1 Introduction

1.1 Agreement No. CE65/2013(EP) Post-Construction Ecological Monitoring of River Improvement Work in Upper Lam Tsuen River, She Shan River and Upper Tai Po River – Investigation required a post-construction ecological monitoring programme when the project completed. An annual report is required to be prepared for 2015 by using the collected data from surveys of January to December conducted by Agreement No. CE65/2013(EP) Post-Construction Ecological Monitoring of River Improvement Work in Upper Lam Tsuen River, She Shan River and Upper Tai Po River – Investigation. This report aims to summaries and present findings of the post construction ecological monitoring carried out during 2015.

1.2 The scope of the ecological monitoring was detailed in EM & A Manual of the project. In brief, the survey aimed to collect data on abiotic factors such as water quality, substratum characteristics, water flow as well as flora and fauna.

1.3 China Hong Kong Ecology Consultants Ltd. was committed by Allied Environmental Consultants Ltd (AEC) to undertake the ecological monitoring tasks for the project from December 2014

1.4 This is the number 2 annual report for the project summarising monitoring results collected from January to December of 2015. It contains the following subsections:

- Summary of major points
- Monitoring Methods
- Monitoring Results
- Summary and Comments

2 Summary of Major Points

- Field ecological monitoring was undertaken since July 2008;
- Presentation of species abundance and species richness for fauna and flora using graphs;
- Aquatic and riparian vegetation re-established quickly after completion of drainage works;
- Adult Hong Kong Newt were commonly found during monitoring survey and its abundance was higher than before;
- Fish's abundance and species richness recovered after completion of construction in late 2013 and returned to original level in baseline monitoring. Low number of fish was usually recorded during wet season throughout 2015 due to seasonality. *;*
- Odonata number increased after completion of construction and that record was higher than baseline level. Number of odonata fluctuated along different season, especially high abundance of odonata was recorded during wet season ;
- Number of bird species was recorded with no significant change from baseline to post-construction monitoring. Bird's abundance recovered after completion of construction in later 2013. Compared to baseline monitoring, more individuals of bird were recorded in post-construction monitoring.

- The species diversity of aquatic marco-invertebrate was low during construction period and recovered after construction completed. Species diversity kept in a stable level throughout 2015 ; and
- Measured water quality and physical characteristics showed no apparent change, overall water quality is defined as clean and retain in an acceptable level to fauna and flora in Lam Tsuen River.

3 Monitoring Methodology

3.1 Riparian Vegetation

Riparian vegetation, including aquatic and emergent, was sampled using line transects along the affected river channel and riparian habitat. Species, relative abundance and average heights were recorded. Vegetation surveys were conducted at four selected belt transects with two located at the lower portion (T3 and T4) of the river channel and another two at the upper section (T1 and T2) of the river respectively (**Figure 1**). The belt transects was run across the river channel in order to collect quantitative data of the vegetation, e.g., species inventory, height, percentage cover. Qualitative data of plants was collected by recording plant species, relative abundance along line transect. Nomenclature and protection status of the species followed those documented in Lai *et al.* (2004) and Hong Kong Herbarium (2015).

3.2 Avifauna

Avifauna survey was conducted during post construction monitoring period. Special attention was given to the river channel and corridor area which birds used as feeding and foraging habitat. Avifauna surveys were undertaken in the early morning plus species recorded in the rest of the day when conducting other taxonomic groups (benthic, fish, insect) monitoring. Numerical abundance was recorded at fixed count points within a radius of 30-50m according to landscape feature and visual penetration extent. The duration of the point count of birds was standardized for 10 minutes at each location in order to collect comparable data. Transect count along accessible section of river channel were used in order to collect qualitative data. Binoculars and digital camera were the main items of equipment used. Nomenclature and protection status of the species follows the AFCD website (www.hkbiodiversity.net) and Carey *et al.* (2001).

The point count was conducted at four locations with two located at the lower portion of the river channel (T3&T4) and the other two located at the upper section of the river (T1&T2). The point count and survey transect locations for the bird survey and sampling sites for surveys of other faunal groups and flora were presented in **Figure 1.**

3.3 Adult Odonata Survey

Adult Odonata survey was conducted along transects (**Figure 1**). Binoculars, digital camera and hand net were utilized to aid identification. Numerical abundance, species identity and other notable behavior were recorded. Nomenclature and protection status of the species followed those documented in the AFCD website (www.hkbiodiversity.net), Wilson *et al.* (2004) and Tam *et al.* (2011). Adult Odonata survey was conducted along line transects in parallel with river channel within the works area where access was permitted.

3.4 Aquatic Macro-invertebrates

Macro-invertebrates in the river channel were surveyed. Sampling was conducted at five sampling locations including two sites located at the lower portion (T3 and T4) of the river channel and another two sites at the upper section (T1 and T2) of the river, as well as the reference site. Those sampling sites covered major type of river habitats, e.g. river pool and riffle (**Figure 1**) Five replicates were taken at each sampling point and pool together for further sample sorting and identification. Kick sampling and hand netting were the survey methodologies for river organisms. Dissection microscope and digital camera were used to aid identification and enumeration. Numerical abundance and species identity were recorded. Nomenclature and protection status of the species has followed those documented in the AFCD website (www.hkbiodiversity.net) and other literatures such as Dudgeon (1994).

3.5 Fish and Newt

Fish community and *Paramesotriton hongkongensis* at the specified river channel was monitored by live trapping, hand netting and direct observation methods.

