Attention: Mr Simon LEUNG

Dear Sirs

Agreement No. CE 45/2008 (CE)
Liantang/Heung Yuen Wai Boundary Control Point and Associated Works
Independent Environmental Checker – Investigation
Monthly EM&A Report (No. 23) – June 2015

With reference to the Monthly EM&A Report No. 23 for June 2015 (Version 2) certified by the ET Leader provided to us on 14 July 2015, please be noted that we have no adverse comments on the captioned submission. We herewith verify the captioned submission in accordance with Condition 5.4 of the Environmental Permit No. EP-404/2011/C.

Thank you for your attention and please do not hesitate to contact the undersigned on tel. 3995 8120 or by email to antony.wong@smec.com; or our Mr Francis LEE on tel. 3995 8144 or by email to francis.lee@smec.com.

Yours faithfully for and on behalf of SMEC Asia Limited

Antony WONG

EXECUTIVE SUMMARY

ES01 This is the 23rd monthly EM&A report presenting the monitoring results and inspection findings for the reporting period from 1 to 30 June 2015 (hereinafter 'the Reporting Period').

ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

- ES02 To facilitate the project management and implementation, Liantang/Heung Yuen Wai Boundary Control Point and Associated Works of the Project is divided five CEDD contracts including Contract 2 (CV/2012/08), Contract 3 (CV/2012/09), Contract 4 (TCSS), Contract 5 (CV/2013/03), Contract 6 (CV/2013/08) and Contract 7 (NE/2014/03)).
- ES03 Currently, the construction works have been undertaking for Contract 2, Contract 3 and Contract 5. Environmental monitoring activities under the EM&A programme in the Reporting Period are summarized in the following table.

		Reporting Period		
Environmental Aspect	Environmental Monitoring Parameters / Inspection	Number of Monitoring Locations to undertake	Total Occasions	
Air Quality	1-hour TSP	6	102	
All Quality	24-hour TSP	6	36#	
Construction Noise	L _{eq(30min)} Daytime	8	35	
Water Quality	Water compling	3 (Contract 2&3)	13(*)	
Water Quality	Water sampling	2 (Contract 5)	13(*)	
	IEC, ET, the Contractor and RE joint	Contract 2	4	
Joint Site Inspection / Audit	site Environmental Inspection and	Contract 3	5	
	Auditing	Contract 5	4	

^(*) Monitoring day

BREACH OF ACTION AND LIMIT (A/L) LEVELS

ES04 In the Reporting Period, no air quality and noise exceedance was registered for the Project. For water quality, a total of six (6) Limit Level exceedances were recorded which include two (2) exceedances for WM1 and four (4) exceedances at WM4. The summary of exceedance in the Reporting Period is shown below.

Eino	Manitanina	A a4: am	T ::4	Event & Action		
Environmental Aspect	Monitoring Action Parameters Level		Limit Level	NOE Issued	Investigation Result	Corrective Actions
Aim Ovolity	1-hour TSP	0	0	0		
Air Quality	24-hour TSP	0	0	0		
Construction Noise	$\begin{array}{c} L_{eq(30min)} \\ Daytime \end{array}$	0	0	0		
	DO	0	0	0		
Water Quality	Turbidity	0	3	3	- Exceedances at WM4 were not project	N/A
Quanty	SS	0	3	3	related - Exceedances at WM1 is underway	N/A

[#] Included 4 events of incomplete monitoring due to power failure.

ENVIRONMENTAL COMPLAINT

ES05 In this Reporting Period, no environmental complaints were received related to the EM&A programme.

NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES06 No environmental summons or successful prosecutions were recorded in the Reporting Period.

REPORTING CHANGE

ES07 No reporting changes were made in the Reporting Period.

SITE INSPECTION

- ES08 In this Reporting Period, joint site inspection to evaluate the site environmental performance at *Contract 2* has been carried out by the RE, IEC, ET and the Contractor on **5**, **12**, **19** and **26** June **2015**. No non-compliance was noted.
- ES09 In the Reporting Period, joint site inspection to evaluate the site environmental performance at *Contract 3* has been carried out by the RE, IEC, ET and the Contractor on **1**, **8**, **17**, **22** and **29 June 2015**. No non-compliance was noted.
- ES10 In the Reporting Period, joint site inspection to evaluate the site environmental performance at *Contract 5* has been carried out by the RE, IEC, ET and the Contractor on **4, 11, 18 and 25 June 2015**. No non-compliance was noted.

FUTURE KEY ISSUES

- ES11 During raining season, muddy water or other water pollutants from site surface flow to local stream such as Kong Yiu Channel and Ma Wat Channel or public area will be key environment issue. Water quality mitigation measures to prevent surface runoff into nearby water bodies or public areas should paid attention and fully implement.
- ES12 Construction noise would be a key environmental issue during construction work of the Project. Noise mitigation measures such as using quiet plants should be implemented in accordance with the EM&A requirement.
- ES13 Since most of construction sites under the Project are located adjacent to villages, the Contractors should fully implement air quality mitigation measures to reduce construction dust emission.

1 INTRODUCTION

1.1 PROJECT BACKGROUND

- 1.1.1 Civil Engineering and Development Department is the Project Proponent and the Permit Holder of Agreement No. CE 45/2008 (CE) Liantang / Heung Yuen Wai Boundary Control Point and Associated Works, which is a Designated Project to be implemented under Environmental Permit number EP-404/2011/C granted on 12 March 2015.
- 1.1.2 The Project consists of two main components: Construction of a Boundary Control Point (hereinafter referred as "BCP"); and Construction of a connecting road alignment. Layout plan of the Project is shown in *Appendix A*.
- 1.1.3 The proposed BCP is located at the boundary with Shenzhen near the existing Chuk Yuen Village, comprising a main passenger building with passenger and cargo processing facilities and the associated customs, transport and ancillary facilities. The connecting road alignment consists of six main sections:
 - 1) Lin Ma Hang to Frontier Closed Area (FCA) Boundary this section comprises at-grade and viaducts and includes the improvement works at Lin Ma Hang Road;
 - 2) Ping Yeung to Wo Keng Shan this section stretches from the Frontier Closed Area Boundary to the tunnel portal at Cheung Shan and comprises at-grade and viaducts including an interchange at Ping Yeung;
 - 3) North Tunnel this section comprises the tunnel segment at Cheung Shan and includes a ventilation building at the portals on either end of the tunnel;
 - 4) Sha Tau Kok Road this section stretches from the tunnel portal at Wo Keng Shan to the tunnel portal south of Loi Tung and comprises at-grade and viaducts including an interchange at Sha Tau Kok and an administration building;
 - 5) South Tunnel this section comprises a tunnel segment that stretches from Loi Tung to Fanling and includes a ventilation building at the portals on either end of the tunnel as well as a ventilation building in the middle of the tunnel near Lau Shui Heung;
 - 6) Fanling this section comprises the at-grade, viaducts and interchange connection to the existing Fanling Highway.
- 1.1.4 Action-United Environmental Services & Consulting has been commissioned as an Independent ET to implement the relevant EM&A program in accordance with the approved EM&A Manual, as well as the associated duties. As part of the EM&A program, the baseline monitoring has carried out between 13 June 2013 and 12 July 2013 for all parameters including air quality, noise and water quality before construction work commencement. The Baseline Monitoring Report summarized the key findings and the rationale behind determining a set of Action and Limit Levels (A/L Levels) from the baseline data. Also, the Project baseline monitoring report which verified by the IEC has been submitted to EPD on 16 July 2013 for endorsement. The major construction works of the Project was commenced on 16 August 2013 in accordance with the EP Section 5.3 stipulation.
- 1.1.5 This is 23rd monthly EM&A report presenting the monitoring results and inspection findings for reporting period from 1 to 30 June 2015.

1.2 REPORT STRUCTURE

- 1.2.1 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-
 - Section 1 Introduction
 - **Section 2** Project Organization and Construction Progress
 - **Section 3** Summary of Impact Monitoring Requirements
 - **Section 4** Air Quality Monitoring
 - **Section 5** Construction Noise Monitoring
 - **Section 6** Water Quality Monitoring
 - **Section 7** Waste Management

Section 8 Site Inspections

Section 9 Environmental Complaints and Non-ComplianceSection 10 Implementation Status of Mitigation Measures

Section 11 Conclusions and Recommendations

2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

2.1 CONSTRUCTION CONTRACT PACKAGING

- 2.1.1 To facilitate the project management and implementation, the Project would be divided by the following contracts:
 - Contract 2 (CV/2012/08)
 - Contract 3 (CV/2012/09)
 - Contract 4 (TCSS)
 - Contract 5 (CV/2013/03)
 - Contract 6 (CV/2013/08)
- 2.1.2 The details of each contracts is summarized below and the delineation of each contracts is shown in *Appendix A*.

Contract 2 (CV/2012/08)

- 2.1.3 Contract 2 has awarded in December 2013 and construction work was commenced on 19 May 2014. Major Scope of Work of the Contract 2 is listed below:
 - construction of an approximately 5.2km long dual two-lane connecting road (with about 0.4km of at-grade road and 4.8km of tunnel) connecting the Fanling Interchange with the proposed Sha Tau Kok Interchange;
 - construction of a ventilation adit tunnel and the mid-ventilation building;
 - construction of the north and south portal buildings of the Lung Shan Tunnel and their associated slope works;
 - provision and installation of ventilation system, E&M works and building services works for Lung Shan tunnel and Cheung Shan tunnel and their portal buildings;
 - construction of Tunnel Administration Building adjacent to Wo Keng Shan Road and the associated E&M and building services works; and
 - construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 3 (CV/2012/09)

- 2.1.4 Contract 3 was awarded in July 2013 and construction work was commenced on 5 November 2013. Major Scope of Work of the Contract 3 is listed below:
 - construction of four link roads connecting the existing Fanling Highway and the south portal of the Lung Shan Tunnel;
 - realignment of the existing Tai Wo Service Road West and Tai Wo Service Road East;
 - widening of the existing Fanling Highway (HyD's entrustment works);
 - demolishing existing Kiu Tau vehicular bridge and Kiu Tau footbridge and reconstruction of the existing Kiu Tau Footbridge (HyD's entrustment works); and
 - construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 4 (Contract number to be assigned)

2.1.5 Contract 4 has not yet been awarded. The work of the Contract 4 includes provision and installation of Traffic Control and Surveillance System and the associated electrical and mechanical works for the Project.

Contract 5 (CV/2013/03)

- 2.1.6 Contract 5 has awarded in April 2013 and construction work was commenced in August 2013. Major Scope of Work of the Contract 5 is listed below:
 - site formation of about 23 hectares of land for the development of the BCP;
 - construction of an approximately 1.6 km long perimeter road at the BCP including a 175m long depressed road;

- associated diversion/modification works at existing local roads and junctions including Lin Ma Hang Road;
- construction of pedestrian subway linking the BCP to Lin Ma Hang Road;
- provision of resite area with supporting infrastructure for reprovisioning of the affected village houses; and
- construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 6 (CV/2013/08)

- 2.1.7 Contract 6 has awarded in June 2015 and construction work was expected to be commenced on 1 November 2015. Major Scope of Work of the Contract 6 would be included below:
 - construction of an approximately 4.6km long dual two-lane connecting road (with about 0.6km of at-grade road, 3.3km of viaduct and 0.7km of tunnel) connecting the BCP with the proposed Sha Tau Kok Road Interchange and the associated ventilation buildings;
 - associated diversion/modification works at access roads to the resite of Chuk Yuen Village;
 - provision of sewage collection, treatment and disposal facilities for the BCP and the resite of Chuk Yuen Village;
 - construction of a pedestrian subway linking the BCP to Lin Ma Hang Road;
 - provisioning of the affected facilities including Wo Keng Shan Road garden; and
 - construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 7 (NE/2014/03)

- 2.1.8 Contract 7 has not yet been awarded. Major Scope of Work of the Contract 7 would be included below:
 - construction of the Hong Kong Special Administrative Region (HKSAR) portion of foru vehicular bridge
 - construction of one pedestrian bridge crossing Shenzhen (SZ) River (cross boundary bridges)

2.2 PROJECT ORGANIZATION

2.2.1 The project organization is shown in *Appendix B*. The responsibilities of respective parties are:

Civil Engineering and Development Department (CEDD)

2.2.2 CEDD is the Project Proponent and the Permit Holder of the EP of the development of the Project and will assume overall responsibility for the project. An Independent Environmental Checker (IEC) shall be employed by CEDD to audit the results of the EM&A works carried out by the ET.

Environmental Protection Department (EPD)

2.2.3 EPD is the statutory enforcement body for environmental protection matters in Hong Kong.

Engineer or Engineers Representative (ER)

- 2.2.4 The ER is responsible for overseeing the construction works and for ensuring that the works are undertaken by the Contractor in accordance with the specification and contract requirements. The duties and responsibilities of the ER with respect to EM&A are:
 - Monitor the Contractors' compliance with contract specifications, including the implementation and operation of the environmental mitigation measures and their effectiveness
 - Monitor Contractors's, ET's and IEC's compliance with the requirements in the Environmental Permit (EP) and EM&A Manual
 - Facilitate ET's implementation of the EM&A programme

- Participate in joint site inspection by the ET and IEC
- Oversee the implementation of the agreed Event / Action Plan in the event of any exceedance
- Adhere to the procedures for carrying out complaint investigation
- Liaison with DSD, Engineer/Engineer's Representative, ET, IEC and the Contractor of the "Construction of the DSD's Regulaiton of Shenzhen River Stage 4 (RSR 4)" Project discussing regarding the cumulative impact issues.

