Attention: Mr Simon LEUNG

**Dear Sirs** 

Agreement No. CE 45/2008 (CE)
Liantang/Heung Yuen Wai Boundary Control Point and Associated Works
Independent Environmental Checker – Investigation
Monthly EM&A Report (No. 43) – February 2017

With reference to the Monthly EM&A Report No. 43 for February 2017 (Version 2) certified by the ET Leader, please be noted that we have no adverse comments on the captioned submission. We herewith verify the captioned submission in accordance with Condition 5.4 of the Environmental Permit No. EP-404/2011/D.

Thank you for your attention and please do not hesitate to contact the undersigned on tel. 3995-8120 or by email to antony.wong@smec.com; or our Mr Man CHEUNG on tel. 3995 8132 or by email to man.cheung@smec.com.

Yours faithfully for and on behalf of SMEC Asia Limited

Antony WONG

### **EXECUTIVE SUMMARY**

ES01 This is the **43<sup>rd</sup>** monthly EM&A report presenting the monitoring results and inspection findings for the reporting period from **1 to 28 February 2017** (hereinafter 'the Reporting Period').

## ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

- ES02 To facilitate the project management and implementation, Liantang/Heung Yuen Wai Boundary Control Point and Associated Works of the Project is divided to seven CEDD contracts including Contract 2 (CV/2012/08), Contract 3 (CV/2012/09), Contract 4 (TCSS), Contract 5 (CV/2013/03), Contract 6 (CV/2013/08) and Contract 7 (NE/2014/03) and an ArshSD contract (Contract SS C505).
- ES03 In the Reporting Period, the major construction works under Liantang/Heung Yuen Wai Boundary Control Point and Associated Works of the Project included Contract 2, Contract 3, Contract 6, Contract 7 and Contract SS C505. Environmental monitoring activities under the EM&A programme in the Reporting Period are summarized in the following table.

Environmental	Environmental Monitoring	Reporting 1	Period
Aspect	Parameters / Inspection	Number of Monitoring Locations to undertake	Total Occasions
Air Ovolity	1-hour TSP	9	135
Air Quality	24-hour TSP	9	45
Construction Noise	L <sub>eq(30min)</sub> Daytime	10	40
		WM1 & WM1-C	12 Scheduled & 1 extra
	Water in site was a second	WM2A(a) & WM2A-Cx	12 Scheduled & 2 extra
Water Quality	Water in-situ measurement	WM2B & WM2B-C	12 Scheduled & 0 extra
	and/or sampling	WM3x &WM3-C	12 Scheduled & 1 extra
		WM4, WM4-CA &WM4-CB	12 Scheduled & 0 extra
Ecology	<ul><li>Woodland compensation</li><li>i) General Health condition of planted species</li><li>ii) Survival of planted species</li></ul>	9 Quadrats	1
		Contract 2	4
Joint Site	IEC, ET, the Contractor and	Contract 3	5
Inspection /	RE joint site Environmental	Contract 6	4
Audit	Inspection and Auditing	Contract 7	5
		Contract SS C505	4

Note: Extra monitoring day was due to measurement results exceedance

### ACTION AND LIMIT (A/L) LEVELS EXCEEDANCE

ES04 In the Reporting Period, no air quality and construction noise exceedances were recorded. For water quality monitoring, a total of thirteen (13) Limit Level exceedances were recorded. The summary of exceedance in the Reporting Period is shown below.

				Event & Action			
Environmental Aspect	Monitoring Parameters	Action Level	Limit Level	NOE Issued	Investigation Result	Project related exceedance	Corrective Actions
Air Quality	1-hour TSP	0	0	0			
7111 Quanty	24-hour TSP	0	0	0			
Construction Noise	L <sub>eq(30min)</sub> Daytime	0	0	0	-1		
Water Quality	DO	0	0	0	-		

			Event & Action				
Environmental Aspect			Action Limit Level Level		Investigation Result	Project related exceedance	Corrective Actions
	Turbidity	0	4	4	- Exceedances recorded at WM1 are under investigation.	0	The Contractors were reminded to implement water quality mitigation
	SS	0	9	9	- All other NOEs were concluded as non-project related		measures in accordance with ISEMM of the EM&A Manual requirements

## **ENVIRONMENTAL COMPLAINT**

- ES05 In this Reporting Period, one (1) documented environmental complaint regarding noise issue for Contract 6 in January 2017 was received. Investigation report for the complaint is in progress.
- ES06 The summary of complaint received in the Reporting Period is summarized below.