Sampling was conducted at five sampling locations including two sites located at the lower portion (T3 and T4) of the river channel and another two sites at the upper section (T1 and T2) of the river, as well as reference site. Those sampling sites covered major type of river habitats, e.g. river pool and riffle (**Figure 1).** The number of the observed fish and newt was estimated and recorded. Nomenclature and protection status of the species followed those documented in the AFCD website (www.hkbiodiversity.net) and Lee *et al.* (2004).

3.6 Abiotic Data Collection

3.6.1 Water Quality Monitoring

Dissolved oxygen level, pH value, conductivity, salinity, BOD and nutrient level (nitrate and ammonium) were measured and analyzed by conventional methods in situ or in laboratory. The instruments for measuring dissolved oxygen level, pH value, conductivity, salinity were model: DO-5510, AZ8685, AZ8361 and AZ8374 respectively. All the instruments were calculated every monitoring month according to the operation manuals in order to obtain the precise result. BOD test took 5 days to complete within darkness incubator with stable temperature at 20^{o}C and was performed using model: DO-5510 for measuring dissolved oxygen. Nutrient levels including nitrate and ammonia were performed in laboratory by applying the In-house method SOP056 (FIA) and SOP057 (FIA) respectively.

3.6.2 Sediment Characteristics

Sediment/substrate characteristics were recorded of sediment cover in percentage e.g. mud, sand, rock, boulder and cemented bottom in the river bed at sampling sites.

3.6.3 Water Flow

Water flow rates in river channel were measured by recording the time taken for a floating object (e.g. floating ball) to cover a measured distance. The

sampling locations for surveys were presented in **Figure 1.**

4 Monitoring Results

4.1 Vegetation

Vegetation has generally covered the gabion wall/retaining wall along the Upper Lam Tsuen River and part of the river bed. Over 60 flora species were recorded within the survey transects along the river course in 2015. Most were wetland species with a few floating aquatic species such as *Lemna minor*, *Pistia stratiotes*and and submerged plants such as *Hydrilla verticillata*. More dense vegetation coverage was observed during dry season when there was no flooding (Photos 1-4). The recorded floras were generally in good health and the height of the dominated riparian grass and herb species were in a range from 0.1m to over 3m as observed along survey transect. Dominant flora species were shown in the **Table 4.1** marked with relative abundance sign "+++". Results of vegetation survey and belt transect survey were presented in **Table 4.1** and **Table 4.2**. **Figure 1** shows the transect line for the flora surveys.

Photo 3. General view of Lam Tsuen River (Middle section) in September.

Photo 4. General view of Lam Tsuen River (Middle section) in December.

4.2 Fauna

4.2.1 Avifauna

Avifauna surveys were undertaken from July 2008 to December 2015 along survey transects and at four selected point count locations. Transect and Point Count locations were shown on **Figure 1**. Result of bird survey was presented in the **Table 4.3.** **Figure 4.1** and **Figure 4.2** showed the abundance of bird and number bird species recorded at Lam Tsuen River from baseline monitoring to post-construction monitoring respectively. During construction period, number of bird was relatively low due to the disturbance raised from construction. Following the completion of construction in late 2013, bird's abundance raised back to the previous level recorded in baseline monitoring with little increment. A sharp peak of bird's abundance was recorded in January 2010, that peak was created by a large group of very common bird *Pycnonotus sinensis* and it was not related to construction work. For the number of bird species at Lam Tsuen Rvier, there is no significant change in average from baseline monitoring to current monitoring. Natural fluctuation could be seen from the record. In total, 46 species of birds were recorded from the bird surveys throughout the year. All the birds are under protection of Wild Animals Protection Ordinance (Cap. 170). Some birds of conservation importance recorded at Lam Tsuen River in 2015 were listed in the **Table 4.2.1** below. Photos 5-12 are showing some birds species which were recorded in Lam Tsuen River during 2015.

Table 4.2.1 Birds recorded with conservation interest

Common Name	Scientific name	Chinese Name	Protection status	Recorded month within 2015
Black Kite	*Milvus lineatus*	麻鷹	Cap.586, RC	1,2,3,4
Chinese Pond Heron	*Ardeola bacchus*	池鷺	RC	Every month
Common Buzzard	*Buteo buteo*	普通鵟	Cap. 586	5,11
Great Coucal	*Centropus sinensis*	褐翅鴉鵑	VU	1,2,3,4,5,6,11
Little Egret	*Egretta garzetta*	小白鷺	RC	Every month
Great Egret	*Ardea alba*	大白鷺	RC	3,4,6,7,8
Night Heron	*Nycticorax nycticorax*	夜鷺	LC	8,9,10

Key: RC – Regional Concern; LC – Local Concern by Fellowes et al. (2002)

4.2.2 Adult Odonata Survey

Records of odonata along the Upper Lam Tsuen River from July2008 to December of 2015 are presented in **Table 4.4**. A graph of odonate species richness is shown in **Figures 4.3**, it indicates that species number of odonate was fluctuating along with different season and more species were recorded after completion of construction in late 2013. Better water quality and increased colonization of vegetation were the main reason of increment in odonata species. The maximum number of odonata species was recorded during wet season and a big contrast that significant low number of species was recorded during dry season. It is assumed that most species of odonata in Hong Kong have a peak emergence in spring and continue to emerge with decreasing number until late autumn (Wilson *et al.*, 2004 & Tam *et al.*, 2011). In total, 19 species of donate were recorded throughout the year. The Sampling location was shown in **Figure 1**. Photographs of some of the recorded dragonfly and damselfly species are presented below.