The Contractor(s)

- 2.2.5 There will be one contractor for each individual works contract. The Contractor(s) should report to the ER. The duties and responsibilities of the Contractor are:
 - Comply with the relevant contract conditions and specifications on environmental protection
 - Employ an Environmental Team (ET) to undertake monitoring, laboratory analysis and reporting of EM &A Facilitate ET's monitoring and site inspection activities
 - Participate in the site inspections by the ET and IEC, and undertake any corrective actions
 - Provide information / advice to the ET regarding works programme and activities which may contribute to the generation of adverse environmental impacts
 - Submit proposals on mitigation measures in case of exceedances of Action and Limit levels in accordance with the Event / Action Plans
 - Implement measures to reduce impact where Action and Limit levels are exceeded
 - Adhere to the procedures for carrying out complaint investigation

Environmental Team (ET)

- 2.2.6 One ET will be employed for this Project. The ET shall not be in any way an associated body of the Contractor(s), and shall be employed by the Project Proponent/Contractor to conduct the EM&A programme. The ET should be managed by the ET Leader. The ET Leader shall be a person who has at least 7 years' experience in EM&A and has relevant professional qualifications. Suitably qualified staff should be included in the ET, and resources for the implementation of the EM&A programme should be allocated in time under the Contract(s), to enable fulfillment of the Project's EM&A requirements as specified in the EM&A Manual during construction of the Project. The ET shall report to the Project Proponent and the duties shall include:
 - Monitor and audit various environmental parameters as required in this EM&A Manual
 - Analyse the environmental monitoring and audit data, review the success of EM&A
 programme and the adequacy of mitigation measures implemented, confirm the validity of
 the EIA predictions and identify any adverse environmental impacts arising
 - Carry out regular site inspection to investigate and audit the Contractors' site practice, equipment/plant and work methodologies with respect to pollution control and environmental mitigation, and effect proactive action to pre-empt problems
 - Monitor compliance with conditions in the EP, environmental protection, pollution prevention and control regulations and contract specifications
 - Audit environmental conditions on site
 - Report on the environmental monitoring and audit results to EPD, the ER, the IEC and Contractor(s) or their delegated representatives
 - Recommend suitable mitigation measures to the Contractor in the case of exceedance of Action and Limit levels in accordance with the Event and Action Plans
 - Liaise with the IEC on all environmental performance matters and timely submit all relevant EM&A proforma for approval by IEC
 - Advise the Contractor(s) on environmental improvement, awareness, enhancement measures etc., on site
 - Adhere to the procedures for carrying out complaint investigation
 - Liaison with the client departments, Engineer/Engineer's Representative, ET, IEC and the Contractor(s) of the concurrent projects as listed under Section 2.3 below regarding the cumulative impact issues.

Independent Environmental Checker (IEC)

- 2.2.7 One IEC will be employed for this Project. The Independent Environmental Checker (IEC) should not be in any way an associated body of the Contractor(s) or the ET for the Project. The IEC should be employed by the Permit Holder (i.e., CEDD) prior to the commencement of the construction of the Project. The IEC should have at least 10 years' experience in EM&A and have relevant professional qualifications. The duty of IEC should be:
 - Provide proactive advice to the ER and the Project Proponent on EM&A matters related to the project, independent from the management of construction works, but empowered to audit the environmental performance of construction
 - Review and audit all aspects of the EM&A programme implemented by the ET
 - Review and verify the monitoring data and all submissions in connection with the EP and EM&A Manual submitted by the ET
 - Arrange and conduct regular, at least monthly site inspections of the works during construction phase, and ad hoc inspections if significant environmental problems are identified
 - Check compliance with the agreed Event / Action Plan in the event of any exceedance
 - Check compliance with the procedures for carrying out complaint investigation
 - Check the effectiveness of corrective measures
 - Feedback audit results to ET by signing off relevant EM&A proforma
 - Check that the mitigation measures are effectively implemented
 - Report the works conducted, the findings, recommendation and improvement of the site inspections, after reviewing ET's and Contractor's works, and advices to the ER and Project Proponent on a monthly basis
 - Liaison with the client departments, Engineer/Engineer's Representative, ET, IEC and the Contractor(s) of the concurrent projects as listed under Section 2.3 below regarding the cumulative impact issues.

2.3 CONCURRENT PROJECTS

- 2.3.1 The concurrent construction works that may be carried out include, but not limited to, the following:
 - (a) Regulation of Shenzhen River Stage IV;
 - (b) Building works and road works by contractors of Architectural Services Department (ArchSD):
 - (c) Widening of Fanling Highway Tai Hang to Wo Hop Shek Interchange Contract No. HY/2012/06:
 - (d) Construction of cross-boundary vehicular and pedestrian bridges (total 5 numbers) across the Shenzhen River; and
 - (e) Construction of BCP facilities in Shenzhen.

2.4 CONSTRUCTION PROGRESS

2.4.1 In the Reporting Period, the major construction activity conducted under the Project is located in Contracts 2, 3 and 5 and they are summarized in below. Moreover, the 3-month rolling construction program of the Contracts 2, 3 and 5 is enclosed in *Appendix C*.

Contract 2 (CV/2012/08)

2.4.2 The contract commenced in May 2014. In this Reporting Period, construction activities conducted are listed below:

Mid-Vent Portal

- Tunnel excavation
- Upgrade wastewater treatment system

North Portal

- Permanent slope formation (soil nailing works)
- Tunnel Boring Machine (TBM) onsite assembly
- South Portal
- Rock Excavation to Vent. Bldg. Formation
- Southbound foundation works

- Northbound bored piles works & pile tests
- Drill and Blast Set Up + Site installation

Admin Building

- Backfilling for surcharge
- Drainage works

Contract 3 (CV/2012/09)

- 2.4.3 The Contract commenced in November 2013. In this Reporting Period, construction activities conducted are listed below:
 - Cable detection and trial trenches
 - Catch fence erection
 - Decking construction for Bridge E
 - E&M work for new valve control & Telemetry House
 - Lagging Wall for Board Pile Wall
 - Storm drain laying
 - Noise barrier construction
 - Pier / pier table construction
 - Pile cap works
 - Piling works
 - Pre-drilling
 - Road works at Fanling Highway
 - Retaining Wall construction
 - Tree felling works
 - Utilities duct laying
 - Viaduct segment erection

Contract 4 (Contract number to be assigned)

2.4.4 The contract has not yet been awarded.

Contract 5 (CV/2013/03)

- 2.4.5 The Contract awarded in April 2013 and commenced on August 2013. In this Reporting Period, construction activities conducted are listed below:
 - Laying additional rising mains at LMH road
 - Construction of secondary boundary fencing
 - Construction of Depressed Road at BCP3
 - Construction of retaining wall No.2a
 - Parapet installation at Bridge J
 - Construction of chain link fence and trapezoidal channel at BCPB
 - Additional works for Village House at RS4
 - Drainage works at existing/proposed LMH Road
 - Drainage works (Connection to Box 3) at BCP Area
 - Brick laying at footpath of proposed LMH road
 - Water works at proposed LMH Road
 - Formation works at BCPB Area
 - Installation of Underground utilities at proposed and existing LMH road
 - Road works (kerb laying) for proposed and existing LMH road
 - Bituminous laying at existing LMH road

Contract 6 (CV/2013/08)

2.4.6 Contract 6 has awarded in June 2015 and construction work was expected to be commenced on 1 November 2015.

2.5 SUMMARY OF ENVIRONMENTAL SUBMISSIONS

- 2.5.1 In according to the EP, the required documents have submitted to EPD for retention which listed in below:
 - Project Layout Plans of Contracts 2, 3 and 5
 - Landscape Plan
 - Topsoil Management Plan
 - Environmental Monitoring and Audit Programme
 - Baseline Monitoring Report (TCS00690/13/600/R0030v3) for the Project
 - Waste Management Plan of the Contracts 2, 3 and 5
 - Contamination Assessment Plan (CAP) for Po Kat Tsai, Loi Tung and the workshops in Fanling
 - Contamination Assessment Report (CAR) for Po Kat Tsai, Loi Tung and the workshops in Fanling
 - Vegetation Survey Report
- 2.5.2 Summary of the relevant permits, licenses, and/or notifications on environmental protection for the Project of each contracts are presented in *Table 2-1*.

Table 2-1 Status of Environmental Licenses and Permits of the Contracts

Item	Description	License/Permit Status		
		Contract 2		
1	Air pollution Control (Construction Dust) Regulation	Ref No.: 368864	31 Dec 2013	
2	Chemical Waste Producer Registration	North Portal Waste Producers Number: No. 5213-652-D2523-01	Valid from 25 Mar 2014	
		Mid-Vent Portal Waste Producers Number: No. 5213-634-D2524-01	Valid from 25 Mar 2014	
		South Portal Waste Producers Number: No. 5213-634-D2526-01	Valid from 9 Apr 2014	
3	Water Pollution Control Ordinance - Discharge License	No.WT00018374-2014	Valid from 3 Mar 2014 to 28 Feb 2019	
		No.: W5/1I389	Valid from 28 Mar 2014 to 31 Mar 2019	
		No.: W5/1I390	Valid from 24 Mar 2014 to 31 Mar 2019 Surrendered, effective 19 June 2014	
		No.: W5/1I391	Valid from 28 Mar 2014 to 31 Mar 2019

3 SUMMARY OF IMPACT MONITORING REQUIREMENTS

3.1 GENERAL

- 3.1.1 The Environmental Monitoring and Audit requirements are set out in the Approved EM&A manual. Environmental issues such as air quality, construction noise and water quality were identified as the key issues during the construction phase of the Project.
- 3.1.2 A summary of construction phase EM&A requirements are presented in the sub-sections below.

3.2 MONITORING PARAMETERS

- 3.2.1 The EM&A program of construction phase monitoring shall cover the following environmental issues:
 - Air quality;
 - Construction noise; and
 - Water quality
- 3.2.2 A summary of the monitoring parameters is presented in *Table 3-1*.

Table 3-1 Summary of EM&A Requirements

Environmental Issue	Parameters
Air Quality	1-hour TSP by Real-Time Portable Dust Meter; and
Air Quality	• 24-hour TSP by High Volume Air Sampler.
Nician	 L_{eq(30min)} in normal working days (Monday to Saturday) 07:00-19:00 except public holiday; and 3 sets of consecutive L_{eq(5min)} on restricted hours i.e. 19:00 to 07:00
Noise	next day, and whole day of public holiday or Sunday
	• Supplementary information for data auditing, statistical results such as L ₁₀ and L ₉₀ shall also be obtained for reference.
	In-situ Measurements
	 Dissolved Oxygen Concentration (mg/L);
	• Dissolved Oxygen Saturation (%);
	• Turbidity (NTU);
Water Quality	pH unit;
	Water depth (m); and
	• Temperature ($^{\circ}$ C).
	Laboratory Analysis
	Suspended Solids (mg/L)

3.3 MONITORING LOCATIONS

3.3.1 The designated monitoring locations as recommended in the *EM&A Manual* are shown in *Appendix D*. As the access to some of the designated monitoring locations was questionable due to safety reason or denied by the landlords, alternative locations therefore have had proposed. The proposed alternative monitoring locations has updated in the revised EM&A Programme which verified by IEC and certified by ET Leader prior submitted to EPD on 10 July 2013. *Table 3-2*, *Table 3-3* and *Table 3-4* are respectively listed the air quality, construction noise and water quality monitoring locations for the Project and a map showing these monitoring stations is presented in *Appendix E*.

Table 3-2 Impact Monitoring Stations - Air Quality

Station ID	Description	Works Area	Related to the Work Contract
AM1a*	Garden Farm, Tsung Yuen Ha Village	BCP	Contract 5
AM2	Village House near Lin Ma Hang Road	LMH to Frontier	Contract 5,
		Closed Area	Contract 6
AM3	Ta Kwu Ling Fire Service Station of Ta	LMH to Frontier	Contract 5,
	Kwu Ling Village.	Closed Area	Contract 6

Station ID	Description	Works Area	Related to the Work Contract

WM4– Control B	Upstream of Ma Wat Channel	833760	837395	Alternative location located at upstream 15m of the designated location	Contract 2 Contract 3

3.4 MONITORING FREQUENCY AND PERIOD

The requirements of impact monitoring are stipulated in *Sections 2.1.6*, *3.1.5* and *4.1.6* of the approved *EM&A Manual* and presented as follows.

Air Quality Monitoring

- 3.4.1 Frequency of impact air quality monitoring is as follows:
 - 1-hour TSP 3 times every six days during course of works
 - 24-hour TSP Once every 6 days during course of works.

Noise Monitoring

3.4.2 One set of $L_{eq(30min)}$ as 6 consecutive $L_{eq(5min)}$ between 0700-1900 hours on normal weekdays and once every week during course of works. If construction work necessary to carry out at other time periods, i.e. restricted time period (19:00 to 07:00 the next morning and whole day on public holidays) (hereinafter referred as "the restricted hours"), 3 consecutive $L_{eq(5min)}$ measurement will depended CNP requirements to undertake. Supplementary information for data auditing, statistical results such as L_{10} and L_{90} shall also be obtained for reference.

Water Quality Monitoring

3.4.3 The water quality monitoring frequency shall be 3 days per week during course of works. The interval between two sets of monitoring shall not be less than 36 hours.

3.5 MONITORING EQUIPMENT

Air Quality Monitoring

3.5.1 The 24-hour and 1-hour TSP levels shall be measured by following the standard high volume sampling method as set out in the *Title 40 of the Code of Federal Regulations, Chapter 1 (Part 50), Appendix B*. If the ET proposes to use a direct reading dust meter to measure 1-hour TSP levels, it shall submit sufficient information to the IEC to approve.

- 3.5.2 The filter paper of 24-hour TSP measurement shall be determined by HOKLAS accredited laboratory.
- 3.5.3 All equipment to be used for air quality monitoring is listed in *Table 3-5*.

