ES11 No environmental summons or successful prosecutions were recorded in the Reporting Period.

### **REPORTING CHANGE**

ES12 No reporting changes were made in the Reporting Period.

### **FUTURE KEY ISSUES**

- ES13 During the wet season, muddy water or other water pollutants from site surface runoff into the public areas will be key environment issue. Special attention should be paid on the water quality mitigation measures to prevent surface runoff flow to public area.
- ES14 Although in wet season, air quality mitigation measures such as watering of site area for 12 times per day and covering of exposed slopes should be fully implemented to reduce construction dust impact as recommended in the EMIS.
- ES15 It was reminded that good housekeeping practice should be maintained. Mosquito control measures should be properly implemented to prevent mosquito breeding on site especially after rain.

- 3.7.2 Regular site inspections and audits will be carried out during the construction phase in order to confirm the construction works under the Contract comply with the regulatory noise requirements.

## Water Quality

3.7.3 No marine works will be undertaken under the Contract. Therefore, no water quality monitoring is required for the construction phase of the Contract.

## <u>Ecology</u>

- 3.7.4 No marine works will be undertaken under the Contract and generated marine ecological impact, no dolphin monitoring is required for the construction phase of the Contract.
- 3.7.5 During construction phase, the ET will perform Pitcher Plants inspection at least once every week to report the growth condition (only undertaken at Establishment period) and protection measures.

## Landscape and Visual

3.7.6 Measures to mitigate landscape and visual impact during construction should be checked and monitored by a Registered Landscape Architect to ensure compliance with the intended aims

of the mitigation measures in accordance with the EM&A Manual.

## Cultural Heritage

3.7.7 Grave G1 as a heritage resource is situated near the proposed toll plaza in Tuen Mun. Site inspections should be undertaken at least once per week throughout the construction period to ensure compliance with the intended aims of recommended mitigation measures.

## Landfill Gas

3.7.8 During EIA study, landfill gas hazards are likely to be generated from the Pillar Point Valley (PPV) Landfill. Landfill gas monitoring is recommended during construction of the Contract to ensure the works area is free of landfill gas before the worker entered the concerned area.

### 3.8 MONITORING SCHEDULE

3.8.1 The monitoring schedule for landscape &visual and landfill gas for the present and next reporting period are presented in *Appendix G*.

## 4 **AIR QUALITY MONITORING**

## 4.1 GENERAL

4.1.1 The air quality impact monitoring and enhanced Total Suspended Particulates (TSP) level monitoring at five proposed locations are currently carried out by the ET of Contract HY/2012/08. Sharing of impact air quality monitoring data between HY/2012/08 and HY/2013/12 is agreed by all relevant parties. The Contract is not required to conduct its own dust monitoring exercise until the Contract HY/2012/08 ends.

## 4.2 AIR QUALITY MONITORING RESULTS IN REPORTING PERIOD

4.2.1 In the Reporting Period, 1-hour and 24-hour TSP monitoring at the five proposed locations are continued to perform by the ET of Contract HY/2012/08. Therefore, no air quality monitoring was conducted by the ET of Contract HY/2013/12. Details information of air quality monitoring results could be referred to the Monthly EM&A Reports of the Contract HY/2012/08 (August 2018).

## 4.3 ACTION AND LIMIT (A/L) LEVELS EXCEEDANCE

4.3.1 According to the air quality monitoring result provided by Contract HY/2012/08, 2 Action Level exceedances were recorded at ASR1 on 26 and 29 August 2018. The summary of air quality exceedance in the Reporting Period is shown in *Table 4-1*.

## 5 ECOLOGY MONITORING

## 5.1 GENERAL

- 5.1.1 According to the EM&A Manual requirements, regularly inspection for Pitcher Plants shall be conducted at least once every week to report the protection measure of the Pitcher Plants during construction period.
- 5.1.2 A total of 181 pitcher plants were transplanted to final receptor site and the rest of the Pitcher Plant individuals (certified dead by the specialist) were not transplanted and were treated as general refuse. All the transplantation of pitcher plant from the nursery site to final receptor site was completed on 10<sup>th</sup> September 2015.

## 5.2 PITCHER PLANTS INSPECTION

- 5.2.1 Inspection for the mitigation measures implementation status of the Pitcher Plant at the final receptor area were performed on 7<sup>th</sup>, 14<sup>th</sup>, 21<sup>st</sup> and 28<sup>th</sup> August 2018 by the ET in the Reporting Period.

