EXECUTIVE SUMMARY

Introduction

1. This is the 33rd Environmental Monitoring and Audit (EM&A) Report prepared by Cinotech Consultants Limited for the "Drainage Improvement in Northern Hong Kong Island – Hong Kong West Drainage Tunnel" (the Project). This report documents the findings of EM&A Works conducted in December 2010.

2. The site activities undertaken in the reporting month included:

- TBM excavation and adit excavation at Western Portal and Adit excavation Spoil Basin dismantle at Eastern Portal;
- East TBM dismantling;
- Drainage works at Intake MB16;
- Dropshaft RBM. Reaming ongoing at Intake THR2 & TP5;
- Dropshaft pilot hole on-going at intake TP4;
- Site preparation works at Intakes BR4 and B2;
- Utility Diversion Works at Intakes CR1 and P5;
- Cofferdam construction at Intakes RR1, W5, W8, MA17 and MA14;
- Excavation of intake structure at Intakes PFLR1, E7, W10, MA15, W3, BR6, DG1, HR1, BR5, GL1, W1;
- Permanent Intake structure works at SM1, HKU1, and E5B;
- Slopeworks at Intake M3 on-going;
- DDA submissions for Adit/Main Tunnel Intersection, Adits, Stilling Chambers and Turning Bays;
- DDA submissions for temporary works, slope works and permanent works for Intake Structures;
- DDA submissions for temporary and permanent works for Dropshafts;
- Environmental impact monitoring;
- Casting of dropshaft precast rings; and
- Permanent Adit lining works at MB16.

Environmental Monitoring Works

3. Environmental monitoring for the Project was performed in accordance with the updated EM&A Manual and the monitoring results were checked and reviewed. Site Inspections/Audits were conducted once per week. The implementation of the environmental mitigation measures, Event Action Plans and environmental complaint handling procedures were also checked.

4. Proposal for Temporary Suspension of Water Quality Monitoring Western Portal was submitted on 15th September 2009 and approved by EPD on 30th October 2009. Marine water quality monitoring was temporary suspended starting from 31st October 2009 until there is marine-based construction activities resumed at the Western Portal (i.e. March of 2011 tentatively.)

5. In order to assess the effectiveness of the implementation of water quality mitigation measures at Western Portal, site inspections/audits were conducted at least twice per week at Western Portal starting from November 2009.

6. Summary of the non-compliance of the reporting month is tabulated in Table I.

Table I Summary Table for Non-compliance Recorded in the Reporting Month

Parameter	No. of Exceedance		No. of Exceedance Due to the Project		Action Taken
	Action Level	Limit Level	Action Level	Limit Level	
Eastern Portal					
1-hr TSP	0	0	0	0	N/A
24-hr TSP	0	0	0	0	N/A
Noise	1	0	1	0	N/A
Western Portal					
1-hr TSP	0	0	0	0	N/A
24-hr TSP	0	0	0	0	N/A
Noise	0	0	0	0	N/A
Intake DG1					
Noise	1	0	1	0	N/A
Intake E5A					
Noise	0	0	0	0	N/A
Intake E7					
Noise	0	0	0	0	N/A
Intake MA14					
Noise	0	0	0	0	N/A
Intake PFLR1					
Noise	0	0	0	0	N/A
Intake W0					
Noise	0	0	0	0	N/A
Intake RR1					
Noise	0	0	0	0	N/A

Intake W5					
Noise	1	0	1	0	N/A
Intake P5					
Noise	0	0	0	0	N/A
Intake W8					
Noise	0	0	0	0	N/A
Intake BR6					
Noise	0	0	0	0	N/A
Intake TP5					
Noise	1	0	1	0	N/A

Eastern Portal

1-hour TSP Monitoring

7. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

24-hour TSP Monitoring

8. All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Construction Noise

9. All construction noise monitoring was conducted as scheduled in the reporting month. One Action Level exceedance was recorded due to the complaint received on 24th December 2010.

Western Portal

1-hour TSP Monitoring

10. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

24-hour TSP Monitoring

11. All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Construction Noise

12. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Water Quality

13. Marine water quality monitoring was temporary suspended starting from 31st October 2009.

Construction Ground Borne Noise

14. All construction ground borne noise monitoring was conducted in the reporting month. No Limit Level exceedance was recorded.

Intake DG1

Construction Noise

15. All construction noise monitoring was conducted as scheduled in the reporting month. One Action Level exceedance was recorded due to the complaint received on 7th December 2010.

Intake E5A

Construction Noise

16. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Intake E7

Construction Noise

17. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Intake MA14

Construction Noise

18. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Intake PFLR1

Construction Noise

19. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Intake RR1

Construction Noise

20. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Intake W0

Construction Noise

21. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Intake W5

Construction Noise

22. All construction noise monitoring was conducted as scheduled in the reporting month. One Action Level exceedance was recorded due to the complaint received on 14th December 2010.

Intake P5

Construction Noise

23. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Intake W8

Construction Noise

24. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Intake BR6

Construction Noise

25. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Intake TP5

Construction Noise

26. One Action Level exceedance was recorded due to the complaint received on 22nd December 2010.

Environmental Licenses and Permits

27. Licenses/Permits granted to the Project include the Environmental Permit (EP) for the Project, An Environmental Permit No. EP-272/2007 was issued on 26 April 2007 and Environmental Permit No. EP-272/2007/A was issue on 26 October 2007. Later, the further Environmental Permit (FEP-01/272/2007/A) and (FEP-01/272/2007/B) was issued on 28 January 2008 and 25 June 2009 to Dragages-Nishimatsu Joint Venture.

28. Registration of Chemical Waste Producer (License: 5213-148-D2393-02 for Eastern Portal and No. 5213-172-D2393-01 for Western Portal).

29. Water Discharge License (License No.: EP860/W10/XY0175 for Area of Mount Butler Office, EP860/W10/XY0177 for Eastern Portal, EP820/W9/XT086 and WT00005864-2010 for Western Portal, EP860/W10/XY0183 for Intake W0, WT00003372-2009 for Intake SM1, WT00003737-2009 for Intake MB16, WT00004126-2009 for Intake HKU1, WT00003738-2009 for THR2, WT00004270-2009 for PFLR1, WT00004806-2009 for Intake E7, WT00004808-2009 for MBD2, WT00004885-2009 for Intake RR1, WT00005135-2009 for Intake W10, WT00005357-2009 for Intake W5, WT00005374-2009 for Intake P5, WT00005376-2009 for Intake TP4, WT00005588-2009 for Intake TP5, WT00005643-2009 for Intake E5A, WT00005754-2010 for Intake W8, WT00005954 for Intake TP789, WT00005915 for Intake E5B, WT00006102-2010 for Intake M3, WT00006415-2010 for Intake MA15, WT00006420-2010 for Intake MA17, WT00006428-2010 for Intake BR6, WT00006609-2010 for Intake HR1, WT00006559-2010 for Intake CR1, WT00006929-2010 for Intake W1, WT00006418-2010 for Intake MA14, WT00006865-2010 for Intake BR5, WT00007039-2010 for Intake DG1 WT00007042-2010 for Intake W3, WT00007043-2010 for Intake GL1, WT00007130-2010 for Intake BR4, WT00007139-2010 for Intake BR6 – SNH17 and WT00007319-2010 for Intake B2).

30. Construction Noise Permit (License No.: GW-RS0512-10 and GW-RS0734-10 for Eastern Portal, GW-RS0865-10 and GW-RS1054-10 for Western Portal, GW-RS0522-10 and GW-RS0733-10 for Intake W0, GW-RS0699-10 for Intake SM1, GW-RS0710-10 for Intake PFLR1, GW-RS0995-10 for Intake W3 and GW-RS0468-10 and GW-RS1071-10 for Intake MA17).

Key Information in the Reporting Month

31. Summary of key information in the reporting month is tabulated in Table II.

Table II Summary Table for Key Information in the Reporting Month

Event	Event Details		Action Taken	Status	Remark
	Number	Nature			
Complaint received	1	Construction noise at Intake DG1	Investigation Completed	Closed	---
	1	Dust nuisance at Intake MB16			
	1	Construction noise at Intake W5			
	1	Construction noise at Intake TP5			
	1	Construction noise at Eastern Portal	Under Investigation	Under Investigation	---
Changes to the assumptions and key construction / operation activities recorded	0	---	N/A	N/A	---
Status of submissions under EP	1	Monthly EM&A Report (November 2010)	Submitted to EPD on 17 December 2010 (EP condition 3.3)	Verified by IEC	---
Notifications of any summons & prosecutions received	0	---	N/A	N/A	---

Future Key Issues:

Major site activities for the coming month include:

- TBM excavation adit excavation at West Portal and Adit excavation & stage II river channel works at East Portals;
- Permanent Adit lining works at MB16 & MBD2;
- East TBM dismantling;
- Landscaping work at Intake SM1;
- Stage 1 Structure Construction at Intake MA15;
- Excavation of dropshaft at Intakes TP4 and TP789 by Raise Boring method;
- Dropshaft pilot hole at Intakes TP789 by Raise Boring Method;
- Excavation of intake structure at Intakes E7, DG1, BR6, PFLR1, W10, W3, E5A, GL1, W5, BR5, HR1, W1, MA17 and BR4;
- Cofferdam construction at Intakes RR1, W8, MA14, M3, P5 and CR1;
- Site preparation works for Intakes CR1, and B2;
- Casting dropshaft precast rings; and
- Permanent dropshaft lining works at MB16.

1. INTRODUCTION

Background

1.1 Drainage Improvement in Northern Hong Kong Island – Hong Kong West Drainage Tunnel is a Designated Project (hereafter referred to as "the Project") under the Environmental Impact Assessment Ordinance (Cap. 449). A study of environmental impact assessment (EIA) was undertaken to consider the key issues of air quality, noise, water quality, ecological, construction waste, landscape and visual, land use, cultural impacts, and identify possible mitigation measures associated with the works. An EIA Report was approved by the Environmental Protection Department (EPD) on 7 April 2006.

1.2 The project comprises the construction of a drainage tunnel deep into the ground in Mid-levels of the Northern Hong Kong Island from Tai Hang to Pokfulam to intercept and convey the stormwater from the upper catchment directly to the sea near Cyberport. The Drainage tunnel alignment starts from the Eastern Portal near Haw Par Mansion in Tai Hang and ends at the Western Portal located to the north of Cyberport running underneath the Pok Fu Lam, Tai Tam, Aberdeen and Lung Fu Shan Country Parks. The underground main drainage tunnel is 6.25m-7.25m in diameter and about 11km long. Two portals and a series of connecting adits and drop shafts are also been constructed. The general layout of the Project is shown in **Figure 1.1**.

1.3 An Environmental Permit (EP) No. EP-272/2007 was issued on 26 April 2007 for Drainage Improvement in Northern Hong Kong Island – Hong Kong West Drainage Tunnel to Drainage Services Department as the Permit Holder. Later, the further Environmental Permit (FEP-01/272/2007/A) and (FEP-01/272/2007/B) was issued on 28 January 2008 and 25 June 2009 to Dragages-Nishimatsu Joint Venture.

1.4 Cinotech Consultants Limited was commissioned by the Dragages-Nishimatsu Joint Venture (the Contractor) to undertake the Environmental Monitoring and Audit (EM&A) works for the Project. The Updated EM&A Manual was prepared by Cinotech to fulfil the requirements of the EP. The construction commencement of this Contract at Eastern Portal was on 17th April 2008 and 2nd May 2008 at Western Portal (land-based). The marine construction works was commenced on 30 May 2008. This is the 33rd monthly EM&A report summarizing the EM&A works for the Project in December 2010.

Project Organizations

1.5 Different parties with different levels of involvement in the project organization include:

- Project Proponent – Drainage Services Department (DSD).
- The Supervising Officer or Supervising Officer's Representative (SO or SOR) – Ove Arup & Partners (ARUP).
- Environmental Team (ET) – Cinotech Consultants Limited (CCL).
- Independent Environmental Checker (IEC) – Allied Environmental Consultants Limited (AEC).
- Contractor – Dragages-Nishimatsu Joint Venture (DNJV).

1.6 The responsibilities of respective parties are detailed in Sections 1.14 to 1.28 of the updated EM&A Manual of the Project.

1.7 The key contacts of the Project are shown in Table 1.1 and the organization chart of ET is shown in **Figure 2.1**.

Table 1.1 Key Project Contacts

Party	Role	Name	Position	Phone No.	Fax No.
DNJV	Permit Holder	Mr. ALTIER Daniel	Project Manager	2671 7333	2671 9300
		Mr. UETAKE H.	Deputy Project Manager		
ARUP	Supervising Officer	Mr. Jackson Wong	SRE	6117 6636	2436 1012
		Ms. Angela Yan	RE	3961 5206	
		Mr. Bernard Cheng	RE	98614939	
Cinotech	Environmental Team	Dr. Priscilla Choy	ET Leader	2151 2089	3107 1388
		Ms. Ivy Tam	Project Coordinator and Audit Team Leader	2151 2090	
		Mr. Henry Leung	Monitoring Team Leader	2151 2087	
AEC	Independent Environmental Checker	Ms. Grace Kwok	Independent Environmental Checker	2815 7028	2815 5399
DNJV	Contractor	Mr. Sing Chu	Environmental Officer	3476 0753	2671 9300

Construction Programme

1.8 The site activities undertaken in the reporting month included:

- TBM excavation and adit excavation at Western Portal and Adit excavation Spoil Basin dismantle at Eastern Portal;
- East TBM dismantling;
- Drainage works at Intake MB16;
- Dropshaft RBM. Reaming ongoing at Intake THR2 & TP5;
- Dropshaft pilot hole on-going at intake TP4;
- Site preparation works at Intakes BR4 and B2;
- Utility Diversion Works at Intakes CR1 and P5;
- Cofferdam construction at Intakes RR1, W5, W8, MA17 and MA14;

- Excavation of intake structure at Intakes PFLR1, E7, W10, MA15, W3, BR6, DG1, HR1, BR5, GL1, W1;
- Permanent Intake structure works at SM1, HKU1, and E5B;
- Slopeworks at Intake M3 on-going;
- DDA submissions for Adit/Main Tunnel Intersection, Adits, Stilling Chambers and Turning Bays;
- DDA submissions for temporary works, slope works and permanent works for Intake Structures;
- DDA submissions for temporary and permanent works for Dropshafts;
- Environmental impact monitoring;
- Casting of dropshaft precast rings; and
- Permanent Adit lining works at MB16.

Table 1.2 Construction Programme Showing the Inter-Relationship with Environmental Protection/Mitigation Measures

Construction Works	Major Environmental Impact	Control Measures
TBM excavation and adit excavation at Western Portal and Adit excavation Spoil Basin dismantle at Eastern Portal	Noise, dust impact, water quality and waste generation	Provided water spraying during dust generation works On-site waste sorting and implementation of trip ticket system Appropriate desilting/sedimentation devices provided on site for treatment before discharge Use of quiet plant and well-maintained construction plant Provide movable noise barrier Provide sufficient mitigation measures as recommended in Approved EIA Report
East TBM dismantling		
Drainage works at Intake MB16		
Dropshaft RBM. Reaming ongoing at Intake THR2 & TP5		
Dropshaft pilot hole on-going at intake TP4		
Site preparation works at Intakes BR4 and B2		
Utility Diversion Works at Intakes CR1 and P5		
Cofferdam construction at Intakes RR1, W5, W8, MA17 and MA14		
Excavation of intake structure at Intakes PFLR1, E7, W10, MA15, W3, BR6, DG1, HR1, BR5, GL1, W1		
Permanent Intake structure works at SM1, HKU1, and E5B		
Slopeworks at Intake M3 on-going		
Permanent Adit lining works at MB16		
DDA submissions for Adit/Main Tunnel Intersection, Adits, Stilling Chambers and Turning Bays	Nil	Nil
DDA submissions for temporary works, slope works and permanent works for Intake Structures		
DDA submissions for temporary and permanent works for Dropshafts		
Environmental impact monitoring		
Casting of dropshaft precast rings		

Summary of EM&A Requirements

1.9 The EM&A programme requires construction phase monitoring construction noise, air quality and water quality and environmental site audit. The EM&A requirements for each parameter are described in the following sections, including:

- All monitoring parameters;
- Action and Limit levels for all environmental parameters;
- Event Action Plans;
- Environmental mitigation measures, as recommended in the project EIA study final report; and
- Environmental requirements in contract documents.

1.10 The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 5 of this report.

1.11 This report presents the monitoring results, observations, locations, equipment, period, methodology and QA/QC procedures of the required monitoring parameters, namely air quality, water quality and noise levels and audit works for the Project in December 2010.

2. AIR QUALITY

Monitoring Requirements

2.1 1-hour and 24-hour TSP monitoring were conducted to monitor the air quality at Eastern and Western Portals. **Appendix A** shows the established Action/Limit Levels for the environmental monitoring works.

Monitoring Locations

2.2 Three designated monitoring stations, AQ1, AQ2 and AQ3 were selected for impact dust monitoring. Table 2.1 describes the air quality monitoring locations, which are also depicted in **Figure 3.1a-b.**

Table 2.1 Locations for Air Quality Monitoring

Monitoring Stations	Locations
AQ1	True Light Middle School of Hong Kong
AQ2	Outside Aegean Terrace
AQ3	Outside The Site Office at Western Portal

Monitoring Equipment

2.3 Table 2.2 summarizes the equipment used in the impact air monitoring programme. Copies of calibration certificates are attached in **Appendix B**.

Table 2.2 Air Quality Monitoring Equipment

Equipment	Model and Make	Quantity
Calibrator	G25A	1
1-hour TSP Dust Meter	Laser Dust Monitor – Model LD3B	1
HVS Sampler	GMWS 2310 c/w of TSP sampling inlet	2

Monitoring Parameters, Frequency and Duration

2.4 Table 2.3 summarizes the monitoring parameters and frequencies of impact dust monitoring for the whole construction period. The air quality monitoring schedule for the reporting month is shown in **Appendix D**.

Table 2.3 Impact Dust Monitoring Parameters, Frequency and Duration

Parameters	Frequency
1-hr TSP	Three times / 6 days
24-hr TSP	Once / 6 days

Monitoring Methodology and QA/QC Procedure

1-hour TSP Monitoring

Measuring Procedures

2.5 The measuring procedures of the 1-hour dust meters were in accordance with the Manufacturer's Instruction Manual as follows:

- Pull up the air sampling inlet cover
- Change the Mode 0 to BG with once
- Push Start/Stop switch once
- Turn the knob to SENSI.ADJ and press it
- Push Start/Stop switch once
- Return the knob to the position MEASURE slowly
- Push the timer set switch to set measuring time
- Remove the cap and make a measurement

Maintenance/Calibration

2.6 The following maintenance/calibration was required for the direct dust meters:

- Check the meter regularly and calibrate the meter at bi-monthly interval throughout all stages of the air quality monitoring.

