## EXECUTIVE SUMMARY

1. This Baseline Environmental Monitoring Report was prepared by Cinotech Consultants Ltd. for the Project “Baseline Environmental Monitoring for Hong Kong-Zhuhai-Macao Bridge Hong Kong Projects - Investigation”. This report presents the baseline monitoring works performed for Project between September and November 2011.
2. The baseline environmental monitoring works for the parameters of 1-hour and 24-hour Total Suspended Particulates (TSP), noise, water quality conducted at each monitoring stations and ecology (Chinese White Dolphin Monitoring) are presented in **Table I to Table IV**:

### Air Quality

**Table I Baseline Air Quality Monitoring Period**

Monitoring Stations	Baseline Monitoring Period
AMS 1 - Sha Lo Wan	18/10/2011 – 31/10/2011
AMS 2 - Tung Chung Development Pier	
AMS 3 - Ho Yu College	18/10/2011 – 2/11/2011 (23/10/2011 and 30/10/2011 was cancelled due to the school closed on Sunday)
AMS 4 - San Tau	18/10/2011 – 31/10/2011
AMS 5 - Ma Wan Chung Village (Tung Chung)	
AMS 6 - Dragonair / CNAC (Group) Building (HKIA)	
AMS 7 - SkyCity Marriott Hotel	
ASR 9A & ASR 9C - Siu Ho Wan MTRC Depot	

3. During the monitoring, there was no major dust generating activities undertaken in the vicinity of the monitoring stations. Data collected was reviewed and analyzed to determine the Action and Limit Levels for air quality during impact monitoring throughout the construction of the Project. Details of the methodology, locations and results are presented in the report.

## Noise

NMS 3 - Ho Yu College	18/10/2011 – 1/11/2011
NMS 4 - San Tau	
NMS 5 - Ma Wan Chung Village (Tung Chung)	
NSR 1 - Pak Mong Village	

4. Monitoring data collected was reviewed and analyzed. Details of the locations and results are presented in this report. The baseline noise monitoring data was processed according to the following periods:

- Daytime: 0700-1900 hrs on normal weekdays
- Evening-time: 1900-2300 hrs
- Holiday-time: 0700-1900 hrs on holidays
- Night-time: 2300-0700 hrs of next day

## 1 INTRODUCTION

### Background

- 1.1 The construction of Hong Kong-Zhuhai-Macau Bridge (HZMB) is a series of bridges and tunnels that will connect the west side of Hong Kong to Macau and the Guangdong province city of Zhuhai, which are situated on the west side of the Pearl River Delta. In relation to the HZMB Main Bridge, there are three projects to be constructed within the HKSAR. These are called the HZMB Hong Kong projects comprising the Hong Kong Link Road (HKLR), the Hong Kong Boundary Crossing Facilities (HKBCF) and the Tuen Mun-Chek Lap Kok Link (TM-CLKL).
- 1.2 Hong Kong-Zhuhai-Macau Bridge (HZMB) Projects is a Designated Project (hereafter referred to as “the Project”) under the Environmental Impact Assessment Ordinance (Cap. 449). A study of environmental impact assessments (EIA) were undertaken to consider the key issues of air quality, noise, water quality, ecological, construction waste, landscape and visual, sediment quality, cultural impacts, fisheries, landfill gas hazard, hazard to life and identify possible mitigation measures associated with the works.
- 1.3 The general layout of the Project is shown in **Figure 1**.
- 1.4 To facilitate early commencement of the HKBCF reclamation works and the TM-CLKL advance Southern Landfall reclamation works, baseline environmental monitoring works for the air quality, noise, water quality and ecology (Chinese White Dolphin Monitoring) shall be conducted in accordance with the requirements in the Environmental Monitoring and Audit (EM&A) Documents as described in **Table 1.1**.

1.5 Cinotech Consultants Limited (Cinotech) was commissioned by the Highways Department (HyD) as Consultants to undertake the Baseline Environmental Monitoring for Hong Kong - Zhuhai - Macao Bridge Hong Kong Projects – Investigation.

1.6 This Baseline Environmental Monitoring Report is prepared by Cinotech to fulfill the baseline monitoring requirements for commencing the construction of the reclamation for HKBCF and TM-CLKL southern landfall.

### **Purpose of the Report**

1.7 The purpose of the Report is to set out baseline levels for the air quality, noise, water quality and ecology (Chinese White Dolphin Monitoring) in accordance with the EM&A Documents. These baseline levels will be used as the basis for compliance check during the impact monitoring in the construction of the reclamation for HKBCF and TM-CLKL southern landfall. This Report presents the locations, equipment, period, methodology, results and observations for the air quality, noise, water quality and dolphin monitoring during the baseline period.

### **Structure of the Baseline Monitoring Report**

1.8 The structure of the Report is summarized as follows:

- Section 1: Introduction, purpose, background and the structure of the report.
- Section 2: Introduction of Air Quality and Noise Monitoring Stations
- Section 3: Air Quality, which describes the baseline air quality monitoring.
- Section 4: Noise, which describes the baseline noise monitoring.
- Section 5: Water Quality, which describes the baseline water quality monitoring
- Section 6: Ecology, which describes the baseline dolphin monitoring
- Section 7: Revisions for inclusion in the EM&A Documents
- Section 8: Conclusions

## 2 MONITORING STATIONS

- 2.1 According to the EM&A Documents, nine air quality monitoring stations and six noise monitoring stations are selected as they are the representative air and noise sensitive receivers located near to the Project. All air quality and noise monitoring stations listed in EM&A Documents and final environmental monitoring locations are summarized in **Table 2.1**:
- 2.2 The air quality monitoring stations at Tuen Mun are not included in this baseline monitoring work as they are not relevant to the construction of the reclamation for HKBCF and TM-CLKL southern landfall.

## ALTERNATIVE AIR QUALITY AND NOISE MONITORING STATIONS

### AMS1 and NMS1 - Sha Lo Wan

- 2.3 We have conducted a site visit at Sha Lo Wan at 7<sup>th</sup> September 2011 and 10<sup>th</sup> October 2011 and joint site visit with Independent Environmental Checker's Representative on 15<sup>th</sup> October 2011.
- 2.4 During the visit, it was confirmed that the nearest Air Sensitive Receivers (ASRs), A93&A94/ Noise Sensitive Receivers (NSRs), N2 and also the indicative position of the monitoring point in the EM&A Documents are unoccupied for a long time. The access road gates to the houses were also locked. The permission to set up the sampler and to obtain access to the monitoring stations cannot be obtained.
- 2.5 Therefore, the baseline air quality monitoring and noise monitoring was proposed to conduct at the area in front of No. 9 and No. 12 Sha Lo Wan respectively based on the following reasons:
- close to the air and noise sensitive receivers (ASR ID: A95 – Sha Lo Wan House No. 9 and NSR ID: N2 – Sha Lo Wan Chung Hau listed in EM&A Documents);
  - No barrier effect to the construction site; and
  - Assurance of minimal disturbance to the occupants during monitoring.

### AMS2 - Seaview Crescent

- 2.6 A letter for requesting permission to carry out baseline environmental monitoring works has been sent to Property Management of Seaview Crescent on 5<sup>th</sup> September 2011. We have also conducted a site visit with the Property Manager at Seaview Crescent to confirm the location of monitoring station on 6<sup>th</sup> and 14<sup>th</sup> October 2011.
- 2.7 However, the notification of not permitted to set up of HVS for 24-hour TSP at the appropriate locations has been received from the Property Management Company of Seaview Crescent verbally during the site visit due to the safety reasons.
- 2.8 Alternative air quality monitoring stations was then proposed at Tung Chung Development Pier for the project according to the following reasons:
- close to the air sensitive receiver;
  - located in vicinity of the construction site (major dust emission source);
  - No barrier effect to the construction site; and
  - Assurance of minimal disturbance to the occupants during monitoring.

### 3 AIR QUALITY

#### Monitoring Requirement

- 3.1 According to the EM&A Documents, baseline air quality monitoring shall be carried out for a period of fourteen days, in terms of 1-hour and 24-hour Total Suspended Particulates (TSP) at all the monitoring locations. Monitoring of 1-hour TSP shall be carried out at least three times per day while that of 24-hour TSP shall be conducted daily for 14 consecutive days.

#### Monitoring Locations

- 3.2 Baseline air quality monitoring was conducted at the nine monitoring stations, as shown in **Figure(s) 2a-h**. **Table 3.1** describes the locations of the air quality monitoring stations.

