TABLE OF CONTENTS

Executive summary

This is the forty third monthly Environmental Monitoring and Audit (EM&A) Report for the river improvement works at Upper Tai Po River under Drainage Services Department Contract No. DC/2007/06 entitled "River Improvement Works in Upper Lam Tsuen River, She Shan River and Upper Tai Po River". This report concludes the impact monitoring for the activities undertaken during the period from 1st March 2012 to 31st March 2012. Construction of box culverts, retaining wall TR2, TR3, TR5A, TR6, stilling basin, inclined gabion/no-fines mass concrete walls, gabion wall, footing of footbridge TB03 and erection of steel deck for footbridge TB06 were the major site activities being carried out in this reporting period.

The Environmental Team (ET) is responsible for the EM&A works required in the EM&A manual. Site inspections were carried out on weekly basis to investigate and audit the equipment and work methodologies with respect to pollution control and environmental mitigation. The weekly inspections records and photos taken were kept.

The ecological impact monitoring was conducted on 16th January 2012 by the Ecologist Dr. Mark Shea. The ecological impact monitoring report prepared by the Ecologist is attached in Appendix K. Next ecological impact monitoring was arranged in July 2012. The summary of ecological site inspection findings and implementation status of environmental protection and mitigation for ecology, prepared by the Ecologist, are provided in table 6.2 and Appendix G respectively.

Environmental Team had carried out construction noise monitoring on weekly basis and no exceedance was found. Noise monitoring records for the reporting month and the data are presented in Section 4. The location plan and the graphical plots presenting the data are provided in Appendix D.

Piling works has been omitted. Therefore, no vibration monitoring was conducted by ET during the reporting month.

A non-compliance event issued by IEC regarding muddy water discharge was recorded in this reporting month. Details of the events and recommendations given please refer to Section 6.2

A complaint incident regarding deposited mud and dust on public road by

construction vehicles was referred by DSD on 30th March 2012. ET has conducted investigations for the incident and details of findings, recommendations and outcome please refer to Section 2.7 and Appendix J.

There was no breach of action and limit levels for this reporting month.

There was no reporting change for this month.

Construction of retaining walls, inclined gabion/no-fines mass concrete walls, abutements of footbridges and box culvert and installations of the pre-fabricated steel deck for footbridges would be carried out in the upcoming month.

ET has reminded the contractor to provide environmental pollution control measures wherever necessary and to keep a good environmental management at site practice.

1.0 Introduction

This is the forty third monthly Environmental Monitoring and Audit (EM&A) Report for the river improvement works at Upper Tai Po River under Drainage Services Department Contract No. DC/2007/06 entitled "River Improvement Works in Upper Lam Tsuen River, She Shan River and Upper Tai Po River". The site layout plan is shown in Figure 2.1. The Environmental Team, Environmental Pioneers & Solutions Limited appointed by Chiu Hing Construction and Transportation Company Limited, prepares the report. The report is to be submitted to the Contractor, the Engineer and the IEC.

This report presents the results of the environmental monitoring of the project activities for Upper Tai Po River conducted during the month of March 2012. This included regular site inspections once per week for verification of implementation of the mitigation measures as recommended in the Environmental Permit (EP-223/2005/A) (EP), EM&A Manual and the Contractor's Environmental Management Plan (EMP).

2.0 Environmental status

2.1 Project area

The location of the project site – Upper Tai Po River starts from Ta Tit Yan of Yai Mo Shan, flows from southeast to northeast alongside Wilson Trail, turning northward before joining the Lam Tsuen River and then runs towards Tai Po Market. For the east of the river, there are active and abandoned cultivated lands. The village settlements are mainly located on the west and northeast side of the river bank, where the San Uk Ka and Lai Chi Shan establishment also lie. The Project site is indicated in **Figure 2.1.**

2.2 Construction programme

Approximately 0.6km of Upper Tai Po River will be improved to enhance the hydraulic performance of the river. The improvement works comprise the following:

(1) Re-profiling and realignment of the Channel;
(2) Inclusion of gabions and retaining wall for bank protection whilst providing a natural channel bed; and
(3) Re-provisioning of footbridges and footpaths along the channel

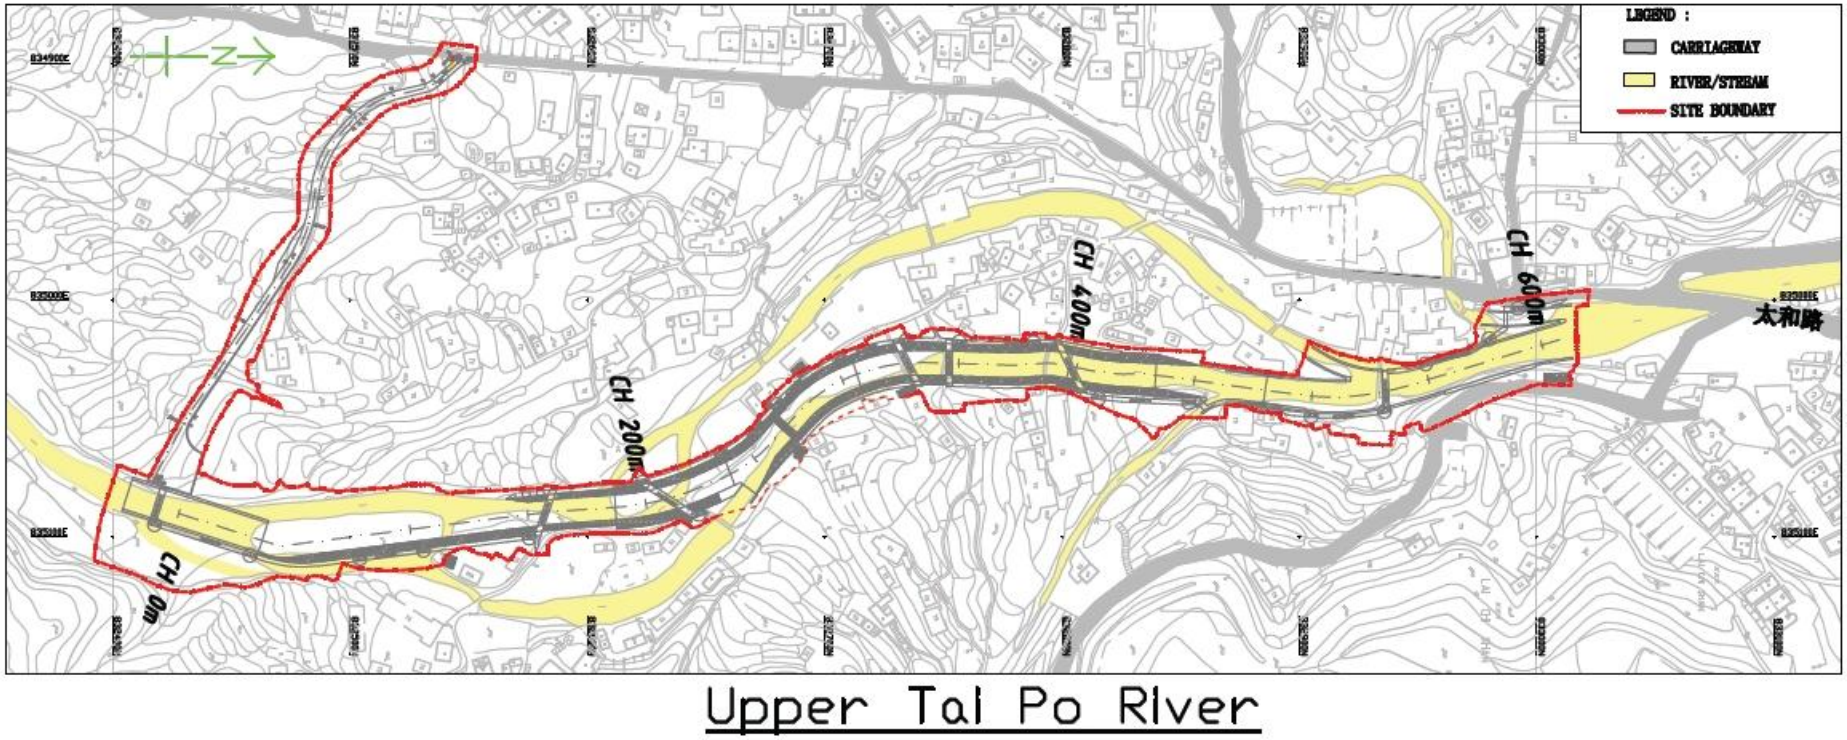
The construction of the proposed improvement works for Upper Tai Po River has been commenced on September 15th 2008 and anticipated to complete in April 2012.

