Executive Summary

- This quarterly EM&A summary report under the Main Contract for the Design and Construction of Tsuen Wan Drainage Tunnel (hereafter referred to as the "Project") to Maeda-CREC-SELI Joint Venture (MCSJV), which summarises the findings of environmental impact monitoring works during the period from October to December 2009.
- Noise monitoring was performed at five monitoring stations (NSR1, NSR3, NSR6, NSR8 and NSR9). Air quality monitoring was carried out at four monitoring stations (ASR1, ASR3, ASR8 and ASR9). Water quality monitoring was carried out at three monitoring stations (Intake I-1, Intake I-2 and Intake I-3). Noise level was measured in terms of Leq, L10 and L90 (30min). Air quality was measured in terms of 1-hour Total Suspended Particulates (TSP). Water quality was measured in terms of Temperature, pH, Dissolved Oxygen (DO), Turbidity (Tby) and Suspended Solid (SS).
- 3 Details of all monitoring stations are summarized in the below table.

| Type of Monitoring | Monitoring Station ID | Name of Premises | Status of Monitoring Works during the Reporting Period |
|------------------------|-----------------------|-------------------------------------|---|
| Air Quality Monitoring | ASR1 | Sik Sik Yuen Ho Fung College | Ongoing |
| | ASR3 | Hong Hoi Chee Hong Temple | Ongoing |
| | ASR8 | Beach Tower (Long Beach Gardens) | Ongoing |
| | ASR9 | Greenview Terrace (Block 1) | Ongoing |
| Noise Monitoring | NSR1 | Sik Sik Yuen Ho Fung College | Ongoing |
| | NSR3 | Hong Hoi Chee Hong Temple | Ongoing |
| | NSR6 | Squatters | Ongoing |
| | NSR8 | Beach Tower (Long Beach Gardens) | Ongoing |
| | NSR9 | Greenview Terrace (Block 1) | Ongoing |
| Water Quality | I-1 | Intake I-1 | Ongoing |
| Monitoring | I-2 | Intake I-2 | Ongoing |
| | I-3 | Intake I-3 | Ongoing |
| | O-1 | Outfall O-1 | Not yet commenced until construction of stilling basin is in place. |

- The major construction activities undertaken by the Contractor during the period from October to December 2009 include site cleaning and tidying and breaking up exiting boulder at I-1, I-2, I-3 and Outfall, tree transplanting at I-1, I-2 and I-3; socket H-piling and construction of launching chamber at Outfall; soil nailing at I-1, I-3 and Outfall; formation of access road at I-3 and Outfall; Excavation and Lateral Support (ELS) at I-1; construction of skin wall and formation of steel platform at I-2.
- 5 No construction activities were carried out during the restricted hours during the reporting period.

- 6 No water quality monitoring was undertaken on 25 December 2009 since no construction activities were carried out.
- No project related exceedance of air quality and water quality monitoring was recorded. For noise monitoring, three environmental complaints on noise triggered the exceedances of Action Levels. Two consecutive noise measurements were carried out by EPD at NSR 9 on 28 October 2009. The measured noise levels were 76.6 dB(A) and 75.9 dB(A), triggering two Limit Level exceedances in the reporting period. A meeting was held on 12 November 2009 with all parties (i.e. the Contractor, ETL, SOR, IEC and EPD) for discussion and agreement on the Contractor's remedial proposal. The proposal was finalised on 17 November 2009 and verified by IEC on 24 November 2009. Noise monitoring was increased at NSR9 from two times to three times per week during this period and no exceedance was recorded during this period after the Contractor implemented the agreed mitigation measures. Hence, the exceedance was closed out on the 4th week of November 2009. The noise monitoring frequency was returned to two times per week. The below table summarizes the exceedances of air quality, noise and water quality in the reporting period.

| Parameter | Action Level Exceedance | Limit Level Exceedance |
|-----------|---|--|
| Air | Nil | Nil |
| Noise | One complaint was received on 2 October 2009. | Two exceedances of limit levels on noise were recorded on 28 October 2009. |
| | Two complaints were received on 9 and 18 November 2009. | |
| DO | Nil | Nil |
| Turbidity | One recorded at I-1 on 25 November 200 (non project related). | 9Four recorded at I-1 and I-2 on 4, 6, 11 and 13 November 2009 (non project related). |
| | | Five recorded at I-2 on 11, 16, 21, 23 and 30 December 2009 (non project related). |
| SS | One recorded at I-3 on 11 November 200 (non project related) | 9 Nine recorded at I-1, I-2 and I-3 on 2, 4, 9, 11, 23, 25, 27 and 30 November 2009 (non project |
| | Three recorded at I-1 and I-2 on 4, 9 and | related). |
| | 23 December 2009. | Seven recorded at I-1 and I-2 on 4, 11, 16, 21, 23 and 30 December 2009. |

8 Waste figures during the reporting period are summarized in the below table.

Status of Waste Management

| Inert C&D Material Disposed of to Public Fill at Tuen Mun (m ³) | 9,326.8 |
|---|----------|
| Inert C&D Material Reused in other Contract* (m³) | 15,935.0 |
| Metals Generated (kg) | 10.0 |
| Paper / Cardboard Packaging (kg) | 1,800.0 |
| Plastics (kg) | 10.0 |
| Chemical Waste (kg) | 170.0 |
| | |

General Waste Disposed of to NENT Landfill (m3)

20.0

- * Other Contracts include DC/2007/08, DC/2007/17, DC/2007/06, DC/2006/04, Ocean Park, HY/2007/09, HY/2008/09, HY/2007/10 and ST/2008/02.
- During the reporting period, four environmental complaints were received. One environmental complaint was received by SOR on 2 October regarding daytime construction noise exceedance recorded at Greenview Terrace (NSR9) on 24 September 2009 at the outfall construction site. The documented complaints for noise were considered to trigger the action level. One environmental complaint was received by EPD on 6 October 2009 regarding the construction dust at I-3 on 2 October 2009. There is no representative air monitoring location as stated in the EM&A Manual. The complaint for dust was considered justifiable because it was due to windy erosion on the exposed surface. One environmental complaint was received by EPD on 9 November regarding movable noise barrier not placing close enough to the piling machine. Immediate Action was taken. The rig was re-orientated and the barrier was placed closed to the drilling head. One environmental complaint was received by EPD on 18 November 2009 regarding rock-breaking activity carried out in the eastern area of Portion D, closest to Greenview Terrace, not totally screened and line of sight of the breaker observed from the NSR. Follow up action was taken. The bamboo scaffold was extended further away from stage 3 scaffold to further screen off the activities to the Greenview.
- 10 No Notification of Summons was received since the commencement of the Project.

1 Introduction

- 1.1.1 The Drainage Services Department (DSD) proposes to construct a tunnel of an internal diameter of 6.5m and length 5.13km, with the purpose to alleviate the flooding risk in Tsuen Wan and Kwai Chung.
- 1.1.2 This project is a Designated Project under Schedule 2 Part I Category Q, of the Environmental Impact Assessment Ordinance (EIAO) as part of the proposed Tsuen Wan Drainage Tunnel (TWDT) passes underneath the existing Tai Mo Shan Country Park. An Environmental Impact Assessment (EIA) Study has therefore been undertaken to provide information on the nature and extent of environmental impacts arising from the construction and operation of the proposed designed project and related activities taking place concurrently. From the EIA the recommendations for monitoring contained herein, are made.
- 1.1.3 The Maeda-CREC-SELI Joint Venture (MCSJV) was awarded by DSD with the Contract Design and Construction of Tsuen Wan Drainage Tunnel.
- 1.1.4 Hyder was commissioned by the MCSJV as the ET to implement an EM&A program in accordance with the EM&A Manual. The proposed tunnel section flows from the junction of Shing Mun Road and Wo Yi Hop Road and discharges to south of Yau Kom Tau underneath Castle Peak Road as shown in Appendix A.
- 1.1.5 The construction works of the Project commenced on January 2008. This is the seventh quarterly EM&A report summarising the impact monitoring results and audit findings of the EM&A program during the reporting period in October December 2009.

2 Project Information

2.1 Project Organization and Management Structure

2.1.1 The organization chart and lines of communication with respect to the on-site environmental management are shown in Appendix B.

2.2 Construction Progress

- 2.2.1 It is anticipated that the overall project programme from the detail design to completion of all civil works shall take approximately 54 months. The construction programme is presented in Appendix C.
- 2.2.2 The major construction activities undertaken in the reporting quarter are:
 - Site cleaning and tidying at I-1, I-2, I-3 and Outfall;
 - Breaking up exiting boulder at I-1, I-2, I-3 and Outfall;
 - Tree transplanting at I-1, I-2 and I-3;
 - Socket H-piling at Outfall;
 - Construction of launching chamber at Outfall;

- Soil nailing at I-1, I-3 and Outfall;
- Formation of access road at I-3 and Outfall;
- Excavation and Lateral Support (ELS) at I-1;
- Construction of skin wall at I-2; and
- Formation of steel platform at I-2;

2.3 Mitigation Measures

2.3.1 The environmental mitigation measures that have been implemented and their status are given in Appendix D.

3 EM&A Requirement

3.1 General

3.1.1 The EM&A requirements are stipulated in the EM&A Manual. The principal purposes of the EM&A program are to assess the compliance with applicable environmental legislation and associated regulations; to ensure the implementation of mitigation measures specified in the EM&A Manual; and to identify any remedial works necessary for redressing any unacceptable or unanticipated environmental impacts.

3.2 EM&A on Air Quality; Noise and Water Quality

Monitoring Parameters

3.2.1 The air quality, noise and water quality frequencies and parameters are shown in Table 3-1.

| Type of Monitoring | Monitoring Station ID | Parameter | Frequency |
|--------------------------|------------------------------------|------------------|---------------------|
| Air Quality Monitoring | ASR1; ASR3; ASR8 and ASR9 | 1-hour TSP | Once every 6-day |
| Noise Monitoring | NSR1; NSR3; NSR6; NSR8 and NSR9 | Leq (30 min.) | Once every week |
| Water Quality Monitoring | I-1; I-1-C; I-2; I-2-C; I-3; I-3-C | DO (mg/l) | Three days per week |
| | | SS (mg/l) | _ |
| | | Turbidity (NTU) | _ |
| | | рН | _ |
| | | Temperature (°C) | |

Table 3-1 Frequency of Air Quality; Noise and Water Quality Monitoring

3.3 Monitoring Locations

3.3.1 The monitoring locations for air quality; noise and water quality are shown in Tables 3-2; 3-3; 3-4 and Appendix E.

| Monitoring Station ID | Name of Premises | Floor Level |
|-----------------------|----------------------------------|-------------|
| ASR1 | Sik Sik Yuen Ho Fung College | G/F |
| ASR3 | Hong Hoi Chee Hong Temple | Podium |
| ASR8 | Beach Tower (Long Beach Gardens) | G/F |
| ASR9 | Greenview Terrace (Block 1) | G/F |

Table 3-2 Air Quality Monitoring Locations

| Monitoring Station ID | Name of Premises | Floor Level |
|-----------------------|----------------------------------|---------------------------|
| NSR1 | Sik Sik Yuen Ho Fung College | G/F |
| NSR3 | Hong Hoi Chee Hong Temple | Podium |
| NSR6 | Squatters | G/F |
| NSR8 | Beach Tower (Long Beach Gardens) | G/F |
| NSR9 | Creary days Tayrage (Pleafe 1) | Podium (up to 6 July2009) |
| | Greenview Terrace (Block 1) | Roof* (from 16 July 2009) |

^{*} The noise monitoring location of NSR9 had been adjusted at rooftop from 16 July 2009.

Table 3-3 Noise Monitoring Locations

| Monitorina | Station | חו | Name | of | Premises |
|------------|---------|----|--------|-----|-------------|
| MOHILOHIIG | Jianon | 10 | Hallic | OI. | 1 101111303 |

| I-1 | Intake I-1 |
|------------------|--|
| I-1-C | Control of Intake I-1 |
| I-2 | Intake I-2 |
| I-2-C | Control of Intake I-2 |
| I-3 | Intake I-3 |
| I-3-C^ | Control of Intake I-3 |
| O-1 (FT) & (ET)* | Outfall 1During Flood Tide and Ebb Tide |
| O-1-C (FT)*# | Control of Outfall O-1 During Flood Tide |
| O-1-C (ET)*# | Control of Outfall O-1 During Ebb Tide |

Note: *Water quality monitoring will be undertaken when the construction of the outfall basin at the seashore is started.

#Note that there are two control stations for Outfall O-1; one for sampling during flood tide and one for sampling during ebb tide. Only one of those control stations for Outfall O-1 shall be sampled during each sampling. Control station to be sampled will be determined base on the tidal information provided by the Hong Kong Observatory.

^ The upper stream location (I-3-C^) had been relocated from end of February 2009 due to coarse stone blockage.

Table 3-4 Water Quality Monitoring Locations

3.4 Performance Limits (AL Levels)

3.4.1 In accordance with the EM&A Manual; the appropriate Action and Limit Levels for Air Quality; Noise and Water Quality were established and are presented in Table 3-5; Table 3-6 and Table 3-7. Should non-compliance of the air quality; noise and water quality criteria occur; actions in accordance with the Event / Action Plan stipulated in contract specific EM&A Manual should be carried out.

| Station | 1-hr TSP Level in μg/m ³ | | | |
|---------|-------------------------------------|-------------|--|--|
| Station | Action Level | Limit Level | | |
| ASR1 | 307 | 500 | | |
| ASR3 | 327 | 500 | | |
| ASR8 | 337 | 500 | | |
| ASR9 | 329 | 500 | | |

Table 3-5 Action & Limit Levels for Air Quality

| Time Period | Action | Limit |
|-----------------------|---|-----------|
| 0700 – 1900 hrs on ne | ormal weekdaysWhen one documented complaint | 75 dB(A)* |
| | is received | |

^{*} For educational establishments the limit level shall be 70dB(A) and reduced to 65dB(A) during examination periods between 0700-1900 hrs on normal weekdays.

Table 3-6 Action & Limit Levels for Noise

| Parameters | Action | Limit | | | |
|---|---|---|--|--|--|
| DO in mg/l | Surface & Middle | Surface & Middle | | | |
| (Surface; Middle & Bottom) | 5%-ile of baseline data for surface | 4mg/l except 5mg/l for FCZ or | | | |
| | and middle layer. | 1%-ile of baseline data for surface and middle layer | | | |
| | <u>Bottom</u> | Bottom | | | |
| | 5%-ile of baseline data for bottom layer. | 2mg/l or 1%-ile of baseline data for bottom layer | | | |
| SS in mg/l | 95%-ile of baseline data or 120% of | 99%-ile of baseline or 130% of | | | |
| (Depth-averaged) | upstream control station's SS at the same tide of the same day | upstream control station's SS at the same tide of the same day and specific sensitive receiver water quality requirements (e.g. required suspended solids levels for concerned sea water intakes) | | | |
| Turbidity (Tby) in NTU (Depth-averaged) | 95%-ile of baseline data or 120% of upstream control station's Tby at the same tide of the same day | 99%-ile of baseline or 130% of upstream control station's Tby at the same tide of the same day | | | |

Notes:

- For DO; non-compliance of the water quality limits occurs when monitoring result is lower than the limits.
- For SS and Tby; non-compliance of the water quality limits occurs when monitoring result is higher than
- All the figures given in the table are used for reference only and the EPD may amend the figures whenever it is considered as necessary.

Table 3-7 Action & Limit Levels for Water Quality

3.5 Monitoring Result

3.5.1 All measured air quality monitoring levels were complying with the Action and Limit Levels in the reporting period. A summary of air quality monitoring results is presented in Table 3-8 and Appendix F.

| _ | 1-hour TSP (μ | g/m³) | Action Level | Limit Level | |
|---------|---------------|-------|--------------|-------------|---------|
| Station | Range | | | (μg/m³) | (μg/m³) |
| ASR1 | 14.1 | - | 278.0 | 307 | 500 |
| ASR3 | 31.8 | - | 303.5 | 327 | 500 |

| Monitoring | 1-hour TSP (μ | g/m³) | Action Level | Limit Level | |
|------------|---------------|-------|--------------|----------------------|---------|
| Station | Range | | | (μg/m ³) | (μg/m³) |
| ASR8 | 24.5 | - | 318.8 | 337 | 500 |
| ASR9 | 13.6 | - | 298.2 | 329 | 500 |

Italic indicates the exceedances of Action Levels

Bold indicates the exceedances of Limit Levels

Table 3-8 Summary of Air Quality Monitoring Results

Three Action Level exceedances for noise monitoring was recorded in the reporting quarter as three noise complaints were received on 2 October, 9 and 18 November 2009. Two consecutive noise measurements were carried out by EPD at NSR 9 on 28 October 2009. The measured noise levels were 76.6 dB(A) and 75.9 dB(A). Hence, they would be the Limit Level exceedances. A meeting was held on 12 November 2009 with all parties (i.e. the Contractor, ETL, SOR, IEC and EPD) for discussion and agreement on the Contractor's remedial proposal. The proposal was finalised on 17 November 2009 and verified by IEC on 24 November 2009. Noise monitoring was increased at NSR9 from two times to three times per week during this period and no exceedance was recorded during this period after the Contractor implemented the agreed mitigation measures. Hence, the exceedance was closed out on the 4th week of November 2009. The noise monitoring frequency was returned to two times per week. Noise monitoring frequency was increased to twice per week at NSR 8 from 2 to 16 October 2009 due to the complaint received from Long Beach Garden on 17 August 2009. A summary of noise monitoring results is presented in Table 3-9 and Appendix F.

| Monitoring Station | Leq (30mins) dB(A | Limit Level | | |
|--------------------|-------------------|-------------|----|--------|
| | Range | | | dB(A) |
| NSR1 | 64 | - | 70 | 70/65* |
| NSR3 | 62 | - | 73 | 75 |
| NSR6 | 53 | - | 72 | 75 |
| NSR8 | 62 | - | 72 | 75 |
| NSR9 | 63 | - | 74 | 75 |

Bold indicates the exceedances of Limit Levels

Noise Limit level at NSR1 was reduced from 70 dB(A) to 65 dB(A) during examination period from 29 - 30 October and from 4 - 21 December 2009.

