered if both STG and ANI fall below the criteria.

6.2 CWD Monitoring Transects and Stations

6.2.1 Small Vessel Line-transect Survey

Small vessel line-transect surveys were conducted along the transects covering Northeast Lantau (NEL), Northwest Lantau (NWL), Airport West (AW), West Lantau (WL) and Southwest Lantau (SWL) areas as proposed in the Manual, which are consistent with the Agriculture, Fisheries and Conservation Department (AFCD) long-term monitoring programme (except the addition of AW). The AW transect has not been previously surveyed in the AFCD programme due to the restrictions of HKIA Approach Area, nevertheless, this transect was established during the EIA of the 3RS Project and refined in the Manual with the aim to collect project specific baseline information within the HKIA Approach Area to fill the data gap that was not covered by the AFCD programme. This also provided a larger sample size for estimating the density, abundance and patterns of movements in the broader study area of the project.

The planned vessel survey transect lines follow the waypoints set for construction phase monitoring as proposed in the Manual and depicted in **Figure 6.1** with the waypoint coordinates of all transect lines given in **Table 6.2**, which are subject to on-site refinement based on the actual survey conditions and constraints.

Table 6.2: Coordinates of Transect Lines in NEL, NWL, AW, WL and SWL Survey Areas

| Waypoint | Easting | Northing | Waypoint | Easting | Northing |

6.2.2 Land-based Theodolite Tracking Survey

Land-based theodolite tracking survey stations were set up at two locations, one facing east/south/west on the southern slopes of Sha Chau (SC), and the other facing north/northeast/northwest at Lung Kwu Chau (LKC). The stations (D and E) are depicted in **Figure 6.2** and shown in **Table 6.3** with position coordinates, height of station and approximate distance of consistent theodolite tracking capabilities for CWD.

Table 6.3: Land-based Theodolite Survey Station Details

| Stations | Location | Geographical Coordinates | Station Height (m) | Approximate Tracking Distance (km) |
|----------|---------------------|--------------------------------------|--------------------|------------------------------------|
| D | Sha Chau (SC) | 22° 20' 43.5" N 113° 53' 24.66" E | 45.66 | 2 |
| E | Lung Kwu Chau (LKC) | 22° 22' 44.83" N 113° 53' 0.2" E | 70.40 | 3 |

6.3 CWD Monitoring Methodology

6.3.1 Small Vessel Line-transect Survey

Small vessel line-transect surveys provided data for density and abundance estimation and other assessments using distance-sampling methodologies, specifically, line-transect methods.

The surveys involved small vessel line-transect data collection and have been designed to be similar to, and consistent with, previous surveys for the AFCD for their long-term monitoring of small cetaceans in Hong Kong. The survey was designed to provide systematic, quantitative measurements of density, abundance and habitat use.

As mentioned in **Section 6.2.1**, the transects covered NEL, NWL covering the AW, WL and SWL areas as proposed in the Manual and are consistent with the AFCD long-term monitoring programme (except AW). There are two types of transect lines:

- Primary transect lines: the parallel and zigzag transect lines as shown in **Figure 6.1**; and
- Secondary transect lines: transect lines connecting between the primary transect lines and going around islands.

All data collected on both primary and secondary transect lines were used for analysis of sighting distribution, group size, activities including association with fishing boat, and mother-calf pairs. Only on-effort data collected under conditions of Beaufort 0-3 and visibility of approximately 1200 m or beyond were used for analysis of the CWD encounter rates.

A 15-20 m vessel with a flying bridge observation platform about 4 to 5 m above water level and unobstructed forward view, and a team of three to four observers were deployed to undertake the surveys. Two observers were on search effort at all times when following the transect lines with

a constant speed of 7 to 8 knots (i.e. 13 to 15 km per hour), one using 7X handheld binoculars and the other using unaided eyes and recording data.

During on-effort survey periods, the survey team recorded effort data including time, position (waypoints), weather conditions (Beaufort sea state and visibility) and distance travelled in each series with assistance of a handheld GPS device. The GPS device also continuously and automatically logged data including time, position (latitude and longitude) and vessel speed throughout the entire survey.

When CWDs were seen, the survey team was taken off-effort, the dolphins were approached and photographed for photo-ID information (using a Canon 7D [or similar] camera and long 300 mm+ telephoto lens), then followed until they were lost from view. At that point, the boat returned (off effort) to the survey line at the closest point after obtaining photo records of the dolphin group and began to survey on effort again.

Focal follows of dolphins would be used for providing supplementary information only where practicable (i.e. when individual dolphins or small stable groups of dolphins with at least one member that could be readily identifiable with unaided eyes during observations and weather conditions are favourable). These would involve the boat following (at an appropriate distance to minimize disturbance) an identifiable individual dolphin for an extended period of time, and collecting detailed data on its location, behaviour, response to vessels, and associates.

6.3.2 Photo Identification

CWDs can be identified by their unique features like presence of scratches, nick marks, cuts, wounds, deformities of their dorsal fin and distinguished colouration and spotting patterns.

When CWDs were observed, the survey team was taken off-effort, the dolphins were approached and photographed for photo-ID information (using a Canon 7D [or similar] camera and long 300 mm+ telephoto lens). The survey team attempted to photo both sides of every single dolphin in the group as the colouration and spotting pattern on both sides may not be identical. The photos were taken at the highest available resolution and stored on Compact Flash memory cards for transferring into a computer.

All photos taken were initially examined to sort out those containing potentially identifiable individuals. These sorted-out images would then be examined in detail and compared to the CWD photo-identification catalogue established for 3RS during the baseline monitoring stage.

6.3.3 Land-based Theodolite Tracking Survey

Land-based theodolite tracking survey obtains fine-scale information on the time of day and movement patterns of the CWDs. A digital theodolite (Sokkia/Sokkisha Model DT5 or similar equipment) with 30-power magnification and 5-s precision was used to obtain the vertical and horizontal angle of each dolphin and vessel position. Angles were converted to geographic coordinates (latitude and longitude) and data were recorded using *Pythagoras* software, Version 1.2. This method delivers precise positions of multiple spatially distant targets in a short period of time. The technique is fully non-invasive, and allows for time and cost-effective descriptions of dolphin habitat use patterns at all times of daylight.

Three surveyors (one theodolite operator, one computer operator, and one observer) were involved in each survey. Observers searched for dolphins using unaided eyes and handheld binoculars (7X50). Theodolite tracking sessions were initiated whenever an individual CWD or group of CWDs was located. Where possible, a distinguishable individual was selected, based on colouration, within the group. The focal individual was then continuously tracked via the theodolite, with a position recorded each time the dolphin surfaced. In case an individual could

not be positively distinguished from other members, the group was tracked by recording positions based on a central point within the group whenever the CWD surfaced. Tracking continued until animals were lost from view; moved beyond the range of reliable visibility (>1-3 km, depending on station height); or environmental conditions obstructed visibility (e.g., intense haze, Beaufort sea state >4, or sunset), at which time the research effort was terminated. In addition to the tracking of CWD, all vessels that moved within 2-3 km of the station were tracked, with effort made to obtain at least two positions for each vessel.

Theodolite tracking included focal follows of CWD groups and vessels. Priority was given to tracking individual or groups of CWD. The survey team also attempted to track all vessels moving within 1 km of the focal CWD.

6.4 Monitoring Results and Observations

6.4.1 Small Vessel Line-transect Survey

Survey Effort

Within this reporting period, two complete sets of small vessel line-transect surveys were conducted on the 6, 7, 12, 13, 16, 20, 21 and 23 November 2018, covering all transects in NEL, NWL, AW, WL and SWL survey areas for twice.

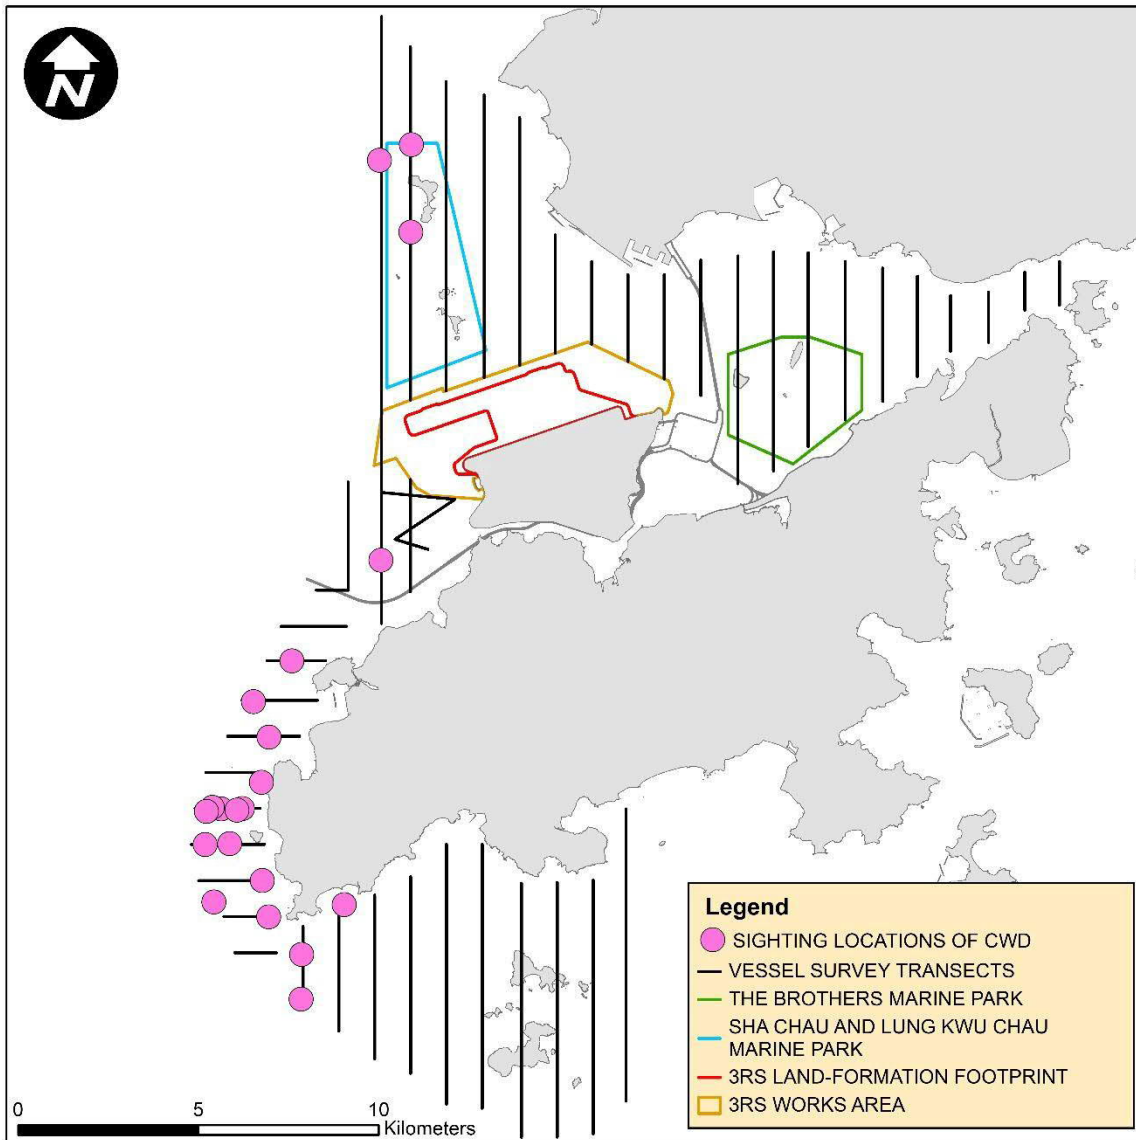

A total of around 444.38 km of survey effort was collected from these surveys, with around 88.2% of the total survey effort being conducted under favourable weather condition (i.e. Beaufort Sea State 3 or below with favourable visibility). Details of the survey effort are given in **Appendix C**.

Sighting Distribution

In November 2018, 21 sightings with 61 dolphins were sighted. Details of cetacean sightings are presented in **Appendix C**.

Distribution of all CWD sightings recorded in November 2018 is illustrated in **Figure 6.3**. In NWL, the majority of CWD sightings were recorded around Lung Kwu Chau while one sighting was recorded at the southwestern part of the survey area. In WL, CWD sightings were distributed from Tai O to Fan Lau, particularly in waters off Peaked Hill. In SWL, CWD sightings were all located in the western end of the survey area around Fan Lau and Fan Lau Tung Wan. No sightings of CWD were recorded in NEL survey area in this month.

Figure 6.3: Sightings Distribution of Chinese White Dolphins

Remarks: Please note that there are 21 pink circles on the map indicating the sighting locations of CWD. Some of them were very close to each other and therefore appear overlapped on this distribution map.