2.3 Proposed construction sequences

The proposed construction sequences are shown in the following:

(1) Site clearance and preparation works
(2) Construction of the maintenance access which involves the construction of retaining walls
(3) River channel construction and excavation, involving the excavation works, construction of retaining walls and gabion walls
(4) Construction of additional boulder trap and additional stilling basins with baffle blocks
(5) Provision of riverbed treatment
(6) Re-provisioning of footbridges
(7) Construction of footpaths
(8) Landscaping works

Fig 2.1 Layout of construction area



2.4 Construction activities for the reporting period

Major construction activity carried out by the contractor during this reporting period includes:

1.) Construction of Box Culverts
2.) Construction of Retaining Wall TR2, TR3, TR5A, TR6
3.) Construction of Stilling Basin
4.) Construction of Inclined Gabion/No-Fines Mass Concrete Wall
5.) Construction of Gabion Wall
6.) Construction of Footing of Footbridge (TB03)
7.) Erection of Steel Deck for Footbridge TB06

2.5 Construction activities for the next reporting period

Major construction activities carried out by the contractor anticipated for the coming month include:

1.) Construction of Retaining Walls
2.) Construction of inclined gabion/no-fines mass concrete walls
3.) Abutements of Footbridges and Box Culvert
4.) Installations of the pre-fabricated steel deck for footbridges

2.6 Exceedance with the environmental performance limits

There was no exceedance with the environmental performance limits for this reporting month. The event and action plan for Ecology is shown in Appendix A. The action and limit level for Noise is shown in Appendix B. The reference standards for vibration are shown in Appendix C.

2.7 Summary of complaints

A complaint incident regarding deposited mud and dust on public road by construction vehicles was referred by DSD on 30th March 2012. ET has conducted investigation with representatives from Contractor, Resident Engineer and Independent Environmental Checker on 3rd April 2012 and recommendations were given to the Contractor to minimize environmental impacts generated from project works. The complaint investigation report with details of findings, recommendation and outcome was attached in Appendix J and was submitted to Environmental Protection Department (EPD) in accordance with the requirement stated in EM&A manual. In total, twenty-four complaints had been received since the commencement

of the contract. The cumulative complaint log is shown in Appendix F.

3.0 Ecological monitoring results

Ecological impact monitoring was conducted on 16th January 2012. The ecological impact monitoring report prepared by the Ecologist is attached in Appendix K.

4.0 Noise monitoring results

In accordance with the EM&A Manual, monitoring locations were established at 11 N.S.R. locations. The descriptions of all 11 N.S.R. are shown in Table 4.1.

TABLE 4.1 Description of Noise Sensitive Receivers

Sensitive Receiver No.	Location and Description
UTP1	54B, Sheung Wun Yiu
UTP2	Village House in Lai Chi Shan
UTP3	Village House near Upper Tai Po River
UTP4	Village House near Upper Tai Po River
UTP5	Village House near Upper Tai Po River
UTP6	Village House near Upper Tai Po River
UTP7	Village House near Upper Tai Po River
UTP8	Village House near Upper Tai Po River
UTP9	49A, Pun Shan Chau
UTP10	Village House near the proposed access road
UTP11	49G, San Uk Ka

Noise monitoring was carried out by the Environmental Team on weekly basis for this reporting month. The scheduled monitoring dates were 1st, 8th, 15th, 22nd and 29th March 2012. Measured $L_{eq\ (30min)}$ results ranged from 51.5dB(A) to 73.6dB(A).

For further details of the monitoring results, graphical plots and the location plan, please refer to the Appendix D.

5.0 Vibration monitoring results

There was no vibration monitoring results for this reporting month. Vibration monitoring will be started once the piling works start in Upper Tai Po River.

6.0 Environmental issues and actions

6.1 Site inspections and key environmental issues

Site inspections were undertaken routinely to inspect the construction activities in Upper Tai Po River to ensure that appropriate environmental protection and pollution control mitigation measures are properly implemented. Implementation status of environmental protection and mitigation measures is shown in Appendix G.

Within this reporting month, site inspections were conducted on 7th, 14th, 21st and 28th March 2012. A detailed checklist of each site inspections together with comments and relevant photos have been filed and kept for record. The findings from inspections were summarized in Table 6.1.

Ecological inspections by the Ecologist Dr. Mark Shea were carried out on 5th, 12th, 19th, 26th and 31st March 2012. Details of findings were summarized in Table 6.2.

Ad-hoc meeting amongst DSD, IEC, ET, ER and Contractor was held on 14 March 2012 regarding the recently received non-compliances/complaints on muddy water. Some additional measures had been proposed, including provision of sedimentation tank at TB02 & TB03 and stop discharge the muddy water directly into the river, improvement of earth bund and provision of sedimentation tank for treating the muddy water from wheel washing bay at ch.600, and provision of additional sedimentation tank at ch.600 to ensure sufficient capacity of the sedimentation process. A checklist for monitoring the implementation status of the abovementioned measures has been prepared by Contractor and weekly checking and updating of the checklist would be carried out by the Environmental Officer. The checklist is attached in Appendix L.

Table 6.1 Summary results of site inspections findings

Date	Findings	Identification	Advice from ET	Action taken	Closing date	Remarks
6 Oct 11	Noise barriers were not yet erected by Contractor along UTPR.	Observation	Since more frequent construction works is expected in dry season, serious noise nuisance may be generated to the village nearby. Contractor was urged to install noise barriers to minimize the noise impact arisen from construction activities.	To be followed during the next reporting period.	Ongoing	--
22 Dec 11	Construction waste was observed near the river channel at ch.100.	Observation	Contractor was urged to remove the waste to avoid contaminating the river and assign designated area for temporary storage of construction material and waste.	The construction waste in the river channel at ch.100 removed.	7 Mar 12	--