Table 3-9 Summary of Impact Noise Monitoring Results

- 3.5.3 A summary of water quality monitoring results is presented in Table 3-10 and Appendix F.
- 3.5.4 No water quality monitoring was undertaken on 25 December 2009 since no construction activities were carried out.
- 3.5.5 None of exceedance related to project construction activities was recorded during reporting quarter but a total of <u>30</u> non project related exceedances were recorded.
- 3.5.6 A total of **15** non project related exceedances were recorded in November 2009 including:

- exceedances of Limit Levels of SS recorded at I-1 on 2 and 4 November 2009 were above baseline Action and Limit Levels as well as the range of baseline SS concentration. The exceedances of Limit Levels of turbidity recorded at I-1 on 4 and 6 November were above baseline Action and Limit Levels as well as the range of baseline turbidity concentration. No direct disturbance was observed from the site. Muddy stain was observed at the exit of the closed channel at upstream near Shing Mun Lane. Hence, the exceedances were considered to be contributed the high turbidity and SS levels of control station (I-1-C) and no action was required as the turbidity and SS results at monitoring station (I-1) were below the Action and Limit Levels of control station.
- exceedance of Action Level of turbidity was recorded at I-1 on 25 November 2009. The measured turbidity level was above baseline Action Level but below Limit Level. It was still within the range of baseline turbidity concentration. The exceedances of Limit Levels of SS recorded on 25, 27 and 30 November 2009 were above baseline Action and Limit Levels and also the range of baseline SS concentration. No direct disturbance was observed from the site. However, other construction activities were carried out at Wo Yi Hop Village near control station (I-1-C). The exceedances were considered to be contributed by the high SS and turbidity levels of control station (I-1-C) and no action should be taken as the SS and turbidity results were below the action and limit levels of control station.
- exceedances of Limit Levels of SS (130% higher than I-2-C) recorded at I-2 on 9 and 23 November 2009 were below baseline Action/Limit Levels and within the range of baseline SS concentration. No direct disturbance was observed from the site. The exceedances of SS levels were considered to be contributed by natural variation and no action was therefore required.
- exceedances of Limit Level of turbidity recorded at I-2 on 11 and 13 November 2009 were above baseline Action and Limit Levels as well as the range of baseline turbidity concentration. Exceedance of Limit level of SS was recorded at 1-2 on 11 November 2009. No direct disturbance was observed from the site. However, there were construction activities of Landslip preventative works for slopes and retaining walls by CEDD at control station (I-2-C). As such, the exceedances were considered to be contributed by the high turbidity and SS levels of control station (I-2-C) and no action should be taken as the turbidity and SS results at monitoring station were below the action and limit levels of control station.
- exceedance of Action Level of SS was recorded at I-3 on 11 November 2009. The measured SS level was above baseline Action Level but below Limit Level, and it was within the range of baseline SS concentration. The exceedance of Limit Level of SS (130% higher than I-3-C) recorded on 30 November 2009 was below baseline Action / Limit Levels and it was within the range of baseline SS concentration. No direct disturbance was observed from the site. Hence, the exceedances were considered to be contributed by natural variation and no action was therefore required
- 3.5.7 A total of <u>15</u> non project related exceedances were recorded in December 2009 including:
 - exceedances of Control Action Levels of SS (120% higher than I-1-C) recorded at I-1 on 4 and 23 December 2009 were below baseline Action/Limit Levels as well as the range of baseline SS concentration. The exceedance of Control Limit Level of SS (130%

higher than I-1-C) recorded at I-1 on 21 December 2009 was below baseline Action and Limit Levels as well as the range of baseline SS concentration. No direct disturbance was observed from the site. Thus, the exceedances were considered to be contributed by natural variation and no action was therefore required.

- exceedance of Control Limit Level of SS (130% higher than I-2-C) and exceedance of Control Action Level of SS (120% higher than I-2-C) recorded at I-2 on 4 and 9 December 2009 were below baseline Action/Limit Levels and within the range of baseline SS concentration. No direct disturbance was observed from the site. Thus, the exceedances of SS levels were considered to be contributed by natural variation and no action was therefore required.
- exceedances of Limit Levels of turbidity were recorded at I-2 on 11, 16, 21, 23 and 30 December 2009. The measured turbidity levels were above baseline Action and Limit Levels as well as the range of baseline turbidity concentration. The exceedances of Limit Levels of SS recorded on 11, 16, 21, 23 and 30December 2009 was above baseline Action and Limit Levels as well as the range of baseline SS concentration. No direct disturbance was observed from the site. However, there were construction activities of Landslip preventative works for slopes and retaining walls by CEDD at control station (I-2-C). As such, the exceedances were considered to be contributed by the high turbidity and SS levels of control station (I-2-C) and no action should be taken as the turbidity and SS results at monitoring station were below the action and limit levels of control station
- 3.5.9 The above mentioned exceedances were considered as non project related, however, proper mitigation measures had been implemented during measurements. Details of the above mentioned investigations could be referred to the notifications of exceedances as enclosed in Appendix G.

| Monitoring | Temperature | DO (mg/L) | DO (mg/L) | | Turbidity (NTU) | | Suspended Solid (mg/L) | |

4 Quarterly Summary; Environmental Condition and Non-Compliance Records

4.1 Summary of Waste Disposal Records

4.1.1 According to the information provided by the Contractor; the quantities of C&D materials in the reporting period are summarized in Table 4-1.

| Status of Waste Management | October 09 | November 09 | December 09 |
|--|------------|-------------|-------------|
| Inert C&D Material Disposed of to Public Fill at Tuen Mun (m³) | 1,125.2 | 3,909.4 | 4,292.2 |
| Inert C&D Material Reused in other Contract* (m3) | 7,480.0 | 5,555.0 | 2,900.0 |
| Metals Generated (kg) | Nil | 10.0 | Nil |
| Paper / Cardboard Packaging (kg) | 1,400.0 | 400.0 | Nil |
| Plastics (kg) | Nil | 10.0 | Nil |
| Chemical Waste (kg) | Nil | Nil | 170.0 |
| General Waste Disposed of to NENT Landfill (m3) | 2.9 | 7.9 | 9.2 |

^{*} Other Contracts include DC/2007/08, DC/2007/17, DC/2007/06, DC/2006/04, Ocean Park, HY/2007/09, HY/2008/09, HY/2007/10 and ST/2008/02.

Table 4-1 Waste Generated from October to December 2009

4.2 Weather Conditions

4.2.1 The weather conditions during the period from July to September 2009 were mainly sunny, cloudy and sometimes fine weather.

4.3 Summary of Project-Related Exceedances

4.3.1 Summary of exceedance results are summarized in Table 4-2. For the exceedances that are considered to be non-related to the construction activities; please refer to the monthly EM&A reports separately. Appendix G shows the Interim Notifications of Environmental Quality Limits Exceedances recorded in the reporting period.

| Environmental Monitoring | Total No. of Measurement | Action Level Exceedance | % of Action Level Exceedance | Limit Level Exceedance | % of Limit Level Exceedance |
|-----------------------------|-----------------------------|-------------------------|------------------------------------|---------------------------|--------------------------------|
| Air Quality | 204 | 0 | 0 | 0 | 0 |
| Noise | 94* | 3 (complaints) | 3.1 | 2 | 2.1 |
| Water | 228 | 0 | 0 | 0 | 0 |

^{*} Two noise measurements were carried by EPD on 28 October 2009.

Table 4-2 Summary of Project- related Exceedances

5 Complaint

- 5.1.1 A complaint hotline at 9850 3241 of the Contractor has been established for the Project.
- 5.1.2 During the reporting period, **four** environmental complaints were received.
- One environmental complaint was received by SOR on 2 October regarding daytime construction noise exceedance recorded at Greenview Terrace (NSR9) on 24 September 2009 at the outfall construction site. According to the regular noise monitoring from July to October 2009 and additional noise measurements taken on 2, 6, 16, 23 and 31 October 2009, all measured noise levels were below the Limit Levels. However, the documented complaints for noise were considered to trigger the action level and the Contractor was reminded to enhance the on-site noise mitigation measures, such as tools box talk for Contractor's Team were carried out for reminding that the movable barrier should be placed to the breaking activities as much as possible, movable noise barriers had been placed on site and the movable noise barriers were modified, a joint filler wall was installed at the vertical face of westbound to mitigate the noise rebound from the vertical face to high level of Greenview Terrace and noise monitoring frequency would be maintained twice per week until no further complaint from Greenview Terrace. Detail of the complaint investigation can be referred to Appendix H.
- One environmental complaint was received by EPD on 6 October 2009 regarding the construction dust at I-3 on 2 October 2009. There is no representative air monitoring location as stated in the EM&A Manual. The contractor and the environmental team carried out site investigation on the subject area at 8 October 2009 in response to the complaint. Air quality mitigation measures as recommended in EIA have been implemented by the Contractor, such as water spraying was provided to the exposed surface and during excavation and loading/unloading works. The complaint for dust was considered justifiable because it was due to windy erosion on the exposed surface. In view of the recent dry season, the haul road and the exposed area were dry very quickly. The Contractor was recommended to provide water spraying more frequently especially in the dry season. Detail of the complaint investigation can be referred to Appendix H.
- One environmental complaint was received by EPD on 9 November regarding movable noise barrier not placing close enough to the piling machine. Immediate Action was taken. The rig was re-orientated and the barrier was placed closed to the drilling head. The Contractor also proposed the follow-up action on the same day. Training was conducted to the operator to ensure that the workers aware that the barrier should be placed closed not the drilling head not the machine itself. In order to prevent future occurrence, a permit to dig system was adopted. It should be checked by the Contractor and endorsed by the SOR before starting the drilling rig. The follow up action was checked and a permit to dig system has been implemented. Detail of the complaint investigation can be referred to Appendix H.
- One environmental complaint was received by EPD on 18 November 2009 regarding rock-breaking activity carried out in the eastern area of Portion D, closest to Greenview Terrace, not totally screened and line of sight of the breaker observed from the NSR. Follow up action was taken. The bamboo scaffold was extended further away from stage 3 scaffold to further screen off the activities to the Greenview. The length of the extension was about 8 to 10 m. A strong reminded was given to the relevant staff and sub-contractor and the barrier should be placed in the right orientation before breaking. The mitigation measures were strictly followed as stated in the proposal. The follow up action and relevant records was checked and the follow up action was implemented. Detaill of the complaint investigation can be referred to Appendix H.

5.1.7 Cumulative statistics of environmental complaints are shown in Table 5-1.

| Complaints Received in the Reporting Period | Cumulative Number of Complaints |
|---|--|
| 4 | 14 |

Table 5-1 Cumulative Statistic of Environmental Complaints

6 Summary of Notification of Summons; Successful Prosecutions and Corrective Actions

- 6.1.1 No summons and successful prosecution was received during the reporting period.
- 6.1.2 Cumulative statistics of Notification of Summon; Successful Prosecutions and Convictions are shown in Table 6-1.

| Notification of Summons | | Successful Prosecution | | | | |
|-------------------------|------------|------------------------|------------|--|--|--|
| October – December 09 | Cumulative | October – December 09 | Cumulative | | | |
| 0 | 0 | 0 | 0 | | | |

Table 6-1 Cumulative Statistics of notification of summons and successful prosecutions

7 Comments; Recommendations and Conclusion

- 7.1.1 During the reporting period, no project related exceedance of air quality was recorded but three Action Level exceedances and two Limit Level exceedances of noise monitoring were recorded. Exceedances of water quality monitoring were recorded but none of these exceedances were related to Project's construction activities.
- 7.1.2 Waste management mitigation measures have been implemented by the Contractor within the reporting period. Waste figures during the reporting period are summarized in the below table.

Status of Waste Management

| Inert C&D Material Disposed of to Public Fill at Tuen Mun (m³) | 9,326.8 |
|--|----------|
| Inert C&D Material Reused in other Contract* (m³) | 15,935.0 |
| Metals Generated (kg) | 10.0 |
| Paper / Cardboard Packaging (kg) | 1,800.0 |
| Plastics (kg) | 10.0 |
| Chemical Waste (kg) | 170.0 |
| General Waste Disposed of to NENT Landfill (m³) | 20.0 |