**Table 3.1 Location for Air Quality Monitoring Locations**

Monitoring Stations	Location

AMS 6	Dragonair / CNAC (Group) Building (HKIA)
AMS 7	SkyCity Marriott Hotel
ASR 9A	Siu Ho Wan MTRC Depot
ASR 9C	Siu Ho Wan MTRC Depot

#### Monitoring Equipment

- 3.3 High Volume Samplers (HVS) were used to carry out 24-hour TSP monitoring. Direct reading dust meter were also used to measure 1-hour average TSP levels. The 1-hour sampling was determined periodically by HVS to check the validity and accuracy of the results measured by direct reading method.
- 3.4 Wind data monitoring equipment was set at Rooftop of Village Office at San Tau for logging wind speed and wind direction such that the wind sensors are clear of obstructions or turbulence caused by building. The wind data monitoring equipment is re-calibrated at least once every six months and the wind directions are divided into 16 sectors of 22.5 degrees each. The location is shown in **Figure 2d**.

- 3.5 **Table 3.2** summarizes the equipment used in the baseline air quality monitoring programme. Copies of the calibration certificates for the equipment are presented in **Appendix A1**.

**Monitoring Methodology and Quality Assurance / Quality Control (QA/QC) Procedure**

- 3.7 Weather data was recorded during the baseline period and is shown in **Appendix F**. The air temperature, precipitation and the relative humidity data was obtained from Hong Kong Observatory where the wind speed and wind direction were recorded by the installed Wind Anemometer. The general weather conditions (i.e. sunny, cloudy or rainy) were recorded by the field staff's observation on the monitoring days.

**24 hour TSP and RSP Air Quality Monitoring****Instrumentation**

- 3.8 High volume Samplers (HVS) completed with appropriate sampling inlets were employed for air quality monitoring. Each sampler was composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50).

**HVS Installation**

- 3.9 The following guidelines were adopted during the installation of HVS:
- Sufficient support was provided to secure the samplers against gusty wind.
  - No two samplers were placed less than 2 meters apart.
  - The distance between the sampler and an obstacle, such as buildings, was at least twice the height that the obstacle protrudes above the sampler.
  - A minimum of 2 meters of separation from walls, parapets and penthouses was required for rooftop samples.
  - A minimum of 2 meters separation from any supporting structure, measured horizontally was required.
  - No furnaces or incineration flues were nearby.
  - Airflow around the sampler was unrestricted.
  - The samplers were more than 20 meters from the drip line.
  - Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring.

**Filters Preparation**

- 3.10 Fiberglass filters were used [Note: these filters have a collection efficiency of larger than 99% for particles of 0.3µm diameter]. A HOKLAS accredited laboratory, Wellab Ltd., was responsible for the preparation of 24-hr conditioned and pre-weighed filter papers for Cinotech's monitoring team.

- 3.11 All filters, which were prepared by Wellab Ltd., were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than  $\pm 3$  °C; the relative humidity (RH) was < 50% and not variable by more than  $\pm 5$ %. A convenient working RH was 40%.
- 3.12 Wellab Ltd. has a comprehensive quality assurance and quality control programmes.

### **Operating/Analytical Procedures**

- 3.13 Operating/analytical procedures for the air quality monitoring were highlighted as follows:
- Prior to the commencement of the dust sampling, the flow rate of the HVS was properly set (between 1.1 m<sup>3</sup>/min. and 1.4 m<sup>3</sup>/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50.
  - The power supply was checked to ensure the sampler worked properly.
  - On sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air quality monitoring station.
  - The filter holding frame was then removed by loosening the four nuts and carefully a weighted and conditioned filter was centered with the stamped number upwards, on a supporting screen.
  - The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
  - The shelter lid was closed and secured with the aluminum strip.
  - The timer was then programmed. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
  - After sampling, the filter was removed and sent to the Wellab Ltd. for weighing. The elapsed time was also recorded.
  - Before weighing, all filters were equilibrated in a conditioning environment for 24 hours. The conditioning environment temperature should be between 25°C and 30°C and not vary by more than  $\pm 3$ °C; the relative humidity (RH) should be < 50% and not vary by more than  $\pm 5$ %. A convenient working RH is 40%. Weighing results were returned to Cinotech for further analysis of TSP concentrations collected by each filter.

**Maintenance/Calibration**

3.14 The following maintenance/calibration was required for the HVS:

- The high volume motors and their accessories were properly maintained. Appropriate maintenance such as routine motor brushes replacement and electrical wiring checking were made to ensure that the equipment and necessary power supply are in good working condition.
- All HVS were calibrated (five point calibration) using Calibration Kit prior to the commencement of the baseline monitoring and thereafter at bi-monthly intervals.

**1 hour TSP Air Quality Monitoring****Measuring Procedures**

3.15 The measuring procedures of the 1-hour dust meter are in accordance with the Manufacturer's Instruction Manual as follows:

- The 1-hour dust meter is placed at least 1.3 meters above ground.
- Set POWER to "ON" and make sure that the battery level was not flash or in low level.
- Allow the instrument to stand for about 3 minutes and then the cap of the air sampling inlet has been released.
- Push the knob at MEASURE position.
- Set time/mode setting to [BG] by pushing the time setting switch. Then, start the background measurement by pushing the start/stop switch once. It will take 6 sec. to complete the background measurement.
- Push the time setting switch to change the time setting display to [MANUAL] at the bottom left of the liquid crystal display. Finally, push the start/stop switch to stop the measuring after 1 hour sampling.
- Information such as sampling date, time, count value and site condition were recorded during the monitoring period.

**Maintenance/Calibration**

3.16 The following maintenance/calibration is required for the 1-hour dust meter;

- Check and calibrate the meter by HVS to check the validity and accuracy of the results measured by direct reading method at 2-month intervals throughout all stages of the air quality monitoring.

## Results and Observations

### Results

- 3.17 Baseline air quality monitoring was conducted at nine monitoring stations, namely AMS1 - Sha Lo Wan, AMS2 - Tung Chung Development Pier, AMS3 - Ho Yu College, AMS4 - San Tau, AMS5 - Ma Wan Chung Village, AMS6 - Dragonair / CNAC (Group) Building, AMS7 - SkyCity Marriott Hotel, ASR9A & 9C - Siu Ho Wan MTRC Depot in the period between 18<sup>th</sup> October 2011 and 2<sup>nd</sup> November 2011. The detailed monitoring schedule is shown in **Appendix E**.
- 3.18 The monitoring data are summarized in **Tables 3.4 and 3.5**. All monitoring data of 1-hour and 24-hour TSP are presented in **Appendices A2 and A4** respectively. Graphical presentations of the 1-hour TSP and 24-hour TSP results are shown in **Appendices A3 and A5** respectively. Detailed weather conditions during the baseline monitoring period are shown in **Appendix F**.

## 4 NOISE

### Monitoring Requirement

- 4.1 According to the EM&A Documents, baseline noise monitoring shall be carried out for a period of fourteen days at all the monitoring locations.
- 4.2 The noise levels shall be measured in terms of the A-weighted equivalent continuous sound pressure level (Leq).
- 4.3 Logger function check and calibration was carried out according to manufacturer's recommendations. The equipment was checked and inspected not less than once every two days after the set up at each monitoring station.

### Monitoring Locations

- 4.4 Baseline noise monitoring was conducted at the six monitoring stations, as shown in **Figure(s) 2a-e and i**. **Table 4.1** describes the locations of the noise monitoring stations.

**Table 4.1 Location for Noise Monitoring Stations**

### Monitoring Equipment

- 4.5 Integrating Sound Level Meter was used for noise monitoring. The meter is a Type 1 sound level meter capable of giving a continuous readout of the noise level readings including equivalent continuous sound pressure level (Leq) and percentile sound pressure level (Lx) and also complied with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications. **Table 4.2** summarizes the noise monitoring equipment being used. Copies of the calibration certificates for the sound level meter and calibrator are attached in **Appendix B1**.

**Monitoring Parameters, Frequency and Duration**

4.6 In accordance with the EM&A Documents, baseline noise for the A-weighted levels  $L_{eq}$ ,  $L_{10}$  and  $L_{90}$  was recorded. Data obtained from the baseline noise monitoring was processed and presented according to the following periods:

- Daytime: 0700-1900 hrs on normal weekdays
- Evening-time: 1900-2300 hrs
- Holiday-time: 0700-1900 hrs on holidays
- Night-time: 2300-0700 hrs of next day

4.7 The frequency and parameters of noise measurement are presented in **Table 4.3**.

4.9 Weather data was recorded during the baseline period and is presented in **Appendix F**. The air temperature, precipitation and the relative humidity data was obtained from Hong Kong Observatory where the wind speed and wind direction were recorded by the installed Wind Anemometer. The general weather conditions (i.e. sunny, cloudy or rainy) were recorded by the field staff's observation on the monitoring days.