Date	Findings	Identification	Advice from ET	Action taken	Closing date	Remarks
27 Jan 12	The tree protective nets for the retained trees at ch.350 were damaged and the tree branches were tied by wires and ropes.	Observation	Contractor was recommended to repair the tree fences and remove the wires immediately for proper protection of the retained trees within the site.	The tree protective nets at ch.350 of UTPR were repaired.	7 Mar 12	--
8 Feb 12	The tree protective nets for the retained trees at ch.400 were damaged by stockpiles of construction material.	Observation	Contractor was recommended to repair the tree fences and relocate the construction material immediately for proper protection of the retained trees within the site.	The tree protective nets at ch.400 of UTPR were repaired.	7 Mar 12	--
22 Feb 12	The tree protective nets were observed to be damaged at ch.0 & 50 of UTPR and the condition of the retained trees was poor.	Observation	Contractor was recommended to closely monitor the retained trees and urged to repair or replace the fence for proper protection of the retained trees.	The tree protective nets at ch.0 were repaired. The protective net at ch.50 was still damaged.	Ongoing	--
22 Feb 12	The wheel washing bay at ch.600 of UTPR was full and muddy.	Non-compliance	As similar observation was still made in the inspection on 29 Feb 12, NC was issued. Contractor was advised to provide cleaning and maintenance for the wheel washing bay regularly to ensure proper and efficient wheel washing for the construction vehicle before leaving the site.	Maintenance of the wheel washing bay at ch.600 was provided by Contractor. No overflow of contaminated wheel washing water was observed.	7 Mar 12	NC issued by IEC
22 Feb 12	Oil containers were observed without secondary containment at ch.0.	Observation	Contractor was reminder to provide drip trays for storing of oil containers to prevent soil contamination as if leakage.	The oil container at ch.0 was removed.	21 Mar 12	--
22 Feb 12	Oil stain was observed on the haul road at ch.200.	Observation	Contractor was reminded to remove the contaminated soil as chemical waste as soon as possible.	The contaminated soil on the haul road at ch.200 was removed as chemical waste by Contractor.	7 Mar 12	--
22 Feb 12	Direct discharge of site water was observed to be caused by displacement of sandbag barriers at ch.600.	Observation	Contractor was urged to maintain the sandbag barrier as soon as possible to stop further discharge of site water. Contractor was reminded to provide de-silting facility with sufficient capacity for treating the contaminated site water before discharge into water body.	As reported by Contractor, there was no constructions works at ch.600 and therefore no contaminated site water was generated. As a result, sandbag barrier was not needed.	28 Mar 12	--
29 Feb 12	Muddy water was observed to be discharged from sump pits into the river at ch.600 without any treatment, which caused river pollution to the downstream area.	Non-compliance	Contractor was urged to stop generating and discharging muddy water into the river immediately by providing sand bags or bunding as barrier. Also, Contractor was seriously reminded to provide sedimentation tanks with sufficient capacity for treating the contaminated site water before discharge into water body.	No discharge of muddy water was observed from the sump pits at ch.600. The river quality was satisfactory.	7 Mar 12	NC issued by IEC
29 Feb 12	Direct discharge of muddy water was observed due to malfunction of sedimentation tank at ch.600.	Non-compliance	Contractor was urged to provide maintenance for the tank and properly treat site water before discharge to fulfill the Discharge License.	During the inspection on 7 Mar 12, the tank was not in operation and discharge of untreated site water. As inspected on 21 Mar 10,	21 Mar 12	NC issued by IEC

Date	Findings	Identification	Advice from ET	Action taken	Closing date	Remarks
				the tank had been properly setup with an additional tank standby to ensure sufficient capacity of the sedimentation process		
7 Mar 12	Direct discharge of site water was observed at ch.200.	Non-compliance	Contractor was urged to provide de-silting facility with sufficient capacity for treating the contaminated site water before discharge into water body.	The site water was diverged to sedimentation tank for de-silting before discharge.	14 Mar 12	NC issued by IEC
14 Mar 12	Some construction material was observed to be placed inside the river channel at ch.100.	Observation	Contractor was urged to relocate the construction material away from the river as soon as possible to avoid river pollution and maintain good housekeeping.	To be followed during the next reporting period.	Ongoing	--
14 Mar 12	Muddy surface runoff was observed at ch.200 as insufficient bunding and geo-textile was observed leading to overflow of muddy water.	Observation	Contractor was advised to modify the bunding to avoid overflow of muddy water. Contractor was reminded to diverge the muddy runoff to sedimentation tank for proper treatment before discharged.	To be followed during the next reporting period.	Ongoing	--
21 Mar 12	The access road around ch.0 of UTPR was very dry and dusty.	Observation	Contractor was reminded to provide frequent water spraying for dust suppression.	To be followed during the next reporting period.	Ongoing	--
21 Mar 12	Improper installation of the sedimentation tank was observed at ch.600 as the second chamber of the tank was not connected.	Observation	Contractor was advised to properly setup the tank for more effective treatment of the site water. Contractor was reminded to provide regular checking and maintenance for sedimentation tanks within the site.	The sedimentation tank at ch.600 was properly setup. Moreover, additional sedimentation tank was provided to ensure there is sufficient capacity for treating the muddy water.	28 Mar 12	--

The summary of ecological inspection prepared by the Ecologist, Dr. Mark Shea is shown in Table 6.2.

Table 6.2 Summary results of ecological site inspection findings

Date	Observations	Advice from Ecologist	Action Taken	Closing Date
05 March 2012	No Major findings for this inspection	No Advice is required	No Action is required to be taken	N/A
12 March 2012	No Major findings for this inspection	No Advice is required	No Action is required to be taken	N/A
19 March 2012	No Major findings for this inspection	No Advice is required	No Action is required to be taken	N/A
26 March 2012	No Major findings for this inspection	No Advice is required	No Action is required to be taken	N/A
31 March 2012	No Major findings for this inspection	No Advice is required	No Action is required to be taken	N/A

6.2 Non-compliance

A non-compliance event was issued by IEC on 9th March 2012 regarding muddy water discharge.

During the site inspection on 29th February 2012, muddy surface runoff from the worksite and excavated pit near ch.600 was entering directly into the river. Besides, muddy water overflowed from the wheel washing bay next to the river. Furthermore, the sedimentation tank near ch.600 had insufficient capacity for treating the muddy site water as the effluent was still observed to be muddy. The mitigation measures for muddy water discharge were considered to be insufficient and ineffective.

Recommendations were provided to Contractor for rectification. It was suggested that discharge of muddy water should be stopped immediately and sedimentation tank should be provided for treating the muddy water before discharge into public drainage. Maintenance of wheel washing bay should be provided regularly to ensure efficient wheel washing. Checking and maintenance of sedimentation tank should be provided regularly to ensure sufficient capacity for treating the muddy water.

In the subsequent site inspection on 7th March 2012, some follow-up actions were implemented by Contractor. During the site inspection on 7th March 2012, it was observed that additional geo-textile had been provided by Contractor and no muddy surface runoff was identified near ch.600. No observation regarding muddy water was made during the inspection. Also, additional bunding was provided for the wheel washing bay and the water level was reduced to avoid overflow of contaminated water. However, the sedimentation tank at ch.600 was not in operation and leading to untreated water discharge. Moreover, direct discharge of site water without treatment from sump pit was observed near ch.250. Although the water appeared to be clear, Contractor was still requested to provide de-silting facility for treating the site water before discharge.

As there were still some defects not yet rectified and direct discharge was still observed, the above mal-practices were considered as non-compliance event under Water Pollution Control Ordinance (WPCO)(Cap.358) and Effluent Discharge Permits (no. 3678 for Upper Tai Po River) issued under the WPCO to the Contractor. No effective mitigation measures were implemented according to advices given by RE, IEC and ET.

Further actions had been taken by Contractor for the abovementioned deficiencies. During the inspection on 14th March 2012, a sedimentation tank had been provided at ch.400 for treating the site water. Also, the unused sedimentation tank at ch.600 had been properly setup with an additional sedimentation tank standby to ensure sufficient capacity of the sedimentation process during the inspection on 21st March 2012. No observation regarding muddy water was made during the inspection.