4.2.3 Aquatic Macro-invertebrates

Aquatic-net and kick sampling were performed at the Upper Lam Tseun River. 17 species were found during the ecology surveys undertaken since baseline monitoring. The river benthic fauna collected was mainly comprised of insects, mollusks and crustaceans. During construction period, species numbers dropped significantly due to disturbance raised from construction. Following the completion of construction, species numbers returned to original level recorded at baseline monitoring and kept stable until late 2015, shown as **Figure 4.4**. Details of recorded of river benthic fauna refers to **Table 4.5.** Sampling location was shown on **Figure 1**.

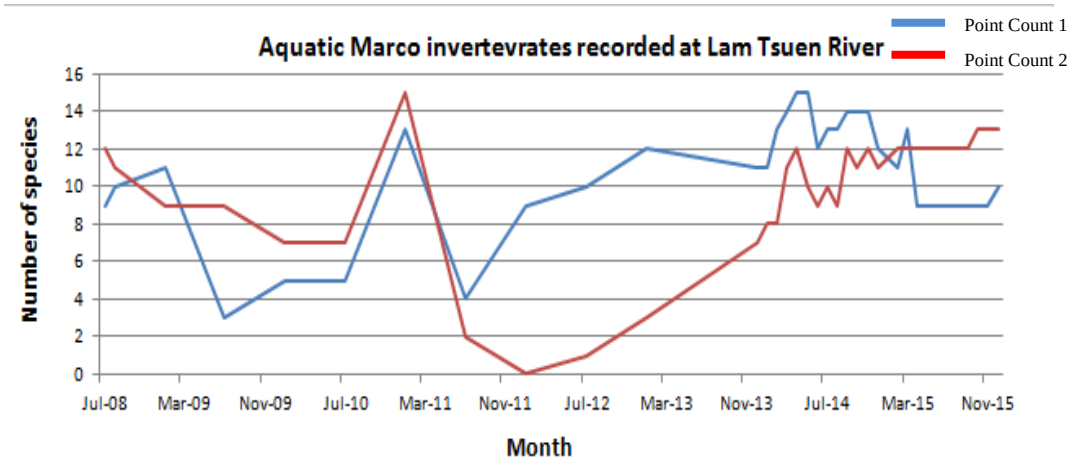

Figure 4.4. Species richness of aquatic macroinvertebrate.

4.2.4 Hong Kong Newt

Surveys of Hong Kong Newt were conducted at Upper Lam Tsuen River from January to December of 2015. Adult Hong Kong Newt was recorded in every survey throughout the year. They were likely roosting in the habitat covered with dense vegetation. Riparian vegetation grown along the channel especially along water margin could provide shelter and breeding habitat for Hong Kong Newt (Photos 21-24). Their estimated abundance was higher than previous stages during baseline and impact monitoring as Lam Tsuen River has become more mature and stable for Hong Kong Newt to colonize. **Figure 4.5** showed the abundance of Hong Kong Newt recorded in Lam Tsuen River from 2008 to 2015. Hong Kong Newt is listed in Wild Animals Protection Ordinance (Cap. 170) and classified as "Near Threatened" under IUCN Red List Status and as "Potential Global Concern" by Fellowes *et al.* (2002). Record of Hong Kong Newts can be referred to **Table 4.6**.

Photo 21. Hong Kong Newt preferred river habitat.	Photo 22. Hong Kong Newt captured by hand net.
	
Photo 23. Hong Kong Newt roosting under rock.	Photo 24. Dead Hong Kong Newt.

4.2.5 River Fish Fauna

Fish surveys were performed at Upper Lam Tsuen River during field monitoring since July 2008 (Photos 25). In total, 18 species of freshwater fish, including species recorded from reference site, were recorded throughout 2015. Details of recorded of fish fauna refers to **Table 4.6.** *Oreochromis niloticus* (Photo 26) and *Rhinogobius spp* (Photo 27) were the dominated species in the river. *Acrossocheilus parallens* is a rare freshwater fish species in Hong Kong and it was observed at a few locations along the surveyed river with pool (Photo 28). The trend of the number of fish species are shown in **Figure 4.6**. The data showed that number of fish species was comparatively low during construction period and increased after the completion of construction. The average number of fish species recorded in post-construction monitoring was similar to the baseline level.. Fish abundance in the 2x2 meter recording areas was significantly low during construction period due to disturbance raised from construction. After completion of construction in late 2013, fish abundance increased sharply and returned to the original level in baseline monitoring. Natural fluctuation was recorded throughout 2015. It is assumed that low abundance of fish was caused by heavy rainfall and floods which dispersed fish in the river during wet season. (**Figure 4.7)**. Sampling location was shown on **Figure 1**.

4.3 Abiotic Data

Data on water quality and major river hydrological feature (water flow and substratum) of the river were collected and are presented in the **Table 4.7.**

All the parameters measured in 2015 were kept in stable within satisfied level of the river condition. There was no significant fluctuation on any parameter observed except only slightly difference on dissolved oxygen and conductivity were recorded throughout the year.

The river substratum was comprised of over 75% stones or rocks in most of the river sections with moderate water flow (up to 0.2m/second at pool and 0.6m/second at riffle).

5 Summary and Commentary

5.1 Data presented and analyzed in this report were derived from ecology surveys conducted since July 2008. The post-construction ecological monitoring will be continued and it is expected that long term monitoring will reveal even more information on ecological recovery and habitat improvement.

5.3 Aquatic and riparian vegetation re-established quickly after the completion of the drainage works as demonstrated by the photographs in this report. Aquatic and marsh plants growing on the riverbed and along the water margins provide breeding and feeding habitat for a variety of aquatic life including insects, shrimps, fish and the Hong Kong Newt.

5.4 The adult Hong Kong Newt was record in every survey throughout the 2015. They were usually found in the habitat covered with dense vegetation. Their abundance was higher than original level in baseline monitoring and kept increasing following the river became more stable and mature.

