AECOM Supervising Officer Representative's Office No. 8 Mong Fat Street, Tuen Mun, New Territories, Hong Kong

Attention: Mr. Albert Yu

Dear Mr. Yu,

Re: Agreement No. CE 48/2011 (EP) Environmental Project Office for the HZMB Hong Kong Link Road, HZMB Hong Kong Boundary Crossing Facilities, and Tuen Mun-Chek Lap Kok Link – Investigation

Contract No. HY/2013/12 TM-CLKL Northern Connection Toll Plaza and Associated Works <u>34th Monthly EM&A Report for August 2017 (EP-354/2009/D)</u>

Reference is made to the Monthly Environmental Monitoring and Audit (EM&A) Report (Aug. 2017) (AUES reference: TCS00715/14/600/R0326v2 dated 11 Sep. 2017) certified by the ET Leader and provided to us via e-mail on 11 Sep 2017.

Please be informed that we have no adverse comments on the captioned Report. We write to verify the captioned submission in accordance with Condition 4.4 of EP-354/2009/D.

Thank you for your attention. Please do not hesitate to contact the undersigned or the ENPO Leader Mr. Y. H. Hui should you have any queries.

Yours sincerely,

Hang Fandleoup

F. C. Tsang Independent Environmental Checker Tuen Mun – Chek Lap Kok Link

EXECUTIVE SUMMARY

ES01 This is the 34th Monthly EM&A Report presenting the monitoring results and inspection findings for the period from 1 to 31 August 2017 (hereinafter 'the Reporting Period').

SUMMARY OF EM&A ACTIVITIES FOR THE REPORTING PERIOD

- ES02 The EM&A activities conducted in the Reporting Period are summary in below:-
 - 24-hours TSP of Air Quality Monitoring –50 events
 - 1-hour TSP of Air Quality Monitoring **165 events**
 - Cultural Heritage Inspection **5 events**
 - Landfill Gas Monitoring 26 days
 - Landscape & Visual Monitoring 4 events
 - Environmental Site Inspection **5** events

BREACH OF ACTION AND LIMIT (A/L) LEVELS

ES03 In the Reporting Period, 1 Action Level exceedances of 1-hour TSP was recorded at ASR1 on 22 August 2017 according to the measurement results by the ET of Contract HY/2012/08, investigation report for the exceedances is underway by the ET and it will submit to all relevant parties. The summary of breach of air quality performance is shown below.

Environmontal	Monitoring	a Action Limit		Event & Action	n	
Environmental Aspect	Monitoring Parameters	Action Level	Limit Level	NOE Issued	Investigation	Corrective Actions
Ain Quality	1-hour TSP	1	0	1	0	0
Air Quality	24-hour TSP	0	0	0	0	0

- ES04 In last Reporting Period, the exceedances of 1-hour TSP were recorded on 29 July 2017. The investigation report (IR) has been submitted by ET.
- ES05 No noise complaints were received in the Reporting Period.
- ES06 Landfill gas monitoring was conducted at the TD1 and Lung Mun Road works area in this reporting month by the Safety Officer. The monitoring results shown no exceedances were triggered.
- ES07 Site inspection for landscape and visual was conducted on weekly basis by the Landscape Architect to ensure the compliance with the intended aims of the mitigation measures. Most of the landscape works such as planting was not yet commenced.

SITE INSPECTION

- ES08 In the Reporting Period, joint site inspection by the RE, ET and the Contractor was carried out on 1st, 8th, 15th, 22nd and 29th August 2017 and the IEC has attended the joint site inspection on 29th August 2017. No non-compliance was recorded during the site inspection but 1 observation and 2 reminders were recorded.
- ES09 Inspection for Pitcher Plants of ecology and grave of culture heritage were also carried out during the weekly site inspection. It was observed that the transplanted pitcher plants were properly protected. Establishment period for the pitcher plants was completed at the end of September 2016 and the final pitcher plants report was submitted to AFCD on early December 2016. Since then only the integrity of the protection fence was checked to fulfil the EIA requirement.

ENVIRONMENTAL COMPLAINT

ES10 In the Reporting Period, no environmental complaint was received.

ES11 The statistical summary of environmental complaints is summarized in the following table.

Departing Deviad	Environmental Complaint Statistics		
Reporting Period	Frequency	Cumulative	
Since the Contract commencement	7	7	
August 2017	0	7	

NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES12 No environmental summons or successful prosecutions were recorded in the Reporting Period.

REPORTING CHANGE

ES13 No reporting changes were made in the Reporting Period.

FUTURE KEY ISSUES

- ES14 During wet season, muddy water or other water pollutants from site surface runoff into the public areas will be key environment issue. Special attention should be paid on the water quality mitigation measures to prevent surface runoff flow to public area.
- ES15 Although in wet season, air quality mitigation measures such as watering of site area for 12 times per day and covering of exposed slopes should be fully implemented to reduce construction dust impact as recommended in the EMIS.
- ES16 It was reminded that good housekeeping practice should be maintained. Mosquito control measures should be properly implemented to prevent mosquito breeding on site especially after rain.

1 INTRODUCTION

1.1 CONTRACT BACKGROUND

- 1.1.1 CRBC-Kaden Joint Venture (hereafter "CRBC-Kaden JV") is commissioned by the Highways Department (HyD) as the Main Contractor of the Contract No. HY/2013/12 Northern Connection Toll Plaza and Tunnel Section ((hereafter "the Contract") and this Contract is part of the Tuen Mun Chek Lap Kok Link (TM-CLK Link Project). TM-CLK Link Project is a Designated Project under Environmental Permit number EP-354/2009/D issued on 13 March 2015. The layout Plan of the Project and the Contract are showed in *Appendix A* and *B* respectively.
- 1.1.2 The construction works of the Contract mainly include:
 - a. construction of an approximately 5.4 hectares toll plaza and an associated footbridge;
 - b. construction of associated carriageways including approximately 0.74 kilometre land viaducts, and an approximately 230 metres vehicular underpass to connect the toll plaza and the roundabout at Lung Mun Road/Lung Fu Road;
 - c. site formation for the construction of the toll plaza, including associated slope works and natural terrain hazard mitigation measures;
 - d. modification and realignment of the existing Lung Mun Road and Lung Fu Road; and
 - e. associated waterworks, drainage, sewerage and landscaping works, etc..
- 1.1.3 This is **34th** monthly EM&A report presenting the monitoring results and inspection findings for period from **1 to 31 August 2017**.