		Environmental Complaint			
Reporting Period	Contract No	Frequency	Complaint Nature	Project related complaint	
	Contract 2	0	NA	NA	
	Contract 3	0	NA	NA	
1 – 28 Feb 2017	Contract 6	1	Noise (1)	#	
	Contract 7	0	NA	NA	
	SS C505	0	NA	NA	

<sup>#</sup> The complaint is under investigation.

#### NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES07 No environmental summons or successful prosecutions were recorded in the Reporting Period.

## REPORTING CHANGE

ES08 In the Reporting period, no reporting changes were made.

# SITE INSPECTION

- ES09 In this Reporting Period, joint site inspection to evaluate the site environmental performance at *Contract 2* has been carried out by the RE, IEC, ET and the Contractor on **3, 10, 17 and 24 February 2017**. No non-compliance was noted during the site inspection.
- ES10 In the Reporting Period, joint site inspection to evaluate the site environmental performance at *Contract 3* has been carried out by the RE, IEC, ET and the Contractor on **2**, **6**, **15**, **20** and **27 February 2017**. No non-compliance was noted during the site inspection.
- ES11 In the Reporting Period, joint site inspection to evaluate the site environmental performance at *Contract 6* has been carried out by the RE, IEC, ET and the Contractor on **2**, **9**, **16** and **23 February 2017.** No non-compliance was noted during the site inspection.
- ES12 In the Reporting Period, joint site inspection to evaluate the site environmental performance at *Contract SS C505* has been carried out by the RE, IEC, ET and the Contractor on 1, 8, 15 and 22 February 2017. No non-compliance was noted during the site inspection.

ES13 In the Reporting Period, joint site inspection to evaluate the site environmental performance at *Contract* 7 has been carried out by the RE, IEC, ET and the Contractor on 1, 7, 14, 21 and 28 February 2017. No non-compliance was noted during the site inspection.

### **FUTURE KEY ISSUES**

- ES14 During dry season, special attention should be paid on the potential construction dust impact since most of the construction sites are adjacent to villages. The Contractor should fully implement the construction dust mitigation measures.
- ES15 Preventive measures for muddy water or other water pollutants from site surface flow to local stream such as Kong Yiu Channel, Ma Wat Channel, Ping Yuen River, Kwan Tei River or public area should be properly maintained. The Contractors should paid special attention on water quality mitigation measures and fully implement according ISEMM of the EM&A Manual, in particular for working areas near Ma Wat Channel and Ping Yuen River. Moreover, all effluent discharge shall be ensure to fulfill Technical Memorandum of Effluent Discharged into Drainage and Sewerage Systems, inland and Coastal Waters criteria or discharge permits stipulation.
- ES16 Construction noise would be a key environmental issue during construction work of the Project. Noise mitigation measures such as using quiet plants should be implemented in accordance with the EM&A requirement.