Contractor was reminded to be aware of the implementation of measures to avoid soil erosion and untreated water discharged and to prevent pollution to the river water.

6.3 Recommendations

Contractor was reminded that all the measures stated in the Environmental Permit should be followed. Contractor was advised that excavation work shall be carried out in sections and in enclosed dewatered condition. Dewatering of the excavation area should be carried out prior to excavation work. All site water shall be well de-silted and treated before discharge. Also, sufficient temporary earth bunds and barriers should be used to entirely enclose the excavation area and exposed slope surface should be covered (e.g. by tarpaulin sheet) to prevent river contamination. Contractor was reminded that discharge of contaminated water is an environmental offence and should be prohibited.

Contractor should also implement necessary measures to mitigate air quality impact from construction works. Earthy stockpiles should be covered with tarpaulin coverings and dusty static area should be dampened regularly for dust suppression.

In order to minimize the noise impact to the noise sensitive receivers, Contractor was reminded to implement proper mitigation measures as stated in Environmental Permit and EM&A Manual, i.e. erecting 2m high noise barriers at locations stated in Environmental Permit, orientating noisy plants away from the nearby NSRs, using movable barriers and acoustic mat, etc.

6.4 Implementation status and effectiveness of the mitigation measures

Referring to the table 6.1 and Section 6.2, contractor was seriously recommended to implement necessary mitigation measures to address environmental problem arisen from site activities.

7.0 Waste management status

It is the contractor's responsibility to ensure that all wastes produced during construction phase for the drainage improvement works are handled, stored and disposed in accordance with good waste management practices and EPD's regulation and requirement. Waste materials generated during construction activities such as construction and demolition (C&D) material, chemical wastes and general refuse, are recommended to be audited at regular intervals to ensure that proper storage, transportation and disposal practices are being implemented. **Table 7.1** is the Waste Disposal recorded by the Contractor in this month.

From the report of Contractor, all the C&D materials generated were reused at Lam Tsuen River for rock filling. No inert waste was disposed from the Project. The non-inert waste was sent to the North East New Territories (NENT) Landfill. Chemical waste were first collected by a black plastic bag with labeling (collection point, chemical name, producer's name), then placed into the Chemical Storing Area for temporary storage. A licensed collector was appointed for the collection and disposal of the chemical waste. All chemical waste was transported to the Chemical Waste Treatment Centre (CWTC). The following table showed the amount of waste generation, reused and disposed from this project site in this reporting month.

The following table showed amount of waste generation, reused and disposed from this project site in this reporting month.

Table 7.1 Summary of Waste generated and disposed in March 2012

Type of waste	Amount generated	Amount reused	Amount disposed
Inert waste	1401 m^3	1401 m^3	0 m^3
Non-inert waste	30 kg	0	30 kg
Chemical waste	0	N/A	0

The cumulative waste flow table is shown in Appendix H.

8.0 Status of environmental licensing and permit

This project requires different permits and licenses to be run legally. **Table 8.1** is the summary of permits/ licenses for this project.

Table 8.1 Summary of Environmental Licensing and Permit Status

Description	License / Permit No.	Date of Issue	Date of Expiry	Remarks
Environmental Permit	EP-223/2005	31st Aug, 2005	N/A	Superseded by EP-223/2005/A
Amended Environmental Permit	EP-223/2005/A	18th Nov, 2008	N/A	Issued
Construction Noise Permit	N/A	N/A	N/A	N/A
Effluent Discharge License	3678	14th Mar, 2008	31st Mar, 2013	Issued
Registration as a Chemical Waste Producer	5213-724-C3251-03	19th Dec, 2007	Not applicable	Issued
Billing Account for Disposal of Construction Waste	7006101	N/A	N/A	N/A

9.0 Future key issues

Construction of retaining walls, inclined gabion/no-fines mass concrete walls, abutements of footbridges and box culvert and installations of the pre-fabricated steel deck for footbridges would be carried out in the upcoming month. The construction activities for these items will generate environmental impacts in several aspects.

For the proposed construction activities, heavy plants and vehicles may be occupied and those would generate certain noise impacts to the sensitive receivers. To minimize noise generation, noisy activities should be well planned and scheduled to avoid parallel operation of multiple plants. Erection of noise barriers and/or movable barriers should be implemented whenever necessary.

To minimize water quality impact arising from construction activities within river channel, water quality mitigation measures should be implemented as far as practicable. Any muddy water, underground water or wastewater generated from construction activities should be diverted to proper treatment facility prior to discharge.

Contractor was reminded to provide regular water spraying to dusty static area for dust suppression. Excessive storage of earthy stockpile and/or C&D wastes should be prevented to minimize air quality impact arisen by wind erosion.

Aforementioned construction works may generate wastes on site. Contractor is advised to assign a site area for temporary waste storage and segregation. Wastes accumulation should be prevented on site; licensed waste collection and disposal should be implemented regularly for hygiene issues.

10.0 Conclusion

Construction of box culverts, retaining wall TR2, TR3, TR5A, TR6, stilling basin, inclined gabion/no-fines mass concrete wall, gabion wall, footing of footbridge TB03 and erection of steel deck for footbridge TB06 were the major site activities being carried out in this reporting period.

Regular site meetings and inspection audits led by the seniors for discussing environmental issues were held among project proponent, Contractor and the Environmental Team on weekly basis.

Environmental Team had carried out construction noise monitoring on weekly basis. All results obtained were within limit and therefore no exceedance was recorded in this reporting month.

Piling works has been omitted. Therefore, no vibration monitoring was conducted during the reporting month.

From the summary of ecological site inspection findings and implementation status of environmental protection and mitigation for ecology, prepared by the Ecologist Dr. Mark Shea, there is no abnormal finding observed in the reporting month. The ecologist has no further advice and no action suggested to the contractor.

The ecological impact monitoring was conducted on 16th January 2012 by the Ecologist Dr. Mark Shea. The ecological impact monitoring report prepared by the Ecologist is attached in Appendix K. The next ecological impact monitoring was scheduled in July 2012

A non-compliance event issued by IEC regarding muddy water discharge was recorded in this reporting month.

A complaint incident regarding deposited mud and dust on public road by construction vehicles was referred by DSD on 30th March 2012.

The ET will continue to implement the environmental monitoring & audit programme in accordance with the EM&A Manual and Environmental Permit requirement.

Appendix A: Event and action plan for ecology

Event and action plan for ecology

In the event of non-compliance, the Event / Action plan prepared by the ecologist shall be followed. Detailed Event/ Action plan was shown in **Appendix Table 1** for reference.

It is not proposed to set population size of the three species (i.e. Three-lined Chinese Stream Catfish, Predaceous and the Hong Kong Newt) or other faunal species for the Action Level and Limit Level in the revised EM&A manual in considering the following reasons:

I. The schedule capture surveys would let to decrease in the populations of the target species; and
II. The planned drainage works would also temporally de-fauna the stream habitat.

It is considered logical and appropriate to audit non-compliance events in relation with ecological mitigation measures, which were specified in the EP and the PS of the project.