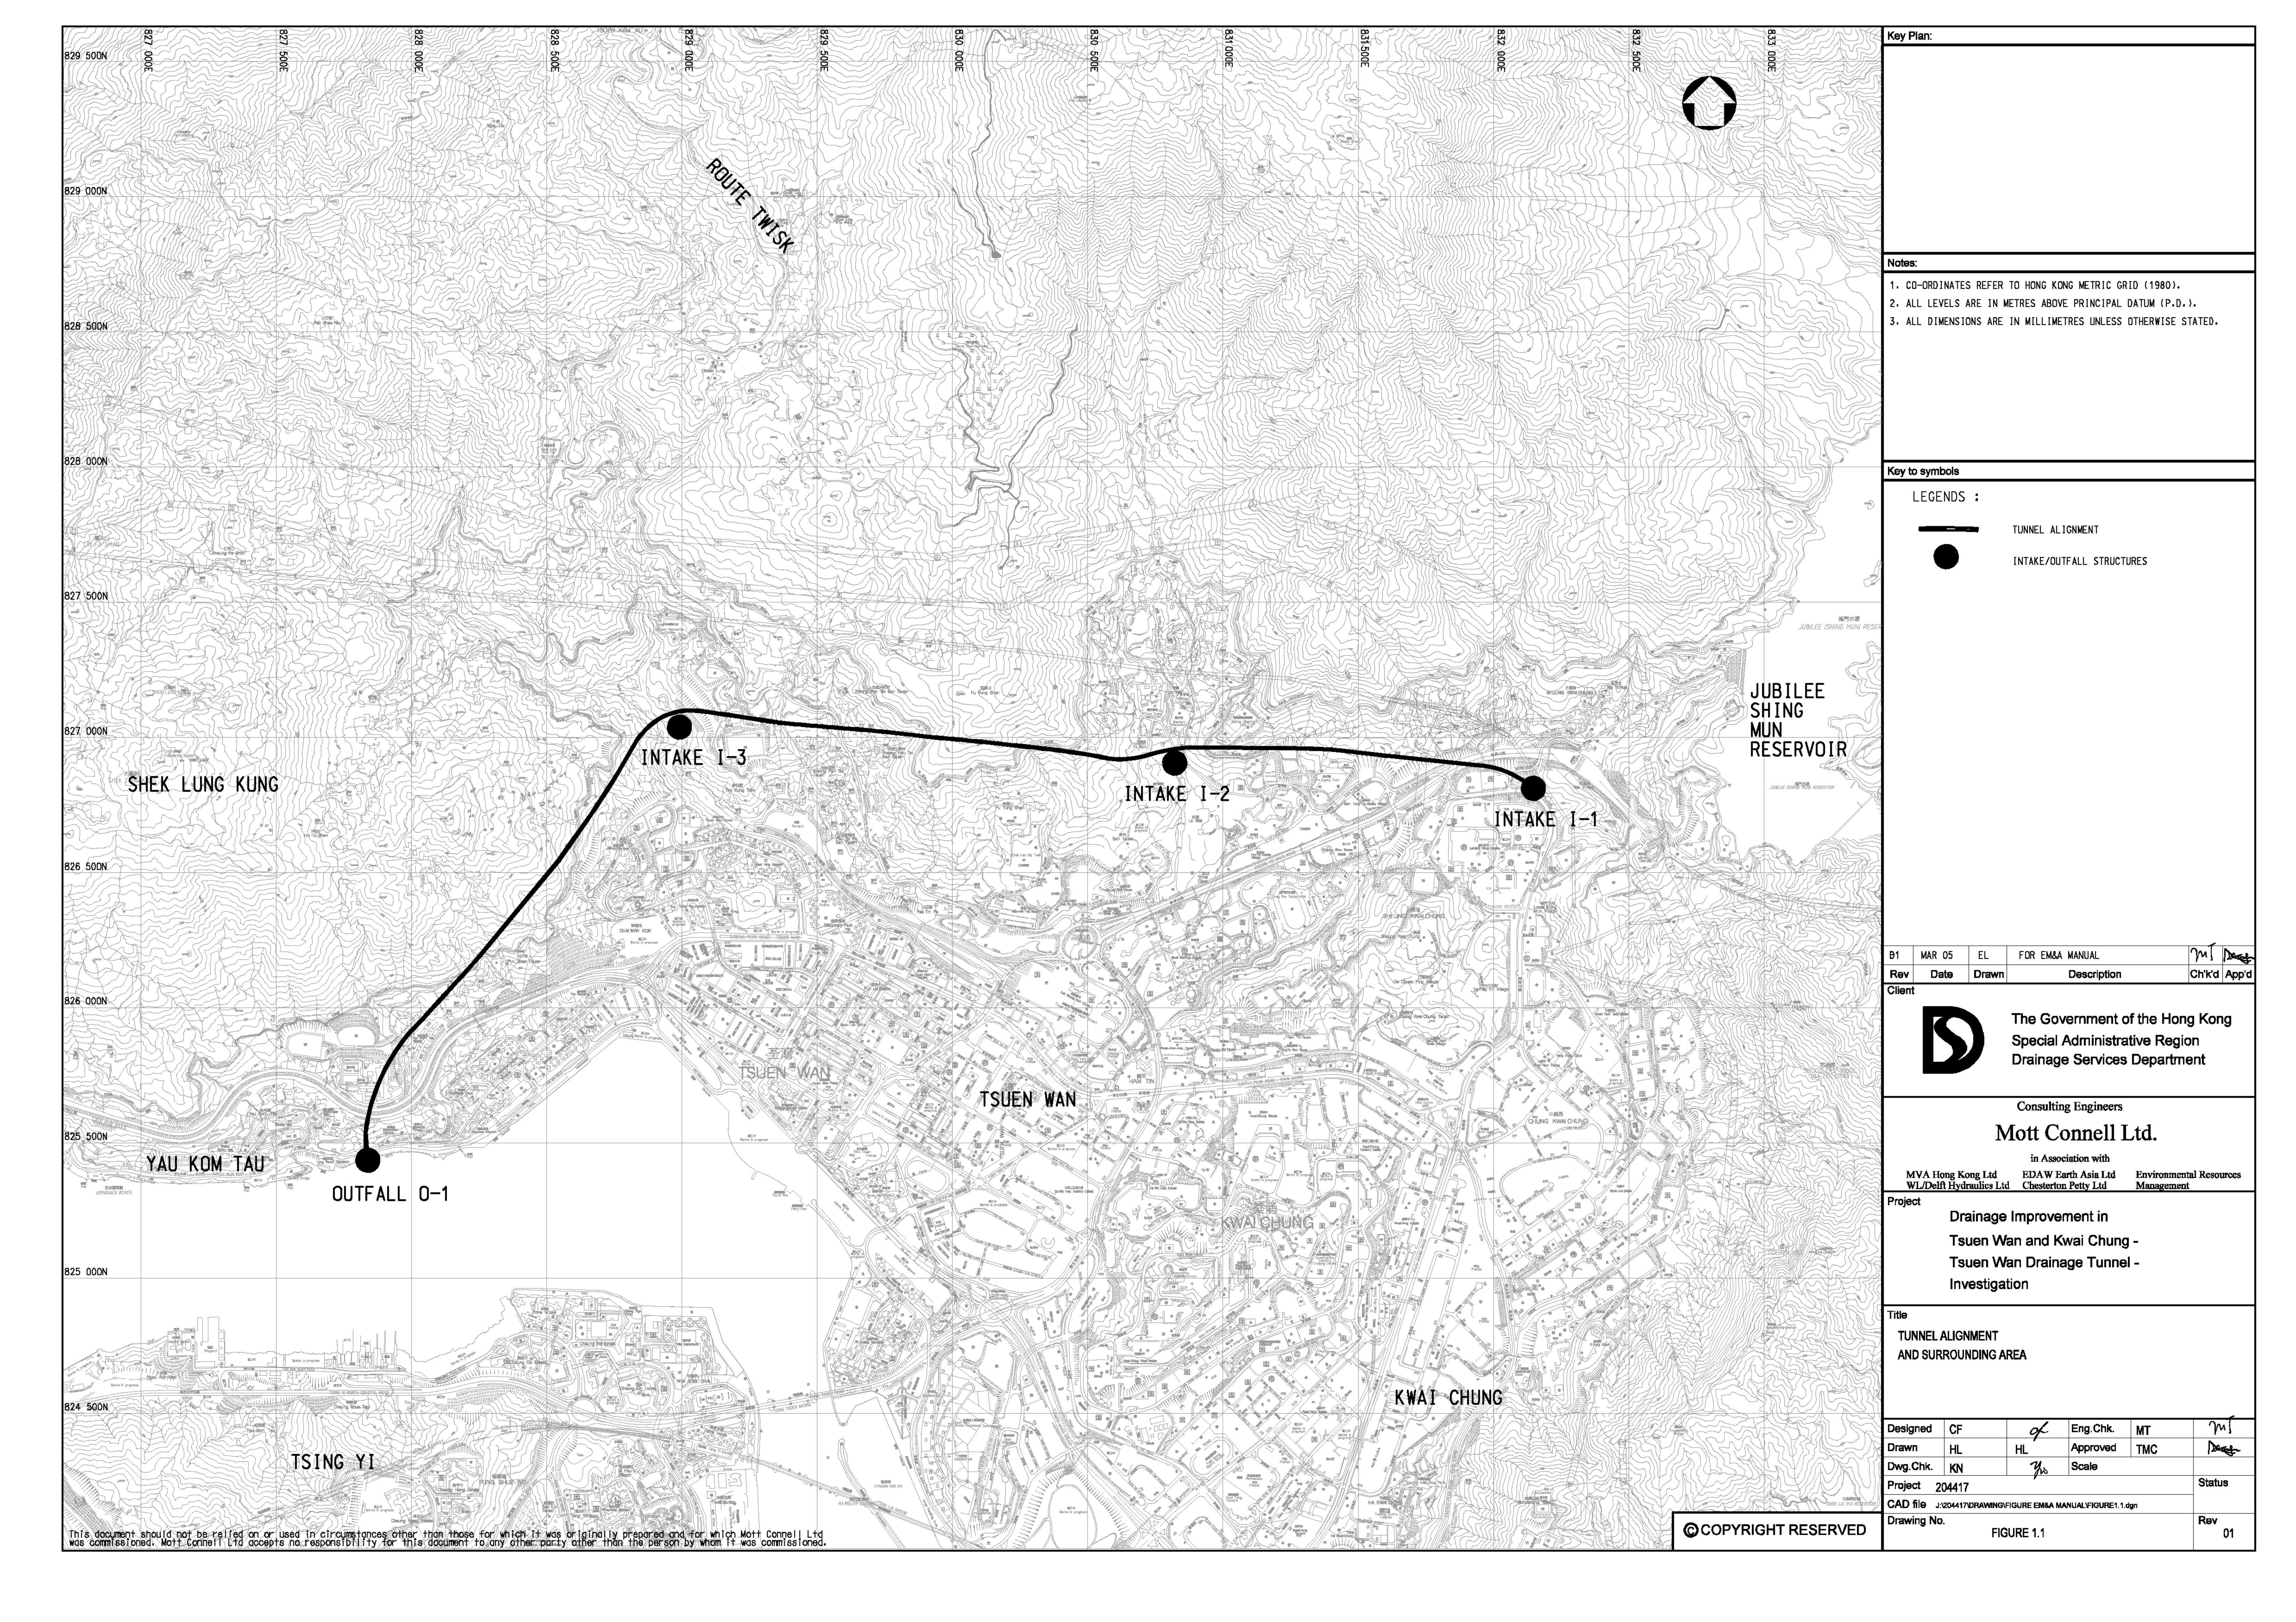

^{*} Other Contracts include DC/2007/08, DC/2007/17, DC/2007/06, DC/2006/04, Ocean Park, HY/2007/09, HY/2008/09, HY/2007/10 and ST/2008/02.

- 7.1.3 During the reporting period, **four** environmental complaints were received on 2, 6 October and 9, 18 November 2009. The complaint received on 6 October 2009 was about the construction dust at I-3 while the other three complaints received concerned the noise exceedance and the improper implementation of noise mitigation measures (i.e. movable noise barrier and screening of rock-breaking activity) at Outfall construction site. Actions had been undertaken by the Contractor to follow up the complaints as mentioned in Section 5. All the four complaints were closed at the end of the reporting period.
- 7.1.4 No Notification of Summons has been received since the commencement of the Project.

Implementation Status of Environmental Mitigation Measures

IMPLEMENTATION SCHEDULE October 2009

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|-------------|---|-------------------------------|----------------------------|---|--------------|
| Air Q | uality | | | | |
| 3.6.1 | Specific As mentioned in Section 3.5, exceedances of 1-hour and 24-hour average TSP guideline | DSD's Contractor | Construction Work Sites | Air Pollution Control (Construction Dust) Regulation | √ |
| | levels have been predicted at most of the ASRs. Hence, mitigation measures are considered necessary in order to suppress the potential dust impact. | | | | |
| | The dust suppression measures set out in the <i>Air Pollution Control (Construction Dust) Regulation</i> , in fact, are more extensive. Therefore, it is expected that with watering the construction site every four times daily together with strict implementation of dust suppression measures as stipulated in the <i>Air Pollution Control (Construction Dust) Regulation</i> , the dust level is expected to be reduced by over 75%. | | | | ✓ |
| | General | | | | |
| | To further ensure compliance with the guideline and AQO limit at the ASRs at all time, it is recommended to implement the <i>Air Pollution Control (Construction Dust) Regulation</i> and include good site practice in the contract clauses to minimize cumulative dust impact. In addition, a comprehensive dust monitoring and audit programme is recommended to ensure proper implementation of the identified mitigation measures. Details of the monitoring and audit requirements are provided in a separate EM&A Manual. • effective dust screens, sheeting or netting should be provided to enclose the scaffolding | | | | |
| | from the ground floor level of the building or if a canopy is provided at the first floor level, from the first floor level, up to the highest level of the scaffolding where a scaffolding is erected around the perimeter of a building under construction; | | | | N/A |
| | dump truck for material transport should be totally enclosed by impervious sheeting; | | | | \checkmark |
| | any excavated dusty materials or stockpile of dusty materials should be covered entirely by impervious sheeting or sprayed with water so as to maintain the entire surface wet, and recovered or backfilled or reinstated within 24 hours of the excavation or unloading; | | | | ✓ |
| | stockpile of dusty materials should not extend beyond the pedestrian barriers, fencing or traffic cones; | | | | ✓ |
| | • dusty materials remaining after a stockpile is removed should be wetted with water and cleared from the surface of roads; | | | | ✓ |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status | |
|-------------|---|--------------------------------|-------------------------|---|--|---|
| 3.6.1 | • the area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores; | Contractor Work (| Contractor Work | Work | Air Pollution Control (Construction Dust) Regulation | ✓ |
| | • where a site boundary adjoins a road, street or other area accessible to the public, hoarding of not less than 2.4m high from ground level should be provided along the entire length except for a site entrance or exit; | | | | ✓ | |
| | • every main haul road should be scaled with concrete and kept clear of dusty materials or sprayed with water so as to maintain the entire road surface wet; | | | | ✓ | |
| | • the portion of road leading only to a construction site that is within 30m of a designated vehicle entrance or exit should be kept clear of dusty materials; | | | | ✓ | |
| | • stockpile of dusty materials should be either covered entirely by impervious sheeting, placed in an area sheltered on the top and the 3 sides; or sprayed with water so as to maintain the entire surface wet; | | | ✓ | | |
| | all dusty materials should be sprayed with water prior to any loading, unloading or transfer operation so as to maintain the dusty material wet; | | | | ✓ | |
| | vehicle speed should be limited to 10 kph except on completed access roads; | | | | \checkmark | |
| | • every vehicle should be washed to remove any dusty materials from its body and wheels before leaving the construction sites; | | | | | ✓ |
| | the load of dusty materials carried by vehicle leaving a construction site should be covered entirely by clean impervious sheeting to ensure that the dusty materials do not leak from the vehicle; and | | | | ✓ | |
| | • the working area of excavation should be sprayed with water immediately before, during and immediately after the operations so as to maintain the entire surface wet. | | | | ✓ | |
| Noise | | DCD; | I C: | DM 2/02 M : C | | |
| 4.6.1 | During Construction Appropriate mitigation measures such as the use of quiet equipment and movable barriers will be developed to ensure that noise can be reduced to acceptable levels without causing programme delays | DSD's Contractor | | PN 2/93 Noise from Construction Activities & EIAO | ✓ | |
| | Good Site Practice Good site practice and noise management can significantly reduce the impact of construction site activities on nearby NSRs. The following package of measures should be followed during construction: | | | | | |
| | only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction works; | | | | ✓ | |
| | machines and plant that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; | | | | ✓ | |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve? | Status | |
|-------------|---|--------------------------------|--|--|--------|----------|
| 4.6.1 | • plant known to emit noise strongly in one direction should, where possible, be orientated to direct noise away from the NSRs; | DSD's Contractor | Construction Work | PN 2/93 Noise from Construction Activities & | ✓ | |
| | mobile plant should be sited as far away from NSRs as possible; and | | Sites | EIAO | ✓ | |
| | • material stockpiles and other structures should be effectively utilised, where practicable, to screen noise from on-site construction activities. | | | | ✓ | |
| | For Drill and Blast Works Charge mass per delay should be decreased by minimising the number of blastholes firing on each delay. | | | | N/A | |
| | Smaller blasthole patterns and longer delays should be used between dependent charges. | | | | N/A | |
| | Times of blasting should be established to suit the situation and firing blasts when neighbours are busy with their daily tasks (and at a regular time such as lunch time). | _ | | | N/A | |
| | For TBM Tunnelling For the tunnel excavation, it is anticipated that beyond the initial length (say within 30m), excavation will be carried out well within the tunnel and door should be provided to further minimize the noise nuisance to the nearby receivers. | | | | N/A | |
| 4.6.2 | During Operation Good site practice and noise management can significantly reduce the impact of maintenance activities on nearby NSRs. The following package of measures should be followed during | DSD's Contractor | Project Area | NCO & EIAO | | |
| | construction | | | | | |
| | only well-maintained plant should be operated on-site; | 1 | | | N/A | |