Table 3-5 Air Quality Monitoring Equipment

Equipment	Model		
	24-Hr TSP		
High Volume Air Sampler	TISCH High Volume Air Sampler, HVS Model TE-5170*		
Calibration Kit	TISCH Model TE-5025A*		
	1-Hour TSP		
Portable Dust Meter	Sibata LD-3B Laser Dust monitor Particle Mass Profiler &		
Portable Dust Meter	Counter*		

^{*} Instrument was used in the Reporting Period and the calibration certificate could be referred in Appendix F.

Wind Data Monitoring Equipment

- 3.5.4 According to the approved EM&A Manual, wind data monitoring equipment shall also be provided and set up for logging wind speed and wind direction near the dust monitoring locations. The equipment installation location shall be proposed by the ET and agreed with the IEC. For installation and operation of wind data monitoring equipment, the following points shall be observed:
 - 1) The wind sensors should be installed 10 m above ground so that they are clear of obstructions or turbulence caused by buildings.
 - 2) The wind data should be captured by a data logger. The data shall be downloaded for analysis at least once a month.
 - 3) The wind data monitoring equipment should be re-calibrated at least once every six months.
 - 4) Wind direction should be divided into 16 sectors of 22.5 degrees each.
- 3.5.5 ET has liaised with the landlords of the successful granted HVS installation premises. However, the owners rejected to provide premises for wind data monitoring equipment installation.
- 3.5.6 Under this situation, the ET proposed alternative methods to obtain representative wind data. Meteorological information as extracted from "the Hong Kong Observatory Ta Kwu Ling Station" is alternative method to obtain representative wind data. For Ta Kwu Ling Station, it is located nearby the Project site. Moreover, this station is located at 15m above mean sea level while its anemometer is located at 13m above the existing ground which in compliance with the general setting up requirement. Furthermore, this station also can be to provide the humidity, rainfall, and air pressure and temperature etc. meteorological information. In Hong Kong of a lot development projects, weather information extracted from Hong Kong Observatory is common alternative method if weather station installation not allowed.

Noise Monitoring

- 3.5.7 Sound level meter in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. The sound level meter shall be checked using an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m/s.
- 3.5.8 Noise monitoring equipment to be used for monitoring is listed in *Table 3-6*.

Table 3-6 Construction Noise Monitoring Equipment

Equipment	Model
Integrating Sound Level Meter	B&K Type 2238* or Rion NL-31 or Rion NL-52*
Calibrator	B&K Type 4231* or Cesva CB-5* or Rion NC-74*

Equipment	Model		
Portable Wind Speed Indicator	Testo Anemometer		

^{*} Instrument was used in the Reporting Period and the calibration certificate could be referred in Appendix F.

3.5.9 Sound level meters listed above comply with the *International Electrotechnical Commission Publications 651: 1979 (Type 1)* and *804: 1985 (Type 1)* specifications, as recommended in TM issued under the NCO. The acoustic calibrator and sound level meter to be used in the impact monitoring will be calibrated yearly.

Water Quality Monitoring

- 3.5.10 DO and water temperature should be measured in-situ by a DO/temperature meter. The instrument should be portable and weatherproof using a DC power source. It should have a membrane electrode with automatic temperature compensation complete with a cable. The equipment should be capable of measuring:
 - a DO level in the range of 0-20 mg/l and 0-200% saturation; and
 - a temperature of between 0 and 45 degree Celsius.
- 3.5.11 A portable pH meter capable of measuring a range between 0.0 and 14.0 should be provided to measure pH under the specified conditions accordingly to the APHA Standard Methods.
- 3.5.12 The instrument should be portable and weatherproof using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0-1000 NTU.
- 3.5.13 A portable, battery-operated echo sounder or tape measure will be used for the determination of water depth at each designated monitoring station as appropriate.
- 3.5.14 A water sampler e.g. Kahlsico Water Sampler, which is a transparent PVC cylinder with capacity not less than 2 litres, will be used for water sampling if water depth over than 0.5m. For sampling from very shallow water depths e.g. <0.5 m, water sample collection will be directly from water surface below 100mm use sampling plastic bottle to avoid inclusion of bottom sediment or humus. Moreover, Teflon/stainless steel bailer or self-made sampling buckets maybe used for water sampling. The equipment used for sampling will be depended the sampling location and depth situations.
- 3.5.15 Water samples for laboratory measurement of SS will be collected in high density polythene bottles, packed in ice (cooled to 4 °C without being frozen), and delivered to the laboratory in the same day as the samples were collected.
- 3.5.16 Analysis of suspended solids should be carried out in a HOKLAS or other accredited laboratory. Water samples of about 1L should be collected at the monitoring stations for carrying out the laboratory suspended solids determination. The SS determination work should start within 24 hours after collection of the water samples. The SS analyses should follow the *APHA Standard Methods 2540D* with Limit of Reporting of 2 mg/L.
- 3.5.17 Water quality monitoring equipment used in the impact monitoring is listed in *Table 3-7*. Suspended solids (SS) analysis is carried out by a local HOKLAS-accredited laboratory, namely *ALS Technichem (HK) Pty Ltd*.

Table 3-7 Water Quality Monitoring Equipment

Equipment	Model		
Water Depth Detector	Eagle Sonar or tape measures		
Water Sampler	A 2-litre transparent PVC cylinder with latex cups at both ends or		
water Sampler	teflon/stainless steel bailer or self-made sampling bucket		
Thermometer & DO	YSI Professional Plus /YSI PRO20 Handheld Dissolved Oxygen		
meter	Instrument* / YSI 550A Multifunctional Meter		

Equipment	Model
pH meter YSI Professional Plus / AZ8685 pH pen-style meter w/ 212632*	
Turbidimeter	Hach 2100Q*
Sample Container	High density polythene bottles (provided by laboratory)
Storage Container	'Willow' 33-liter plastic cool box with Ice pad

^{*} Instrument was used in the Reporting Period and the calibration certificate could be referred in Appendix F.

3.6 MONITORING METHODOLOGY

1-hour TSP Monitoring

- 3.6.1 The 1-hour TSP monitor was a brand named "Sibata LD-3B Laser Dust monitor Particle Mass Profiler & Counter" which is a portable, battery-operated laser photometer. The 1-hour TSP meter provides a real time 1-hour TSP measurement based on 90° light scattering. The 1-hour TSP monitor consists of the following:
 - (a.) A pump to draw sample aerosol through the optic chamber where TSP is measured;
 - (b.) A sheath air system to isolate the aerosol in the chamber to keep the optics clean for maximum reliability; and
 - (c.) A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.
- 3.6.2 The 1-hour TSP meter is used within the valid period as follow manufacturer's Operation and Service Manual.

24-hour TSP Monitoring

- 3.6.3 The equipment used for 24-hour TSP measurement is Tisch Environmental, Inc. Model TE-5170 TSP high volume air sampling system, which complied with *EPA Code of Federal Regulation, Appendix B to Part 50*. The High Volume Air Sampler (HVS) consists of the following:
 - (a.) An anodized aluminum shelter;
 - (b.) A 8"x10" stainless steel filter holder:
 - (c.) A blower motor assembly;
 - (d.) A continuous flow/pressure recorder;
 - (e.) A motor speed-voltage control/elapsed time indicator;
 - (f.) A 7-day mechanical timer, and
 - (g.) A power supply of 220v/50 Hz
- 3.6.4 The HVS is operated and calibrated on a regular basis in accordance with the manufacturer's instruction using Tisch Calibration Kit Model TE-5025A. Calibration would carry out in two month interval.
- 3.6.5 24-hour TSP is collected by the ET on filters of HVS and quantified by a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (ALS), upon receipt of the samples. The ET keep all the sampled 24-hour TSP filters in normal air conditioned room conditions, i.e. 70% RH (Relative Humidity) and 25°C, for six months prior to disposal.

Noise Monitoring

- Noise measurements were taken in terms of the A-weighted equivalent sound pressure level (L_{eq}) measured in decibels dB(A). Supplementary statistical results (L_{10} and L_{90}) were also obtained for reference.
- 3.6.7 During the monitoring, all noise measurements would be performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (L_{eq}). $Leq_{(30min)}$ in six consecutive $Leq_{(5min)}$ measurements will use as the monitoring parameter for the time period between 0700-1900 hours on weekdays; and also $Leq_{(15min)}$ in three consecutive $Leq_{(5min)}$ measurements would be used as monitoring parameter for other time periods (e.g. during

restricted hours), if necessary.

3.6.8 Prior of noise measurement, the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency. The checking is performed before and after the noise measurement.

Water Quality

3.6.9 Water quality monitoring is conducted at the designated locations. The sampling produce with the in-situ monitoring are presented as below:

Sampling Procedure

- 3.6.10 A Digital Global Positioning System (GPS) is used to identify the designated monitoring stations prior to water sampling. A portable, battery-operated echo sounder is used for the determination of water depth at each station. At each station, water sample would be collected from 0.1m below water surface or the water surface to prevent the river bed sediment for stirring.
- 3.6.11 The sample container will be rinsed with a portion of the water sample. The water sample then will be transferred to the high-density polythene bottles as provided by the laboratory, labeled with a unique sample number and sealed with a screw cap.
- 3.6.12 Before sampling, general information such as the date and time of sampling, weather condition as well as the personnel responsible for the monitoring would be recorded on the field data sheet.
- 3.6.13 A 'Willow' 33-liter plastic cool box packed with ice will be used to preserve the water samples prior to arrival at the laboratory for chemical determination. The water temperature of the cool box is maintained at a temperature as close to 4°C as possible without being frozen. Samples collected are delivered to the laboratory upon collection.

In-situ Measurement

- 3.6.14 YSI PRO20 Handheld Dissolved Oxygen Instrument is used for water in-situ measures, which automates the measurements and data logging of temperature, dissolved oxygen and dissolved oxygen saturation.
- 3.6.15 A portable AZ Model 8685 pH pen-style meter is used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 14 and readable to 0.1.
- 3.6.16 A portable Hach 2100Q Turbidimeter is used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 1000 NTU.
- 3.6.17 All in-situ measurement equipment are calibrated by HOKLAS accredited laboratory of three month interval.

Laboratory Analysis

3.6.18 All water samples analyzed Suspended Solids (SS) will be carried out by a local HOKLAS-accredited testing laboratory (ALS Technichem (HK) Pty Ltd HOKLAS registration no. 66). SS determination using *APHA Standard Methods 2540D* as specified in the *EM&A Manual* will start within 48 hours of water sample receipt.

3.7 EQUIPMENT CALIBRATION

- 3.7.1 Calibration of the HVS is performed upon installation and thereafter at bimonthly intervals in accordance with the manufacturer's instruction using the certified standard calibrator (TISCH Model TE-5025A). Moreover, the Calibration Kit would be calibrated annually. The calibration data are properly documented and the records are maintained by ET for future reference.
- 3.7.2 The 1-hour TSP meter was calibrated by the supplier prior to purchase. Zero response of the

- equipment would be checked before and after each monitoring event. Annually calibration with the High Volume Sampler (HVS) in same condition would be undertaken by the Laboratory.
- 3.7.3 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at yearly basis.
- 3.7.4 All water quality monitoring equipment would be calibrated by HOKLAS accredited laboratory of three month intervals.
- 3.7.5 The calibration certificates of all monitoring equipment used for the impact monitoring program in the Reporting Period and the HOKLAS accredited certificate of laboratory are attached in *Appendix F*.

3.8 DERIVATION OF ACTION/LIMIT (A/L) LEVELS

3.8.1 The baseline results form the basis for determining the environmental acceptance criteria for the impact monitoring. According to the approved Environmental Monitoring and Audit Manual, the air quality, construction noise and water quality criteria were set up, namely Action and Limit levels are listed in *Tables 3-8*, *3-9* and *3-10*.

Table 3-8 Action and Limit Levels for Air Quality Monitoring

Monitoring Station	Action 1	Level (μg/m³)	Limit Level (µg/m³)		
Monitoring Station	1-hour TSP 24-hour TSP		1-hour TSP	24-hour TSP	
AM1a	265	143			
AM2	268	149			
AM3	269	145		260	
AM4a	267	148			
AM5	268	143	500		
AM6	269	148			
AM7b	275	156			
AM8	269	144			
AM9b	271	151			

Table 3-9 Action and Limit Levels for Construction Noise

Monitoring Location	Action Level	Limit Level in dB(A)		
Womtoring Location	Time Period: 0700-1900 hours on normal weekdays			
NM1, NM2, NM3, NM4, NM5, NM6, NM7, NM8, NM9, NM10	When one or more documented complaints are received	75 dB(A) ^{Note 1 & Note 2}		

Note 1: Acceptable Noise Levels for school should be reduced to 70 dB(A) and 65 dB(A) during examination period

Note 2: If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the NCA have to be followed.

Table 3-10 Action and Limit Levels for Water Quality

Parameter	Performance	Monitoring Location					
	criteria	WM1	WM2A	WM2B	WM3	WM4	
DO	Action Level	(*)4.23	(**)4.00	(*)4.74	(**)4.00	(*)4.14	
(mg/L)	Limit Level	^(#) 4.19	(**)4.00	^(#) 4.60	(**)4.00	^(#) 4.08	
	Action Level	51.3	24.9	11.4	13.4	35.2

(NTU)	Limit Level	67.6	33.8	12.3	14.0	38.4	
		AND	130% of upstream control station of the same day				
	Action Level	54.5	14.6	11.8	12.6	39.4	
CC (max/T)		AND	120% of upstream control station of the same day				
SS (mg/L)	Limit Laval	64.9	17.3	12.4	12.9	45.5	
	Limit Level	AND	130% of ups	tream control s	tation of the s	ame day	

Remarks:

- (*) The Proposed <u>Action Level</u> of Dissolved Oxygen is adopted to be used 5%-ile of baseline data (**) The Proposed <u>Action & Limit Level</u> of Dissolved Oxygen is used 4mg/L
- (#) The Proposed <u>Limit Level</u> of Dissolved Oxygen is adopted to be used 1%-ile of baseline data
- 3.8.2 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan which presented in *Appendix G*.