24-hour TSP Monitoring

Instrumentation

2.7 High volume (HVS) samplers (Model GMWS-2310 Accu-Vol) completed with appropriate sampling inlets were employed for 24-hour TSP monitoring. The sampler was composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complied with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50). Moreover, the HVS also met all the requirements in section 2.5 of the updated EM&A Manual.

Operating/Analytical Procedures

2.8 Operating/analytical procedures for the operation of HVS were as follows:

- A horizontal platform was provided with appropriate support to secure the samplers against gusty wind.
- No two samplers were placed less than 2 meters apart.
- The distance between the sampler and an obstacle, such as buildings, was at least twice the height that the obstacle protrudes above the sampler.
- A minimum of 2 meters of separation from walls, parapets and penthouses was required for rooftop samples.
- A minimum of 2 meters separation from any supporting structure, measured horizontally was required.
- No furnaces or incineration flues were nearby.
- Airflow around the sampler was unrestricted.

- The sampler was more than 20 meters from the drip line.
- Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring.

2.9 Prior to the commencement of the dust sampling, the flow rate of the high volume sampler was properly set (between 1.1 m^3/min. and 1.4 m^3/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50.

2.10 For TSP sampling, fiberglass filters (G810) were used [Note: these filters have a collection efficiency of > 99% for particles of 0.3 mm diameter].

2.11 The power supply was checked to ensure the sampler worked properly. On sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air monitoring station.

2.12 The filter holding frame was then removed by loosening the four nuts and a weighted and conditioned filter was carefully centered with the stamped number upwards, on a supporting screen.

2.13 The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.

2.14 The shelter lid was closed and secured with the aluminum strip.

2.15 The timer was then programmed. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).

2.16 After sampling, the filter was removed and sent to the HOKLAS laboratory (Wellab Ltd.) for weighing. The elapsed time was also recorded.

2.17 Before weighing, all filters were equilibrated in a conditioning environment for 24 hours. The conditioning environment temperature should be between 25°C and 30°C and not vary by more than ±3°C; the relative humidity (RH) should be < 50% and not vary by more than ±5%. A convenient working RH is 40%.

Maintenance/Calibration

2.18 The following maintenance/calibration was required for the HVS:

- The high volume motors and their accessories were properly maintained. Appropriate maintenance such as routine motor brushes replacement and electrical wiring checking were made to ensure that the equipment and necessary power supply are in good working condition.
- High volume samplers were calibrated at bi-monthly intervals using TE-5028A Calibration Kit throughout all stages of the air quality monitoring.

Results and Observations

Eastern Portal (AQ1)

2.19 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

2.20 All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Western Portal (AQ2)

2.21 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Western Portal (AQ3)

2.22 All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

2.23 Wind data was obtained from the Meteorological Observations for King's Park Automatic Weather Station for Eastern Portal and Wong Chuk Hang Automatic Weather Station for Western Portal. These wind data for the reporting period is summarized in **Appendix C.**

2.24 The monitoring data and graphical presentations of 1-hour and 24-hour TSP monitoring results are shown in **Appendices E and F** respectively.

2.25 The summary of exceedance record in reporting month is shown in **Appendix H**.

2.26 In accordance with Condition 4.2 of the EP, all environmental monitoring data was made available to the public via internet access at the website http://www.cinotech.com.hk/projects/WestDrainageTunnel/.

2.27 According to our field observations, the major dust source identified at the designated air quality monitoring stations are as follows:

Area	Station	Major Noise Source
Eastern Portal	AQ1 – True Light Middle School of Hong Kong	Road Traffic Dust Loading/unloading activities
Western Portal	AQ2 – Outside Aegean Terrace	Road Traffic Dust Loading/unloading activities
	AQ3 – Outside The Site Office at Western Portal	

Table 2.4 Summary Table of Air Quality Monitoring Results during the reporting month

Parameter	Date	Concentration (µg/m3)	Action Level, µg/m3	Limit Level, µg/m3
Eastern Portal				
1-hr TSP (AQ1)	3-Dec-10	55.8	345	500
	3-Dec-10	80.3		
	3-Dec-10	113.1

3. NOISE

Airborne Construction Noise Monitoring

Monitoring Requirements

3.1 Eighteen noise monitoring stations, namely NC1, NC2, NC3, NC4, NC5, NC6, NC7, NC8, NC9, NC10, NC11, NC12, NC13, NC14, NC15, NC16, NC17, NC18 and NC19 were selected for impact monitoring in the reporting month. **Appendix A** shows the established Action and Limit Levels for the environmental monitoring works.

Monitoring Locations

3.2 Noise monitoring was conducted at ten designated monitoring stations as listed in Table 3.1. **Figure 3.1a-n** shows the locations of these stations.

Table 3.1 Noise Monitoring Stations

Monitoring Stations	Locations
NC1/NC1a	True Light Middle School of Hong Kong/Outside True Light Middle School of Hong Kong
NC2	The Legend
NC3	Outside Aegean Terrace
NC4	Man Yuen Garden
NC5	Blk D Villa Monte Rosa
NC6	Rosaryhill School
NC7	Buddist Li Ka Shing Care & Attention Home for the Elderly
NC8	Marymount Secondary School
NC9	117 Blue Pool Road
NC10	The Harbour View
NC11	Honey Court
NC12	Ying Wa Girl's School
NC13	Peaksville Court
NC14	Hong Kong Japanese School
NC15	Hong Kong Academy
NC16	Raimondi College
NC17	Hong Kong Institute of Technology
NC18	Blk A, 80 Robinson Road
NC19	Villa Veneto

Monitoring Equipment

3.3 Table 3.2 summarizes the noise monitoring equipment. Copies of calibration certificates are provided in **Appendix B**.

Table 3.2 Noise Monitoring Equipment

Equipment	Model and Make	Qty.
Integrating Sound Level Meter	B&K Model 2250 Light SVAN 955, 957	5
Calibrator	B&K 4231 and SVAN 30A	4

Monitoring Parameters, Frequency and Duration

3.4 Table 3.3 summarizes the monitoring parameters, frequency and total duration of monitoring. The noise monitoring schedule is shown in **Appendix D**.

Table 3.3 Noise Monitoring Parameters, Frequency and Duration

Monitoring Stations	Parameter	Period	Frequency	Measurement
NC1 NC2 NC3 NC4 *NC5 NC6 NC7 NC8 NC9 NC10 *NC11 NC12 NC13 NC14 *NC15 NC16 NC17 NC18 NC19	L_{10}(30 min.) dB(A) L_{90}(30 min.) dB(A) L_{eq}(30 min.) dB(A)	0700-1900 hrs on normal weekdays	Once per week	Façade
NC1a NC2 NC3	L_{10}(5 min.) dB(A) L_{90}(5 min.) dB(A) L_{eq}(5 min.) dB(A)	1900 – 2300 hrs on all other days 0700 – 2300 hrs holidays & 2300 – 0700 hrs of next day		

*Free Field Measurement

Monitoring Methodology and QA/QC Procedures

- The Sound Level Meter was set on a tripod at a height of 1.2 m above the ground.

- For free field measurement, the meter was positioned away from any nearby reflective surfaces. All records for free field noise levels were adjusted with a correction of +3 dB(A).
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
  - frequency weighting : A
  - time weighting : Fast
  - time measurement : 30 minutes / 5 minutes
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with the portable wind meter.
- At the end of the monitoring period, the L_{eq}, L_{90} and L_{10} were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- Noise measurement was paused temporarily during periods of high intrusive noise if possible and observation was recorded when intrusive noise was not avoided.
- Noise monitoring was cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s.

Maintenance and Calibration

3.5 The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.

3.6 The sound level meter and calibrator were checked and calibrated at yearly intervals.

3.7 Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

Results and Observations

3.8 Noise monitoring (0700-1900 hrs on normal weekdays, 1900-2300 hrs on all other days, 2300-0700 hrs of next day and 0700-1900 hrs on holidays) at the three designated locations (NC1/NC1a (for restricted hours), NC2 and NC3) was conducted as scheduled in the reporting month for Eastern and Western Portal.

3.9 As the noise monitoring for restricted hours inside the True Light Middle School of Hong Kong (NC1) throughout the construction period will cause disturbance to them. Thus, the noise monitoring for evening time will be conducted at outside the school (NC1a) at the nearest of the staff accommodation. As no baseline noise monitoring has been conducted at NC1a and the major noise source was the traffic noise along Tai Hang Road. The noise monitoring results will be adjusted with the reference baseline noise level at NC1 (1900-2300 on all other days and 0700 – 2300 hrs holidays & 2300 – 0700 hrs of next day) and will be used as reference only.

3.10 Noise monitoring (0700-1900 hrs on normal weekdays) at NC4, NC5, NC6, NC7, NC8, NC9, NC10, NC11, NC12, NC13, NC14, NC15, NC16, NC17, NC18 and NC19 were conducted as scheduled in the reporting month for Intake BR6, Intake DG1, E5A, E7, MA14, PFLR1, RR1, THR2, W0, W5 and P5 respectively.

Eastern Portal (NC1 & NC2) – 0700-1900 hrs on normal weekdays

3.11 One Action levels exceedance was recorded due to the complaints received on 24th December 2010.

Eastern Portal (NC1a & NC2) – 1900-2300 hrs on all other days and 0700-2300 hrs on holidays

3.12 No Action/Limit Level exceedance was recorded.

Eastern Portal (NC1a & NC2) – 2300-0700 hrs of next day

3.13 One Action levels exceedance was recorded due to the complaints received on 24th December 2010.

Western Portal (NC3) – 0700-1900 hrs on normal weekdays

3.14 No Action/Limit Level exceedance was recorded.

Western Portal (NC3) – 1900-2300 hrs on all other days and 0700-2300 hrs on holidays

3.15 No Action/Limit Level exceedance was recorded.

Western Portal (NC3) – 2300-0700 hrs of next day

3.16 No Action/Limit Level exceedance was recorded.

Intake BR6 (NC4) – 0700-1900 hrs on normal weekdays

3.17 No Action/Limit Level exceedance was recorded.

Intake DG1 (NC5) – 0700-1900 hrs on normal weekdays

3.18 One Action level exceedance was recorded due to the complaints received on 7th December 2010.

Intake DG1 (NC6) – 0700-1900 hrs on normal weekdays

3.19 One Action level exceedance was recorded due to the complaints received on 7th December 2010.

Intake E5A (NC7) – 0700-1900 hrs on normal weekdays

3.20 No Action/Limit Level exceedance was recorded.

Intake E7 (NC8) – 0700-1900 hrs on normal weekdays

3.21 No Action/Limit Level exceedance was recorded.

Intake E7 (NC9) – 0700-1900 hrs on normal weekdays

3.22 No Action/Limit Level exceedance was recorded.

Intake MA14 (NC10) – 0700-1900 hrs on normal weekdays

3.23 No Action/Limit Level exceedance was recorded.

Intake PFLR1 (NC11) – 0700-1900 hrs on normal weekdays

3.24 No Action/Limit Level exceedance was recorded.

Intake RR1 (NC12) – 0700-1900 hrs on normal weekdays

3.25 No Action/Limit Level exceedance was recorded.

Intake RR1 (NC13) – 0700-1900 hrs on normal weekdays

3.26 No Action/Limit Level exceedance was recorded.

Intake THR2 (NC14) – 0700-1900 hrs on normal weekdays

3.27 No Action/Limit Level exceedance was recorded.

Intake W0 (NC15) – 0700-1900 hrs on normal weekdays

3.28 No Action/Limit Level exceedance was recorded.

Intake W5 (NC16) – 0700-1900 hrs on normal weekdays

3.29 One Action level exceedance was recorded due to the complaints received on 14th December 2010.

Intake W8 (NC17) – 0700-1900 hrs on normal weekdays

3.30 No Action/Limit Level exceedance was recorded.

Intake W8 (NC18) – 0700-1900 hrs on normal weekdays

3.31 No Action/Limit Level exceedance was recorded.

Intake P5 (NC19) – 0700-1900 hrs on normal weekdays

3.32 No Action/Limit Level exceedance was recorded.

Intake TP5 – 0700-1900 hrs on normal weekdays

3.33 One Action level exceedance was recorded due to the complaints received on 22nd December 2010.

3.34 The summary of exceedance record in reporting month is shown in **Appendix H**.

3.35 All the Construction Noise Levels (CNLs) reported in this report were adjusted with the corresponding baseline level (i.e. Measured Leq – Baseline Leq = Measured CNL), in order to facilitate the interpretation of the noise exceedance. The baseline noise level and the Noise Limit Level at each designated noise monitoring station are presented at Table 3.4.

3.36 Noise monitoring results and graphical presentations are shown in **Appendix G**. In accordance with Condition 4.2 of the EP, all environmental monitoring data was made available to the public via internet access at the website http://www.cinotech.com.hk/projects/WestDrainageTunnel/.

3.37 The major noise sources identified at the designated noise monitoring stations are as follows:

Area	Station	Major Noise Source
Eastern Portal	NC1 – True Light Middle School of Hong Kong	Traffic Noise Loading/unloading activities
	NC2 – The Legend	
Western Portal	NC3 – Outside Aegean Terrace	Traffic Noise Loading/unloading activities
Intake BR6	NC4 - Man Yuen Garden	Traffic Noise Excavation works
Intake DG1	NC5 - Blk D Villa Monte Rosa NC6 - Rosaryhill School	Traffic Noise Excavation works
Intake E5A	NC7 - Buddist Li Ka Shing Care & Attention Home for the Elderly	Traffic Noise Excavation works
Intake E7	NC8 – Marymount Secondary School NC9 – 117 Blue Pool Road	Traffic Noise Excavation works
Intake MA14	NC10 - The Harbour View	Traffic Noise Excavation works
Intake PFLR1	NC11 – Honey Court	Traffic Noise Excavation works
Intake RR1	NC12 – Ying Wa Girl's School NC13 – Peaksville Court	Traffic Noise Excavation works
Intake THR2	NC14 – Hong Kong Japanese School	Traffic Noise Excavation works
Intake W0	NC15 – Hong Kong Academy	Traffic Noise
Intake W5	NC16 - Raimondi College	Traffic Noise Excavation works
Intake W8	NC17 - Hong Kong Institute of Technology	Traffic Noise Excavation works
	NC18 - Blk A, 80 Robinson Road	
Intake P5	NC19 – Villa Veneto	Traffic Noise Excavation works

Table 3.4 Baseline Noise Level and Noise Limit Level for Monitoring Stations

Station	Baseline Noise Level, dB (A)	Noise Limit Level, dB (A)
NC1 – True Light Middle School of Hong Kong	70.2 (at 0700 – 1900 hrs on normal weekdays)	70* (at 0700 – 1900 hrs on normal weekdays)
NC1a – Outside True Light Middle School of Hong Kong (the nearest of staff accommodation)	65.8 (at 0700 – 2300 hrs holidays & 1900 – 2300 hrs on all other days) 60.7 (at 2300 – 0700 hrs of next day) **(reference)**	65 (at 0700 – 2300 hrs holidays & 1900 – 2300 hrs on all other days) 50 (at 2300 – 0700 hrs of next day)
NC2 – The Legend	64.8 (at 0700 – 1900 hrs on normal weekdays) 59.1 (at 0700 – 2300 hrs holidays & 1900 – 2300 hrs on all other days) 53.9 (at 2300 – 0700 hrs of next day)	75 (at 0700 – 1900 hrs on normal weekdays)
NC3 – Outside Aegean Terrace	57.7 (at 0700 – 1900 hrs on normal weekdays) 53.8 (at 0700 – 2300 hrs holidays & 1900 – 2300 hrs on all other days) 52.0 (at 2300 – 0700 hrs of next day)	65 (at 0700 – 2300 hrs holidays & 1900 – 2300 hrs on all other days) 50 (at 2300 – 0700 hrs of next day)
NC4 – Man Yuen Garden	64.5 (at 0700 – 1900 hrs on normal weekdays) 61.6 (at 0700 – 2300 hrs holidays & 1900 – 2300 hrs on all other days) 54.8 (at 2300 – 0700 hrs of next day)	75 (at 0700 – 1900 hrs on normal weekdays)
NC5 - Blk D Villa Monte Rosa	66.1(at 0700 – 1900 hrs on normal weekdays)	75 (at 0700 – 1900 hrs on normal weekdays)
NC6 - Rosaryhill School	64.1 (at 0700 – 1900 hrs on normal weekdays)	70* (at 0700 – 1900 hrs on normal weekdays)
NC7 - Buddist Li Ka Shing Care & Attention Home for the Elderly	65.1 (at 0700 – 1900 hrs on normal weekdays)	75 (at 0700 – 1900 hrs on normal weekdays)
NC8 – Marymount Secondary School	63.5 (at 0700 – 1900 hrs on normal weekdays)	70* (at 0700 – 1900 hrs on normal weekdays)
NC9 – 117 Blue Pool Road	63.3 (at 0700 – 1900 hrs on normal weekdays)	75 (at 0700 – 1900 hrs on normal weekdays)
NC10 – The Harbour View	71.7 (at 0700 – 1900 hrs on normal weekdays)	75 (at 0700 – 1900 hrs on normal weekdays)
NC11 – Honey Court	63.2 (at 0700 – 1900 hrs on normal weekdays)	75 (at 0700 – 1900 hrs on normal weekdays)

NC12 – Ying Wa Girl's School	67.1 (at 0700 – 1900 hrs on normal weekdays)	70* (at 0700 – 1900 hrs on normal weekdays)
NC13 - Peaksville Court	65.2 (at 0700 – 1900 hrs on normal weekdays)	75 (at 0700 – 1900 hrs on normal weekdays)
NC14 – Hong Kong Japanese School	60.8 (at 0700 – 1900 hrs on normal weekdays)	70* (at 0700 – 1900 hrs on normal weekdays)
NC15 – Hong Kong Academy	63.5 (at 0700 – 1900 hrs on normal weekdays)	70* (at 0700 – 1900 hrs on normal weekdays)
NC16 - Raimondi College	70.4 (at 0700 – 1900 hrs on normal weekdays)	70* (at 0700 – 1900 hrs on normal weekdays)
NC17 - Hong Kong Institute of Technology	66.0 (at 0700 – 1900 hrs on normal weekdays)	70* (at 0700 – 1900 hrs on normal weekdays)
NC18 - Blk A, 80 Robinson Road	64.8 (at 0700 – 1900 hrs on normal weekdays)	75 (at 0700 – 1900 hrs on normal weekdays)
NC19 – Villa Veneto	68.6 (at 0700 – 1900 hrs on normal weekdays)	75 (at 0700 – 1900 hrs on normal weekdays)

(*) reduce to 65 dB(A) during school examination periods.