### Field Monitoring

4.10 The monitoring procedures are as follows:

- The microphone head of the head level meter was normally positioned 1m exterior of the noise sensitive facade and lowered sufficiently so that the building's external wall acts as a reflecting surface.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces. All records for free field noise levels will be adjusted with a correction of +3 dB(A).
- The battery condition was checked to ensure good functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
  - frequency weighting : A
  - time weighting : Fast
  - measurement time : 5 minutes ( $L_{eq(30-min)}$  would be determined for daytime noise by calculating the logarithmic average of six  $L_{eq(5min)}$  data.)
- Prior to and after noise measurement, the meter was calibrated using the calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after

---

measurement is more than 1.0 dB, the measurement was considered invalid and repeat of noise measurement was required after re-calibration or repair of the equipment.

- Noise monitoring was carried out continuously for 24 hours during the 14 days baseline monitoring period. Monitoring data was recorded and stored automatically within the sound level meter system. At the end of the monitoring period, noise levels in term of  $L_{eq}$ ,  $L_{90}$  and  $L_{10}$  were recorded. In addition, site conditions and noise sources were recorded when the equipment were checked and inspected every two days.
- All the monitoring data within the sound level meter system was downloaded through the computer software, and all these data was checked and reviewed within the computer.

### **Maintenance and Calibration**

4.11 Maintenance and Calibration procedures were as follows:

- The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.
- The sound level meter and calibrator were checked and calibrated at yearly intervals.
- Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

### **Results and Observations**

#### **Results**

- 4.12 Baseline noise monitoring was conducted at the six monitoring station in the period between 18<sup>th</sup> October 2011 and 1<sup>st</sup> November 2011. The monitoring schedule is shown in **Appendix E**.
- 4.13 The baseline noise monitoring results are summarized in **Table 4.5** to **4.7**. All baseline noise monitoring results are given in **Appendices B2** to **B4**. Graphical presentations of the data are provided in **Appendix B5**. Weather conditions recorded during the baseline monitoring period are shown in **Appendix F**.

### Action and Limit Levels

- 4.16 The Action and Limit Levels were established in accordance with the EM&A Documents. The baseline noise level shall be referenced during the compliance check in the impact noise monitoring period. **Table 4.9** presents the Action and Limit Levels for construction noise.

**Table 4.9 Action Limit Levels for Noise during Construction Period**

Time Period	Action Level	Limit Level
0700-1900 hrs on normal weekdays	When one documented complaint is received	75* dB(A)

Noted: If works are to be carried during restricted hours, the conditions stipulated in the construction noise permit issued by the Noise Control Authority have to be followed.

(\*) reduce to 70 dB(A) for schools and 65 dB(A) during school examination periods.

## 5 WATER QUALITY

### Monitoring Requirement

- 5.1 According to the EM&A Documents, baseline water quality monitoring shall be carried out three times per week for a period of 4 weeks at all the monitoring locations prior to the commencement of marine works. The interval between two sets of monitoring will not be less than 36 hours.
- 5.2 Replicate in-situ measurements and samples collected from each independent sampling event shall be collected to ensure a robust statistically interpretable database.
- 5.3 Baseline water quality monitoring was conducted three times per week for four consecutive weeks at the 40 designated monitoring stations between 6<sup>th</sup> October 2011 and 31<sup>st</sup> October 2011 prior to the commencement of marine works. Monitoring took place two times per monitoring day during mid ebb (within  $\pm 1.75$  hours of the predicted time) and mid flood tides (within  $\pm 1.75$  hours of the predicted time) at three depths (i.e. 1m below surface, mid-depth and 1m above seabed, except where the water depth less than 6m, mid-depth station may be omitted. Should the water depth be less than 3m, only the mid-depth station was monitored) Dissolved oxygen, Suspended solids (SS), turbidity, pH, salinity and temperature were monitored in accordance with the requirements set out in the EM&A Documents.

### Monitoring Locations

- 5.4 After reviewing the EM&A Document as required in Clause 6.3.2 in the Brief, water quality monitoring was conducted at 40 monitoring stations listed in **Table 5.1**. A drawing showing the route of each vessel (stations to be covered in sequence) is shown in **Figure 3a (6/10/2011 – 12/10/2011) and 3b(14/10/2011 – 31/10/2011)**.

## Monitoring Equipment

### Dissolved Oxygen (DO) and Temperature Measuring Equipment

- 5.5 The instrument for measuring dissolved oxygen and temperature was portable and weatherproof complete with cable, sensor, comprehensive operation manuals and use DC power source. It was capable of measuring:
- a dissolved oxygen level in the range of 0-20 mg/L and 0-200% saturation; and
  - a temperature of 0-45 degree Celsius.
- 5.6 It has a membrane electrode with automatic temperature compensation complete with a cable.
- 5.7 Sufficient stocks of spare electrodes and cables were available for replacement where necessary.
- 5.8 Salinity compensation was built-in in the DO equipment.

### Turbidity

- 5.9 Turbidity was measured in situ by the nephelometric method. The instrument was portable and weatherproof using a DC power source complete with cable, sensor and comprehensive operation manuals. The equipment was capable of measuring turbidity

---

between 0-1000 NTU. The probe cable was not less than 25m in length. The meter was calibrated in order to establish the relationship between NTU units and the levels of suspended solids. The turbidity measurement was carried out on split water sample collected from the same depths of suspended solids samples.

### **Sampler**

- 5.10 A water sampler, consisting of a transparent PVC or glass cylinder of a capacity of not less than two litres which can be effectively sealed with cups at both ends was used. The water sampler has a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler was at the selected water depth.

### **Water Depth Detector**

- 5.11 A portable, battery-operated echo sounder was used for the determination of water depth at each designated monitoring station.

### **pH**

- 5.12 The instrument was consisting of a potentiometer, a glass electrode, a reference electrode and a temperature-compensating device. It was readable to 0.1pH in a range of 0 to 14. Standard buffer solutions of at least pH 7 and pH 10 were used for calibration of the instrument before and after use.

### **Salinity**

- 5.13 A portable salinometer capable of recording salinity within the range of 0-40 ppt was used for salinity measurements.

### **Monitoring Position Equipment**

- 5.14 A hand held Global Positioning System (GPS) was used during water quality monitoring to ensure the monitoring vessel is at the correct location before taking measurements.

### **Sample Container and Storage**

- 5.15 Following collection, water samples for laboratory analysis were stored in high density polythene bottles (250ml/1L) with no preservatives added, packed in ice (cooled to 4°C without being frozen) and kept in dark during both on-site temporary storage and shipment to the testing laboratory. The samples were delivered to the laboratory as soon as possible and the laboratory determination works were started within 24 hours after collection of the water samples. Sufficient volume of samples was collected to achieve

---

the detection limit.

### **Calibration of In Situ Instruments**

- 5.16 All in situ monitoring instruments were checked, calibrated and certified by a laboratory accredited under HOKLAS or other international accreditation scheme before use, and subsequently re-calibrated at 3 monthly intervals throughout all stages of the water quality monitoring programme. Responses of sensors and electrodes were checked with certified standard solutions before each use. Wet bulb calibration for a DO meter was carried out before measurement at each monitoring event.
- 5.17 For the on site calibration of field equipment (Multi-parameter Water Quality System), the BS 1427:2009, "Guide to on-site test methods for the analysis of waters" was observed.
- 5.18 Sufficient stocks of spare parts were maintained for replacements when necessary. Backup monitoring equipment was also being made available so that monitoring can proceed uninterrupted even when some equipment was under maintenance, calibration, etc.

### **Monitoring Equipment**

- 5.19 **Table 5.2** summarizes the equipment used in the baseline water quality monitoring program. All the monitoring equipment complied with the requirements set out in the EM&A Documents. Copies of the calibration certificates are attached in **Appendix C1**.

conditions and any special phenomena or work underway nearby shall also be recorded.

### **Monitoring Methodology**

#### **Instrumentation**

- 5.22 A multi-parameter meters (Model YSI 6820-C-M /YSI 6920) were used to measure DO, turbidity, salinity, pH and temperature.

#### **Operating/Analytical Procedures**

- 5.23 At each measurement, two consecutive measurements of DO concentration, DO saturation, salinity, turbidity, pH and temperature were taken. The probes were retrieved out of the water after the first measurement and then re-deployed for the second measurement. Where the difference in the value between the first and second readings of each set was more than 25% of the value of the first reading, the reading was discarded and further readings were taken.