APPENDIX TABLE 1 Event / Action plan table for Ecology

Event	Action			
	ET	**ER**	**IEC**	**Contractor**
Non-conformity on one occasion	1. Identify Source 2. Inform the IEC and the ER 3. Discuss remedial actions with the IEC, the ER and the Contractor 4. Monitor remedial actions until rectification has been completed	1. Check report 2. Check the Contractor's working method 3. Discuss with the ET and the Contractor on possible remedial measures, 4. Advise the Contractor on effectiveness of proposed remedial measures 5. Check implementation of remedial measures	1. Ensure Remedial measures are properly implemented	1. Amend working methods 2. Rectify damage and undertake any necessary replacement
Repeated Non conformity	1. Identify Source 2. Inform the IEC and the ER 3. Increase monitoring frequency 4. Discuss remedial actions with the IEC, the ER and the Contractor 5. Monitor remedial actions until rectification has been completed 6. If exceedance stops, cease additional monitoring	1. Check monitoring report 2. Check the Contractor's working method 3. Discuss with the ET and the Contractor on possible remedial measures 4. Advise the Contractor on effectiveness of proposed remedial measures 5. Check implementation of remedial measures	1. Ensure Remedial measures are properly implemented	1. Amend working methods 2. Rectify damage and undertake any necessary replacement

Appendix B: Action and limit level for construction noise

The Action and Limit levels for construction noise are defined in **Appendix Table 2**

Appendix Table 2: Action and Limit Levels for Construction Noise

Time Period	Action	Limit
0700 – 1900 hrs on normal weekdays	When one documented complaint is received	75 dB(A)*
0700 – 2300hrs on holidays; and 1900 – 2300 hrs on all other days		Subject to the control of Noise Control Ordinance
2300 – 0700 hrs of next day		Subject to the control of Noise Control Ordinance

*Limit level set in accordance with Particular Specification Section 26

Appendix C: Reference standards for vibration

Guidance regarding vibration limits is provided by the following British Standards (or their equivalent ISO standards):
BS 7385 - Measurement and evaluation of vibration in buildings. Part 2: Guide to damage levels from ground borne vibration.

BS 7385 suggests vibration levels, below which damage is unlikely to occur in 95% of buildings. For cosmetic damage, the level is 15 mm/s at 4 Hz, increasing to 20 mm/s at 15 Hz, increasing to 50 mm/s at 40 Hz and above. Minor structural damage is possible at vibration levels twice those given above, major damage at four times the levels given.

Appendix Table 3: Transient vibration guide values for cosmetic building damage (BS7385:Part 2 1993)

	Type of Building	**Peak component particle velocity (mm/s) in frequency range of predominant pulse**
1	Reinforced or framed structures	50 at 4 Hz and above
2	Un-reinforced or light framed structures	15 at 4 Hz, increasing to 20 at 15 Hz, increasing to 50 at 40 Hz and above.

The vibration magnitudes and frequencies refer to Peak Particle Velocities (PPV) occurring in any single direction, measured on the ground level of the building concerned.

Appendix D: Noise monitoring results, graphical plots and location plan

Location	Leq 30min	L_{10} 30min	L_{90} 30min	Date	Time Duration	Major Construction Noise	Other Noise source	Weather	Location description
UTP 1	67.1	69.3	59.5	1-Mar-12	13:26-13:56	Soil sorting Rock breaking	- Background noise - Traffic noise	Cloudy	Façade
UTP 2	56.4	59.2	42.6	1-Mar-12	12:54-13:24	Rock breaking	- Background noise - Traffic noise	Cloudy	Façade
UTP 3	59.9	61.5	50.1	1-Mar-12	14:00-14:30	Rock breaking	- Background noise	Cloudy	Façade
UTP 4	63.8	65.6	58.0	1-Mar-12	14:33-15:03	N/A	- Background noise	Cloudy	Façade

Graphical plot for noise measurements

The followings were the graphical plots for the 11 monitoring locations. Each plot showed the date of measurement taken, day time limit of 75 dB(A) as well as the measured daytime level for each location. The graphs contain the data recorded from December 2011 to March 2012.

Appendix F: Cumulative complaint log

Environmental Parameters	Cumulative no. Brought forward	No. of complaint March 2012	Overall Total
Air/Dust	7	0	7
Noise	5	0	5
Water	11	0	11
House Keeping Hygiene	0	1	1
Chemical waste	0	0	0
Total	23	1	24

Appendix G: Implementation status of environmental protection and mitigation measures

Implementation status of environmental protection and mitigation

Environmental Aspect	Protection / Mitigation Measures	Implementation status	Follow-up action
Construction Noise	No percussive piling shall be carried out	Implemented	Not required
	-Use well maintained construction plant	Implemented	Not required
	-Shut down plants between work periods	Implemented	Not required
	-Install silencers on construction equipment	Implemented	Not required
	-Locate mobile plant far away from NSRs	Implemented	Not required
	-Quiet plants should be used	Implemented	Not required
	-2m high temporary noise barriers, as stipulated in EP condition 2.9, shall be installed	Deficient	Ongoing
Fugitive Dust Emission	-Implement regular watering and vehicle washing facilities	Deficient	Ongoing
	-Cover excavated or stockpile of dusty material by impervious sheeting or sprayed with water	Implemented	Not required
	-Use tarpaulin to cover dusty materials on vehicles	Implemented	Not required
Water Quality	Excavation works within the Tai Po River within the Project shall be carried out in stages and excavation area for each stage shall be limited to section of half width of the channel and less than 100m long at any one time in order to maintain water flow within the river during construction stage	Implemented	Not required
	Land-based plant shall be employed and site run-off shall be directed towards regularly cleaned and maintained silt traps and oil / grease separators to minimize leakage and loss of sediments during excavation	Deficient	Ongoing
	Large boulders removed from the Tai Po River within the Project during excavation shall be re-instated upon completion of works A section of 150m long natural riverbank on the western side of the river channel (Ch0 –Ch150) shall be retained	Implemented	Not required
	The excavation area shall be enclosed with bunds or barriers and dewatered prior to excavation to minimize the impacts upon the downstream of the Tai Po River	Deficient	Ongoing
	Provide silt trap and oil interceptor to remove the oil, lubricants, grease,	Implemented	Not required

	silt, grit and debris from the wastewater before pumped to the public storm water drainage system		
	Provide site toilet facilities	Implemented	Not required
Waste Management	Reuse excavated material as far as possible	Implemented	Not required
	Recycle scrap metals or abandoned equipment	Implemented	Not required
	Adopt a trip ticket system for the disposal of C&D materials	Implemented	Not required
	All general refuse should be segregated and stored in enclosed bins or compaction units	Deficient	Ongoing
Vibration	Percussive piling is to be replaced by bore-hole piling to minimize vibration impacts to the two identified Declared monuments	Not applicable at this stage	Not required
	Carrying out of vibration monitoring to ensure that vibration associated with the construction phase do not exceed the threshold limit otherwise contractor have to review the work method and construction activities have to be slow down or rescheduled to reduce the impacts	Not applicable at this stage	Not required
	Close monitoring and measurement on the cracks of the external wall of Fan Sin Temple during construction works will be carried out. Any changes on the cracks will be recorded for the contractor to slow down the construction activities accordingly; and to review the work methods and equipments immediately	Not Applicable at this stage	Not required

Implementation status of environmental protection and mitigation for ecology, prepared by the Ecologist, Dr. Mark Shea.