Ground Borne Construction Noise Monitoring

Monitoring Requirements

3.38 In accordance with the recommendations of the EIA study, ground borne noise monitoring is required to carry out during the TBM operation. Eight designated monitoring stations (GNC1 to GNC8) are designated for construction groundborne noise monitoring to check for compliance.

Monitoring Locations

3.39 Construction Ground Borne Noise Monitoring at GNC3 was temporary suspended since 7 May 2009 as the ISS EastPoint Property Management Ltd. received an instruction from the Incorporated Owners of Aegean Terrace that we are not permitted to conduct any noise monitoring inside Aegean Terrace for the Project.

3.40 According to the approved EIA report, noise monitoring should be performed at NSR1a (i.e. Crane Court) when TBM is operating through the tunnel section between points A and B). Therefore, Ground borne noise monitoring has been conducted at Crane Court (GNC4) since 3 June 2009 during the TBM operated.

3.41 Ground borne noise monitoring at GNC1 – True Light Middle School, GNC2 – The Legend and GNC4 – Crane Court were completed by end of August 2009 accordingly.

3.42 Ground borne noise monitoring at GNC5 was completed by end of November 2009.

3.43 Ground borne noise monitoring was conducted at GNC6 – French International School in the reporting month during the TBM operation and completed by end of June 2010.

3.44 Ground borne noise monitoring was conducted at GNC7 – Hong Villa in the reporting month. **Figure 3.1o** shows the locations of the monitoring stations.

Monitoring Equipment

3.45 The noise monitoring equipment shall be the same as stated in Section 3.3.

Monitoring Parameters, Frequency and Duration

3.46 Table 3.6 summarizes the monitoring parameters, frequency and total duration of monitoring. The noise monitoring schedule is shown in **Appendix D**.

Table 3.6 Ground Borne Noise Monitoring Parameters, Frequency and Duration

Monitoring Stations	Parameter	Period	Frequency
GNC7	L_{10}(30 min.) dB(A) L_{90}(30 min.) dB(A) L_{eq}(30 min.) dB(A)	0700-1900 hrs on normal weekdays	Once per week

Results and Observations

3.47 Groundborne Noise monitoring (0700-1900 hrs on normal weekdays) at Hong Villa (GNC7) was conducted as scheduled in the reporting month. The construction ground borne noise standards are presented at Table 3.7.

Hong Villa (GNC7) - 0700-1900 hrs on normal weekdays

3.48 No exceedance was recorded.

Table 3.7 Construction Ground Borne Noise Standards

	Ground Borne Noise Criteria, dB(A) (Leq 30 min)		
Uses	Daytime (except General Holidays and Sundays)*	Daytime during general holidays and Sundays and all days during Evening (1900 to 2300 hrs)**	Night time (2300 to 0700 hrs)
Domestic Premises	65	55	40
Educational Institutions (normal periods)	60	55	(1)
Education Institutions (during examination periods)	55	55	(1)

*10dB(A) below the noise criteria stipulated in EIAO-TM
**10dB(A) below the noise criteria stipulated in GW-TM
(1) No sensitive uses usually present during these periods

Table 3.8 Summary Table of Ground Borne Noise Monitoring Results during the Reporting Month

Parameter	Date	Construction Ground Borne Noise Level : Leq(30min) dB (A)	Standards
GNC7	2-Dec-10	54.7	65 dB(A)
	7-Dec-10	58.6	
	14-Dec-10	53.9	
	23-Dec-10	56.3	
	30-Dec-10	57.0	

4. WATER QUALITY

Monitoring Requirements

4.1 Dissolved oxygen (DO concentration in mg/L and DO saturation in percentage), Turbidity (Tby in NTU), Suspended Solid (SS in mg/L), pH, salinity and both water and ambient temperature monitoring were conducted to monitor the water quality. **Appendix A** shows the established Action/Limit Levels for the environmental monitoring works.

4.2 Proposal for Temporary Suspension of Water Quality Monitoring Western Portal was submitted on 15th September 2009 and approved by EPD on 30th October 2009. Marine water quality monitoring was temporary suspended starting from 31st October 2009 until there is marine-based construction activities resumed at the Western Portal (i.e. March of 2011 tentatively.)

Monitoring Locations

4.3 Locations of designated Water Quality Monitoring Stations are shown in **Figure 4.1a-b** and described in Table 4.1. Samples shall be taken at all designated Monitoring and Control Stations.

Table 4.1 Locations for Water Quality Monitoring

Monitoring Stations	Coordinates	
	Northing	Easting
Control Stations		
CE (Ebb)	814956	830026
CF (Flood)	812420	831778
Impact Stations		
I1	813654	831088
I2	813582	831105
Intake A	813044	831603
Intake B	814583	830606

Results and Observations

4.4 No marine water quality monitoring was conducted during the reporting month.

Underground water level

4.5 Ground water levels were measured once per month during the construction phase in order to ensure the water levels at those intakes near to the natural stream courses and thus on the surrounding habitats will not be significantly affected.

4.6 Locations of designated ground water level (borehole with piezometer) monitoring station UC1 at Eastern Portal has been changed to ADH48 which was verified by IEC on 5th June 2008. The updated ground water level monitoring stations, TP789_DH2, TP5_DH2, THR2_DH7 and PFLR1_DH2 were also verified by IEC on 19th June 2010.

4.7 Ground water level monitoring location is shown in **Figure 4.2a-e** and the Monitoring data are shown in Table 4.2.

Table 4.2 Ground Water Level Monitoring Data

Date	Water Level (from ground)/m
Location: ADH48 (Eastern Portal)	
28 December 2010	8.72
Location: TP789_DH2	
10 December 2010	14.75
Location: TP5_DH2	
10 December 2010	Obstructed
Location: THR2_DH7	
13 December 2010	2.42
Location:PFLR1_DH2	
6 December 2010	11.60

5. ENVIRONMENTAL AUDIT

Site Audits

5.1 Site audits were carried out on a weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures in the Project site. The summaries of site audits are attached in **Appendix I.**

5.2 Site audits were conducted on 2nd, 10th, 16th, 23rd and 30th December 2010. IEC site inspections were conducted on 30th December 2010. No non-compliance was observed during the site audits.

5.3 In order to assess the effectiveness of the implementation of water quality mitigation measures at Western Portal, additional site inspection was conducted on 1st, 8th, 17th, 21st and 28th December 2010. No non-compliance was observed during the site audits.

Review of Environmental Monitoring Procedures

5.4 The monitoring works conducted by the monitoring team were inspected regularly. The following observations have been recorded for the monitoring works:

Air Quality Monitoring

- The monitoring team recorded all observations around the monitoring stations within and outside the construction site.
- The monitoring team recorded the temperature and weather conditions on the monitoring days.

Noise Monitoring

- The monitoring team recorded all observations around the monitoring stations, which might affect the monitoring result.
- Major noise sources were identified and recorded. Other intrusive noise attributing to the result was trimmed off by pausing the monitoring temporarily.

Status of Environmental Licensing and Permitting

5.5 All permits/licenses obtained for the Project are summarized in Table 5.1.

Status of Waste Management

5.6 Spoil generated from TBM excavation in the Western tunnel was delivered by the tunnel conveyor system to the barge berthed at the jetty. If there was no barge at the jetty or after 21:00 hours, the spoil would be directed to the TBM Spoil Basin for temporary storage. The spoils would be transferred to a side conveyor using a backhoe for discharge onto the next

barge or in the following day. In the Eastern tunnel and adits, the spoil materials were collected by means of dump trucks which transported the materials to the Western Portal. The spoil materials from the Eastern tunnel and adits were then disposed of either directly into the barges at the ramp jetty, or temporarily stored in the Adit Spoil Basin for later handling. The barges took the spoil materials to other projects (in Mainland China and in Hong Kong) for re-use.

Adit spoil handling arrangements in the Western Portal

5.7 The spoils generated during adit excavation (drill-and-blast) were delivered by trains to the Adit Spoil Basin at the tunnel portal. The adit spoils were transferred to a dump truck by means of a backhoe. The dump truck was then discharge the adit spoils onto the barge at the ramp jetty. The mitigation measures for the spoil handling works at Western Portal are presented in Section 5.22.

5.8 The details of site arrangements on the delivery and handling of excavated materials, particularly the Western Portal is provided in the **Annex I** to this report.

Two Blasts Per Day in Western Adits

5.9 Blasting works were increased to two times per day to ensure timely completion of the Project, especially when unexpected ground conditions are encountered during adit excavation. Two blasts per days are planned initially for the Adits leading to Intake HKU1, W10 and P5. The proposal of two blasts per day in Western Adits is provided in **Annex II** to this report.

5.10 During this reporting period, a total 18 nos. of dump trucks of waste were delivered to SENT landfill, and 389 nos. of dump trucks of C&D waste were delivered to fill reception facilities. Both the trip ticket system and chit accounting system for disposal of waste were operating smoothly to date. 2 trucks overloading case was recorded during this reporting period (all within the 105% allowable buffer weight). No disposal of inert C&D material to public sorting facilities and no dump truck without cover were reported from CEDD. In respect of the dump truck cover, DNJV keeps on take record photos and inspection to ensure that all dump trucks have fully covered the skip before leaving the site.

5.11 The rock materials from the Eastern Portal and Western Portal were received by the alternative disposal sites at ZhongShan. Some of the tunnel spoils from Eastern Tunnel and adits were also received by Leighton site at Ocean Park and in a residential development site at No. 1 Gough Hill Road, the Peak which was started from 24th September 2010.

5.12 The amount of wastes generated by the activities of the Project during the reporting month is shown in **Appendix N**.

Table 5.1 Summary of Environmental Licensing and Permit Status

Permit No.	Valid Period		Details	Status
	From	To		
Environmental Permit (EP)				
FEP-01/272/2007/B	25/6/09	N/A	Construction of a 6.25m-7.25m in diameter and about 11 km long underground main drainage tunnel, 2 portals and a series of connecting adits and drop shafts.	Valid
Effluent Discharge License				
EP860/W10/XY0175	23/06/08	30/06/13	Industrial discharge (Area of Mount Butler Office)	Valid
EP860/W10/XY0177	23/06/08	30/06/13	Industrial discharge (Eastern Portal Site)	Valid
EP820/W9/XT086	22/07/08	31/07/13	Industrial discharge (Western Portal Site)	Valid
WT00005864-2010	20/01/10	31/01/15	Industrial discharge (Western Portal Site)	Valid
EP860/W10/XY0183	19/11/08	30/11/13	Industrial discharge (Intake W0, Stubbs Road, Wan Chai, HK)	Valid
WT00003372-2009	-	30/4/14	Industrial discharge (Intake SM1)	Valid

WT00007139-2010	-	31/07/15	Industrial discharge (Intake BR6) – SMH17	Valid
WT00007319-2010	-	31/08/15	Industrial discharge (Intake B2)	Valid
Registration of Chemical Waste Producer				
5213-148-D2393-02	---	N/A	Chemical waste types: Spent oil	Valid
5213-172-D2393-01	---	N/A	Chemical waste types: Spent oil	Valid
Construction Noise Permit (CNP)				
GW-RS0512-10 (superseded by RS0734-10)	22/06/10	21/12/10	Construction Noise Permit for the use of powered mechanical equipment for carrying out construction work at Hong Kong West	Valid

Permit No.	Valid Period		Details	Status
	From	To		
GW-RS0734-10	25/08/10	24/02/11	Drainage Tunnel (Eastern Portal) (DSD Contract No. DC/2007/10), Tai Hang Road, Causeway Bay, Hong Kong.	
GW-RS0865-10 (superseded by GW-RS1054-10)	14/10/10	13/12/10	Construction Noise Permit for the use of powered mechanical equipment for carrying out construction work and performing prescribed construction work at Hong Kong West Drainage Tunnel (Western Portal), Cyberport Road, Cyberport, Hong Kong (DSD Contract No. DC/2007/10).	Valid
GW-RS1054-10	14/12/10	13/02/11		
GW-RS0522-10 (superseded by GW-RS0733-10)	24/06/10	23/12/10	Construction Noise Permit for the use of powered mechanical equipment for carrying out construction work at a construction site of "Hong Kong West Drainage Tunnel" near Stubbs Road Garden, Wan Chai, Hong Kong	Valid
GW-RS0733-10	19/08/10	18/02/11		
GW-RS0699-10	22/08/10	21/02/11	Construction Noise Permit for the use of powered mechanical equipment for carrying out construction work at Smithfield Road outside Mei Wah Mansion, Kennedy Town, Hong Kong.	Valid
GW-RS0710-10	19/08/10	18/02/11	Construction Noise Permit for the use of powered mechanical equipment for carrying out construction work at Section of Pokfulam Road (near Football Field, Pokfulam Road Playground), Hong Kong	Valid
GW-RS0995-10	30/11/10	30/05/11	Construction Noise Permit for the use of powered mechanical equipment for carrying out construction work at outside Hongkong Electric Centre, Kennedy Road, Hong Kong	Valid
GW-RS0468-10 (superseded by GW-RS1071-10)	10/06/10	09/12/10	Construction Noise Permit for the use of powered mechanical equipment for carrying out construction work and performing prescribed construction work at Junction of Magazine Gap Road and May Road, Mid-levels, Hong Kong.	Valid
GW-RS1071-10	09/12/10	08/06/11		

Implementation Status of Environmental Mitigation Measures

5.13 During site inspections in the reporting month, no non-conformance was identified. ET weekly site inspections were carried out during the reporting month and the observations and recommendations are summarized in Table 5.2.

Table 5.2 Observations and Recommendations of Site Inspections

Parameters	Date	Observations and Recommendations	Follow-up
Water Quality	02/12/2010	No sedimentation facilities were observed at Intake MA17. The Contractor was reminded to provide such facilities for treating the muddy water.	Follow-up action was needed for the item.
	02/12/2010	Directly discharge of wastewater to manhole was observed at Intake W5. The Contractor was reminded to rectify the deficiency immediately.	Rectification/improvement was observed during the follow-up audit session.
	10/12/2010	To ensure the capacity of sedimentation system is enough for settling the silt before discharge at Intake MA17.	Follow-up action was needed for the item.
Noise	02/12/2010	Noise was noticed from the breaking works at Intake E7. The Contractor was reminded to improve existing noise mitigation measures to minimize the noise impact.	Follow-up action was needed for the item.
Reminders	02/12/2010	The Contractor was reminded of the followings: - Clear the chemical oil at the drip tray at Intake P5.	Rectification/improvement was observed during the follow-up audit session.
	02/12/2010	The Contractor was reminded of the followings: - Provide sand bags around the gully to avoid any site discharge from discharging out directly at Intake TP789.	Follow-up action was needed for the item.
	02/12/2010	The Contractor was reminded of the followings: - To seal the leakage of the water recycling tank at Intake TP4.	Rectification/improvement was observed during the follow-up audit session.
	02/12/2010	The Contractor was reminded of the followings: - Clear the U-Channel at Intake HKU1.	Rectification/improvement was observed during the follow-up audit session.
	02/12/2010	The Contractor was reminded of the followings: - Ensure the site discharge from sedimentation tank discharging at the appropriate outlet at Intake W10.	Follow-up action was needed for the item.
	02/12/2010	The Contractor was reminded of the followings: - To review the sedimentation system at Intake TP5.	Follow-up action was needed for the item.
	02/12/2010	The Contractor was reminded of the followings: - Clear the empty oil containers as chemical wastes properly.	Follow-up action was needed for the item.
	02/12/2010	The Contractor was reminded of the followings: - Provide sand bags at the site boundary at Intake E7.	Rectification/improvement was observed during the follow-up audit session.
	10/12/2010	The Contractor was reminded of the followings: - Clear the chemical oil at the drip tray at Intake MBD2.	Rectification/improvement was observed during the follow-up audit session.

Parameters	Date	Observations and Recommendations	Follow-up
	10/12/2010	The Contractor was reminded of the followings: - Clean the soil in the sediment tank at Intake DG1.	Rectification/improvement was observed during the follow-up audit session.
	10/12/2010	The Contractor was reminded of the followings: - Clean the soil in the sediment tank at Intake W10.	Follow-up action was needed for the item.
	10/12/2010	The Contractor was reminded of the followings: - Clean the oil stain near the drip tray at intake RR1.	Rectification/improvement was observed during the follow-up audit session.
	16/12/2010	The Contractor was reminded of the followings: - To clear the chemical oil at the drip tray at Intake MA15.	Rectification/improvement was observed during the follow-up audit session.
	16/12/2010	The Contractor was reminded of the followings: - Properly provide maintenance for the excavators at Intake MA15 and THR2 to avoid dark smoke emission.	Rectification/improvement was observed during the follow-up audit session.
	16/12/2010	The Contractor was reminded of the followings: - To review the capacity of the sedimentation facilities at Intake MA17 and W10.	Rectification/improvement was observed during the follow-up audit session.
	16/12/2010	The Contractor was reminded of the followings: - Provide sand bag bund to protect the gullies at Intake M3.	Rectification/improvement was observed during the follow-up audit session.
	16/12/2010	The Contractor was reminded of the followings: - To display the environmental permit at Intake B2.	Follow-up action was needed for the item.
	16/12/2010	The Contractor was reminded of the followings: - Clear the stagnant water at the drip tray at Intake W1.	Follow-up action was needed for the item.
	23/12/2010	The Contractor was reminded of the followings: - Properly clear the sedimentation tanks to ensure the site discharge comply with WPCO license at Intake W10 and SMH17.	Follow-up action was needed for the item.
	23/12/2010	The Contractor was reminded of the followings: - Clear the stagnant water at the pit area at Intake P5.	Follow-up action was needed for the item.
	23/12/2010	The Contractor was reminded of the followings: - Clear the sediment at the public road at Intake W8.	Follow-up action was needed for the item.
	23/12/2010	The Contractor was reminded of the followings: - Clear the general refuse at Intake MA14 and TP5.	Follow-up action was needed for the item.
	23/12/2010	The Contractor was reminded of the followings:	Follow-up action was needed for the item.