Encounter Rate

Two types of dolphin encounter rates were calculated based on the data from November 2018. They included the number of dolphin sightings per 100 km survey effort (STG) and total number of dolphins per 100 km survey effort (ANI) in the whole survey area (i.e. NEL, NWL, AW, WL and SWL). In the calculation of dolphin encounter rates, only survey data collected under favourable weather condition (i.e. Beaufort Sea State 3 or below with favourable visibility) were used. The formulae used for calculation of the encounter rates are shown below:

Encounter Rate by Number of Dolphin Sightings (STG)

$$STG = \frac{\text{Total No. of On – effort Sightings}}{\text{Total Amount of Survey Effort (km)}} \times 100$$

Encounter Rate by Number of Dolphins (ANI)

$$ANI = \frac{\text{Total No. of Dolphins from On – effort Sightings}}{\text{Total Amount of Survey Effort (km)}} \times 100$$

(Notes: Only data collected under Beaufort 3 or below condition were used)

In November 2018, a total of around 392.04 km of survey effort were conducted under Beaufort Sea State 3 or below with favourable visibility, whilst a total number of 19 on-effort sightings with 56 dolphins were sighted under such condition. Calculation of the encounter rates in November 2018 are shown in **Appendix C**.

For the running quarter of the reporting period (i.e., from September to November 2018), a total of around 1258.60 km of survey effort were conducted under Beaufort Sea State 3 or below with favourable visibility, whilst a total number of 54 on-effort sightings and a total number of 166 dolphins from on-effort sightings were obtained under such condition. Calculation of the running quarterly encounter rates are shown in **Appendix C**.

The STG and ANI of CWD in the whole survey area (i.e. NEL, NWL, AW, WL and SWL) during the month of November 2018 and during the running quarter are presented in **Table 6.4** below and compared with the Action Level. The running quarterly encounter rates STG and ANI did not trigger Action Level.

Table 6.4: Comparison of CWD Encounter Rates of the Whole Survey Area with Action Levels

| | Encounter Rate (STG) | Encounter Rate (ANI) |
|---|---|---|
| November 2018 | 4.85 | 14.28 |
| Running Quarter from September 2018 to November 2018 ⁽¹⁾ | 4.29 | 13.19 |
| Action Level | Running quarterly ⁽¹⁾ < 1.86 | Running quarterly ⁽¹⁾ < 9.35 |

Note: (1) Running quarterly encounter rates STG & ANI were calculated from data collected in the reporting period and the two preceding survey months, i.e. the data from September to November 2018, containing six sets of transect surveys for all monitoring areas. Action Level will be triggered if both STG and ANI fall below the criteria.

Group Size

In November 2018, 21 groups with 61 dolphins were sighted, and the average group size of CWDs was 2.90 dolphins per group. Numbers of sightings with small group size (i.e. 1-2 dolphins) and medium group size (i.e. 3-9 dolphins) were similar. No sighting with large group size (i.e. 10 or more dolphins) was recorded.

Activities and Association with Fishing Boats

Five out of 21 sightings of CWDs were recorded engaging in feeding activities in November 2018. No association with operating fishing boats was observed in this reporting month.

Mother-calf Pair

In November 2018, three sightings were recorded with the presence of mother-and-unspotted calf, mother-and-unspotted juvenile or mother-and-spotted juvenile pairs. Two of these sightings were sighted in NWL while the remaining one was encountered in WL.

6.4.2 Photo Identification

In November 2018, a total number of 30 different CWD individuals were identified for totally 34 times. A summary of photo identification works is presented in **Table 6.5**. Representative photos of these individuals are given in **Appendix C**.

Table 6.5: Summary of Photo Identification

| Individual ID | Date of Sighting (dd-mmm-yy) | Sighting Group No. | Area | Individual ID | Date of Sighting (dd-mmm-yy) | Sighting Group No. | Area |
|---------------|------------------------------|--------------------|------|---------------|------------------------------|--------------------|------|
| NLMM004 | 6-Nov-18 | 2 | NWL | SLMM034 | 21-Nov-18 | 2 | SWL |
| NLMM006 | 6-Nov-18 | 2 | NWL | SLMM037 | 20-Nov-18 | 2 | WL |
| NLMM012 | 6-Nov-18 | 1 | NWL | SLMM052 | 16-Nov-18 | 1 | WL |
| NLMM013 | 6-Nov-18 | 2 | NWL | SLMM059 | 20-Nov-18 | 3 | WL |
| NLMM018 | 20-Nov-18 | 2 | WL | WLMM001 | 16-Nov-18 | 8 | WL |
| | | 3 | WL | WLMM007 | 16-Nov-18 | 8 | WL |
| NLMM023 | 12-Nov-18 | 2 | NWL | WLMM018 | 20-Nov-18 | 4 | WL |
| NLMM037 | 6-Nov-18 | 2 | NWL | WLMM056 | 20-Nov-18 | 3 | WL |
| NLMM039 | 6-Nov-18 | 1 | NWL | WLMM060 | 12-Nov-18 | 1 | NWL |
| NLMM052 | 12-Nov-18 | 2 | NWL | WLMM063 | 16-Nov-18 | 3 | WL |
| NLMM068 | 6-Nov-18 | 2 | NWL | WLMM071 | 12-Nov-18 | 1 | NWL |
| SLMM003 | 16-Nov-18 | 1 | WL | WLMM079 | 16-Nov-18 | 1 | WL |
| | 20-Nov-18 | 2 | WL | | | 8 | WL |
| SLMM007 | 16-Nov-18 | 1 | WL | WLMM109 | 16-Nov-18 | 8 | WL |
| SLMM014 | 21-Nov-18 | 1 | SWL | WLMM125 | 20-Nov-18 | 3 | WL |
| | | 3 | SWL | WLMM127 | 6-Nov-18 | 2 | NWL |
| SLMM028 | 20-Nov-18 | 1 | WL | WLMM131 | 20-Nov-18 | 2 | WL |

6.4.3 Land-based Theodolite Tracking Survey

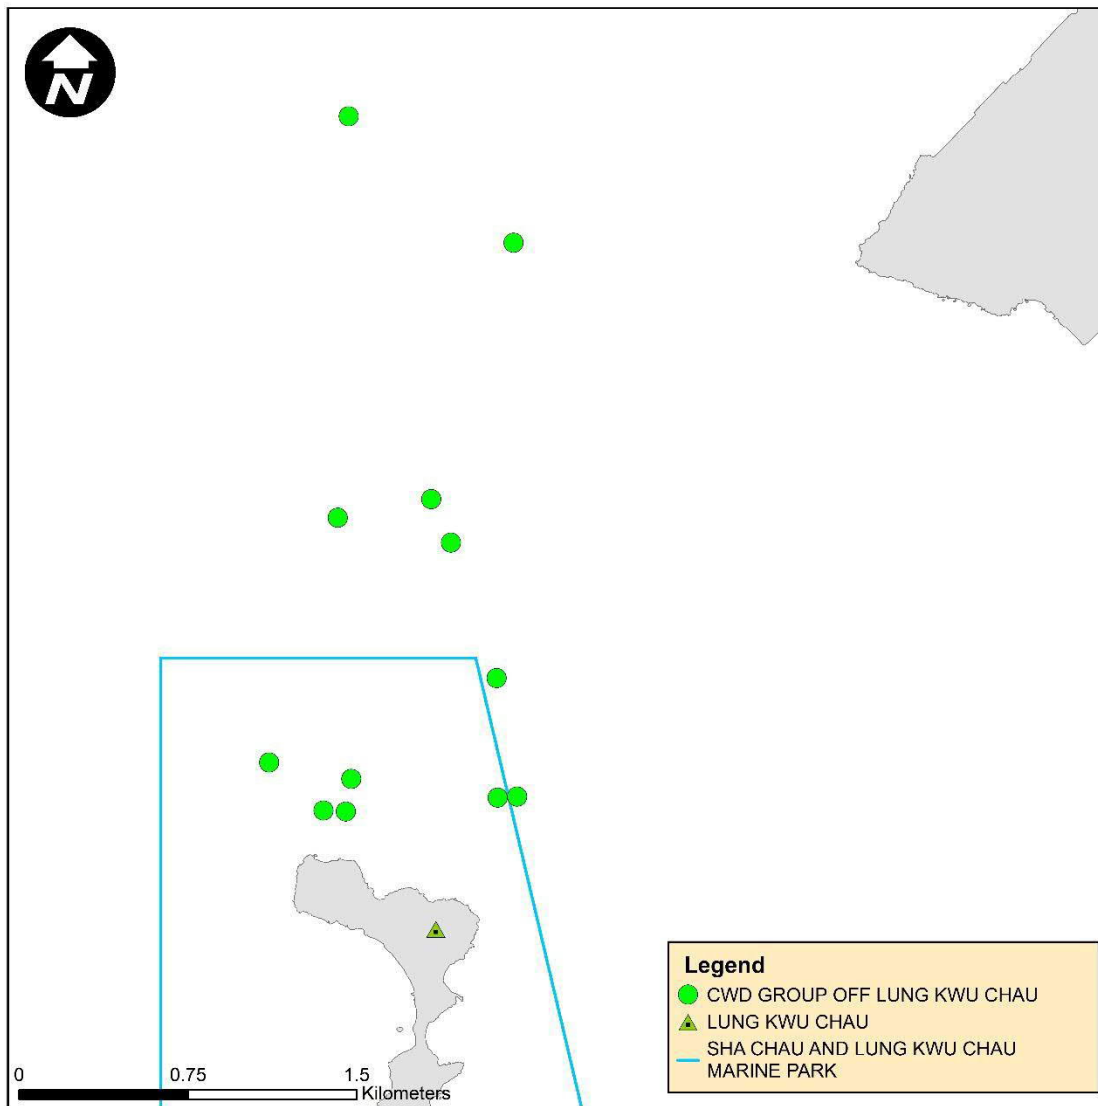

Survey Effort

Land-based theodolite tracking surveys were conducted at LKC on 5, 13 and 21 November 2018 and at SC on 14 and 27 November 2018, with a total of five days of land-based theodolite tracking survey effort accomplished in this reporting period. A total number of 12 CWD groups were tracked at LKC station during the surveys. Information of survey effort and CWD groups sighted during these land-based theodolite tracking surveys are presented in **Table 6.6**. Details of the survey effort and CWD groups tracked are presented in **Appendix C**. The first sighting locations of CWD groups tracked at LKC station during land-based theodolite tracking surveys in November 2018 were depicted in **Figure 6.4**. No CWD group was sighted from SC station in this reporting month.

Table 6.6: Summary of Survey Effort and CWD Group of Land-based Theodolite Tracking

| Land-based Station | No. of Survey Sessions | Survey Effort (hh:mm) | No. of CWD Groups Sighted | CWD Group Sighting per Survey Hour |
|--------------------|------------------------|-----------------------|---------------------------|------------------------------------|
| Lung Kwu Chau | 3 | 18:00 | 12 | 0.67 |
| Sha Chau | 2 | 12:00 | 0 | 0 |
| TOTAL | 5 | 30:00 | 12 | 0.40 |

Figure 6.4: Plots of First Sightings of All CWD Groups obtained from Land-based Stations

6.5 Progress Update on Passive Acoustic Monitoring

Underwater acoustic monitoring using Passive Acoustic Monitoring (PAM) should be undertaken during land formation related construction works. In this reporting period, the Ecological Acoustic Recorder (EAR) was retrieved on 28 November 2018 and subsequently redeployed and positioned at south of Sha Chau Island inside the SCLKCMP with 20% duty cycle (**Figure 6.5**). The EAR deployment is generally for 6 weeks prior to data retrieval for analysis. Acoustic data is reviewed to give an indication of CWDs occurrence patterns and to obtain anthropogenic noise

information simultaneously. Analysis (by a specialized team of acousticians) involved manually browsing through every acoustic recording and logging the occurrence of dolphin signals. All data will be re-played by computer as well as listened to by human ears for accurate assessment of dolphin group presence. As the period of data collection and analysis takes more than four months, PAM results could not be reported in monthly intervals but report for supplementing the annual CWD monitoring analysis.

6.6 Site Audit for CWD-related Mitigation Measures

During the reporting period, silt curtains were in place by the contractors for sand blanket laying works, in which dolphin observers were deployed by each contractor in accordance with the MMWP. Teams of at least two dolphin observers were deployed at 12 to 16 dolphin observation stations by the contractors for continuous monitoring of the DEZ by all contractors for ground improvement works (DCM works and PVD installation) and seawall construction in accordance with the DEZ Plan. Trainings for the proposed dolphin observers on the implementation of MMWP and DEZ monitoring were provided by the ET prior to the aforementioned works, with a cumulative total of 668 individuals being trained and the training records kept by the ET. From the contractors' MMWP observation records, no dolphin or other marine mammals were observed within or around the silt curtains. As for DEZ monitoring records, no dolphin or other marine mammals were observed within or around the DEZs in this reporting month. These contractors' records were also audited by the ET during site inspection.

Audits of acoustic decoupling measures for construction vessels were carried out during weekly site inspection and the observations are summarised in **Section 7.1**. Audits of SkyPier high speed ferries route diversion and speed control and construction vessel management are presented in **Section 7.2** and **Section 7.3** respectively.

6.7 Timing of Reporting CWD Monitoring Results

Detailed analysis of CWD monitoring results collected by small vessel line-transect survey will be provided in future quarterly reports. Detailed analysis of CWD monitoring results collected by land-based theodolite tracking survey and PAM will be provided in future annual reports after a larger sample size of data has been collected.