Environmental Aspect	Protection / Mitigation Measures	Implementation status	Follow-up action
Ecology	Large boulders will be returned to the riverbed following the excavation works.	Not applicable	Not required
	Construction works from Ch. 0.0m – Ch. 150m would be along one side of the river only	Not applicable	Not required
	Approximately 150m of the existing natural riverbank on the western side of the river would be retained.	Implemented	Not required
	Excavation works within the river channel should be restricted to an enclosed dewater section of the river, and would be limited to sections 50-100m long at any one time.	Implemented	Not required
	Flows to the area downstream shall be maintained at all times during the construction phase	Implemented	Not required
	Capture survey shall be conducted within the Tai Po River before commencement of works. The captured target species shall be relocated to areas of the watercourse upstream of the watercourse upstream of the Tai Po River	Capture surveys had been conducted at the beginning of the Contract, during the wet season July/August 2008 and 4th November 2008	Not required
	Temporary noise barriers should be constructed to control noise impacts to habitats and associated wildlife within and adjacent to the proposed works area	Implemented	Not required
	Excavation works shall be carried out by land based plant within enclosed dry section of river channel.	Implemented	Not required
	Compensatory planting of trees and other vegetation along the banks of the newly improved drainage channel should be provided to compensate for the loss of riparian vegetation.	Not applicable	Not required
	Operation phase activities in the improved drainage channel would be limited to periodic channel maintenance such as de-silting.	Not applicable	Not required

Appendix H: Cumulative waste flow table

Cumulative waste flow table showing amount of wastes generated, reused and disposed since 15th September 2008

Type of waste	Inert Waste			Non-Inert Waste			Chemical Waste	
	Amount generated	Amount reused	Amount disposed	Amount generated	Amount reused	Amount disposed	Amount generated	Amount disposed*
Year 2008 to 2009	36.9 m^3	0	36.9 m^3	2.000 tonnes	0	2.000 tonnes	20kg	20kg
Year 2010	1955 m^3	1955m^3	0	0.192 tonnes	0	0.192 tonnes	0	0
Year 2011	5505 m^3	5490 m^3	51.9 m^3	0.376 tonnes	0	0.376 tonnes	3kg	3kg
January 2012	1920 m^3	1920 m^3	0	0.030 tonnes	0	0.030 tonnes	2kg	2kg
February 2012	2110 m^3	2110 m^3	0	0.020 tonnes	0	0.020 tonnes	1kg	1kg
March 2012	1401 m^3	1401 m^3	0	0.030 tonnes	0	0.030 tonnes	0	0
Total	**12927.9 m^3**	**12876 m^3**	**88.8 m^3**	**2.648 tonnes**	**0**	**2.648 tonnes**	**26kg**	**26kg**

Remark*: Chemical wastes generated from the project sites including Upper Tai Po River, Lam Tsuen River and She Shan River were centralized for disposal

5th April 2012

To: Distribution List

Dear Sirs or Madams,

Contract No. DC/2007/06
Drainage Improvement works in Upper Tai Po River, Lam Tsuen River and She Shan River

Complaint Investigation Report and Log

Based on the complaint incident received from ECRS with details of:

ECRS ref. no.:	10587
Date received:	30th March 2012
Incident location:	Tat Wan Road beside Tai Po River (TPR)
Description:	Complaint was referred by DSD that a resident complained against deposited mud and dust at Tat Wan Road beside Tai Po River (TPR).

Enclosed please find the complaint investigation report and log sheets of the incident as for your record.

Yours faithfully,

Goldie Fung
ET leader

DSD Project – River Improvement Works in Upper Lam Tsuen River, She Shan River and Upper Tai Po River

Report for Complaint/ Concern
Our Ref.: DC0706-CL-120330-1 (ECRS)
EPD complaint ref.: 10587

RECIPIENT

Name: Chiu Hing Construction & Transportation Co., Ltd,
Details: Complaint was referred by DSD that a resident complained against deposited mud and dust at Tat Wan Road beside Tai Po River (TPR).

Received Date: 30th March 2012 Received Time: N/A

COMPLAINANT / Concern

Name: N/A Tel: N/A
Address: N/A

COMPLAINT

☐Noise ☑Air quality/Dust ☐Water ☐Odour ☑Environment ☐Traffic/Pedestrian ☐Safety ☐Others

Event Date and Time: 30th March 2012

Location: Tat Wan Road beside Tai Po River

INVESTIGATION RESULTS, RECOMMENDATIONS & MITIGATION MEASURES

1. A complaint on 30th March 2012 was recorded regarding deposited mud and dust at Tat Wan road by the construction vehicles. Environmental Team (ET) was informed by email on 2nd April 2012 by the Environmental Officer (EO).

2. ET has conducted a site investigation on 3rd April 2012 with representatives from RE, IEC and Contractor to resolve the concern.

3. As reported by Contractor, the following remedial works have been carried out.
   - Wheel washing facilities were provided at site entrance (Fig. 1).
   - Workers were assigned to clean up the mud and dust immediately after the complaint received (Fig. 2).

4. During the investigation, the following observations were made:
   - Water sprayer was provided at site entrance for vehicle washing (Fig. 3).
   - The road was cleaned up without mud or muddy water (Fig 4).

5. To minimize the environmental nuisance to the public at the concerned area, Contractor was recommended to further enhance mitigation measures immediately, which should at least include:
   - Worker should be assigned for the vehicle washing throughout the operation hours of site.
   - The deposited mud and dust on the public road should be washed away to minimize the environmental nuisance to the public.

DSD Project – River Improvement Works in Upper Lam Tsuen River, She Shan River and Upper Tai Po River

Report for Complaint/ Concern

Our Ref.: DC0706-CL-120330-1 (ECRS)

ECRS ref. no.: 10587

Sheet: 2 of 2

6. Contractor was seriously reminded to maintain proper practices and dust mitigation measures, such as:
   - Every construction vehicle should be cleaned up before leaving the site.
   - The deposited mud and dust should be cleaned up immediately.
   - Briefing to frontline staffs about prevention of dust generation, e.g. regular water spraying on dry earth surface, covering of earthy stockpiles with tarpaulin, etc.

7. ET has reminded the contractor to pay serious attention on not arising possible environmental impacts in the future.

	Ecology Team: China-Hong Kong Ecology Consultants	

River Improvement Works in Upper Lam Tsuen River, She Shan River and Upper Tai Po River

Contract No. DC/2007/06

Ecological Impact Monitoring Report (No. 7)
Upper Tai Po River

Table of Contents **Page**

1 Introduction

1.1 The project of Drainage Improvement Works in Upper Tai Po River requires to carry out an ecological impact monitoring programme when the project commenced. The collected data was used to assess ecological impact during construction period.

1.2 Scope of ecological impact monitoring was detailed in the Particular Specification (PS) and EM & A Manual of the project. In brief, the survey need to collect data on abiotic such as water quality, substratum characteristics, water flow, and biotic data of flora and fauna.

1.3 China-Hong Kong Ecology Consultants was committed by Chiu Hing Construction and Transportation Co. Limited to undertake the ecological baseline survey in Oct 2007 and impact monitoring tasks for the project starting from January 2009. Monitoring frequency were twice a year.

1.4 This is the number 7 ecological impact monitoring report for the project conducted in January 2012. It contents the following subsections:

- Summary of major points
- Summary of the construction activities for July 2011 (last reporting time) to January 2012
- Monitoring Methods and Results
- Audit/review of monitoring results
- Remedial measures adopted to restore the adverse condition
- Record of complaints and remedial measures
- Forecast of works programme and monitoring requirements; and
- Comments and conclusions

2 Summary Of Major Points

- Field ecological monitoring was undertaken on 16th January 2012;
- Stream habitat at most sections of Upper Tai Po River (Photo 1,2) was changed due to drainage works;
- During the impact monitoring, the man power deployed and survey duration was the same as pervious monitoring events. (i.e. 3 field workers from China-Hong Kong Ecology Consultant and 2 environmental assistant from Chiu Hing Construction & Transportation Co. Ltd); and
- The number of target stream fauna (i.e., fish, *Parazacco spilurus*) recorded in January 2012 was lower than those recorded during baseline monitoring (before fish capture/relocation took place). *Parazacco spilurus* was only recorded from the reference site adjacent to the project site at upper stream. The reason for low fish population of *Parazacco spilurus* was due to river bed modification. The other target species including fish (*Pseudobagrus trilineatus*) and Hong Kong Newt (*Paramesotriton hongkongensis*) were not found within works area during both baseline and impact monitoring.