Parameters	Date	Observations and Recommendations	Follow-up
		- Clear the used cement bags at Intake MA17.	
	23/12/2010	The Contractor was reminded of the followings: - Provide sand bags to protect the gullies at Intake M3.	Follow-up action was needed for the item.
	23/12/2010	The Contractor was reminded of the followings: - Provide appropriate desilting facilities for treating muddy water at Intake M3.	Follow-up action was needed for the item.
	30/12/2010	The Contractor was reminded of the followings: - Properly clear the sedimentation tank and internal drain at Intake E5A.	Rectification/improvement was observed during the follow-up audit session.

5.14 The monthly IEC audit was carried out on 30th December 2010, the observations were recorded and they are presented as follows:

5.15 The last observations were recorded by IEC on 26th November 2010.

30th December 2010

Follow Up Observations:
- Wetsep installed in WP had been fixed.
- Tarpaulin sheet have been repaired and replaced with new one.

New Observations:
- Oil stains were observed near vehicle washing bay at Intake E5A. The Contractor was requested to clear oil stains.

Reminder:
- The Contractor was reminded to clear debris and silt deposited at surface channel and vehicle washing bay on regular basis.

Non-compliance Recorded during Site Inspections

5.16 No non-compliance was recorded in the reporting month.

Summary of Mitigation Measures Implemented

5.17 The Contractor has implemented the mitigation measures as recommended in the EIA and the updated EM&A Manual in the reporting period except those mitigation measures not applicable at this stage. Status of the implementation of mitigation measures is presented in Table 1.2 and **Appendix J**.

5.18 According to the updated EM&A Manual and EP condition, mitigation measures such as noise enclosure and use of quiet PME are required to be implemented.

5.19 The actual implementation status of major mitigation measures required under the EP is as follows:
- Installation of silt curtain during the course of marine works.
- Provide noise enclosure at Eastern Portal.

- Submitted the Alternative Plant Inventory (EP condition 2.8(c)).

5.20 Alternative plant inventory for the noise performance of plants used in Eastern and Western Portal will be updated from time to time and submitted for ETL's certification and IEC's verification in accordance with EP condition 2.8c.

5.21 An updated summary of the EMIS is provided in **Appendix J**.

5.22 For the spoil handling works in the Western Portal, the mitigation measures including:

- Acoustic cover for the main conveyor;
- Tarpaulin curtains underneath the conveyor enclosure;
- Sprinkle system underneath the jetty to suppress fugitive dust from unloading spoil; and
- Side curtains at the jetty to shield the unloading dump truck.

Implementation Status of Event Action Plans

5.23 The Event Action Plans for air quality and noise are presented in **Appendix K**.

Eastern Portal

1-hr TSP Monitoring

5.24 No Action/Limit Level exceedance was recorded in the reporting month.

24-hr TSP Monitoring

5.25 No Action/Limit Level exceedance was recorded in the reporting month.

Construction Noise

5.26 One Action levels exceedance was recorded due to the complaints received on 24th December 2010.

Western Portal

1-hr TSP Monitoring

5.27 No Action/Limit Level exceedance was recorded in the reporting month.

24-hr TSP Monitoring

5.28 No Action/Limit Level exceedance was recorded in the reporting month.

Construction Noise

5.29 No Action/Limit Level exceedance was recorded.

Water Quality

5.30 Marine water quality monitoring was temporary suspended starting from 31st October 2009.

Construction Ground Borne Noise

5.31 No Limit Level exceedance was recorded.

Intake DG1

Construction Noise

5.32 One Action levels exceedance was recorded due to the complaints received on 7th December 2010.

Intake E5A

Construction Noise

5.33 No Action/Limit Level exceedance was recorded in the reporting month.

Intake E7

Construction Noise

5.34 No Action/Limit Level exceedance was recorded in the reporting month.

Intake MA14

Construction Noise

5.35 No Action/Limit Level exceedance was recorded in the reporting month.

Intake PFLR1

Construction Noise

5.36 No Action/Limit Level exceedance was recorded in the reporting month.

Intake RR1

Construction Noise

5.37 No Action/Limit Level exceedance was recorded in the reporting month.

Intake THR2

Construction Noise

5.38 No Action/Limit Level exceedance was recorded in the reporting month.

Intake W0

Construction Noise

5.39 No Action/Limit Level exceedance was recorded in the reporting month.

Intake W5

Construction Noise

5.40 One Action levels exceedance was recorded due to the complaints received on 14th December 2010.

Intake P5

Construction Noise

5.41 No Action/Limit Level exceedance was recorded in the reporting month.

Intake W8

Construction Noise

5.42 No Action/Limit Level exceedance was recorded in the reporting month.

Intake BR6

Construction Noise

5.43 No Action/Limit Level exceedance was recorded in the reporting month.

Intake TP5

Construction Noise

5.44 One Action levels exceedance was recorded due to the complaints received on 22nd December 2010.

Summary of Complaint, Warning, Notification of any Summons and Successful Prosecution

5.45 Seven environmental complaints were received in the reporting month. For the details, please refer to the following table: -

Complaint No.	Date	Complaint Details
COM-2010-12-170	7 December 2010	The complaint was received regarding the noise arising from the excavation works, starting from 9:00 hrs, in the construction site near Evergreen Villa of Stubbs Road.
COM-2010-12-171	8 December 2010	The complainant complained the works near Mount Butler Road generated dust, thus affecting the air quality in the vicinity.
COM-2010-12-173	14 December 2010	A complaint was received from Ms Lo regarding noisy construction activities at Site Portion W5 had affected her niece's study to prepare for examination.
COM-2010-12-178	22 December 2010	Kerry Property Management Ltd notified that some complaints from the residents regarding the early commencement of the noise works at Intake Ste TP5 (earlier than 08:00hrs) in the past few days.
COM-2010-12-179	24 December 2010	The Property Management Office of The Legend referred the complaint from the resident to DSD regarding the intermediate noise from Eastern Portal site portion in the morning and at night.

5.46 No warning, summon and notification of successful prosecution was received in the reporting month.

5.47 There were a total of 77 project related environmental complaints, no warning, summons and successful prosecution received since the commencement of the Project. The Complaint Log is attached in **Appendix L**.

6. FUTURE KEY ISSUES

Key Issues for the Coming Month

6.1 Key environmental issues at Eastern and Western Portals, Intake MA16, MBD2, E5A, E5B, E7, PFLR1, RR1, THR2, SM1, W0, W5, P5, M3, TP4, TP5, TP789, HKU1, W10, W3, W8, MA15, MA17, GL1, HR1, W1, DG1, CR1, BR4, BR5, GL1, MA14 and BR6 in the coming month include:

- Noise from operation of the equipment, especially for rock-breaking activities, piling works and machinery on-site;
- Dust generation from stockpiles of dusty materials, excavation works and rock breaking activities;
- Runoff from exposed slope;
- Wastewater and runoff discharge from site;
- Regular removal of silt, mud and sand along u-channels and sedimentation tanks;
- Review and implementation of temporary drainage system for the surface runoff;
- Proper storage of construction materials on site;
- Storage of chemicals/fuel and chemical waste/waste oil on site;
- Watering for rock breaking activity, soil nailing and on haul road;
- Accumulation of general and construction waste on site.

6.2 The tentative program of major site activities and the impact prediction and control measures for the coming two months, i.e. January 2011 to February 2011 are summarized as follows:

Construction Works	Major Impact Prediction	Control Measures
- TBM excavation adit excavation at West Portal and Adit excavation & stage II river channel works at East Portals; - Permanent Adit lining works at MB16 & MBD2; - East TBM dismantling; - Landscaping work at Intake SM1; - Stage 1 Structure Construction at Intake MA15; - Excavation of dropshaft at Intakes TP4 and TP789 by Raise Boring method; - Dropshaft pilot hole at Intakes TP789 by Raise - Boring Method; - Excavation of intake structure at Intakes E7, DG1, BR6, PFLR1, W10, W3, E5A, GL1, W5, BR5, HR1, W1, MA17 and BR4; - Cofferdam construction at Intakes RR1, W8, MA14, M3, P5 and CR1; - Site preparation works for Intakes CR1, and B2; - Casting dropshaft precast rings; and - Permanent dropshaft lining works at MB16.	Air impact (dust)	a) Frequent watering of haul road and unpaved/exposed areas; b) Frequent watering or covering stockpiles with tarpaulin or similar means; and c) Watering of any earth moving activities.
	Water quality impact (surface run-off)	d) Diversion of the collected effluent to de-silting facilities for treatment prior to discharge to public storm water drains; e) Provision of adequate de-silting facilities for treating surface run-off and other collected effluents prior to discharge; f) Provision of perimeter protection such as sealing of hoarding footings to avoid run-off from entering the existing storm water drainage system via public road; and g) Provision of measures to prevent discharge into the stream.
	Noise Impact	h) Scheduling of noisy construction activities if necessary to avoid persistent noisy operation; i) Controlling the number of plants use on site; j) Regular maintenance of machines; and k) Use of acoustic barriers if necessary.

Monitoring Schedule for the Next Month

6.3 The tentative environmental monitoring schedules for the next month are shown in **Appendix D**.

Construction Program for the Next Month

6.4 The tentative construction program for the Project is provided in **Appendix M**.

7. CONCLUSIONS AND RECOMMENDATIONS

Conclusions

7.1 Environmental monitoring works were performed in the reporting month and all monitoring results were checked and reviewed.

1-hr TSP Monitoring

7.2 All 1-hr TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

24-hr TSP Monitoring

7.3 All 24-hr TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Construction Noise Monitoring

7.4 All noise monitoring was conducted as scheduled in the reporting month. Five Action Level exceedances were recorded due to the complaints received at Eastern Portal and Intake DG1, W5 and TP5 respectively.

Construction Ground Borne Noise Monitoring

7.5 All construction ground borne noise monitoring was conducted in the reporting month. No Limit Level exceedance was recorded.

Water Quality

7.6 Marine water quality monitoring was temporary suspended starting from 31st October 2009.

Complaint and Prosecution

7.7 Five environmental complaints and no environmental prosecution were received in the reporting month.

Recommendations

7.8 According to the environmental audit performed in the reporting period, the following recommendations were made:

Air Quality Impact

- To prohibit any open burning on site.
- To regularly maintain the quality of machinery and vehicles on site.
- To implement dust suppression measures on all haul roads, stockpiles, dry surfaces and excavation works.

- To provide hoarding along the entire length of that portion of the site boundary.

Noise Impact

- To inspect the noise sources inside the site.
- To space out noisy equipment and position the equipment as far away as possible from sensitive receivers.
- To provide temporary noise barriers for operations of noisy equipment near the noise sensitive receivers in an appropriate location.

Water Impact

- To prevent any surface runoff discharge into any stream course.
- To review and implement temporary drainage system.
- To identify any wastewater discharges from site.
- To ensure properly maintenance for de-silting facilities.
- To clear the silt and sediment in the sedimentation tanks.
- To review the capacity of de-silting facilities for discharge.
- To divert all the water generated from construction site to de-silting facilities with enough handling capacity before discharge.
- To avoid accumulation of stagnant and ponding water on site.

Waste/Chemical Management

- To check for any accumulation of waste materials or rubbish on site.
- To ensure the performance of sorting of C&D materials at source (during generation);
- To carry out inspection of dump truck at site exit to ensure inert and non-inert C&D materials are properly segregated before removing off site.
- To avoid any discharge or accidental spillage of chemical waste or oil directly from the site.
- To avoid improper handling or storage of oil drum on site.

APPENDIX A
ACTION AND LIMIT LEVELS

Appendix A - Action and Limit Levels

Table A-1 Action and Limit Levels for 1-Hour TSP

Location	Action Level, μg/m^3	Limit Level, μg/m^3
AQ1	345	500
AQ2	321	

Table A-2 Action and Limit Levels for 24-Hour TSP

Location	Action Level, μg/m^3	Limit Level, μg/m^3
AQ1	201	260
AQ3	156	

Table A-3 Action and Limit Levels for Construction Noise

Time Period	Action Level	Limit Level
0700-1900 hrs on normal weekdays	When one documented complaint is received	75* dB(A)
0700-2300 hrs on holidays; and 1900-2300 hrs on all other days		60/65/70** dB(A)
2300-0700 hrs of next day		45/50/55** dB(A)

(*) reduce to 70 dB(A) for schools and 65 dB(A) during school examination periods.
(**) to be selected based on Area Sensitivity Rating.

Table A-4 Action and Limit Levels for Water Quality

Parameter		Action	Limit
DO, mg/L	Surface and Middle	6.3	6.2
	Bottom	6.0	5.8
SS, mg/L		15.7 or 120% of upstream control station's SS at the same tide of the same day	16.4 or 130% of SS readings at the upstream control station at the same tide of same day and specific sensitive receiver water quality requirements
Turbidity, NTU		10.2 or 120% of upstream control station's turbidity at the same tide of the same day	11.1 or 130% of turbidity at the upstream control station at the same tide of same day

APPENDIX B
COPIES OF CALIBRATION CERTIFCATES

High-Volume TSP Sampler
5-POINT CALIBRATION DATA SHEET

CINOTECH

Ambient Condition			
Temperature, Ta (K)	294	Pressure, Pa (mmHg)	767.2

Orifice Transfer Standard Information					
Equipment No.:	A-04-01	Slope, mc	0.0462	Intercept, bc	-0.0163
Last Calibration Date:	11-Oct-10	$mc \times Qstd + bc = [\Delta H \times (Pa/760) \times (298/Ta)]^{1/2}$			
Next Calibration Date:	9-Oct-11	$Qstd = \{[\Delta H \times (Pa/760) \times (298/Ta)]^{1/2} - bc\} / mc$			

Calibration of TSP Sampler

Calibration Point	Orfice			HVS	
	ΔH (orifice), in. of water	$[\Delta H \times (Pa/760) \times (298/Ta)]^{1/2}$	Qstd (CFM) X - axis	ΔW (HVS), in. of oil	$[\Delta W \times (Pa/760) \times (298/Ta)]^{1/2}$ Y-axis
1	11.7	3.46	75.24	7.9	2.84
2	9.9	3.18	69.24	6.4	2.56
3	7.5	2.77	60.31	5.0	2.26
4	5.0	2.26	49.31	3.2	1.81
5	3.1	1.78	38.90	1.9	1.39

By Linear Regression of Y on X

Slope , mw = 0.0393 **Intercept, bw :** -0.1319

Correlation coefficient* = 0.9993

*If Correlation Coefficient < 0.990, check and recalibrate.

Set Point Calculation

From the TSP Field Calibration Curve, take Qstd = 43 CFM

From the Regression Equation, the "Y" value according to

$$mw \times Qstd + bw = [\Delta W \times (Pa/760) \times (298/Ta)]^{1/2}$$

Therefore, Set Point; $W = (mw \times Qstd + bw)^2 \times (760 / Pa) \times (Ta / 298) =$ **2.38**

Model No.	: LD-3B
Serial No.	: 954253
Sensitivity (K) 1 CPM	: 0.001 mg/m^3
Sen. Adjustment Scale Setting	: 685 CPM
Equipment No.	: A-02-05

Test Conditions:

Room Temperature	: 20 degree Celsius
Relative Humidity	: 59%

Test Specifications & Methodology:

1. Instruction and Operation Manual High Volume Sampler, Andersen Samplers, Inc.
2. In-house method in according to the instruction manual: The Laser Dust Monitor was compared with a calibrated High Volume Sampler and the result was used to generate the Correlation Factor (CF) between the Laser Dust Monitor and High Volume Sampler.

Results:

Correlation Factor (CF)	0.0031

****

(One Action levels exceedance was recorded due to the complaint received on 22nd December 2010.)

APPENDIX I
SITE AUDIT SUMMARY

Weekly Site Inspection Record Summary
Inspection Information

Checklist Reference Number	101202
Date	2 December 2010 (Thursday)
Time	8:45 – 17:45

Ref. No.	Non-Compliance	Related Item No.
-	None identified	-
Ref. No.	**Remarks/Observations**	**Related Item No.**
	A. Water Quality	
101202-O01	• No sedimentation facilities were observed at Intake MA17. The Contractor was reminded to provide such facilities for treating the muddy water.	B7i.
101202-O02	• Directly discharge of wastewater to manhole was observed at Intake W5. The Contractor was reminded to rectify the deficiency immediately.	B7i.
	B. Air Quality	
	• No environmental deficiency was identified during site inspection.	
	C. Noise	
101202-O03	• Noise was noticed from the breaking works at Intake E7. The Contractor was reminded to improve existing noise mitigation measures to minimize the noise impact.	E7
	D. Waste / Chemical Management	
	• No environmental deficiency was identified during site inspection.	
	E. Ecology	
	• No environmental deficiency was identified during site inspection.	
	F. Marine Ecology	
	• No environmental deficiency was identified during site inspection.	
	G. Reminders	
101202-R04	• Clear the chemical oil at the drip tray at Intake P5.	F2ii.
101202-R05	• Provide sand bags around the gully to avoid any site discharge from discharging out directly at Intake TP789.	B5
101202-R06	• To seal the leakage of the water recycling tank at Intake TP4.	B9
101202-R07	• Clear the U-Channel at Intake HKU1.	F9
101202-R08	• Ensure the site discharge from sedimentation tank discharging at the appropriate outlet at Intake W10.	B7i.
101202-R09	• To review the sedimentation system at Intake TP5.	B7i.
101202-R10	• Clear the empty oil containers as chemical wastes properly.	F2ii.
101202-R11	• Provide sand bags at the site boundary at Intake E7.	B5
	H. Others	
101202-F12	• Intake BR4 and RR1 were not observed during the site inspection. Follow-up action is needed for the outstanding items.