|-------------|--|---|----------------------------|--|---|---|
| 6.5.1 | As referred to the section 6.4.1, the 317,936m ₃ of inert surplus material generated by the project is suitable for public fill. The public fill reception facility at Tuen Mun Area 38 provides a suitable facility for the reuse of surplus inert C&D material generated from the project. | lic fill. The public fill reception facility at Tuen Mun Area 38 y for the reuse of surplus inert C&D material generated from the ontractor will be required to minimise the generation of C&D ite through the following: Contractor Work Sites No. 15/ 2003, ETWBT 12/2002 and ETWBT 31/2004 | | | WDO (Cap.354), ETWBTC No. 15/2003, ETWBTC No. 12/2002 and ETWBTC No. 31/2004 | |
| | material and reuse it on site through the following: (a) to plan in the design and construction, methods to minimise the generation of C&D | | | √ | | |
| | material; | | | | • | |
| | (b) to submit a Waste Management Plan (WMP) in accordance with Environment Transport and Works Bureau Technical Circular (ETWBTC) No. 15/2003 or any superseding circular(s); | | | | ✓ | |
| | (c) to reuse recycled aggregates in accordance with ETWBTC No. 12/2002 or any superseding circular(s); | | | | ✓ | |
| | (d) to observe the requirements of the Trip-Ticket System, stipulated in ETWBTC No. 31/2004 or any superceding circular(s), for disposal of C&D material; | | | | ✓ | |
| | (e) to incorporate a Waste Management System into the WMP for effective management and control of C&D materials to avoid/reduce/minimise the generation of C&D material during construction. | | | | | ✓ |
| | The contractor will be required to properly sort into inert C&D materials, metals, timber and other non-inert C&D material in the workplace to prevent cross-contamination. | | | | \checkmark | |
| | In addition, DSD will conduct site inspection to monitor the contractors' performance in the implementation of the WMP and other relevant specified requirements. | DSD | Construction Work Sites | WDO (Cap.354) and ETWBTC No. 15/2003 | √ | |
| | Excavated Materials Excavated materials should be segregated from other wastes to avoid contamination thereby ensuring acceptability at public filling areas and avoiding the need for disposal at landfill. Municipal Waste | DSD's Contractor | Construction Work Sites | WDO (Cap.354) and ETWBTC No. 15/2003 | √ | |
| | Temporary refuse collection facilities should be set-up by the contractor and wastes should be stored in appropriate containers prior to collection and disposal. | | | ✓ | | |
| | Domestic effluent generated by the workforce will be directed to foul sewer or chemical toilets if public facilities are not available. | | | | \checkmark | |
| 6.5.1 | Waste Management Plan A Waste Management Plan (WMP) for the construction of the Project should be prepared as part of the contractors submission. It will provide recommendations for appropriate recycling or disposal route and should include method statement for stockpiling and transportation of the excavated material and other construction wastes should also be included in the WMP and approved before the commencement of construction. All mitigation measures arising from the approved WMP shall be fully implemented. | DSD's Contractor | Construction Work Sites | WDO (Cap.354), ETWBTC No. 15/2003 and ETWBTC No. 33/2002 | √ | |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|----------------|--|--------------------------------|-------------------------------|---|--------|
| | For the purpose of enhancing the management of C&D material including rock, and to minimize its generation at source, a C&D Material Management Plan (C&DMMP) has been prepared for this project and would be processed in accordance with the Environment, Transport and Works Bureau Technical Circular (Works) No. 33/2002 - Management of Construction and Demolition Material Including Rock. | | | | N/A |
| Ecology | | | | | |
| 7.7.1 | Avoidance The surface structures are located mainly on existing disturbed areas (ie pollution and urbanisation) and have generally avoided the natural stream sections of higher species diversity and abundance of aquatic organisms. | DSD's Contractor | Construction Work Sites | EIAO | ✓ |
| | The major construction activities at streams are scheduled to avoid wet season of high water flow which may adversely affect the downstream natural habitats due to the construction runoff. | | | | ✓ |
| 7.7.2 | Minimisation The previous discussion in Section 7.6.4 has indicated that the impacts on ecological | | | | |
| | resources due to the construction and operation of the proposed Project are generally expected to be low. The following mitigation measures to minimise impacts and disturbance to the surrounding habitats, are recommended. | | | | |
| | Measures for Construction Runoff Install sheet piles/cofferdam/weir along the boundary of the works area within the stream habitats in particular Sam Dip Tam Stream and Tso Kung Tam Stream before the commencement of works to prevent construction runoff during construction. Provision of adequate designed sand/ silt removal facilities such as sand traps, silt traps and sediment basin in the areas which could potentially be affected may be required. | | | | ✓ |
| | Good Construction Practice | | | | ✓ |
| | Erect fences along the boundary of the works area before the commencement of works to prevent tipping, vehicle movements, and encroachment of personnel onto adjacent areas, particularly the stream habitats. | DSD's Contractor | Construction Work Sites | EIAO | ✓ |
| | Avoid any damage and disturbance, particularly those caused by filling and illegal dumping, to the remaining and surrounding natural stream habitats. | | | | ✓ |
| | Regularly check the work site boundaries to ensure that they are not breached and that no damage occurs to surrounding areas. | | | | ✓ |
| | Prohibit and prevent open fires within the site boundary during construction and provide temporary fire fighting equipment in the work areas. | | | | ✓ |
| | Treat any damage that may have occurred to individual major trees in the adjacent area with surgery. | | | | ✓ |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve? | Status | |
|-------------|---|--------------------------------|----------------------------|--|----------|-----|
| | Reinstate temporary work sites/disturbed areas, particularly stream of natural bottom and bank, plantation, intertidal habitat, and the areas located within the proposed Ecological Park, immediately after completion of the construction works, ie through on-site tree/shrub planting and reprovision of natural or semi-natural bottom (also refer to Section 7.7.3), in order to facilitate the recolonisation of the wildlife recorded during the baseline surveys. Tree/shrub species used should make reference from those in the surrounding area | DSD's Contractor | Construction Work Sites | EIAO | √ | |
| 7.7.3 | Compensation Provide natural stream bed (approximately 0.03 ha) for the new Dry Weather Flow Channel (created from village-orchard) by laying natural stones at Intake I-2 (Figure 7.7). The reinstated stream bed shall mimic the existing natural conditions with certain portion of big boulders creating the lentic and lotic zones for the aquatic fauna, and while it will be developed during detailed design may draw on concepts shown in Figure 2.18. Provide natural stream bed (approximately 0.5 ha,) for the Approach Channel and Dry | | | | N/A | |
| | Weather Flow Channel by laying natural stones at Intake I-3 (Figure 7.8). The reinstated stream bed shall mimic the existing natural conditions (rocky bottom with very limited aquatic plants) with certain portion of big boulders creating the lentic and lotic zones for the aquatic fauna, and while it will be developed during detailed design may draw on concepts shown in Figure 2.18. | | | | N/A | |
| | Provide natural bottom (ie retain the existing stream bed or reinstate the stream bed by providing boulders/ rocks, riprap or gabion) for the affected stream sections (Figure 7.8) in order to allow natural colonisation of aquatic fauna. | | | | | N/A |
| | Provide at least 2.2 ha of compensatory planting on the permanent and temporary affected plantation areas, particularly the slopes along access road and adjacent to Intake I-3 and cascade at Outfall O-1, after construction to stabilise the slope to present soil erosion and consequent stream sedimentation. Among the 2.2 ha compensatory planting, at least 0.5 ha of compensatory tree planting on the new formed slope along the access road of the Intake I-3 and 0.5 ha of compensatory tree planting over the cascade (by constructing intermediate platform) at Outfall O-1 will be provided (location refer to Figures 7.4 – 7.6). Species used for planting should take reference from the species identified in Appendix F and be native to Hong Kong or South China region. | | | | N/A | |
| | Provide armour rocks for the affected intertidal habitat in order to allow natural colonisation of intertidal organisms. | | | | N/A | |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|-------------|--|---|-------------------------------|---|----------|
| Cultura | l Heritage | | | | |
| 8.6 | As no impacts on recorded archaeological sites or area with archaeological potential were identified within the Study Area, no mitigation measure for archaeological resources is considered necessary. | | | | N/A |
| | The construction methods to be employed should seek to avoid potential vibration impacts to Kuen Yuen Tung Monastery at Lo Wai, the Western Monastery, Yuen Yuen Home for the Aged, Hong Hoi Chee Hong Temple, Chiu Yum Tsing Yuen, Tse's Grave, Wan Lin Bridge and Sam Dip Tam Rock Carving in Sam Dip Tam and the Tin Hau Temple, Yam Kom Tau Village Rural Committee and the Yeung's Ancestral Hall in Yau Kom Tau as these sites fall within 50 m of the Preferred Option of the drainage tunnel alignment or associated Intakes/Outfall construction activities. Construction works that generates excessive vibration in close proximity to these sites should be restricted to protect the building from adverse vibration impacts and to ensure that the building structures will not be damaged as a result of these impacts. | DSD's Contractor | Construction Work Sites | EIAO | √ |
| | In order to ensure that no structural or superficial damage will be caused by the construction activities, a precautionary approach involving a pre-construction condition survey and establishment of appropriate vibration limits for the potentially impacted structures should be adopted. Protection measures for the potentially impacted structures, if considered necessary from the pre-construction condition survey, should be implemented prior to the commencement of construction works. Vibration monitoring during the construction phase should be undertaken as part of the EM&A programme. | Qualified archaeologist/ built heritage specialist | Construction Work Sites | EIAO | √ |
| Fisherie | 1 1 0 | • | • | | |
| 10.6 | In accordance with the guidelines in the <i>EIAO-TM</i> on fisheries impact assessment the general policy for mitigating impacts to fisheries, in order of priority are avoidance, minimization and compensation. | DSD's Contractor | Construction Work Sites | EIAO | N/A |
| | Impacts to fisheries resources and fishing operations have largely been avoided during the construction and operation of the drainage tunnel through the avoidance of dredging, reclamation and filling activities. Good construction practice and associated measures were recommended in Water Quality Assessment in Section 5 to control water quality impacts to within acceptable levels and are also expected to control impacts to fisheries resources. Hence, no fisheries-species mitigation measures are required during construction and operation of the drainage tunnel. | | | | N/A |

Remarks:

Compliance of mitigation measure

IMPLEMENTATION SCHEDULE November 2009

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|-------------|---|--------------------------------|----------------------------|---|--------|
| Air Q | ualit <u>y</u> | | | | |
| 3.6.1 | Specific As mentioned in Section 3.5, exceedances of 1-hour and 24-hour average TSP guideline | DSD's Contractor | Construction Work Sites | Air Pollution Control (Construction Dust) Regulation | ✓ |
| | levels have been predicted at most of the ASRs. Hence, mitigation measures are considered necessary in order to suppress the potential dust impact. The dust suppression measures set out in the <i>Air Pollution Control (Construction Dust)</i> | | | | |
| | Regulation, in fact, are more extensive. Therefore, it is expected that with watering the construction site every four times daily together with strict implementation of dust suppression measures as stipulated in the Air Pollution Control (Construction Dust) Regulation, the dust level is expected to be reduced by over 75%. | | | | ✓ |
| | General | | | | |
| | To further ensure compliance with the guideline and AQO limit at the ASRs at all time, it is recommended to implement the <i>Air Pollution Control (Construction Dust) Regulation</i> and include good site practice in the contract clauses to minimize cumulative dust impact.In addition, a comprehensive dust monitoring and audit programme is recommended to ensure proper implementation of the identified mitigation measures. Details of the monitoring and audit requirements are provided in a separate EM&A Manual. | | | | |
| | • effective dust screens, sheeting or netting should be provided to enclose the scaffolding from the ground floor level of the building or if a canopy is provided at the first floor level, from the first floor level, up to the highest level of the scaffolding where a scaffolding is erected around the perimeter of a building under construction; | | | | N/A |
| | • dump truck for material transport should be totally enclosed by impervious sheeting; | | | | ✓ |
| | any excavated dusty materials or stockpile of dusty materials should be covered entirely by impervious sheeting or sprayed with water so as to maintain the entire surface wet, and recovered or backfilled or reinstated within 24 hours of the excavation or unloading; | | | | ✓ |
| | stockpile of dusty materials should not extend beyond the pedestrian barriers, fencing or traffic cones; | | | | ✓ |
| | dusty materials remaining after a stockpile is removed should be wetted with water and cleared from the surface of roads; | | | | ✓ |

| | Storage Precautions • All chemical storage containers shall be correctly labelled. |] | | | ✓ | | | | | | | | | | | |
| | Solid and impermeable enclosure walls or storage shelves shall be used. | - | | | ✓ | | | | | | | | | | | |
| _ | Only compatible chemical wastes shall be stored in the same storage area. | | | | | | | | | | | | | | | |
| ŀ | The storage areas shall be inspected to detect any leakages or defective containers on a regular basis. | | | | | | | - | - | | | | | | | ✓ |
| Ī | Suitable notices warning of hazards, emergency response plans, telephone numbers etc shall be posted around the site, including storage areas. | | | | | | ✓ | | | | | | | | | |
| | Large and heavy containers shall be stored at ground level. | | | | \checkmark | | | | | | | | | | | |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure? | Location of the measure | What requirements or standards for the measure to achieve? | Status | |
|-------------|--|-------------------------------|-------------------------|--|--------|---|
| | Chemical waste containers shall be stored below eye level. | | | | ✓ | |
| 5.9.1 | Adequate space for handling of the containers shall be provided | DSD's | Construction | WQO | ✓ | |
| | Spill response kits shall be located adjacent/near to the storage areas. | Contractor | Work Sites | | ✓ | |
| | A log of chemical wastes shall be maintained. | | | | ✓ | |
| | Incompatible chemicals shall be stored separately. | | | | ✓ | |
| | 2 Responses/Action Plan | | | | | |
| | All Workers shall be made aware of emergency telephone numbers and the location of all relevant pollution control equipment. Training be given in emergency response/action plans. The action include the following steps: | | | | ✓ | |
| | • Only trained personnel who are equipped with protective clothing and equipment shall be allowed to enter the spillage area for clean up. | | | | ✓ | |
| | • Spills shall be transferred appropriate back into containers using suitable equipment. | | | | ✓ | |
| | Absorbent materials shall be used to clean up the spills and shall be disposed of as chemical wastes. | | | | | ✓ |
| | Where appropriate suitable solvents may be used to clean the contaminated area after removal of all contaminated materials. | | | | ✓ | |
| | All necessary protective devices, safety equipment, containers and clean up materials for emergency use shall be maintained to a high standard. | | | | ✓ | |
| | 3 Spill Clean Up and Disposal | | | | | |
| | Effect the response plan. | | | | ✓ | |
| | Control the leakage and absorb the spillage using suitably absorbent materials. | | | | ✓ | |
| | Provide safety equipment and personal protective equipment for handling of chemical wastes would be similar to that for handling of chemicals. | | | | ✓ | |
| | Safety equipment includes but is not limited to: • Fire extinguishers. | | | | ✓ | |
| | • Spades, brushes, dustpan, mop and bucket (or similar readily available on site). | | | | ✓ | |
| | Absorbent material such as dry sand, tissues and toweling (all materials readily available on-site). | | | | ✓ | |
| | Containers including plaster bags, drums, etc. | | | | ✓ | |
| | Absorbing materials. | - | | | ✓ | |
| | • Pumps. | | | | ✓ | |
| | Personal protective equipment includes as appropriate: • First-aid kits. | | | | | ✓ |
| | Safety helmet and goggles. | | | | ✓ | |
| | Gloves which can resist chemical reaction. | | | | ✓ | |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status | |

|-------------|--|--------------------------------|----------------------------|---|----------|
| 6.5.1 | As referred to the section 6.4.1, the 317,936m3 of inert surplus material generated by the | DSD's | Construction | WDO (Cap.354), ETWBTC | |
| | project is suitable for public fill. The public fill reception facility at Tuen Mun Area 38 | Contractor | Work Sites | No. 15/2003, ETWBTC No. | |
| | provides a suitable facility for the reuse of surplus inert C&D material generated from the | | | 12/2002 and ETWBTC No. 31/2004 | |
| | project. Under the contract, the contractor will be required to minimise the generation of C&D | - | | 31/2004 | |
| | material and reuse it on site through the following: | | | | |
| | (a) to plan in the design and construction, methods to minimise the generation of C&D material; | - | | | ✓ |
| | (b) to submit a Waste Management Plan (WMP) in accordance with Environment Transport and Works Bureau Technical Circular (ETWBTC) No. 15/2003 or any superseding circular(s); | | | | ✓ |
| | (c) to reuse recycled aggregates in accordance with ETWBTC No. 12/2002 or any superseding circular(s); | | | | ✓ |
| | (d) to observe the requirements of the Trip-Ticket System, stipulated in ETWBTC No. 31/2004 or any superceding circular(s), for disposal of C&D material; | | | | √ |
| | (e) to incorporate a Waste Management System into the WMP for effective management and control of C&D materials to avoid/reduce/minimise the generation of C&D material during construction. | | | | √ |
| | The contractor will be required to properly sort into inert C&D materials, metals, timber and | | | | √ |
| | other non-inert C&D material in the workplace to prevent cross-contamination. | | | | |
| | In addition, DSD will conduct site inspection to monitor the contractors' performance in the implementation of the WMP and other relevant specified requirements. | DSD | Construction Work Sites | WDO (Cap.354) and ETWBTC No. 15/2003 | √ |
| | Excavated Materials | DSD's | Construction | WDO (Cap.354) and | ✓ |
| | Excavated materials should be segregated from other wastes to avoid contamination thereby | Contractor | Work Sites | ETWBTC No. 15/2003 | |
| | ensuring acceptability at public filling areas and avoiding the need for disposal at landfill. | _ | | | |
| | Municipal Waste Temporary refuse collection facilities should be set-up by the contractor and wastes should be | | | | √ |
| | stored in appropriate containers prior to collection and disposal. | | | | V |
| | Domestic effluent generated by the workforce will be directed to foul sewer or chemical | - | | | |
| | toilets if public facilities are not available. | | | | √ |
| 6.5.1 | Waste Management Plan | DSD's | Construction | WDO (Cap.354), ETWBTC | |
| | A Waste Management Plan (WMP) for the construction of the Project should be prepared as | Contractor | Work Sites | No. 15/2003 and ETWBTC | |
| | part of the contractors submission. It will provide recommendations for appropriate recycling | | | No. 33/2002 | |
| | or disposal route and should include method statement for stockpiling and transportation of | | | | ✓ |
| | the excavated material and other construction wastes should also be included in the WMP and approved before the commencement of construction. All mitigation measures arising | | | | |
| | from the approved WMP shall be fully implemented. | | | | |
| | nom the approved 11.111 shan be fully implemented. | | | | |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|----------------|--|--------------------------------|-------------------------------|---|----------|
| | For the purpose of enhancing the management of C&D material including rock, and to minimize its generation at source, a C&D Material Management Plan (C&DMMP) has been prepared for this project and would be processed in accordance with the Environment, Transport and Works Bureau Technical Circular (Works) No. 33/2002 - Management of Construction and Demolition Material Including Rock. | | | | N/A |
| Ecology | | | | | |
| 7.7.1 | Avoidance The surface structures are located mainly on existing disturbed areas (ie pollution and urbanisation) and have generally avoided the natural stream sections of higher species diversity and abundance of aquatic organisms. The major construction activities at streams are scheduled to avoid wet season of high water flow which may adversely affect the downstream natural habitats due to the construction | DSD's Contractor | Construction Work Sites | EIAO | √ √ |
| 7.7.2 | runoff. Minimisation The previous discussion in Section 7.6.4 has indicated that the impacts on ecological | | | | |
| | resources due to the construction and operation of the proposed Project are generally expected to be low. The following mitigation measures to minimise impacts and disturbance to the surrounding habitats, are recommended. | | | | |
| | Measures for Construction Runoff Install sheet piles/cofferdam/weir along the boundary of the works area within the stream habitats in particular Sam Dip Tam Stream and Tso Kung Tam Stream before the commencement of works to prevent construction runoff during construction. Provision of adequate designed sand/ silt removal facilities such as sand traps, silt traps and sediment basin in the areas which could potentially be affected may be required. | | | | ✓ |
| | Good Construction Practice | - | | | ✓ |
| | Erect fences along the boundary of the works area before the commencement of works to prevent tipping, vehicle movements, and encroachment of personnel onto adjacent areas, particularly the stream habitats. | DSD's Contractor | Construction Work Sites | EIAO | ✓ |
| | Avoid any damage and disturbance, particularly those caused by filling and illegal dumping, to the remaining and surrounding natural stream habitats. | | | | ✓ |
| | Regularly check the work site boundaries to ensure that they are not breached and that no damage occurs to surrounding areas. Prohibit and prevent open fires within the site boundary during construction and provide | | | | ✓ |
| | temporary fire fighting equipment in the work areas. Treat any damage that may have occurred to individual major trees in the adjacent area with | | | | √ |
| | surgery. | | | | ✓ |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve? | Status |
|-------------|---|--------------------------------|-------------------------|--|--------|
| | Reinstate temporary work sites/disturbed areas, particularly stream of natural bottom and | DSD's | Construction | EIAO | |
| | bank, plantation, intertidal habitat, and the areas located within the proposed Ecological Park, | Contractor | Work Sites | | |
| | immediately after completion of the construction works, ie through on-site tree/shrub | | | | ✓ |
| | planting and reprovision of natural or semi-natural bottom (also refer to Section 7.7.3), in | | | | |
| | order to facilitate the recolonisation of the wildlife recorded during the baseline surveys. Tree/shrub species used should make reference from those in the surrounding area | | | | |
| 7.7.3 | Compensation | - | | | |
| | Provide natural stream bed (approximately 0.03 ha) for the new Dry Weather Flow Channel | | | | |
| | (created from village-orchard) by laying natural stones at Intake I-2 (Figure 7.7). The | | | | N/A |
| | reinstated stream bed shall mimic the existing natural conditions with certain portion of big | | | | |
| | boulders creating the lentic and lotic zones for the aquatic fauna, and while it will be | | | | |
| | developed during detailed design may draw on concepts shown in Figure 2.18. | | | | |
| | Provide natural stream bed (approximately 0.5 ha,) for the Approach Channel and Dry | | | | |
| | Weather Flow Channel by laying natural stones at Intake I-3 (Figure 7.8). The reinstated | | | | |
| | stream bed shall mimic the existing natural conditions (rocky bottom with very limited aquatic plants) with certain portion of big boulders creating the lentic and lotic zones for the | | | | N/A |
| | aquatic fauna, and while it will be developed during detailed design may draw on concepts | | | | |
| | shown in Figure 2.18. | | | | |
| | Provide natural bottom (ie retain the existing stream bed or reinstate the stream bed by | | | | |
| | providing boulders/rocks, riprap or gabion) for the affected stream sections (Figure 7.8) in | | | | N/A |
| | order to allow natural colonisation of aquatic fauna. | | | | |
| | Provide at least 2.2 ha of compensatory planting on the permanent and temporary affected | | | | |
| | plantation areas, particularly the slopes along access road and adjacent to Intake I-3 and | | | | |
| | cascade at Outfall O-1, after construction to stabilise the slope to present soil erosion and | | | | |
| | consequent stream sedimentation. Among the 2.2 ha compensatory planting, at least 0.5 ha of compensatory tree planting on the new formed slope along the access road of the Intake I- | | | | N/A |
| | 3 and 0.5 ha of compensatory tree planting over the cascade (by constructing intermediate | | | | 11//1 |
| | platform) at Outfall O-1 will be provided (location refer to Figures 7.4 – 7.6). Species used | | | | |
| | for planting should take reference from the species identified in Appendix F and be native to | | | | |
| | Hong Kong or South China region. | | | | |
| | Provide armour rocks for the affected intertidal habitat in order to allow natural colonisation | | | | N/A |
| | of intertidal organisms. | | | | 11/71 |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|-------------|--|---|-------------------------------|---|----------|
| Cultural | Heritage | | | | |
| 8.6 | As no impacts on recorded archaeological sites or area with archaeological potential were identified within the Study Area, no mitigation measure for archaeological resources is considered necessary. | | | | N/A |
| | The construction methods to be employed should seek to avoid potential vibration impacts to Kuen Yuen Tung Monastery at Lo Wai, the Western Monastery, Yuen Yuen Home for the Aged, Hong Hoi Chee Hong Temple, Chiu Yum Tsing Yuen, Tse's Grave, Wan Lin Bridge and Sam Dip Tam Rock Carving in Sam Dip Tam and the Tin Hau Temple, Yam Kom Tau Village Rural Committee and the Yeung's Ancestral Hall in Yau Kom Tau as these sites fall within 50 m of the Preferred Option of the drainage tunnel alignment or associated Intakes/Outfall construction activities. Construction works that generates excessive vibration in close proximity to these sites should be restricted to protect the building from adverse vibration impacts and to ensure that the building structures will not be damaged as a result of these impacts. | DSD's Contractor | Construction Work Sites | EIAO | ✓ |
| | In order to ensure that no structural or superficial damage will be caused by the construction activities, a precautionary approach involving a pre-construction condition survey and establishment of appropriate vibration limits for the potentially impacted structures should be adopted. Protection measures for the potentially impacted structures, if considered necessary from the pre-construction condition survey, should be implemented prior to the commencement of construction works. Vibration monitoring during the construction phase should be undertaken as part of the EM&A programme. | Qualified archaeologist/ built heritage specialist | Construction Work Sites | EIAO | √ |
| Fisherie | | ' | • | | |
| 10.6 | In accordance with the guidelines in the <i>EIAO-TM</i> on fisheries impact assessment the general policy for mitigating impacts to fisheries, in order of priority are avoidance, minimization and compensation. | DSD's Contractor | Construction Work Sites | EIAO | N/A |
| Remarks | Impacts to fisheries resources and fishing operations have largely been avoided during the construction and operation of the drainage tunnel through the avoidance of dredging, reclamation and filling activities. Good construction practice and associated measures were recommended in Water Quality Assessment in Section 5 to control water quality impacts to within acceptable levels and are also expected to control impacts to fisheries resources. Hence, no fisheries-species mitigation measures are required during construction and operation of the drainage tunnel. | | | | N/A |