3 Summary Of The Construction Activities

3.1 Major construction activities carried out by the contractor from July 2011 (last reporting time) to January 2012.

- Construction of retaining wall
- Construction of Gabion walls

- Cascade formation
- Demolish of existing bridge
- Inclined Gabion Wall Formation
- No-Fine concrete and Inclined Gabion
- Backfilling
- Maintenance of staircase
- Footpath Construction
- Footbridge Construction
- Construction of additional boulder trap

4 Monitoring Methodology

4.1 Avifauna

Avifauna survey was conducted during the impact monitoring period. Special attention was given to those stream channel area where birds used as feeding and foraging habitat. In general, avifauna survey was taken in the morning or late afternoon when birds are more active (feeding and foraging). Numerical abundance was recorded at fixed count points within a fixed radium, e.g. 30-50m according to landscape feature and visual penetration extent. Duration of the point count of birds was standardised for 10 minutes at each location in order to collect comparable data. Transect count will also be used for the avifauna survey aimed to collect qualitative data. The transect route was shown in Figure 1-1 to 1-3. Binoculars and digital camera was the main instrument to be used. Nomenclature and protection status of the species followed those documented in the AFCD website (www.hkbiddiversity.net) and Carey et al (2001).

The point count was conducted at two locations with one located at the lower portion of the river channel and the other located at the upper section of the river. The location of point counts were shown in Figure 1-1 to 1-3.

4.2 Fish And Newt Population

Fish community including target species (Three-lined Chinese Stream Catfish and Predaceous Chub) and Hong Kong Newt population at the specified river channel was monitored by live trapping, hand nets and direct observation methods. Active searching at night for *Pseudobagrus trilineatus* has also been carried out. Sampling was conducted at two proposed sampling locations, i.e. upper and lower sections of the river and covered major type of stream habitats, e.g. stream pool and riffle. The number of the captured or observed fish was estimated and recorded. Nomenclature and protection status of the species followed those documented in the AFCD website (www.hkbiddiversity.net) and Virginia et al (2004). Sampling sites were shown in Figure 1-1 to 1-3

4.3 Aquatic Macro-invertebrates

Macro-invertebrates in the likely affected streams was surveyed. Two sampling sites within the affected stream sites was designed to collect necessary macroinvertebrate fauna for ecological impact monitoring information. Three replicates was taken at each sampling point and pool together for further sample process. Kick sampling and hand netting was the main survey methodologies for stream organisms. Dissection microscope, digital camera was used to aid identification and enumeration. Numerical abundance, species identity was recorded. Nomenclature and protection status of the species will follow those documented in the AFCD website (www.hkbiddiversity.net) and other literatures such as Dudgeon (1999). Sampling sites were shown in Figure 1-1 to 1-3.

4.4 Adult Odonate Survey

Adult Odonate survey was conducted within the monitoring area. Transect count was used for the survey. Binoculars, digital camera and hand net was utilized to aid identification. In general, all captured fauna was released immediately after on-site identification or taking photo. Numerical abundance, species identity and other notable behaviour was recorded. Nomenclature and protection status of the species followed those documented in the AFCD website (www.hkbiddiversity.net) and Keith (2003). Adult Odonate survey was conducted along line transects in parallel with river channel within works area where access was permitted. Transect route were shown in Figure 1-1 to 1-3.

4.5 Riparian Vegetation

Riparian vegetation including aquatic and emergent was sampled by line a belt transects along the affected stream channel and riparian habitat. Species, relative abundance, average heights were recorded. Vegetation survey was conducted at two selected belt transects with one located at the lower portion of the river channel and the other at the upper section of the river respectively. The belt transects was run across the river channel and is aimed to collect quantitative data of vegetation. Similarly, qualitative data of plants was collected by recording plant species along line transect. Nomenclature and protection status of the species followed those documented in the AFCD website (www.hkbiddiversity.net) and Hong Kong Herbarium (2004). Sampling sites were shown in Figure 1-1 to 1-3.

4.6 Abiotic Data Collection

Water Quality Monitoring

Dissolved oxygen level, pH value, conductivity, salinity, Biochemical Oxygen Demand (BOD) and nutrient level (nitrate and ammonium) was sampled and analyzed by conventional methods in situ or send to laboratory.

Sediment Characteristics

Sediment/substrate characteristics was recorded of sediment cover in percentage e.g. mud, sand, rock, boulder and cemented bottom in the stream bed at sampling sites.

Water flow

Water flow rates in river channel were measured by record of travel time of a floating material (e.g. floating ball) in a measured distance.

5 Monitoring Results

5.1 Vegetation

Vegetation growing along the affected stream was surveyed at Upper Tai Po River. About 12 flora species was recorded within the survey transects along the affected stream courses. All recorded floras were common species. Compared with the baseline result, the number of flora species was reduced from 38 to 12 flora species. Most vegetation along the stream section was cleared in order to construct temporal assess road and new embankment. Moreover, previous heavy rainfall has also washed out most vegetation along channel.

Despite that, the vegetation was predicted to be re-colonized along the river channel after finished the construction work. Generally, belt transect for vegetation was only conducted in reference site only. The height of the dominated riparian grass and herb species were in a range from 0.4m to 1.5m. No rare or protected flora species was recorded. Results of vegetation survey and belt transect survey were given in **Table 5-1** and **Table 5-2**. Figure 1-1 to 1-3 shows the transect line for the flora surveys.

5.2 Fauna

5.2.1 Avifauna

Avifauna survey was undertaken along survey transects and at two selected point count locations. In total, 16 species of birds were recorded during bird surveys within project area which was comparatively less than the baseline result of 24 avifauna species on October 2007. The project site was utilised by avifauna as foraging/ roosting area only. No breeding site was found within project site during impact monitoring. Thus, it was predicted that adverse impact on avifauna species will be temporal during construction period. Transect and Point Count locations were shown on **Figure 1-1 to 1-3**. Result of bird survey was presented in the table 5-3

5.2.2 Adult Odonate Survey

Odonate survey was performed and species recorded at Upper Tai Po River were listed in **Table 5-4**. Only 1 species of dragonfly species were recorded during the surveys in current cold and dry season. Recorded *Pantala flavescens* was the common and abundant in Hong Kong (Keith, 2003). Sampling location was shown on **Figure 1-1 to 1-3**.

5.2.3 *Hong Kong Newt*

Survey of Hong Kong Newt was conducted at Upper Tai Po River. No Hong Kong Newt species was recorded.

5.2.4 Aquatic Macro-invertebrates

Upper Tai Po River was flowing with constant water during survey. Aquatic-net and kick sampling was performed at the stream.

The stream benthos fauna collected was mainly comprised of insects, mollusks and as well as small fish (Photo 3). The mollusk fauna of the stream was dominated by snail species of *Physella acuta* at the river channel. Apparently, stream benthic fauna was temporally de-faunated as a result of engineering works and heavy rainfall last year. Despite that, the aquatic macro-invertebrates was predicted to be re-colonized along the river channel after finished the construction work. Stream benthos fauna recorded in reference site was similar to previous monitoring period. Details of recorded of stream benthic fauna refers to **Table 5-5.** Sampling location was shown on **Figure 1-1 to 1-3**.