## Laboratory Analytical Methods

- 5.24 The testing of all parameters was conducted by Wellab Ltd. (HOKLAS Registration No.083) and comprehensive quality assurance and control procedures in place in order to ensure quality and consistency in results. The testing method, reporting limit and detection limit are provided in **Table 5.4**.

**Table 5.4 Methods for Laboratory Analysis for Water Samples**

Determinant	Instrumentation	Analytical Method	Reporting Limit	Detection Limit
Suspended Solid (SS)	Weighing	APHA 17e 2540D	0.5 mg/L <sup>(1)</sup>	0.5 mg/L

Remark: 1) Limit of Reporting is reported as Detection Limit

### QA/QC Requirements

#### Decontamination Procedures

- 5.25 Water sampling equipment used during the course of the monitoring programme was decontaminated by manual washing and rinsed clean seawater/distilled water after each sampling event. All disposal equipment was discarded after sampling.

#### Sampling Management and Supervision

- 5.26 All sampling bottles were labelled with the sample I.D (including the indication of sampling station and tidal stage e.g. IS1\_me\_a), laboratory number and sampling date. Water samples were dispatched to the testing laboratory for analysis as soon as possible after the sampling. All samples were stored in a cool box and kept at less than 4°C but without frozen. (Please refer to Photo 1a and 1b) All water samples were handled under chain of custody protocols and relinquished to the laboratory representatives at locations specified by the laboratory.

**Photo 1a - All samples were stored in a cool box with ice**

**Photo 1b - All samples were kept at less than 4°C**

- 5.27 The laboratory determination works were started within 24 hours after collection of the water samples.

#### Quality Control Measures for Sample Testing

- 5.28 The samples testing were performed by Wellab Ltd. The following quality control programme was performed by the laboratories for every batch of 20 samples:
- ✧ One method blank; and
  - ✧ One set of quality control (QC) samples (including method QC and sample duplicate).

#### **Maintenance and Calibration**

- 5.29 Before each round of monitoring, a zero check in distilled water was performed with the turbidity probe of YSI 6820-C-M /YSI 6920. The probe was then calibrated with a solution of known NTU.
- 5.30 QA/QC procedures as attached in **Appendix C2** are available for the SS analyzed in the HOKLAS-accredited laboratory, WELLAB Ltd.

#### **Results and Observations**

##### **Results**

- 5.31 Baseline water quality monitoring was conducted between 6<sup>th</sup> and 31<sup>st</sup> October 2011. The monitoring results are shown in **Appendix C3**. Graphical presentation of water quality at the monitoring stations is given in **Appendix C4**. Detailed weather conditions at the monitoring locations during the baseline monitoring period are shown in **Appendix F**. The detailed monitoring schedule is shown in **Appendix E**.

##### **Observations**

- 5.32 During the baseline monitoring period, no marine construction works in the area (vicinity of all monitoring stations) was noted. Thus, there was no observable pollution source identified in the vicinity of all monitoring stations during the baseline monitoring programme.
- 5.33 Measurements and water sampling were conducted according to the instructions as stated in the EM&A Documents that listed in Table 5.3.
- 5.34 Since no observable pollution activity was identified for all stations during sampling, the baseline monitoring results are considered representative of the ambient water quality levels.

### Action and Limit Levels

5.35 The Action and Limit levels for DO, SS and turbidity have been set in compliance with the requirements set out in the EM&A Documents, which are summarized in **Table 5.5**.

**Table 5.5 Action and Limit Levels for Water Quality**

Parameter (unit)	Water Depth	Action Level	Limit Level
Dissolved Oxygen (mg/L) (surface, middle, bottom)	Surface and Middle	5%-ile of baseline data	4 mg/L except 5mg/L for FCZ or 1%-ile of baseline data
	Bottom	5%-ile of baseline data	2 mg/L or 1%-ile of baseline data
Turbidity (NTU)	Depth average	95%-ile of baseline data or 120% of upstream control station's turbidity at the same tide of the same day	99%-ile of baseline or 130% of turbidity at the upstream control station at the same tide of same day
SS (mg/L)	Depth average	95%-ile of baseline data or 120% of upstream control station's SS at the same tide of the same day	99%-ile of baseline or 130% of SS at the upstream control station at the same tide of same day and 10mg/L for WSD Seawater Intakes

Note:

- (1) Depth-averaged is calculated by taking the arithmetic means of reading of all three depths
- (2) For DO, non-compliance of the water quality limit occurs when monitoring result is lower than the limit.
- (3) For SS & turbidity non-compliance of the water quality limits occur when monitoring result is higher than the limits.
- (4) All the figures given in the table are used for reference only and the EPD may amend the figures whenever it is considered as necessary.

5.36 The calculated Action and Limit levels are shown in **Table 5.6**.

**Table 5.6      Calculated Action and Limit Levels for Water Quality**

Parameter (unit)	Water Depth	Action Level	Limit Level
Dissolved Oxygen (mg/L) (surface, middle, bottom)	Surface and Middle	<u>5.0</u>	4.2 except 5 for FCZ
	Bottom	<u>4.7</u>	3.6
Turbidity (NTU)	Depth average	<u>27.5</u> or 120% of upstream control station's turbidity at the same tide of the same day	<u>47.0</u> or 130% of turbidity at the upstream control station at the same tide of same day
SS (mg/L)	Depth average	<u>23.5</u> or 120% of upstream control station's SS at the same tide of the same day	<u>34.4</u> or 130% of SS at the upstream control station at the same tide of same day and 10mg/L for WSD Seawater Intakes

Note:

- (1) Depth-averaged is calculated by taking the arithmetic means of reading of all three depths
- (2) For DO, non-compliance of the water quality limit occurs when monitoring result is lower than the limit.
- (3) For SS & turbidity non-compliance of the water quality limits occur when monitoring result is higher than the limits.
- (4) All the figures given in the table are used for reference only and the EPD may amend the figures whenever it is considered as necessary.
- (5) The 1%-ile of baseline data for dissolved oxygen (surface and middle) and dissolved oxygen (bottom) are 4.2mg/L and 3.6mg/L respectively.

## 6 ECOLOGY

- 6.1 The baseline dolphin monitoring was carried out by Chinese White Dolphin (CWD) Service Contract No. HY/2011/02 for a period of three months prior to the commencement of works and agreed with AFCD.
- 6.2 The baseline line-transect vessel surveys for dolphin monitoring were conducted in September, October and November 2011 as shown in **Table 6.1** and the location of dolphin transect survey is shown in **Figure 4**.

**Table 6.1 Date of Baseline Dolphin Monitoring**

14	07/11/2011	NW LANTAU + W LANTAU

\* NW Lantau = Northwest Lantau Survey Area, NE Lantau = Northeast Lantau Survey Area, W Lantau = West Lantau

- 6.3 In total, 112 groups of Chinese White Dolphins, numbering 413 individuals, were observed during the three-month survey. Most were sighted in the West Lantau (WL) and Northwest Lantau (NWL) regions.
- 6.4 Major findings along and near the future alignments of HKLR and TM-CLKL as well as the reclamation site of HKBCF (collectively called “the Site” below) are summarized as follows:
- Dolphins were sighted but not in high concentration near the Site
  - Several large dolphin aggregations were seen near the Site
  - Several grids had moderate to high dolphin density near the Site
  - Several mother-calf pairs were recorded (near alignments of HKLR and TM-CLKL)

only)

- Several feeding activities were sighted along and near the Site
- Two fishing boat-associated sightings were made near the Site

6.5 Through photo-identification work, 96 individuals were identified from 182 sightings. Some were sighted over three times during the three-month survey, indicating their frequent use of Hong Kong waters. Many of them were year-round residents and some were accompanied by calves. Ranging pattern developed showed that most of the dolphins ranged across the three survey areas including the proposed HZMB work areas.

6.6 Further monitoring should be conducted during the construction and post-construction phase to identify any potential impact caused by the HZMB project. The event and action plan for dolphin monitoring is presented in **Table 6.2**.