3.9 DATA MANAGEMENT AND DATA QA/QC CONTROL

- 3.9.1 All monitoring data will be handled by the ET's in-house data recording and management system. The monitoring data recorded in the equipment will be downloaded directly from the equipment at the end of each monitoring day. The downloaded monitoring data will input into a computerized database maintained by the ET. The laboratory results will be input directly into the computerized database and checked by personnel other than those who input the data.
- 3.9.2 For monitoring parameters that require laboratory analysis, the local laboratory shall follow the QA/QC requirements as set out under the HOKLAS scheme for the relevant laboratory tests.

4 AIR QUALITY MONITORING

4.1 GENERAL

- 4.1.1 In the Reporting Period, construction works under the project have been commenced in Contracts 2, 3 and 5 and air quality monitoring was performed at 6 relevant designated locations as below:
 - AM1a Garden Farm, Tsung Yuen Ha Village;
 - AM2 Village House near Lin Ma Hang Road;
 - AM3 Ta Kwu Ling Fire Service Station of Ta Kwu Ling Village;
 - AM7b Loi Tung Village;
 - AM8 Po Kat Tsai Village;
 - AM9b Nam Wa Po Village House No. 80
- 4.1.2 The air quality monitoring schedule is presented in Appendix H and the monitoring results are summarized in the following sub-sections.

4.2 AIR QUALITY MONITORING RESULTS IN REPORTING MONTH

4.2.1 In the Reporting Period, a total of *102* events of 1-hour TSP and *36* events (in which 4 events were incomplete due to power failure) 24-hours TSP monitoring were carried out and the monitoring results are summarized in *Tables 4-1 to 4-6*. The detailed 24-hour TSP monitoring data are presented in *Appendix I* and the relevant graphical plots are shown in *Appendix J*.

Table 4-1 Summary of 24-hour and 1-hour TSP Monitoring Results – AM1a

	24-hour		1-hour TSP (μg/m³)				
Date	TSP $(\mu g/m^3)$	Date	Start Time	1 st reading	2 nd reading	3 rd reading

29-Jun-15	47 (*)	30-Jun-15	13:33	26	21	32			
Average (Range)	47 (29-63)	Average (Range)		33 (17 - 63)					

Remark: (*)24-hour TSP monitoring were ram less than 24 hours due to power failure and these result are invalidated.

monitoring was rescheduled from 15 June 2015 to 17 June 2015 due to power failure.

during operation on 3, 9, 19 and 29 June 2015. These TSP monitoring were ran less than 24 hours and therefore the results would be accounted as invalidated. Due to the previous power failure incident, the 24-hour TSP sampling was set to be started at 07:00 instead of 00:00 which covered the working hour of the construction site. Having reviewed on the failure monitoring result, exceedance was not likely to be triggered since the results are far lower than the Action/Limit Level when dust concentration was peak.

- 4.2.3 As shown in *Tables 4-1 to 4-6*, all the 1-hour TSP and 24-hour TSP monitoring results were below the Action/Limit Levels. No Notification of Exceedance (NOE) was issued in this Reporting Period.
- 4.2.4 The meteorological data during the impact monitoring days are summarized in *Appendix K*.

5 CONSTRUCTION NOISE MONITORING

5.1 GENERAL

- 5.1.1 In the Reporting Period, construction works under the project have been commenced in Contracts 2, 3 and 5 and noise monitoring was performed at 8 relevant designated locations as below:
 - NM1 Tsung Yuen Ha Village House No. 63;
 - NM2 Village House near Lin Ma Hang Road;
 - NM5 Village House, Loi Tung
 - NM6 Tai Tong Wu Village House 2
 - NM7 Po Kat Tsai Village
 - NM8 Village House, Tong Hang;
 - NM9 Village House, Kiu Tau Village; and
 - NM10 Nam Wa Po Village House No. 80
- 5.1.2 The noise monitoring schedule is presented in Appendix H and the monitoring results are summarized in the following sub-sections.

5.2 NOISE MONITORING RESULTS IN REPORTING MONTH

5.2.1 In the Reporting Period, a total of **45** event noise measurements were carried out at the designated locations. The sound level meter was set in 1m from the exterior of the building façade including noise monitoring locations NM1, NM2, NM5, NM6, NM7, NM8 and NM9. Therefore, no façade correction (+3 dB(A)) is added according to acoustical principles and EPD guidelines. However, free-field status was performed at NM10. So, façade correction (+3 dB(A)) has added according to the requirement in this month. The noise monitoring results at the designated locations are summarized in *Table 5-1*. The detailed noise monitoring data are presented in *Appendix I* and the relevant graphical plots are shown in *Appendix J*.

Table 5-1 Summary of Construction Noise Monitoring Results

		(Constru	ction N	oise Level	$(L_{eq30min}), dB$	S (A)			
Date	NM1	NM2	NM8	NM9	NM10 ^(*)	Date	NM5	NM6	NM7	
1-Jun-15	55	61	57	59	64	4-Jun-15	56	63	65	
6-Jun-15	51	55	59	58	64	10-Jun-15	54	64	66	
12-Jun-15	54	61	58	59	62	16-Jun-15	63	62	61	
18-Jun-15	54	61	58	57	65	22-Jun-15	57	58	61	
24-Jun-15	49	60	57	61	67	27-Jun-15	55	58	63	
30-Jun-15	51	61	59	58	66					
Limit	Limit 75 dB(A)									
Level					75	uD(A)				

Remarks

As shown in *Table 5-1*, the noise level measured at the designated monitoring locations NM1, NM2, NM5, NM6, NM7, NM8, NM9 and NM10, were below 75dB(A). Furthermore, there was no noise complaints (Action Level exceedance) received by the RE, Contractors or CEDD in the Reporting Period. Therefore, no Action or Limit Level exceedance was triggered and no corrective action was required.

^(*) facade correction (+3 dB(A) is added according to acoustical principles and EPD guidelines

6 WATER QUALITY MONITORING

6.1 GENERAL

- 6.1.1 In the Reporting Period, construction works under the project has been commenced in Contracts 3 and 5 and water quality monitoring was performed at 5 relevant designated locations as below:
 - WM1 Contract 5 working site downstream at Kong Yiu Channel;
 - WM1 Control Contract 5 working site upstream at Kong Yiu Channel;
 - WM4 –South Portal of Contract 2 and Contract 3 working site downstream of Ma Wat Channel
 - WM4 Control A Contract 3 working site Kau Lung Hang Stream
 - WM4 Control B Contract 3 working site Upstream of Ma Wat Channel
- 6.1.2 The water quality monitoring schedule is presented in *Appendix H*. The monitoring results are summarized in the following sub-sections.

6.2 RESULTS OF WATER QUALITY MONITORING

- 6.2.1 In the Reporting Period, there were **thirteen** (13) sampling days of water quality monitoring conducted at the designated water monitoring location.
- 6.2.2 The key monitoring parameters including Dissolved Oxygen, Turbidity and Suspended Solids are summarized in *Tables 6-1 and 6-2*. Breaches of water quality monitoring criteria are shown in *Table 6-3*. Detailed monitoring database including in-situ measurements and laboratory analysis data are shown in *Appendix I* and the relevant graphical plot are shown in *Appendix J*.

Table 6-1 Summary of Water Quality Monitoring Results for Contracts 2 and 3

Date	Di	Dissolved Oxygen (mg/L)			Turbidity (NTU)			Suspended Solids (mg/L)		
	WM4	WM4-CA	WM4-CB	WM4	WM4-CA	WM4-CB	WM4	WM4-CA	WM4-CB

Date		d Oxygen g/L)		oidity ΓU)	Suspended Solids (mg/L)		
Date	WM1	WM1- Control	WM1	WM1- Control	WM1	WM1- Control	
19-Jun-15#	7.21	5.98	82.1	76.1	93.5	44.0	
22-Jun-15#	6.34	6.70	278.5	126.5	211.5	58.0	
24-Jun-15	6.72	5.42	<u>>999</u>	317.0	485.0	147.5	
27-Jun-15#	6.56	5.98	68.9	15.4	69.5	6.5	
30-Jun-15	6.40	7.52	48.5	13.6	47.5	6.5	

Remark:

- *i* bold and underlined indicated Limit Level exceedance.
- # water sampling was not able to carry out due to shallow water and water monitoring was conducted at box culvert 2 downstream for reference
- * monitoring was rescheduled from 4 June to 5 June 2015
- ** water sampling was not able to carry out due to shallow water at WM1 and box culvert 2.

Table 6-3 Breaches of Water Quality Monitoring Criteria in Reporting Period

Location	Dissolved Oxygen (mg/L)		Turbidity (NTU)		Suspended Solids (mg/L)		Total Exceedance	
Zocation .	Action	Limit	Action	Limit	Action	Limit	Action	Limit
WM1	0	0	0	1	0	1	0	2
WM4	0	0	0	2	0	2	0	4
No of Exceedance	0	0	0	3	0	3	0	6

- 6.2.3 During water monitoring on 1, 6, 8, 10, 12, 17, 19, 22 and 27 June 2015, very shallow water was observed at the proposed water monitoring location and water sampling at WM1 was unable to carry out. Water sampling was then carried out near the box culvert 2 at close downstream and the data is served as reference only. During water monitoring on 15 June 2015, water monitoring unable to carry out at WM1 and downstream box culvert 2since very shallow water was encountered.
- 6.2.4 In this Reporting Period, one (1) exceedance of turbidity and one (1) exceedance of suspended solids were recorded at WM1. For WM4, a total of four (4) Limit Level exceedances were recorded, namely two (2) Limit Level exceedances of turbidity and two (2) Limit Level exceedances of suspended solids.
- 6.2.5 NOE was issued to relevant parties upon confirmation of the monitoring result. The investigation for the cause of exceedance is presented in below.

Investigation Result for turbidity and SS Exceedance at WM1 on 24 June 2015

- 6.2.6 According to the site information provided by the Contractor, site formation at BCPB was carried out under Contract 5 on 24 June 2015 and no discharges were made.
- 6.2.7 According to the site record from the monitoring team, there was heavy rain in North District before the water monitoring work. During the water monitoring on 24 June 2015, muddy water was observed throughout the channel due to heavy rain.
- 6.2.8 Since the water monitoring was conducted after rainstorm, the existing condition of the river water was deteriorated by vigorous water flow in the river and stirred up the sediment at river bed. High turbidity and SS result was also recorded at upstream control station.
- 6.2.9 In view of the subsequent monitoring activities and results during non-rainy day in the week after, no muddy water was observed. It is considered that the exceedances were a single incident due to the rainstorm.

Investigation Result for turbidity and SS Exceedance at WM4 on 10 June 2015 (Contract 2)

- 6.2.10 According to the site information provided from the Contractor of C2 (DHK), construction activities carried out on 10 June 2015 at South Portal included tunnel excavation and slope stabilization and all works were far from the Ma Wat River.
- 6.2.11 According to the site record by the monitoring team, there was heavy rainstorm in Taipo and Fanling District before the water monitoring work and muddy water was observed at upstream of the Ma Wat River WM4-CB. It was suspected the muddy water was come from other construction site which located at the upstream of the Contract.
- 6.2.12 Moreover, according to the photo record provided by other contractor, muddy water flowed from other upstream location was observed but this location was not under monitored by the Contract. Since the water monitoring was conducted after rainstorm, the existing condition of the river water was deteriorated by vigorous water flow in the river and stirred up the sediment at river bed.
- 6.2.13 In view of the subsequent monitoring activities and results during non-rainy day in the week after, no muddy water was observed and no exceedance was triggered. It is considered that the exceedances were a single incident due to cumulative effect of the rainstorm and muddy water from upstream.

Investigation Result for turbidity and SS Exceedance at WM4 on 10 June 2015 (Contract 3)

- 6.2.14 According to the site diary provided by the Contractor, construction works carried out on 10 June 2015 included concreting, erection of formwork and backfilling. The works were carried out away from the watercourse and the wastewater generated from the site was treated by the onsite wastewater treatment facilities before discharge.
- 6.2.15 According to the site record from the monitoring team, there was heavy rainstorm in Taipo and Fanling District before the water monitoring work and muddy water was observed at upstream of the Ma Wat River WM4-CB. It was suspected the muddy water was come from other construction site which located at the upstream of the Contract.
- 6.2.16 Moreover, muddy water flowed from other upstream location was observed but this location was not under monitored by the Contract. Since the water monitoring was conducted after rainstorm, the existing condition of the river water was deteriorated by vigorous water flow in the river and stirred up the sediment at river bed.
- 6.2.17 Since no exceedance was recorded in the subsequent non-rainy day, it is considered that the exceedances were a single incident due to cumulative effect of the rainstorm and muddy water from upstream.

Investigation Result for turbidity and SS Exceedance at WM4 on 24 June 2015 (Contract 2)

- 6.2.18 According to the site information provided from the Contractor of C2 (DHK), construction activities carried out on 24 June 2015 at South Portal included tunnel excavation and the work was far from the Ma Wat River.
- 6.2.19 According to the site record from the monitoring team, there was heavy rain in Taipo and Fanling District before the water monitoring work. During the course of monitoring, turbid water was observed throughout the Ma Wat River at both control and impact locations.
- 6.2.20 Moreover, according to the photo record provided by other contractor, muddy water flowed from other upstream location was observed but this location was not under monitored by the Contract. Since the water monitoring was conducted after rainstorm, the existing condition of the river water was deteriorated by vigorous water flow in the river and stirred up the sediment at river bed.

6.2.21 In view of the subsequent monitoring activities and results during non-rainy day in the week after, no muddy water was observed and no exceedance was triggered. It is considered that the exceedances were a single incident due to cumulative effect of the rainstorm and muddy water from upstream.