5.5 Fish's abundance and species number recovered after completion of construction work since late 2013. The number of fish species was recorded in a stable level during 2015. Natural fluctuation was observed in fish's abundance during post-construction monitoring.Significant low abundance of fish was usually recorded during wet season, it was assumed that fishes were dispersed by heavy rain and floods. *Acrossocheilus parallens* a rare freshwater fish species in Hong Kong, was found in some locations with pool.

5.6 Abundance of the aquatic marco-invertebrates was low during construction period. After completion of construction, abundance recovered and remained in at a stable level during post-construction monitoring.

5.7 Species composition of avifauna at Lam Tsuen River was observed with no significant change from baseline motoring to post-construction monitoring. The average abundance of avifauna recorded in post-construction monitoring was slightly higher than that record in baseline and impact monitoring. Natural fluctuation in abundance and species richness were observed during post-construction monitoring.

5.8 Odonata had the lowest number during construction period. Following the completion of construction in late 2013, more species were recorded in post-construction monitoring. Better water quality and increased colonization of vegetation were the main reason of increment in odonata species. In addition, odonata number also showed natural fluctuation that significant low number was recorded during dry season.

5.9 Measured water quality and physical characteristics showed no apparent change. The water quality of the surveyed river was not polluted although low concentration of nutrients will discharge to the river from the nearby agriculture lands and resident houses.

Asteraceae	*Eclipta prostrata*	鱧腸															+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Asteraceae	*Spilanthes paniculata*	金鈕扣															+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Asteraceae	*Wedelia trilobata*	三裂葉蜈蚣菊																																							
Asteraceae	*Sonchus arvensis*	苣賣菜																																							
Athyriaceae	*Callipteris esculenta*	菜蕨																	+	+	+	+	+	+	+	+	+	+													
Blechnaceae	*Blechnum orientale*	烏毛蕨											+	+	+	+	+	+	+	+	+	+	+	+	+																
Brassicaceae	*Cardamine flexuosa*	碎米薺		+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Brassicaceae	*Nasturtium officinale*	西洋菜		+	+	+	+	+		+			+	+++	+++	+++	+	+	+	+	+	++	++	++	++	+	++	++	++	+	+	+	+	+	+	+	+	+	+	+	++
Brassicaceae	*Rorippa indica*	塘葛菜								+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Brassicaceae	*Capsella bursa-pastoris*	薺菜															+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Buddlejaceae	*Buddleja asiatica*	白背楓															+	+	+	+	+	+	+	+																	
Caesalpiniaceae	*Cassia alata*	翅莢決明	+	+	+	+	+		+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Caryophyllaceae	*Drymaria cordata*	荷蓮豆															+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Caryophyllaceae	*Myosoton aquaticum*	鵝腸菜															+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Commelinaceae	*Commelina diffusa*	節節草	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	++	++	++	++	++	+++	+++	+++	+++	++	++	++	++	++	++	++	++	++	++	++	++
Convolvulaceae	*Ipomoea cairica*	五爪金龍		+	+	+	+	+	+	+	+	+	+	+	+	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++	++
Convolvulaceae	*Pharbitis nil*	牽牛				+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+																
Convolvulaceae	*Ipomoea aquatica*	蕹菜											+	+	+	+	+	+	+	+	+	+	+	+	+																
Cucurbitaceae	*Solena amplexicaulis*	茅瓜															+	+	+	+	+	+	+	+	+																
Cuscutaceae	*Cuscuta australis*	南方菟絲子																							+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Cyperaceae	*Cyperus flabelliformis*	風車草														+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Cyperaceae	*Cyperus sp.*	莎草														+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Euphorbiaceae	*Macaranga tanarius*	血桐	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Euphorbiaceae	*Bischofia javanica*	秋楓															+	+	+	+	+	+	+						+	+	+	+	+	+	+	+	+	+	+	+	+
Fabaceae	*Pueraria lobata*	野葛	++	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Fabaceae	*Crotalaria pallida*	猪屎豆								+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+																
Fabaceae	*Sesbania cannabina*	田菁										+	+	+	+	+	+	+	+	+	+	+	+	+	+																
Fabaceae	*Dalbergia benthamii*	兩廣黃檀																																							
Fabaceae	*Pueraria lobata var.thomsonii*	粉葛																							+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Lauraceae	*Machilus breviflora*	短序潤楠																																							
Lauraceae	*Machilus pauhoi*	刨花潤楠																																							
Magnoliaceae	*Michelia alba*	白蘭	+	+	+	+	+	+							+	+	+	+	+	+	+	+	+	+																	
Malvaceae	*Hibiscus rosa-sinensia*	大紅花															+	+	+	+	+	+	+	+																	
Mimosaceae	*Acacia confusa*	台灣相思	+	+	+	+	+	+							+	+	+	+	+	+	+	+	+	+																	
Mimosaceae	*Leucaena leucocephala*	銀合歡		+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Mimosaceae	*Mimosa pudica*	含羞草								+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+																
Mimosaceae	*Calliandra haematocephala*	紅絨球										+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Moraceae	*Ficus hispida*	對葉榕	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+

Table 4.1. Flora species recorded along the Lam Tsuen River including riparian habitat.