IMPLEMENTATION SCHEDULE December 2009

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|-------------|---|--------------------------------|----------------------------|---|----------|
| Air Q | uality | | | | |
| 3.6.1 | Specific As mentioned in Section 3.5, exceedances of 1-hour and 24-hour average TSP guideline | DSD's Contractor | Construction Work Sites | Air Pollution Control (Construction Dust) Regulation | √ |
| | levels have been predicted at most of the ASRs. Hence, mitigation measures are considered necessary in order to suppress the potential dust impact. The dust suppression measures set out in the <i>Air Pollution Control (Construction Dust)</i> Regulation, in fact, are more extensive. Therefore, it is expected that with watering the | - | | | |
| | construction site every four times daily together with strict implementation of dust suppression measures as stipulated in the <i>Air Pollution Control (Construction Dust) Regulation</i> , the dust level is expected to be reduced by over 75%. | | | | ✓ |
| | General To further ensure compliance with the guideline and AQO limit at the ASRs at all time, it is recommended to implement the <i>Air Pollution Control (Construction Dust) Regulation</i> and include good site practice in the contract clauses to minimize cumulative dust impact.In addition, a comprehensive dust monitoring and audit programme is recommended to ensure proper implementation of the identified mitigation measures. Details of the monitoring and audit requirements are provided in a separate EM&A Manual. • effective dust screens, sheeting or netting should be provided to enclose the scaffolding | | | | |
| | from the ground floor level of the building or if a canopy is provided at the first floor level, from the first floor level, up to the highest level of the scaffolding where a scaffolding is erected around the perimeter of a building under construction; | | | | N/A |
| | dump truck for material transport should be totally enclosed by impervious sheeting; | | | | ✓ |
| | any excavated dusty materials or stockpile of dusty materials should be covered entirely by impervious sheeting or sprayed with water so as to maintain the entire surface wet, and recovered or backfilled or reinstated within 24 hours of the excavation or unloading; | | | | ✓ |
| | stockpile of dusty materials should not extend beyond the pedestrian barriers, fencing or traffic cones; | | | | √ |
| | dusty materials remaining after a stockpile is removed should be wetted with water and cleared from the surface of roads; | | | | ✓ |

Updated on 31 December 2009

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|--------------------|---|--------------------------------|-------------------------------|---|--------|
| 3.6.1 | the area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores; | DSD's Contractor | Construction Work Sites | Air Pollution Control (Construction Dust) Regulation | ✓ |
| | where a site boundary adjoins a road, street or other area accessible to the public, hoarding of not less than 2.4m high from ground level should be provided along the entire length except for a site entrance or exit; | | | | ✓ |
| | every main haul road should be scaled with concrete and kept clear of dusty materials or sprayed with water so as to maintain the entire road surface wet; | | | | ✓ |
| | the portion of road leading only to a construction site that is within 30m of a designated vehicle entrance or exit should be kept clear of dusty materials; | | | | ✓ |
| | • stockpile of dusty materials should be either covered entirely by impervious sheeting, placed in an area sheltered on the top and the 3 sides; or sprayed with water so as to maintain the entire surface wet; | _ | | | ✓ |
| | all dusty materials should be sprayed with water prior to any loading, unloading or transfer operation so as to maintain the dusty material wet; | | | | ✓ |
| | vehicle speed should be limited to 10 kph except on completed access roads; | | | | ✓ |
| | • every vehicle should be washed to remove any dusty materials from its body and wheels before leaving the construction sites; | | | | ✓ |
| | the load of dusty materials carried by vehicle leaving a construction site should be covered entirely by clean impervious sheeting to ensure that the dusty materials do not leak from the vehicle; and | | | | ✓ |
| 27.4 | • the working area of excavation should be sprayed with water immediately before, during and immediately after the operations so as to maintain the entire surface wet. | | | | ✓ |
| Noise 4.6.1 | During Construction | DSD's Contractor | Construction Work | PN 2/93 Noise from Construction Activities & | |
| | Appropriate mitigation measures such as the use of quiet equipment and movable barriers will be developed to ensure that noise can be reduced to acceptable levels without causing programme delays | Communica | Sites | EIAO | ✓ |
| | Good Site Practice Good site practice and noise management can significantly reduce the impact of construction site activities on nearby NSRs. The following package of measures should be followed during construction: | | | | |
| | only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction works; | | | | ✓ |
| | machines and plant that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; | | | | ✓ |

Updated on 31 December 2009

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status | |
|-------------|---|--------------------------------|----------------------------|---|------------|---|
| 4.6.1 | • plant known to emit noise strongly in one direction should, where possible, be orientated to direct noise away from the NSRs; | DSD's Contractor | Construction Work | PN 2/93 Noise from Construction Activities & | ✓ | |
| | mobile plant should be sited as far away from NSRs as possible; and | | Sites | EIAO | ✓ | |
| | • material stockpiles and other structures should be effectively utilised, where practicable, to screen noise from on-site construction activities. | | | | ✓ | |
| | For Drill and Blast Works Charge mass per delay should be decreased by minimising the number of blastholes firing on each delay. | | | | N/A | |
| | Smaller blasthole patterns and longer delays should be used between dependent charges. | | | | N/A | |
| | Times of blasting should be established to suit the situation and firing blasts when neighbours are busy with their daily tasks (and at a regular time such as lunch time). For TBM Tunnelling | | | | N/A | |
| | For the tunnel excavation, it is anticipated that beyond the initial length (say within 30m), excavation will be carried out well within the tunnel and door should be provided to further minimize the noise nuisance to the nearby receivers. | | | | N/A | |
| 4.6.2 | During Operation Good site practice and noise management can significantly reduce the impact of maintenance activities on nearby NSRs. The following package of measures should be followed during construction | DSD's Contractor | Project Area | Project Area NCO & EIAO | NCO & EIAO | |
| | only well-maintained plant should be operated on-site; | | | | N/A | |
| | machines and plant that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; and | | | | N/A | |
| | • plant known to emit noise strongly in one direction should, where possible, be orientated to direct noise away from the NSRs. | | | | N/A | |
| | Quality | _ | | | | |
| 5.9.1 | During Construction Mitigation measures and a spill control and response plan have been prepared for works at | DSD's Contractor | Construction Work Sites | Work Sites Professional Persons with | | ✓ |
| | the intakes and work sites. | | | (ProPECC PN 1/94) and | | |

| | Temporarily exposed surfaces should be covered e.g. by tarpaulin. Temporary access roads should be protected by crushed stone or gravel. | _ | | | √ | |
| | Trenches should be dug and backfilled in short sections. Measures should be taken to minimize the ingress of rainwater into trenches. | | | | ↓ | |
| | Actions to be taken when a rainstorm is imminent or forecast: • Silt removal facilities, should be checked to ensure that they can function properly. | | | | ✓ | |

Updated on 31 December 2009

| | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|---|--|--------------------------------|----------------------------|---|--------------|
| - | Open stockpiles of construction materials on site should be covered with tarpaulin or similar fabric. | DSD's Contractor | Construction Work Sites | WQO | ✓ |
| | All temporary covers to slopes and stockpiles should be secured. | | | | ✓ |
| | Actions to be taken during or after rainstorms: Silt removal facilities should be checked and maintained to ensure satisfactory working conditions. | | | | ✓ |
| | Spill Control and Response Plan | | | | |
| | 1 Prevention and Precaution Measures | | | | |
| | General PrecautionsNo discharge of silty water into watercourses. | | | | ✓ |
| | All materials to be used during construction and operation shall be identified and their hazard potential evaluated. | | | | ✓ |
| | Maintenance of vehicles and equipment involving activities with potential for leakage and spillage shall only be undertaken with the areas appropriately equipped to control these discharges. | | | | ✓ |
| | Any soil contaminated with chemicals/oils shall be removed from site and the void created shall be filled with suitable materials. | | | | ✓ |
| | Any construction plant which causes pollution to catchwaters or water gathering ground due to leakage of oil or fuel shall be removed off-site immediately. | | | | ✓ |
| | Suitable containers shall be used to hold the chemical wastes to avoid leakage or spillage during storage, handling and transport | | | | ✓ |
| | Chemical waste containers shall be suitably labelled to notify and warn the personnel who are handling the wastes to avoid accidents. | | | | ✓ |
| | Storage areas shall be selected at safe locations on site and adequate space shall be allocated to the storage area. | | | | ✓ |
| | Prevent obstructions and tripping hazards. | | | | ✓ |
| | Storage Precautions • All chemical storage containers shall be correctly labelled. | | | | ✓ |
| | Solid and impermeable enclosure walls or storage shelves shall be used. | | | | ✓ |
| - | Only compatible chemical wastes shall be stored in the same storage area. | | | | |
| | The storage areas shall be inspected to detect any leakages or defective containers on a regular basis. | | | | ✓ |
| | Suitable notices warning of hazards, emergency response plans, telephone numbers etc shall be posted around the site, including storage areas. | | | | ✓ |
| Ī | Large and heavy containers shall be stored at ground level. | | | | \checkmark |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure? | Location of the measure | What requirements or standards for the measure to achieve? | Status |

| | Chemical waste containers shall be stored below eye level. | | | | ✓ |
| 5.9.1 | Adequate space for handling of the containers shall be provided | DSD's | Construction | WQO | ✓ |
| | Spill response kits shall be located adjacent/near to the storage areas. | Contractor | Work Sites | - | ✓ |
| | A log of chemical wastes shall be maintained. | | | | ✓ |
| | Incompatible chemicals shall be stored separately. | | | | ✓ |
| | 2 Responses/Action Plan | | | | |
| | All Workers shall be made aware of emergency telephone numbers and the location of all relevant pollution control equipment. Training be given in emergency response/action plans. The action include the following steps: | | | | ✓ |
| | • Only trained personnel who are equipped with protective clothing and equipment shall be allowed to enter the spillage area for clean up. | | | | ✓ |
| | • Spills shall be transferred appropriate back into containers using suitable equipment. | | | | ✓ |
| | Absorbent materials shall be used to clean up the spills and shall be disposed of as chemical wastes. | | | | ✓ |
| | Where appropriate suitable solvents may be used to clean the contaminated area after removal of all contaminated materials. | | | | ✓ |
| | All necessary protective devices, safety equipment, containers and clean up materials for emergency use shall be maintained to a high standard. | | | | ✓ |
| | 3 Spill Clean Up and Disposal | | | | |
| | Effect the response plan. | | | | ✓ |
| | Control the leakage and absorb the spillage using suitably absorbent materials. | | | | ✓ |
| | Provide safety equipment and personal protective equipment for handling of chemical wastes would be similar to that for handling of chemicals. | | | | ✓ |
| | Safety equipment includes but is not limited to: • Fire extinguishers. | | | | ✓ |
| | • Spades, brushes, dustpan, mop and bucket (or similar readily available on site). | | | | ✓ |
| | Absorbent material such as dry sand, tissues and toweling (all materials readily available on-site). | | | | ✓ |
| | Containers including plaster bags, drums, etc. | | | | ✓ |
| | Absorbing materials. | | | | ✓ |
| | • Pumps. | | | | ✓ |
| | Personal protective equipment includes as appropriate: • First-aid kits. | | | | ✓ |
| | Safety helmet and goggles. | | | | ✓ |
| | Gloves which can resist chemical reaction. | | | | ✓ |