1.2 REPORT STRUCTURE

1.2.1 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-

Section 1 Introduction

- Section 2 Contract Organization and Construction Progress and Environmental Submissions
- Section 3 Summary of Impact Monitoring Requirements under the Contract
- Section 4 Air Quality Monitoring
- Section 5 Ecology Monitoring
- Section 6 Cultural Heritage
- Section 7 Landscape and Visual
- Section 8 Landfill gas hazard Monitoring
- Section 9 Waste Management
- Section 10 Inspections and Audit
- Section 11 Environmental Complaints and Non-Compliance
- Section 12 Implementation Status of Mitigation Measures
- Section 13 Conclusions and Recommendations

2 CONTRACT ORGANIZATION AND CONSTRUCTION PROGRESS AND ENVIRONMENTAL SUBMISSIONS

2.1 CONTRACT ORGANIZATION

2.1.1 The Contract organization and contact details of key personnel are shown in *Appendix C*.

2.2 CONSTRUCTION PROGRESS

- 2.2.1 In the Reporting Period, the major construction activity conducted under the Contract is summarized in below. The three-months rolling programme of the Contract is enclosed in *Appendix D*.
 - Instrumentation and Monitoring
 - Site Formation Earthwork on Slope D and E; surface drainage on Slope C, D & E and Portion H;
 - Toll Plaza Decking and TD2;
 - Toll Plaza Footbridge;
 - Retaining Structure RW_A, RW_B and RW_F;
 - Toll Collector Subway & Associated Works;
 - Bridge G1, G2 and Bridge H1 by Form Traveller;
 - Sewer Culvert at FC1 and FC2;
 - Waterproofing and lining at Vehicular Underpass
 - Road and Drainage Works at +11mPD, +19mPD and Portion H

2.3 SUMMARY OF ENVIRONMENTAL SUBMISSIONS

- 2.3.1 The environmental submissions under the EP requirement had been submitted to the EPD and they are listed in below:
 - Monitoring Plan on Construction Dust (submission refer to Contract HY/2012/08)
 - Landscape and Visual Plan (not yet endorsed by EPD)
 - Waste Management Plan (endorsed by EPD on 16 March 2015)
 - Baseline Monitoring Report (not yet endorsed by EPD)
- 2.3.2 Summary of environmental permits, licenses and notifications for the Contract is presented in *Table 2-1*.

 Table 2-1
 Status of Environmental Licenses and Permits of the Contract

No.	Type of Permit/ License	Reference/ License No.	Date of Issue	Date of Expiry
1	Air pollution Control (Construction Dust) Regulation	377719	06-08-2014	N/A

4	Water Pollution Control Ordinance – New Variation of Effluent Discharge License	WT00023973-2016	18-05-2016	30-09-2019
5	Waste Disposal Regulation - Billing Account for Disposal of Construction Waste	7020460	01-08-2014	N/A
6	CNP for Multiple Task	GW-RW0230-17	08-05-2017	04-11-2017
7	CNP for MH5	GW-RW0242-17	22-05-2017	17-11-2017
8	CNP for Tunnel Works	GW-RW0243-17	23-05-2017	22-11-2017
9	CNP for Road Paving Works	GW-RW0211-17	25-04-2017	01-11-2017
10	CNP for Portion H	GW-RW0242-17	22-05-2017	17-11-2017

3 SUMMARY OF IMPACT MONITORING REQUIREMENTS UNDER THE CONTRACT

3.1 GENERAL

- 3.1.1 The major construction activities under the Contract are land-based and no marine work will be involved. In accordance with the Project EM&A Manual requirements, the environmental aspects under the Contract shall be included air quality, ecological, cultural heritage, landscape and visual, landfill gas and site inspection during construction period. In addition, audit of the contractor's implementation of the construction noise and land-based water quality pollution control measures are also required for the Contract.
- 3.1.2 A summary of construction phase EM&A requirements are presented in the sub-sections below.

3.2 AIR QUALITY MONITORING

- 3.2.1 The construction phase air quality monitoring shall cover the following parameters:
 - 1-hour TSP; and
 - 24-hour TSP

3.3 MONITORING LOCATION

3.3.1 The air quality monitoring stations for impact monitoring are listed in *Table 3-1* and illustrated in *Appendix E*.

-		
ID	Location	Air monitoring station Description
ASR1	Tuen Mun Fireboat Station	EM&A Manual
ASR5	Pillar Point Fire Station	EM&A Manual
AQMS1	Previous River Trade Golf	Enhanced TSP Level under EP condition 2.4
ASR6	Butterfly Beach Laundry	Enhanced TSP Level under EP condition 2.4
ASR10	Butterfly Beach Park	Enhanced TSP Level under EP condition 2.4

 Table 3-1
 Air Quality Monitoring Stations under the Contract

3.4 MONITORING FREQUENCY

- 3.4.1 As per Condition 2.4 of the EP of TM-CLKL, an enhanced monitoring plan on TSP level at Tuen Mun ("the Enhanced TSP Monitoring Plan") is required to be submitted to the DEP for approval at least 1 month before the commencement of construction of the Project. Details of the Enhanced TSP Monitoring Plan under Contract No. HY/2012/08 could be found from the project website. The air quality monitoring work under this Contract will follow the monitoring requirement of enhanced TSP monitoring under the project.
- 3.4.2 The air quality monitoring requirements for the Contract is summarized in *Table 3-2*.

 Table 3-2
 Enhanced TSP Monitoring Plan – Construction Phase

Condition	Monitoring Parameter	Monitoring Location	Frequency	Monitoring Requirement
General	1-hour TSP 24-hour TSP	ASR1, ASR5, AQMS1, ASR6, ASR10 ASR1, ASR5, AQMS1, ASR6, ASR10	3 times per day every six days Daily every six days	Throughout the Northern Connection, toll plaza and tunnel buildings construction works
Special	1-hour TSP 24-hour TSP	ASR1, ASR5, AQMS1, ASR6, ASR10 ASR1, ASR5, AQMS1, ASR6, ASR10	3 times per day every three days Daily every three days	Northern ConnectionDuring excavation worksforlaunchingshaft,excavation workforcutandCoverConstruction

Condition	Monitoring Parameter	Monitoring Location	Frequency	Monitoring Requirement
				<u>Toll Plaza</u>
				During excavation, slope
				works, construction of road
				and superstructures and
				wind erosion from open
				sites and stockpiling areas
				Tunnel Buildings
				During excavation,
				foundation works,
				construction of
				superstructures and wind
				erosion from open sites and
				stockpiling areas

3.5 MONITORING EQUIPMENT

- 3.5.1 The 24-hour and 1-hour TSP levels shall be measured by following the standard high volume sampling method as set out in the *Title 40 of the Code of Federal Regulations, Chapter 1 (Part 50), Appendix B.*
- 3.5.2 A high volume sampler in compliance with the following specifications shall be used for carrying out the 1-hr and 24-hr TSP monitoring:
 - (i) 0.6-1.7 m3/min (20-60 SCFM) adjustable flow range;
 - (ii) equipped with a timing/control device with +/- 5 minutes accuracy for 24 hours operation;
 - (iii) installed with elapsed-time meter with +/- 2 minutes accuracy for 24 hours operation;
 - (iv) capable of providing a minimum exposed area of $406 \text{ cm} 2 (63 \text{ in}^2)$;
 - (v) flow control accuracy: +/- 2.5% deviation over 24-hr sampling period;
 - (vi) equipped with a shelter to protect the filter and sampler;
 - (vii) incorporated with an electronic mass flow rate controller or other equivalent devices;
 - (viii) equipped with a flow recorder for continuous monitoring;
 - (ix) provided with a peaked roof inlet;
 - (x) equipped with a manometer;
 - (xi) able to hold and seal the filter paper to the sampler housing in a horizontal position;
 - (xii) easy to change the filter; and
 - (xiii) capable of operating continuously for 24-hr period.
- 3.5.3 Calibration of dust monitoring equipment shall be conducted by the ET upon installation and in bi-monthly intervals during construction phase. The transfer standard shall be traceable to the internationally recognized primary standard and be calibrated annually. The calibration data shall be properly documented for future reference by concerned parties, such as the IEC. All the data shall be converted into standard temperature and pressure condition.
- 3.5.4 The filter paper of 24-hour TSP measurement shall be determined by HOKLAS accredited laboratory.
- 3.5.5 If the ET Leader proposes to use a direct reading dust meter to measure 1-hr TSP levels on an ad hoc basis, he shall submit sufficient information to the IEC to prove that the instrument is capable of achieving a comparable result as that the High Volume Sampler (HVS) and may be used for the 1-hr sampling. The instrument should also be calibrated regularly and the 1-hr sampling shall be checked periodically by the HVS to check the validity and accuracy of the results measured by the direct reading method.
- 3.5.6 According to the Project EM&A Manual, wind data monitoring equipment shall also be provided and set up for logging wind speed and wind direction near the dust monitoring

locations. The equipment installation location shall be proposed by the ET Leader and agreed with the IEC. For installation and operation of wind data monitoring equipment, the following points shall be observed:

- (i) the wind sensors should be installed on masts at an elevated level 10 m above ground so that they are clear of obstructions or turbulence caused by the buildings;
- (ii) the wind data should be captured by a data logger to be down-loaded for processing at least once a month;
- (iii) the wind data monitoring equipment should be re-calibrated at least once every six months; and
- (iv) wind direction should be divided into 16 sectors of 22.5 degrees each.

3.6 DERIVATION OF ACTION/LIMIT (A/L) LEVELS

3.6.1 The baseline monitoring results formed the basis for determining the air quality criteria for the impact monitoring. The ET shall compare the impact monitoring results with air quality criteria set up for 24-hour TSP and 1-hour TSP. Based on results of the approved Baseline Monitoring Report of HyD Contract HY/2012/08, the Action and Limit Levels for impact dust monitoring are shown in *Tables 3-3*.

Air Quality Monitoring	24-hour T	SP (µg/m ³)	1-hour TSP (µg/m ³)	
Stations	Action Level	Limit Level	Action Level	Limit Level
ASR1	213	260	331	500
ASR5	238	260	340	500
AQMS1	213	260	335	500
ASR6	238	260	338	500
ASR10	214	260	337	500

 Table 3-3
 Action and Limit Levels for Impact Air Quality Monitoring

3.6.2 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan which presented in *Appendix F*.

3.7 OTHER ENVIRONMENTAL ASPECTS

<u>Noise</u>

- 3.7.1 The TM-CLKL EIA study stated that no existing noise sensitive receiver (NSR) was identified within the Study Area at Tuen Mun. Therefore, no noise monitoring is required for the construction phase of the Contract.
- 3.7.2 Regular site inspections and audits will be carried out during the construction phase in order to confirm the construction works under the Contract comply with the regulatory noise requirements.

Water Quality

3.7.3 No marine works will be undertaken under the Contract. Therefore, no water quality monitoring is required for the construction phase of the Contract.

<u>Ecology</u>

- 3.7.4 No marine works will be undertaken under the Contract and generated marine ecological impact, no dolphin monitoring is required for the construction phase of the Contract.
- 3.7.5 During construction phase, the ET will perform Pitcher Plants inspection at least once every week to report the growth condition (only undertaken at Establishment period) and protection measures.

Landscape and Visual

3.7.6 Measures to mitigate landscape and visual impact during construction should be checked and

monitored by a Registered Landscape Architect to ensure compliance with the intended aims of the mitigation measures in accordance with the EM&A Manual.

<u>Cultural Heritage</u>

3.7.7 Grave G1 as a heritage resource is situated near the proposed toll plaza in Tuen Mun. Site inspections should be undertaken at least once per week throughout the construction period to ensure compliance with the intended aims of recommended mitigation measures.

Landfill Gas

3.7.8 During EIA study, landfill gas hazards are likely to be generated from the Pillar Point Valley (PPV) Landfill. Landfill gas monitoring is recommended during construction of the Contract to ensure the works area is free of landfill gas before the worker entered the concerned area.

3.8 MONITORING SCHEDULE

3.8.1 The monitoring schedule for landscape &visual and landfill gas for the present and next reporting period are presented in *Appendix G*.

4 AIR QUALITY MONITORING

4.1 GENERAL

4.1.1 The air quality impact monitoring and enhanced Total Suspended Particulates (TSP) level monitoring at five proposed locations are currently carried out by the ET of Contract HY/2012/08. Sharing of impact air quality monitoring data between HY/2012/08 and HY/2013/12 is agreed by all relevant parties. The Contract is not required to conduct its own dust monitoring exercise until the Contract HY/2012/08 ends.

4.2 AIR QUALITY MONITORING RESULTS IN REPORTING PERIOD

4.2.1 In the Reporting Period, 1-hour and 24-hour TSP monitoring at the five proposed locations are continued to perform by the ET of Contract HY/2012/08. Therefore, no air quality monitoring was conducted by the ET of Contract HY/2013/12. Details information of air quality monitoring results could be referred to the Monthly EM&A Reports of the Contract HY/2012/08 (August 2017).

4.3 ACTION AND LIMIT (A/L) LEVELS EXCEEDANCE

4.3.1 According to the air quality monitoring result provided by Contract HY/2012/08, 1 Action Level exceedance of 1-hour TSP was recorded at ASR1 on 22 August 2017. Notification on Exceedance (NOE) was issued on 7 September 2017 after receiving the monitoring result from the Contract HY/2012/08. The summary of air quality exceedance in the Reporting Period is shown in *Table 4-1*.

Table 4-1	Summary	of Air Qualit	ty Monitoring Exceedance
-----------	----------------	---------------	--------------------------

Date of Exceedance	Monitoring Station	Air Quality Parameter	Result	Exceed
22 August 2017	ASR1	1Hr TSP	$360 \ \mu g/m^3$	Action Level

4.4 **AIR QUALITY EXCEEDANCE INVESTIGATION**

- 4.4.1 Investigation report for the exceedances is underway by the ET and it will submit to all relevant parties.
- 4.4.2 In last Reporting Period, the investigation report (IR) of the exceedances of 1-hour TSP on 29 July 2017 has been submitted by ET. After the investigation, it is concluded that the exceedences on 29 July 2017 is due to the pollutant source located at upstream rather than the construction site. Therefore the exceedences were not project related. The IR of the exceedences conducted by the ET is shown in *Appendix J*.

5 ECOLOGY MONITORING

5.1 GENERAL

- 5.1.1 According to the EM&A Manual requirements, regularly inspection for Pitcher Plants shall be conducted at least once every week to report the protection measure of the Pitcher Plants during construction period.
- 5.1.2 A total of 181 pitcher plants were transplanted to final receptor site and the rest of the Pitcher Plant individuals (certified dead by the specialist) were not transplanted and were treated as general refuse. All the transplantation of pitcher plant from the nursery site to final receptor site was completed on 10th September 2015.