			Baseline monitoring	Impact monitoring						Impact monitoring				Post Construction monitoring			Post Construction monitoring								Post Construction monitoring								Post Construction monitoring				Post Construction monitoring			
Family	Species name	Species name in Chinese	Jul to Aug 08	Jan-09	Jul-09	Jan-10	Jul-10	Jan-11	Jul-11	Jan-12	Jul-12	Aug-13	Dec-13	Jan-14	Feb-14	Mar-14	Apr-14	May-14	Jun-14	Jul-14	Aug-14	Sep-14	Oct-14	Nov-14	Dec-14	Jan-15	Feb-15	Mar-15	Apr-15	May-15	Jun-15	Jul-15	Aug-15	Sep-15	Oct-15	Nov-15	Dec-15
Moraceae	*Ficus variegata*	青果榕																								+	+	+	+	+	+	+	+	+	+	+	+
Moraceae	*Ficus subpisocarpa*	筆管榕																																			
Moraceae	*Ficus microcarpa*	細葉榕																																			
Musaceae	*Musa paradisiaca*	大蕉	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Myrtaceae	*Cleistocalyx nervosum*	水翁															+	+	+	+	+	+	+	+	+												
Nyctaginaceae	*Bougainvillea spectabilis*	勒杜鵑	+	+	+	+	+	+								+	+	+	+	+	+	+	+	+	+												
Oleaceae	*Ligustrum sinense*	山指甲																								+	+	+	+	+	+	+	+	+	+	+	+
Onagraceae	*Ludwigia erecta*	美洲水丁香											++	++	+	+	+	+	+	++	++	++	++	++	++	+	+	+	+	+	+	+	+	+	+	+	+
Oxalidaceae	*Oxalis corniculata*	酢漿草											+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Plantaginaceae	*Plantago major*	車前草															+	+	+	+	+	+	+	+	+												
Poaceae	*Panicum repens*	枯骨草	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+												
Poaceae	*Pennisetum purpureum*	象草	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	++	++	++	++	+	+	+	+	+	+	+	+
Poaceae	*Pennisetum alopecuroides*	狼尾草																														+	+	+	+	+	+
Poaceae	*Rhynchelytrum repens*	紅毛草	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+												
Poaceae	*Microstegium ciliatum*	剛秀竹	++	++	++	++	++	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Poaceae	*Brachiaria mutica*	巴拉草	++	+	++	++	++	++	+	++	++	++	++	++	++	++	++	++	++	+++	+++	+++	+++	+++	+++	+++	+++	+++	+++	+++	+++	+++	+++	+++	+++	+++	+++
Poaceae	*Miscanthus floridulus*	五節芒		+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Poaceae	*Arundinella nepalensis*	石珍芒		+	+	+	+	+		+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Poaceae	*Panicum maximum*	大黍		+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+												
Poaceae	*Coix lacryma-jobi*	薏苡				+	+	+						+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Poaceae	*Arundo donax*	蘆竹															+	+	+	+	+	+	+	+	+												
Poaceae	*Chloris virgata*	虎尾草															+	+	+	+	+	+	+	+	+												
Poaceae	*Setaria palmifolia*	棕葉狗尾草																																			
Polygonaceae	*Rumex trisetifer*	假菠菜		+	+	+	+	+		+					+	+	++	++	++	++	++	++	++	++	++	+	++	++	++	++	++	++	++	++	+	+	+
Polygonaceae	*Polygonum chinense*	火炭母															+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Polygonaceae	*Polygonum hydropiper*	水蓼															+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Polygonaceae	*Polygonum glabrum*	光蓼																														+	+	+	+	+	+
Polygonaceae	*Polygonum perfoliatum*	杠板歸															+	+	+	+	+	+	+	+	+												
Polygonaceae	*Polygonum lapathifolium*	大馬蓼															+	+	+	+	+	+	+	+	+												
Portulacaceae	*Portulaca oleracea*	馬齒莧							+	+	+									+	+	+	+	+	+												
Ranunculaceae	*Ranunculus sceleratus*	石龍芮														+	++	+	+			+	+			+	+	+	+	+	+	+	+	+	+	+	+
Rubiaceae	*Adina pilulifera*	水團花															+	+	+	+	+	+	+	+	+												
Sapindaceae	*Dimocarpus longan*	龍眼		+	+	+	+	+							+	+	+	+	+	+	+	+	+	+	+												
Scrophulariaceae	*Scoparia dulcis*	野甘草															+	+	+	+	+	+	+	+	+												
Scrophulariaceae	*Lindernia anagallis*	長蕊母草															+	+	+	+	+	+	+	+	+												
Solanaceae	*Solanum nigrum*	龍葵				+	+	+		+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+												
Solanaceae	*Lycopersicon esculentum*	番茄											+	+	+	+	+																				
Solanaceae	*Solanum torvum*	水茄															+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Sterculiaceae	*Sterculia lanceolata*	假蘋婆															+	+	+	+	+	+	+	+	+												
Sterculiaceae	*Byttneria aspera*	刺果藤															+	+	+	+	+	+	+	+	+												
Thelypteridaceae	*Cyclosorus parasiticus*	華南毛蕨															+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Thelypteridaceae	*Macrothelypteris torresiana*	普通針毛蕨															+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Tiliaceae	*Microcos nervosa*	布渣葉																																			
Ulmaceae	*Celtis sinensis*	朴樹	+	+	+	+	+	+							+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Ulmaceae	*Trema orientalis*	異色山黃麻																+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Ulmaceae	*Trema tomentosa*	山黃麻										+	+	+	+	+	+	+	+	+	+	+	+	+	+												
Urticaceae	*Pilea microphylla*	透明草			+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Verbenaceae	*Duranta erecta*	假連翹																								+	+	+	+	+	+	+	+	+	+	+	+
Urticaceae	*Boehmeria nivea*	苧麻			+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Verbenaceae	*Lantana camara*	馬纓丹	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Vitaceae	*Cayratia corniculata*	角花烏蘞莓	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Floating Plant																																					
Lemnaceae	*Lemna minor*	浮萍		+											+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
Submerged Plant																																					
Hydrocharitaceae	*Hydrilla verticillata*	黑藻														+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+