Therefore after 23 September 2016, only the integrity of the protection fence was checked to fulfil the EIA requirement. During each inspection, the protection mitigation measures were checking at the final receptor area to make sure no site activities was undertaken inside the protection zone. Besides, no construction activities were observed to be carried out at the surrounding of the final receptor area. The condition of chain link fence is good and no repair or maintenance is required.
- 5.2.3 No matters the completion of Establishment period, the Contractor should properly maintain the fencing along the receptor area to avoid disturbance to the pitcher plants under the EIA requirement.

## 6 CULTURAL HERITAGE

## 6.1 GENERAL

- 6.1.1 According to the EM&A Manual requirements, regular inspection for heritage resource, Grave G1, shall be audited by the ET at least once every week to ensure recommended mitigation measures implemented during construction period. The aim of the survey is to prevent any possible damage to the grave and to ensure the proposed mitigation measures are implemented. The broad scope of the audit will involve supervision of the following:
  - Non-contact effects of the engineering works, such as vibration from pneumatic drills which could cause damage, such as foundation or wall cracks and loosening of tiles or fixtures; and
  - Contact between the historic structures and equipment and materials associated with the engineering works.
- 6.1.2 Specifically, the monitoring programme will entail the following tasks:
  - The extent of the agreed works areas should be regularly checked during the construction phase to ensure the buffer is being maintained; and
  - Ensure no stockpiling or equipment storage is affecting the structure.

- 6.2.1 In the Reporting Period, Grave G1 of inspection was undertaken on 7<sup>th</sup>, 14<sup>th</sup>, 21<sup>st</sup> and 28<sup>th</sup> August 2018. During these inspections, buffer zone was maintained between the working area and the Grave. The nearby areas were clean, and no construction materials or mechanical equipment were stored within or close to the buffer zone.
- 6.2.2 Since construction works very close to buffer zone of the Grave G1, cultural heritage mitigation measures and protection measures as provided by the Contractor, therefore has fully implemented in accordance with EM&A Manual requirements.

## 7 LANDSCAPE AND VISUAL

## 7.1 GENERAL

7.1.1 According to EM&A Manual requirements, monitoring of Contractor's operations during construction period to report on Contractor's compliance should be carried out on weekly basis. Measure to mitigate landscape and visual impact during construction should be checked and monitored by a Registered Landscape Architect to ensure compliance with the intended aims of the mitigation measures. Moreover, the progress of the engineering works shall be regularly reviewed on site to identify the earliest practical opportunities for the landscape works to be undertaken.

## 7.2 LANDSCAPE AND VISUAL INSPECTION

- 7.2.1 In the Reporting Period, site inspection for landscape and visual mitigation measures was undertaken on 3<sup>rd</sup>, 10<sup>th</sup>, 17<sup>th</sup>, 24<sup>th</sup> and 31<sup>st</sup> August 2018 by the Registered Landscape Architect.
- 7.2.2 Most of the landscape works such as planting was not yet commenced, but some transplanting works was commenced on 22 May 2017. The detailed inspection checklists were provided in *Appendix K*.

## 8 LANDFILL GAS HAZARD MONITORING

## 8.1 GENERAL

- 8.1.1 During EIA study, landfill gas hazards are likely to be generated from the Pillar Point Valley (PPV) Landfill. Hence, regular landfill gas monitoring is recommended during construction of the proposed toll plaza.
- 8.1.2 During construction, a Safety Officer should be appointed to carry out the monitoring works. The monitoring frequency and areas to be monitored should be set down prior to commencement of ground-works either by the Safety Officer or an approved and appropriated qualified person. The routine monitoring should be carried out in all excavations, manholes, chambers, relocation of monitoring wells and any other confined spaces that may have been created. All measurements in excavations should be made with the extended monitoring tube located not more than 10 mm from the exposed ground surface. Monitoring should be performed properly to make sure that the area is free of landfill gas before any man enters in the area.
- 8.1.3 For excavations deeper than 1m, measurements should be carried out:
  - at the ground surface before excavation commences;
  - immediately before any worker enters the excavation;
  - at the beginning of each working day for the entire period the excavation remains open; and
  - periodically through the working day whilst workers are in the excavation.
- 8.1.4 For excavations between 300mm and 1m deep, measurements should be carried out:
  - directly after the excavation has been completed; and
  - periodically whilst the excavation remains open
- 8.1.5 For excavations less than 300mm deep, monitoring may be omitted, at the discretion of the Safety Officer (SO) or other appropriately qualified person.
- 8.1.6 To ensure the accuracy of the monitoring data, zeroing of the gas analyser shall be undertaken at the start of each day's monitoring. As advised by the SO, the gas analyser would be optimally calibrated by the self-test function to provide the most accurate result. The gas analyser is calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at yearly basis.
- 8.1.7 The landfill consultation zone was divided into 6 monitoring zones. The landfill gas monitoring zones are summarized in *Table 8-1*. Moreover part of landfill gas monitoring zone at TD1 was handover to the Contract No. HY/2017/10 since 7 May 2018. The layout plan for the monitoring zone is illustrated in *Appendix E*.