**Table 6.2 Event/Action Plan for Dolphin Monitoring**

EVENT	ACTION*			
	ET	IEC	ER	Contractor
Dolphin numbers and behavior patterns recorded in the construction and post-construction monitoring are significantly lower than or different from those recorded in the pre-construction monitoring	Repeat statistical data analysis to confirm findings; Review historical data to ensure differences are as a result of natural variation or previously observed seasonal differences; Identify source(s) of impact; Inform the IEC, ER and Contractor; Check monitoring data; Discuss additional dolphin monitoring and any other measures, with the IEC and Contractor.	Discuss monitoring with the ET and the Contractor; Review proposals for additional monitoring and any other measures submitted by the Contractor and advise the ER accordingly.	Discuss with the IEC additional monitoring requirements and any other measures proposed by the ET; Make agreement on the measures to be implemented.	Inform the ER and confirm notification of the non-compliance in writing; Discuss with the ET and the IEC and propose measures to the IEC and the ER; Implement the agreed measures.

Note: ET – Environmental Team, IEC – Independent Environmental Checker, ER – Engineer’s Representative

\* Action to be instigated within 1 month of an event

- 6.7 Detailed findings were reported in the Baseline Monitoring Report for Baseline Chinese White Dolphin Monitoring for Hong Kong-Zhuhai-Macao Bridge Hong Kong Projects submitted by Hong Kong Cetacean Research Project under Contract No. HY/2011/02 and is provided in **Appendix D** of this report.
- 6.8 The baseline for underwater noise, dolphin north-south movement and mudflat ecology stated in the EM&A Manual for HKBCF (Section 10.5.2, 10.5.3 & 10.5.4 respectively) and the baseline for walkover survey, audit of species translocation works (corals) and bored piling monitoring stated in the EM&A Manual for TM-CLKL (Section 6.4.2, 6.4.3 & 6.4.5 respectively) were not included in this Baseline Environmental Monitoring Report as these monitoring are not relevant for commencing the construction of the reclamation for HKBCF and TM-CLKL southern landfall.

## **7 REVISIONS FOR INCLUSION IN THE EM&A DOCUMENTS**

- 7.1 The baseline environmental monitoring was conducted according to the EM&A Documents for air quality, noise, water quality and ecology (Chinese White Dolphin Monitoring).
- 7.2 The monitoring methodology, parameters monitored, and monitoring locations are all in line with the EM&A Documents for the Project.

## 8 COMMENTS AND CONCLUSIONS

- 8.1 The baseline air quality, noise and water quality monitoring for the Project was conducted between 6<sup>th</sup> October 2011 and 2<sup>nd</sup> November 2011. A total of fourteen baseline line-transect vessel surveys for dolphin monitoring were conducted in September, October and November 2011 prior to the commencement of works.
- 8.2 The baseline environmental monitoring was carried out in accordance with the EM&A Documents, in respect of the methodology, equipment, location and monitoring parameters.
- 8.3 The baseline air quality (1-hour and 24-hour TSP levels) monitoring was conducted at eight monitoring locations (AMS1 - Sha Lo Wan, AMS2 - Tung Chung Development Pier, AMS4 - San Tau, AMS5 - Ma Wan Chung Village, AMS6 - Dragonair / CNAC (Group) Building, AMS7 - SkyCity Marriott Hotel, ASR9A & 9C - Siu Ho Wan MTRC Depot) between 18<sup>th</sup> October 2011 and 31<sup>st</sup> October 2011 and at on monitoring location (AMS3 - Ho Yu College) between 18<sup>th</sup> October 2011 and 2<sup>nd</sup> November 2011 (School Closed on Sunday). During the monitoring, some influencing factors (e.g. road traffic dust) may be affected the baseline dust monitoring results in the vicinity of the monitoring stations. The baseline air quality monitoring results are considered representative to the ambient air quality conditions of the respective sensitive receivers. The Action and Limit Levels for the air quality were established based on the baseline monitoring results.
- 8.4 Baseline noise monitoring was conducted at six monitoring stations (NMS1 - Sha Lo Wan, NMS2 - Seaview Crescent, NMS3 - Ho Yu College, NMS4 - San Tau, NMS5 - Ma Wan Chung Village, NSR1 - Pak Mong Village) between 18<sup>th</sup> October 2011 and 1<sup>st</sup> November 2011. The major noise sources identified at the monitoring stations are the noise from air traffic, road traffic, insect and bird calling. The baseline monitoring results are considered representative to the ambient noise level at all monitoring stations except at NMS3 as the construction activities (piling works) were operated from other construction site in vicinity of monitoring station.
- 8.5 Baseline water quality monitoring was conducted at 40 monitoring stations (IS1, IS2, IS3, IS4, IS5, IS(Mf)6, IS7, IS8, IS(Mf)9, IS10, IS(Mf)11, IS12, IS13, IS14, IS15, IS(Mf)16, IS17, IS(Mf)20, CS1, CS2, CS(Mf)3, CS4, CS(Mf)5, CS6, SR1, SR2, SR3, SR4, SR5, SR6, SR7, SR8, SR9, SR10A, SR10B, ST1, ST2, ST3, CSA, GG1) between 6<sup>th</sup> October 2011 and 31<sup>st</sup> October 2011. No observable pollution source was observed at the monitoring stations. Since no observable pollution activity was identified for all stations during sampling, the baseline monitoring results are considered representative of the ambient water quality levels.
- 8.6 Baseline Chinese White Dolphin monitoring was conducted in the three survey areas

(Northeast Lantau, Northwest Lantau, West Lantau) from September to November through another contract. Dolphin sightings, distribution, encounter rate, group size, habitat use, mother-calf pairs and behavior were reported in the full baseline monitoring report. Photo-identification and range estimation of identified individuals were also made.

From the TSP Field Calibration Curve, take Qstd = 43 CFM  
 From the Regression Equation, the "Y" value according to

$$mw \times Qstd + bw = [\Delta W \times (Pa/760) \times (298/Ta)]^{1/2}$$

Therefore, Set Point;  $W = (mw \times Qstd + bw)^2 \times (760 / Pa) \times (Ta / 298) =$  3.75

Sensitivity (K) 1 CPM	: 0.001 mg/m <sup>3</sup>
Sen. Adjustment Scale Setting	: 790 CPM
Equipment No.	: A-02-06

**Test Conditions:**

Room Temperature	: 22 degree Celsius
Relative Humidity	: 66%

**Test Specifications & Methodology:**

1. Instruction and Operation Manual High Volume Sampler, Andersen Samplers, Inc.
2. In-house method in according to the instruction manual: The Laser Dust Monitor was compared with a calibrated High Volume Sampler and the result was used to generate the Correlation Factor (CF) between the Laser Dust Monitor and High Volume Sampler.

**Results:**

Correlation Factor (CF)	0.0031

### Certificate of Calibration

**Item for calibration:**

Description	: 'SVANTEK' Integrating Sound Level Meter
Manufacturer	: SVANTEK
Model No.	: SVAN 955
Serial No.	: 14302
Microphone No.	: 17204
Equipment No.	: N-08-04

**Test conditions:**

Room Temperature	: 22 degree Celsius
Relative Humidity	: 58%

**Test Specifications:**

Performance checking at 94 and 114 dB

**Methodology:**

In-house method, according to manufacturer instruction manual

**Results:**

Reference Set Point, dB	Instrument Readings, dB
94	94.0
114	114.0

### Certificate of Calibration

**Item for calibration:**

Description	: Sonde Environmental Monitoring System
Manufacturer	: YSI
Model No.	: 6820-C-M
Serial No.	: 02D0126AA
Equipment No.	: W.03.01

**Test conditions:**

Room Temperature	: 25 degree Celsius
Relative Humidity	: 58%

**Test Specifications:**

Conductivity & Salinity Sensor, Model: 6560, S/N: 11J100025

1. Conductivity performance check with Potassium Chloride standard solution
2. Salinity performance check with Sodium Chloride standard solution

Dissolved Oxygen Sensor, Model: 6562, S/N: 07E100029

1. Performance check against Winkler titration

Turbidity Sensor, Model: 6136, S/N: 11J1000475

1. Calibration check with Formazin standard solution

pH Meter, Model: 6561, S/N: 11H

1. Calibration check with standard pH buffer

Depth Meter

1. Calibration check at 1m water level depth

**Methodologies:**

1. YSI 6-Series Sonde Environmental Monitoring System Instruction Manual
2. In-house method with reference to APHA and ISO standards

### Results:

#### 1. Conductivity performance check

Specific Conductivity, $\mu\text{S}/\text{cm}$		Correction, $\mu\text{S}/\text{cm}$	Acceptable range
Salinity Meter (C1)	Theoretical Value (C2)	$D = C1 - C2$	
1420	1420	0	$1420 \pm 20$

#### 2. Salinity Performance check

Salinity, ppt		Correction, ppt	Acceptable range
Instrument Reading	Theoretical Value		
30.0	30.0	0.0	$30.0 \pm 3$