<u>Investigation Result for turbidity and SS Exceedance at WM1 on 24 June 2015 (Contract 5)</u>

6.2.22 The investigation result is underway and it will be reported in next reporting period.

7 WASTE MANAGEMENT

7.1 GENERAL WASTE MANAGEMENT

7.1.1 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

7.2 RECORDS OF WASTE QUANTITIES

- 7.2.1 All types of waste arising from the construction work are classified into the following:
 - Construction & Demolition (C&D) Material;
 - Chemical Waste:
 - General Refuse; and
 - Excavated Soil.
- 7.2.2 The quantities of waste for disposal in this Reporting Period are summarized in *Tables 7-1* and 7-2 and the Monthly Summary Waste Flow Table is shown in *Appendix L*. Whenever possible, materials were reused on-site as far as practicable.

Table 7-1 Summary of Quantities of Inert C&D Materials for the Project

Type of Waste	Cont	ract 2	Cont	ract 3	Cont	ract 5	Total
Type of Waste	Quantity	Disposal Location	Quantity	Disposal Location	Quantity	Disposal Location	Quantity
C&D Materials (Inert) (in '000m ³)	31.0299		2.515		0		3305449
Reused in this Project (Inert) (in '000 m ³)	5.2132		0.840		0		6.0532
Reused in other Projects (Inert) (in '000 m ³)	25.3643	C5	0		0		25.3643
Disposal as Public Fill (Inert) (in '000 m ³)	0.4524	Tuen Mun 38	1.675	Tuen Mun 38	0		2.1274

Table 7-2 Summary of Quantities of C&D Wastes for the Project

Type of Wests	Contract 2		Contract 3		Contract 5		Total
Type of Waste	Quantity	Disposal Location	Quantity	Disposal Location	Quantity	Disposal Location	Quantity
Recycled Metal ('000kg) #	0	-	0	-	0		0
Recycled Paper / Cardboard Packing ('000kg) #	0.2900	Licensed collector	0	-	0		0.2900
Recycled Plastic ('000kg) #	0	-	0.030	Licensed collector	0		0.030 ('000kg)
Chemical Wastes ('000kg) #	0.5280	Licensed collector	0.800	Licensed collector	0		528kg +800m ³
General Refuses ('000m ³)	0.1703	NENT	0.060	NENT	0.015	NENT	0.2453

Remark #: Unit of recycled metal, recycled paper/ cardboard packing, recycled plastic and chemical waste for Contractor 3 was in ('000m³).

8 SITE INSPECTION

8.1 REQUIREMENTS

8.1.1 According to the approved EM&A Manual, the environmental site inspection shall be formulation by ET Leader. Weekly environmental site inspections should carry out to confirm the environmental performance.

8.2 FINDINGS / DEFICIENCIES DURING THE REPORTING MONTH

The Contract 2

- 8.2.1 In the Reporting Period, joint site inspection for Contract 2 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on 5, 12, 19 and 26 June 2015. No non-compliance was noted.
- 8.2.2 The findings / deficiencies of *Contract 2* that observed during the weekly site inspection are listed in *Table 8-1*.

Table 8-1 Site Observations for Contract 2

Date	Findings / Deficiencies	Follow-Up Status
5 June 2015	The Contractor was reminded to provide proper label for the trees within the site. (South Portal)	Not required for reminder.
	• The Contractor was reminded to wash the vehicle within the site area prior to leaving the site. (Mid-Vent)	Not required for reminder.
12 June 2015	• The Contractor should ensure all vehicles were thoroughly washed before leaving the site. (Admin Building)	All vehicles had wheel washed before leaving the site. The site entrance is free of mud.
19 June 2015	Waste cumulated on site was observed. The contractor should be clean more frequency to maintain the site clean and tidy. (South Portal)	The waste cummulated on site was cleaned on regular basis.
26 June 2015	No adverse environmental were observed.	Not required for reminder.

The Contract 3

- 8.2.3 In the Reporting Period, joint site inspection for Contract 3 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on 1, 8, 17, 22 and 29 June 2015. No non-compliance was noted.
- 8.2.4 The findings / deficiencies of *Contract 3* that observed during the weekly site inspection are listed in *Table 8-2*.

Table 8-2 Site Observations for Contract 3

Date	Findings / Deficiencies	Follow-Up Status		
1 June 2015	• Chemical containers without drip tray was observed at SA12, the Contractor should provide drip tray for the chemical container underneath to prevent land containination.	The chemical containers without drip tray have been removed and placed in proper location.		

Date	Findings / Deficiencies	Follow-Up Status
	 Continuous smoke emitted from a crawler crane was observed at FH9, the Contractor should check the condition of the machine and repair if necessary. 	The filter has been replcaed for the described crawler crane and further check up will be conducted if continuous smoke observed in next time.
8 June 2015	 Stagnant water cummulated in the drip tray under an air compressor wa observed at SA2, the Contractor should clean the water to prevent mosquito breeding. 	The stagnant water has been removed from the drip tray.
17 June 2015	• Mix up of construction waste and construction material was observed, the Contractor should provide clear discrimination for the waste and material. (Bridge E)	Clear discrimination has been provided for the construction wastes and materials near Bridge E.
22 June 2015	• Mix up of chemical waste and chemical inside a chemical waste storage room observed, the Contractor should ensure the storage room only for storage of chemical waste. Moreover, proper ventilation should be provided according to the chemical waste ordinance. (SA12B)	The incompatible goods have been removed from the chemical waste storage room and ventilation was provided.
29 June 2015	 Stagnant water was observed in the trip tray of the air compressor, the Contractor should clear the stagnant water to prevent mosquito breeding. (SA4) Unmitigated cement bags (over 20 	 The air compressor has been removed from site. The cement bags have been
	bags) were observed, the Contractor should provide proper measures such as covering for the cement bags to potential dust impact. (SA4)	removed from site.
	• Grouting system without sufficient mitigation measures was observed, the Contract should provide 3 sides with top shelter for the grouting system to minimize dust impact. (SA4)	The grouting work was completed and the grouting system has been removed from site.
	• The Contractor was reminded to providie label about the contact person for every chemical waste containers inside the chemical waste storage room.	Not required for reminder.

8.2.5 Furthermore, the Contractor of Contract 3 was reminded to provide water spraying during dusty works, such as breaking and excavation.

The Contract 5

- 8.2.6 In the Reporting Period, joint site inspection for Contract 5 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on **4, 11, 18 and 25 June 2015**. No non-compliance was noted.
- 8.2.7 The findings / deficiencies of *Contract 5* that observed during the weekly site inspection are listed in *Table 8-3*.

Table 8-3 Site Observations for Contract 5

Date	Findings / Deficiencies	Follow-Up Status
4 June 2015	No environmental issue was observed during the site inspection.	N/A
11 June 2015	 During the wet season, the Contractor was reminded to cover the open slope to prevent soil run-off into the river. The Contractor was reminded to maintain proper condition of the chemical waste storage, including provide drip tray for chemical containers 	 Not required for reminder. Not required for reminder.
18 June 2015	Chemical spillage was observed from an 18L container without drip tray underneath, the Contractor should clean the spill and dispose of according to chemical waste ordinance (Retaining Wall).	The chemical spill was cleaned up and chemical waste storage is provided on-site.
	• Stagnant water cumulated in the drip tray was observed, the Contractor should clean up the stagnant water to prevent mosquito breeding. (1500 pipe)	Generally, the Contractor would drain away stagnant water to prevent mosquito breeding
	• Sand and gravel was observed on a pedestrian road, the Contractor should maintain the cleanliness of the pedestrian road (1500 pipe).	Sand and gravel on pedestain road was cleaned up.
	• Sand and mud was observed on an access road in front of a dwelling, the Contractor should ensure the access is keep clear of sand and mud. (1500 pipe near KS works area)	The site entrance/exit was cleaned and washed to maintain the cleanliness.
25 June 2015	No environmental issue was observed during the site inspection.	N/A

8.2.8 Overall, general housekeeping such as daily site tidiness and cleaniness should be maintained for all Contracts. Furthermore, the Contractors were reminded to implement Waste Management Plan of the Project.

Other Contracts

8.2.9 Since the construction works at the Contract 4 and Contract 6 have not yet been commenced, no site inspection is performed for these Contracts.

9 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

9.1 ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTION

- 9.1.1 In the Reporting Period, no environmental complaints, summons and prosecution under the EM&A Programme was lodged.
- 9.1.2 The statistical summary table of environmental complaint is presented in *Tables 9-1, 9-2* and *9-3*.

Table 9-1 Statistical Summary of Environmental Complaints

Donoutino Donio d	Contract	En	vironmental (Complaint Statistics
Reporting Period	No	Frequency	Cumulative	Complaint Nature
19 May 2014 – 31 May 2015	Contract 2	0	11	(4) Water Quality(5) Construction Dust(2) Noise
06 Nov 2013 – 31 May 2015	Contract 3	0	3	(1) Construction Dust(2) Water quality
16 Aug 2013 – 31 May 2015	Contract 5	0	2	• (2) Construction Dust
1 20 Jun 2015	Contract 2	0	12	(5) Water Quality(5) Construction Dust(2) Noise
1 – 30 Jun 2015	Contract 3	0	3	(1) Construction Dust(2) Water quality
	Contract 5	0	2	• (2) Construction Dust

 Table 9-2
 Statistical Summary of Environmental Summons

Donouting Donied	Contract	Contract Environmental Summons Stati					
Reporting Period	No	Frequency	Cumulative	Complaint Nature			
19 May 2014 – 31 May 2015	Contract 2	0	0	NA			
06 Nov 2013 – 31 May 2015	Contract 3	0	0	NA			
16 Aug 2013 – 31 May 2015	Contract 5	0	0	NA			
-	Contract 2	0	0	NA			
1 - 30 Jun 2015	Contract 3	0	0	NA			
	Contract 5	0	0	NA			

 Table 9-3
 Statistical Summary of Environmental Prosecution

Donouting Dowlod	Contract	Environmental Prosecution Statistics					
Reporting Period	No	Frequency	Cumulative	Complaint Nature			
19 May 2014 – 31 May 2015	Contract 2	0	0	NA			
06 Nov 2013 – 31 May 2015	Contract 3	0	0	NA			
16 Aug 2013 – 31 May 2015	Contract 5	0	0	NA			
	Contract 2	0	0	NA			
1 – 30 Jun 2015	Contract 3	0	0	NA			
	Contract 5	0	0	NA			

The Other Contracts

9.1.3 Since the construction works at the Contract 4 and Contract 6 have not yet commenced, no environmental complaint, summons and prosecution under the EM&A Programme are registered in the Reporting Period.

10 IMPLEMENTATION STATUS OF MITIGATION MEASURES

10.1 GENERAL REQUIREMENTS

- 10.1.1 The environmental mitigation measures that recommended in the Implementation Schedule for Environmental Mitigation Measures (ISEMM) in the approved EM&A Manual covered the issues of dust, noise, water and waste and they are summarized presented in *Appendix M*.
- 10.1.2 All contracts under the Project shall be implementing the required environmental mitigation measures according to the approved EM&A Manual as subject to the site condition. Environmental mitigation measures generally implemented by Contracts 2, 3 and 5 in this Reporting Period are summarized in *Table 10-1*.

Table 10-1 Environmental Mitigation Measures

Issues	Environmental Mitigation Measures								
Water	• Wastewater to be treated by the wastewater treatment facilities i.e.								
Quality	sedimentation tank or AquaSed before discharge.								
Air Quality	 Maintain damp / wet surface on access road Keep slow speed in the sites All vehicles must use wheel washing facility before off site Sprayed water during breaking works A cleaning truck was regularly performed on the public road to prevent fugitive dust emission 								
Noise	 Restrain operation time of plants from 07:00 to 19:00 on any working day except for Public Holiday and Sunday. Keep good maintenance of plants Place noisy plants away from residence or school Provide noise barriers or hoarding to enclose the noisy plants or works Shut down the plants when not in used. 								
Waste and Chemical	 On-site sorting prior to disposal Follow requirements and procedures of the "Trip-ticket System" 								
Management	 Predict required quantity of concrete accurately Collect the unused fresh concrete at designated locations in the sites for subsequent disposal 								
General	The site was generally kept tidy and clean.								

10.2 TENTATIVE CONSTRUCTION ACTIVITIES IN THE COMING MONTH

10.2.1 Construction activities as undertaken in the coming month for the Project lists below:

Backfilling for surcharge

Contract 2

Mid-Vent Portal Tunnel excavation Cavern excavation North Portal Permanent slope for site formation South Bound invert grouting North Bound blast door installation North Bound top heading canopies TBM sliding to face Associated equipment installation for operation of TBM (mortar plant, cooling tower...) Rock Excavation to Vent. Bldg. Formation South Portal Southbound foundation works Northbound bored piles works & pile tests Drill and blast set up and site installation

Contract 3

Admin Building

Contract 3

Cable detection and trial trenches

- Decking construction for Bridge E
- E&M work for new valve control & Telemetry House
- Storm Drains Laying
- Noise barrier construction
- Pier / Pier Table construction
- Pile cap works
- Portal beam erection
- Pre-drilling works and piling works for viaduct
- Retaining Wall construction
- Road works at Fanling Highway
- Socket H-pile installation
- Tree felling works
- Utilities duct laying
- Viaduct segment erection

- Laying of additional rising main at LMH road
- Bituminous laying at proposed and existing LMH road.
- Construction of secondary boundary fencing
- Construction of retaining wall no. 2a
- Brick laying at footpath of proposed LMH road
- Road works (kerb laying) for proposed LMH road and existing LMH road
- Formation works at BCP area
- Construction of superstructure at Footbridge (RS4)
- Installation of precast parapet and vehicular railing at Bridge J
- Construction of Depressed Road at BCP3
- Filling work for ArchSD permanent office
- Drainage works at proposed and exiting LMH Road
- Water works at proposed LMH Road
- Irrigation system at proposed and existing LMH Road
- Drainage works at BCP area
- Installation of Underground utilities at proposed and existing LMH Road

10.3 KEY ISSUES FOR THE COMING MONTH

- 10.3.1 Key issues to be considered in the coming month for Contracts 2, 3 and 5 include:
 - Implementation of control measures for rainstorm;
 - Regular clearance of stagnant water during wet season;
 - Implementation of dust suppression measures at all times;
 - Potential wastewater quality impact due to surface runoff;
 - Potential fugitive dust quality impact due from the dry/loose/exposure soil surface/dusty material;
 - Disposal of empty engine oil containers within site area;
 - Ensure dust suppression measures are implemented properly;
 - Sediment catch-pits and silt removal facilities should be regularly maintained;
 - Management of chemical wastes;
 - Discharge of site effluent to the nearby wetland, stockpiling or disposal of materials, and any dredging or construction area at this area are prohibited;
 - Follow-up of improvement on general waste management issues; and
 - Implementation of construction noise preventative control measures
- 10.3.2 Contract 4 and Contract 6 have not yet commenced and no environmental issue is presented.