## 9 WASTE MANAGEMENT

## 9.1 GENERAL WASTE MANAGEMENT

- 9.1.1 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time. The effective management of waste arising during the construction phase will be monitored through the site audit programme. The aims of the waste audit are:
  - to ensure the waste arising from the works are handled, stored, collected, transferred and disposed of in an environmentally acceptable manner; and
  - to encourage the reuse and recycling of material.
- 9.1.2 In addition to the site inspections, the ET shall review the documentation procedures prepared by the Waste Coordinator once a week to ensure proper records are being maintained and procedures undertaken in accordance with the Waste Management Plan.

## 9.2 **RECORDS OF WASTE QUANTITIES**

- 9.2.1 All types of waste arising from the construction work are classified into the following:
  - Construction & Demolition (C&D) Material;

## 13 CONCLUSIONS AND RECOMMENDATIONS

## 13.1 CONCLUSIONS

- 13.1.1 This is **46**<sup>th</sup> monthly EM&A report presenting the monitoring results and inspection findings for the period of **1** to **31 August 2018**.
- 13.1.2 There were two exceedances of 1-hour TSP measurements trigger in Action Level at ASR1 on 26 and 29 August 2018. NOEs were issued to notify all relevant parties. Investigation reports (IRs) for the exceedances prepared by the ET were endorsed by IEC and the IR revealed that the exceedances were not project related.
- 13.1.3 Site inspection for landscape and visual was conducted on weekly basis by the Landscape Architect to ensure the compliance of the intended aims of the mitigation measures. Most of the landscape works such as planting was not yet commenced.
- 13.1.4 In the Reporting Period, no noise complaint was received by RE, the Contractor, ENPO or HyD. No Action Level exceedances were therefore triggered and no NOE or the associated corrective actions were required.
- 13.1.5 Establishment period for the pitcher plants was completed at the end of September 2016, the join site completion of Establishment period visit with AFCD was undertaken on 23 September 2016 and the final pitcher plants report was submitted to AFCD on early December 2016. Therefore after 23 September 2016, only the integrity of the protection fence was checked to fulfil the EIA requirement. During each inspection, the protection mitigation measures were checking at the final receptor area to make sure no site activities was undertaken inside the protection zone. Besides, no construction activities were observed to be carried out at the surrounding of the final receptor area. The condition of chain link fence is good and no repair or maintenance is required.
- 13.1.6 Excavation works were resumed at TD1 and Lung Mun Road after 11 August 2018, the landfill gas monitoring was resumed at the works area from 11 August 2018. The monitoring results shown no exceedances were triggered.
- 13.1.7 In the Reporting Period, no environmental complaint was received.
- 13.1.8 No notifications of summons, or successful prosecution were received by the Contractor during the Reporting Period.
- 13.1.9 In the Reporting Period, joint site inspection by the RE, ET and the Contractor was carried out on 7<sup>th</sup>, 14<sup>th</sup>, 21<sup>st</sup> and 28<sup>th</sup> August 2018 and the IEC has attended the joint site inspection on 28<sup>th</sup> August 2018. No non-compliance was recorded during the site inspection but 12 observations and 2 reminders were recorded.
- 13.1.10 In the Reporting Period, Grave G1 of inspection was undertaken on 7<sup>th</sup>, 14<sup>th</sup>, 21<sup>st</sup> and 28<sup>th</sup> August 2018. Based on the inspection findings, the cultural heritage mitigation measures as implemented by the Contractor are fully complied with the EM&A Manual requirements.