5.2.5 *Stream Fish Fauna*

Fish surveys were performed at Upper Tai Po River during surveys. In total, 10 species freshwater fish (Photo 4) were recorded within project area. Fish density was low along river channel. Compared with the baseline result, the number of fish species was similar to the result of current impact monitoring. The pelagic fish, *Parazacco spilurus* which have conservation interest, was restricted in the upper section of the surveyed river outside the works boundary where the water was not affected by construction works. Small number of *Parazacco spilurus (Photo 5)* was recorded from the reference site adjacent to the project

site at upper stream section. No record of *Parazacco spilurus* and reduced population of the fish was observed within project site. That would likely be due to the habitat change caused by river bed modification, which was in line with the prediction of impact in the Project Profile (Agreement No. CE50/2001).

Generally, most of the recorded fish fauna are common species in Hong Kong. *Parazacco spilurus* is a common freshwater fish species in Hong Kong but it was listed as vulnerable in China Red Data Book (hkbiodiversity website) and some of them were captures and released to an undisturbed upper stream habitat before construction works with most recently performed on the 1st September 2011 and 3rd October 2011. The locally rare fish species of Three-lined Chinese Stream Catfish was not recorded at affected stream section during day and night time surveys (Photo 4) during both baseline and impact monitoring periods. Details of records of fish fauna refers to **Table 5-6.** Sampling location was shown on **Figure 1-1 to 1-3**.

5.3 Abiotic Data

Data on water quality and major stream hydrological feature (water flow and substratum) of the stream were collected and given in the Table 5.7.

Generally, the water quality was found polluted at lower stream section mainly due to the domestic sewage discharge from villages. Concentration of Ammonia (0.30 mg/L) in lower stream section was comparatively higher than that measured at upper stream section. Fish with less tolerance to toxic ammonia would be eliminated from stream water. Currently, the level of ammonia concentration is considered low and it was likely due to dilution of the running water in the stream. Salinity was low, and it was indicated that the stream was not affected by tidal effect. Generally, water quality (including DO, BOD, pH and nutrients) measured within project area was kept in constant level when compared with previous monitoring result of abiotic data. The detailed abiotic information was shown in Table 5.7.

The stream substratum was comprised of over 80% stones or rocks at most of the stream sections with moderate water flow (up to 0.2m/second at pool and 0.5m/second at riffle).

6 Audit/review Of Monitoring Results

Total population was decreased for the concerned Fish (*Parazacco spilurus*) population at river channel within project site in the current monitoring period than those recorded in baseline ecology survey. Reduced fish population including *Parazacco spilurus* was likely due to habitat change caused by river bed modification within project site. Habitat change due to river bed modification was stated in Project profile. The project profile also predicted some indirect localized disturbance would occur on aquatic community and direct impact to approx. 0.6km of lowland river habitat within project area during construction period. The decrease of concerned fish (*Parazacco spilurus*) population was caused by river bed change which was a unavoidable as predicted. Project profile stated that the new channel bed would be lined with natural materials such as small cobbles and boulders which are similar to the substratum before the construction work. Thus, it is predicted that the concerned fish (*Parazacco spilurus*) population would be restored after the completion of the construction work.

7 Remedial Measures Adopted To Restore The Adverse Condition

There was no unacceptable adverse condition, which would affect adjacent habitats outside project area, was identified within the project area.

8 Record Of Complaints And Remedial Measures

There were 23 complaints at construction site for the Upper Tai Po river. The complaints were followed up with suitable mitigation measures by contractor. The complaints and remedial measures were shown on Appendix I & II.

9 Forecast Of Works Programme And Monitoring Requirements

Major Construction activities carried out by the contractor anticipated for the coming month.

- Gabion Wall Formation
- Retaining Wall Formation
- Cascade Formation
- River Bed Formation
- No-Fine concrete and Inclined Gabion

10 Comments And Conclusions

Ecological impact monitoring was carried out during January 2012 and relevant biotic and abiotic data was collected according to the project specification and the EM & A Manual. One of the three target freshwater fauna species, i.e., fish *Parazacco spilurus,* was recorded at upper stream section adjacent to project boundary. The reduced population of the fish would likely due to the habitat change caused by river bed modification, which was predicted and considered as acceptable in Project profile and such disturbance would be reversible during the operation period. The fish was commonly seen in more upper stream courses which would be the source for late re-colonization of the newly built river channel. The locally rare fish species of Three-lined Chinese Stream Catfish and the Hong Kong Newt were not recorded at the affected stream section during day and night time surveys conducted for both baseline and impact monitoring.

Most aquatic and riparian vegetation along the stream section was cleared due to construction works. Plantation works along newly built up river banks would be undertaken at late stage of the project.

The water quality in the surveyed stream was found polluted at lower stream section mainly due to the domestic sewage discharge from villages. No significant change in water quality was detected except the increased sediments in water after comparing the results with baseline monitoring data.

APPENDIX II The list for mitigation measure for Upper Tai Po River construction site.

Dust

- Arrange the staff to clean the upper access during the vehicle pass the road.
- The access at downstream would be clean 2 times in one day.
- The wheel washing bay was provided to prevent the dust erosion.
- The wheels of the vehicles are required to be cleaned before leave.

Muddy Water

- The rock has been used to create a river bank to reduce the sand and/or mud is washed into river bank.
- Watering along the access road is carried out every day.
- Sand Bags is provided to prevent the muddy water discharge to the river. The muddy water has been treated by effective Wet Seps to minimize the water penetrate through the soil to river.

Noise

- Work 25mins then take a rest 10mins
- noise barrier
- Machines would not be operated at same time and point besides work far away from Noise sensitive receiver
- Regular maintenance

Appendix L: Checklist for Rectification of the Non-compliance

Checklist for Rectification of the Non-compliance (NC)

Action Items	Location	Record Photos	Non-compliance Defects	Rectification Method	Rectify Photos	Inspection Date	Inspection by
1.3 (a)	Upper Tai Po River, Area N		Muddy water was observed being directly discharged into river from sump pit near Ch. 250.	A sedimentation tank has been provided to treat the muddy water prior to the discharge into the west branch of the river. The sedimentation tank will be cleaned and de-sludge regularly.		17 Mar 12	
						24 Mar 12	
						31 Mar 12	
						07 Apr 12	
						14 Apr 12	
						21 Apr 12	
						28 Apr 12	
						05 May 12	

1.3 (b)	Upper Tai Po River, Area N		Muddy water overflowed from the wheel washing bay was observed	A sedimentation tank has been provided to treat the muddy water from ahead washing bay prior to the discharge into the river. The sedimentation tank will be cleaned and de-sludge regularly Also, the boarder of wheel washing bay has been increased to prevent the overflow of wheel washing water.	 	17 Mar 12	JS
						24 Mar 12	JS
						31 Mar 12	JS
						07 Apr 12	
						14 Apr 12	
						21 Apr 12	
						28 Apr 12	
						05 May 12	

1.3 (c)	Upper Tai Po River, Area N		The capacity of sedimentation tank near Ch.600 was insufficient.	A proper sedimentation tank which has sufficient capacity to treat the muddy water before discharge to the river. Also, an additional sedimentation tank has been provided.		17 Mar 12	
						24 Mar 12	
						31 Mar 12	
						07 Apr 12