11 CONCLUSIONS AND RECOMMENDATIONS

11.1 CONCLUSIONS

- 11.1.1 This is 23rd monthly EM&A report presenting the monitoring results and inspection findings for the Reporting Period from 1 to 30 June 2015.
- For air quality monitoring, no 1-hour and 24-hour TSP monitoring results triggered the Action or Limit Levels were recorded. No NOEs or the associated corrective actions were therefore issued.
- 11.1.3 No noise complaint (which is an Action Level exceedance) was received and no construction noise measurement results that exceeded the Limit Level were recorded in the Reporting Period. No NOEs or the associated corrective actions were therefore issued.
- 11.1.4 For water quality monitoring, one (1) exceedance of turbidity and one (1) exceedance of suspended solids recorded at WM1. For WM4, a total of four (4) Limit Level exceedances were recorded, namely two (2) Limit Level exceedances of turbidity and two (2) Limit Level exceedances of suspended solids. It was concluded that the exceedances at WM4 were all not project related and the cause of exceedance at WM1 is underway.
- 11.1.5 No notification of summons or successful prosecution under the EM&A Programme of the Project was received in the reporting period for Contract 2, 3 and 5.
- 11.1.6 No environmental complaint under the EM&A Programme of the Project was received in the reporting period for Contract 2, 3 and 5.
- During the Reporting Period, four (4), five (5) and four (4) events of joint site inspection by the RE, IEC, ET with the relevant Main-contractor were carried out for Contracts 2, 3 and 5 respectively in accordance with the EM&A Manual stipulation. No non-compliance observed during the site inspection.

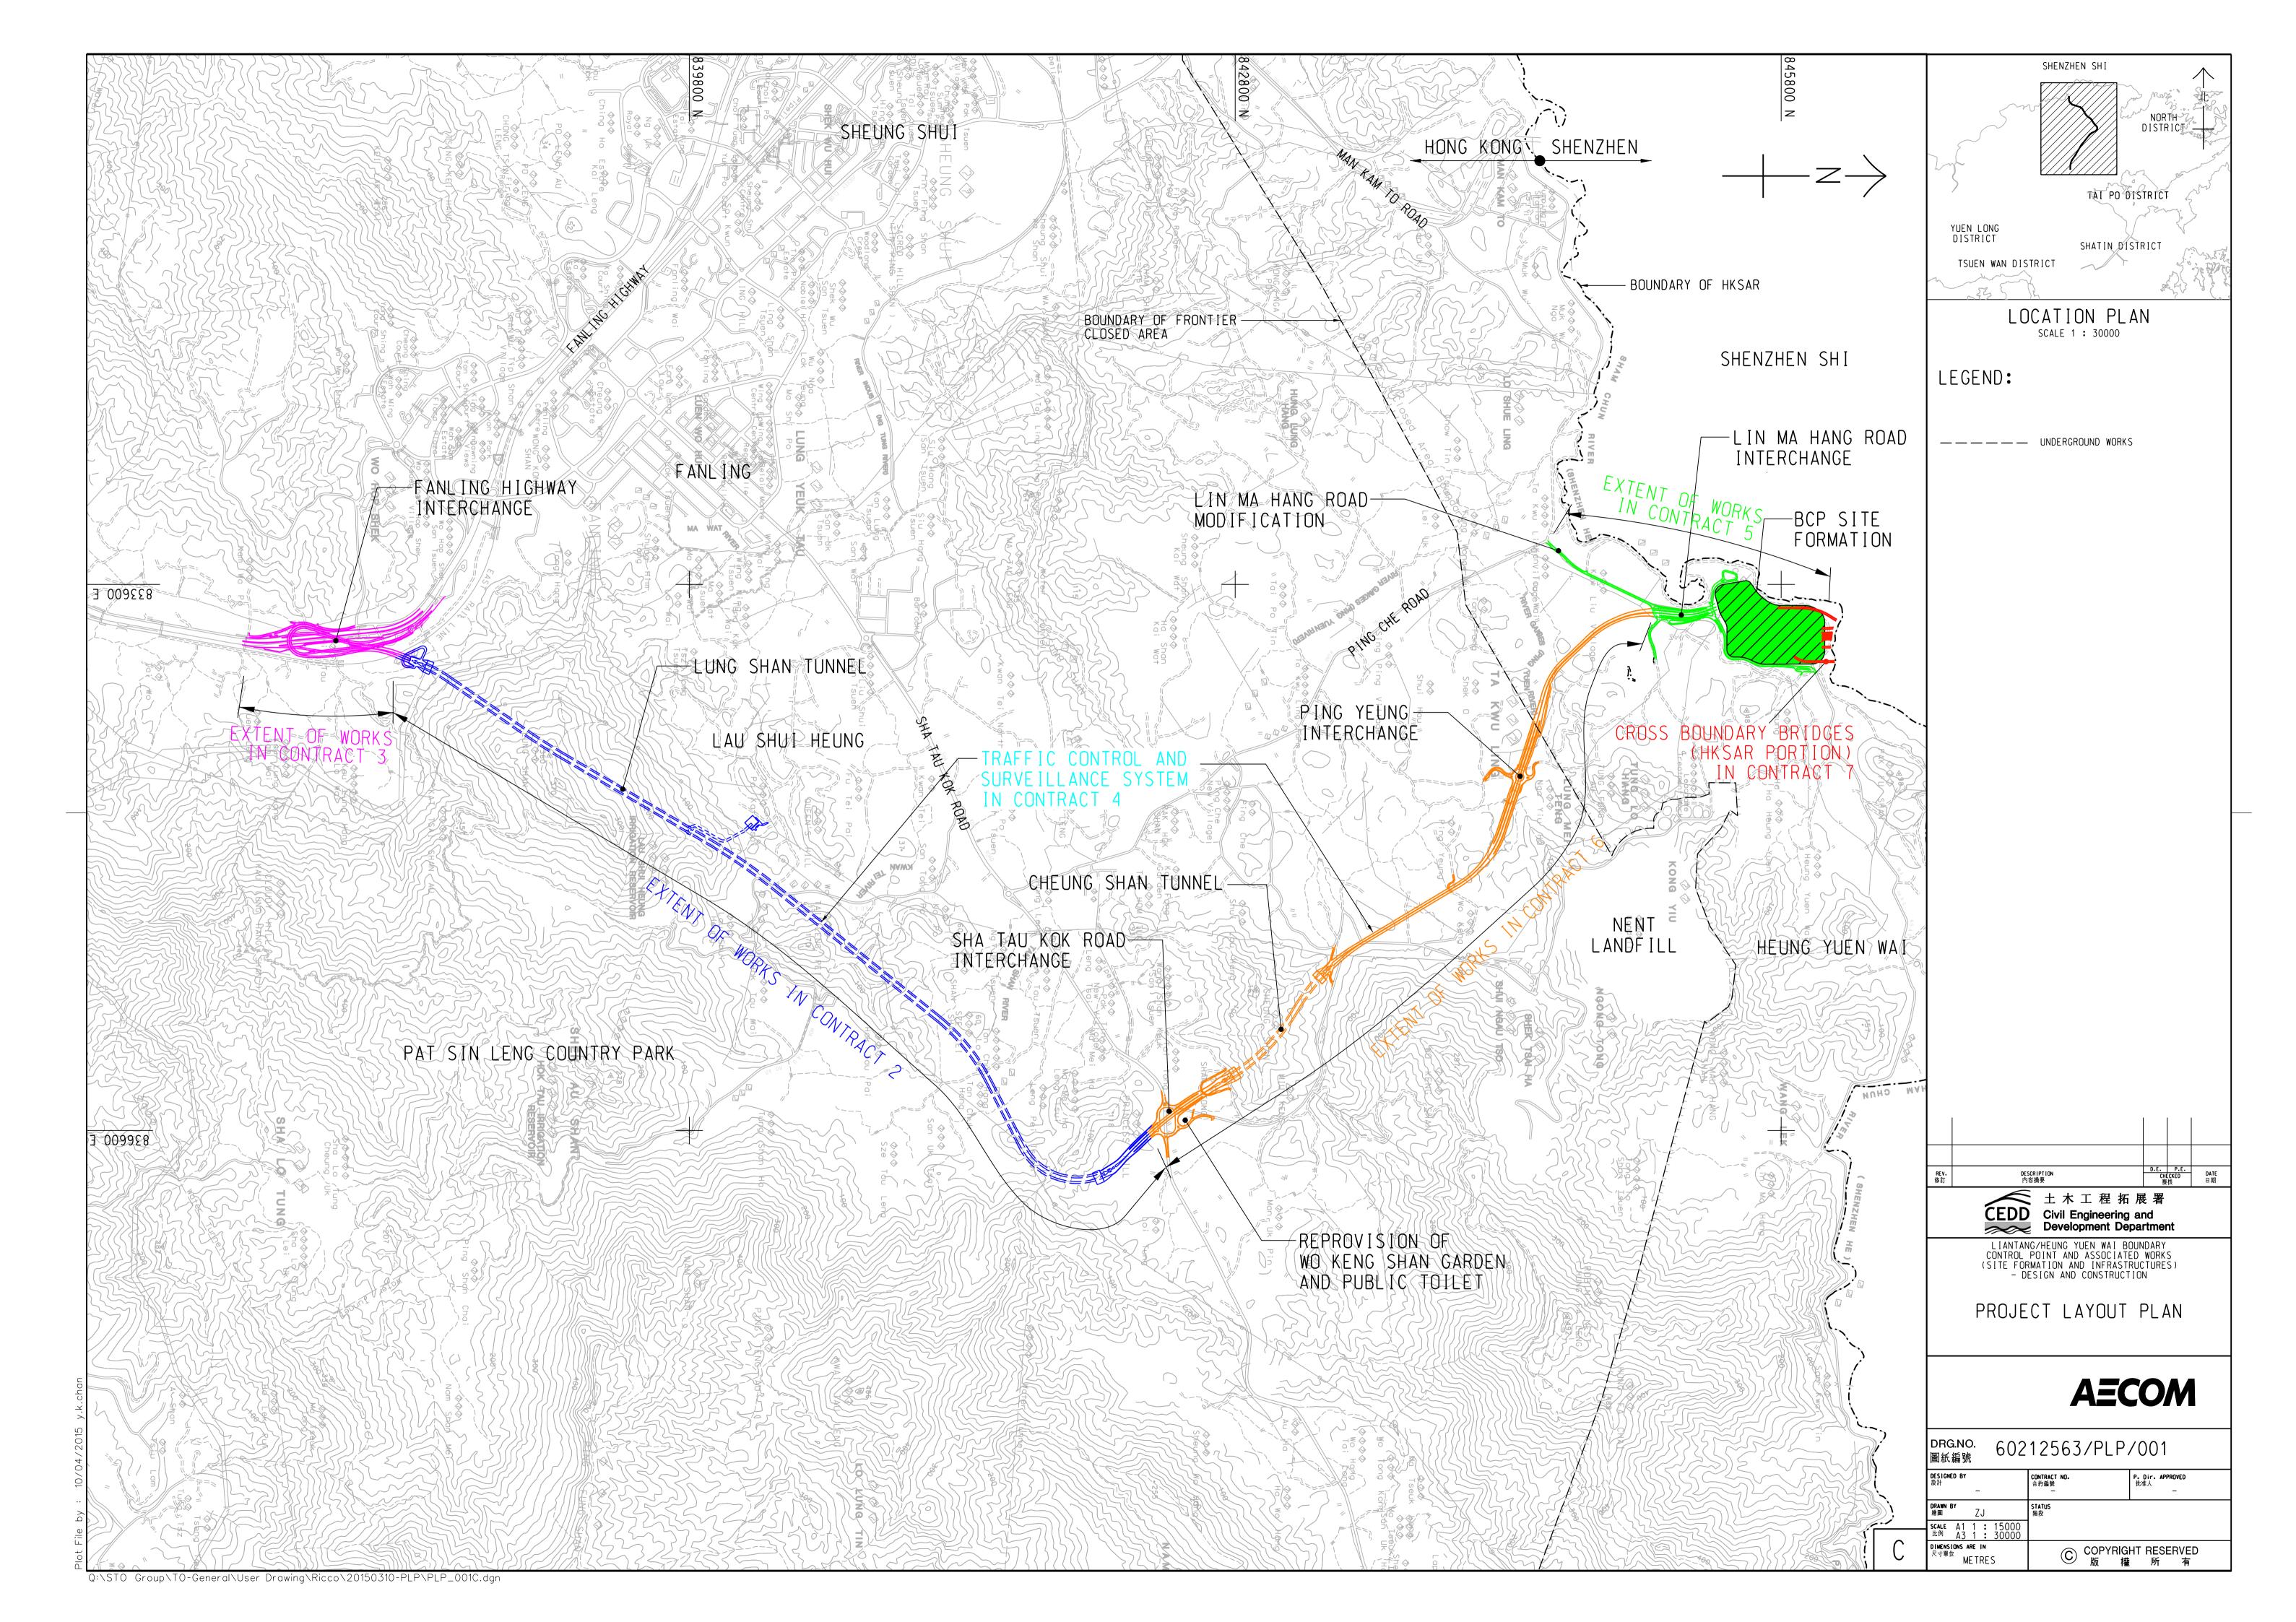

11.2 RECOMMENDATIONS

- During wet season, muddy water or other water pollutants from site surface runoff into Kong Yiu Channel and Ma Wat Channel will be key environment issue. Water quality mitigation measures to prevent surface runoff into nearby water bodies and public areas should be paid on special attention. The Contractors should fully implement the water quality mitigation measures.
- 11.2.2 Construction noise should be a key environmental impact during the works. The noise mitigation measures such as use of quiet plants or temporary noise barrier installation at the construction noise predominate area should be implemented as accordance with the EM&A requirement.
- Since most of construction sites under the Project are adjacent to villages, the contractors should be paid attention on the construction dust emission. The Contractor should fully implement the construction dust mitigation measures properly.
- Furthermore, daily cleaning and weekly tidiness shall be properly performed and maintained. In addition, mosquito control should be kept to prevent mosquito breeding on site.