| | Face visor and masks. | | | | ✓ |
| 5.9.2 | Emergency Responses to Spillages | | | | |
| | Emergency plans and clean up procedures will need to be provided by the Contractor recognising his specific working methods and construction programme, activities and sequences. Agreement must be sought prior to commencement of the construction work but the following principles should be considered. | | | | |
| | The emergency plans should include the procedures for: | | | | ✓ |
| | • spill prevention and precaution; | | | | , |
| | response actions; and | | | | √ |
| | spill clean up and disposal. | | | | ✓ |
| | Spill prevention and precaution embraces good site practice and covers: • good housekeeping practices; | | | | ✓ |
| | chemical storage requirements; and | | | | ✓ |
| | chemical transfer and transport. | | | | ✓ |
| 5.9.3 | During Operation | DSD's Contractor | Project Area | | |
| | Regular inspection of the tunnels is essential to monitor the structural integrity and proper functioning of the drainage tunnel, which allows repairing of structural deterioration when it begins to develop. It is recommended that routine inspection shall be carried out at least two times per year for the drainage tunnel at the beginning and end of wet season from April to September. | | | | N/A |
| | Management | | | | |
| 6.5.1 | During Construction Vegetation Removed from Site Clearance Wastes generated from site clearance shall be sorted and excavated topsoil segregated from roots for re-use in landscaping works, thus eliminating the need for off-site disposal. | DSD's Contractor | Construction Work Sites | Waste Disposal Ordinance (Cap.354); Waste Disposal (Chemical Wastes) (General) Regulation (Cap 354) and ETWBTC No. | ✓ |
| | Construction and Demolition Materials The Contractor should reuse any C&D material on-site. C&D waste should be segregated and stored in different containers to other wastes to encourage the re-use or recycling of materials and their proper disposal. The use of wooden hoardings shall not be allowed. An alternative material, which can be reused or recycled, for example, metal (aluminium, alloy, etc) shall be used. | | | 15/2003, Waste anagement on Construction Site | √ |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|-------------|--|--------------------------------|----------------------------|--|----------|
| 6.5.1 | As referred to the section 6.4.1, the 317,936m3 of inert surplus material generated by the | DSD's | Construction | WDO (Cap.354), ETWBTC No. 15/ 2003, ETWBTC No. 12/2002 and ETWBTC No. 31/2004 | |
| | project is suitable for public fill. The public fill reception facility at Tuen Mun Area 38 | Contractor | Work Sites | | |
| | provides a suitable facility for the reuse of surplus inert C&D material generated from the | | | | |
| | project. Under the contract, the contractor will be required to minimise the generation of C&D | | | | |
| | material and reuse it on site through the following: | | | | |
| | (a) to plan in the design and construction, methods to minimise the generation of C&D material; | | | | ✓ |
| | (b) to submit a Waste Management Plan (WMP) in accordance with Environment Transport and Works Bureau Technical Circular (ETWBTC) No. 15/2003 or any superseding circular(s); | | | | ✓ |
| | (c) to reuse recycled aggregates in accordance with ETWBTC No. 12/2002 or any superseding circular(s); | | | | ✓ |
| | (d) to observe the requirements of the Trip-Ticket System, stipulated in ETWBTC No. 31/2004 or any superceding circular(s), for disposal of C&D material; | | | | √ |
| | (e) to incorporate a Waste Management System into the WMP for effective management and control of C&D materials to avoid/reduce/minimise the generation of C&D material during construction. | | | | √ |
| | The contractor will be required to properly sort into inert C&D materials, metals, timber and | | | | √ |
| | other non-inert C&D material in the workplace to prevent cross-contamination. | | | | |
| | In addition, DSD will conduct site inspection to monitor the contractors' performance in the implementation of the WMP and other relevant specified requirements. | DSD | Construction Work Sites | WDO (Cap.354) and ETWBTC No. 15/2003 | √ |
| | Excavated Materials | DSD's | Construction | WDO (Cap.354) and | ✓ |
| | Excavated materials should be segregated from other wastes to avoid contamination thereby | Contractor | Contractor Work Sites | ETWBTC No. 15/2003 | |
| | ensuring acceptability at public filling areas and avoiding the need for disposal at landfill. | | | | |
| | Municipal Waste Temporary refuse collection facilities should be set-up by the contractor and wastes should be | | | | √ |
| | stored in appropriate containers prior to collection and disposal. | | | | V |
| | Domestic effluent generated by the workforce will be directed to foul sewer or chemical | - | | | |
| | toilets if public facilities are not available. | | | | √ |
| 6.5.1 | Waste Management Plan | DSD's Contractor | Construction | WDO (Cap.354), ETWBTC No. 15/2003 and ETWBTC No. 33/2002 | |
| | A Waste Management Plan (WMP) for the construction of the Project should be prepared as | | Work Sites | | |
| | part of the contractors submission. It will provide recommendations for appropriate recycling | | | | |
| | or disposal route and should include method statement for stockpiling and transportation of | | | | ✓ |
| | the excavated material and other construction wastes should also be included in the WMP and approved before the commencement of construction. All mitigation measures arising | | | | |
| | from the approved WMP shall be fully implemented. | | | | |
| | nom the approved 11.111 shan be fully implemented. | | | | |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|----------------|--|--------------------------------|-------------------------------|---|----------|
| | For the purpose of enhancing the management of C&D material including rock, and to minimize its generation at source, a C&D Material Management Plan (C&DMMP) has been prepared for this project and would be processed in accordance with the Environment, Transport and Works Bureau Technical Circular (Works) No. 33/2002 - Management of Construction and Demolition Material Including Rock. | | | | N/A |
| Ecology | | | | | |
| 7.7.1 | Avoidance The surface structures are located mainly on existing disturbed areas (ie pollution and urbanisation) and have generally avoided the natural stream sections of higher species diversity and abundance of aquatic organisms. The major construction activities at streams are scheduled to avoid wet season of high water flow which may adversely affect the downstream natural habitats due to the construction | DSD's Contractor | Construction Work Sites | EIAO | √ √ |
| 7.7.2 | runoff. Minimisation The previous discussion in Section 7.6.4 has indicated that the impacts on ecological | | | | |
| | resources due to the construction and operation of the proposed Project are generally expected to be low. The following mitigation measures to minimise impacts and disturbance to the surrounding habitats, are recommended. | | | | |
| | Measures for Construction Runoff Install sheet piles/cofferdam/weir along the boundary of the works area within the stream habitats in particular Sam Dip Tam Stream and Tso Kung Tam Stream before the commencement of works to prevent construction runoff during construction. Provision of adequate designed sand/ silt removal facilities such as sand traps, silt traps and sediment basin in the areas which could potentially be affected may be required. | | | | ✓ |
| | Good Construction Practice | - | | | ✓ |
| | Erect fences along the boundary of the works area before the commencement of works to prevent tipping, vehicle movements, and encroachment of personnel onto adjacent areas, particularly the stream habitats. | DSD's Contractor | Construction Work Sites | EIAO | ✓ |
| | Avoid any damage and disturbance, particularly those caused by filling and illegal dumping, to the remaining and surrounding natural stream habitats. | | | | ✓ |
| | Regularly check the work site boundaries to ensure that they are not breached and that no damage occurs to surrounding areas. Prohibit and prevent open fires within the site boundary during construction and provide | | | | ✓ |
| | temporary fire fighting equipment in the work areas. Treat any damage that may have occurred to individual major trees in the adjacent area with | | | | √ |
| | surgery. | | | | ✓ |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve? | Status |
|-------------|---|--------------------------------|-------------------------|--|--------|
| | Reinstate temporary work sites/disturbed areas, particularly stream of natural bottom and | DSD's | Construction | EIAO | |
| | bank, plantation, intertidal habitat, and the areas located within the proposed Ecological Park, | Contractor | Work Sites | | |
| | immediately after completion of the construction works, ie through on-site tree/shrub | | | | ✓ |
| | planting and reprovision of natural or semi-natural bottom (also refer to Section 7.7.3), in | | | | |
| | order to facilitate the recolonisation of the wildlife recorded during the baseline surveys. Tree/shrub species used should make reference from those in the surrounding area | | | | |
| 7.7.3 | Compensation | - | | | |
| | Provide natural stream bed (approximately 0.03 ha) for the new Dry Weather Flow Channel | | | | |
| | (created from village-orchard) by laying natural stones at Intake I-2 (Figure 7.7). The | | | | N/A |
| | reinstated stream bed shall mimic the existing natural conditions with certain portion of big | | | | |
| | boulders creating the lentic and lotic zones for the aquatic fauna, and while it will be | | | | |
| | developed during detailed design may draw on concepts shown in Figure 2.18. | | | | |
| | Provide natural stream bed (approximately 0.5 ha,) for the Approach Channel and Dry | | | | |
| | Weather Flow Channel by laying natural stones at Intake I-3 (Figure 7.8). The reinstated | | | | |
| | stream bed shall mimic the existing natural conditions (rocky bottom with very limited aquatic plants) with certain portion of big boulders creating the lentic and lotic zones for the | | | | N/A |
| | aquatic fauna, and while it will be developed during detailed design may draw on concepts | | | | |
| | shown in Figure 2.18. | | | | |
| | Provide natural bottom (ie retain the existing stream bed or reinstate the stream bed by | | | | |
| | providing boulders/rocks, riprap or gabion) for the affected stream sections (Figure 7.8) in | | | | N/A |
| | order to allow natural colonisation of aquatic fauna. | | | | |
| | Provide at least 2.2 ha of compensatory planting on the permanent and temporary affected | | | | |
| | plantation areas, particularly the slopes along access road and adjacent to Intake I-3 and | | | | |
| | cascade at Outfall O-1, after construction to stabilise the slope to present soil erosion and | | | | |
| | consequent stream sedimentation. Among the 2.2 ha compensatory planting, at least 0.5 ha of compensatory tree planting on the new formed slope along the access road of the Intake I- | | | | N/A |
| | 3 and 0.5 ha of compensatory tree planting over the cascade (by constructing intermediate | | | | 11//1 |
| | platform) at Outfall O-1 will be provided (location refer to Figures 7.4 – 7.6). Species used | | | | |
| | for planting should take reference from the species identified in Appendix F and be native to | | | | |
| | Hong Kong or South China region. | | | | |
| | Provide armour rocks for the affected intertidal habitat in order to allow natural colonisation | | | | N/A |
| | of intertidal organisms. | | | | 11/71 |

| EIA Ref. | Recommended Mitigation Measures | Who to implement the measure ? | Location of the measure | What requirements or standards for the measure to achieve ? | Status |
|-------------|--|---|-------------------------------|---|----------|
| Cultural | Heritage | | | | |
| 8.6 | As no impacts on recorded archaeological sites or area with archaeological potential were identified within the Study Area, no mitigation measure for archaeological resources is considered necessary. | | | | N/A |
| | The construction methods to be employed should seek to avoid potential vibration impacts to Kuen Yuen Tung Monastery at Lo Wai, the Western Monastery, Yuen Yuen Home for the Aged, Hong Hoi Chee Hong Temple, Chiu Yum Tsing Yuen, Tse's Grave, Wan Lin Bridge and Sam Dip Tam Rock Carving in Sam Dip Tam and the Tin Hau Temple, Yam Kom Tau Village Rural Committee and the Yeung's Ancestral Hall in Yau Kom Tau as these sites fall within 50 m of the Preferred Option of the drainage tunnel alignment or associated Intakes/Outfall construction activities. Construction works that generates excessive vibration in close proximity to these sites should be restricted to protect the building from adverse vibration impacts and to ensure that the building structures will not be damaged as a result of these impacts. | DSD's Contractor | Construction Work Sites | EIAO | ✓ |
| | In order to ensure that no structural or superficial damage will be caused by the construction activities, a precautionary approach involving a pre-construction condition survey and establishment of appropriate vibration limits for the potentially impacted structures should be adopted. Protection measures for the potentially impacted structures, if considered necessary from the pre-construction condition survey, should be implemented prior to the commencement of construction works. Vibration monitoring during the construction phase should be undertaken as part of the EM&A programme. | Qualified archaeologist/ built heritage specialist | Construction Work Sites | EIAO | √ |
| Fisherie | | ' | • | | |
| 10.6 | In accordance with the guidelines in the <i>EIAO-TM</i> on fisheries impact assessment the general policy for mitigating impacts to fisheries, in order of priority are avoidance, minimization and compensation. | DSD's Contractor | Construction Work Sites | EIAO | N/A |
| Remarks | Impacts to fisheries resources and fishing operations have largely been avoided during the construction and operation of the drainage tunnel through the avoidance of dredging, reclamation and filling activities. Good construction practice and associated measures were recommended in Water Quality Assessment in Section 5 to control water quality impacts to within acceptable levels and are also expected to control impacts to fisheries resources. Hence, no fisheries-species mitigation measures are required during construction and operation of the drainage tunnel. | | | | N/A |

Appendix G

Interim Notifications of Environmental Quality Limits Exceedances

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel |
|---|--|
| Date | 28-Oct-09 |
| Time | 1st measurement at 15:08 and repeat measurement at 15:38 |
| Monitoring Location | Roof top of Greenview Terrace facing to the construction site (NSR 9) |
| Parameter | Daytime Construction Noise |
| Action & Limit Levels | When one documented complaint is received / 75 dB(A) |
| Measured Level | 1st measurement = 76.6 dB(A) & Repeat measurement = 75.9dB(A), therefore it is the Limit Level Exceedance. |
| Possible reason for Action or Limit Level Non-compliance | Two possible reasons were identified for this exceedance. 1. One of the existing bamboo noise barrier was removed due to removal of the berm under this existing noise barrier. 2. Comparing with the previous noise monitoring results, number of PMEs were increased and the PMEs were also fully utilized simultaneously: a. One no. of small rock breaker for portal b. One no. of drilling rig for pre-bored H-piling and c. Two nos. of rock breaker at +24 mPD platform. |
| Actions taken / to be taken | Noise monitoring frequency would be increased from twice per week to at least three times per week. Noise monitoring would be tested and further assess whether any further exceedance occurs and the effectiveness of the remedial action after the proposed mitigate measures implemented by the Contractor. |
| Remarks | Under the Contractor's proposal for Noise Exceedance of Limit Level on 28 October 2009, proposal was reviewed and analysis of working procedures was carried out. Following mitigation measures would be implemented: (1) noise enclosure was used to cover the ceiling of the portal (2) scaffold of noise acoustic material was relocated (3) noise barriers will be placed as closer as the breaker and the drilling rig during operation and (4) in addition, the number of breakers would be reduced. |

Remedial Proposal for Noise Exceedance of Limit Level on 28-Oct-09 Rev I

Background

EPD had carried out audit inspection for noise measurement on 28-Oct-09 and two exceedance found at below:

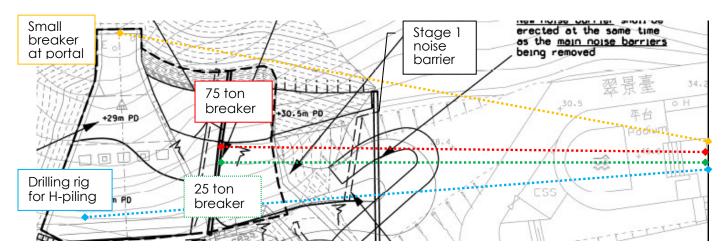

- NSR 9 Greenview Terrace (Block 1)
- Leq(30min) 76.6 dB(A) at 1508 hrs
- Leq(30min) 75.9 dB(A) at 1538 hrs

Therefore, MCSJV is obliged to propose the following noise mitigation measures for the activities identified as the source of limit level exceedance as below (i.e. Portal work, pre-bored H-piling & rock breaking)

Investigation for the Source of Exceedance

The plants operated during the measurement as below:

- 1. One no. of small rock breaker for portal
- 2. One no. of drilling rig for pre-bored H-piling
- 3. Two nos. of rock breaker at +24 mPD platform

The approximate combined noise level is around 78 dB(A) if all plants fully utilized simultaneously. In addition, the 25 ton & 75 ton breakers did break the most hard rock and therefore relative noisy was expected. It was the first time all plants operated simultaneously without stoppage and rescheduling of plants. It reflected that over use of plants was the major source to the exceedance. The management and scheduling of plants have to be re-considered.

The other possible reason for the course is one of our noise barrier had been dismantled for breaking the berm underneath and the shielding effect by the remaining noise barriers had been diminished.

Remedial Proposal for Noise Mitigation

It was noted that the over use of plants was the major source to the exceedance. Therefore, the immediate action is to prevent the use of three breakers + drilling rig simultaneously. The analysis of the scenario of the noisy operation for the portal works & piping works & 24 platform rock breaking should be as follow:

- 1. Rock breaking or hole drilling for inserting chemical explosive agent at portal
- 2. Drilling for H-piling
- 3. Rock breaking at 24 platform and excavator for mucking out

The on-site Noise Mitigation Measures should be as follows:

- a. Use movable barrier to screen off the noise source by movable barrier closing to the drilling head as shown in Photo 1 & 2 (Not more than 2m from the noise source and the barrier facing to GVT). The line of sight from NSR to the drilling head had been blocked, see attached sketch.
- b. The combined noise level was found 72.9 dB(A) refer to appendix B.
- c. A demarcation line by spray paint (as indicated in red in above) will be laid on site to delineate the pre-bored H piling and portal works
- d. A log sheet will be adopted to record the usage of PME by an Environmental Engineer. Proper record will be maintained on site for EPD checking
- e. The works areas for the drillers and the small breakers shall be confined to the areas (green at portal and blue for pre-bored H piling)
- f. All noise mitigation measures including the enclosure cover at ceiling of portal, movable noise barrier at opening of portal and movable noise barrier for driller shall be properly in place at all time during the drilling and rock breaking works
- g. The movable noise barrier for the driller shall be placed within 2 meters from the major noise emitting source of the driller and properly oriented to block the line of sight to the NSR at all time during the drilling works.

Photo no. 1 Movable barrier for Drilling rig

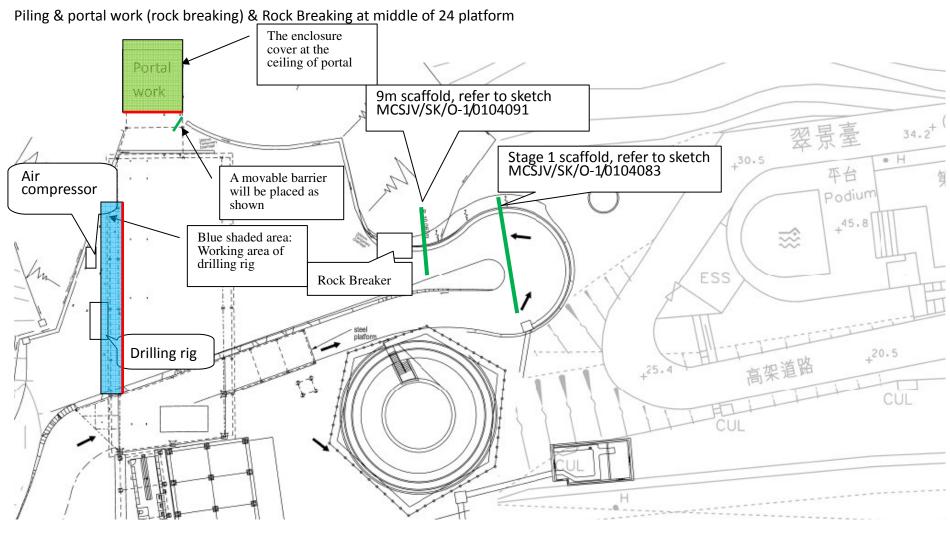

Photo no. 2 Movable barrier for Drilling rig

Proposed Noise Monitoring & Verification for Closure of the Exceedance Event

- 1. The mitigation measures will be implemented
- 2. The ETL will arrange noise monitoring for three days a week and last for a week. The monitoring duration should be 1 hour for each time.
- 3. If the readings are below Leq30 75 dB(A), the noise monitoring will switch back to the frequency as described in EM&A manual and the exceedance event will be closed out.

Description (cause of impact, type of impact and location, etc.)

Details of the Complaint

A complaint (SOR ref: (DC/2007/12)/M45/500/02749) was received from Greenview Terrace regarding to daytime construction noise level ($L_{eq(30min)}$) was sometimes exceeded 75 dB(A) at the outfall construction site. The complaint date was corresponded to 24 September 2009.

Findings/ Observations

Regular daytime construction noise monitoring, in accordance with EM&A Manual are performed by Environmental Team. The monitoring station concerned is NSR9 (i.e. at the roof top of Greenview Terrace facing to the construction site).

Soil nailing, excavation, rock breaking and drilling, loading and unloading the materials were generally observed during monitoring period in July and September 2009. The monitoring results from 6 July 2009 to 29 October 2009 at NSR 9 under EM&A requirements were summarised in the attached table. In accordance with EIAO-TM, the daytime construction noise limit is 75 dB(A) for NSR9. The measured noise levels complied with the limit level in accordance with the EIAO-TM. These cases would also be treated as an action level exceedance on noise and would be reported in next EM&A report.