5.2 PITCHER PLANTS INSPECTION

- 5.2.1 Inspection for the mitigation measures implementation status of the Pitcher Plant at the final receptor area were performed on 1st, 8th, 15th, 22nd and 29th August 2017 by the ET in the Reporting Period.
- 5.2.2 Establishment period for the pitcher plants was completed at the end of September 2016, the join site completion of Establishment period visit with AFCD was undertaken on 23 September 2016 and the final pitcher plants report was submitted to AFCD on early December 2016. Therefore after 23 September 2016, only the integrity of the protection fence was checked to fulfil the EIA requirement. During each inspection, the protection mitigation measures were checking at the final receptor area to make sure no site activities was undertaken inside the protection zone. Besides, no construction activities were observed to be carried out at the surrounding of the final receptor area. The condition of chain link fence is good and no repair or maintenance is required.
- 5.2.3 No matters the completion of Establishment period, the Contractor should properly maintain the fencing along the receptor area to avoid disturbance to the pitcher plants under the EIA requirement.

6 CULTURAL HERITAGE

6.1 GENERAL

- 6.1.1 According to the EM&A Manual requirements, regular inspection for heritage resource, Grave G1, shall be audited by the ET at least once every week to ensure recommended mitigation measures implemented during construction period. The aim of the survey is to prevent any possible damage to the grave and to ensure the proposed mitigation measures are implemented. The broad scope of the audit will involve supervision of the following:
 - Non-contact effects of the engineering works, such as vibration from pneumatic drills which could cause damage, such as foundation or wall cracks and loosening of tiles or fixtures; and
 - Contact between the historic structures and equipment and materials associated with the engineering works.
- 6.1.2 Specifically, the monitoring programme will entail the following tasks:
 - The extent of the agreed works areas should be regularly checked during the construction phase to ensure the buffer is being maintained; and
 - Ensure no stockpiling or equipment storage is affecting the structure.
- 6.1.3 In the event of non-compliance the responsibilities of the relevant parties is detailed in the Event/ Action Plan in *Appendix F*.

6.2 **GRAVE INSPECTION**

- 6.2.1 In the Reporting Period, Grave G1 of inspection was undertaken on 1st, 8th, 15th, 22nd and 29th August 2017. During these inspections, buffer zone was maintained between the working area and the Grave. The nearby areas were clean, and no construction materials or mechanical equipment were stored within or close to the buffer zone. Moreover protective measures (hoarding and scaffold with protective net above the grave) was provided for constructing Toll Plaza Decking TD2 deck structure.
- 6.2.2 Since construction works very close to buffer zone of the Grave G1, cultural heritage mitigation measures and protection measures as provided by the Contractor, therefore has fully implemented in accordance with EM&A Manual requirements.

7 LANDSCAPE AND VISUAL

7.1 GENERAL

7.1.1 According to EM&A Manual requirements, monitoring of Contractor's operations during construction period to report on Contractor's compliance should be carried out on weekly basis. Measure to mitigate landscape and visual impact during construction should be checked and monitored by a Registered Landscape Architect to ensure compliance with the intended aims of the mitigation measures. Moreover, the progress of the engineering works shall be regularly reviewed on site to identify the earliest practical opportunities for the landscape works to be undertaken.

7.2 LANDSCAPE AND VISUAL INSPECTION

- 7.2.1 In the Reporting Period, site inspection for landscape and visual mitigation measures was undertaken on 4th, 11th, 18th and 25th August 2017 by the Registered Landscape Architect.
- 7.2.2 Most of the landscape works such as planting was not yet commenced, but some transplanting works was commenced on 22 May 2017. The detailed inspection checklists were provided in *Appendix K*.

8 LANDFILL GAS HAZARD MONITORING

8.1 GENERAL

- 8.1.1 During EIA study, landfill gas hazards are likely to be generated from the Pillar Point Valley (PPV) Landfill. Hence, regular landfill gas monitoring is recommended during construction of the proposed toll plaza.
- 8.1.2 During construction, a Safety Officer should be appointed to carry out the monitoring works. The monitoring frequency and areas to be monitored should be set down prior to commencement of ground-works either by the Safety Officer or an approved and appropriated qualified person. The routine monitoring should be carried out in all excavations, manholes, chambers, relocation of monitoring wells and any other confined spaces that may have been created. All measurements in excavations should be made with the extended monitoring tube located not more than 10 mm from the exposed ground surface. Monitoring should be performed properly to make sure that the area is free of landfill gas before any man enters in the area.
- 8.1.3 For excavations deeper than 1m, measurements should be carried out:
 - at the ground surface before excavation commences;
 - immediately before any worker enters the excavation;
 - at the beginning of each working day for the entire period the excavation remains open; and
 - periodically through the working day whilst workers are in the excavation.
- 8.1.4 For excavations between 300mm and 1m deep, measurements should be carried out:
 - directly after the excavation has been completed; and
 - periodically whilst the excavation remains open
- 8.1.5 For excavations less than 300mm deep, monitoring may be omitted, at the discretion of the Safety Officer (SO) or other appropriately qualified person.
- 8.1.6 To ensure the accuracy of the monitoring data, zeroing of the gas analyser shall be undertaken at the start of each day's monitoring. As advised by the SO, the gas analyser would be optimally calibrated by the self-test function to provide the most accurate result. The gas analyser is calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at yearly basis.
- 8.1.7 The landfill consultation zone was divided into 6 monitoring zones. The landfill gas monitoring zones are summarized in *Table 8-1* and the layout plan for the monitoring zone is illustrated in *Appendix E*.

ID	Location	Excavation >300mm deep undertaken in this reporting period
TD1	TD1, Retaining Wall A, Grave G1 and	Yes
	Subway	
RW-B	Retaining Wall B	No
RW-F	Retaining Wall F	No
S&U	Slope and Underpass	No
BW	Bridge Works (G2, H1)	No
LMR	Lung Mun Road	Yes (Till 21 August 2017)

Table 8-1Landfill Gas Monitoring Zone

8.2 LANDFILL GAS MONITORING RESULT

8.2.1 In the Reporting Period, landfill gas monitoring was conducted at the zone TD1 and LMR

which have excavation works was undertaking. For the zone LMR, all the excavation works was temporary completed on 21 August 2017. Therefore, no landfill gas monitoring was conducted at the zone LMR after 21 August 2017 until the excavation works is resumed. A BIOGAS 5000 gas analyser was used for the landfill gas monitoring and the valid calibration certificate is presented in *Appendix H*.

8.2.2 There were a total of **26** days monitoring were carried by the Safety Officer or an approved and qualified persons, the landfill gas monitoring had been canceled on 23 August 2017 due to the typhoon was hoisted. The results of landfill gas measurement are summarized in *Table* **8-2**. Moreover, database of monitoring result and graphical plot are attached in *Appendix I*.

Landfill Gas	Action	Limit Detectable at TD1			Detectable at LMR		
Parameter	Level	Level	Min	Max	Min	Max	
Methane	>10% LEL (>0.5% v/v)	>20% LEL (>1% v/v)	0.1%	0.1%	0.1%	0.1%	
Oxygen	<19%	<18%	19.2%	21.1%	20.1%	21.1%	
Carbon Dioxide	>0.5%	>1.5%	0.1%	0.2%	0.1%	0.2%	

 Table 8-2
 Summary of Landfill Gas Measurement Results

8.2.3 The measurement results shown that slightly methane concentration was detected and oxygen concentration measured was over 19.0 % and Carbon Dioxide was between 0.1% and 0.2 %. No exceedance was triggered and therefore no corrective action was required accordingly.

