Dear Mr Yau

**Low Level Radioactive Waste Storage Facility at Siu A Chau  
Verification of Operation Phase EM&A Report No. 19**

We refer to your submission email dated 18 December 2015, regarding the captioned report.

We do not have comments and hereby verify the captioned report for your onward submission.

If you require any further information, please do not hesitate to contact the undersigned at 2268 3208 or our W K Chiu at 2268 3149.

Yours faithfully

Sam Tsoi  
Independent Environmental Checker

## **EXECUTIVE SUMMARY**

This is the ninth yearly report after the Facility has been operated for 10 years and it presents the results of the radiological monitoring work performed between August 27, 2014 and the date of sampling, which is April 15, 2015. No exceedance in Investigation Level was observed for all the radiation monitoring results and collected environmental samples.

This is also the last yearly report for the first ten years of operation.

The Facility was operating smoothly over the years and there is no indication that the operation of the Facility has risen or will raise the environmental radiation level around the Facility. However we occasionally saw minor exceedances in Investigation Levels in some samples to which we could not find any explanation. From the nature of the wastes and the specification of the waste drums, we do not anticipate any aerial effluent except radon gas emitted from the radium wastes. Yet the released radon was under constant monitoring and we did not see any abnormal releases. Hence radon and its progenies was not the source for those exceedances. Similarly there was no liquid effluent throughout the entire ten years of operation; hence any exceedances observed in marine samples should not be attributable to the Facility.

It can therefore be concluded that the fluctuation in the natural environment can be greater than  $3 \times SD$  or  $3 \times SU$  of the baseline samples defined for the Investigation Levels in Appendix 1. A review of the baseline levels and Investigation Levels are recommended.

## **1. INTRODUCTION**

### **Background**

- 1.1 Various industrial, educational and medical facilities in Hong Kong have, for a number of years, used radioactive materials and generated radioactive waste. Most of the existing waste arisings were stored in disused air raid tunnels close to Queen's Road East in Wan Chai. Other arisings were stored temporarily (although in some cases for several years) at the point of use in educational institutions or hospitals.
- 1.2 A consultancy study in 1995 concluded that Siu A Chau was a suitable location for a purpose-built storage facility to which all waste will be transported, placed in stainless steel drums and stored.
- 1.3 In July 2003 ATAL-Belgoprocess Joint Venture Limited (ABJV) was awarded a contract to design, construct, and operate the LRWF at Siu A Chau for 10 years. Thereafter, the ABJV will transfer the waste management skills for this Facility to Hong Kong.
- 1.4 The LRWF was designed to have a storage vault that can initially store 260 drums of waste, each drum of 275 litres net capacity. The building also contains facilities for waste reception and repackaging waste, and administering the process. A jetty was built to provide marine access to the Facility.
- 1.5 The Facility is equipped with various radiation monitors inside the building specially installed for detecting all possible leakage of effluents from the building.
- 1.6 However, it is possible that minute activities may escape from detection and enter the biosphere, or an unexpected incidence would have resulted in a significant release of radionuclide from the Facility. It is one of the objectives of this environmental monitoring scheme to monitor whether in the long-term, the operation of the Facility will cause deterioration to the environment.

### **Purpose of the Report**

- 1.7 This is the nineteenth EM&A (Operation Phase) report, which is also the ninth annual report on measurement results of environmental samples taken after the commencement of operation of the LRWF on July 28, 2005. This report covers the monitoring period from August 27, 2014 to the date of sampling which was April 15, 2015.
- 1.8 The requirements of the operation phase monitoring and audit; monitoring scheme and monitoring equipment and procedures have been fully described in the First EM&A (Operation Phase) Report. Please refer to that report for reference.
- 1.9 This report also covers the monitoring of personnel doses, the non-active areas of the Facility and the liquid and gaseous effluents.

## 2. MONITORING RESULTS

- 2.1 The sampling scheme remained unchanged. 15 in-situ ambient  $\gamma$  dose rates were measured. 3 soil samples; 3 sand samples; 3 grass samples; 8 seawater samples from 4 locations at two depths; 1 kg of sea snails; a few fish and 3 airborne particulate samples were collected and analysed as in previous monitoring. **Figure 2.1** shows the locations for taking various samples.
- 2.2 Ambient  $\gamma$  dose rates were taken at exactly the same locations and would give a true picture of the variation of the radiation environment if there were any.
- 2.3 Soil and grass samples were collected at more or less the same place as for the baseline. Since we need fresh surface soils that would have stored information of fallout since the commencement of the operation, the sampling sites shifted a little bit every time.
- 2.4 The uncertainties of the measurement results are given as standard deviation (SD) or standard uncertainty (SU). SD is given for individual sample and is calculated according to the number of counts recorded and assuming a normal distribution for the counts. SU is reported for each group of samples and it takes into account of the variance between samples. Please refer to the First EM&A Report (Operation Phase) for details.