APPENDIX J
ENVIRONMENTAL MITIGATION
IMPLEMENTATION SCHEDULE (EMIS)

Appendix J - Summary of Environmental Mitigation Implementation Schedule

Types of Impacts	Mitigation Measures	Status
Construction Dust	*Dust Mitigation Measures*	
	• The Contractor shall undertake at all times to prevent dust nuisance as a result of his activities. Effective dust suppression measures should be installed to minimize air quality impacts, at the boundary of the site and at any sensitive receivers.	^
	• No blasting shall be carried out when the strong wind signal or tropical cyclone warning signal No. 3 or higher is hoisted (unless prior permission of the Commissioner of Mines is obtained).	^
	• Effective water sprays shall be used during the delivery and handling of all raw sand, aggregate and other similar materials, when dust is likely to be created, to dampen all stored materials during dry and windy weather. Watering of exposed surfaces shall be conducted as often as possible depending on the circumstances.	^
	• A watering programme of once every 2 hours in normal weather conditions, and hourly in dry/windy conditions.	^
	• Any stockpile of dusty material cannot be immediately transported out of the Site shall be either: a) covered entirely by impervious sheeting; b) placed in an area sheltered on the top and the three sides; or c) sprayed with water or a dust suppression chemical so as to maintain the entire surface wet.	*
	• Should a conveyor system be used, the Contractor shall implement the following precautionary measures. Conveyor belts shall be fitted within windboards. Conveyor transfer points and hopper discharge areas shall be enclosed to minimize dust emission. All conveyors under control of the Contractor, and carrying materials which have the potential to create dust, shall be totally enclosed and fitted with belt cleaners.	^
	• Any dusty materials being discharged to vehicle from a conveying system at fixed transfer point, three-sided roofed enclosed with a flexible curtain across the entry shall be provided. Exhaust fans shall be provided for this enclosure and vented via a suitable fabric filter system.	^
	• The heights from excavated spoils are dropped should be minimise to reduce the fugitive dust arising from unloading/loading.	^
	• The Contractor shall confine haulage and delivery vehicles to designated roadways inside the site. If in the opinion of the Engineer, any motorising vehicle is causing dust nuisance, the Engineer may require that the vehicle be restricted to a maximum speed of 15km per hour while within the site area.	^
	• Areas within the site where there is a regular movement of vehicles shall have an approved hard surface, be kept clear of loose surface materials and / or be regularly watered.	^
	• Wheel cleaning facilities shall be installed for both portals and used by all vehicles leaving the site. No earth, mud, debris, dust and the like shall be deposited on public roads. Water in the wheel cleaning facility shall be changed at frequent intervals and sediments shall be removed regularly. The Contractor shall submit details of proposals for the wheel cleaning facilities to the Engineer prior to construction of the facility. Such wheel cleaning facilities shall be usable prior to any earthwork excavation activity on site. The Contractor shall provide a hard-surfaced road between any cleaning facility and the public road.	^
	• Chemical wetting agents shall only be used on completed cuts and fills to reduce wind erosion.	N/A

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	• No vehicle exhausts shall be directed towards the ground or downwards to minimize dust nuisance.	^
	• Ventilation system, equipped with proprietary filters, should be provided to ensure the safe working environment inside the tunnel. Particular attention should be paid to the location and direction of the ventilation exhausts. The exhausts should not be allowed to face any sensitive receivers directly. Consideration should also be given to the location of windows, doors and direction of prevailing winds in relation to the nearby sensitive receivers.	^
	• In the event of any spoil or debris from construction works being deposited on adjacent land, or stream, or any silt being washed down to any area, then all such spoil, debris or material and silt shall be immediately removed and the affected land and areas restored to their natural state by the Contractor to the satisfaction of the Engineers.	^
	In addition, based on the *Air Pollution Control (Construction Dust) Regulation*, any works involved regulatory and notifiable works, such as stockpiling, loading and unloading of dusty materials, shall take precautions to suppress dust nuisance.	
	• The working area of any excavation or earthmoving operation shall spray with water or a dust suppression chemical immediately before, during and immediately after the operation so as to maintain the entire surface wet;	^
	• Exposed earth shall be properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen or other suitable surface stabiliser within six months after the last construction activity on the construction site or part of the construction site where the exposed earth lies; and	^
	• Any stockpile of dusty materials (greater than $20m^3$) shall be either covered entirely by impervious sheeting or placed in an area sheltered on the top and three sides; and sprayed with water or a dust suppression chemical so as to maintain the entire surface wet.	^
	• Other suitable dust control measures as stipulated in Air Pollution Control (Construction Dust). Regulation, where appropriate, should be adopted.	^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
\# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
Construction Noise	*Air borne noise* In general, potential construction noise impact can be minimized or avoided by imposing a combination of the following mitigation measures: • Noisy equipment and activities should be sited by the Contractor as far from close-proximity sensitive receivers as practical. Prolonged operation of noisy equipment close to dwellings should be avoided. • The Contractor should minimise construction noise exposure to the schools (especially during examination periods). The Contractor should liaise with the school and the Examination Authority to ascertain the exact dates and times of all examination periods during the course of the works contract and to avoid noisy activities during these periods. • Noisy plant or processes should be replaced by quieter alternatives. Silenced diesel and gasoline generators and power units, as well as silenced and super-silenced air compressor, can be readily obtained. • Noisy activities should be scheduled to minimise exposure of nearby sensitive receivers to high levels of construction noise. For example, noisy activities can be scheduled for midday, or at times coinciding with periods of high background noise (such as during peak traffic hours). • Idle equipment should be turned off of throttled down. Noisy equipment should be properly maintained and used no more often than is necessary. • The power units of non-electric stationary plant and earth-moving plant should be quietened by vibration isolation and partial or full acoustic enclosures for individual noise-generating components. • Construction activities should be planned so that parallel operation of several sets of equipment close to a given receiver is avoided, thus reducing the cumulative impacts between operations. The numbers of operating items of powered mechanical equipment should be minimised. Noise can be reduced by increasing the distance between the operating equipment and the NSRs or by reducing the number of items of equipment and/or construction activity in the area at any one time. • The use of quiet plant working methods can further reduce noise level. Quiet plant is defined as Powered Mechanical Equipment (PME) whose actual sound power level is less than the value specified in the TMs for the same piece of equipment. To allow the Contractor some flexibility to select equipment to suit his needs, it is considered too restrictive to specify which specific items of silenced equipment to be used for the construction operations. It should be noted that various types of silenced equipment can be found in Hong Kong and are readily available on the market. BS 5228 also provides examples of quiet construction plant and their SWL. • Construction plant should be properly maintained (well-greased, damage and worn parts promptly replaced) and operated. Construction equipment often has silencing measures built in or added on, e.g. bulldozer silencers, compressor panels, and mufflers. Silencing measures should be properly maintained and utilised. Rubber or damping materials should be introduced between metal panels to avoid rattle and reverberation of noise. • Equipment known to emit sound strongly in one direction should be oriented so that the noise is directed away from nearby NSRs. • Materials stockpile and other structures (such as site offices) should be effectively utilised to shield construction noise. Noise	^ * ^ ^ ^ ^ ^ ^ ^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

* Recommendation was made during site audit but improved/rectified by the contractor;
# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	can also be reduced by construction of temporary noise barriers which screen the lower floors from viewing the sites. Temporary noise barriers should be installed at active parts of construction areas where construction equipment is being operated in close proximity to NSRs. • It is noted that under the WBTC No. 19/2001, all construction sites are required to use metallic site hoarding can be slightly modified (with the addition of steel backings) into temporary noise barriers. These barriers should be gap free and have a surface mass density of at least 7kg/m^2. • All hand-held percussive breakers and air compressors should comply the Noise Control (Hand-held Percussive Breakers) Regulations respectively under the NCO (Ordinance No. 75/88, NCO Amendment 1992 No.6). The Contractor shall devise, arrange methods of working and carry out the works in such manner as to minimise noise impacts on the surrounding environment, and shall provide experienced personnel with suitable training to ensure that these measures are implemented properly. <u>Level 2 Use of Barriers</u> Level 2 mitigation measures include providing movable barriers for sites which have sufficient space for installation, full enclosures during the drilling activities at Eastern Portal and at muck pit areas for Eastern portals and cantilever-typed high rise noise barrier for intake W5 (P) and W8. Before construction of the full enclosure at muck pit area, the use of full enclosure noise barrier (Stage A) for the drilling activities at the Eastern Portal area is required. A full enclosure for the muck pit area will then be constructed at this later stage (Stage B). The full enclosure shall be gap free apart from necessary entrance/exits, which shall face towards the entrance of eastern portal to minimize the amount of noise generated from affecting the nearest RNSRs especially school (True Light Middle School of Hong Kong). 5m high cantilever-typed hoarding barrier to be built at W5 (P) and W8. These enclosures/barriers should have no gaps and have a superficial surface density of at least 10kg/m^2. Good site practice shall also be adopted by the Contractor to ensure the conditions of the hoardings are properly maintained throughout the construction period. To schedule the noise barrier erection and dismantling to the non sensitive periods of school to avoid adverse impact to W8/3. Movable barriers of 3 to 5m height with a small cantilevered upper portion and skid footing to be located within about 5 m or more for mobile equipment such that the line of sight is blocked. To provide purposes-built noise barriers or screens constructed of appropriate materials (minimum superficial density of 10kg/m^2) located close to the operating PME. Pre-drilling following by chemical splitting instead of using large excavator mounted breaker should be used as mitigation measure for rock breaking and rock drilling.	^ ^ ^ ^ ^ ^ ^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

Types of Impacts	Mitigation Measures	Status
Water Quality	<u>Precautionary measures for construction work near natural streams</u> The government provides guidelines (ETWB TCW NO. 5/2005 and DSD TC 2/2004) are providing guidelines to minimize impacts when there is construction work carried out at near natural streams course. Relevant mitigation measures for the intakes are summarised as follows: • Temporary site access to the work sites should be carefully planned and located to minimize disturbance caused to the substrates of streams/rivers and riparian vegetation by construction plant. • Locations well away from the rivers/streams for temporary storage of materials (e.g equipment, filling materials, chemicals and fuel) and temporary stockpile of construction debris and spoil should be identified before commencement of works. • Proposed works site areas inside, or in the proximity of, natural rivers and streams should be temporarily isolated to prevent adverse impacts on the stream water qualities. • Stockpiling of construction materials, if necessary, should be completely properly covered and located away from any natural stream/river. • Construction debris and spoil should be covered up and/or properly disposed of as soon as possible to avoid being washed into nearby rivers/streams by rain and local runoff. <u>Construction of temporary berthing point at the Western Portal</u> A refuse collection vessel shall be provided to collect refuse or materials lost into the sea. The respective areas of the marine works will be completely enclosed by the silt curtain. The curtain shall be extended from water surface down to the seabed where it is anchored using sinker blocks. The Contractor shall inspect the silt curtain on regular basis to ensure its integrity and it is serviceable for all times.	^ ^ ^ ^ ^ ^ N/A

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
\# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	Transfer of armour rock onto the seabed from barge at the temporary pier location should be conducted by careful grabbing and unloading to the seabed (to minimize sediment migration).	^
	The conveyor belt should be completely covered and muddy effluent from the temporary barge should be contained, treated and disposed. Where there is transfer of excavated wastes, the Contractor should provide appropriate measures to ensure that the waste is free from floatables, putrescibes, organic wastes and toxic materials and when required a refuse collection vessel be provided to collect float refuse.	^
	<u>Construction of stilling basin at Western Portal outfall</u>	
	All construction for the basin should be carried out inside the temporary cofferdam which is a temporary watertight enclosure built in the water and pumped dry to expose the bottom so that construction of stilling basin can be undertaken.	^
	During the dewatering process, appropriate desilting/sedimentation devices should be provided on site for treatment before discharge. The Contractor should ensure discharge water from the sedimentation tank meet the WPCO/TM requirements before discharge.	^
	The cofferdam will remain on site until after the construction of stilling basin has been completed. The coffer dam shall be regularly inspected and maintained to ensure no spillage of waste or wastewater into the sea. Conveyance of dredged materials from the coffer dam shall be carried out cautiously to avoid spillage into the sea.	^
	The filled material for the stilling basin should be contained inside the temporary cofferdam. The top level of the cofferdam shall be constructed higher than the final backfilled level.	^
	The Contractor shall be responsible for the design, installation and maintenance of the silt curtains to minimize the impacts on the water quality and the protection of water quality. The design and specification of the silt curtains shall be submitted by the Contractor to the Engineer for approval.	N/A
	Silt curtains shall be formed from tough, abrasion resistant, permeable membranes, suitable for the purpose, supported on floating booms in such a way as to ensure that the sediment plume shall be restricted to within the limit of the works area. The silt curtain shall be formed and installed in such a way that tidal rise and fall are accommodated, with the silt curtains always extending from the surface to the bottom of the water column and held with anchor blocks. The removal and reinstallation of such curtains during typhoon conditions shall be as agreed with the Director of Marine Department. The contractor shall regularly inspect the silt curtains and check that they are moored and marked to avoid danger to marine traffic. Any damage to the silt curtain shall be repaired by the Contractor promptly and the works shall be stopped until the repair is fixed to the satisfaction of the Engineer.	N/A

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
\# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	Transfer of rock fill material (armour rock) from the barge onto the site location should be conducted by grabbing and placement on the seabed to minimize sediment migration. No free dropping of the material will be allowed.	^
	Prior to the construction of armor rock based panel, a silt curtain shall also be installed prior to carry out any marine works as a preventive mitigation measure.	N/A
	<u>Construction of TBM tunnel at both portals and intakes</u>	
	Recycled water will be used at the cutter face for cooling purposes. Used water will be collected and discharged to a settling tank for settlement. Excess water from the settling tank will be transferred to the water treatment plant on site where the addition of flocculants will assist in settlement of solids. The Contractor should ensure discharge water from the sedimentation tank meet the WPCO/TM requirements before discharge.	^
	During the drilling process, all flushing water will be recycled for use. Discharge of the treated water to nearby drainage system shall be allowed provided that it has been treated to a level meeting with statutory requirements.	^
	Water flow at streams should be maintained by a temporary diversion system during the construction phase of intakes and manhole drop shafts.	^
	<u>General Construction Activities and Workforce</u>	
	A. Surface runoff	
	Effluent produced from construction activities are subjected to WPCO control. Effluent produced from sites should be diverted away from stream courses. Construction works near stream course should be scheduled in the dry season as far as practical to avoid excessive site runoff discharge.	*
	Under the *Water Pollution Control Ordinance* (WPCO), turbid water from construction sites must be treated to minimize the solids content before being discharged into storm drains. The suspended solids load can be reduced by directing the runoff into temporary sand traps or other silt-removal facilities, and other good and appropriate site management practices. Advice on the handling and disposal of construction site discharge is provided in the ProPECC Paper (PN 1/94) on Construction Site Drainage.	*
	A drainage system layout should be prepared by the Contractor for each of the works areas (portals and intakes), detailing the facilities and measures to manage pollution arising from surface runoff from those works areas. The drainage layout and an associated drainage management plan to reduce surface runoff sediments and pollutants entering watercourses, should be submitted to the Engineer for approval and to EPD for agreement.	*

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	The system should be capable of handling stormwater from the site and directing it to sediment removal facilities before discharge. If oil and grease is used on the site or brought to the site, the stormwater should pass through oil interceptors before discharge. The interceptors should have a bypass to prevent washout in heavy storms.	^
	A temporary channel system or earth bunds or sand barriers should be provided in works areas on site to direct stormwater to silt-removal facilities. Stockpiled materials, if susceptible to erosion of rain or wind, should be covered with tarpaulins (or/similar fabric0 or hydroseedings as far as practicable especially during the wet season.	*
	Silt removal facilities should be checked and the deposited silt and grit should be removed regularly to ensure these facilities are in good working condition and to prevent blockages.	*
	Vehicle washing areas should be drained into a settlement into a settlement basin to settle out the suspended solid before discharge to storm water drains. The water should be recycled on site whenever possible. It is suggested that the wash water from the wheel wash basin is either reused for road watering or pumped to the on-site settling tanks for treatment. Water used for dust depression purposes should be minimized and an alternative soil holding agent should be considered.	^
	B. Spillage, Oil and Solvents Any contractor generating waste oil or other chemicals as a result of his activities should register as a chemical waste producer and provide a safe storage area for chemicals on site. Oil interceptors need to be regularly inspected and cleaned to avoid wash-out of oil during storm conditions. A bypass should be provided to avoid overload of the interceptor's capacity.	^
	Any spillage should be cleaned up immediately and the resulting contaminated absorbent material should be properly managed according to Waste Disposal Regulations. Spills should be contained to avoid spreading and contaminating the water resources.	^
	Oil and fuels should be used and stored properly in designated area. All fuel tanks and storage areas should be provided with locks and be sited on within sealed areas within surrounded by bunds of with a capacity equal to 110% of the storage capacity of the largest tank.	*
	Good housekeeping practices are required to minimize careless spillage and keep the work space in a tidy and clean condition. Appropriate training, including safety codes and relevant manuals, should be given to the personnel who regularly handle the chemicals on site.	^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	C. On-Site Effluent Generation	
	Sewage arising from the additional population of workers on site should be collected in a suitable storage facility (chemical mobile toilets). Most of the work site locations are close to the public sewerage system, and therefore the use of septic tanks isare, therefore, not encouraged. Portable toilets should be used coupled with tickering away services provided by a licensed collector. They should be positioned at appropriate locations across the site to ensure no direct discharge of foul water off-site.	^
	D. Protection of Existing Flora and Fauna	
	The Contractor should provide details of the plant and operation plans at each site for approval by the Engineer before commencing construction. The plans should include how the existing flora and fauna will be protected. Locations required for groundwater levels monitoring are Eastern Portal, PFLR1(P), THR2(P), TP5, TP789 and W12.	^
	The construction and demolition of the temporary pier may create short term impacts on the local marine water quality. The situation will be restored once the work is finished by proper phasing of the works programme and implementation of the adequate mitigation measures (e.g. silt curtain) the impacts will be minimized.	^
	<u>Maintaining Baseflow in Downstream Watercourses</u>	
	The final design will be developed during the detailed design stage. The exact base flow rates to be maintained at each of the intakes will be subject to detailed site investigation at design stage.	
	• Purpose of the by-pass device is to maintain the base-flow of the affected stream course.	N/A
	• The by-pass system comprises an approach link and a trapezoidal channel.	N/A
	• The approach link is section with inclined profiled surface at a gradient of 1 in 100. It is used to direct the base flow to the bypass trapezoidal channel at its down stream end during the normal days.	N/A
	• The trapezoidal channel is sized such that it could handle the base flow in the affected stream course which is estimated to be no more than 20 l/s.	N/A
	• Whenever the flow in the stream course exceeding the base flow rate, the excessive flow will overflow into the intake structure via the bottom rack structure. The bottom rack structure has bar screen on the top and inclined channel at the bottom. The top level of the bar screen is level with the by-pass channel with an aim to receive the overflow from the by-pass channel.	N/A
	• The by-pass channel is designed requiring minimum maintenance. However, it is recommended that the maintenance authority carry out regular maintenance inspection prior to onset of seasons and after significant rainstorm event to prevent blockage of the by-pass and bottom rack structure.	N/A