The Contractor and the Environmental Team were also undertaken site investigation on the subject area in response to Greenview Terrace's complaint. The mitigation measures during the site investigation were observed as follows:

Noise

- Several layers of sound insulation sheets were installed at several locations of the site area.
- Movable noise barriers were used to surround the breaking activities.
- Noise insulation materials were used to enclose the breaking tip tightly.

Conclusion/Proposed Action

Based on our site inspection and monitoring results, no noise levels ($L_{eq(30min)}$) from the measurement taken from ET were exceeded 75dB(A). However, it was a recurrent case from Greenview Terrace. The Contractor was reminded to enhance the on-site noise mitigation measures. The enhanced mitigation measures have been implemented as follows:

- 1. A staff from the Contractor was designated to take the reading of L_{eq} (5mins) at the roof of Greenview Terrace. In case of the L_{eq} (5min) exceed 73 dB(A), the Contractor would re-schedule the noisy plants to mitigate the escalation of noise level.
- 2. The designated staff was reminded to record all the weather condition including raining and wind speed.
- 3. Tools box talk for Contractor's Team was carried out for reminding that the movable barrier should be placed to the breaking activities as much as possible.
- 4. Several movable noise barriers had been placed on site and the movable noise barriers was modified.
- 5. Existing 25 ton rock breaker had been replaced by the another breaker.
- 6. The breaking tap of the 25 ton rock breaker had been replaced by another breaking tap.
- 7. A joint filler wall was installed at the vertical face of westbound to mitigate the noise rebound from the vertical face to high level of Greenview Terrace.
- 8. Noise monitoring frequency was increased twice per week.

The frequency of noise monitoring was increased by ET. The additional measurement was taken on 10, 12, 15, 17, 28 August, 4, 11, 18, 25 September and 2, 6, 16, 23 and 31October 2009. The noise levels ($L_{eq, 30 \text{ min}}$) were shown in the following table.

| Date | Start Time | End Time | L _{eq} , dB(A) | Limit Level, dB(A) | Noise Sources |
|-----------|---------------|-------------|----------------------------|-----------------------|--|
| 10-Aug-09 | 10:27 | 10:57 | 73 | 75 | Breaker x 2, Backhoe x 1, Traffic Noise |
| 12-Aug-09 | 09:57 | 10:27 | 74.1 | 75 | Breaker x 2, Backhoe x 2, Traffic Noise |
| 15-Aug-09 | 09:48 | 10:18 | 71.5 | 75 | Breaker x 2 & Backhoe x 2, Traffic Noise |
| 17-Aug-09 | 15:41 | 16:11 | 70.9 | 75 | Breaker x 2, Backhoe x 2, Traffic and Aircraft Noise |
| 28-Aug-09 | 14:34 | 15:04 | 73.5 | 75 | Breaker x 2, Excavator x 1, Traffic and Aircraft Noise |
| 4-Sep-09 | 10:20 | 10:50 | 72.8 | 75 | Breaker x 1, Excavator x 1, Traffic Noise |
| 11-Sep-09 | 09:50 | 10:20 | 71.9 | 75 | Breaker x 1, Excavator x 1, Traffic Noise |
| 18-Sep-09 | 09:40 | 10:10 | 71.9 | 75 | Breaker x 1, Drilling Work, Excavator x1, Traffic Noise |
| 25-Sep-09 | 15:40 | 16:10 | 74.8 | 75 | Breaker x 1, Excavator x 1, Decoration at 14/F, Traffic Noise |
| 2-Oct-09 | 09:40 | 10:10 | 73.7 | 75 | Breaker x 1, Excavator x 1, Decoration at 14/F, Traffic & Aircraft Noise |
| 6-Oct-09 | 09:45 | 10:15 | 71.2 | 75 | Breaker x 1, Excavator x 1, Decoration at 14/F, Traffic & Aircraft Noise |
| 16-Oct-09 | 14:32 | 15:02 | 71.8 | 75 | Breaker x 1, Excavator x 1 |
| 23-Oct-09 | 09:15 | 09:45 | 72.0 | 75 | Breaker x 1, Excavator x 1 |
| 31-Oct-09 | 15:01 | 15:31 | 67.6 | 75 | Excavator x 1 |

Remark:

The location of PME will be changed on and off and the utilization time for each PME may not be in constant.

From the additional monitoring data above and the regular monitoring in the attachment under EM&A requirements, the measured noise levels were complied with the limit level in accordance with the EIAO-TM. From the noise level on 25 September 2009 and 2 October 2009, the trend of noise level seemed to be increased since the decoration work at 14/F Greenview Terrace was the domain noise source during the monitoring. The noise level during that time would be considered for reference only. There was no exceedance of the measured noise level at Greenview Terrace in our investigation.

FOLLOW UP ACTION (S)

ET will continuously review the condition of the site during the routine site inspections and provide reminder to the Contractor. The noise monitoring frequency would be maintained in twice per week. This case would be reported an action level exceedance on noise and also would be recorded in complaint log in the monthly EM&A report (October 2009).

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel |
|---|---|
| Date | 04-Nov-09 |
| Time | 10:00 AM |
| Monitoring Location | Sik Sik Yuen Ho Fung College (I-1) |
| Parameter | Turbidity |
| Action & Limit Levels | 9.75 / 12.47 |
| Measured Level | 13.68 |
| Possible reason for Action or Limit Level Non-compliance | A high turbidity level of 14.11 is recorded at Control Station (I-1-C) |
| Actions taken / to be taken | The measured turbidity level was above baseline Action and Limit Levels as well as the range of baseline turbidity concentration (3.13-13.15 NTU). Construction activities, such as rock breaking, rock dowel and mucking out, were undertaken during the measurement and no direct disturbance was observed from the site. Thus, the exceedance is considered to be contributed by the high turbidity level of control station (I-1-C) and no action should be required. |
| Remarks | Following mitigation measures were provided: (1) sandbags were used at the gap of the bridge to avoid wastewater from site activities directly running down to the channel of I-1. (2) The working site was segregated with a wall and no wastewater was observed down to the channel-I1. (3) Sand/silts removal facilites was installed at the location of I-1. |

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel |
|---|--|
| Date | 02-Nov-09 |
| Time | 10:00 AM |
| Monitoring Location | Sik Sik Yuen Ho Fung College (I-1) |
| Parameter | Suspended Solid |
| Action & Limit Levels | 8.85 / 10.17 |
| Measured Level | 17.8 |
| Possible reason for Action or Limit Level Non-compliance | A high SS level of 16.7 is recorded at Control Station (I-1-C) and muddy stain was observed at the exit of closed channel at Shing Mun Lane refered to attached photo for details. |
| Actions taken / to be taken | The measured SS level was above baseline Action and Limit Levels as well as the range of baseline SS level (1 - 10.5 mg/L). Construction activities, such as rock breaking, rock dowel and mucking out, were undertaken during the measurement and no direct disturbance was contributed by project construction activities. The exceedance is considered to be contributed by the high SS level at control station (I-1-C) from the muddy stain and no action should be taken as the SS result at monitoring station was below the action and limit level of control station. |
| Remarks | Following mitigation measures were provided on site: (1) sandbags were used at the gap of the bridge to avoid wastewater from site activities directly running down to the channel of I-1. (2) The working site was segregated with a wall and no wastewater was observed down to the channel-I1. (3) Sand/silts removal facilities was installed at the location of I-1. |

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel | |
|---|---|--|
| Date | 23-Nov-09 | |
| Time | 10:12 AM | |
| Monitoring Location | Hong Hoi Chee Hong Temple (I-2) | |
| Parameter | Suspended Solid | |
| Action & Limit Levels | 7.68 / 8.34 | |
| Measured Level | 3.0 (higher than 130% of control station's SS) | |
| Possible reason for Action or Limit Level Non-compliance | A low SS level of 2.0 is recorded at Control Station (I-2-C) | |
| Actions taken / to be taken | The measured SS level was below baseline Action / Limit Level and was within the range of baseline SS concentration (1- 8.5mg/L). Site cleaning and tidying, erect formwork for skin wall and formation of man access shaft were undertaken during measurement. No direct disturbance was observed from the site. Thus, the exceedance is considered to be contributed by natural variation and no action should be required. | |
| Remarks | Following mitigation measures were provided: (1) exposed surfaces were covered or segregated. (2) sandbags were used to avoid wastewater from site activities directly running down to the river of I-2. (3) sand/silts removal facilites was installed at the location of I-2. | |

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel | |
|---|--|--|
| Date | 25-Nov-09 | |
| Time | 10:37 AM | |
| Monitoring Location | Sik Sik Yuen Ho Fung College (I-1) | |
| Parameter | Suspended Solid | |
| Action & Limit Levels | 8.85 / 10.17 | |
| Measured Level | 11.3 | |
| Possible reason for Action or Limit Level Non-compliance | A highSS level of 11.1 is recorded at Control Station (I-1-C). Other construction activities were carried out at control station during the measurement. (Refer to the photos below). | |
| Actions taken / to be taken | The measured SS level was above baseline Action and Limit Levels as well as the range of baseline SS concentration (1 - 10.5 mg/L). Construction activities, such as rock breaking, slope stabilization and mucking out, were undertaken during the measurement and no direct disturbance was observed from the site. The exceedance is considered to be contributed by the high SS level of control station (I-1-C) and no action should be taken as the SS result at monitoring station was below the action and limit level of control station. | |
| Remarks | Following mitigation measures were provided: (1) sandbags were used at the gap of the bridge to avoid wastewater from site activities directly running down to the channel of I-1. (2) The working site was segregated with a wall and no wastewater was observed down to the channel-I1. (3) Sand/silts removal facilites was installed at the location of I-1. | |

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel |
|---|--|
| Date | 27-Nov-09 |
| Time | 10:29 AM |
| Monitoring Location | Sik Sik Yuen Ho Fung College (I-1) |
| Parameter | Suspended Solid |
| Action & Limit Levels | 8.85 / 10.17 |
| Measured Level | 12.6 |
| Possible reason for Action or Limit Level Non-compliance | A high SS level of 11.7 is recorded at Control Station (I-1-C). Other construction activities were carried out at control station during the measurement. (Refer to the photos below). |
| Actions taken / to be taken | The measured SS level was above baseline Action and Limit Levels as well as the range of baseline SS concentration (1-10.5 mg/L). Construction activities, such as site cleaning and tidying, disposal of C&D materials, excavation and break up of rock, and shotcrete of shaft wall and rock face, were undertaken during the measurement and no direct disturbance was observed from the site. The exceedance is considered to be contributed by the high SS level of control station (I-1-C) and no action should be taken as the SS result at monitoring station was below the action and limit level of control station. |
| Remarks | Following mitigation measures were provided: (1) sandbags were used at the gap of the bridge to avoid wastewater from site activities directly running down to the channel of I-1. (2) The working site was segregated with a wall and no wastewater was observed down to the channel-I1. (3) Sand/silts removal facilities was installed at the location of I-1. |

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel |
|---|---|
| Date | 30-Nov-09 |
| Time | 10:22 AM |
| Monitoring Location | Sik Sik Yuen Ho Fung College (I-1) |
| Parameter | Suspended Solid |
| Action & Limit Levels | 8.85 / 10.17 |
| Measured Level | 16.3 |
| Possible reason for Action or Limit Level Non-compliance | A high SS level of 18.8 is recorded at Control Station (I-1-C). Other construction activities were carried out at control station during the measurement. (Refer to the photos below). |
| Actions taken / to be taken | The measured SS level was above baseline Action and Limit Levels as well as the range of baseline SS concentration (1-10.5 mg/L). Construction activities, such as site cleaning and tidying, disposal of C&D materials, rock breaking and cement grouting, were undertaken during the measurement and no direct disturbance was observed from the site. The exceedance is considered to be contributed by the high SS level of control station (I-1-C) and no action should be taken as the SS result at monitoring station was below the action and limit level of control station. |
| Remarks | Following mitigation measures were provided: (1) sandbags were used at the gap of the bridge to avoid wastewater from site activities directly running down to the channel of I-1. (2) The working site was segregated with a wall and no wastewater was observed down to the channel-I1. (3) Sand/silts removal facilites was installed at the location of I-1. |

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel |
|---|---|
| Date | 30-Nov-09 |
| Time | 9:10 AM |
| Monitoring Location | Squatters (I-3) |
| Parameter | Suspended Solid |
| Action & Limit Levels | 6.13 / 7.23 |
| Measured Level | 2.7 (higher than 130% of control station's SS) |
| Possible reason for Action or Limit Level Non-compliance | A low SS level of 2.0 is recorded at Control Station (I-3-C) |
| Actions taken / to be taken | The measured SS level was below baseline Action and Limit Levels, and it was still within the range of baseline SS concentration (1 -7.5 mg/L). Construction activities, such as site cleaning and tidying, soil nailing, boulder breaking, formation of access road and C&D materials disposal, were undertaken during the measurement and no direct disturbance was observed from the site. Thus, the exceedance is considered to be contributed by natural variation and no action should be required. |
| Remarks | Following mitigation measures were provided: (1) Gabion wall has been constructed to avoid any water from rainstorm and from site activities directly running down to the river of I-3. (2) Sedimentation Pond and Sand/silts removal facilities was installed at the location of I-3. |

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel |
|---|---|
| Date | 9-Nov-09 |
| Time | N/A |
| Monitoring Location | Roof top of Greenview Terrace facing to the construction site (NSR 9) |
| Parameter | Noise |
| Action & Limit Levels | When one documented complaint is received / 75 dB(A) |
| Measured Level | N/A |
| Possible reason for Action or Limit Level Non-compliance | Movable noise barrier was not placed close enough to the piling machine. |
| Actions taken / to be taken | The rig was re-orientated and the barrier was placed closed to the drilling head immediately. The documented complaint for noise is considered to trigger the action level. |
| Remarks | Please refer to Appendix K for details. |

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel |
|---|---|
| Date | 18-Nov-09 |
| Time | N/A |
| Monitoring Location | Roof top of Greenview Terrace facing to the construction site (NSR 9) |
| Parameter | Noise |
| Action & Limit Levels | When one documented complaint is received / 75 dB(A) |
| Measured Level | N/A |
| Possible reason for Action or Limit Level Non-compliance | Rock-breaking activity carried out in the eastern area of Portion D, closest to Greenview Terrace, was not totally screened and line of sight of the breaker was observed from the NSR. |
| Actions taken / to be taken | The bamboo scaffold was extended further away from stage 3 scaffold to further screen off the activities to the Greenview. The length of the extension was about 8 to 10 m. A strong reminded was given to the relevant staff and sub-contractor and the barrier should be placed in the right orientation before breaking. The mitigation measures were strictly followed as stated in the proposal. The documented complaint for noise is considered to trigger the action level. |
| Remarks | Please refer to Appendix K for details. |

| Parameter | Suspended Solid |
| Action & Limit Levels | 8.85 / 10.17 |
| Measured Level | 3.6 (higher than 120% of control station's SS) |
| Possible reason for Action or Limit Level Non-compliance | A low SS level of 2.9 is recorded at Control Station (I-1-C) |
| Actions taken / to be taken | The measured SS level was below baseline Action and Limit Levels as well as lies within the range of baseline SS concentration (1 -10.5 mg/L). Construction activities, such as disposal of C&D materials, maintain site cleaning and tidying as well as shotcrete to shaft wall, were undertaken during the measurement and no direct disturbance was observed from the site. Thus, the exceedance is considered to be contributed by natural variation and no action should be required. |
| Remarks | Following mitigation measures were provided: (1) sandbags were used at the gap of the bridge to avoid wastewater from site activities directly running down to the channel of I-1. (2) The working site was segregated with a wall and no wastewater was observed down to the channel-I1. (3) Sand/silts removal facilites was installed at the location of I-1. |

Incident Report on Action Level or Limit Level Non-compliance

| Project | Tsuen Wan Drainage Tunnel |
|---|---|
| Date | 23-Dec-09 |
| Time | 10:56 AM |
| Monitoring Location | Hong Hoi Chee Hong Temple (I-2) |
| Parameter | Suspended Solid |
| Action & Limit Levels | 7.68 / 8.34 |
| Measured Level | 13.9 |
| Possible reason for Action or Limit Level Non-compliance | A high SS level of 14.2 is recorded at Control Station (I-2-C). There were construction activities of Landslip preventative works for slopes and retaining walls by CEDD at control station. (Refer to the photos below) |
| Actions taken / to be taken | The measured SS level was above baseline Action and Limit Levels as well as above the range of baseline SS level (1 - 8.5 mg/L). Construction activities, such as site cleaning and tidying, breaking of boulder, formation of U-channel, formation of man access shaft as well as formation of access road, were undertaken during the measurement and no direct disturbance was contributed by project construction activities. Thus, the exceedance is considered to be contributed by the high SS level of control station (I-2-C) and no action should be taken as the SS level at monitoring station was below the action and limit level of control station. |
| Remarks | Following mitigation measures were provided: (1) exposed surfaces were covered or segregated. (2) sandbags were used to avoid wastewater from site activities directly running down to the river of I-2. (3) sand/silts removal facilites was installed at the location of I-2. |