6.8 Summary of CWD Monitoring

Monitoring of CWD was conducted with two complete sets of small vessel line-transect surveys and five days of land-based theodolite tracking survey effort as scheduled. The running quarterly encounter rates STG and ANI in the reporting period did not trigger the Action Level for CWD monitoring.

7 Environmental Site Inspection and Audit

7.1 Environmental Site Inspection

Site inspections of the construction works were carried out on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures for the Project. The weekly site inspection schedule of the construction works is provided in **Appendix B**. Bi-weekly site inspections were also conducted by the IEC. Besides, *ad-hoc* site inspections were conducted by ET and IEC if environmental problems were identified, or subsequent to receipt of an environmental complaint, or as part of the investigation work. These site inspections provided a direct means to reinforce the specified environmental protection requirements and pollution control measures in construction sites.

During site inspections, environmental situation, status of implementation of pollution control and mitigation measures were observed both within the site area as well as outside the project sites which was likely to be affected, directly or indirectly, by the site activities. Environmental documents and site records, including waste disposal record, maintenance record of environmental equipment, and relevant environmental permit and licences, were also checked on site. Observations were recorded in the site inspection checklist and passed to the contractor together with the appropriate recommended mitigation measures where necessary in order to advise contractors on environmental improvement, awareness and on-site enhancement measures. The observations were made with reference to the following information during the site inspections:

- The EIA and EM&A requirements;
- Relevant environmental protection laws, guidelines, and practice notes;
- The EP conditions and other submissions under the EP;
- Monitoring results of EM&A programme;
- Works progress and programme;
- Proposal of individual works;
- Contract specifications on environmental protection; and
- Previous site inspection results.

Good site practices were observed in site inspections during the reporting period. Advice were given when necessary to ensure the construction workforce were familiar with relevant procedures, and to maintain good environmental performance on site. Regular toolbox talks on environmental issues were organized for the construction workforce by the contractors to ensure understanding and proper implementation of environmental protection and pollution control mitigation measures.

During the reporting period, implementation of recommended landscape and visual mitigation measures (CM1 – CM10) where applicable was monitored weekly in accordance with the Manual and no non-conformity was recorded. In case of non-conformity, specific recommendations will be made, and actions will be proposed according to the Event and Action Plan. The monitoring status is summarized in **Appendix A**.

A summary of implementation status of the environmental mitigation measures for the construction phase of the Project during the reporting period is provided in **Appendix A**.

7.2 Audit of SkyPier High Speed Ferries

The Marine Travel Routes and Management Plan for High Speed Ferries of SkyPier (the SkyPier Plan) was submitted to the Advisory Council on the Environment for comment and subsequently submitted to and approved by EPD in November 2015 under EP Condition 2.10. The approved SkyPier Plan is available on the dedicated website of the Project. In the SkyPier Plan, AAHK has committed to implement the mitigation measure of requiring HSFs of SkyPier travelling between HKIA and Zhuhai / Macau to start diverting the route with associated speed control across the area, i.e. Speed Control Zone (SCZ), with high CWD abundance. The route diversion and speed restriction at the SCZ have been implemented since 28 December 2015.

Key audit findings for the SkyPier HSFs travelling to/from Zhuhai and Macau against the requirements of the SkyPier Plan during the reporting period are summarized in **Table 7.1**. The daily movements of all SkyPier HSFs in this reporting period (i.e., 86 to 92 daily movements) were within the maximum daily cap of 125 daily movements. Status of compliance with the annual daily average of 99 movements will be further reviewed in the annual EM&A Report.

In total, 870 ferry movements between HKIA SkyPier and Zhuhai / Macau were recorded in November 2018 and the data are presented in **Appendix G**. The time spent by the SkyPier HSFs travelling through the SCZ in November 2018 were presented in **Figure 7.1**. It will take 9.6 minutes to travel through the SCZ when the SkyPier HSFs adopt the maximum allowable speed of 15 knots within the SCZ. **Figure 7.1** shows that all of the SkyPier HSFs spent more than 9.6 minutes to travel through the SCZ, except one HSF on 06 November 2018.

Figure 7.1: Duration of the SkyPier HSFs travelling through the SCZ for November 2018

Note: Data above the red line indicated that the time spent by the SkyPier HSFs travelling through the SCZ is more than 9.6 minutes, which is in compliance with the SkyPier Plan.

One ferry was recorded with average speed over 15 knots on 06 November 2018. A notice was sent to the ferry operator and the case is under investigation by ET. The investigation results will be presented in the next monthly EM&A report.

As reported in the Construction Phase Monthly EM&A Report No. 34, one ferry was recorded with minor deviation from the diverted route on 18 October 2018. ET’s investigation found that the deviation was due to a failure in water jet pump. Due to emergency, the captain decided to deviate from planned track for safety reasons.

One meeting was held with the ferry operators on 12 November 2018 to review and discuss the deviation cases happened in the past few months as well as to share experience and recommendations to further strengthen the implementation of SkyPier Plan.

Table 7.1: Summary of Key Audit Findings against the SkyPier Plan

| Requirements in the SkyPier Plan | 1 November to 30 November 2018 |
|---|---|
| Total number of ferry movements recorded and audited | 870 |
| Use diverted route and enter / leave SCZ through Gate Access Points | 0 deviation |
| Speed control in speed control zone | The average speeds taken within the SCZ by all HSFs were within 15 knots, which complied with the SkyPier Plan, except one HSF on 06 November 2018 (9.1 knots to 20.3 knots), which complied with the SkyPier Plan. The time used by HSFs to travel through SCZ is presented in Figure 7.1 . |
| Daily Cap (including all SkyPier HSFs) | 86 to 92 daily movements (within the maximum daily cap - 125 daily movements). |

7.3 Audit of Construction and Associated Vessels

The updated Marine Travel Routes and Management Plan for Construction and Associated Vessel (MTRMP-CAV) was submitted and approved in November 2016 by EPD under EP Condition 2.9. The approved Plan is available on the dedicated website of the Project.

ET carried out the following actions during the reporting period:

- Two skipper training sessions were held for contractors' concerned skippers of relevant construction vessels to familiarize them with the predefined routes; general education on local cetaceans; guidelines for avoiding adverse water quality impact; the required environmental practices / measures while operating construction and associated vessels under the Project; and guidelines for operating vessels safely in the presence of CWDs. The list of all trained skippers was properly recorded and maintained by ET.
- Three skipper training sessions were held by contractors' Environmental Officers. Competency tests were subsequently conducted with the trained skippers by ET.
- In this reporting period, three skippers were trained by ET and five skippers were trained by contractors' Environmental Officers. In total, 1073 skippers were trained from August 2016 to November 2018.
- The Marine Surveillance System (MSS) automatically recorded deviation cases such as speeding, entering no entry zone and not travelling through the designated gate. ET conducted checking to ensure the MSS records deviation cases accurately.
- Deviations such as speeding in the works area, entered no entry zone, and entering from non-designated gates were identified. All the concerned contractors were reminded to comply with the requirements of the MTRMP-CAV during the bi-weekly MTCC audit.
- Three-month rolling programmes (one month record and three months forecast) for construction vessel activities were received from the contractors in order to help maintain the number of construction and associated vessels on site to a practicable minimal level.

7.4 Implementation of Dolphin Exclusion Zone

The DEZ Plan was submitted in accordance with EP Condition 3.1 (v) requirement and Section 10.3 of the Manual, and approved in April 2016 by EPD. The 24-hour DEZs with a 250m radius

for marine works were established and implemented by the contractors for ground improvement works (DCM works and PVD installation) and seawall construction according to their Method Statement for DEZ Monitoring that followed the specifications and requirements of the DEZ Plan.

During the reporting period, ET was notified that no dolphin sightings were recorded within the DEZ by the contractors. The ET checked the relevant records by the contractors and conducted ad-hoc inspection to audit the implementation of DEZ.

7.5 Terrestrial Ecological Monitoring

In accordance with the Manual, ecological monitoring shall be undertaken monthly at the HDD daylighting location on Sheung Sha Chau Island during the HDD construction works period from August to March to identify and evaluate any impacts with appropriate actions taken as required to address and minimise any adverse impact found. During the reporting period, it was observed from the monthly ecological monitoring at the HDD daylighting location on Sheung Sha Chau that preparation works for shoreline landscape reinstatement were carried out under the Contract P560(R), and there was no encroachment of any works upon the egret area nor any significant disturbance to the ardeids on the island by the works. No signs of breeding or nursery activities were observed. At the HDD daylighting location, neither nest nor breeding activity of ardeids were found during the monthly ecological monitoring and weekly site inspections in the reporting period. The location map and site photos regarding the monthly ecological monitoring for the HDD works and egret area are provided in **Appendix C** for reference.

7.6 Status of Submissions under Environmental Permits

The current status of submissions under the EP up to the reporting period is presented in **Table 7.2**.

Table 7.2: Status of Submissions under Environmental Permit

| EP Condition | Submission | Status |
|--------------|--|----------------------------|
| 2.1 | Complaint Management Plan | |
| 2.4 | Management Organizations | |
| 2.5 | Construction Works Schedule and Location Plans | |
| 2.7 | Marine Park Proposal | |
| 2.8 | Marine Ecology Conservation Plan | |
| 2.9 | Marine Travel Routes and Management Plan for Construction and Associated Vessels | |
| 2.10 | Marine Travel Routes and Management Plan for High Speed Ferries of SkyPier | |
| 2.11 | Marine Mammal Watching Plan | |
| 2.12 | Coral Translocation Plan | Accepted / approved by EPD |
| 2.13 | Fisheries Management Plan | |
| 2.14 | Egret Survey Plan | |
| 2.15 | Silt Curtain Deployment Plan | |
| 2.16 | Spill Response Plan | |
| 2.17 | Detailed Plan on Deep Cement Mixing | |
| 2.19 | Waste Management Plan | |
| 2.20 | Supplementary Contamination Assessment Plan | |
| 3.1 | Updated EM&A Manual | |
| 3.4 | Baseline Monitoring Reports | |

7.7 Compliance with Other Statutory Environmental Requirements

During the reporting period, environmental related licenses and permits required for the construction activities were checked. No non-compliance with environmental statutory requirements was recorded. The environmental licenses and permits which are valid in the reporting period are presented in **Appendix E**.

7.8 Analysis and Interpretation of Complaints, Notification of Summons and Status of Prosecutions

7.8.1 Complaints

A complaint was received on 6 Nov 2018 regarding dust nuisance from sand barges at Tuen Mun. Investigation was conducted by the ET in accordance with the Manual and the Complaint Management Plan of the Project. The anonymous complainant did not provide any specific information (e.g. date, time, name of vessels) on the case. In recent months, only one contractor has deployed sand delivery vessels for 3RS Project, and photo records of implementation of dust mitigation measure, such as water spraying, were provided by the contractor. Considering that Tuen Mun Anchorage Area is one of the designated anchorage areas for all vessels in Hong Kong waters, including construction vessels of various construction projects. Based on the information provided by the complainant, there were no evidences suggesting that the Project's sand delivery vessels caused dust nuisance to nearby residence at Tuen Mun. Nevertheless, ET will continue reminding all contractors to continue the implementation of dust mitigation measures and to conduct regular training for all frontline staff to avoid dust nuisance to the public. ET will also continue to monitor the implementation of dust mitigation measures. Hence, the complaint case was considered closed.

7.8.2 Notifications of Summons or Status of Prosecution

Neither notification of summons nor prosecution was received during the reporting period.

7.8.3 Cumulative Statistics

Cumulative statistics on complaints, notifications of summons and status of prosecutions are summarized in **Appendix F**.

8 Future Key Issues and Other EIA & EM&A Issues

8.1 Construction Programme for the Coming Reporting Period

Key activities anticipated in the next reporting period for the Project will include the following:

Advanced Works:

Contract P560 (R) Aviation Fuel Pipeline Diversion Works

- Trench backfilling;
- Shoreline reinstatement next to the new pipe; and
- Stockpiling of excavated materials from previous HDD operation.

DCM Works:

Contract 3201, 3203, and 3205 DCM Works

- DCM works

Reclamation Works:

Contract 3206 Main Reclamation Works

- PVD installation;
- Seawall construction;
- Marine filling; and
- DCM works.

Airfield Works:

Contract 3301 North Runway Crossover Taxiway

- Cable ducting works;
- Subgrade works;
- Operation of aggregate mixing facility; and
- Precast of duct bank and fabrication of steel works.

Terminal 2 Expansion Works:

Contract 3501 Antenna Farm and Sewage Pumping Station

- Excavation works; and
- Pipe installation.

Contract 3502 Terminal 2 Automated People Mover (APM) Depot Modification Works

- Site clearance;
- Plant mobilization
- Cable duct installation; and
- Brick wall construction.

Contract 3503 Terminal 2 Foundation and Substructure Works

- Site establishment;
- Drainage, utility, and road work;
- Piling and structure works; and
- Demolition of footbridge.