Post-Construction Ecological Monitoring of River Improvement Work in Upper Lam Tsuen River, She Shan River and Upper Tai Po River – Investigation

2015 Annual Report
She Shan River

Table of Contents **Page**

TABLE

1 Introduction

1.1 Agreement No. CE65/2013(EP) Post-Construction Ecological Monitoring of River Improvement Work in Upper Lam Tsuen River, She Shan River and Upper Tai Po River – Investigation required a post-construction ecological monitoring programme when the project completed. An annual report is required to be prepared for 2015 by using the data collected from surveys of January to December conducted by Agreement No. CE65/2013(EP) Post-Construction Ecological Monitoring of River Improvement Work in Upper Lam Tsuen River, She Shan River and Upper Tai Po River – Investigation. This report aims to summaries and present findings of the post construction ecological monitoring carried out during 2015.

1.2 The scope of the ecological monitoring was detailed in EM & A Manual of the project. In brief, the survey aimed to collect data on abiotic factors such as water quality, substratum characteristics, water flow as well as flora and fauna.

1.3 China Hong Kong Ecology Consultants Ltd. was committed by Allied Environmental Consultants Ltd (AEC) to undertake the ecological monitoring tasks for the project from December 2014.

1.4 This is the number 2 annual report for the project summarising monitoring results collected from January to December of 2015. It contains the following subsections:

- Summary of major points
- Monitoring Methods
- Monitoring Results
- Summary and Comments

2 Summary of Major Points

- Field ecological monitoring were undertaken during January to December 2015;
- Presentation of species abundance and species richness for fauna and flora using graphs;
- Fauna and flora along the drainage project sections is in a process of re-establishing or restoration;
- Hong Kong Newt was recorded at middle section of the river;
- The species richness and abundance of marco-invertebrate , odonata and avifauna were in natural fluctuation;
- A significant low number of fish was observed during wet season as large amount of fishes were affected by heavy rain or flooding; and
- The measured water quality was generally acceptable.

3 Monitoring Methodology

3.1 Riparian Vegetation

Riparian vegetation, including aquatic and emergent, was sampled using line transects along the affected river channel and riparian habitat. Species, relative abundance and average heights were recorded. Vegetation survey was conducted at three selected belt transects located at the upper (T1), middle

(T2) and lower portion (T3) of the river channel respectively (**Figure 1**). The belt transects was run across the river channel in order to collect quantitative data of vegetation, e.g., species inventory, height, percentage cover. Qualitative data of plants was collected by recording plant species along line transect, e.g., species inventory, relative abundance. Nomenclature and protection status of the species has followed those documented in the Lai *et al.* (2004) and Hong Kong Herbarium (2015).

3.2 Avifauna

Avifauna survey was conducted during the post construction monitoring period. Special attention was given to those stream channel area which birds used as feeding and foraging habitat. Avifauna surveys were undertaken in the early morning plus species recorded in the rest of the day when conducting other taxonomic groups (benthic, fish, insect) monitoring. Numerical abundance was recorded at fixed count points within a radius of 30 to 50m according to landscape feature and visual penetration extent. The duration of the point count of birds was standardized for 10 minutes at each location in order to collect comparable data. Transect count along accessible section of river channel were used in order to collect qualitative data. Binoculars and digital camera were the main items of equipment used. Nomenclature and protection status of the species has followed in the AFCD website (www.hkbiodiversity.net) and Carey *et al.* (2001).

The point count was conducted at three locations located at the lower (T3), middle (T2) and upper (T1) portion of the river channel respectively. The point count and survey transect locations for the bird survey and sampling sites for surveys of other faunal groups and flora were presented in **Figure 1.**

3.3 Adult Odonata Survey

Adult Odonata survey was conducted along transects (**Figure 1)**. Binoculars, digital camera and hand net were utilized to aid identification. Numerical abundance, species identity and other notable behavior were recorded. Nomenclature and protection status of the species has followed those documented in the AFCD website (www.hkbiodiversity.net), Wilson *et al.* (2004) and Tam *et al.* (2011). Adult Odonata survey was conducted along line transects in parallel with river channel within the works area where access was permitted.

3.4 Aquatic Macro-invertebrates

Macro-invertebrates in the riverbed were surveyed. Four sampling sites were selected to collect necessary macro-invertebrate fauna for ecological monitoring information, which covered upper (T1), middle (T2) and lower (T3) sections of the river respectively, as well as reference site (**Figure 1**). Five replicates were taken at each sampling point and pool together for further sample process. Kick sampling and hand netting were the survey methodologies for stream organisms. Dissection microscope and digital camera were used to aid identification and enumeration. Numerical abundance, species identity was recorded. Nomenclature and protection status of the species has followed those documented in the AFCD website (www.hkbiodiversity.net), and other literatures such as Dudgeon (1994).

3.5 Fish Population and Hong Kong Newt

Fish community at the specified river channel was monitored by live trapping, hand netting and direct observation methods. Hong Kong newt was surveyed by direct observation and hand netting as well.

Sampling was conducted at four proposed sampling locations at upper (T1), middle (T2), lower (T3) sections and reference site respectively. Those sampling sites covered major type of stream habitats, e.g. river pool and riffle (**Figure 1**). The number of the observed fish was estimated and recorded. Nomenclature and protection status of the species has followed those documented in the AFCD website (www.hkbiodiversity.net) and Lee *et al.* (2004).