**Fig. 2.1 Locations of the Sampling Sites**

( $\gamma$ : Ambient gamma dose rate; S: Soil or Sand; W: Water; P: Air particulates)  
(Grass sampling sites are the same as soil sampling sites)

### Ambient $\gamma$ Dose Rates

2.5 The measurement results are given in the last column in **Table 2.1(a)**. The 1<sup>st</sup> year results are average of all previous results measured within the 1<sup>st</sup> year. **Table 2.1(b)** also shows the results of the previous measurements for comparison. It is noted that the overall average value has not changed during the monitoring period.

2.7 The overall mean ambient  $\gamma$  dose-rate for this year is the same as those in previous years.

**Soil**

2.8 Soil samples were collected at 3 locations only, all from the undisturbed areas. These locations correspond to the passive air sampler locations which aim to detect dispersion of effluent leakages, if any, in the prevailing wind directions. The measurement results are given in **Table 2.2(a) & (b)**.

2.11 No exceedance of Investigation Level is observed.

### Grass

2.12 Grass samples were collected in locations near to the soil samples. The measurement results are given in **Table 2.4(a) & (b)**. The  $\gamma$ -spectra are identical to the background of the  $\gamma$  spectrometer and do not reveal the presence of any significant  $\gamma$ -emitting radionuclides, hence they are not reported here.

**Table 2.4(a) Activity Concentration of Gross  $\alpha$  and  $\beta$  Emitters in Grass Samples**

Location	Collection Date	$\alpha$ Activity* (Bq g <sup>-1</sup> )	SD (Bq g <sup>-1</sup> )	$\beta$ Activity* (Bq g <sup>-1</sup> )	SD (Bq g <sup>-1</sup> )

19 (2015)	0.019	0.002	0.27	0.03

2.13 No exceedance of Investigation Level is observed.

**Sea Water**

- 2.14 The same 4 locations were chosen to collect the water samples at 2 depths. The measurement results are given in **Table 2.5(a) & (b)**.
- 2.15 Similar to grass samples, the  $\gamma$  spectra are not reported. There is no sign of presence of  $\gamma$  emitters.
- 2.16 No exceedance of Investigation Level is observed.

## Marine Organisms

2.17 Fishes were caught along the jetty and sea snails were collected randomly along the shores.

2.18 The measurement results are given in **Table 2.6(a) & (b)** and **Table 2.7(a) & (b)** for the gross  $\alpha/\beta$  activities in fish and sea snails respectively.

**Table 2.6(a) Activity Concentration of Gross  $\alpha/\beta$  Emitters in Fish Samples**

Sample	Collection Date	$\alpha$ Activity* (Bq g <sup>-1</sup> )	SD (Bq g <sup>-1</sup> )	$\beta$ Activity* (Bq g <sup>-1</sup> )	SD (Bq g <sup>-1</sup> )
1	15 Apr 15	0.003 <sup>#</sup>	0.002	0.020	0.002
2	15 Apr 15	0.014	0.002	0.035	0.002
3	15 Apr 15	0.013	0.002	0.049	0.002

\* Bq g<sup>-1</sup> refers to wet mass of fish flesh.

<sup>#</sup> Below minimum detectable  $\alpha$  activity of 0.006 Bq g<sup>-1</sup>.

**Table 2.6(b) Comparison of  $\alpha/\beta$  Activities in Fish Samples with Previous Results**

EM&A Report No.	Mean $\alpha$ Activity (Bq g <sup>-1</sup> )	SU (Bq g <sup>-1</sup> )	Mean $\beta$ Activity (Bq g <sup>-1</sup> )	SU (Bq g <sup>-1</sup> )
1 (Baseline)	0.0093	0.004	0.068	0.003

2.22 All activities are normal.

**3. REPORT ON ELEVATED ENVIRONMENTAL RADIATION BACKGROUND**

- 3.1 The Investigation Levels for environmental samples have been established and they are given in Appendix 1. The relevant action plan is given in the First EM&A Report (Operation Phase).
- 3.2 There is no exceedance of Investigation Level in all the samples.