Types of Impacts	Mitigation Measures	Status
Waste/Chemical	<u>General</u> A proper waste management plan should be implemented to promote waste minimisation at source. Where waste generation is unavoidable then the potential for recycling or reuse should be explored and opportunities taken. If wastes cannot be recycled then the recommended disposal routes should be followed. All waste materials shall be segregated into categories covering: • Excavated material or construction waste suitable for reuse on-site • Excavated material or construction waste suitable for public filling areas • Remaining C&D waste for landfill • Chemical waste, and • General refuse Proper segregation and disposal of construction waste should be implemented. Separate containers for inert and non-inert wastes should be provided. The inert waste should be taken to public filling area and the non-inert waste should be transported to strategic landfills. A trip-ticket system on the solid waste transfer/disposal operations should be included as one of the contractual requirements (ETWB TCW No. 31/2004). The Independent Environmental Checker (IEC) should responsible for auditing this system. IEC should also responsible for auditing the well-documented record system which includes: (i) quantity of waste generation, (ii) quantity of recycled material, (iii) quantity of disposed material, (iv) disposal methods and (v) sites should be implemented during construction phase. Regular cleaning and maintenance of the waste storage area should be conducted throughout the construction stage. <u>Excavated spoil</u> Control measures for soil temporarily stockpiled on-site should be taken in order to minimize the noise, generation of dust, pollution of water and visual impact. Key impacts include:	^ ^ ^ ^ ^ ^ ^ ^ ^ ^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
\# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	• Surface of stockpiled soil should be wetted with water when necessary especially during dry season	^
	• Disturbance of stockpiled soil should be minimized	^
	• Stockpiled soil should be properly covered with tarpaulins especially heavy rain storms	^
	• Stockpiling areas should be enclosed if possible	^
	• Stockpiling location should be away from the shoreline	^
	• An independent surface water drainage system equipped with silt traps should be installed at the stockpiling area	^
	<u>Chemical wastes</u>	
	For those processes that generate chemical waste, it may be possible to find alternatives which generate reduced quantities or even no chemical waste, or less dangerous types of chemical waste.	^
	Construction processes produce chemical waste, the contractor must register with EPD as a Chemical Waste Producer. Wastes classified as chemical wastes are listed in the Waste Disposal (Chemical Waste) (General) Regulation (CWR). It should be handled in accordance with the Code of Practice on the Packaging, Handling and Storage of Chemical Waste published by the EPD. A producer of chemical wastes should be registered as chemical waste producer and registered with EPD.	^
	The chemical waste generated shall be properly labelled, stored and disposed of according to the CWR. Proper storage area shall be allocated on site for storage of chemical waste. The chemical waste should only be collected by a licensed collector. An updated list of licensed chemical waste collector can be obtained from EPD.	^
	In case of spillage, spill absorbent material and emulsifiers should be available on site. This material should be replaced on a regular basis and the contaminated material stored in a designated, secure place.	*
	<u>General refuse</u> A reputable waste collector should be employed by the contractor to remove general refuse from the site, separate from C&DM and chemical wastes, and on regular basis in order to minimize odour, pest and litter impacts. The burning of refuse at site is not permitted under the Air Pollution Control Ordinance (Cap 311).	^
	Office waste can be reduced through recycling of paper if volumes are large enough to warrant collection.	^
	Good management practices should be implemented to ensure that refuse is properly stored and is transported for disposal of at licensed landfills.	^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

* Recommendation was made during site audit but improved/rectified by the contractor;
# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
Terrestrial Ecology	During the detailed design stage, the following issues should also be considered as possible to further minimise the impacts: • Adjustment of site boundary to minimise temporary loss of natural stream habitat during construction. • Adjustment of site boundary to minimise use of mixed woodland as temporary works area. In particular, the woodland habitat in temporary works area of the Eastern Portal will be avoided, thereby greatly reducing the area of temporary loss of woodland habitat. • Minimizing felling of large trees. • About 20% of trees within the works area will be transplanted. The individual of Artocarpus hypargyreus recorded within the temporary works area of HKU1, if to be encroached, would also be transplanted. Standard site practices including the following, should be enforced to minimise the disturbance to the surroundings: • Treat any damage that may occur to large individual trees in the adjacent area using materials and methods appropriate for tree surgery. • Reinstate work sites/disturbed areas immediately after completion of the construction works, in particular, through on-site tree/shrub planting along the woodland and shrubland section within the temporary works area. Tree/shrub species used should make reference from those in the surrounding area. • Regularly check the work site boundaries to ensure that they are not exceeded and that no damage occurs to surrounding areas. A total of 1.02 ha would be replanted with woodland species, reaching almost a 1.5:1 ratio for compensatory planting. Tree/shrub species used should be based on those in the surrounding areas, including those which are commonly recorded during the baseline surveys. A low-flow channel would be provided within the channelised section to maintain a deeper water depth in the expanded channel, in particular during dry season as well as a basin at the end of the channelised section to provide living space for aquatic life. Step chute in the form of a series of descending water pools would be constructed between the low flow channel and the undisturbed stream course. There would also be openings for aquatic fauna between each chute step (pool). These could work like a "ladder" to help avoid isolating the aquatic fauna in the channelised section from natural habitats. Measures are also needed to maintain the flow of all affected streams/nullahs during the construction stages. Temporary bypass should be provided if the stream/nullah flows will be cut off by the construction works. After the construction works are finished, sections of temporary loss should be reinstated. Construction materials, wastes, and equipment should be cleared from the sites.	^ ^ ^ ^ ^ ^ ^ ^ ^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
\# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	Surveys of amphibians at E4(P), PFLR1(P), W12(P), MB16, E5(B)(P), TP789(P) and P5(P) prior to commencement of construction is recommended. Frogs, including Hong Kong Cascade Frog and Lesser Spiny Frog, and tadpoles found at work areas of these proposed intake points will be collected and translocated to nearby streams that will not be affected by the project. These procedures should be performed by experienced herpetologists. A detailed translocation proposal will be submitted during the detailed design stage. Measures should also be taken to avoid runoff to streams and marine habitats. Stream/channel which could potentially be affected during construction should be prevented from sedimentation by erection of sediment barriers. Site runoff should be desilted by siltation traps in streams/channels or diverted, to reduce the potential for suspended sediments, organics and other contaminants to enter the local stream environment.	^ ^
Marine Ecology	Silt curtains will be deployed during the construction and demolition of the temporary berthing point. Deployment of silt curtains around the berthing point area would effectively avoid adverse water quality impacts due to barge filling. No significant ecological impact is anticipated. The invert of the stilling basin would be at -5.4 mPD. A cofferdam in the form of pipe-pile wall is to be constructed outside the stilling basin prior to the construction of basin. The cofferdam will be dewatered to provide a working area for construction of the stilling basin. The boulders from the seawall will then be removed by landbased grabs. Although the speed of the working vessels to be used in the Project (mainly barges) would not be high, a speed limit for marine traffic is proposed as a precautionary measure. A speed limit of 10 knots should be strictly enforced in the works area, in particular in the waters between the outfall location and the navigation channel in East Lamma Channel.	N/A ^ ^

\# Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
Cultural Heritage	The Cultural Heritage Impact Assessment has identified the following resources which will require mitigation measures during the construction stage; <u>Haw Par Mansion (including boundary wall and gate)</u> A condition survey must be undertaken by a qualified professional prior to the commencement of construction works for the tunnel portal in order to assess the structural integrity of the mansion, wall and gate (with special attention paid to any fragile architectural features). A report containing description of the types of construction, identification of fragile elements, an appraisal of the condition and a photographic record must be prepared. The report must also provide an assessment indicating whether further precautionary measures will be necessary during the construction phase, and if so provide details for sufficient protective measures, including monitoring for vibration control to ensure that no damage to the structure and fabric of the house, wall and gate results from the construction works. The report must be submitted to AMO for approval before construction activities commence. Upon approval the appropriate monitoring and precautionary measures shall be put into place. A buffer zone with a minimum width of 3 metres and an obstruction free access point must be maintained between the boundary wall/gate and the temporary works area (during construction works associated for both the tunnel portal and the permanent vehicle access ramp). This is to enable access for routine maintenance works on the wall and to ensure that the wall is not damaged by machinery operation or related construction activities. The temporary works area will be enclosed by standard DSD site hoarding. <u>Former Explosive Magazine of Victoria Barracks</u> A condition survey must be undertaken by a qualified professional prior to the commencement of construction works in order to assess the structural integrity of the retaining wall and the extent of damage from cracks and vegetation growth. A report containing a description of the wall's construction materials, identification of fragile and/or endangered elements, an appraisal of the condition and a photographic record of the retaining wall must be prepared. The report must also provide an assessment indicating whether further precautionary measures will be necessary during the construction phase, and if so provide details for sufficient protective measures, such as monitoring for vibration control, to ensure that no damage to the retaining wall results from the construction works. The report must be submitted to AMO for approval before construction activities commence. Upon approval the appropriate monitoring and precautionary measures shall be put into place. A buffer zone with a minimum width of 3 metres and an obstruction free access point must be maintained between the retaining wall and the temporary works area (for the duration of the construction phase). The works area will be enclosed by standard DSD site hoarding.	^ ^ ^ ^

Com-2008-05-003	Construction site at Eastern Portal	22 May 2008	The complaint was lodged by Ms. Ng on 22 May 2008 regarding noise nuisance generated from the construction activities at the construction site of Eastern Portal	According to the Contractor, only one excavator and one generator were operated for the excavation works around 8 am on 22 May 2008 at the Eastern portal. No other construction activities were conducted. In response to the complaint, The Contractor agreed to reschedule their current works activities, with immediate effect from 23 May 2008, that only site preparation works without noise nuisance to the nearby residents will be carried out from 7:00 am to 8:00 am at the Eastern Portal area. Base on the information collected and the monitoring results, the complaint was considered not justifiable since (1) no exceedance of the noise monitoring results was recorded in May and (2) no non-compliance or observation on noise was recorded.	Closed

COM-2009-12-059	Construction site at Intake MB16	27 November 2009	The complaint was received on 2 November 2009 regarding the dust nuisance caused by the works at the Construction Site at Mount Butler Road near Clementi Road (Intake MB16). EPD subsequently issued a notice of complaint.	Based on the information collected, the Contractor has implemented the dust suppression measures to prevent dust nuisance from the construction activities. During the site inspection in November 2009, slope improvement works including soil nailing works were observed from other construction site adjacent to DNJV's construction works at Mount Butler Road.	Closed
COM-2009-12-061	Construction site at Intake PFLR1	23 and 28 December 2009	Two public complaints were received from the resident of Pok Fu Lam Road on 23rd and 28th December 2009 respectively about the construction noise nuisance from the construction site at	Based on the information gathered in the Investigation, the noise levels measured at Honey Court (NC11) during the construction works were well below the construction noise limit.	Closed

Log Ref.	Location	Received Date	Details of Complaint	Investigation/Mitigation Action	Status
			Intake PFLR 1.	The location of the designated noise monitoring station (NC11 – Honey Court) is at location close to the construction site compared with Pok Fu Lam Height. In addition, a large scale innovation works being undertaken at a resident building adjacent to the Pok Fu Lam Height was observed during the routine site inspection. The innovation works included hammering and drilling on the outer walls of the building and contributed significantly to the noisy environment.	
COM-2010-01-062	Construction site at Western Portal	3 January 2010	The public complaint was received from the resident of Bel-Air through the project hotline on 3rd January 2010 about "wooing" sound heard after midnight, and he suspected that the sound was coming the construction sites at Cyberport.	Base on the information collected, the noise levels measured at NC3 during the construction works were well below the baseline level. The location of the designated noise monitoring station (NC3 – Outside Aegean Terrace) is at location close to the construction site compared with Bel-Air. The Contractor will continue implementing the existing noise mitigation measures at the Western Portal to minimize the	Closed

				environmental impact to the nearby residents.	
COM-2010-01-063 COM-2010-01-066(1), (2) and (3)	Intake MB16	20 January 2010 23, 25, 27 January and 2 February 2010	The first complaint was raised by the resident at No. 58 Mount Butler Road about the noise and vibration generated from the works on 20 January 2010. Three complaints were raised by the resident of Amber Lodge through the Project Hotline regarding the low frequent vibration from underground on 23, 25, 27 January and 2 February 2010.	Based on the EIA assessment results, No. 58 Mount Butler Road and Amber Lodge are not the potential ground borne noise sensitive receivers as they are not within the influence zone near the Main Tunnel alignments from Cyberport to Tai Hang and the alignments of the adits. The additional ground borne noise levels measured at inside Amber Lodge during the TBM works were well within the construction ground borne noise standards. The Contractor volunteered to stop the operation of the East TBM between midnight and 07:00 hours in Week 6 and 7 after which the machine has moved far away from these premises	Closed

COM-2010-04-100	Western Portal	30 April 2010	The public complaint was received from the resident of Bel-Air on 30th April 2010 regarding the dust nuisance generated during loading / unloading operation from two barges at pier of Cyberport. Dark smoke was also emitted from the two barges.	Based on the information collected, the air quality levels measured at AQ2 and AQ3 during the construction works were below the air quality criteria. The Contractor has taken initiative to minimize dust nuisance to the nearby residents by implementation of additional mitigation measures as below: - To plan the installation of 3-sided curtain-like enclosure at the conveyor discharge point to the barge. - Mechanical cover closed even for empty trucks leaving the Site. - Written advice to subcontractor on the subject of dust suppression and speeding of vehicles. - Toolbox training to drivers on the new measures.	Closed
COM-2010-05-105	Western Portal	7 May 2010	The second complaint was received via EPD Hotline on 7 May 2010. The anonymous complainant concerned about the dark smoke emitted from the barges on 4 May 2010	Based on the information collected, the air quality levels measured at AQ2 and AQ3 during the construction works were below the air quality criteria.	Closed

Total	479016		283	453526	25207		172340	4025		32535	1103

Notes:
(1) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.
(2) Plastics refer to plastic bottles/containers, plastic/foam from packaging material.
(3) Quantities in December 2010 are upto 31 December 2010.
(4) Assuming the conversion factor from m^3 to ton for rock is 2.5.
(5) The materials reused in other Project shall not be treated as waste under the Waste Disposal Ordinance (Cap 354).
(6) The figures are included for the sake of completeness of record.

ANNEX I
REVIEW REPORT FOR "HANDLING & DELIVERY OF EXCAVATED MATERIALS AT THE WESTERN PORTAL"

HANDLING & DELIVERY OF EXCAVATED MATERIALS AT THE WESTERN PORTAL

Background

1. Project

"Dragages - Nishimatsu Joint Venture (DNJV)" is the principal contractor undertaking the contract work (DSD Contract No.: DC/2007/10) for the construction of:

- A drainage tunnel (Main Tunnel) from Tai Hang to Cyberport, having an internal diameter from 6.25m to 7.25m;
- A network of adits connecting to the Main Tunnel; and
- 32 intakes to collect surface runoffs into the Main Tunnel via the adit network. The water collected will be discharged into the sea at Cyberport.

The entire drainage tunnel network is built in rock strata, composed of granite and volcanic rocks. Two tunnel boring machines (TBM) are employed for the excavation of the Main Tunnel – one TBM is driving from the East to West whereas the other TBM is operating from West to East. The two tunnels will be broken through at a point near Stubb Road. The conventional drill and blast method is adopted for the excavation of the adits. The excavation of the Main Tunnels and the adits are concurrently carried out.

In addition, mechanical excavation, raise boring method, reverse circulation drilling and hand-dug caisson are used for the excavation of intakes cofferdam and dropshafts.

To facilitate the operation of the TBM and tunnel excavation, a temporary barging point was formed at the Western Portal in Cyberport to provide support for the supplies to both TBM; for handling of excavated materials; and for the berthing of vessels.

In the West Tunnel, the excavated materials generated from the TBM operations are delivered by a conveyor belt to the tunnel portal and are discharged either onto the barge or the TBM Spoil Basin. On the other hand, materials generated by drill-and-blast method in the adits are delivered to the Adit Spoil Basin at the portal for subsequent discharge onto the barge.

All excavated materials generated from tunneling operations at the West Portal are delivered by barges to the approved disposal ground for recycling use.

2. Environmental Impact Assessment (EIA)

The Work is a "designated project" under Schedule 2 of Environmental Impact Assessment Ordinance, Cap. 499. An EIA Study has been undertaken by Black & Veatch Hong Kong Ltd. for the Project to provide information on the nature and extent of potential environmental impacts arising from the construction and operation of the Project and related activities taking place concurrently, and to contribute to decisions on the overall environmental acceptability of the Project.

The EIA Report was issued in January 2006, and was approved by EPD under the EIAO (Register No.: AEIAR-099/2006 dated 7-Apr-06). In March 2006, Drainage Services Department (DSD) commissioned Ove Arup and Partners Hong Kong Limited (Arup) to undertake the consultancy assignment of Agreement No. CE 17/2005 (DS), based upon more detailed design information. The Technical Note on Supplementary Environmental Assessment was issued on 29-Mar-07 to highlight the changes since the approval of the EIA Report; evaluate the associated environmental implications; and review the mitigation measures required.

The following is mentioned in Chapter 6: Air Quality Assessment of the EIA Report (Register No.: AEIAR-099/2006) prepared by Black & Veatch:

> "6.5.7 For Western portal, spoil generated will be delivery to barges by means of a covered conveyor belt. As a result, the number of vehicles entering the site will be reduced hugely and no vehicle-generated air pollution problems will arise. However, dust may be emitted from the transfer points of the conveyor. Proper design and maintenance of the conveyor will reduce dust emissions from the transfer points to ensure low dust impact."

The intent of this Clause is to reduce the impact on air quality arising from handling and delivery of spoil to a minimum.

There are comments from concerned groups over the site arrangements for the handling and delivery of excavated materials from the tunnel and adits.

3. Environmental Permit

The Environmental Permit (EP-272/2007) was first issued to DSD on 26-Apr-07. An application for construction and operation of the designated project was subsequently made and the revised Permit (EP-272/2007/A) was issued on 26-Oct-07. After the award of the Contract, DNJV applied for the issue of Further Environmental Permit (FEP-01/272/2007/A) which was subsequently issued on 28-Jan-08. A variation to the Further Environmental Permit was made in June 2009 and the revised Permit (FEP-01/272/2007/B) was issued on 25-Jun-09.

Purpose and Scope

A review was performed on the current site arrangements on the delivery and handling of excavated materials, particularly the Western Portal, within the context of the EIA Report and over their impact on the environment.