3.6 Abiotic Data Collection

3.6.1 Water Quality Monitoring

Dissolved oxygen level, pH value, conductivity, salinity, BOD and nutrient level (nitrate and ammonium) were sampled and analyzed by conventional methods in situ or in laboratory. The instruments for measuring dissolved oxygen level, pH value, conductivity, salinity were model: DO-5510, AZ8685, AZ8361 and AZ8374 respectively. All the instruments were calculated every monitoring month according to the operation manuals in order to obtain the precise result. BOD test took 5 days to complete within darkness incubator with stable temperature at 20^{o}C and was performed using model: DO-5510 for measuring dissolved oxygen. Nutrient levels including nitrate and ammonia were performed in laboratory by applying the In-house method SOP056 (FIA) and SOP057 (FIA) respectively.

3.6.2 Sediment Characteristics

Sediment/substrate characteristics were recorded of sediment cover in percentage e.g. mud, sand, rock, boulder and cemented bottom in the stream bed at sampling sites.

3.6.3 Water Flow

Water flow rates in river channel were measured by recording the time taken for a floating object (e.g. floating ball) in a measured distance. The sampling locations for surveys were presented in **Figure 1.**

4 Monitoring Results

4.1 Vegetation

Over 60 flora species was recorded within the survey transects along the river course within 2015. Most of the recorded floras were comprised of marsh species with few floating aquatic species such as *Lemna mino* and submerged plant such as *Hydrilla verticillata*. The height of the dominated riparian grass and herb species were in a range from 0.2m to 2m as observed along survey transect. Dominant flora species were shown in the **Table 4.1** marked with relative abundance sign "+++". Vegetation has generally covered the riparian habitat in upper sections and part of the riverbed. Aquatic plants *Brachiaria*

mutica and *Commelina diffusa* were the most abundant plants found at most section of the river channel all of the years. An aquatic plant, which is also a vegetable, *Nasturtium officinale* was recorded especially high in abundance during dry season when there was no flooding occurred. The composition of vegetation species had not changed greatly throughout the year, but relatively low vegetation coverage was recoded during wet season when flooding event was frequently occurred or sometimes in dry season after vegetation clearance work at lower to middle section (Photos 1-4). Results of vegetation survey and belt transect survey were presented in **Table 4.1** and **Table 4.2**. **Figure 1** shows the transect line for the flora surveys.

Photo 4. General view of She Shan River (Middle section) in December.

4.2 Fauna

4.2.1 Avifauna

An avifauna surveys were undertaken from January to December 2015 along survey transect and at three selected point count locations. Transect and Point Count locations were shown on **Figure 1**. Result of bird survey was presented in the **Table 4.3**. The summarised results showed that there was no obvious change on species richness of avifauna at She Shan River and the number of avifauna was presenting a natural fluctuation, shown as **Figure 4.1** and **Figure 4.2.** In total, 43 species of birds were recorded during the bird surveys within project area throughout the year. 9 species of total recorded were wetland dependent species including *Ardea alba, Alcedo atthis, Actitis hypoleucos, Motacilla cinerea, Tringa ochropus, Egretta garzetta, Motacilla alba, Ardeola bacchus* and *Amaurornis phoenicurus,* they were commonly found forging in the river channel. The most common terrestrial birds recorded included – *Pycnonotus jocosus*, *Sturnus nigricolli*s, *Copsychus saularis,* and *Streptopelia chinensis*. Birds with conservation interest recoded during 2015 were listed in the table below. Photos 5-12 are showing some birds recorded at She Shan River during 2015.

Common Name	Scientific name	Chinese Name	Protection status	Recorded month within 2015
Ashy Drongo	*Dicrurus leucophaeus*	灰卷尾	LC	12
Black Kite	*Milvus lineatus*	麻鷹	Cap.586, RC	1,2,3,4
Chinese Pond Heron	*Ardeola bacchus*	池鷺	RC	Every month
Common Emerald Dove	*Chalcophaps indica*	綠翅金鳩	VU	8
Common Buzzard	*Buteo buteo*	普通鵟	Cap. 586	1,2,12
Crested Goshawk	*Accipiter trivirgatus*	鳳頭鷹	CR, Cap.586	1,2,4,10
Crested Serpent Eagle	*Spilornis cheela*	蛇鵰	VU,LC, Cap.586	3,5,8,9,10,11

Great Coucal	*Centropus sinensis*	褐翅鴉鵑	VU	1,2,3,4,5,8
Little Egret	*Egretta garzetta*	小白鷺	RC	Every month
Great Egret	*Ardea alba*	大白鷺	RC	1,2,9
Grey Heron	*Ardea cinerea*	蒼鷺	PRC	4,11

Key:

RC – Regional Concern; LC – Local Concern; PRC – Potential Regional concern by Fellowes et al. (2002)

Cap.586 – Endangered Species of Animals and Plants Ordinance (Cap. 586)

VU - Vulnerable in China Red Data Book Status

CR - Rare in China Red Data Book Status

4.2.2 Adult Odonata Survey

Odonata surveys were performed from January to December 2015 and a list of recorded odonata species in She Shan River is shown in **Table 4.4**. A graph of odonata species richness is shown in **Figures 4.3**, it indicates that species number of odonata fluctuated among different seasons. The maximum number of odonata species was recorded during wet season and a big contrast showing species number of odonata in dry season was significantly low. It is assumed that most species of odonata in Hong Kong have a peak emergence in spring and continue to emerge with decreasing number until late autumn (Wilson *et al.*, 2004 & Tam *et al.*, 2011). Thus, the low species diversity during dry season was mainly related to seasonality. In total, 16 species of odonata were recorded in 2015 and the pattern of species richness was similar to those results collected in previous years that number of species was fluctuating along with different seasons. Sampling location was shown on **Figure 1**. Some of the recorded dragonfly and damselfly species are presented in Photos (13-22).