Contract 3505 Terminal 2 Spectrum Lighting Mock-ups

- Re-fixing of ceiling panels.

Automated People Mover (APM) works:

Contract 3602 Existing APM System Modification Works

- Site establishment;
- Site office construction
- Drilling dowel bars; and
- Construction of concrete plinth.

Baggage Handling System (BHS) works:

Contract 3603 3RS Baggage Handling System

- Site establishment; and
- BHS modification work at Terminal 1.

Airport Support Infrastructure & Logistic Works:

Contract 3801 APM and BHS Tunnels on Existing Airport Island

- Site establishment;
- Diversion of underground utilities;
- Piling and foundation works; and
- Demolition of footbridge.

8.2 Key Environmental Issues for the Coming Reporting Period

The key environmental issues for the Project in the coming reporting period expected to be associated with the construction activities include:

- Generation of dust from construction works and stockpiles;
- Noise from operating equipment and machinery on-site;
- Generation of site surface runoffs and wastewater from activities on-site;
- Water quality from DCM works and marine filling;
- DEZ monitoring for ground improvement works (DCM works and PVD installation) and seawall construction;
- Implementation of MMWP for silt curtain deployment by the contractors' dolphin observers;
- Terrestrial ecological monitoring on Sheung Sha Chau;
- Sorting, recycling, storage and disposal of general refuse and construction waste;
- Management of chemicals and avoidance of oil spillage on-site; and
- Acoustic decoupling measures for equipment on marine vessels.

The implementation of required mitigation measures by the contractors will be monitored by the ET.

8.3 Monitoring Schedule for the Coming Reporting Period

A tentative schedule of the planned environmental monitoring work in the next reporting period is provided in **Appendix B**.

9 Conclusion and Recommendation

The key activities of the Project carried out in the reporting period included reclamation works and land-side works. Reclamation works included deep cement mixing (DCM) works, marine filling, seawall construction and prefabricated vertical drain (PVD) installation. Land-side works involved mainly foundation and substructure work for Terminal 2 expansion, modification and tunnel work for Automated People Mover (APM) and Baggage Handling System (BHS) systems, and preparation work for utilities, with activities include site establishment, site office construction, road and drainage works, cable ducting, demolition of existing facilities, piling, and excavation works.

All the monitoring works for construction dust, construction noise, water quality, construction waste, landscape & visual, terrestrial ecology, and CWD were conducted during the reporting period in accordance with the Manual.

Monitoring results of construction dust, construction noise, construction waste, and CWD did not trigger the corresponding Action and Limit Levels during the reporting period.

The water quality monitoring results for DO, total alkalinity, and chromium obtained during the reporting period were within the corresponding Action and Limit Levels stipulated in the EM&A programme. Relevant investigation and follow-up actions will be conducted according to the EM&A programme if the corresponding Action and Limit Levels are triggered. For SS, turbidity and nickel, some of the testing results triggered the relevant Action and Limit Levels, and the corresponding investigations were conducted accordingly. The investigation findings concluded that the cases were not related to the Project. To conclude, the construction activities during the reporting period did not introduce adverse impact to all water quality sensitive receivers.

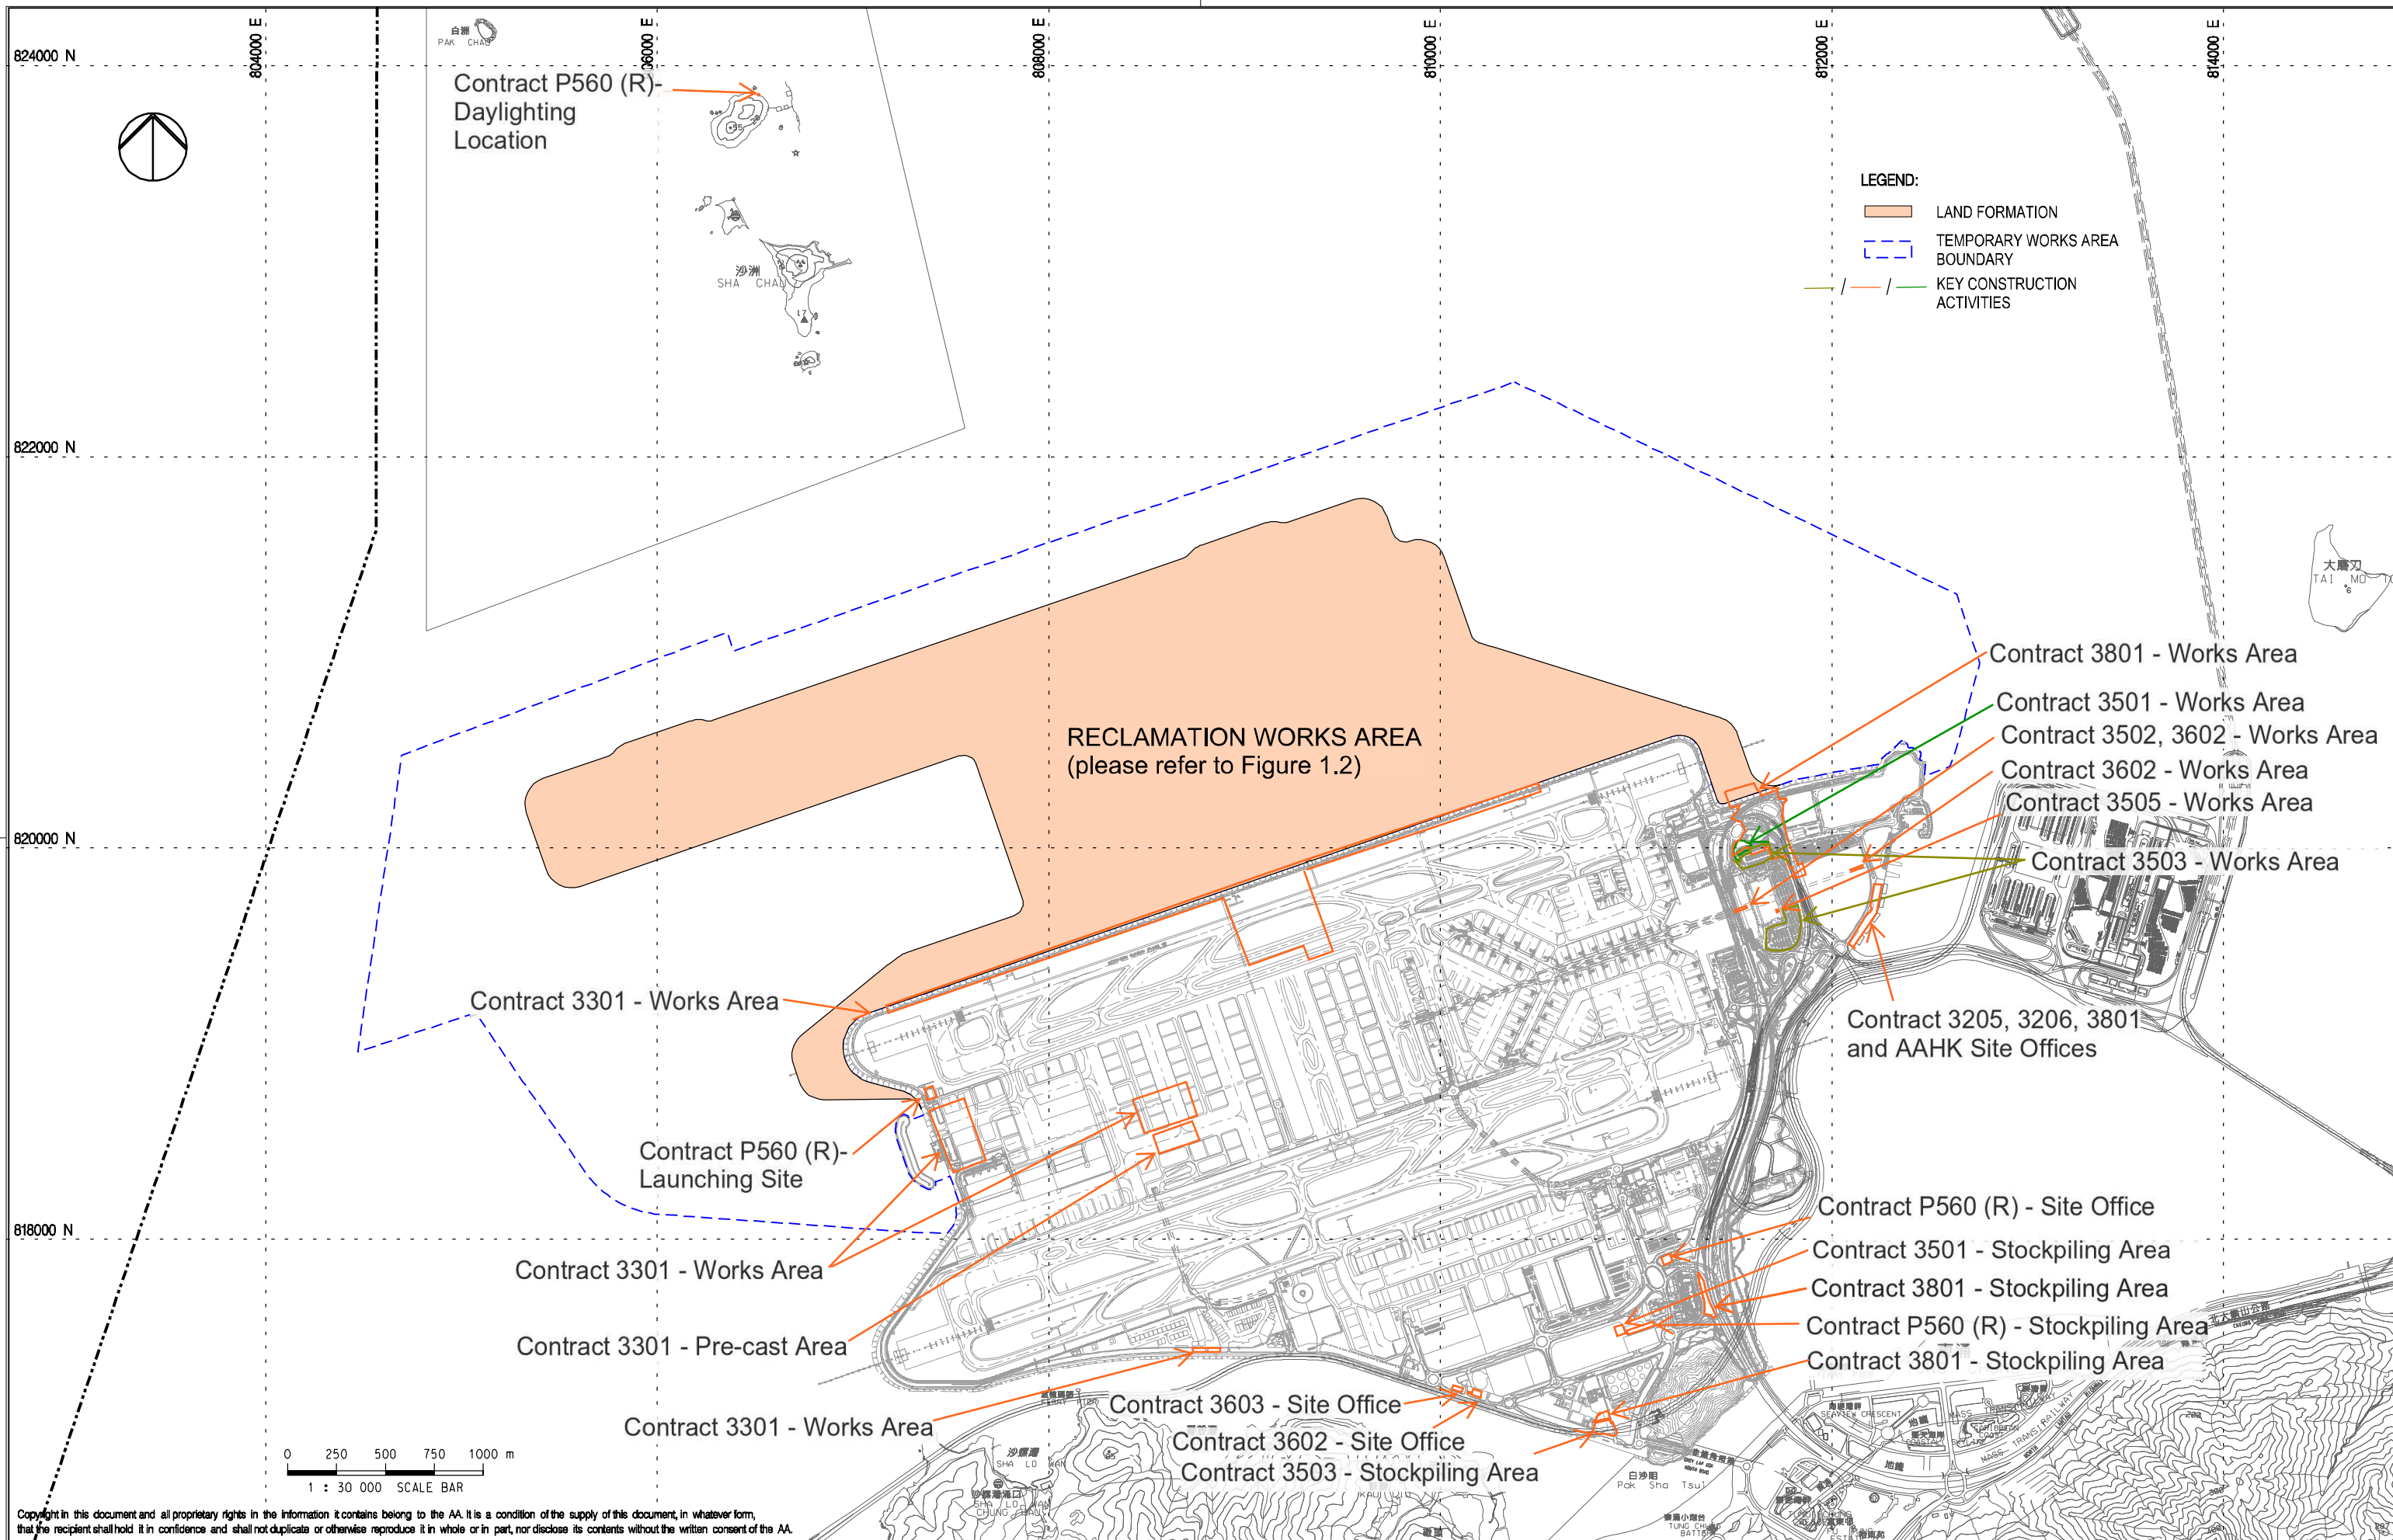

Weekly site inspections of the construction works were carried out by the ET to audit the implementation of proper environmental pollution control and mitigation measures for the Project. Bi-weekly site inspections were also conducted by the IEC. Site inspection findings were recorded in the site inspection checklists and provided to the contractors to follow up.