9 WASTE MANAGEMENT

9.1 GENERAL WASTE MANAGEMENT

- 9.1.1 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time. The effective management of waste arising during the construction phase will be monitored through the site audit programme. The aims of the waste audit are:
 - to ensure the waste arising from the works are handled, stored, collected, transferred and disposed of in an environmentally acceptable manner; and
 - to encourage the reuse and recycling of material.
- 9.1.2 In addition to the site inspections, the ET shall review the documentation procedures prepared by the Waste Coordinator once a week to ensure proper records are being maintained and procedures undertaken in accordance with the Waste Management Plan.

9.2 **RECORDS OF WASTE QUANTITIES**

- 9.2.1 All types of waste arising from the construction work are classified into the following:
 - Construction & Demolition (C&D) Material;
 - Chemical Waste;
 - General Refuse; and
 - Excavated Soil.
- 9.2.2 The quantities of wastes generated under the Contract in this Reporting Period are summarized in *Tables 9-1* and *9-2* and the Monthly Summary Waste Flow Table is shown in *Appendix L*. Whenever possible, materials were reused on-site as far as practicable.

Table 9-1Summary of Quantities of Inert C&D Materials

Type of Waste	Quantity	Disposal Location
Reused in this Contract (Inert) (`000m ³)	1.768	-
		1. Lam Tei Quarry
		2. Eco Park K.Wah Recycle
		Facilities
		3. Lung Kwu Tan Tailor Recycled
Reused in other Projects (Inert) (`000m ³)	1.547	Aggregates
		4. Liantang BCP Project
		5. TM-CLKL Contract 2 -

Recycled Paper / Cardboard Packaging (`000kg)	0	-
Recycled Plastic (`000kg)	0	-
Chemical Wastes (`000kg)	0	License Collector
General Refuses (`000m ³)	0.179	WENT

10 INSPECTION AND AUDIT

10.1 SITE INSPECTION

10.1.1 According to the approved EM&A Manual, the environmental site inspection shall be formulated by ET Leader on weekly basis to confirm the environmental performance of the construction site.

Findings / Deficiencies During Reporting Period

- 10.1.2 In the Reporting Period, joint site inspections to evaluate site environmental performance were carried out by the RE, ET and the Contractor on 1st, 8th, 15th, 22nd and 29th August 2017. No non-compliance was noted but 1 observation and 2 reminders were recorded during site inspection. Moreover, ENPO/IEC has attended joint site inspection on 29th August 2017.
- 10.1.3 The findings / deficiencies observed during the weekly site inspection in the Reporting Period are listed in *Table 10-1*.

Date	Findings / Deficiencies	Follow-Up Status
1 August 2017	• Nil	• NA
8 August 2017	• Housekeeping should be improved, C&D waste scattered near the grave protection zone should be removed. (Grave G1)	• Not required for reminder.
15 August 2017	• Water spraying or proper dust mitigation measures should be provided for the exposed slope to reduce dust impact. (Slope 170)	• Not required for reminder.
22 August 2017	• Nil	• NA
29 August 2017	• Tarpaulin covered on the existing slope should be maintained properly after typhoon. (Stream B & Slope facing Lung Mun Road)	• Broken tarpaulin had been replaced.

Table 10-1Site Observations for the Contract

10.1.4 No outstanding deficiency remained to be rectified in previous Reporting Period which presented in *Table 10-2*.

Table 10-2	Outstanding Items in	Site Inspection	of previous	Reporting Period
-------------------	----------------------	-----------------	-------------	-------------------------

]	Date	Findings / Deficiencies	Follow-Up Status
		• NA	• NA

- 10.1.5 Air quality mitigation measures such as watering of site area for 12 times per day and covering of exposed slopes should be implemented during the construction period to reduce construction dust impact as recommended in the EMIS.
- 10.1.6 Good site practice for daily housekeeping is reminded. In addition, clean-up of the waste skips and wastewater treatment system should be increased to ensure these facilities functional and effective.
- 10.1.7 In addition, muddy water or other water pollutants from site surface runoff shall not be discharged into public areas. Water quality mitigation measures to prevent surface runoff into the public areas should be paid on special attention.

10.1.8 Stagnant water should be removed as soon as possible after rain to prevent mosquito breeding on site.

Inspection Checklist for Vulnerable to Contaminated Water Discharge

- 10.1.9 Following to the complaint about discharge of milky water to Bufferfuly Beach on 2 September 2015. The Contractor proposed to carry out daily inspection of wastewater treatment facilities, concerned discharge points, drainage inlets and outlets during typhoon or wet season.
- 10.1.10 In addition, specific inspections would also be conducted before and after adverse weather to ensure necessary remedial works would be carried out timely. Should incidental contaminated water discharge be found at the inlet of the associated drainage system, a specific inspection of the relevant drainage pipes would be conducted for traces of deposit, and follow up actions would be taken when necessary.
- 10.1.11 The daily inspection for vulnerable to contaminated water discharge was conducted by the Contractor at August 2017 during the wet season. As requested by the EPD, the associated inspection checklist should be presented in the Monthly EM&A Report and it is shown in Appendix P.

11 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

11.1 Environmental Complaint, Summons and Prosecution

- 11.1.1 In the Reporting Period, no environmental complaint, summons and prosecution under the EM&A Programme was lodged. However, there was one exceedance of the environmental performance limit (Action Level).
- 11.1.2 The statistical summary table of environmental exceedance, complaint, summons and prosecution are presented in *Tables 11-1, 11-2, 11-3 and 11-4*.

Departing	Environmental Environmental Environmental			ce	
Reporting Period	Aspect / Parameter	Performance	Reporting Month	Previous Months	Cumulative
	Air Quality -	Action Level	1	7	8
August 2017	1-hr TSP	Limit Level	0	0	0
August 2017	Air Quality -	Action Level	0	0	0
	24-hr TSP	Limit Level	0	0	0

	Environmental Prosecution Statistics					
Reporting Period	Frequency	Cumulative	Complaint Nature			
			Air	Noise	Water	
August 2017	0	0	NA	NA	NA	

11.1.3 In the Reporting Period, no warning letter related to environmental issue was received from the EPD or HyD.

12 IMPLEMENTATION STATUS OF MITIGATION MEASURES

12.1 GENERAL REQUIREMENTS

- 12.1.1 The environmental mitigation measures that recommended in the Environmental Mitigation and Enhancement Measures Implementation Schedule (EMIS) for in the Project EM&A Manual covered the issues of air quality, cultural heritage, ecology, landfill gas hazard, landscape & visual, noise, water and waste. The updated EMIS for the Contract is shown in *Appendix M*.
- 12.1.2 The Contractor shall implement the required environmental mitigation measures according to the EM&A Manual as subject to the site condition. The environmental mitigation measures implemented by the Contract in this Reporting Period are summarized in *Table 12-1* and *Appendix M*.

Issues	Environmental Mitigation Measures
Air Quality	 Maintain damp / wet surface on access road Keep slow speed in the sites All vehicles must use wheel washing facility before off site Sprayed water during rock breaking works During transportation by truck, materials loaded lower than the side and tail boards, and covered before transport Compacted all soil stockpiles Part of the exposed slopes covered geotextile net
Cultural Heritage	 Set a buffer zone between the working area and the Grave All construction materials and equipment store far from the Grave Inspection the Grave to ensure provision mitigation measures effective
Ecology	Wire fencing provided for temporary protect Pitcher PlantsUndertake weekly inspection of Pitcher Plants
Landfill Gas Hazard	Landfill Gas measurement undertake during trench excavation
Water Quality	 Temporary drainage system provide for surface runoff prevent discharge to public area Wastewater to be treated by sedimentation tank before discharge.
Noise	 No operation of powered mechanical equipment is allowed during restricted hours from 19:00 to 07:00 on the following day and whole day during Sunday and public holiday without construction noise permit (CNP) Keep good maintenance of plants The noisy plants or works provide mobile noise barriers Shut down the plants when not in use
Waste and Chemical Management	 On-site sorting prior to disposal Follow requirements and procedures of the "Trip-ticket System" Predict required quantity of concrete accurately Collect the unused fresh concrete at designated locations in the sites for subsequent disposal
General	The site was generally kept tidy and clean.

Table 12-1Environmental Mitigation Measures

12.2 TENTATIVE CONSTRUCTION ACTIVITIES IN THE COMING MONTH

- 12.2.1 Construction activities as undertaken in the coming month for the Contract lists below:
 - Site Formation Earthwork at 5SE-D/C170; surface drainage on Slope C, D & E and Portion H;
 - Parapet construction for Retaining Structure RW_B, RW_F, Bridge G2 and Toll Plaza Decking TD2;
 - Toll Collector Subway & Associated Works;
 - Dismantling formwork and falsework for Toll Plaza Decking TD2;
 - Bridge G2 and Bridge H1 and G1 by Formtraveller;
 - Vehicular Underpass drainage works;

• Installation of Precast Parapet at Toll Plaza Decking TD1 and TD2

12.3 KEY ENVIRONMENTAL ISSUES FOR THE COMING MONTH

- 12.3.1 Key environmental issues to be considered in the coming month include:
 - Implementation of dust suppression measures at all times;
 - Potential wastewater quality impact due to surface runoff;
 - Potential fugitive dust impact due to the dry/loose/exposure soil surface/dusty material;
 - Ensure dust suppression measures are implemented properly;
 - Sediment catch-pits and silt removal facilities should be regularly maintained;
 - Management of chemical wastes;
 - Site effluent discharge to the nearby nullah is prohibited;
 - Follow-up of improvement on general waste management issues; and
 - Implementation of construction noise preventative control measures

13 CONCLUSIONS AND RECOMMENDATIONS

13.1 CONCLUSIONS

- 13.1.1 This is 34^{th} monthly EM&A report presenting the monitoring results and inspection findings for the period of 1^{st} to 31^{st} August 2017.
- 13.1.2 No exceedances of 24-hour TSP monitoring were recorded in the Reporting Period. However, there was one exceedance of 1-hour TSP measurements trigger in Action Level at ASR1 on 22 August 2017. NOE was issued to notify all relevant parties. Investigation report for the exceedance is underway by the ET and it will submit to all relevant parties.
- 13.1.3 In last Reporting Period, the investigation report (IR) for the exceedances of 1-hour TSP on 29 July 2017 has been submitted by ET. After the investigation, it is concluded that the exceedences on 29 July 2017 is due to the pollutant source located at upstream rather than the construction site. Therefore the exceedences were not project related.
- 13.1.4 In the Reporting Period, no noise complaint was received by RE, the Contractor, ENPO or HyD. No Action Level exceedances were therefore triggered and no NOE or the associated corrective actions were required.
- 13.1.5 Site inspection for landscape and visual was conducted on weekly basis by the Landscape Architect to ensure the compliance of the intended aims of the mitigation measures. Most of the landscape works such as planting was not yet commenced.
- 13.1.6 Establishment period for the pitcher plants was completed at the end of September 2016, the join site completion of Establishment period visit with AFCD was undertaken on 23 September 2016 and the final pitcher plants report was submitted to AFCD on early December 2016. Therefore after 23 September 2016, only the integrity of the protection fence was checked to fulfil the EIA requirement. During each inspection, the protection mitigation measures were checking at the final receptor area to make sure no site activities was undertaken inside the protection zone. Besides, no construction activities were observed to be carried out at the surrounding of the final receptor area. The condition of chain link fence is good and no repair or maintenance is required.
- 13.1.7 Landfill gas monitoring was conducted at the TD1 and Lung Mun Road works area. The monitoring results shown no exceedances were triggered.
- 13.1.8 In the Reporting Period, no environmental complaint was received.
- 13.1.9 No notifications of summons, or successful prosecution were received by the Contractor during the Reporting Period.
- 13.1.10 In the Reporting Period, joint site inspection by the RE, ET and the Contractor was carried out on 1st, 8th, 15th, 22nd and 29th August 2017 and the IEC has attended the joint site inspection on 29th August 2017. No non-compliance was recorded during the site inspection but 1 observation and 2 reminders were recorded.
- 13.1.11 In the Reporting Period, Grave G1 of inspection was undertaken on 1st, 8th, 15th, 22nd and 29th August 2017. Based on the inspection findings, the cultural heritage mitigation measures as implemented by the Contractor are fully complied with the EM&A Manual requirements.

13.2 RECOMMENDATIONS

13.2.1 Air quality mitigation measures such as watering of site area for 12 times per day and covering of exposed slopes should be fully implemented to reduce construction dust impact as recommended in the EMIS.

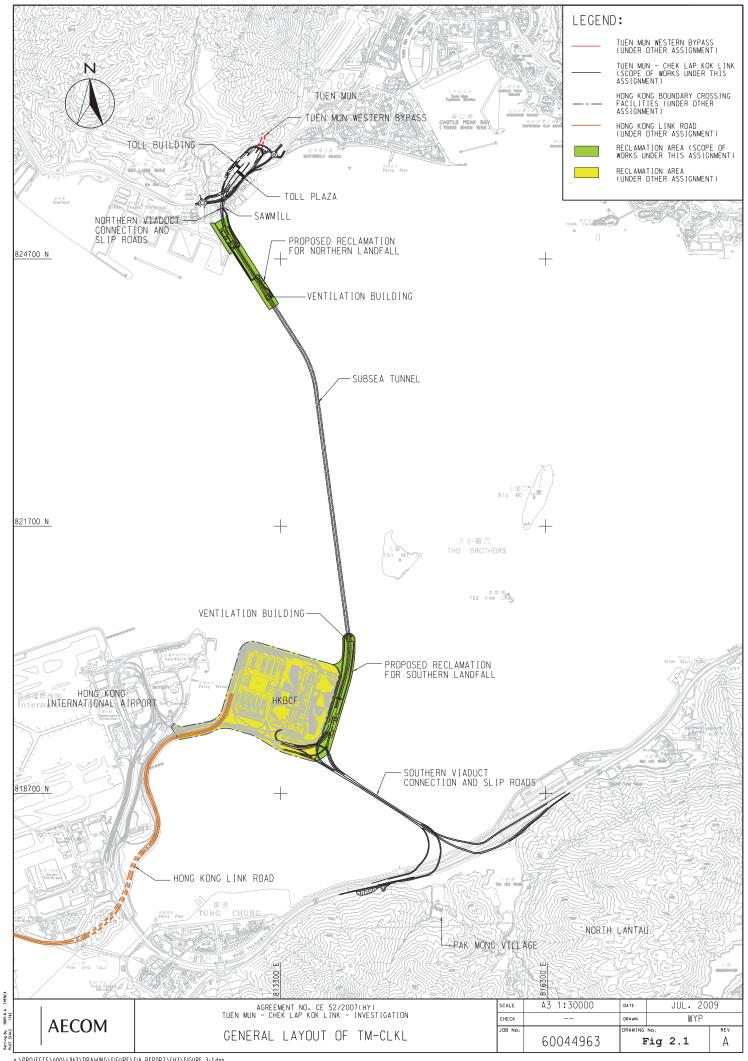

- 13.2.2 During the wet season, muddy water or other water pollutants from site surface runoff discharged into public areas would be a potential environmental issue. Special attention should be paid on the water quality mitigation measures to prevent surface runoff flow to public area.
- 13.2.3 Stagnant water should be removed as soon as possible after rain to prevent mosquito breeding on site.

Event and Action Plan

Event and Action Plan for Air Quality

EVENT		ACTION		
	ET ⁽¹⁾	IEC ⁽¹⁾	SOR ⁽¹⁾	Contractor(s)
Action Level		1 (1 1 5		1. D'C
Exceedance recorded	 Identify the source. Repeat measurements to confirm findings. If two consecutive measurements exceed Action Level, the exceedance is then confirmed. Inform the IEC and the SOR Investigate the cause of exceedance and check Contractor's working procedures to determine possible mitigation to be implemented. If the exceedance is confirmed to be Project related after investigation, increase monitoring frequency to daily. Discuss with the IEC and the Contractor on remedial actions required. If exceedance continues, arrange meeting with the IEC and the SOR. If exceedance stops, cease additional monitoring. 	 Check monitoring data submitted by the ET. Check the Contractor's working method. If the exceedance is confirmed to be Project related after investigation, discuss with the ET and the Contractor on possible remedial measures. Advise the SOR on the effectiveness of the proposed remedial measures. Supervisor implementation of remedial measures. 	 Confirm receipt of notification of failure in writing. Notify the Contractor. Ensure remedial measures properly implemented. 	 Rectify any unacceptable practice. Amend working methods if appropriate If the exceedance is confirmed to be Project related, submit proposals for remedial actions to IEC within 3 working days of notification Implement the agreed proposals Amend proposal if appropriate.
Limit Level				
Exceedance recorded	 Identify the source. Repeat measurement to confirm finding. If two consecutive measurements exceed Limit Level, the exceedance is then confirmed. Inform the IEC, the SOR, the DEP and the Contractor. Investigate the cause of exceedance and check Contractor's working procedures to determine possible mitigation to be implemented. If the exceedance is confirmed to be Project related after investigation, increase monitoring frequency to daily. Carry out analysis of the Contractor's working procedures to determine possible mitigation to be implemented. Arrange meeting with the IEC and the SOR to discuss the remedial actions to be taken. Assess effectiveness of the Contractor's remedial actions and keep the IEC, the DEP and the SOR informed of the results. If exceedance stops, cease additional monitoring. 	 Check monitoring data submitted by the ET. Check Contractor's working method. If the exceedance is confirmed to be Project related after investigation, discuss with the ET and the Contractor on possible remedial measures. Advise the SOR on the effectiveness of the proposed remedial measures. Supervisor implementation of remedial measures. 	 Confirm receipt of notification of failure in writing. Notify the Contractor. If the exceedance is confirmed to be Project related after investigation, in consultation with the IEC, agree with the Contractor on the remedial measures to be implemented. Ensure remedial measures are properly implemented. If exceedance continues, consider what activity of the work is responsible and instruct the Contractor to stop that activity of work until the exceedance is abated. 	 action to avoid further exceedance. 2 If the exceedance is confirmed to be Project related after investigation, submit proposals for remedial actions to IEC within 3 working days of notification. 3 Implement the agreed proposals. 4 Amend proposal if appropriate. 5 Stop the relevant activity of works as determined by the SOR until the exceedance is abated.

EVENT		ACTION

Check implementation of remedial measures. 	 Notify Contractor Ensure remedial measures are properly implemented 	 Amend working methods Rectify damage and undertake any necessary replacement
Repeated Non- conformity	 Identify Source Inform the IC(E) and the ER Increase monitoring frequency Discuss remedial actions with the IC(E), the ER and the Contractor Monitor remedial actions until rectification has been completed If exceedance stops, cease additional monitoring 	 Check monitoring report Check the Contractor's working method Discuss with the ES and the Contractor on possible remedial measures Advise the ER on effectiveness of proposed remedial measures Supervise implementation of remedial measures. 	 Notify the Contractor Ensure remedial measures are properly implemented 	 Amend working methods Rectify damage and undertake any necessary replacement

Event / Action Plan for Cultural Heritage

Note:

ET - Environmental Specialist, IEC - Independent Environmental Checker, ER - Engineer's Representative

Action	ЕТ	IEC	ER	Contractor
Level Non- conformity on one occasion	 Identify Source Inform the IEC and the ER Discuss remedial actions with the IEC, the ER and the Contractor Monitor remedial actions until rectification has been completed 	 Check report Check the Contractor's working method Discuss with the ET and the Contractor on possible remedial measures Advise the ER on effectiveness of proposed remedial measures. Check implementation of remedial measures. 	 Notify Contractor Ensure remedial measures are properly implemented Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the works in the case of a serious nonconformity until situation rectified. 	 Amend working methods Rectify damage and undertake any necessary replacement
Repeated Non conformity	 Identify Source Inform the IC(E) and the ER Increase monitoring frequency Discuss remedial actions with the IC(E), the ER and the Contractor Monitor remedial actions until rectification has been completed If exceedance stops, cease additional monitoring 	 Check monitoring report Check the Contractor's working method Discuss with the ES and the Contractor on possible remedial measures Advise the ER on effectiveness of proposed remedial measures Supervise implementation of remedial measures 	 Notify the Contractor Ensure remedial measures are properly implemented Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the works in the case of a serious nonconformity until situation rectified. 	 Amend working methods Rectify damage and undertake any necessary replacement

Event / Action Plan for General Ecology

Note:

ET - Environmental Specialist, IC(E) - Independent Checker (Environmental), ER - Engineer's Representative

Parameter	Measurement	Action
Oxygen	< 19%	- Ventilate to restore oxygen to > 19%
	< 18%	 Stop work Evacuate personnel / prohibit entry Increase ventilation to restore to > 19%
Methane	> 10% LEL (> 0.5% v/v)	Prohibit hot workVentilate to restore methane to < 10% LEL
	> 20% LEL (>1% v/v)	 Stop work Evacuate personnel / prohibit entry Increase ventilation to restore to < 10%
Carbon Dioxide	> 0.5%	- Ventilate to restore oxygen to $< 0.5\%$
	> 1.5%	 Stop work Evacuate personnel / prohibit entry Increase ventilation to restore to < 0.5%

Actions in the Event of Landfill Gas being Detected in Excavation / Confined Area

Appendix H

Calibration Certificates of Monitoring Equipment

CERTIFICATION OF CALIBRATION

Date Of Calibration: 20-Jun-2017 Certificate Number: G503226_2/18640

ISSUED BY: GEOTECHNICAL INSTRUMENTS (UK) LTD

Customer: Fugro Geotechnical Services Ltd

Units 6, 8-11 10/F Worldwide Industrial Centre 43-47 Shan Mei Street Fo Tan Sha Tin, N.T. HONG KONG

- Description: Gas Analyser
- Model: BIOGAS 5000

Serial Number: G503226

UKAS Accredited results:

Results after adjustment :

	Methane (CH ₄)									
Certified Gas (%)	Uncertainty (%)									
5.1	4.9	0.41								
15.0	14.8	0.64								
50.0	49.4	0.94								

Carbon Dioxide (CO ₂)								
Certified Gas (%)	Instrument Reading (%)	Uncertainty (%)						
5.1	5.0	0.43						
15.0	14.9	0.70						
50.0	50.0	1.1						

Oxygen (O ₂)							
Certified Gas (%)	Instrument Reading (%)	Uncertainty (%)					
20.9	20.9	0.31					

The inwards assessment was carried out 14-Jun-2017.

The maximum adjustment is larger than the inwards assessment uncertainty.

Inwards assessment data is available if requested.

All concentrations are molar.

CH_4 , CO_2 readings recorded at :	37.2 °C ± 1.5 °C
O2 reading recorded at :	26.8 °C ± 1.5 °C

Barometric Pressure : 1012 mbar ± 3 mbar

Method of Test : The analyser is calibrated in a temperature controlled chamber using a series of reference gases, in compliance with procedure LP004.

This certificate is issued in accordance with the laboratory accreditation requirements of the United Kingdom Accreditation Service. It provides traceability of measurement to the SI system of units and/or to units of measurement realised at the National Physical Laboratory or other recognised national metrology institutes. This certificate may not be reproduced other than in full, except with the prior written approval of the issuing laboratory.

CERTIFICATION OF CALIBRATION

Date Of Calibration: 20-Jun-2017 Certificate Number: G503226_2/18640

ISSUED BY: GEOTECHNICAL INSTRUMENTS (UK) LTD

The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95%. The uncertainty evaluation has been carried out in accordance with UKAS requirements.

Calibrations marked 'Non-UKAS Accredited results' on this certificate have been included for completeness. Non-UKAS Accredited results:

Checklist for Landscape and Visual Monitoring

Contract No. HY/2013/12

Tuen Mun - Chek Lap Kok Link - Northern Connection Toll Plaza and Associated Works

Landscape and Visual Checklist

Monitoring Date: <u>04th August 2017</u>

Item	Environmental Protection Measures	Location/ Timing	Implementation		St	atus		Remarks
			Agent	Α	UA	IR	NA	
1	Existing trees on boundary of the Project Area shall be carefully protected during construction. Detailed Tree Protection Specification shall be provided in the Contract Specification. Under this specification, the Contractor shall be required to submit, for approval, a detailed working method statement for the protection of trees prior to undertaking any works adjacent to all retained trees, including trees in contractor's works areas. (Tree protection measures will be detailed at Tree Removal Application stage)	All areas / During construction	Design Consultant/ Contractor	V				
2	Trees unavoidably affected by the works shall be transplanted where practical. Trees will be transplanted straight to their final receptor site and not held in a temporary nursery. A detailed Tree Transplanting Specification shall be provided in the Contract Specification. Sufficient time for necessary tree root and crown preparation periods shall be allowed in the project programme		Design Consultant/ Contractor	V				Tree Transplanting works conducted on 22-May-17.
3	Hillside and roadside screen planting to proposed roads, associated structures and slope works	All areas / During construction	Design Consultant/ Contractor				V	Construction of roads planting not commenced yet
4	Hydroseeding or sheeting of soil stockpiles with visually unobtrusive material (in earth tone)	All areas / During construction	Design Consultant/ Contractor			\checkmark		Sheeting of soil stockpiles shall be in earth tone
5	Screening of construction works by hoardings around works area in visually unobtrusive colours, to screen works	All areas / During construction	Design Consultant/ Contractor				\checkmark	For some area, erection of hoarding was not feasible due to the limitation of

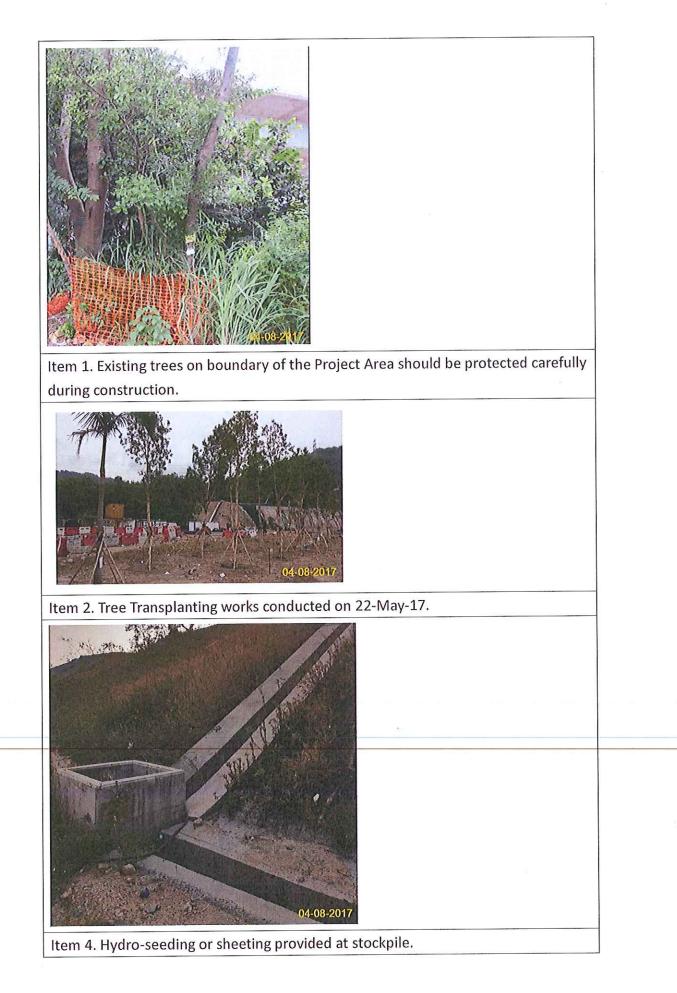

6	Control night-time lighting and glare by hooding all lights	All areas / During construction	Design Consultant/ Contractor	1			traffic sight line; water barrier with panel was used to screen works. Only temporary traffic management lighting was applied.
7	Ensure no run-off into water body adjacent to the Project Area	All areas / During construction	Design Consultant/ Contractor	\checkmark			
8	Avoidance of excessive height and bulk of buildings and structures	All areas / During construction	Design Consultant/ Contractor			\checkmark	No high-rise building would be constructed.
9	Recycle/Reuse all felled trees and vegetation, e.g. mulching	All areas / During construction	Design Consultant/ Contractor	V			Recycle of trees carried out licensed recycler was conducted.
10	Compensatory tree planting shall be provided to the satisfaction of relevant Government departments. Required numbers and locations of compensatory trees shall be determined and agreed separately with Government during the Tree Felling Application process under ETWBTC 3/2006	During construction	Design Consultant/ Contractor			V	Compensatory planting will be carry out in later stage of the project.