Appendix H

Complaint Log

APPENDIX K

COMPLAINT LOG

| Complaint No. | Log Ref. | Date/Location | Complainant | Details of Complaint | Investigation / Mitigation Action | Status |
|------------------|----------|----------------------------|--------------------------|---|---|--------|
| 1 | CIR-001 | 9 March 2009 at Outfall | Public through EPD | EPD has received a complaint (EPD ref: EP3/N22/RW/04846-09) regarding to muddy effluent discharged from the outfall of the construction site from a public on 9 March 2009. Site investigation was also carried out by EPD with the Contractor on the same day. | In the afternoon on 9 March 2009, the Contractor was carrying out regular maintenance for removing silt accumulated in the wastewater treatment plant. During the maintenance works, some residual silt inside the plant was accidentally leaked out to the outfall discharge outlet. The reason was that a flexible pipe for disposing silt was found connecting to the concrete platform of the outfall discharge outlet. Conclusion/Remedial Action The complaint was valid and it was due to maintenance works at the wastewater treatment plant at the outfall area. The contractor had cleaned up the silt at discharge outlet and the channel at the outfall area on 12 March 2009 as shown in the attached photo. The ET will closely inspect the discharge outlet and the channel during the routine site inspections and provide advice to the Contractor. The Contractor was also advised to provide mitigation measures during any occasion of the maintenance work on the wastewater treatment plant. The discharge pipe of the treatment plant should be plugged and ensure not functioned when carrying out maintenance works on the wastewater treatment plant in order to prevent the discharge of silt or muddy water to the outlet. Flexible pipe for discharge of sludge should not be placed on the concrete platform under the outfall discharge outlet. For disposal of slit or sludge in the | Closed |

| Complaint No. | Log Ref. | Date/Location | Complainant | Details of Complaint | Investigation / Mitigation Action | Status |
|------------------|----------|--------------------------|--------------------------|---|--|--------|
| | | | | | wastewater treatment plant, tanker should be used. | |
| 2 | CIR-002 | 8 May 2009 at Outfall | Public through EPD | EPD has received a complaint (EPD ref: EP3/N22/RW/09755-09) regarding to construction dust from the outfall construction site on 8 May 2009. Site investigation was also carried out by EPD with the Contractor on 14 May 2009. | Findings/ Observations Regular 1-hour TSP monitoring, in accordance with EM&A Manual, is performed by Environmental Team. The monitoring station concerned is ASR9 (i.e. at the podium level of Greenview Terrace facing to the construction site). The closest date for the 1-hour TSP concentration monitoring was on 6 May 2009 and 12 May 2009 at Greenview Terrace, ASR9. Soil nailing works and loading & unloading excavated materials were observed during monitoring. In accordance with the EM&A Manual and the Baseline Monitoring Report, all 1-hour TSP concentrations at ASR9 were below the established Action and Limit Levels. No exceedance was recorded on 6 and 12 May 2009. The contractor and the environmental team were also undertaken site investigation on the subject area in response to the complaint. It was confirmed that the air quality mitigation measures as recommended in EIA have been provided by the Contractor. The mitigation measures are as follows: • Water spraying was provided to the exposed surface. • Several automatic sprinklers were provided at the outfall construction site for water spraying of the haul road. • Water spraying was provided during dust generating works (e.g. rock breaking and soil nailing works). Conclusion/Remedial Action | Closed |
| | | | | | Based on the site inspection and monitoring results, | |

| Complaint No. | Log Ref. | Date/Location | Complainant | Details of Complaint | Investigation / Mitigation Action | Status |
|------------------|----------|---------------------------|--------------------------|--|---|--------|
| | | | | | action & limit level exceedance on construction dust are identified. Air quality mitigation measures as recommended in EIA have been implemented in order to control and minimise the air quality impact and nuisance arising from the construction activities. Nevertheless, in view of the recent dry and sunny weather, the haul road and the exposed area would be dry very quickly. The Contractor was recommended to provide more frequent water spraying especially in the dry and sunny weather. | |
| 3 | CIR-003 | 14 May 2009 at Outfall | Public through EPD | EPD has received a complaint (EPD ref: EP/RW/080206) regarding to daytime construction rock breaking at 7:15 am and dusty at the outfall construction site on 14 May 2009. | The closest date to the complaint for the 1-hour TSP monitoring & daytime construction noise monitoring was on 12, 18 and 27 May 2009 at Greenview Terrace, ASR9 and NSR9. Soil nailing, excavation, rock breaking, loading and unloading the materials were observed during monitoring period. The measured noise levels complied with the limit level in accordance with the EIAO-TM. All 1-hour TSP concentrations at ASR9 were below the established Action and Limit Levels. No 1-hour TSP exceedance was recorded. The contractor and the environmental team were also undertaken site investigation on the subject area in response to the complaint. Air quality mitigation measures as recommended in EIA have been implemented by the Contractor. However, noise mitigation measures could be further improved. Based on our site inspection and monitoring results, the complaint for dust is considered not justifiable since no action & limit level exceedance on construction dust is identified. Air quality mitigation measures as recommended in EIA have also been implemented in order to control and minimise the air | Closed |

| Complaint No. | Log Ref. | Date/Location | Complainant | Details of Complaint | Investigation / Mitigation Action | Status |
|---------------|----------|---------------|-------------|----------------------|--|--------|
| | | | | | quality impact arising from the construction activities. In view of the recent dry and sunny weather, the haul road and the exposed area would be dry very quickly. The Contractor was recommended to enhance water spraying especially in the dry and sunny weather. On the other hand, the complaint for noise is considered due to works and the Contractor was agreed to improve the on-site noise mitigation measures such as the following measures. ET's site inspection and the joint inspection with relevant parties was conducted on 29 May 2009 and 4 June 2009 respectively to confirm all the below measures have been implemented. • For the idling plant, it should be switched off to reduce noise level generated. • The sound insulation sheets and noise insulation materials should be placed to enclose the breaking tip tightly and also aside or surrounding the breaking activities as recommended in the following photos 1-3 in noise mitigation measures. • Noise monitoring frequency was increased in order to check the effectiveness of the mitigation measures. The additional measurement was taken on 27 May, 8 June, 10 June and 12 June 2009 after all the measures implemented. The noise levels (Leq. 30 min) were 70.9 dB (A), 70.5 dB (A), 70.3 dB (A) and 70.3 dB (A) respectively, which comply with the limit level in accordance with the EIAO-TM. Soil nailing, excavation and rock breaking were observed during monitoring period. The measures were well in place and seemed effective during the measurement. | |

| Complaint No. | Log Ref. | Date/Location | Complainant | Details of Complaint | Investigation / Mitigation Action | Status |
|---------------|----------|--|--------------------------|--|--|--|
| 4 | CIR-004 | 10 July 2009 at Outfall | Public through EPD | EPD has received a complaint (EPD ref: EP3/N22/RW/15137-09) regarding to construction dust from the outfall construction site on 10 July 2009. | Findings/ Observations 1-hour TSP concentration monitoring was on 10 July 2009 at Greenview Terrace, ASR9. Soil nailing works, concrete breaking, excavation and loading & unloading excavated materials were observed during monitoring. All 1-hour TSP concentrations at ASR9 were below the established Action and Limit Levels. No exceedance was recorded on 10 July 2009. The contractor and the environmental team were also undertaken site investigation on the subject area in response to the complaint. It was confirmed that the air quality mitigation measures as recommended in EIA have been provided by the Contractor. The mitigation measures are as follows: • Water spraying was provided to the exposed surface. • Automatic sprinklers were provided at the outfall construction site for water spraying of the haul road. • Water spraying was provided during dust generating works (e.g. rock breaking and soil nailing works). • Tarpaulin was used for covering the dusty works in the Portal area. Conclusion/Remedial Action The complaint is considered not justifiable since no action & limit level exceedance on construction dust are identified | Closed |
| 5 & 6 | CIR-005 | 29 July 2009 & 11 August 2009 at Outfall | Public through SOR | SOR has received two complaints (SOR ref: (DC/2007/12)/M45/500/02480, 02500) from Greenview Terrace | Findings/ Observations Soil nailing, excavation, rock breaking and drilling, loading and unloading the materials were generally observed during monitoring period in July and August 2009. According to the noise monitoring results from | Same Case with Complaint No. 11 |

| Complaint No. | Log Ref. | Date/Location | Complainant | Details of Complaint | Investigation / Mitigation Action | Status |
|---------------|----------|---------------|-------------|--|---|--------|
| | | | | regarding to daytime construction noise exceedance recorded at NSR9 on 8, 22, 23, 27 and 29 July 2009 and a large amount dust generated at the outfall construction site. The complaint dates were corresponded to 29 July and 11 August 2009. | 6 July 2009 to 31 August 2009 at NSR 9, the measured noise levels complied with the limit level in accordance with the EIAO-TM. All 1-hour TSP concentrations at ASR9 were below the established Action and Limit Levels from 6 July 2009 to 25 August 2009. Conclusion/Remedial Action The dust complaint on 22 July 2009 was due to the soil nailing works. The Contractor was reminded enhance the dust mitigation measures during soil nailing works. A designated staff was provided to spray water continuously during soil nailing. A nylon bag was placed on the drilling hole and keeping wet to suppress dust. A sprinkler was added at the hillside of the site and water spraying was provided continuously during operation of drilling to suppress dust. The documented complaint for noise is considered to trigger the action level and the Contractor was also reminded to enhance the on-site noise mitigation measures continuously. The enhanced mitigation measures are proposed as follows: A staff from the Contractor was designated to take the reading of Leq (5mins) at the roof of Greenview Terrace. In case of the Leq (5min) exceed 73 dB(A), the Contractor would re-schedule the noisy plants to mitigate the escalation of noise level. The designated staff was reminded to record all the weather condition including raining and wind speed. Tools box talk for the Contractor's Team was carried out for reminding that the movable barrier should be placed to the breaking activities as much as possible. | |

|------------------|----------|------------------------------|--------------------------|---|---|--------|
| | | | | | movable noise barriers were also modified. Existing 25 ton rock breaker had been replaced by the another breaker. The breaking tap of the 25 ton rock breaker had been replaced by another breaking tap. A joint filler wall was installed at the vertical face of westbound to mitigate the noise rebound from the vertical face to high level of Greenview Terrace. From the additional monitoring data and monitoring data under regular EM&A requirements, noise level (Leq, 30 min) between 6 July to 31 August 2009 was in the range of 71 to 74 dB(A) to the nearest integer. The noise monitoring frequency was maintained in twice per week to check whether the mitigation measures are effective. From the information of the Contractor, all the mitigation measures were implemented on 31 August 2009. Noise levels (Leq, 30 min) were also re-measured after the implementation of the mitigation measures. Noise level (Leq, 30 min) from 4 Sep to 28 Sep 2009 was in the range of 70 to 73 dB(A) to the nearest integer after the implementation of the mitigation measures. In our investigation, there was no exceedance of the measured noise level at Greenview Terrace. | |
| 7 | CIR-006 | 12 August 2009 at Outfall | Public through SOR | SOR has received a complaint (SOR ref: (DC/2007/12)/M45/500/02527) from Greenview Terrace, via Apple Daily regarding to daytime construction noise level (L _{eq(30min)}) was sometimes more than 80 dB(A) and a large amount dust | Findings/ Observations Soil nailing, excavation, rock breaking and drilling, loading and unloading the materials were generally observed during monitoring period in July and August 2009. According to the noise monitoring results from 6 July 2009 to 31 August 2009 at NSR 9, the measured noise levels complied with the limit level in accordance with the EIAO-TM. | 9 | CIR-008 | 17 August 2009 at Portion D of the Site | Public through SOR | SOR has received a complaint (SOR ref:(DC/2007/12)/M45/500/02546) from Long Bench Garden regarding to noise nuisance generated from the daytime construction work (rock-breaking) in Portion D of the Site. The complaint date was corresponded to 17 August 2009. | Findings/ Observations Soil nailing, excavation, rock breaking and drilling, loading and unloading the materials were generally observed during monitoring period in August 2009. The monitoring results from 3 August 2009 to 31 August 2009 at NSR 8 showed the measured noise levels complied with the limit level in accordance with the EIAO-TM. The contractor and the environmental team were also undertaken site investigation on the subject area in response to the complaint. Noise mitigation measures should be enhanced continuously due to this complaint. Conclusion/Proposed Action The documented complaint for noise is considered to trigger the action level and the Contractor was reminded to enhance the on-site noise mitigation measures continuously. The enhanced mitigation measures are recommended as follows: Movable noise barriers had been placed towards the direction of Long Bench Garden, particular for the pipe pile works in the portal. Tools box talk for construction team was carried out for reminding that the movable barrier should be placed to the breaking activities as much as possible. The existing noisy 25 ton rock breaker had been replaced by the other breaker. A joint filler wall had been fixed on the vertical face of west bound to absorb the noise generated towards Long Beach Garden. Noise monitoring frequency was increased twice per | Closed |

| | | | | | should be placed to the breaking activities as much as possible. Movable noise barriers were placed on site and the movable noise barriers were also modified. Existing 25 ton rock breaker had been replaced by the another breaker. The breaking tap of the 25 ton rock breaker had been replaced by another breaking tap. A joint filler wall was installed at the vertical face of westbound to mitigate the noise rebound from the vertical face to high level of Greenview Terrace. From the additional monitoring data and monitoring data under regular EM&A requirements, noise level (Leq, 30 min) from 6 July to 31 August 2009 was in the range of 71 to 74 dB(A) to the nearest integer. The noise monitoring frequency was maintained in twice per week to check whether the mitigation measures are effective. From the information of the Contractor, all the mitigation measures were implemented on 31 August 2009. Noise levels (Leq, 30 min) were also remeasured after the implementation of the mitigation measures. Noise level (Leq, 30 min) from 4 Sep to 28 Sep 2009 was in the range of 70 to 73 dB(A) to the nearest integer after the implementation of the mitigation measures. In our investigation, there was no exceedance of the measured noise level at Greenview Terrace. | |
| 11 | CIR-010 | 24 September 2009 at Outfall | Public through SOR | A complaint (SOR ref: (DC/2007/12)/M45/500/02749) was received from Greenview Terrace regarding to daytime construction noise level | Findings/ Observations Soil nailing, excavation, rock breaking and drilling, loading and unloading the materials were generally observed during monitoring period in July and September 2009. The monitoring results from 6 July 2009 to 29 October 2009 at NSR 9 showed the | Closed as no new complaint was received |

| | | | | (Leq(30min)) was sometimes exceeded 75 dB(A) at the outfall construction site. | measured noise levels complied with the limit level in accordance with the EIAO-TM. The contractor and the environmental team were also undertaken site investigation on the subject area in response to the complaint. Noise mitigation measures have been enhanced continuously due to this complaint. Conclusion/Proposed Action The documented complaint for noise is considered to trigger the action level and the Contractor was reminded to enhance the on-site noise mitigation measures continuously. The enhanced mitigation measures were implemented as follows: A staff from the Contractor was designated to take the reading of Leq (5mins) at the roof of Greenview Terrace. In case of the Leq (5min) exceed 73 dB(A), the Contractor would re-schedule the noisy plants to mitigate the escalation of noise level. The designated staff was reminded to record all the weather condition including raining and wind speed. Tools box talk for the Contractor's Team was carried out for reminding that the movable barrier should be placed to the breaking activities as much as possible. Movable noise barriers were placed on site and the movable noise barriers were also modified. Existing 25 ton rock breaker had been replaced by the another breaker. The breaking tap of the 25 ton rock breaker had been replaced by another breaking tap. A joint filler wall was installed at the vertical face of westbound to mitigate the noise rebound from the vertical face to high level of Greenview Terrace. | in the reporting month. |

|------------------|----------|--------------------------|--------------------------|---|--|---|
| | | | | | From the additional monitoring data above and the regular monitoring under EM&A requirements, the measured noise levels were complied with the limit level in accordance with the EIAO-TM. From the noise level on 25 September 2009 and 2 October 2009, the trend of noise level seemed to be increased since the decoration work at 14/F Greenview Terrace was the domain noise source during the monitoring. The noise level during that time would be considered for reference only. There was no exceedance of the measured noise level at Greenview Terrace in our investigation. | |
| 12 | CIR-011 | 2 October 2009 at I-3 | Public through EPD | EPD has received a complaint (EPD ref: EP3/N22/RW/22016-09) regarding to construction dust at the Intake-3 on 2 October 2009. | Findings/ Observations There is no representative air monitoring location as stated in the EM&A Manual. The contractor and the environmental team were undertaken site investigation on the subject area at 08-Oct-09 in response to the complaint. Air quality mitigation measures as recommended in EIA have been implemented by the Contractor. However, the dust impact by exposed area could be further improved. The mitigation measures during the site investigation were observed as follows: • Water spraying was provided to the exposed surface. • Wheel washing facilities for dump trucks was provided at the site exit. • Water spraying was provided during excavation and loading/unloading works | Closed as no new complaint was received in the reporting month. |
| | | | | | Conclusion/Proposed Action Based on our site inspection, the complaint for dust is | |

|------------------|--|--------------------------------|--|---|--|--------|
| | | | | | considered justifiable as it is due to windy erosion on the exposed surface. Air quality mitigation measures as recommended in EIA have also been implemented in order to control and minimise the air quality impact arising from the construction activities. In view of the recent dry season, the haul road and the exposed area would be dry very quickly. The Contractor was recommended to provide water spraying more frequently especially in the dry season. | |
| 13 | (DC/2007/12)/ M45/500/2923 & email on 11 November 2009 from MCSJV | 9 November 2009 at Outfall | Greenview Terrace through EPD | Movable noise barrier was not placed close enough to the piling machine. | Immediate Action The rig was re-orientated and the barrier was placed closed to the drilling head. Follow-up Action Training was conducted to the operator to ensure that the workers aware that the barrier should be placed closed not the drilling head not the machine itself. In order to prevent future occurrence, a permit to dig system was adopted. It should be checked by the Contractor and endorsed by the SOR before starting the drilling rig. | Closed |
| 14 | (DC/2007/12)/ M45/500/2978 & email on 19 November 2009 from MCSJV | 18 November 2009 at Outfall | Greenview Terrace through EPD | Rock-breaking activity carried out in the eastern area of Portion D, closest to Greenview Terrace, was not totally screened and line of sight of the breaker was observed from the NSR. | system has been implemented. Follow up Action The bamboo scaffold was extended further away from stage 3 scaffold to further screen off the activities to the Greenview. The length of the extension was about 8 to 10 m. A strong reminded was given to the relevant staff and sub-contractor and the barrier should be placed in the right orientation before breaking. | Closed |

Contract No. DC/2007/12
Design and Construction of Tsuen Drainage Tunnel
Environmental Monitoring and Audit