On the implementation of the SkyPier Plan, the daily movements of all SkyPier high speed ferries (HSFs) in November 2018 were in the range of 86 to 92 daily movements, which are within the maximum daily cap of 125 daily movements. A total of 870 HSF movements under the SkyPier Plan were recorded in the reporting period. Except the case on 06 November 2018, all HSFs had travelled through the SCZ with average speeds under 15 knots (9.1 to 20.3 knots), which were in compliance with the SkyPier Plan. Zero deviation from the diverted route in November 2018 was recorded in the HSF monitoring. In summary, the ET and IEC have audited the HSF movements against the SkyPier Plan and conducted follow up investigations or actions accordingly.

On the implementation of MTRMP-CAV, the MSS automatically recorded the deviation case such as speeding, entering no entry zone, not travelling through the designated gates. ET conducted checking to ensure the MSS records all deviation cases accurately. Training has been provided for the concerned skippers to facilitate them in familiarising with the requirements of the MTRMP-CAV. Deviations including speeding in the works area, entered no entry zone, and entry from non-designated gates were reviewed by ET. All the concerned captains were reminded by the contractor's MTCC representative to comply with the requirements of the MTRMP-CAV. The ET reminded contractors that all vessels shall avoid entering the no-entry zone, in particular the

Brothers Marine Park. Three-month rolling programmes for construction vessel activities, which ensures the proposed vessels are necessary and minimal through good planning, were also received from contractors.

Appendix A. Environmental Mitigation Implementation Schedule (EMIS) for Construction Phase

Appendix A Environmental Mitigation Implementation Schedule (EMIS) for Construction Phase