Delivery and Handling of Excavated Materials

1. Excavated Materials from TBM

Excavated materials generated from the operation of the tunnel boring machine are small (often less than 100mm) and the sizes are quite uniform. These materials are carried by a covered conveyor belt system installed near the crown of the Main Tunnel; and are discharged directly onto the barge berthed at the seawall. *Owing to the mode of TBM operation, there are times that TBM excavated materials must be re-handled*.

Typical examples include:

- A barge is already full and has to leave the Site. When there is no barge at the seawall, the materials will be discharged into the TBM Spoil Basin.

- When the TBM operates during night time, we have to discharge the TBM excavated materials into the TBM Spoil Basin in accordance with the conditions of the Construction Noise Permit in force.

When the next barge comes during daytime, the materials stored in the TBM Spoil Basin will be picked up by a backhoe and are transferred into a side conveyor. The side conveyor carried the materials to the main conveyor for discharge onto the barge (*Photo 1*).

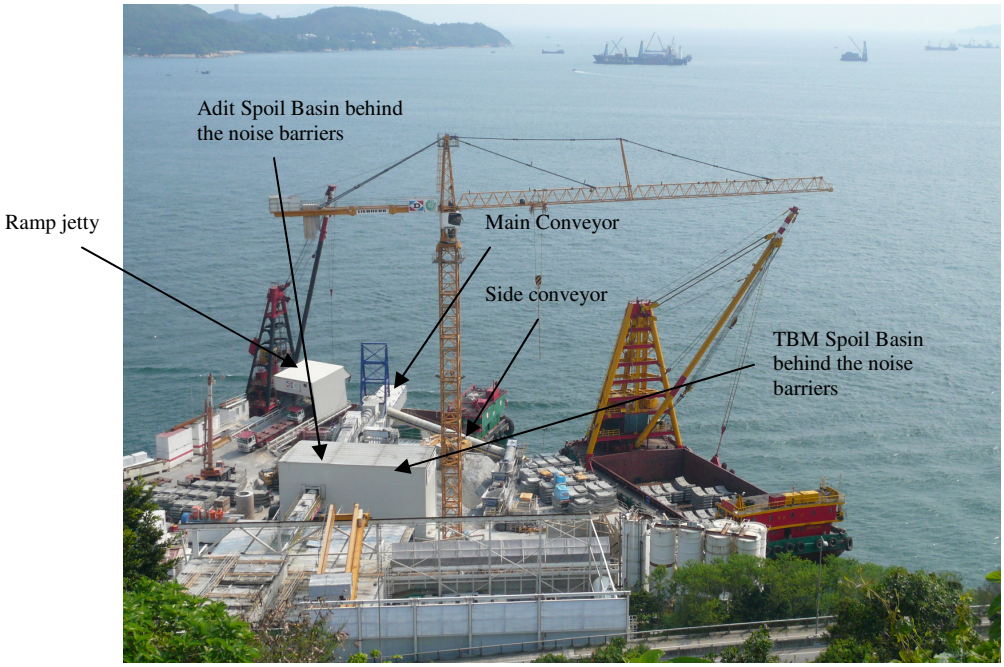

Photo 1: View of the Western Portal

The Main Conveyor and the Side Conveyor are fully enclosed by sound absorptive panels.

2. Excavated Materials from Drill-and-Blast Adits

Excavated materials generated by drill-and-blast are bigger (over 200mm) and they are of irregular sizes and shapes.

The materials are picked up by either the Häggloader (*Photo 2*) or the John Deere skid loader (*Photo 3*) at the adit face; and they are then transferred onto train cars (Shuttle Cars as in *Photo 4*). These Shuttle Cars will be brought to the Adit Spoil Basin at the tunnel portal (*Photo 5*). A backhoe is deployed at the surface adjacent to the Adit Spoil Basin transferring the excavated materials from the Adit Spoil Basin onto a 24-T dump truck that travels less than 100m within the Site from the Adit Spoil to the ramp jetty and vice versa.

The Adit Spoil Basin is provided with noise covers such that the entire basin is fully enclosed for nighttime operation.

The ramp jetty is enclosed at 3 sides – the top and the lateral sides. It is equipped with curtains and water sprinkler system for dust suppression. (*Photo 6 & 7*)

Environmental Considerations

DNJV chooses the current mode of handling and delivery of excavated materials after careful consideration to its impact on the environment. (i.e. TBM excavated materials by conveyor belt onto barge or the TBM Spoil Basin; and Adit excavated materials by trains to the Adit Spoil Basin and onto the barge by dump trucks)

It is because excavated materials from Drill-and-Blast Adits cannot be handled by a conveyor system due to their big sizes and heavy weight. If a conveyor system was used, we need to mechanically break the materials into small chunks at the portal surface, using hydraulic breakers or by other means. That will certainly have an impact to the environment (e.g. more noise produced, more dust generated, more diesel fuel consumed).

All wastewater collected from surface runoffs and from the spoil basins are pumped into Wetsep and the water treatment plant at the Western Portal for treatment before discharge into the sea in accordance with the conditions of the Effluent Discharge Licences in force.

The current mode of operation has the least impact to the environment in terms of noise, air and water. Mitigating measures in place at the Western Portal are described in details in the next section. Moreover, excavated materials from TBM operation (uniform size) and those from drill-and-blast operations in the adits (irregular sizes) are delivered to the approved disposal locations for reuse (e.g. site formation).

Environmental Mitigation Measures at Western Portal

1. Covered Conveyors

   Both the main and side conveyors (*Photo 8*) are entirely covered to mitigate noise propagation and avoid fugitive dust during the transportation of excavated materials.

2. Dust Suppression

   - A sprinkler system (*Photo 9*) was installed underneath the ramp jetty for dust suppression when excavated materials are being loaded onto the barge.
   - Dust curtains (*Photo 10*) were also installed at the outer rims of the conveyor enclosure in order to shield fugitive dust, if any, arising from the discharge of excavated materials from the conveyor.
   - The 24T dump truck transporting materials from the Adit Spoil Basin to the ramp jetty is fitted with mechanical covers.

3. Noise Enclosure at Western Portal and the Adit Spoil Basin

   All logistics movements take place inside a sophisticated and purposely-built acoustic enclosure. Mobile plant such as locomotives and train cars are travelling inside the noise enclosure and into the tunnel under construction. In addition, movable noise covers (*Photo 11*) were provided in the Adit Spoil basin to block noise propagation during the unloading of excavated materials from the shuttle cars.

4. Noise Barriers at Western Portal

In addition to the noise enclosure erected at the Western Portal, a row of noise barrier was built in the Western Portal adjacent the pea gravel storage yard (*Photo 12*). The barrier does not only screen the mobile plant at the pea gravel storage yard from the views of the Aegean Terrace residents, but it shields part of the noise generated from the operation of such plant. There is another row of barriers erected at the side abutting the Cyberport Road (*Photo 13*).

Air Quality Monitoring

DNJV has been undertaking the 24-hour Total Suspended Particulates (TSP) monitoring since commencement of the Work. The TSP station is installed within our site boundaries rather than the designated location at Aegean Terrace as stipulated in the E&MA Manual. The reason is that residents at Aegean Terrace refused to allow the environmental team to set up the instrument on their premises. Sampling and analysis are conducted by an HOKLAS laboratory to collect TSP filtering sample in a frequency of once every 6 days.

The 24-hour TSP monitoring results indicate that the TSP levels are all below Action (156 μg/m^3). No exceedance on monitoring limits was recorded. The agreed and pre-set Action and Limit levels and the actual TSP monitoring levels in the past 4 months are shown below.

The impact on air quality arising from the handling and delivery of excavated material is insignificant.

Date	TSP level (μg/m^3)
7-Apr	108
13-Apr	47.6
19-Apr	123.9
24-Apr	135.5
30-Apr	62.2

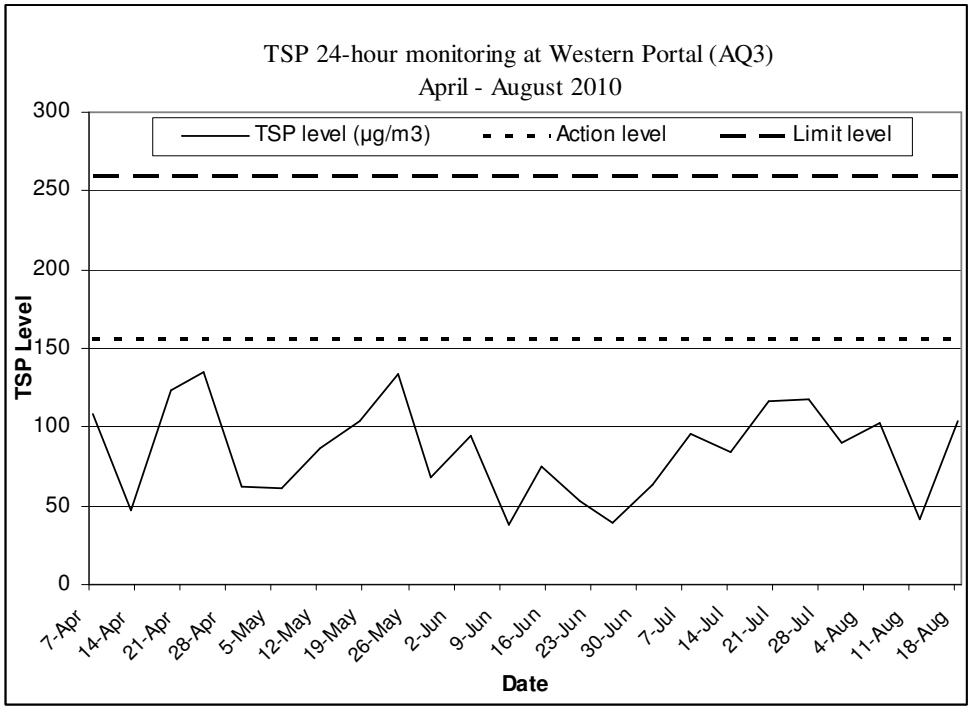
10-Jun	38.0
15-Jun	74.5
21-Jun	53.4
26-Jun	39.0
2-Jul	63.9
8-Jul	95.9
14-Jul	84.6
20-Jul	116.6
26-Jul	117.8
31-Jul	89.7
6-Aug	102.8
12-Aug	42.0
18-Aug	103.8

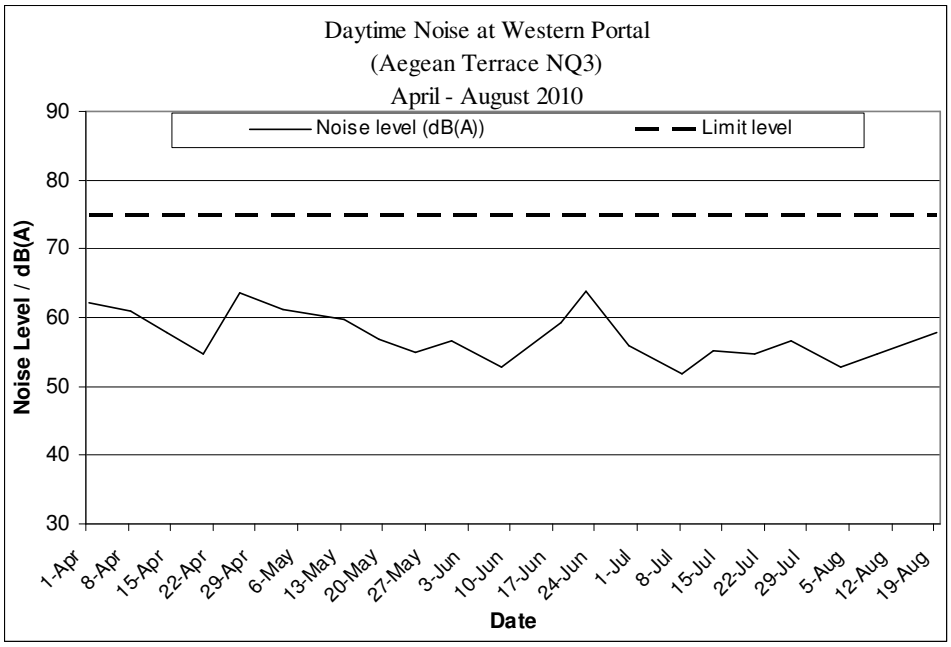


Environmental Noise Monitoring

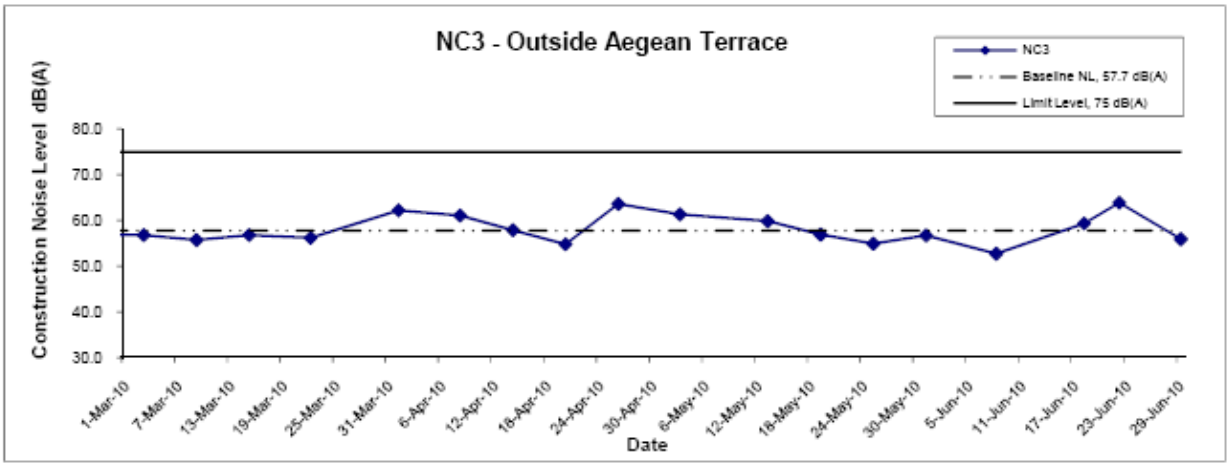
The E&MA Programme requires the carrying out of baseline noise monitoring prior to the commencement of construction work and impact noise monitoring when actual construction work started on the Site. DNJV employs an environmental team to conduct periodic noise monitoring during daytime, evening and nighttime. The designated noise monitoring station is adjacent to the Aegean Terrace, the nearest noise sensitive receiver. The daytime noise levels in the months from April to August as well as corresponding readings during daytime, evening and nighttime in the previous quarter are tabulated and graphically illustrated below.

There is no exceedance of noise levels recorded in the past 4 months. The noise impact arising from the handling and delivery of excavated material is insignificant.

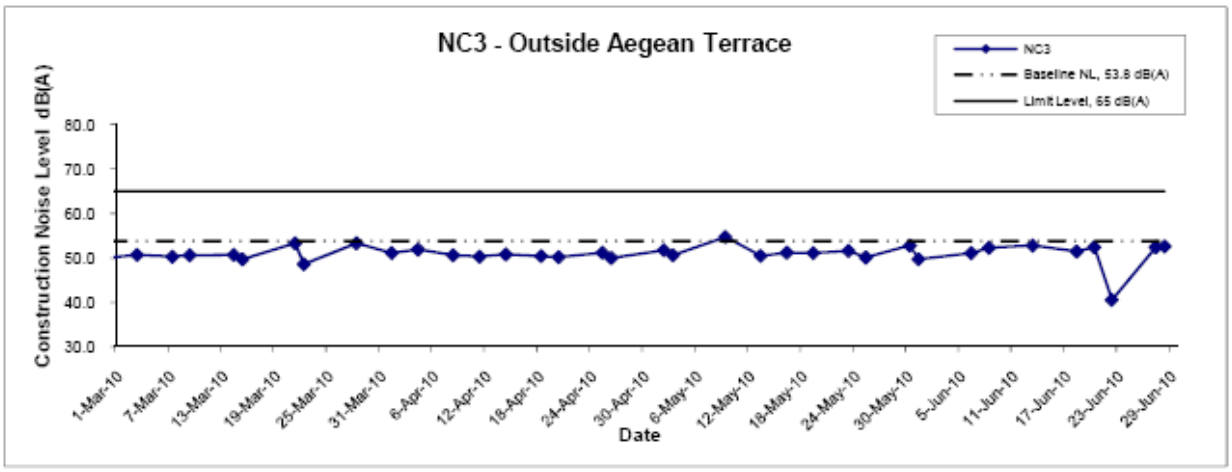
Date	Noise level (dB(A))
1-Apr	62.2
8-Apr	61.0
14-Apr	57.9
20-Apr	54.8
26-Apr	63.6
3-May	61.3
13-May	59.8
19-May	56.9
25-May	54.9
31-May	56.7
8-Jun	52.7
18-Jun	59.3
22-Jun	63.9
29-Jun	55.9
8-Jul	51.8
13-Jul	55.3
20-Jul	54.7
26-Jul	56.7
3-Aug	52.7
9-Aug	54.8
19-Aug	57.8



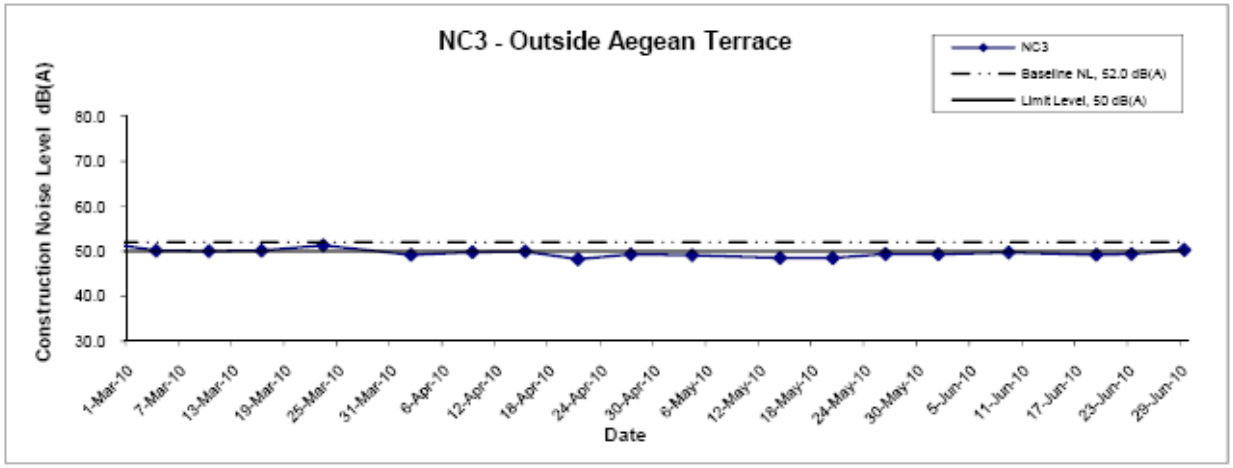
Noise Levels



Noise Levels
(Restricted Hours - 07:00 - 23:00 holidays & 19:00 - 23:00 on all other days)



Noise Levels
(Restricted Hours - 23:00 to 07:00 on all days)



Conclusion

The current mode of handling and delivery of excavated materials from TBM operation and adit excavation (drill-and-blast) has insignificant impact to the environment. It does not deviate from the intent of the EIA Report on the control of air quality – Clause 6.5.7 of the Report, and does not constitute material change of the EIA of Hong Kong West Drainage Tunnel Project.