#### 3. Dissolved Oxygen check

Oxygen level in water at 20°C	Dissolved Oxygen, mg O <sub>2</sub> /L		Correction, mg O <sub>2</sub> /L	Acceptable range
	D.O. Meter	Winkler Titration		
Saturated	9.1	9.1	0.0	$\pm 0.2$
Half-saturated	5.6	5.6	0.0	$\pm 0.2$
Zero	0.0	0.0	0.0	$\pm 0.2$

#### 4. Turbidity check

Turbidity value in solution, NTU	Calibration Value, NTU	Correction, NTU	Acceptable range
0.00	0.00	0.00	$0.00 \pm 0.05$
100	100	0	$100 \pm 5$
1000	1000	0	$1000 \pm 100$

#### 5. pH Meter check

Test Parameters	Performance characteristic	Acceptable range
Liquid junction error $\Delta\text{pH}_j$ , pH unit	0.01	Less than 0.05
Shift on stirring $\Delta\text{pH}_s$ , pH unit	0.01	Less than 0.02
Noise $\Delta\text{pH}_n$ , pH unit	0.00	Less than 0.02

#### 6. Depth Meter check

Instrument Reading, m	Calibration Value, m	Correction, m	Acceptable range
1.0	1.00	0.00	$1.00 \pm 0.05$

### Certificate of Calibration

**Item for calibration:**

Description	: Sonde Environmental Monitoring System
Manufacturer	: YSI
Model No.	: 6820-C-M
Serial No.	: 02D0293AA
Equipment No.	: W.03.02

**Test conditions:**

Room Temperature	: 24 degree Celsius
Relative Humidity	: 56%

**Test Specifications:**

Conductivity & Salinity Sensor, Model: 6560, S/N: 11J100025

1. Conductivity performance check with Potassium Chloride standard solution
2. Salinity performance check with Sodium Chloride standard solution

Dissolved Oxygen Sensor, Model: 6562, S/N: 04A0146

1. Performance check against Winkler titration

Turbidity Sensor, Model: 6136, S/N: 11J100476

1. Calibration check with Formazin standard solution

pH Meter, Model: 6561, S/N: 10E

1. Calibration check with standard pH buffer

Depth Meter

1. Calibration check at 1m water level depth

**Methodologies:**

1. YSI 6-Series Sonde Environmental Monitoring System Instruction Manual
2. In-house method with reference to APHA and ISO standards

### Results:

#### 1. Conductivity performance check

Specific Conductivity, $\mu\text{S}/\text{cm}$		Correction, $\mu\text{S}/\text{cm}$	Acceptable range
Salinity Meter (C1)	Theoretical Value (C2)	$D = C1 - C2$	
1421	1420	1	$1420 \pm 20$

#### 2. Salinity Performance check

Salinity, ppt		Correction, ppt	Acceptable range
Instrument Reading	Theoretical Value		
30.1	30.0	0.1	$30.0 \pm 3$

#### 3. Dissolved Oxygen check

Oxygen level in water at 20°C	Dissolved Oxygen, mg O <sub>2</sub> /L		Correction, mg O <sub>2</sub> /L	Acceptable range
	D.O. Meter	Winkler Titration		
Saturated	9.0	9.0	0.0	$\pm 0.2$
Half-saturated	5.8	5.8	0.0	$\pm 0.2$
Zero	0.0	0.0	0.0	$\pm 0.2$

#### 4. Turbidity check

Turbidity value in solution, NTU	Calibration Value, NTU	Correction, NTU	Acceptable range
0.00	0.00	0.00	$0.00 \pm 0.05$
100	100	0	$100 \pm 5$
1000	1000	0	$1000 \pm 100$

#### 5. pH Meter check

Test Parameters	Performance characteristic	Acceptable range
Liquid junction error $\Delta\text{pH}_j$ , pH unit	0.01	Less than 0.05
Shift on stirring $\Delta\text{pH}_s$ , pH unit	0.01	Less than 0.02
Noise $\Delta\text{pH}_n$ , pH unit	0.01	Less than 0.02

#### 6. Depth Meter check

Instrument Reading, m	Calibration Value, m	Correction, m	Acceptable range
1.0	1.00	0.00	$1.00 \pm 0.05$

**Sample Description** : 124 liquid samples as received by customer said to be marine water  
Project No. : MA11050  
Project Name : Baseline Environmental Monitoring for Hong Kong-Zhuhai-Marco Brige  
Hong Kong Projects - Investigation  
Sampling Date : 2011-10-31

**Test Requested & Methodology:**

Item	Parameters	Ref. Method	Limit of Reporting
1	Suspended Solids (SS)	APHA 17ed 2540 D	*0.5 mg/L

Remark: 1) \* Limit of Reporting is reported as Detection Limit

## **1. INTRODUCTION**

In 2009, the Hong Kong-Zhuhai-Macao Bridge (HZMB) received official approval to be built by the Governments of the Hong Kong Special Administrative Region, Guangdong Province and the Macao Special Administrative Region. The Main Bridge will be jointly funded by all three Governments. Each Government will be responsible for constructing its own boundary crossing facility and link road to connect to the Main Bridge. In Hong Kong, there are three projects associated with the HZMB construction, namely the Hong Kong Link Road (HKLR) Project, the Hong Kong Boundary Crossing Facilities (HKBCF) Project, and the Tuen Mun-Chek Lap Kok Link (TM-CLKL) Project. According to the EM&A Manuals and EPs of the HZMB Projects in Hong Kong (i.e. HKBCF, HKLR and TM-CLKL), baseline dolphin monitoring is required to be carried out three months prior to the commencement of the HKBCF reclamation contract.

To comply with the requirements of the EM&A Manuals and EPS of the HZMB Projects in Hong Kong, the present monitoring study aims to collect data on Chinese White Dolphins (a.k.a. Indo-Pacific humpback dolphin, *Sousa chinensis*) during the pre-construction phase (i.e. baseline dolphin monitoring) in Northeast Lantau (NEL), Northwest Lantau (NWL) and West Lantau (WL) survey areas. This report is the draft final report submitted to the Highways Department, summarizing the results of the survey findings during the entire baseline monitoring period (i.e. September to November 2011).

## **2. OBJECTIVES AND METHODOLOGY**

### *2.1. Objectives of the Present Study*

Several objectives were set for this baseline monitoring study of Chinese White Dolphins for the study area in North and West Lantau waters, in association with the construction works of HZMB Projects. The first objective was to assess the spatial and temporal patterns of distribution and habitat use of Chinese White Dolphins during the pre-construction phase of HZMB Projects in great details. This objective was achieved through collection of research data on dolphins by conducting line-transect vessel surveys in NWL, NEL and WL survey areas.

The second objective was to identify individual Chinese White Dolphins by their natural marks, which was achieved by taking high-quality photographs of dolphins for photo-identification analysis. Photographs of identified individuals were compiled and added to the photo-identification catalogue.

The third objective was to analyze the monitoring data from the present baseline study for better understanding of the various aspects of local dolphin population in relation to the construction works of HZMB Projects. This objective was achieved by conducting various data analyses, including distribution analysis, encounter rate analysis, behavioural analysis and quantitative grid analysis to assess the spatial and temporal patterns of distribution and habitat use of local dolphins based on systematic line-transect survey data, and ranging pattern analysis to study individual movement based on photo-identification data.

## 2.2. *Line-transect Vessel Surveys*

The survey team used standard line-transect methods (Buckland et al. 2001) to conduct regular vessel surveys, and followed the same technique of data collection that has been adopted in the last 16 years of marine mammal monitoring surveys in Hong Kong (Hung 2010, 2011; Jefferson 2000). The territorial water of Hong Kong Special Administrative Region was divided into twelve survey areas, and line-transect surveys were conducted in NWL, NEL and WL areas (see transect line layout in Figure 1).

During each vessel survey, a 15-m inboard vessel (*Standard* 31516) with an open upper deck (about 4.5 m above water surface) was used to make observations from the flying bridge area. Two experienced observers (a data recorder and a primary observer) made up the on-effort survey team, and the survey vessel transited different transect lines at a constant speed of 13-15 km per hour. The data recorder searched with unaided eyes and filled out the datasheets, while the primary observer searched for dolphins continuously through 7 x 35 *Brunton* marine binoculars. Both observers searched the sea ahead of the vessel, between 270° and 90° (in relation to the bow, which is defined as 0°). Two to three additional experienced observers were available on the boat to work in shift (i.e. rotate every 30 minutes) in order to minimize fatigue of the survey team members. All observers were experienced in small cetacean survey techniques and identifying local cetacean species. Beforehand they had participated in rigorous at-sea training program provided by the PI.