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|--|-----------|--------------|--|---|-----------------------------------|
| Air Quality Impact – Construction Phase | | | | | |
| 5.2.6.2 | 2.1 | - | Dust Control Measures <ul style="list-style-type: none"> Water spraying for 12 times a day or once every two hours for 24-hour working at all active works area. | Within construction site / Duration of the construction phase | I |
| 5.2.6.3 | 2.1 | - | <ul style="list-style-type: none"> Covering of at least 80% of the stockpiling area by impervious sheets. Water spraying of all dusty materials immediately prior to any loading transfer operation so as to keep the dusty material wet during material handling. | Within construction site / Duration of the construction phase | I |
| 5.2.6.4 | 2.1 | - | Dust control practices as stipulated in the Air Pollution Control (Construction Dust) Regulation should be adopted. These practices include: Good Site Management <ul style="list-style-type: none"> Good site management is important to help reducing potential air quality impact down to an acceptable level. As a general guide, the Contractor should maintain high standard of housekeeping to prevent emission of fugitive dust. Loading, unloading, handling and storage of raw materials, wastes or by-products should be carried out in a manner so as to minimise the release of visible dust emission. Any piles of materials accumulated on or around the work areas should be cleaned up regularly. Cleaning, repair and maintenance of all plant facilities within the work areas should be carried out in a manner minimising generation of fugitive dust emissions. The material should be handled properly to prevent fugitive dust emission before cleaning. | Within construction site / Duration of the construction phase | I |
| | | | Disturbed Parts of the Roads <ul style="list-style-type: none"> Each and every main temporary access should be paved with concrete, bituminous hardcore materials or metal plates and kept clear of dusty materials; or Unpaved parts of the road should be sprayed with water or a dust suppression chemical so as to keep the entire road surface wet. | Within construction site / Duration of the construction phase | I |
| | | | Exposed Earth <ul style="list-style-type: none"> Exposed earth should be properly treated by compaction, hydroseeding, vegetation planting or seeding with latex, vinyl, bitumen within six months after the last construction activity on the site or part of the site where the exposed earth lies. | Within construction site / Duration of the construction phase | I |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|--|---|-----------------------------------|
| | | | <p>Loading, Unloading or Transfer of Dusty Materials</p> <ul style="list-style-type: none"> All dusty materials should be sprayed with water immediately prior to any loading or transfer operation so as to keep the dusty material wet. | Within construction site / Duration of the construction phase | I |
| | | | <p>Debris Handling</p> <ul style="list-style-type: none"> Any debris should be covered entirely by impervious sheeting or stored in a debris collection area sheltered on the top and the three sides; and Before debris is dumped into a chute, water should be sprayed so that it remains wet when it is dumped. | Within construction site / Duration of the construction phase | I |
| | | | <p>Transport of Dusty Materials</p> <ul style="list-style-type: none"> Vehicle used for transporting dusty materials/spoils should be covered with tarpaulin or similar material. The cover should extend over the edges of the sides and tailboards. | Within construction site / Duration of the construction phase | I |
| | | | <p>Wheel washing</p> <ul style="list-style-type: none"> Vehicle wheel washing facilities should be provided at each construction site exit. Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels. | Within construction site / Duration of the construction phase | I |
| | | | <p>Use of vehicles</p> <ul style="list-style-type: none"> The speed of the trucks within the site should be controlled to about 10km/hour in order to reduce adverse dust impacts and secure the safe movement around the site; Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels; and Where a vehicle leaving the construction site is carrying a load of dusty materials, the load should be covered entirely by clean impervious sheeting to ensure that the dusty materials do not leak from the vehicle. | Within construction site / Duration of the construction phase | I |
| | | | <p>Site hoarding</p> <ul style="list-style-type: none"> Where a site boundary adjoins a road, street, service lane or other area accessible to the public, hoarding of not less than 2.4m high from ground level should be provided along the entire length of that portion of the site boundary except for a site entrance or exit. | Within construction site / Duration of the construction phase | I |
| 5.2.6.5 | 2.1 | - | <p>Best Practices for Concrete Batching Plant</p> <p>The relevant best practices for dust control as stipulated in the Guidance Note on the Best Practicable Means for Cement Works (Concrete Batching Plant) BPM 3/2 as well as in the future Specified Process licence should be adopted. The best practices are recommended to be applied to both the land based and floating concrete batching plants. Best practices include:</p> <p>Cement and other dusty materials</p> | Within Concrete Batching Plant / Duration of the construction phase | N/A |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|--|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ The loading, unloading, handling, transfer or storage of cement, pulverised fuel ash (PFA) and/or other equally dusty materials shall be carried in a totally enclosed system acceptable to EPD. All dust-laden air or waste gas generated by the process operations shall be properly extracted and vented to fabric filtering system to meet the required emission limit; ▪ Cement, PFA and/or other equally dusty materials shall be stored in storage silo fitted with audible high level alarms to warn of over-filling. The high-level alarm indicators shall be interlocked with the material filling line such that in the event of the silo approaching an overfilling condition, an audible alarm will operate, and after 1 minute or less the material filling line will be closed; ▪ Vents of all silos shall be fitted with fabric filtering system to meet the required emission limit; ▪ Vents of cement/PFA weighing scale shall be fitted with fabric filtering system to meet the required emission limit; and ▪ Seating of pressure relief valves of all silos shall be checked, and the valves re-seated if necessary, before each delivery. | | |
| | | | <p>Other raw materials</p> <ul style="list-style-type: none"> ▪ The loading, unloading, handling, transfer or storage of other raw materials which may generate airborne dust emissions such as crushed rock, sand, stone aggregate, shall be carried out in such a manner to prevent or minimize dust emissions; ▪ The materials shall be adequately wetted prior to and during the loading, unloading and handling operations. Manual or automatic water spraying system shall be provided at all unloading areas, stock piles and material discharge points; ▪ All receiving hoppers for unloading relevant materials shall be enclosed on three sides up to 3 m above the unloading point. In no case shall these hoppers be used as the material storage devices; ▪ The belt conveyor for handling materials shall be enclosed on top and two sides with a metal board at the bottom to eliminate any dust emission due to wind-whipping effect. Other type of enclosure will also be accepted by EPD if it can be demonstrated that the proposed enclosure can achieve same performance; ▪ All conveyor transfer points shall be totally enclosed. Openings for the passage of conveyors shall be fitted with adequate flexible seals; ▪ Scrapers shall be provided at the turning points of all conveyors to remove dust adhered to the belt surface; ▪ Conveyors discharged to stockpiles of relevant materials shall be arranged to minimize free fall as far as practicable. All free falling transfer points from conveyors to stockpiles shall be enclosed with chute(s) and water sprayed; ▪ Aggregates with a nominal size less than or equal to 5 mm should be stored in totally enclosed structure such as storage bin and should not be handled in open area. Where there is sufficient buffer area surrounding the concrete batching plant, ground stockpiling may be used; | <p>Within Concrete Batching Plant / Duration of the construction phase</p> | <p>N/A</p> |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|---|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ The stockpile shall be enclosed at least on top and three sides and with flexible curtain to cover the entrance side; ▪ Aggregates with a nominal size greater than 5 mm should preferably be stored in a totally enclosed structure. If open stockpiling is used, the stockpile shall be enclosed on three sides with the enclosure wall sufficiently higher than the top of the stockpile to prevent wind whipping; and ▪ The opening between the storage bin and weighing scale of the materials shall be fully enclosed. | | |
| | | | <p>Loading of materials for batching</p> <ul style="list-style-type: none"> ▪ Concrete truck shall be loaded in such a way as to minimise airborne dust emissions. The following control measures shall be implemented: <ul style="list-style-type: none"> (a) Pre-mixing the materials in a totally enclosed concrete mixer before loading the materials into the concrete truck is recommended. All dust-laden air generated by the pre-mixing process as well as the loading process shall be totally vented to fabric filtering system to meet the required emission limit; and (b) If truck mixing batching or other types of batching method is used, effective dust control measures acceptable to EPD shall be adopted. The dust control measures must have been demonstrated to EPD that they are capable to collect and vent all dust-laden air generated by the material loading/mixing to dust arrestment plant to meet the required emission limit. ▪ The loading bay shall be totally enclosed during the loading process. | Within Concrete Batching Plant / Duration of the construction phase | N/A |
| | | | <p>Vehicles</p> <ul style="list-style-type: none"> ▪ All practicable measures shall be taken to prevent or minimize the dust emission caused by vehicle movement; and ▪ All access and route roads within the premises shall be paved and adequately wetted. | Within Concrete Batching Plant / Duration of the construction phase | N/A |
| | | | <p>Housekeeping</p> <ul style="list-style-type: none"> ▪ A high standard of housekeeping shall be maintained. All spillages or deposits of materials on ground, support structures or roofs shall be cleaned up promptly by a cleaning method acceptable to EPD. Any dumping of materials at open area shall be prohibited. | Within Concrete Batching Plant / Duration of the construction phase | N/A |
| 5.2.6.6 | 2.1 | - | <p>Best Practices for Asphaltic Concrete Plant</p> <p>The relevant best practices for dust control as stipulated in the Guidance Note on the Best Practicable Means for Tar and Bitumen Works (Asphaltic Concrete Plant) BPM 15 (94) as well as in the future Specified Process licence should be adopted. These include:</p> <p>Design of Chimney</p> <ul style="list-style-type: none"> ▪ The chimney shall not be less than 3 metres plus the building height or 8 metres above ground level, whichever is the greater; ▪ The efflux velocity of gases from the main chimney shall not be less than 12 m/s at full load condition; | Within Concrete Batching Plant / Duration of the construction phase | N/A |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|--|--|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ The flue gas exit temperature shall not be less than the acid dew point; and ▪ Release of the chimney shall be directed vertically upwards and not be restricted or deflected. | | |
| | | | <p>Cold feed side</p> <ul style="list-style-type: none"> ▪ The aggregates with a nominal size less than or equal to 5 mm shall be stored in totally enclosed structure such as storage bin and shall not be handled in open area; ▪ Where there is sufficient buffer area surrounding the plant, ground stockpiling may be used. The stockpile shall be enclosed at least on top and three sides and with flexible curtain to cover the entrance side. If these aggregates are stored above the feeding hopper, they shall be enclosed at least on top and three sides and be wetted on the surface to prevent wind-whipping; ▪ The aggregates with a nominal size greater than 5 mm should preferably be stored in totally enclosed structure. Aggregates stockpile that is above the feeding hopper shall be enclosed at least on top and three sides. If open stockpiling is used, the stockpiles shall be enclosed on three sides with the enclosure wall sufficiently higher than the top of the stockpile to prevent wind whipping; ▪ Belt conveyors shall be enclosed on top and two sides and provided with a metal board at the bottom to eliminate any dust emission due to the wind-whipping effect. Other type of enclosure will also be accepted by EPD if it can be demonstrated that the proposed enclosure can be achieve the same performance; ▪ Scrapers shall be provided at the turning points of all belt conveyors inside the chute of the transfer points to remove dust adhered to the belt surface; ▪ All conveyor transfer points shall be totally enclosed. Openings for the passages of conveyors shall be fitted with adequate flexible seals; and ▪ All materials returned from dust collection system shall be transferred in enclosed system and shall be stored inside bins or enclosures. | <p>Within Concrete Batching Plant / Duration of the construction phase</p> | N/A |
| | | | <p>Hot feed side</p> <ul style="list-style-type: none"> ▪ The inlet and outlet of the rotary dryer shall be enclosed and ducted to a dust extraction and collection system such as a fabric filter. The particulate and gaseous concentration at the exhaust outlet of the dust collector shall not exceed the required limiting values; ▪ The bucket elevator shall be totally enclosed and the air be extracted and ducted to a dust collection system to meet the required particulates limiting value; ▪ All vibratory screens shall be totally enclosed and dust tight with close-fitted access inspection opening. Gaskets shall be installed to seal off any cracks and edges of any inspection openings; ▪ Chutes for carrying hot material shall be rigid and preferably fitted with abrasion resistant plate inside. They shall be inspected daily for leakages; | <p>Within Concrete Batching Plant / Duration of the construction phase</p> | N/A |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|---|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ All hot bins shall be totally enclosed and dust tight with close-fitted access inspection opening. Gaskets shall be installed to seal off any cracks and edges of any inspection openings. The air shall be extracted and ducted to a dust collection system to meet the required particulates limiting value; and ▪ Appropriate control measures shall be adopted in order to meet the required bitumen emission limit as well as the ambient odour level (2 odour units). | | |
| | | | <p>Material transportation</p> <ul style="list-style-type: none"> ▪ The loading, unloading, handling, transfer or storage of other raw materials which may generate airborne dust emissions such as crushed rocks, sands, stone aggregates, reject fines, shall be carried out in such a manner as to minimize dust emissions; ▪ Roadways from the entrance of the plant to the product loading points and/or any other working areas where there are regular movements of vehicles shall be paved or hard surfaced; and ▪ Haul roads inside the Works shall be adequately wetted with water and/or chemical suppressants by water trucks or water sprayers. | Within Concrete Batching Plant / Duration of the construction phase | N/A |
| | | | <p>Control of emissions from bitumen decanting</p> <ul style="list-style-type: none"> ▪ The heating temperature of the particular bitumen type and grade shall not exceed the corresponding temperature limit of the same type listed in Appendix 1 of the Guidance Note; ▪ Tamper-free high temperature cut-off device shall be provided to shut off the fuel supply or electricity in case the upper limit for bitumen temperature is reached; ▪ Proper chimney for the discharge of bitumen fumes shall be provided at high level; ▪ The emission of bitumen fumes shall not exceed the required emission limit; and <p>The air-to-fuel ratio shall be properly controlled to allow complete combustion of the fuel. The fuel burners, if any, shall be maintained properly and free from carbon deposits in the burner nozzles.</p> | Within Concrete Batching Plant / Duration of the construction phase | N/A |
| | | | <p>Liquid fuel</p> <ul style="list-style-type: none"> ▪ The receipt, handling and storage of liquid fuel shall be carried out so as to prevent the release of emissions of organic vapours and/or other noxious and offensive emissions to the air. | Within Concrete Batching Plant / Duration of the construction phase | N/A |
| | | | <p>Housekeeping</p> <ul style="list-style-type: none"> ▪ A high standard of housekeeping shall be maintained. Waste material, spillage and scattered piles gathered beneath belt conveyors, inside and around enclosures shall be cleared frequently. The minimum clearing frequency is on a weekly basis. | Within Concrete Batching Plant / Duration of the construction phase | N/A |
| 5.2.6.7 | 2.1 | - | <p>Best Practices for Rock Crushing Plants</p> <p>The relevant best practices for dust control as stipulated in the Guidance Note on the Best Practicable Means for Mineral Works (Stone Crushing Plant) BPM 11/1 (95) as well as in the future Specified Process licence should be adopted. These include:</p> | Within Concrete Batching Plant / Duration of the construction phase | N/A |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|---|-----------------------------------|
| | | | <p>Crushers</p> <ul style="list-style-type: none"> ▪ The outlet of all primary crushers, and both inlet and outlet of all secondary and tertiary crushers, if not installed inside a reasonably dust tight housing, shall be enclosed and ducted to a dust extraction and collection system such as a fabric filter; ▪ The inlet hopper of the primary crushers shall be enclosed on top and 3 sides to contain the emissions during dumping of rocks from trucks. The rock while still on the trucks shall be wetted before dumping; ▪ Water sprayers shall be installed and operated in strategic locations at the feeding inlet of crushers; and ▪ Crusher enclosures shall be rigid and be fitted with self-closing doors and close-fitting entrances and exits. Where conveyors pass through the crusher enclosures, flexible covers shall be installed at entries and exits of the conveyors to the enclosure. | | |
| | | | <p>Vibratory screens and grizzlies</p> <ul style="list-style-type: none"> ▪ All vibratory screens shall be totally enclosed in a housing. Screenhouses shall be rigid and reasonably dust tight with self-closing doors or close-fitted entrances and exits for access. Where conveyors pass through the screenhouse, flexible covers shall be installed at entries and exits of the conveyors to the housing. Where containment of dust within the screenhouse structure is not successful then a dust extraction and collection system shall be provided; and ▪ All grizzlies shall be enclosed on top and 3 sides and sufficient water sprayers shall be installed at their feeding and outlet areas. | Within Concrete Batching Plant / Duration of the construction phase | N/A |
| | | | <p>Belt conveyors</p> <ul style="list-style-type: none"> ▪ Except for those conveyors which are placed within a totally enclosed structure such as a screenhouse or those erected at the ground level, all conveyors shall be totally enclosed with windshield on top and 2 sides; ▪ Effective belt scraper such as the pre-cleaner blades made by hard wearing materials and provided with pneumatic tensioner, or equivalent device, shall be installed at the head pulley of designated conveyor as required to dislodge fine dust particles that may adhere to the belt surface and to reduce carry-back of fine materials on the return belt. Bottom plates shall also be provided for the conveyor unless it has been demonstrated that the corresponding belt scraper is effective and well maintained to prevent falling material from the return belt; and ▪ Except for those transfer points which are placed within a totally enclosed structure such as a screenhouse, all transfer points to and from conveyors shall be enclosed. Where containment of dust within the enclosure is not successful, then water sprayers shall be provided. Openings for any enclosed structure for the passage of conveyors shall be fitted with flexible seals. | Within Concrete Batching Plant / Duration of the construction phase | N/A |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|--|-----------|--------------|---|--|-----------------------------------|
| | | | <p>Storage piles and bins</p> <ul style="list-style-type: none"> Where practicable, free falling transfer points from conveyors to stockpiles shall be fitted with flexible curtains or be enclosed with chutes designed to minimize the drop height. Water sprays shall also be used where required. The surface of all surge piles and stockpiles of blasted rocks or aggregates shall be kept sufficiently wet by water spraying wherever practicable; All open stockpiles for aggregates of size in excess of 5 mm shall be kept sufficiently wet by water spraying where practicable; or The stockpiles of aggregates 5 mm in size or less shall be enclosed on 3 sides or suitably located to minimize wind-whipping. Save for fluctuations in stock or production, the average stockpile shall stay within the enclosure walls and in no case the height of the stockpile shall exceed twice the height of the enclosure walls. Scattered piles gathered beneath belt conveyors, inside and around enclosures shall be cleared regularly. | Within Concrete Batching Plant / Duration of the construction phase | N/A |
| | | | <p>Rock drilling equipment</p> <ul style="list-style-type: none"> Appropriate dust control equipment such as a dust extraction and collection system shall be used during rock drilling activities. | Within Concrete Batching Plant / Duration of the construction phase | N/A |
| Hazard to Human Life – Construction Phase | | | | | |
| Table 6.40 | 3.2 | - | <ul style="list-style-type: none"> Precautionary measures should be established to request barges to move away during typhoons. | Construction Site / Construction Period | I |
| Table 6.40 | 3.2 | - | <ul style="list-style-type: none"> An appropriate marine traffic management system should be established to minimize risk of ship collision. | Construction Site / Construction Period | I |
| Table 6.40 | 3.2 | - | <ul style="list-style-type: none"> Location of all existing hydrant networks should be clearly identified prior to any construction works. | Construction Site / Construction Period | I |
| Noise Impact – Construction Phase | | | | | |
| 7.5.6 | 4.3 | - | <p>Good Site Practice</p> <p>Good site practice and noise management can significantly reduce the impact of construction site activities on nearby NSRs. The following package of measures should be followed during each phase of construction:</p> <ul style="list-style-type: none"> only well-maintained plant to be operated on-site and plant should be serviced regularly during the construction works; machines and plant that may be in intermittent use to be shut down between work periods or should be throttled down to a minimum; | Within the Project site / During construction phase / Prior to commencement of operation | I |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|--|-----------|--------------|--|---|-----------------------------------|
| | | | <ul style="list-style-type: none"> ▪ plant known to emit noise strongly in one direction, should, where possible, be orientated to direct noise away from the NSRs; ▪ mobile plant should be sited as far away from NSRs as possible; and ▪ material stockpiles and other structures to be effectively utilised, where practicable, to screen noise from on-site construction activities. | | |
| 7.5.6 | 4.3 | - | <p>Adoption of QPME</p> <ul style="list-style-type: none"> ▪ QPME should be adopted as far as applicable. | Within the Project site / During construction phase / Prior to commencement of operation | I |
| 7.5.6 | 4.3 | - | <p>Use of Movable Noise Barriers</p> <ul style="list-style-type: none"> ▪ Movable noise barriers should be placed along the active works area and mobile plants to block the direct line of sight between PME and the NSRs. | Within the Project site / During construction phase / Prior to commencement of operation | I |
| 7.5.6 | 4.3 | - | <p>Use of Noise Enclosure/ Acoustic Shed</p> <ul style="list-style-type: none"> ▪ Noise enclosure or acoustic shed should be used to cover stationary PME such as air compressor and generator. | Within the Project site / During construction phase / Prior to commencement of operation | I |
| Water Quality Impact – Construction Phase | | | | | |