It also concludes that the current spoil transportation arrangement does not constitute a breach of Condition 1.7 of the Further Environmental Permit that the HKWDT Project is designed and constructed in accordance with the information and all recommendations described in the EIA Report.

Appropriate mitigation measures are designed and implemented with due consideration of actual work method and site constraints to ensure compliance with the respective air quality and noise emission limits at the nearby sensitive receivers. These are in line with the recommendations of the EIA Report and comply with the conditions of the Further Environmental Permit.

ANNEX II
PROPOSAL OF TWO BLASTS PER DAY IN WESTERN ADITS

Proposal of Two Blasts Per Day in Western Adits

1. Objectives

The objectives of this document are to:

- Explain the proposed arrangement of 2 blasts per day and the construction sequence,
- Review environmental implications and mitigation of the proposed arrangement,
- Review the related documents under EIA Ordinance to check whether there are any conditions/restrictions applicable to the proposed blasting arrangement.

2. The Project

The Hong Kong West Drainage Tunnel (DSD Contract No.: DC/2007/10) is a stormwater drainage tunnel running between Tai Hang (Eastern Portal) and Cyberport (Western Portal) with a network of adit tunnels. It is designed to collect stormwater from the upper catchments by a system of intake points, dropshafts and adits to relieve the flooding problem at the lower catchments of northern Hong Kong Island during heavy rainstorms. The Main Tunnel comprises 2 tunnel sections, namely:

- A main tunnel with internal diameter of 6.25m from Ch+43 (Eastern Portal) to Ch3+955.
- A main tunnel with internal diameter of 7.25m from Ch3+955 to Ch10+534 (Western Portal)

The 2 Main Tunnel Sections are excavated by the operation of 2 tunnel boring machines (TBM). On the other hand, the adits are excavated by drill and blast method.

3. Blasting in the West Adits

DNJV is currently adopting drill and blast method for the construction of the Western Adits. The blasting direction is from the Main Tunnel towards the intake dropshafts. For safety reason and full evacuation of personnel from the TBM, blasting can only be commenced when the TBM excavation has progressed some 200m beyond the adit and tunnel junction. This criterion is a restriction to the progress of adit excavation (especially when hard ground conditions or fault zones are encountered) though a number of adits can be excavated concurrently by drill and blast (*concurrent blasting*).

At present, drill and blast operation is now being conducted at 8 adits (including SM1, P5, HKU1, RR1, W5, TP4, TP5 and TP789) concurrently during daytime. It is worthwhile noting that the blasting faces are located from 2,100m to 4,200m from the tunnel portal.

Figure 1 illustrates the alignment of the West Tunnel and West Adits and the progress of TBM excavation in the West Tunnel.

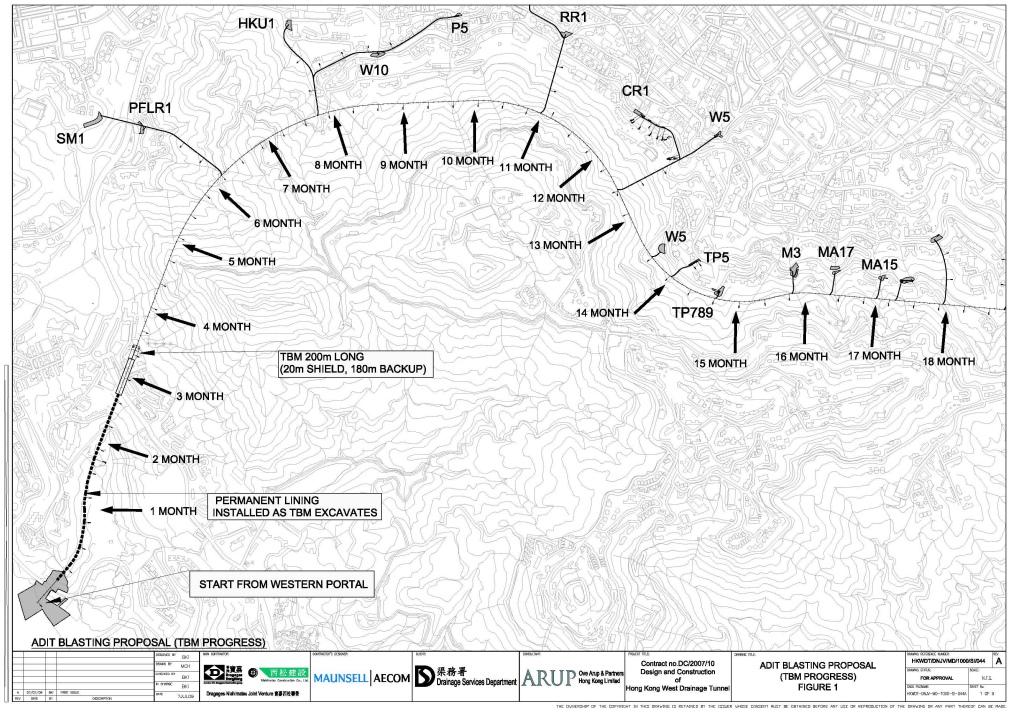


Figure 1: West Tunnel/Adit Alignment and TBM Progress

Lockable blast doors are installed at each main tunnel and adit junction where blasting is to be carried out. Besides, ventilation fans are installed to induce forced ventilation during mucking out and extraction ventilation immediately after blasting.

All daily blasting are carried out at the same time and therefore all adit working faces will be cleared prior to blasting the charged adits along the entire section of the tunnel. The daytime blasting window is somewhere between 13:00 hours and 19:00 hours. A typical work cycle includes the following activities:

(1) Drilling

(2) Charging

(3) Blasting

(4) Ventilation (extraction of blast fumes)

(5) Inspection (check for misfire and loose rocks)

(6) Mucking

(7) Installation of temporary tunnel support

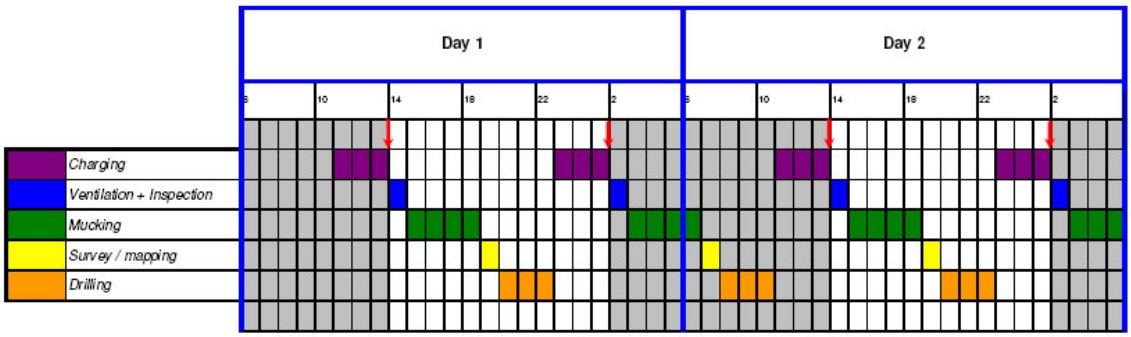
(8) Survey/mapping

Owing to the working cycle for a single concurrent blast and the progress of the tunneling works (the adits to be blasted are getting deeper and deeper in the Main Tunnel), the daytime blasting schedule is pushed to the latter part of the blasting window.

4. Two Blasts Per Day

The Hong Kong West Drainage Tunnel Project is a flood relief programme for the northern shore of Hong Kong Island. The timely completion of the Project is important to the safety of the people living in the low-lying areas along the northern shore of Hong Kong Island. DNJV proposes to increase the blasting work to two times per day to ensure timely completion of the Project, especially when unexpected ground conditions are encountered during adit excavation. Two blasts per days are planned initially for the Adits leading to Intakes HKU1, W10 and P5.

Because of the time taken for a typical work cycle, it is anticipated that the second blast will take place in the early hours of the day (around 01:00 to 03:00 hours).



For the planned arrangement for two blasts per day, it is important to note the following points: -

(1) The blasting faces are currently located from 2,100m to 4,200m from the tunnel portal and 120m – 150m below the surface. The distances will increase as tunnel and adit excavation progress. Besides, the blast faces

(2) For nighttime blasting, DNJV will attempt to limit the number of blast faces (1 to 2).

(3) There is no change in construction methodology for adit excavation. As mentioned in the EIA Report, blasting is seen as the most suitable method of excavation for adits.

(4) There is no change in the number and type of prescribed powered mechanical equipment used in the nighttime blasting.

(5) There is no overnight storage of explosives on Site. There will two deliveries of explosives to Site by the Mines Division – one in the morning and the other in late afternoon. The explosives will be delivered to the blasting locations inside tunnel by means of a special train and under the strict supervision by the Mines Department.

5. Environmental Implications and Mitigations

Air Quality

- Water sprinklers and water spraying are used to suppress dust and fumes generated by blasting.
- A fume scrubber is installed at the tunnel portal for further dust and fume suppression.
- The TSP monitoring station is now installed within the site boundaries at the Western Portal. Air monitoring has been carried out since the commencement of construction work. No exceedance has been registered even after adit blasting was conducted inside the tunnel.

Noise

- No new plant and equipment will be introduced as a result of 2 blasts per day or nighttime blasting. The existing powered mechanical plant pertaining to works under restricted hours both at the surface and inside tunnel still apply. A Construction Noise Permit (GW-RS0774-10) was granted to cover all PME essential for the drill & blast works and nighttime operation.
- Blast doors will be installed at the tunnel and adit junctions to confine the blast areas.
- As the blasting faces are all deep inside the tunnel (the rock cover 120m -150m), the number of blast faces is limited and the noise generated during blasting is transient in nature, the noise impact on the nearby communities will be insignificant.
- The noise enclosure at the tunnel portal area will remain, allowing for operation of PME within the enclosure during restricted hours.
- Noise monitoring at designated locations as described in the EM&A Manual will continue.

Photos of Mitigation Measures for Blasting Works

Blast door at tunnel and adit junction

Blast door at tunnel and adit junction for micro-blasting

 Water sprinkler system for dust & fumes suppression	 Fume scrubber in the Western Portal

Water Treatment and Handling of Excavated Materials

- Water collected from the main tunnel will either by treated before discharge or temporarily stored for reuse.
- Valid effluent discharge licences are in force at the Western Portal and periodic water samplings are performed in accordance with the licence conditions.
- Excavated materials from adit blasting will be transported to the tunnel portal (inside the noise enclosure) for overnight storage in the Adit Spoil Basin which is fully covered by noise panels. Removal of excavated materials from the Adit Spoil Basin to the barge will only be done in the following morning.

6. Environmental Document Review

The following environmental documents under EIA Ordinance and related to the Project have been reviewed:

(1) The EIA Report (Register No.: AEIAR-099/2006) prepared by Black & Veatch Co.

(2) The Technical Notes on Supplementary Environmental Assessment prepared by Ove Arup in March 2007.

(3) The Technical Notes to Support VEP Application, prepared by Ove Arup in October 2007.

(4) The Environmental Permit (EP-272/2007/B) previously held by DSD and the Further Environmental Permit (FEP-01/272/2007/B) currently held by DNJV.

EIA Report

The following clauses are relevant the subject matter:

"2.4.5 Blasting is seen as the most suitable method of excavation for the adits due to the relative cost of alternative methods of construction. Blasting is not seen as a suitable method of excavation or the shafts due to the noise generated. Given the proximity of the intake shaft locations to sensitive receivers, blasting would need to be severely restricted to remain within the noise restrictions. Construction of shafts by drill and blast would also necessitate the shafts to be constructed larger than the 2.3 diameter required enabling spoil to be removed. This would consequently lead to slower progress

and would also cause difficulties at many intake locations, where the working area is very restricted.

6.5.9(ii) No blasting shall be carried out when the strong wind signal or tropical cyclone warning signal No. 3 or higher is hoisted (unless prior permission of the Commissioner of Mines is obtained).

13.3.2 For the adit construction, drill and blast method will be adopted for the majority of the works. As the storage of explosives relates to the extent of the drill and blast component of works, it is important to review the rate of work, storage/delivery arrangements and the duration of the works. The blasting works will require about 30 months to complete. Based on the proposed construction programme and the blasting frequencies, there will be no requirement for overnight storage of explosive on site. The delivery of the explosive will be once per day. The delivery of explosives from Government Explosives Depots to the blasting site is controlled by the Explosives Delivery Unit of the Mines Division. Explosives are classified as Category I Dangerous Goods and use of explosives is controlled under the Dangerous Good Ordinance (Chapter 295). Since there will be no overnight storage of explosive on site, no Quantitative Risk Assessment is required for this study."

Technical Notes on Supplementary Environmental Assessment

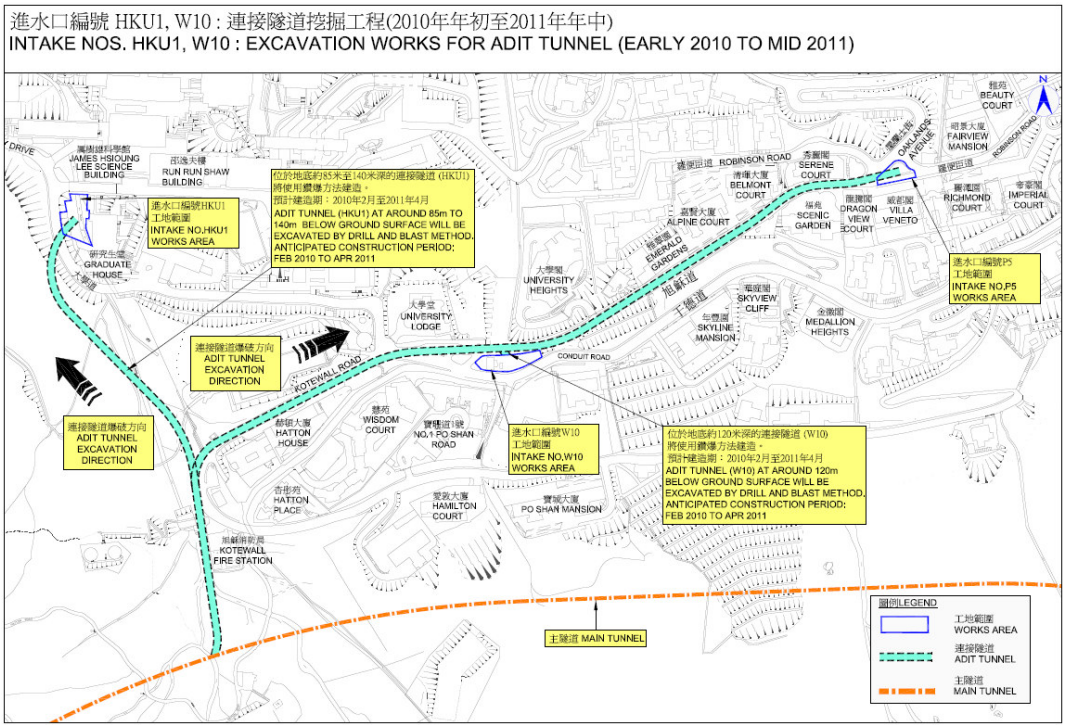
Table 1-1: 'Summary of General Design Changes Since Approval of EIA' in page 2 of the Technical Notes states the following:

EIA Assumptions	Proposed Improvements	Justifications	Environmental Concerns
Delivery of explosives once per day	Delivery of explosive once or twice per day	Additional delivery and blasting will expedite the progress of construction	No impact on the EIA is anticipated since there are still no overnight storage of explosive (see Section 12)

The proposed improvement in the Technical Notes does allow for 2 blasts per day and confirms no environmental concerns with such an improvement.

Technical Notes to Support VEP Application

The Technical Notes were prepared to address the impact of the proposed slight southward shift of the HKU1-W10-P5 Adit Junction due to the corresponding shift of the main tunnel alignment. However, there is no change in the HKU1-W10-P5 intake locations. The Notes do not mention anything about the blasting along the adits and in particular the HKU1-W10-P5 Adits.



Environmental Permit & Further Environmental Permit

There are no General Conditions or Special Conditions in the EP and FEP for blasting works on Site.

7. Environmental Team Leader's Comments

The Environmental Team Leader (Dr. Priscilla Choy) expressed her professional opinion in her letter of 8 September 2010 that there is no specific restriction on 2 blasts per day including nighttime blasting work.

8. Conclusion

DNJV proposes 2 blasts per day in the West Adits – one in the daytime and the other one during nighttime. The review concludes that there is no restriction in all relevant environmental documents under the EIA Ordinance on 2 blasts per day (even nighttime blasting).

In addition, there is no adverse impact on the environment as a result of 2 blasts per day and nighttime blasting.

8th September 2010

Dear Sir,

Contract No. DC/2007/10
Design and Construction of Hong Kong West Drainage Tunnel
Proposal for 2 blasts in the West Adits

We refer to your message regarding the environmental aspects for proposing 2 blasts per day in the West Adits via e-mail on 3rd September 2010 for the captioned project.

After reviewing the relevant Environmental Permit, EIA Reports (including Technical Notes on Supplementary Environmental Assessment) for the captioned Contract, we would like to confirm that there is no specific restriction for 2 blasts per day including nighttime blasting for the Project. However, the EIA Report specifies that there will be no overnight storage of explosives for this project.

Although there is no restriction for 2 blasts per day, the following mitigation measures are recommended in the EIA Report for blasting operation:

Air Quality
- No blasting shall be carried out when the strong wind signal or tropical cyclone warning signal No. 3 or higher is hoisted (unless prior permission of the Commissioner of Mines is obtained).

Hazard to Life
- No overnight storage of explosives for this project.

If you have queries, please contact the undersigned at 2151 2089.

Yours faithfully,
Cinotech Consultants Limited

Dr. Priscilla Choy
Environmental Team Leader