**4. REPORT ON NON-COMPLIANCE**

4.1 The Action Level and Limit Level (A/L Levels) for non-compliance have been established and they are given in Appendix 1 for easy reference. The relevant Event and Action Plan have been developed. Please refer to the First EM&A Report (Operation Phase) for details.

**Dose for Radiation Workers**

4.2 There was no record of exceeding the A/L Levels as recorded by TLDs.

**Dose Rates at Un-controlled Areas**

4.3 No exceedance of the A/L Levels was observed.

**Liquid Effluent Discharge**

4.4 There was no liquid effluent discharged during the monitoring period.

**Airborne Effluent Discharge**

4.5 The average total radon released during the monitoring period was estimated to be  $2.6 \times 10^8$  Bq/month, which is below the A/L Levels.

4.6 The discharged  $\alpha$  and  $\beta$  activities were also below the A/L Levels.

4.7 The total airborne effluent discharge was below the A/L Levels.

**5. RESULT OF ENVIRONMENTAL COMPLIANCE AUDITS**

5.1 No compliant was received during the period.

**APPENDIX 1**

**Limit Level and Action Level**

The Limit Levels for non-compliance with the Environmental Performance Requirements during the Operation are shown in **Table A1-1**.

**Table A1-1 Limit Levels for Non-compliance and Action Levels**

<b>Environmental Performance Requirements</b>	<b>Limit Levels</b>	<b>Action Levels (3/10<sup>th</sup> of Limit Levels)</b>
Dose for radiation workers	1.67 mSv per month	0.5 mSv per month
Dose rate at un-controlled areas	1 µSv per hour	0.3 µSv per hour
Liquid effluent discharge	10 ALI per month	3 ALI per month
Airborne effluent discharge	10 ALI per month	3 ALI per month

**Investigation Level**

With the help of all the internal monitoring, it is unlikely that the effluents will cause any observable increase in the radiation levels in the vicinity of the Facility under normal operation. It is also not anticipated that any significant quantity of the radioactive wastes would be released to the environment under even the most severe natural disasters. Nevertheless when the environmental samples are found to have radioactivities higher than the normal fluctuation of the established baseline levels, some investigation has to be initiated. The levels that trigger the investigation are called investigation levels and they are given in **Table A1.2**.

**Table A1.2 Investigation Levels for Environmental Samples**

<b>Environmental Samples</b>		<b>Investigation Levels</b>	
Ambient $\gamma$ dose rate ( $\mu\text{Sv h}^{-1}$ )	A	0.23	3 × SD of individual baseline dose rate
	B	0.25	
	D	0.27	
	E	0.29	
	F	0.28	
	G	0.27	
	H	0.31	
	I	0.32	
	J	0.24	
	K	0.32	
	L	0.30	
	M	0.31	
	N	0.29	
O	0.24		
P	0.29		
Soil (Bq kg <sup>-1</sup> )	<sup>226</sup> Ra	91.7	3 × SU of baseline samples
	<sup>228</sup> Th	128.5	
	<sup>40</sup> K	1497	
	<sup>137</sup> Cs	1.36	

	Other $\gamma$ emitters		Occurrence in any quantities
Sand (Bq kg <sup>-1</sup> )	<sup>226</sup> Ra	32.0	3 × SU of baseline samples
	<sup>228</sup> Th	38.1	
	<sup>40</sup> K	894	
	Other $\gamma$ emitters		Occurrence in any quantities
Grass (Bq g <sup>-1</sup> )	Gross $\alpha$	0.22	3 × SU of baseline samples
	Gross $\beta$	0.43	
	$\gamma$ emitters not found in baseline		Occurrence in any quantities
Sea water (Bq L <sup>-1</sup> )	Gross $\alpha$	1.52	3 × SU of baseline samples
	Gross $\beta$	9.3	
	$\gamma$ emitters not found in baseline		Occurrence in any quantities
Fish (Bq g <sup>-1</sup> )	Gross $\alpha$	0.021	3 × SU of baseline samples
	Gross $\beta$	0.076	
Sea snails (Bq g <sup>-1</sup> )	Gross $\alpha$	0.048	3 × SU of baseline samples
	Gross $\beta$	0.076	
Airborne particulates (cpm)	Gross $\alpha$		Occurrence in any quantities
	Gross $\beta$		

- SD is the standard deviation of a single sample.

- SU is standard uncertainty of the sample group.