During on-effort survey periods, the survey team recorded effort data including time, position (latitude and longitude), weather conditions (Beaufort sea state and visibility), and distance traveled in each series (a continuous period of search effort) with the assistance of a handheld GPS (*Garmin eTrex Legend H*). When dolphins were sighted, the survey team would end the survey effort, and immediately recorded the initial sighting distance and angle of the dolphin group from the survey vessel, as well as the sighting time and position. Then the research vessel was diverted from its course to approach the animals for species identification, group size estimation, assessment of group composition, and behavioural observations. The perpendicular distance (PSD) of the dolphin group to the transect line was later calculated from the initial sighting distance and angle. The line-transect data collected during the present study were compatible with the long-term databases maintained by Hong Kong Cetacean Research Project (HKCRP) in a way that it can be analyzed by established computer programmes (e.g. all recent versions of DISTANCE programme including version 6.0, ArcView<sup>®</sup> GIS programme) for examination of population status including trends in abundance, distribution and habitat use of Chinese White Dolphins.

### *2.3. Photo-identification*

When a group of Chinese White Dolphins were sighted during the line-transect survey, the survey team would end effort and approach the group slowly from the side and behind to take photographs of them. Every attempt was made to photograph every dolphin in the group, and even photograph both sides of the dolphins, since the colouration and markings on both sides may not be symmetrical (Jefferson 2000). Two professional digital cameras (*Canon EOS 7-D, 60-D* models), each equipped with long telephoto lenses (100-400 mm zoom), were available on board for researchers to take sharp, close-up photographs of dolphins as they surfaced. The images were shot at the highest available resolution and stored on Compact Flash memory cards for downloading onto a computer.

All digital images taken in the field were first examined, and those containing potentially identifiable individuals were sorted out. These photographs would then be examined in greater details, and were carefully compared to over 700 identified dolphins in the PRE Chinese White Dolphin photo-identification catalogue managed by the HKCRP researchers. Chinese White Dolphins can be identified by their natural markings, such as nicks, cuts, scars and deformities on their dorsal fin and body, and their unique spotting patterns were also used as secondary identifying

features (Jefferson 2000). All photographs of each individual were then compiled and arranged in chronological order, with data including the date and location first identified (initial sighting), re-sightings, associated dolphins, distinctive features, and age classes entered into a computer database. Any new individuals were given a new identification number, and their data were also added to the catalogue, along with text descriptions including age class, gender, any nickname or unique markings.

## *2.4. Data Analyses*

### *2.4.1. Distribution pattern analysis*

The line-transect survey data was integrated with the Geographic Information System (GIS) in order to visualize and interpret different spatial and temporal patterns of dolphin distribution using sighting positions. Location data of dolphin groups were plotted on map layers of Hong Kong using a desktop GIS (ArcView<sup>®</sup> 3.1) to examine their distribution patterns in details. The dataset was also stratified into different subsets to examine distribution patterns of dolphin groups with different categories of group sizes, young calves and activities.

### *2.4.2. Encounter rate analysis*

Since the line-transect survey effort was uneven among different survey areas and across different years, the encounter rates of Chinese White Dolphins (number of on-effort sightings per 100 km of survey effort) were calculated in each survey area in relation to the amount of survey effort conducted during the baseline monitoring period, which was also compared to the ones calculated from previous years of monitoring data to examine temporal trend. The encounter rate could be used as an indicator to determine areas of importance to dolphins within the study area.

### *2.4.3. Quantitative grid analysis on habitat use*

To conduct quantitative grid analysis of habitat use, positions of on-effort sightings of Chinese White Dolphins collected during the 3-month baseline monitoring period were plotted onto 1-km<sup>2</sup> grids among NWL, NEL and WL survey areas on GIS. Sighting densities (number of on-effort sightings per km<sup>2</sup>) and dolphin densities (total number of dolphins from on-effort sightings per km<sup>2</sup>) were then calculated for each 1 km by 1 km grid with the aid of GIS. Sighting density grids and dolphin density grids were then further normalized with the amount of survey effort conducted within each grid. The total amount of survey effort spent on each grid was calculated by examining the survey coverage on each line-transect survey to determine how many times the grid was surveyed during the study period.

For example, when the survey boat traversed through a specific grid 50 times, 50 units of survey effort were counted for that grid. With the amount of survey effort calculated for each grid, the sighting density and dolphin density of each grid were then normalized (i.e. divided by the unit of survey effort).

The newly-derived unit for sighting density was termed SPSE, representing the number of on-effort sightings per 100 units of survey effort. In addition, the derived unit for actual dolphin density was termed DPSE, representing the number of dolphins per 100 units of survey effort. Among the 1-km<sup>2</sup> grids that were partially covered by land, the percentage of sea area was calculated using GIS tools, and their SPSE and DPSE values were adjusted accordingly. The following formulae were used to estimate SPSE and DPSE in each 1-km<sup>2</sup> grid within the study area:

$$\text{SPSE} = ((S / E) \times 100) / \text{SA}\%$$

$$\text{DPSE} = ((D / E) \times 100) / \text{SA}\%$$

where S = total number of on-effort sightings  
D = total number of dolphins from on-effort sightings  
E = total number of units of survey effort  
SA% = percentage of sea area

#### 2.4.4. Behavioural analysis

When dolphins were sighted during vessel surveys, their behaviour was observed. Different activities were categorized (i.e. feeding, milling/resting, traveling, socializing) and recorded on sighting datasheets. This data was then input into a separate database with sighting information, which can be used to determine the distribution of behavioural data with a desktop GIS. Distribution of sightings of dolphins engaged in different activities and behaviours would then be plotted on GIS and carefully examined to identify important areas for different activities of the dolphins.

#### 2.4.5. Ranging pattern analysis

Location data of individual dolphins that occurred during the 3-month baseline monitoring period were obtained from the dolphin sighting database and photo-identification catalogue. To deduce home ranges for individual dolphins using the fixed kernel methods, the program Animal Movement Analyst Extension, created by the Alaska Biological Science Centre, USGS (Hooge and Eichenlaub 1997), was loaded as an extension with ArcView<sup>®</sup> 3.1 along with another extension Spatial Analyst 2.0. Using the fixed kernel method, the program calculated kernel density estimates based on all sighting positions, and provided an active interface to display

kernel density plots. The kernel estimator then calculated and displayed the overall ranging area at 95% UD level.

### **3. RESULTS AND DISCUSSIONS**

#### *3.1. Summary of survey effort and dolphin sightings*

From September to November 2011, a total of 14 line-transect vessel surveys were conducted in NWL, NEL and WL survey areas (Appendix I). Among these surveys, 966 km of survey effort was collected, with 95% of these effort conducted under favourable sea conditions (Beaufort 3 or below with good visibility). The high percentage of survey effort conducted under favourable sea conditions is critical to the success of the dolphin data collection programme in Hong Kong, as only such data can be used in various analyses such as the examination of encounter rates, habitat use and estimation of density and abundance. The details of the survey effort data collected during the baseline monitoring are shown in Appendix II.

During the 3-month study period, 112 groups of Chinese White Dolphins, numbering 413 individuals, were sighted from the vessel surveys (Appendix III). Among them, 91 groups were sighted during on-effort line-transect vessel surveys, while the others were sighted during off-effort search. Most sightings were made in WL (46 groups) and NWL (49 groups), comprising 84.8% of the total (Figure 1). In addition, 17 dolphin groups were also sighted in NEL throughout the 3-month study period (Figure 1).

#### *3.2. Distribution*

Dolphin sightings were unevenly distributed throughout the three survey areas of NWL, NEL and WL during the study period. In North Lantau region, concentration of these sightings were found around Lung Kwu Chau, near Black Point, Pillar Point and Shum Shui Kok, but the dolphins generally avoided the waters to the north of the Chek Lap Kok airport as well as the northern and eastern portions of NEL survey area (Figure 2). On the contrary, dolphins occurred evenly throughout the WL survey area, but slightly more sightings were made near Kai Kung Shan, Fan Lau and the offshore waters between Tai O Peninsula and Kai Kung Shan (Figure 3).

Throughout the baseline monitoring period, dolphins occurred regularly in the

vicinity of the future alignments of HKLR and TM-CLKL as well as the reclamation site of HKBCF, but not in high concentration (Figures 2-3). Their occurrence around these future construction sites in association with HZMB Projects should be continuously monitored to determine whether there will be any change in dolphin distribution and habitat use around these work areas during the construction period.