Ostd slo intercep coeffici	t (b) = ent (r) =	2.10265 -0.00335 0.99999	Qa slor intercer coeffici	ot (b) =	1.31664 -0.00206 0.99999

CALCULATIONS

Vstd = Diff. Vol[(Pa-Diff. Hg)/760](298/Ta) Qstd = Vstd/Time

Va = Diff Vol [(Pa-Diff Hg)/Pa] Qa = Va/Time

For subsequent flow rate calculations:

Qstd = $1/m\{ [SQRT (H2O (Pa/760) (298/Ta))] - b\}$ Qa = $1/m\{ [SQRT H2O (Ta/Pa)] - b\}$

2. The results presented are the mean of 3 measurements at each calibration point.

3. Test equipment:

> Equipment ID CL130 CL281 TST150A

Description Universal Counter Multifunction Acoustic Calibrator Measuring Amplifier

Certificate No. C143868 DC130171 C141558

4. Test procedure: MA100N.

5. Results:

5.1 Sound Level Accuracy

UUT	Measured Value	Mfr's Spec.	Uncertainty of Measured Value (dB)
Nominal Value	(dB)	(dB)	
94 dB, 1 kHz	94.0	± 0.3	± 0.2

Frequency Accuracy

UUT Nominal Value	Measured Value	Mfr's	Uncertainty of Measured Value (Hz)
(kHz)	(kHz)	Spec.	
1	1.001	1 kHz ± 1 %	±1

Remark: The uncertainties are for a confidence probability of not less than 95 %.

Note:

Tel/電話: 2927 2606

The values given in this Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to the Nation Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory

COMMENTS

The performance of the equipment stated in this report is checked with independent reference material and results compared against a calibrated secondary source.

The "Tolerance Limit" quoted is the acceptance criteria applicable for similar equipment used by the ALS Hong Kong laboratory or quoted from relevant international standards.

The "Next Calibration Date" is recommended according to best practice principals as practised by the ALS Hong Kong laboratory or quoted from relevant international standards.

Scope of Test: Turbidity
Equipment Type: Turbidimeter

Brand Name: HACH Model No.: 2100Q

Serial No.: 11030C008499

Equipment No.: -

Date of Calibration: 29 April, 2015

NOTES

This is the Final Report and supersedes any preliminary report with this batch number.

Results apply to sample(s) as submitted. All pages of this report have been checked and approved for release.

Event and Action Plan

Event and Action Plan for Air Quality

	ET	IEC	ER	Contracto
Action Level				
Exceedance for one sample	Identify source, investigate the causes of exceedance and propose remedial measures; Inform IEC and ER; Repeat measurement to confirm finding; Increase monitoring frequency to daily.	Check monitoring data submitted by ET; Check Contractor's working method.	Notify Contractor.	Rectify any unacceptable practice; Amend working methods if appropriate.
Exceedance for two or more consecutive samples	 Identify source; 	1. Check monitoring data submitted by ET; 2. Check Contractor's working method; 3. Discuss with ET and Contractor on possible remedial measures; 4. Advise the ET on the effectiveness of the proposed remedial measures; 5. Monitor the implementation of remedial measures.	Confirm receipt of notification of failure in writing; Notify Contractor; Ensure remedial measures properly implemented.	Submit proposals for remedial to ER within 3 working days of notification; Implement the agreed proposals; Amend proposal i appropriate.
Limit Level				
Exceedance for one sample	investigate the causes of exceedance and propose remedial measures; 2. Inform ER, Contractor and EPD; 3. Repeat measurement to confirm finding; 4. Increase monitoring frequency to daily; 5. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results.	Contractor on possible remedial measures; 4. Advise the ER on the effectiveness of the proposed remedial measures; 5. Monitor theimplementation of remedial measures.	Confirm receipt of notification of failure in writing; Notify Contractor; Ensure remedial measures properly implemented.	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; 4. Amend proposal i appropriate.
Exceedance for two or more consecutive samples	1. Notify IEC, ER, Contractor	submitted by ET; 2. Check Contractor's working method; 3. Discuss amongst ER, ET, and Contractor on the potential remedial actions; 4. Review Contractor's remedial actions whenever necessary to assure their	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; 4. Ensure remedial measures properly implemented;	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; 4. Resubmit proposals if problem still not
	and ER to discuss the remedial actions to be taken; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; 8. If exceedance stops, cease additional monitoring.	the ER accordingly; 5. Monitor the implementation of remedial measures.	5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	under control; 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated.

Event and Action Plan for Construction Noise

Event	ET	IEC	ER	Action Contractor
Action Level	1. Notify ER, IEC and Contractor; 2. Carry out investigation; 3. Report the results of investigation to the IEC, ER and Contractor; 4. Discuss with the IEC and Contractor on remedial measures required; 5. Increase monitoring frequency to check mitigation effectiveness.	1. Review the investigation results submitted by the ET; 2. Review the proposed remedial measures by the Contractor and advise the ER accordingly; 3. Advise the ER on the effectiveness of the proposed remedial measures.	Confirm receipt of notification of failure in writing; Notify Contractor; In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; Supervise the implementation of remedial measures.	Submit noise mitigation proposals to IEC and ER; Implement noise mitigation proposals.
Limit Level	Inform IEC, ER, Contractor and EPD; Repeat measurements to confirm findings; Increase monitoring frequency; Identify source and investigate the cause of exceedance; Carry out analysis of Contractor's working procedures; Discuss with the IEC, Contractor and ER on remedial measures required; Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; If exceedance stops, cease additional monitoring.	Discuss amongst ER, ET, and Contractor on the potential remedial actions; Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly.	1. Confirm receipt of notification of failure in writino: 2. Notify Contractor; 3. In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; 4. Supervise the implementation of remedial measures; 5. If exceedance continues, consider stopping the Contractor to continue working on that portion of work which causes the exceedance until the exceedance is abated.	1. Take immediate action to avoid further exceedance: 2. Submit proposals for remedial actions to IEC and ER within 3 working days of notification; 3. Implement the agreed proposals; 4. Submit further proposal if problem still not under control; 5. Stop the relevant portion of works as instructed by the ER until the exceedance is abated.

Event and Action Plan for Water Quality

EVENT	ET	IEC	ER	CONTRACTOR
Action level being exceeded by one sampling day	1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC and Contractor; 6. Repeat measurement on next day of exceedance.	Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures	Discuss with IEC on the proposed mitigation measures; Make agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures	Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Consider changes of working methods; Discuss with ET and IEC and propose mitigation measures to IEC and ER; Implement the agreed mitigation measures.
Action Level being exceeded by more than two consecutive sampling day's	1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working matheries; 5. Discuss mitigation measures with IEC and Contractor; 6. Ensure mitigation measures are implemented; 7. Prepare to increase the monitoring frequency to daily; 8. Repeat measurement on next day of	Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures	Discuss with IEC on the proposed mitigation measures; Make agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures	Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Consider changes of working methods; Discuss with ET and IEC and propose mitigation measures to IEC and ER within 2 working relaw; Implement the agreed mitigation measures.
Limit Level being exceeded by one sampling day	exceedance. 1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC, Contractor and EPD; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC, ER and Contractor; 6. Ensure mitigation measures are implemented; 7. Increase the monitoring frequency to daily until no exceedance of Limit	Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures	Discuss with IEC, ET and Contractor on the proposed mitigation measures; Request Contractor to critically review the working methods; Make agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures	Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Consider changes of working methods; Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; Implement the agreed mitigation measures.
Limit level being exceeded by more than one consecutive sampling days	Level. 1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC, Contractor and EPD; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC, ER and Contractor; 6. Ensure mitigation measures are implemented; 7. Increase the monitoring frequency to daily until no exceedance of Limit Level for two consecutive days.	Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IEC, ET and Contractor on the proposed mitigation measures; 2. Request Contractor to critically review the working methods; 3. Make agreement on the mitigation measures to be implemented; 4. Assess the effectiveness of the implemented mitigation measures; 5. Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the construction activities until no exceedance of Limit Level.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; 6. Implement the agreed mitigation measures; 7. As directed by the ER, to slow down or to stop all or part of the construction activities.

0	0	0	0	0	350	30	4	2	1	4

Notes:

- (1) The performance targets are given in PS clause 6(14) above.
- (2) The waste flow table shall also include C&D materials that are specified in the Contractor to be imported for use at the Site.
- (3) Plastic refer to plastic bottles/containers, plastic sheets/foam from packaging material.
- (4) The Contractor shall also submit the latest forecast of the total amount of C&D materials expected to be generated from the Works, together with a breakdown of the nature
- Hard Rocks and Large Broken Concrete = Cannot be defined at this stage
- Imported Fill = Estimated by the Contractor = 1 loading = 8m 3
- Metal = Estimated by the Contractor
- Paper/cardboard packaging = Estimated by the Contractor
- Plastics = Estimated by the Contractor
- Chemical Waste = Estimated by the Contractor (Spent lubricating oil, assume density 0.9kg/L)
- Other, e.g. general refuse = Estimated by the Contractor

Appendix M

Implementation Schedule for Environmental Mitigation Measures

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure	Who to implement the	Location of the measure	When to implement the	What requirements or standards for the measure to
	Her.		& Main Concerns to address	measure?	illeasure	measure?	achieve?
Air Quali	ty Impact (Construction)					
3.6.1.1	2.1	 General Dust Control Measures The following dust suppression measures should be implemented: Frequent water spraying for active construction areas (4 times per day for active areas in Po Kak Tsai and 8 times per day for all other active areas), including areas with heavy construction and slope cutting activities 80% of stockpile areas should be covered by impervious sheets Speed of trucks within the site should be controlled to about 10 km/hr All haul roads within the site should be paved to avoid dust 	To minimize adverse dust emission generated from various construction activities of the works sites	Contractor	Construction Works Sites	During Construction	EIA Recommendation and Air Pollution Control (Construction Dust) Regulation
		emission due to vehicular movement					
3.6.1.2	2.1	Best Practice for Dust Control The relevant best practices for dust control as stipulated in the Air Pollution Control (Construction Dust) Regulation should be adopted to further reduce the construction dust impacts of the Project. These best practices include: Good site management	To minimize adverse dust emission generated from various construction activities of the works sites	Contractor	Construction Works Sites	During Construction	EIA Recommendation and Air Pollution Control (Construction Dust) Regulation
		 The Contractor should maintain high standard of housekeeping to prevent emission of fugitive dust. Loading, unloading, handling and storage of raw materials, wastes or by-products should be carried out in a manner so as to minimize the release of visible dust emission. 	WOINS SILES				
		Any piles of materials accumulated on or around the work areas should be cleaned up regularly.					
		Cleaning, repair and maintenance of all plant facilities within the work areas should be carried out in a manner minimizing generation of fugitive dust emissions.					
		 The material should be handled properly to prevent fugitive dust emission before cleaning. Disturbed Parts of the Roads 					
		 Each and every main temporary access should be paved with

concrete, bituminous hardcore materials or metal plates and kept clear of dusty materials; or

 Unpaved parts of the road should be sprayed with water or a dust suppression chemical so as to keep the entire road surface wet.

Exposed Earth

Exposed earth should be properly treated by compaction, hydroseeding, vegetation planting or seating with latex, vinyl, bitumen within six months after the last construction activity on the site or part of the site where the exposed earth lies.

Loading, Unloading or Transfer of Dusty Materials

 All dusty materials should be sprayed with water immediately prior to any loading or transfer operation so as to keep the dusty material wet.

Debris Handlina

- Any debris should be covered entirely by impervious sheeting or stored in a debris collection area sheltered on the top and the three sides.
- Before debris is dumped into a chute, water should be sprayed so that it remains wet when it is dumped.

Transport of Dusty Materials

 Vehicle used for transporting dusty materials/spoils should be covered with tarpaulin or similar material. The cover should extend over the edges of the sides and tailboards.

Wheel washing

Vehicle wheel washing facilities should be provided at each construction site exit. Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels.

Use of vehicles

- Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels.
- Where a vehicle leaving the construction site is carrying a load of dusty materials, the load should be covered entirely by clean impervious sheeting to ensure that the dusty materials do not leak from the vehicle.