| 8.8.1.8 | 5.1 | - | <p>Construction of Site Runoff and Drainage</p> <p>The site practices outlined in ProPECC Note PN 1/94 should be followed as far as practicable in order to minimise surface runoff and the chance of erosion. The following measures are recommended:</p> <ul style="list-style-type: none"> Install perimeter cut-off drains to direct off-site water around the site and implement internal drainage, erosion and sedimentation control facilities. Channels, earth bunds or sand bag barriers should be provided on site to direct storm water to silt removal facilities. The design of the temporary on-site | Within construction site / Duration of the construction phase | I |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------------------|-----------|--------------|--|---|-----------------------------------|
| | | | <p>drainage system should be undertaken by the Contractors prior to the commencement of construction (for works areas located on the existing Airport island) or as soon as the new land is completed (for works areas located on the new landform);</p> <hr/> <ul style="list-style-type: none"> ▪ Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM-DSS standards under the WPCO. The design of efficient silt removal facilities should make reference to the guidelines in Appendix A1 of ProPECC Note PN 1/94. Sizes may vary depending upon the flow rate. The detailed design of the sand/silt traps should be undertaken by the Contractors prior to the commencement of construction; <hr/> <ul style="list-style-type: none"> ▪ All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly during rainstorms. Deposited silt and grit should be regularly removed, at the onset of and after each rainstorm to ensure that these facilities are functioning properly; <hr/> <ul style="list-style-type: none"> ▪ Measures should be taken to minimize the ingress of site drainage into excavations. If excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from foundation excavations should be discharged into storm drains via silt removal facilities; <hr/> <ul style="list-style-type: none"> ▪ In the event that contaminated groundwater is identified at excavation areas, this should be treated on-site using a suitable wastewater treatment process. The effluent should be treated according to the requirements of the TM-DSS standards under the WPCO prior to discharge to foul sewers or collected for proper disposal off-site. No direct discharge of contaminated groundwater is permitted; and <hr/> <ul style="list-style-type: none"> ▪ All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facility should be provided at construction site exits. Wash-water should have sand and silt settled out and removed regularly to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains. All washwater should be treated according to the requirements of the TM-DSS standards under the WPCO prior to discharge. | | I |
| 8.8.1.9 | 5.1 | - | <p>Sewage Effluent from Construction Workforce</p> <ul style="list-style-type: none"> ▪ Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site where necessary to handle sewage from the workforce. A licensed contractor should be employed to provide appropriate and adequate portable toilets and be responsible for appropriate disposal and maintenance. | Within construction site / During construction phase | I |
| 8.8.1.10 8.8.1.11 | 5.1 | | <p>General Construction Activities</p> <ul style="list-style-type: none"> ▪ Construction solid waste, debris and refuse generated on-site should be collected, handled and disposed of properly to avoid entering any nearby storm water drain. Stockpiles of cement and other construction materials should be kept covered when not being used; and | Within construction site / During construction phase | I |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|--|-----------|--------------|---|---|--|
| | | | <ul style="list-style-type: none"> ▪ Oils and fuels should only be stored in designated areas which have pollution prevention facilities. To prevent spillage of fuels and solvents to any nearby storm water drain, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. The bund should be drained of rainwater after a rain event. | | |
| 8.8.1.12 8.8.1.13 | 5.1 | 2.28 | <p>Drilling Activities for the Submarine Aviation Fuel Pipelines</p> <p>To prevent potential water quality impacts at Sha Chau, the following measures shall be applied:</p> <ul style="list-style-type: none"> ▪ A 'zero-discharge' policy shall be applied for all activities to be conducted at Sha Chau; ▪ No bulk storage of chemicals shall be permitted; and ▪ A containment pit shall be constructed around the drill holes. This containment pit shall be lined with impermeable lining and bunded on the outside to prevent inflow from off-site areas. | Within construction site / During construction phase | I |
| | | | <p>At the airport island side of the drilling works, the following measures shall be applied for treatment of wastewater:</p> <ul style="list-style-type: none"> ▪ During pipe cleaning, appropriate desilting or sedimentation device should be provided on site for treatment before discharge. The Contractor should ensure discharge water from the sedimentation tank meet the WPCO/TM requirements before discharge; and ▪ Drilling fluid used in drilling activities should be reconditioned and reused as far as possible. Temporary enclosed storage locations should be provided on-site for any unused chemicals that needs to be transported away after all the related construction activities are completed. The requirements in ProPECC Note PN 1/94 should be adhered to in the handling and disposal of bentonite slurries. | Within construction site / During construction phase | I |
| Waste Management Implication – Construction Phase | | | | | |
| 10.5.1.1 | 7.1 | - | <p>Opportunities to minimise waste generation and maximise the reuse of waste materials generated by the project have been incorporated where possible into the planning, design and construction stages, and the following measures have been recommended:</p> <ul style="list-style-type: none"> ▪ The relevant construction methods (particularly for the tunnel works) and construction programme have been carefully planned and developed to minimise the extent of excavation and to maximise the on-site reuse of inert C&D materials generated by the project as far as practicable. Temporary stockpiling areas will also be provided to facilitate on-site reuse of inert C&D materials; ▪ Priority should be given to collect and reuse suitable inert C&D materials generated from other concurrent projects and the Government's PFRF as fill materials for the proposed land formation works; ▪ Only non-dredged ground improvement methods should be adopted in order to completely avoid the need for dredging and disposal of marine sediment for the proposed land formation work; ▪ Excavation work for constructing the APM tunnels, BHS tunnels and airside tunnels will not be down to the CMPs beneath the fill materials in order to avoid excavating any sediments; and | Project Site Area / During design and construction phase | I I I N/A |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|----------|-----------|--------------|---|---|-----------------------------------|
| | | | <ul style="list-style-type: none"> For the marine sediments expected to be excavated from the piling works of TRC, APM & BHS tunnels, airside tunnels and other facilities on the proposed land formation area, piling work of marine sections of the approach lights and HKIAAA beacons, basement works for some of T2 expansion area and excavation works for the proposed APM depot should be treated and reused on-site as backfilling materials, although required treatment level / detail and the specific re-use mode are under development. | | N/A |
| 10.5.1.1 | 7.1 | - | <p>The following good site practices should be performed during the construction activities include:</p> <ul style="list-style-type: none"> Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site; Training of site personnel in proper waste management and chemical waste handling procedures; Provision of sufficient waste disposal points and regular collection for disposal; Appropriate measures to minimise windblown litter and dust during transportation of waste by either covering trucks by tarpaulin/ similar material or by transporting wastes in enclosed containers. The cover should be extended over the edges of the sides and tailboards; Stockpiles of C&D materials should be kept wet or covered by impervious sheets to avoid wind-blown dust; All dusty materials including C&D materials should be sprayed with water immediately prior to any loading transfer operation so as to keep the dusty material wet during material handling at the barging points/ stockpile areas; C&D materials to be delivered to and from the project site by barges or by trucks should be kept wet or covered to avoid wind-blown dust; The speed of the trucks including dump trucks carrying C&D or waste materials within the site should be controlled to about 10 km/hour in order to reduce the adverse dust impact and secure the safe movement around the site; and To avoid or minimise dust emission during transport of C&D or waste materials within the site, each and every main temporary access should be paved with concrete, bituminous hardcore materials or metal plates and kept clear of dusty materials. Unpaved parts of the road should be sprayed with water or a dust suppression chemical so as to keep the entire road surface wet. | Project Site Area / Construction Phase | I |
| 10.5.1.3 | 7.1 | - | <p>The following practices should be performed to achieve waste reduction include:</p> <ul style="list-style-type: none"> Use of steel or aluminium formworks and falseworks for temporary works as far as practicable; Adoption of repetitive design to allow reuse of formworks as far as practicable; Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal; | Project Site Area / Construction Phase | I |

|--------------------------|-----------|--------------|---|---|-----------------------------------|
| 13.11.5.4 to 13.11.5.13 | 10.3.1 | - | <p>SkyPier High Speed Ferries' Speed Restrictions and Route Diversions</p> <ul style="list-style-type: none"> SkyPier HSFs operating to / from Zhuhai and Macau would divert north of SCLKC Marine Park with a 15 knot speed limit to apply for the part-journeys that cross high CWD abundance grid squares as indicatively shown in Drawing No. MCL/P132/EIA/13-023 of the EIA Report. Both the alignment of the northerly route and the portion of routings to be subject to the speed limit of 15 knots shall be finalised prior to commencement of construction based on the future review of up-to-date CWD abundance and EM&A data and taking reference to changes in total SkyPier HSF numbers; and A maximum of 10 knots will be enforced through the designated SCLKC Marine Park area at all times. <p>Other mitigation measures</p> <ul style="list-style-type: none"> The ET will audit various parameters including actual daily numbers of HSFs, compliance with the 15-knot speed limit in the speed control zone and diversion compliance for SkyPier HSFs operating to / from Zhuhai and Macau; and The effectiveness of the CWD mitigation measures after implementation of initial six month SkyPier HSF diversion and speed restriction will be reviewed. | to completion of construction Area between the footprint and SCLKC Marine Park during construction phase | |
| 13.11.5.14 to 13.11.5.18 | 10.3.1 | 2.31 | <p>Dolphin Exclusion Zone</p> <ul style="list-style-type: none"> Establishment of a 24 hr Dolphin Exclusion Zone (DEZ) with a 250 m radius around the land formation works areas; A DEZ would also be implemented during ground improvement works (e.g. DCM), water jetting works for submarine cables diversion, open trench dredging at the field joint locations and seawall construction; and A DEZ would also be implemented during bored piling work but as a precautionary measure only. | Marine waters around land formation works area during construction phase | N/A |
| 13.11.5.19 | 10.4 | 2.31 | <p>Acoustic Decoupling of Construction Equipment</p> <ul style="list-style-type: none"> Air compressors and other noisy equipment that must be mounted on steel barges should be acoustically-decoupled to the greatest extent feasible, for instance by using rubber or air-filled tyres; and Specific acoustic decoupling measures shall be specified during the detailed design of the project for use during the land formation works. | Around coastal works area during construction phase | |
| 13.11.5.20 | 10.6.1 | 2.29 | <p>Spill Response Plan</p> <ul style="list-style-type: none"> An oil and hazardous chemical spill response plan is proposed to be established during the construction phase as a precautionary measure so that appropriate actions to prevent or reduce risks to CWDs can be undertaken in the event of an accidental spillage. | Construction phase | |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|--|-----------|--------------|--|---|-----------------------------------|
| 13.11.5.21 to 13.11.5.23 | 10.6.1 | - | Construction Vessel Speed Limits and Skipper Training <ul style="list-style-type: none"> A speed limit of 10 knots should be strictly observed for construction vessels at areas with the highest CWD densities; and Vessels traversing through the work areas should be required to use predefined and regular routes (which would presumably become known to resident dolphins) to reduce disturbance to cetaceans due to vessel movements. Specific marine routes shall be specified by the Contractor prior to construction commencing. | All areas north and west of Lantau Island during construction phase | I |
| Fisheries Impact – Construction Phase | | | | | |
| 14.9.1.2 to 14.9.1.5 | - | - | Minimisation of Land Formation Area <ul style="list-style-type: none"> Minimise the overall size of the land formation needed for the additional facilities to minimise the overall loss of habitat for fisheries resources. | Land formation footprint / during detailed design phase to completion of construction | I |
| 14.9.1.6 | - | - | Use of Construction Methods with Minimal Risk/Disturbance <ul style="list-style-type: none"> Use of non-dredge method for the main land formation and ancillary works including the diversion of the aviation fuel pipeline to the AFRF; Use of Deep Cement Mixing (DCM) method instead of conventional seabed dredging for the land formation works to reduce the risk of negative impacts through the elevation of suspended solids and contaminants on fisheries and the marine environment; Use of bored piling in short duration to form the new approach lights and marker beacons for the new runway; and Use of horizontal directional drilling (HDD) method and water jetting methods for placement of undersea cables and pipelines to minimise the disturbance to fisheries resources. | During construction phase at marine works area | I I N/A I |
| 14.9.1.11 | - | - | Strict Enforcement of No-Dumping Policy <ul style="list-style-type: none"> A policy prohibiting dumping of wastes, chemicals, oil, trash, plastic, or any other substance that would potentially be harmful to dolphins and/or their habitat in the work area; Mandatory educational programme of the no-dumping policy be made available to all construction site personnel for all project-related works; Fines for infractions should be implemented; and Unscheduled, on-site audits shall be implemented. | All works area during the construction phase | I |
| 14.9.1.12 | - | - | Good Construction Site Practices <ul style="list-style-type: none"> Regular inspection of the integrity and effectiveness of all silt curtains and monitoring of effluents to ensure that any discharge meets effluent discharge guidelines; Keep the number of working or stationary vessels present on-site to the minimum anytime; and | All works area during the construction phase | I |

| EIA Ref. | EM&A Ref. | EP Condition | Environmental Protection Measures | Location / Duration of measures Timing of completion of measures | Mitigation Measures Implemented?^ |
|---|-----------|--------------|---|--|-----------------------------------|
| 14.9.1.13 to 14.9.1.18 | - | | <ul style="list-style-type: none"> ▪ Unscheduled, on-site audits for all good site practice restrictions should be conducted, and fines or penalties sufficient to be an effective deterrent need to be levied against violators. <p>Mitigation for Indirect Disturbance due to Deterioration of Water Quality</p> <ul style="list-style-type: none"> ▪ Water quality mitigation measures during construction phases include consideration of alternative construction methods, deployment of silt curtain and good site practices; ▪ Alternative construction methods including use of non-dredge methods for ground improvement (e.g. Deep Cement Mixing (DCM), prefabricated vertical drains (PVD), sand compaction piles, steel cells, stone columns and vertical sand drains); ▪ Use of bored piling in short duration to form the new approach lights and marker beacons for the new runway; and ▪ Use of horizontal directional drilling (HDD) method and water jetting methods for placement of undersea cables and pipelines to minimise the disturbance to fisheries resources. | All works area during the construction phase | |

Abbreviations: STG# = Sighting Number; GP SZ = Group Size; BEAU = Beaufort Sea State; PSD = Perpendicular Distance (in metres); N/A = Not Applicable;
DEC LAT = Latitude (WGS84 in Decimal), DEC LON = Longitude (WGS84 in Decimal); BOAT ASSOC. = Fishing Boat Association; P/S = Primary Transect / Secondary Transect

Notes:

CWD monitoring survey data of the two preceding survey months (i.e. September and October 2018) are presented for reference only. No relevant figure or text will be mentioned in the monthly EM&A report.

Sighting data of finless porpoise (FP) are presented for reference only. No relevant figure or text will be mentioned in the monthly EM&A report. All FP sightings are excluded in calculation.

Calculation of the November 2018 encounter rates STG and ANI in the whole survey area (NEL, NWL, AW, WL, SWL):

A total of 392.038 km of survey effort was collected under Beaufort Sea State 3 or below with favourable visibility; total no. of 19 on-effort sightings and total number of 56 dolphins from on-effort sightings were collected under such condition. Calculation of the encounter rates in November 2018 are shown as below:

Encounter Rate by Number of Dolphin Sightings (STG) in November 2018

$$STG = \frac{19}{392.038} \times 100 = 4.85$$

Encounter Rate by Number of Dolphins (ANI) in November 2018

$$ANI = \frac{56}{392.038} \times 100 = 14.28$$

Calculation of the running quarterly STG and ANI in the whole survey area (NEL, NWL, AW, WL, SWL):

A total of 1258.595 km of survey effort was collected under Beaufort Sea State 3 or below with favourable visibility; total no. of 54 on-effort sightings and total number of 166 dolphins from on-effort sightings were collected under such condition. Calculation of the running quarterly encounter rates are shown as below:

Running Quarterly Encounter Rate by Number of Dolphin Sightings (STG)

$$STG = \frac{54}{1258.595} \times 100 = 4.29$$

Running Quarterly Encounter Rate by Number of Dolphins (ANI)

$$ANI = \frac{166}{1258.595} \times 100 = 13.19$$

Appendix D. Calibration Certificates

Equipment Verification Report (TSP) – Amendment 1

Equipment Calibrated:

Type: Laser Dust monitor
 Manufacturer: Sibata LD-3B
 Serial No. 597337
 Equipment Ref: Nil
 Job Order HK1846685

Standard Equipment:

Standard Equipment: Higher Volume Sampler
 Location & Location ID: AUES office (calibration room)
 Equipment Ref: HVS 018
 Last Calibration Date: 21 September 2018

Equipment Verification Results:

Testing Date: 28 September & 2 October 2018

| Hour | Time | Mean Temp °C | Mean Pressure (hPa) | Concentration in µg/m ³ (Standard Equipment) | Total Count (Calibrated Equipment) | Count/Minute (Total Count/min) |
|----------|---------------|--------------|---------------------|---|------------------------------------|--------------------------------|
| 2hr01min | 09:37 ~ 11:38 | 27.6 | 1009.9 | 32 | 3003 | 24.8 |
| 2hr | 11:51 ~ 13:51 | 27.6 | 1009.9 | 54 | 5161 | 43.0 |
| 2hr | 14:02 ~ 16:02 | 27.6 | 1009.9 | 56 | 5139 | 42.8 |
| 2hr02min | 09:41 ~ 11:43 | 27.2 | 1014.9 | 39 | 3874 | 31.7 |
| 2hr16min | 12:06 ~ 14:22 | 27.2 | 1014.9 | 44 | 4406 | 32.5 |

Linear Regression of Y or X

Slope (K-factor): 1.2771 (µg/m³)/CPM
 Correlation Coefficient 0.9971
 Date of Issue 5 October 2018 (1st issue)
8 November 2018 (Amendment 1)

Remarks:

1. **Strong** Correlation ($R > 0.8$)
2. Factor 1.2771 (µg/m³)/CPM should be applied for TSP monitoring

*If $R < 0.5$, repair or re-verification is required for the equipment

Operator : Fai So Signature :  Date : 8 November 2018

QC Reviewer : Ben Tam Signature :  Date : 8 November 2018

TSP SAMPLER CALIBRATION CALCULATION SPREADSHEET

Location : Gold King Industrial Building, Kwai Chung Date of Calibration: 21-Sep-18
 Location ID : Calibration Room Next Calibration Date: 21-Dec-18

CONDITIONS

| | | | |
|--------------------------|--------|----------------------------|-------|
| Sea Level Pressure (hPa) | 1011.6 | Corrected Pressure (mm Hg) | 758.7 |

| 5 | 1.3 | 1.3 | 2.6 | 0.810 | 24 | 23.81 | | | |

Calculations :

$Q_{std} = 1/m[\sqrt{H_2O(P_a/P_{std})(T_{std}/T_a)}] - b]$
 $IC = I[\sqrt{P_a/P_{std})(T_{std}/T_a)}]$

Qstd = standard flow rate
 IC = corrected chart responses
 I = actual chart response
 m = calibrator Qstd slope
 b = calibrator Qstd intercept
 Ta = actual temperature during calibration (deg K)
 Pstd = actual pressure during calibration (mm Hg)

For subsequent calculation of sampler flow:

$1/m((I)[\sqrt{298/T_{av}})(P_{av}/760)] - b)$

m = sampler slope
 b = sampler intercept
 I = chart response
 Tav = daily average temperature
 Pav = daily average pressure

Calculations :

$Q_{std} = 1/m[\sqrt{H_2O(P_a/P_{std})(T_{std}/T_a)}] - b$
 $IC = I[\sqrt{P_a/P_{std}}(T_{std}/T_a)]$
 Qstd = standard flow rate
 IC = corrected chart responses
 I = actual chart response
 m = calibrator Qstd slope
 b = calibrator Qstd intercept
 Ta = actual temperature during calibration (deg K)
 Pstd = actual pressure during calibration (mm Hg)

For subsequent calculation of sampler flow:

$1/m((I)[\sqrt{298/T_{av}}(P_{av}/760)] - b)$
 m = sampler slope
 b = sampler intercept
 I = chart response
 Tav = daily average temperature
 Pav = daily average pressure

Relative Humidity : (50 ± 25) %

Test Specifications

Calibration check.

Ref. Document/Procedure : Z01, IEC 61672.

Test Results

All results were within the IEC 61672 Type1 or manufacturer's specification.

The results are shown in the attached page(s).

Main Test equipment used:

| <u>Equipment No.</u> | <u>Description</u> | <u>Cert. No.</u> | <u>Traceable to</u> |
|----------------------|--------------------------|------------------|---------------------|
| S017 | Multi-Function Generator | C170120 | SCL-HKSAR |
| S240 | Sound Level Calibrator | 803357 | NIM-PRC & SCL-HKSAR |

The values given in this Calibration Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Hong Kong Calibration Ltd. shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to International System of Units (SI), or by reference to a natural constant.
The test results apply to the above Unit-Under-Test only

REPORT OF EQUIPMENT PERFORMANCE CHECK/ CALIBRATION

Report No. : AH100036
Date of Issue : 04 October 2018
Page No. : 1 of 2

PART A – CUSTOMER INFORMATION

Enovative Environmental Service Ltd.
Flat 2207, Yu Fun House,
Yu Chui Court, Shatin
New Territories, Hong Kong
Attn: Mr. Thomas WONG

PART B – DESCRIPTION

Name of Equipment : YSI ProDSS (Multi-Parameters)
Manufacturer : YSI (a xylem brand)
Serial Number : 17E100747
Date of Received : Oct 03, 2018
Date of Calibration : Oct 03, 2018
Date of Next Calibration^(a) : Jan 03, 2019

PART C – REFERENCE METHODS/ DOCUMENTS FOR THE CALIBRATION

| Parameter | Reference Method |
|----------------------|--|
| pH at 25°C | APHA 21e 4500-H ⁺ B |
| Dissolved Oxygen | APHA 21e 4500-O G |
| Conductivity at 25°C | APHA 21e 2510 B |
| Salinity | APHA 21e 2520 B |
| Turbidity | APHA 21e 2130 B |
| Temperature | Section 6 of international Accreditation New Zealand Technical Guide no. 3 Second edition March 2008: Working Thermometer Calibration Procedure. |

PART D – CALIBRATION RESULTS^(b,c)

(1) pH at 25°C

| Target (pH unit) | Displayed Reading ^(d) (pH Unit) | Tolerance ^(e) (pH Unit) | Results |
|------------------|--|------------------------------------|--------------|
| 4.00 | 3.99 | -0.01 | Satisfactory |
| 7.42 | 7.40 | -0.02 | Satisfactory |
| 10.01 | 9.96 | -0.05 | Satisfactory |

Tolerance of pH should be less than ±0.10 (pH unit)

(2) Temperature

| Reading of Ref. thermometer (°C) | Displayed Reading (°C) | Tolerance (°C) | Results |
|----------------------------------|------------------------|----------------|--------------|
| 7.6 | 7.1 | -0.5 | Satisfactory |
| 25.0 | 24.6 | -0.4 | Satisfactory |
| 35.5 | 34.9 | -0.6 | Satisfactory |

Tolerance limit of temperature should be less than ±2.0 (°C)

~ CONTINUED ON NEXT PAGE ~

Remark(s): -

- ^(a) The "Date of Next Calibration" is recommended according to best practice principals as practiced by QPT or quoted from relevant international standards.
^(b) The results relate only to the calibrated equipment as received
^(c) The performance of the equipment stated in this report is checked with independent reference material and results compared against a calibrated secondary source.
^(d) "Displayed Reading" denotes the figure shown on item under calibration/ checking regardless of equipment precision or significant figures.
^(e) The "Tolerance Limit" mentioned is the acceptance criteria applicable for similar equipment used by QPT or quoted from relevant international standards.

APPROVED SIGNATORY:

LAM Ho-ye, Emma
Assistant Laboratory Manager

REPORT OF EQUIPMENT PERFORMANCE CHECK/ CALIBRATION

Report No. : AH100036
Date of Issue : 04 October 2018
Page No. : 2 of 2

PART D – CALIBRATION RESULTS (Cont'd)

(3) Dissolved Oxygen

| Expected Reading (mg/L) | Displayed Reading (mg/L) | Tolerance (mg/L) | Results |
|-------------------------|--------------------------|------------------|--------------|
| 0.34 | 0.26 | -0.08 | Satisfactory |
| 7.75 | 7.82 | 0.07 | Satisfactory |
| 8.20 | 8.00 | -0.20 | Satisfactory |

Tolerance limit of dissolved oxygen should be less than ± 0.20 (mg/L)

(4) Conductivity at 25°C

| Conc. of KCl (M) | Expected Reading ($\mu\text{S}/\text{cm}$) | Displayed Reading ($\mu\text{S}/\text{cm}$) | Tolerance (%) | Results |
|------------------|--|---|---------------|--------------|
| 0.001 | 146.9 | 145.8 | -0.7 | Satisfactory |
| 0.01 | 1412 | 1380 | -2.3 | Satisfactory |
| 0.1 | 12890 | 12434 | -3.5 | Satisfactory |
| 0.5 | 58670 | 57510 | -2.0 | Satisfactory |
| 1.0 | 111900 | 110518 | -1.2 | Satisfactory |

Tolerance limit of conductivity should be less than ± 10.0 (%)

(5) Salinity

| Expected Reading (g/L) | Displayed Reading (g/L) | Tolerance (%) | Results |
|------------------------|-------------------------|---------------|--------------|
| 10 | 9.66 | -3.4 | Satisfactory |
| 20 | 19.84 | -0.8 | Satisfactory |
| 30 | 30.38 | 1.3 | Satisfactory |

Tolerance limit of salinity should be less than ± 10.0 (%)

(6) Turbidity

| Expected Reading (NTU) | Displayed Reading ^(f) (NTU) | Tolerance ^(g) (%) | Results |
|------------------------|--|------------------------------|--------------|
| 0 | 0.00 | -- | -- |
| 10 | 10.47 | 4.7 | Satisfactory |
| 20 | 21.75 | 8.8 | Satisfactory |
| 100 | 93.90 | -6.1 | Satisfactory |
| 800 | 730.06 | -8.7 | Satisfactory |

Tolerance limit of turbidity should be less than ± 10.0 (%)

Appendix F. Cumulative Statistics on Exceedances, Environmental Complaints, Notification of Summons and Status of Prosecution

Statistics for Exceedances for 1-hour TSP, Noise, Water, Waste, CWD Monitoring

| | | Total no. recorded in the reporting period | Total no. recorded since the project commenced |
|----------|--------|--|--|
| 1-hr TSP | Action | 0 | 0 |
| | Limit | 0 | 0 |
| Noise | Action | 0 | 0 |
| | Limit | 0 | 0 |
| Water | Action | 0 | 0 |
| | Limit | 0 | 0 |
| Waste | Action | 0 | 0 |
| | Limit | 0 | 0 |
| CWD | Action | 0 | 0 |
| | Limit | 0 | 0 |

Remark: Exceedances, which are not project related, are not shown in this table.

Statistics for Complaints, Notifications of Summons and Prosecution

| Reporting Period | Cumulative Statistics | | |
|--|-----------------------|--------------------------|--------------|

** Insufficient or no AIS data for speed calculation.

Follow-up on instantaneous speeding

Referring to the data of SkyPier HSF movements in November 2018, instantaneous speeding (i.e. a sudden change in speed at over 15 knots for a short period of time) within the SCZ was recorded from 8 HSF movements of which the durations of all instantaneous speeding cases were less than two minutes. The AIS data and ferry operators' responses showed the cases were due to local strong water currents and giving way to vessels. The captains had reduced speed and maintained the speed at less than 15 knots after the incidents.

5 HSFs with no transmission of AIS data was received in November 2018.