Photo 21. Odonata - *Rhinocypha perforata perforata*	Photo 22. Odonata - *Trithemis festiva*

4.2.3 Aquatic Macro-invertebrates

The river benthic fauna collected was mainly comprised of insects, mollusks and crustaceans. Over 20 species were recorded during ecology surveys undertaken from January to December 2015. The species richness was observed with no significant change, shown as **Figure 4.3**. Details of recorded benthic fauna refer to **Table 4.5**. Sampling location was shown on **Figure 1**.

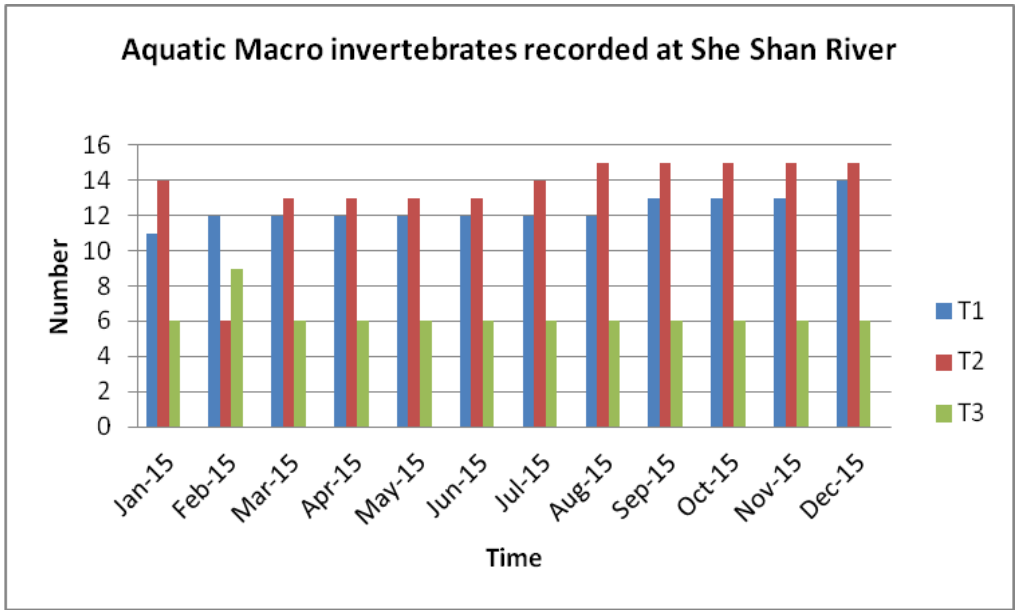

Figure 4.3 Species richness of aquatic macroinvertebrate.

4.2.4 Hong Kong Newt

Survey of Hong Kong Newt was conducted at She Shan River from January to December of 2015. Adult Hong Kong Newt was only recorded at middle section in She Shan River, where covered with dense vegetation. Hong Kong Newt was absent from July to November, assuming that they were back to terrestrial habitats during their breeding period in wet season (Dudgeon, 2003).

Photos 23-24 are showing the potential habitat for Hong Kong Newt and Hong Kong Newt captured by hand net respectively. Record of Hong Kong Newts can be referred to **Table 4.6.**

Photo 23. Hong Kong Newt preferred habitat.

Photo 24. Hong Kong Newt.

4.2.5 Fish Fauna

Fish surveys were performed at She Shan River from January to December 2015 and total 13 species of freshwater fish were recorded. *Zacco platypus* and *Oreochromis niloticus* were the dominant fish species in the river channel (Photos 25-28). There was no apparent change on the species number and composition at She Shan River within 2015, shown as **Figure 4.4**. The abundance of fish was fluctuating along with different season, lower abundance of fish was observed during wet season as frequent flooding has washed proportion of fish out of the river, shown as **Figure 4.5**. Details of recorded of fish fauna refers to **Table 4.6.** Sampling location was shown on **Figure 1**.

4.3 Abiotic Data

Data on water quality and major stream hydrological feature (water flow and substratum) of the stream were collected and are presented in the **Table 4.7.**

All the parameters measured in 2015 were kept in stable within satisfied level of the river condition. There was no significant fluctuation on any parameter observed except only slightly difference on dissolved oxygen and conductivity

were recorded throughout the year. Results of water test are presented in the **Table 4.7.**

The river substratum was comprised of over 20-80% stones or rocks in large proportion of the river sections with slow water flow (up to 0.2m/second at pool and 0.5m/second at riffle).

5 Summary and Commentary

5.1 Data presented and analyzed in this report were derived from ecology surveys conducted during 2015. The post-construction ecological monitoring will be continued and it is expected that long term monitoring will reveal even more information on ecological recovery and habitat improvement.

5.2 Aquatic and riparian vegetation re-established quickly after the completion of the drainage works as demonstrated by the photographs in this report. Aquatic and marsh plants growing on the riverbed and along the water margins provide breeding and feeding habitat for a variety of aquatic life including insects, shrimps, fish and the Hong Kong Newt.

5.3 The adult Hong Kong Newt was mainly recorded at middle section of the river during dry season.

5.4 The species richness of fish was recorded in a stable level during 2015. However, the fish abundance was observed significant low during wet season, it was believed that fishes were affected by heavy rain and floods. *Zacco platypus* and *Oreochromis niloticus* were the dominant species in the river channel.

5.5 Abundance of the aquatic marco-invertebrates and avifauna were stable with no apparent seasonal change.

5.6 The species richness of odonata fluctuates sharply along with different season, maximum species number was recorded during wet season due to seasonality.

5.7 Measured water quality parameters and physical characteristics showed only minor monthly fluctuation.