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		Site hoarding Where a site boundary adjoins a road, street, service lane or other area accessible to the public, hoarding of not less than 2.4m high from ground level should be provided along the entire length of that portion of the site boundary except for a site entrance or exit. Blasting The areas within 30m from the blasting area should be wetted with water prior to blasting.					
Air Qualit	ty Impact (Operation)					
3.5.2.2	2.2	 The following odour containment and control measures will be provided for the proposed sewage treatment work at the BCP site: The treatment work will be totally enclosed. Negative pressure ventilation will be provided within the enclosure to avoid any fugitive odorous emission from the treatment work. Further odour containment will be achieved by covering or confining the sewage channels, sewage tanks, and equipment with potential odour emission. Proper mixing will be provided at the equalization and sludge holding tanks to prevent sewage septicity. Chemical or biological deodorisation facilities with a minimum odour removal efficiency of 90% will be provided to treat potential odorous emissions from the treatment plant including sewage channels / tanks, filter press and screening facilities so as to minimize any potential odour impact to the nearby ASRs. 	To minimize potential odour impact from operation of the proposed sewage treatment work at BCP	DSD	BCP	Operation Phase	EIA recommendation
Noise Imp	pact (Cons	truction)					
4.4.1.4	3.1	Adoption of Quieter PME Use of the recommended quieter PME such as those given in the BS5228: Part 1:2009 and presented in Table 4.14, which can be found in Hong Kong.	To minimize the construction air-borne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and Noise Control Ordinance (NCO)

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
4.4.1.4	3.1	Use of Movable Noise Barrier The use of movable barrier for certain PME can further alleviate the construction noise impacts. In general, a 5 dB(A) reduction for movable PME and 10 dB(A) for stationary PME can be achieved depending on the actual design of the movable noise barrier. The Contractor shall be responsible for design of the movable noise barrier with due consideration given to the size of the PME and the requirement for intercepting the line of sight between the NSRs and PME. Barrier material with surface mass in excess of 7 kg/m² is recommended to achieve the predicted screening effect.	To minimize the construction airborne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO
4.4.1.4	3.1	Use of Noise Enclosure/ Acoustic Shed The use of noise enclosure or acoustic shed is to cover stationary PME such as air compressor and concrete pump. With the adoption of the noise enclosure, the PME could be completely screened, and noise reduction of 15 dB(A) can be achieved according to the GW-TM.	To minimize the construction airborne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO
4.4.1.4 3.1	3.1	Use of Noise Insulating Fabric Noise insulating fabric can be adopted for certain PME (e.g. drill rig, pilling auger etc). The insulating fabric should be lapped such that there are no openings or gaps on the joints. Technical data from manufacturers state that by using the Fabric, a noise reduction of over 10 dB(A) can be achieved on noise level.	To minimize the construction airborne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO

4.5.2.4	3.2	 The following noise reduction measures shall be considered as far as practicable during operation: Choose quieter plant such as those which have been effectively silenced; Include noise levels specification when ordering new plant (including chillier and E/M equipment); Locate fixed plant/louver away from any NSRs as far as practicable; Locate fixed plant in walled plant rooms or in specially designed enclosures; Locate noisy machines in a basement or a completely separate building; Install direct noise mitigation measures including silencers, acoustic louvers and acoustic enclosure where necessary; and Develop and implement a regularly scheduled plant maintenance programme so that equipment is properly operated and serviced in order to maintain a controlled level of noise. 	To minimize the fixed plant noise impact	Managing Authority of the buildings / Contractor	BCP, Administration Building and all ventilation buildings	Before Operation	EIAO and NCO
Water Qu	uality Impac	ct (Construction)					
5.6.1.1	4.1	Construction site runoff and drainage The site practices outlined in ProPECC Note PN 1/94 should be followed as far as practicable in order to minimise surface runoff and the chance of erosion. The following measures are recommended to protect water quality and when properly implemented should be sufficient to adequately control site discharges so as to avoid water quality impacts:	To control site runoff and drainage; prevent high sediment loading from reaching the nearby	Contractor	Construction Works Sites	Construction Phase	Practice Note for Professional Persons on Construction Site Drainage (ProPECC Note PN 1/94)
		At the start of site establishment, perimeter cut-off drains to direct off-site water around the site should be constructed with internal drainage works and erosion and sedimentation control facilities implemented. Channels (both temporary and permanent drainage pipes and culverts), earth bunds or sand bag barriers should be provided on site to direct stormwater to silt removal facilities. The design of the temporary on-site drainage system should be undertaken by the Contractor prior to the commencement of construction.	watercourses				
		The dikes or embankments for flood protection should be implemented around the boundaries of earthwork areas.					

Objectives of the What requirements Who to Recommended When to **Recommended Mitigation Measures** EM&A implement Location of the or standards for the Measure EIA Ref. implement the Ref. the measure measure to measure? & Main Concerns measure? achieve? to address

Temporary ditches should be provided to facilitate the runoff discharge into stormwater drainage system through a sediment/silt trap. The sediment/silt traps should be incorporated in the permanent drainage channels to enhance deposition rates, if practical.

- Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM standards under the WPCO. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC Note PN 1/94. Sizes may vary depending upon the flow rate. The detailed design of the sand/silt traps should be undertaken by the Contractor prior to the commencement of construction.
- All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly during rainstorms. Deposited silt and grit should be regularly removed, at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times.
- Measures should be taken to minimize the ingress of site drainage into excavations. If excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from foundation excavations should be discharged into storm drains via silt removal facilities.
- If surface excavation works cannot be avoided during the wet season (April to September), temporarily exposed slope/soil surfaces should be covered by tarpaulin or other means, as far as practicable, and temporary access roads should be protected by crushed stone or gravel, as excavation proceeds. Interception channels should be provided (e.g. along the crest/edge of the excavation) to prevent storm runoff from washing across exposed soil surfaces. Arrangements should always be in place to ensure that adequate surface protection measures can be safely carried out well before the arrival of a rainstorm. Other measures that need to be implemented before, during and after rainstorms are summarized in ProPECC Note PN 1/94.
- The overall slope of the site should be kept to a minimum to reduce

		the erosive potential of surface water flows.	·				
		All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facility should be provided at construction site exit where practicable. Wash-water should have sand and silt settled out and removed regularly to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains.					
		Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.					
		Manholes (including newly constructed ones) should be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and stormwater runoff being directed into foul sewers.					
		■ Precautions should be taken at any time of the year when rainstorms are likely. Actions should be taken when a rainstorm is imminent or forecasted and actions to be taken during or after rainstorms are summarized in Appendix A2 of ProPECC Note PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events, especially for areas located near steep slopes.					
		■ Bentonite slurries used in piling or slurry walling should be reconditioned and reused wherever practicable. Temporary enclosed storage locations should be provided on-site for any unused bentonite that needs to be transported away after all the related construction activities are completed. The requirements in ProPECC Note PN 1/94 should be adhered to in the handling and disposal of bentonite slurries.

		The following conditions should be complied, if there is any works to be carried out within the water gathering grounds:	quality impacts to the water gathering grounds		Works Sites within the water gathering	Phase	1/94

Objectives of the What requirements Who to Recommended When to **Recommended Mitigation Measures** EM&A implement Location of the or standards for the Measure EIA Ref. implement the Ref. the measure measure to measure? & Main Concerns measure? achieve? to address grounds Adequate measures should be implemented to ensure no pollution

- or siltation occurs to the catchwaters and catchments.
- No earth, building materials, oil or fuel, soil, toxic materials or any materials that may possibly cause contamination to water gathering grounds are allowed to be stockpiled on site.
- All surplus spoil should be removed from water gathering grounds as soon as possible.
- Temporary drains with silt traps should be constructed at the site boundary before the commencement of any earthworks.
- Regular cleaning of silt traps should be carried out to ensure proper operation at all time.
- All excavated or filled surfaces which have the risk of erosion should always be protected form erosion.
- Facilities for washing the wheels of vehicles before leaving the site should be provided.
- Any construction plant which causes pollution to catchwaters or catchments due to the leakage of oil or fuel should be removed off site immediately.
- No maintenance activities which may generate chemical wastes should be undertaken in the water gathering grounds. Vehicle maintenance should be confined to designated paved areas only and any spillages should be cleared up immediately using absorbents and waste oils should be collected in designated tanks prior to disposal off site. All storm water run-off from these areas should be discharged via oil/petrol separators and sand/silt removal traps.
- Any soil contaminated with fuel leaked from plant should be removed off site and the voids arising from removal of contaminated soil should be replaced by suitable material approved by the Director of Water Supplies.
- Provision of temporary toilet facilities and use of chemicals or insecticide of any kind are subject to the approval of the Director of Water Supplies.
- Drainage plans should be submitted for approval by the Director of

Construction solid waste, debris and refuse generated on-site should be collected, handled and disposed of properly to avoid entering any nearby stormwater drain. Stockplies of cement and other construction materials should be kept covered when not being used. Oils and fuels should only be stored in designated areas which have pollution prevention facilities. To prevent spillage of fuels and solvents to any nearby stormwater drain, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. The bund should be drained of rainwater after a rain event. 5.6.1.3 4.1 Sewage effluent from construction workforce Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site where necessary to handle sewage from the workforce. A licensed contractor should be employed to provide appropriate and adequate portable toilets and be responsible for appropriate disposal and maintenance. 5.6.1.4 4.1 Hydrogeological Impact Grout injection works would be conducted before blasting, for sealing a limited area around the tunnel with a grout of a suitable strength for controlling the potential groundwater inflows. Waste Ma	anagement	Implication (Construction)					
7.6.1.1	6	Good Site Practices Adverse impacts related to waste management such as potential hazard, air, odour, noise, wastewater discharge and public transport as mentioned in section 3.4.7.2 (ii)(c) of the Study Brief are not expected to arise, provided that good site practices are strictly followed. Recommendations for good site practices during the construction activities include:	To minimize adverse environmental impact	Contractor	Construction works sites (general)	Construction Phase	EIA recommendation; Waste Disposal Ordinance; Waste Disposal (Chemical Wastes) (General) Regulation; and ETWB TC(W) No.
		Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site					19/2005, Environmental Management on Construction Site
		 Training of site personnel in proper waste management and chemical handling procedures 					
		 Provision of sufficient waste disposal points and regular collection of waste 					
		Dust suppression measures as required under the Air Pollution Control (Construction Dust) Regulation should be followed as far as practicable. Appropriate measures to minimise windblown litter and dust/odour during transportation of waste by covering trucks or in enclosed containers					
		 General refuse shall be removed away immediately for disposal. As 					

Environmental Monitoring and Audit Manual									
EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?		
	•	such odour is not anticipated to be an issue to distant sensitive receivers							
		Provision of wheel washing facilities before the trucks leaving the works area so as to minimise dust introduction from public road							
		 Covers and water spraying system should be provided for the stockpiled C&D material to prevent dust impact or being washed away 							
		 Designate different locations for storage of C&D material to enhance reuse 							
		■ Well planned programme for transportation of C&D material to lessen the off-site traffic impact. Well planned delivery programme for offsite disposal and imported filling material such that adverse noise impact from transporting of C&D material is not anticipated							
		Site practices outlined in ProPECC PN 1/94 "Construction Site Drainage" should be adopted as far as practicable, such as cleaning and maintenance of drainage systems regularly							
		 Provision of cover for the stockpile material, sand bag or earth bund as barrier to prevent material from washing away and entering the drains 							
7.6.1.2		Waste Reduction Measures	To reduce the quantity of wastes	Contractor	Construction works sites (General)	Construction Phase	EIA recommendation and Waste Disposal Ordinance		
		Good management and control can prevent the generation of a significant amount of waste. Waste reduction is best achieved at the planning and design stage, as well as by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include:							
		 Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal 							
		 Encourage collection of aluminium cans by providing separate labelled bins to enable this waste to be segregated from other general refuse generated by the work force 							
		 Proper storage and site practices to minimise the potential for damage or contamination of construction materials 							
		Plan and stock construction materials carefully to minimise amount							

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		In addition to the above measures, specific mitigation measures are recommended below for the identified waste arising to minimise environmental impacts during handling, transportation and disposal of these wastes.					
7.6.1.3	6	C&D Materials	To minimize impacts resulting from C&D material	Contractor	Construction Works Sites (General)	Construction Phase	EIA recommendation; Waste Disposal Ordinance; and ETWB TCW No. 31/2004
		In order to minimise impacts resulting from collection and transportation of C&D material for off-site disposal, the excavated materials should be reused on-site as backfilling material as far as practicable. The surplus rock and other inert C&D material would be disposed of at the Government's Public Fill Reception Facilities (PFRFs) at Tuen Mun Area 38 for beneficial use by other projects in the HKSAR as the last resort. C&D waste generated from general site clearance and tree felling works would require disposal to the designated landfill site. Other mitigation requirements are listed below:					
		 A Waste Management Plan should be prepared and implemented in accordance with ETWB TC(W) No. 19/2005 Environmental Management on Construction Site; and 					
		■ In order to monitor the disposal of C&D material and solid wastes at public filling facilities and landfills, and to control fly-tipping, a trip-ticket system (e.g. ETWB TCW No. 31/2004) should be included.					
7.6.1.4	6	General refuse General refuse should be stored in enclosed bins or compaction units separated from other C&D material. A reputable waste collector is to be employed by the Contractor to remove general refuse from the site separately. Preferably an enclosed and covered area should be provided to reduce the occurrence of 'wind blown' litter.	To minimize impacts resulting from collection and transportation of general refuse for off-site disposal	Contractor	Construction works sites (General)	Construction phase	Waste Disposal Ordinance and Public Health and Municipal Services Ordinance - Public Cleansing and Prevention of Nuisances Regulation
7.6.1.5	6	Chemical waste If chemical wastes are produced at the construction site, the Contractor will be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical	To minimize impacts resulting from collection and transportation of chemical waste for off-site disposal	Contractor	Construction works sites (General)	Construction phase	Waste Disposal (Chemical Waste) (General) Regulation and Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes