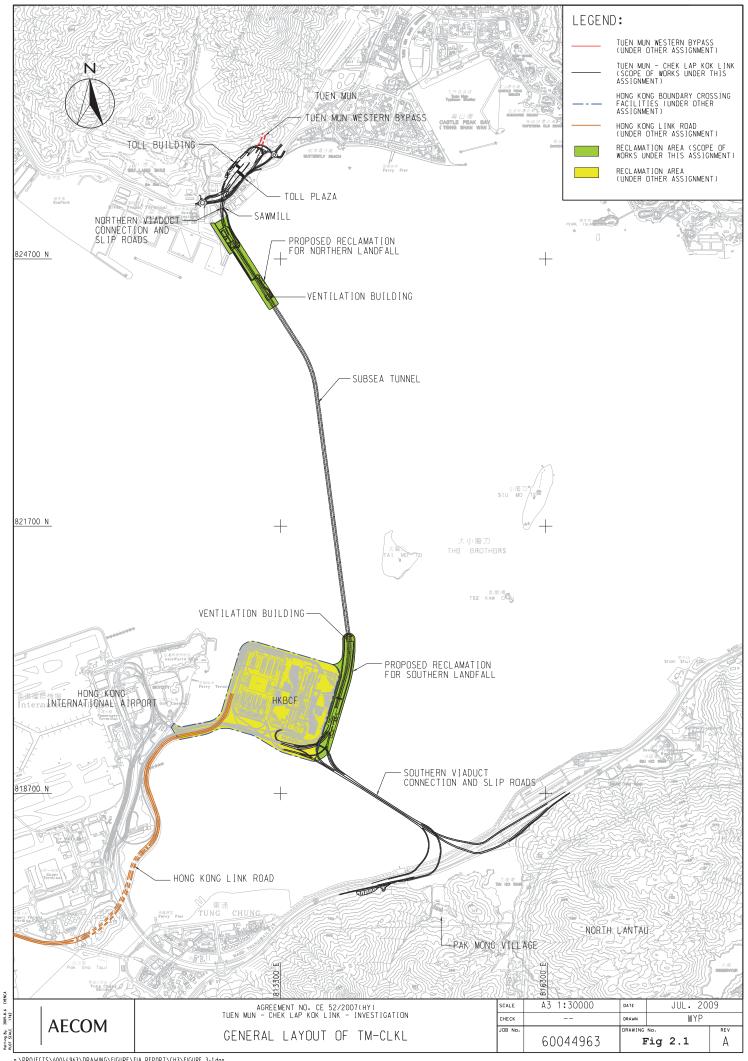

## **13.2 RECOMMENDATIONS**

- 13.2.1 During the wet season, muddy water or other water pollutants from site surface runoff into the public areas will be key environment issue. Special attention should be paid on the water quality mitigation measures to prevent surface runoff flow to public area.
- 13.2.2 Although in wet season, air quality mitigation measures such as watering of site area for 12 times per day and covering of exposed slopes should be fully implemented to reduce construction dust impact as recommended in the EMIS.
- 13.2.3 Stagnant water should be removed as soon as possible after rain to prevent mosquito breeding on site.

**Investigation Report for Exceedance** 

### Contract No. HY/2013/12 Tuen Mun - Chek Lap Kok Link - Northern Connection Toll Plaza and Associated Works

Date	26 August 2018
Environmental Aspect	Air Quality
Parameter	1-hour TSP
Monitoring Location	ASR1 (Tuen Mun Fireboat Station)
Measurement Period	10:57-11:57
Action Level (ug/m3)	331
Limit Level (ug/m3)	500
Measured Level (ug/m3)	417
Exceedance	Action Level
Possible reason for Action or Limit Level Non-compliance	<ol> <li>For the exceedance recorded on 26 August 2018 was public holiday, according to site information provided by CRBC-Kaden JV only indoor E&amp;M works at Retaining Wall B was conducted.</li> <li>To reduce dust impact arising from the construction, mitigation measures for construction dust control were implemented in normal working day. They include the followings:-         <ul> <li>water trucks were arranged on haul road to keep road surface wet (refer to photo 1 and water spraying record)</li> <li>for un-accessible area, water spraying by workers was provided (refer to photo 2, 8 and water spraying record)</li> <li>Hydro seeding or covered part of the exposed slopes and stockpile by tarpaulin sheet (refer to Photo 3 to 5)</li> <li>to set speed control at 8 km/hr for all vehicles using the haul road (refer to photo 6 and 7)</li> </ul> </li> <li>According to the weather station setting up at ASR5 under Contract No. HY/2012/08, North wind at 1.3 to 2.7 m/s was blowing between 10:00 to 12:00.</li> <li>The monitoring station ASR1 was located at the downwind of the works area Retaining Wall B, but it located more than 500m form the works area Also, only indoor works was conducted at those works area during the time of monitoring. Moreover, review the monitoring result at other monitoring stations which was located more closely to the works area, no exceedence was recorded at similar time. Another, stockpile stored at Portion F was backfilled and most of the site area was hard paved. It is unlikely to create heavy construction dust impact. (Ref. to Figure 1 &amp; 2, Photo 9)</li> <li>During the join site inspection with ER, Contractor, IEC and ET on 28 August 2018, no dust emitted from the works area was observed during the inspection. Also ER agreed that dust mitigation measures were implemented properly at those works area. The ET observed that the contractor had properly implemented the dust mitigation measure under EMIS requirement and</li></ol>

### Investigation Report on Action or Limit Level Non-compliance

	was due to other pollutant source rather than the construction site.
	7. Based on above investigation, the exceedance is unlikely related to the Contract work and no corrective action was required accordingly.
Action to be taken	ET will continue regular audit and inspection for the implemented dust mitigation measures during the construction period.

## Contract No. HY/2013/12 Tuen Mun - Chek Lap Kok Link - Northern Connection Toll Plaza and Associated Works

Date	29 August 2018
Environmental Aspect	Air Quality
Parameter	1-hour TSP
Monitoring Location	ASR1 (Tuen Mun Fireboat Station)
Measurement Period	13:36-14:36
Action Level (ug/m3)	331
Limit Level (ug/m3)	500
Measured Level (ug/m3)	403
Exceedance	Action Level
Possible reason for Action or Limit Level Non-compliance	<ol> <li>According to site information provided by CRBC-Kaden JV, road and drainage works at Lung Mun Road central median, E&amp;M works at Retaining Wall B, drainage works at Portion H, +19 Platform and Underpass, installation of VE panels at Retaining Wall B and housekeeping works at Portion F were conducted on 29 August 2018.</li> <li>To reduce dust impact arising from the construction, mitigation measures for construction dust control were implemented. They include the followings:-         <ul> <li>water trucks were arranged on haul road to keep road surface wet (refer to photo 1 and water spraying record)</li> <li>for un-accessible area, water spraying by workers was provided (refer to photo 2, 8, 12 and water spraying record)</li> <li>Hydro seeding or covered part of the exposed slopes and stockpile by tarpaulin sheet (refer to Photo 3 to 5)</li> <li>to set speed control at 8 km/hr for all vehicles using the haul road (refer to photo 6 and 7)</li> </ul> </li> <li>According to the weather station setting up at ASR5 under Contract No. HY/2012/08, south-easterly to south-westerly wind at 0.9 to 2.2 m's was blowing between 13:00 to 15:00.</li> <li>All construction area located at the downstream of Monitoring station ASR1. Another, rainy and Amber Rainstorm Signal was recorded during the time of monitoring. It is unlikely to create heavy construction dust impact. Furthermore, to reduce dust impact arising from the closest construction area Portion F more effective, the Contractor increase the water spraying frequency to once per 15 mins during working hours.</li> <li>Review the monitoring result at other monitoring stations which was located more closely to the major works area +19 platform, Portion H and Lung Mun Road no exceedence was recorded at similar time. (Ref. to Figure 1 &amp; 2)</li> <li>During the join site inspection with ER, IEC, Contractor and ET on 28 August 2018, no dust emitted from the works area was observed during t</li></ol>

# Investigation Report on Action or Limit Level Non-compliance

	was properly implemented the dust mitigation measure under EMIS requirement and no environmental issue related to dust aspect was observed. (Ref. to Photo 8 and water spraying record)
	7. Therefore the exceedance of Air Quality Monitoring at ASR1 was due to other pollutant source rather than the construction site.
	8. Based on above investigation, the exceedance is unlikely related to the Contract work and no corrective action was required accordingly.
Action to be taken	ET will continue regular audit and inspection for the implemented dust mitigation measures during the construction period.