### *3.3. Encounter rate*

To calculate encounter rates of Chinese White Dolphins, only data collected in Beaufort 0-3 conditions was included in the analysis (see Hung 2011). During the baseline monitoring period, the combined dolphin encounter rate of NWL, NEL and WL was 10.8 sightings per 100 km. This was much higher than the ones in previous years from 2008-2010, but was slightly lower than the one in 2007 recorded during AFCD marine mammal monitoring programme (Figure 4a).

Among the three survey areas, the dolphin encounter rate was the highest in WL (20.4 sightings per 100 km), which was much higher than the ones in NWL (9.3) and NEL (5.4) (Figure 4b). The prominent usage of WL during the same three-month period (September to November) was also consistent throughout the past five years (Figure 4b), providing solid evidence that this stretch of coastal waters presents the most important habitat for Chinese White Dolphins in Hong Kong. Moreover, dolphin usage among all three survey areas during this three-month period also followed similar temporal trends, with encounter rates dropping from the highest in 2007 to the lowest in 2010, but increasing to a higher level in 2011 (Figure 4b). In fact, dolphin encounter rate in NEL reached the highest in 2011 during the five-year period.

### *3.4. Group size*

Group sizes of dolphins during the baseline monitoring period ranged from singles to 18 animals, with an overall mean of  $3.7 \pm 3.1$  (SD) animals per group. Among the three survey areas, their mean group sizes were similar across NEL, NWL and WL survey areas (3.2-3.9 dolphins per group). Moreover, the mean dolphin group size during the 3-month study period was very similar to the one recorded during the 2010-11 AFCD monitoring period (Hung 2011).

Most dolphin groups sighted during the 3-month period tended to be small, with 48.2% of the groups composed of 1-2 animals, and 72.3% of the groups with fewer

than five animals. On the other hand, 31 groups had 5 or more animals, and only five groups had 10 or more animals. These larger aggregations of dolphins were mostly found near Sha Chau and between Lung Kwu Chau and Black Point in NWL; around the Brothers Islands in NEL; and between Tai O Peninsula and Peaked Hill in WL (Figure 5). Notably, several large dolphin groups could be found near the alignments of HKLR and TM-CLKL as well as the reclamation site of HKBCF (Figure 5). Since large dolphin aggregations in certain locations may imply rich fishery resources and good feeding opportunities for dolphins, dolphin occurrence in these important feeding habitats should be closely monitored throughout the construction period to determine whether the construction works in association with the HZMB Projects would affect the feeding opportunities of the dolphins.

### *3.5. Habitat use*

From September to November 2011, the most heavily utilized habitats by Chinese White Dolphins included the waters around Lung Kwu Chau and Shau Chau, near Pillar Point and Black Point, and along the Urmston Road in NWL; around the Brothers Islands and near Shum Shui Kok in NEL; and around Tai O Peninsula, near Kai Kung Shan, Peaked Hill and Fan Lau in WL (Figures 6-7). These important dolphin habitats during the baseline monitoring period coincided well with the results from the previous AFCD monitoring periods (e.g. Hung 2010, 2011), further confirming the importance of these habitats to Chinese White Dolphins in Hong Kong.

Notably, several grids along the alignments of HKLR (Grids E21, F21 & G20) and TM-CLKL (Grids O14-15) as well as near the reclamation site of HKBCF (Grid P17) recorded moderate to high dolphin densities (Figures 6-7). Although the impending construction works in association with HZMB Projects are not situated at the most important dolphin habitats in Hong Kong (e.g. Lung Kwu Chau, Tai O Peninsula to Fan Lau, the Brothers Islands), these works will still be in the vicinity of these sensitive habitats, and dolphin usage should therefore be carefully monitored during the entire construction period to observe any significant changes incurred.

### *3.6. Mother-calf pairs*

During the 3-month baseline monitoring period, a total of 14 unspotted calves (UC) and 14 unspotted juveniles (UJ) were sighted among the three survey areas. These young calves comprised 6.8% of all animals sighted. The young calves were

regularly sighted in the WL and NWL survey areas, but only twice in the NEL survey area. Concentration of these sightings with mother-calf pairs could be found near Tai O Peninsula and Black Point (Figure 8). Several sightings with mother-calf pairs were also located near the alignments of HKLR and TM-CLKL. As the young calves need to maintain close acoustic contact with their mothers in order to survive (Van Parijs and Corkeron 2001), they are more susceptible to acoustic disturbances from underwater construction activities, and their activities around the works area should be carefully monitored throughout the entire construction period.

### *3.7. Activities and associations with fishing boats*

During the baseline monitoring period, 13 and 6 dolphin sightings were associated with feeding and socializing activities respectively, comprising of 11.6% and 5.4% of the total dolphin sightings. Only two dolphin groups were engaged in traveling activities near Pillar Point and to the west of the airport (Figure 9). Dolphin sightings associated with feeding activities were mostly found near Kai Kung Shan and Tai O in WL, and near Lung Kwu Chau in NWL (Figure 9). On the other hand, sightings associated with socializing activities were more scattered around the marine park area in NWL and the central portion of WL (Figure 9). Notably, several sightings associated with feeding activities were observed along and near the alignments of HKLR and TM-CLKL, and around the reclamation site of HKBCF (Figure 9).

Only six dolphin groups were found to be associated with operating fishing boats, comprising of 5.4% of all dolphin groups. These sightings included three dolphin groups associated with pair trawlers, two with hang trawlers and one with shrimp trawler. The location of these fishing boat-associated sightings were scattered throughout the three survey areas, with no apparent concentration (Figure 10). Only two of these sightings were found in the vicinity of the future work sites of HZMB Projects (Figure 10).

### *3.8. Photo-identification work and individual range use*

From September to November 2011, over 5,000 digital photographs of Chinese White Dolphins were taken during the baseline monitoring surveys for the photo-identification work. In total, 96 individuals sighted 182 times altogether were identified (Table 1). The majority of these re-sightings were made in NWL and WL, comprising 53.2% and 31.9% of the total respectively. In addition, 27 re-sightings

were also made in NEL, or about half of the total number of dolphins sighted there during the 3-month study period. Most of the identified individuals were sighted only once or twice, with some notable exceptions though. For example, two individuals (CH34 and NL104) were sighted seven times, and WL04 were sighted five times during the study period. In addition, six individuals were sighted four times, while 15 other individuals were also sighted three times during the baseline monitoring period. Repeated sightings of these individuals during the relatively short study period indicated their frequent use of Hong Kong waters during the baseline monitoring study period.

Ranging patterns of the 96 individuals identified during the baseline monitoring surveys were determined by fixed kernel method, and are shown in Appendix IV. Notably, the majority of these individuals ranged extensively across NEL, NWL and WL survey areas, and many of their ranges overlapped with the alignments of HKLR and TM-CLKL as well as the reclamation site of HKBCF during the baseline monitoring period (Appendix IV). In particular, some individuals (e.g. NL136, NL246, NL264, WL05) were sighted in both NEL and NWL survey areas, while others (e.g. NL258, WL04, WL116, WL137) were sighted in both NWL and WL survey areas during the three-month period (Appendix IV). Several individuals were even sighted across all three areas within the relatively short study period (e.g. NL33, NL123, NL226) (Appendix IV). Their frequent movements across these three survey areas will make them more susceptible to the potential disturbance arisen from the construction activities in association with the HZMB Projects, as the HKLR will be constructed at the boundary of NWL and WL survey areas, while the HKBCF and TM-CLKL will be constructed at the boundary of NWL and NEL survey areas. Recent research on social structure analysis also indicated that there are two social clusters in Hong Kong, with their overall 95% UD ranges overlapped at the waters where the HKLR will be constructed (Dungan 2011; Hung 2011). Consequently, individual movement patterns and habitat use should be closely monitored in the vicinity of the work sites of HKLR, TM-CLKL and HKBCF during and after the construction period, to determine whether individual dolphins will be affected by these construction works.

More importantly, many individuals that were sighted during the baseline monitoring period were year-round residents (e.g. EL01, NL98, NL139, WL25), and some were even accompanied by young calves (e.g. NL24, NL33, NL104, NL123). In fact, these were also the individuals being sighted multiple times during the 3-month baseline monitoring period, showing their strong reliance of Hong Kong

waters. Special attention should be paid to the range use of these year-round residents, as their continuous reliance of these three survey areas during and after the HZMB construction period can become an important indicator to determine whether the local dolphins will be affected by various construction works of HZMB Projects.