#### 1 INTRODUCTION

### 1.1 PROJECT BACKGROUND

- 1.1.1 Civil Engineering and Development Department is the Project Proponent and the Permit Holder of Agreement No. CE 45/2008 (CE) Liantang / Heung Yuen Wai Boundary Control Point and Associated Works, which is a Designated Project to be implemented under Environmental Permit number EP-404/2011/C granted on 12 March 2015 and the latest Environmental Permit number EP-404/2011/D granted on 20 January 2017.
- 1.1.2 The Project consists of two main components: Construction of a Boundary Control Point (hereinafter referred as "BCP"); and Construction of a connecting road alignment. Layout plan of the Project is shown in *Appendix A*.
- 1.1.3 The proposed BCP is located at the boundary with Shenzhen near the existing Chuk Yuen Village, comprising a main passenger building with passenger and cargo processing facilities and the associated customs, transport and ancillary facilities. The connecting road alignment consists of six main sections:
  - 1) Lin Ma Hang to Frontier Closed Area (FCA) Boundary this section comprises at-grade and viaducts and includes the improvement works at Lin Ma Hang Road;
  - 2) Ping Yeung to Wo Keng Shan this section stretches from the Frontier Closed Area Boundary to the tunnel portal at Cheung Shan and comprises at-grade and viaducts including an interchange at Ping Yeung;
  - 3) North Tunnel this section comprises the tunnel segment at Cheung Shan and includes a ventilation building at the portals on either end of the tunnel;
  - 4) Sha Tau Kok Road this section stretches from the tunnel portal at Wo Keng Shan to the tunnel portal south of Loi Tung and comprises at-grade and viaducts including an interchange at Sha Tau Kok and an administration building;
  - 5) South Tunnel this section comprises a tunnel segment that stretches from Loi Tung to Fanling and includes a ventilation building at the portals on either end of the tunnel as well as a ventilation building in the middle of the tunnel near Lau Shui Heung;
  - 6) Fanling this section comprises the at-grade, viaducts and interchange connection to the existing Fanling Highway.
- 1.1.4 Action-United Environmental Services & Consulting has been commissioned as an Independent ET to implement the relevant EM&A program in accordance with the approved EM&A Manual, as well as the associated duties. As part of the EM&A program, the baseline monitoring has carried out between 13 June 2013 and 12 July 2013 for all parameters including air quality, noise and water quality before construction work commencement. The Baseline Monitoring Report summarized the key findings and the rationale behind determining a set of Action and Limit Levels (A/L Levels) from the baseline data. Also, the Project baseline monitoring report which verified by the IEC has been submitted to EPD on 16 July 2013 for endorsement. The major construction works of the Project was commenced on 16 August 2013 in accordance with the EP Section 5.3 stipulation.
- 1.1.5 This is 43<sup>rd</sup> monthly EM&A report presenting the monitoring results and inspection findings for reporting period from 1 to 28 February 2017.

### 1.2 REPORT STRUCTURE

- 1.2.1 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-
  - **Section 1** Introduction
  - Section 2 Project Organization and Construction Progress
  - **Section 3** Summary of Impact Monitoring Requirements
  - **Section 4** Air Quality Monitoring
  - Section 5 Construction Noise Monitoring

Section 6	Water Quality Monitoring
Section 7	Waste Management
Section 8	Site Inspections
Section 9	Environmental Complaints and Non-Compliance
Section 10	Implementation Status of Mitigation Measures
Section 11	Conclusions and Recommendations

### 2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

### 2.1 CONSTRUCTION CONTRACT PACKAGING

- 2.1.1 To facilitate the project management and implementation, the Project would be divided by the following contracts:
  - Contract 2 (CV/2012/08)
  - Contract 3 (CV/2012/09)
  - Contract 4 (NE/2014/02)
  - Contract 5 (CV/2013/03)
  - Contract 6 (CV/2013/08)
  - Contract 7 (NE/2014/03)
  - ArchSD Contract No. SS C505
- 2.1.2 The details of each contracts is summarized below and the delineation of each contracts is shown in *Appendix A*.

# Contract 2 (CV/2012/08)

- 2.1.3 Contract 2 has awarded in December 2013 and construction work was commenced on 19 May 2014. Major Scope of Work of the Contract 2 is listed below:
  - construction of an approximately 5.2km long dual two-lane connecting road (with about 0.4km of at-grade road and 4.8km of tunnel) connecting the Fanling Interchange with the proposed Sha Tau Kok Interchange;
  - construction of a ventilation adit tunnel and the mid-ventilation building;
  - construction of the north and south portal buildings of the Lung Shan Tunnel and their associated slope works;
  - provision and installation of ventilation system, E&M works and building services works for Lung Shan tunnel and Cheung Shan tunnel and their portal buildings;
  - construction of Tunnel Administration Building adjacent to Wo Keng Shan Road and the associated E&M and building services works; and
  - construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

# Contract 3 (CV/2012/09)

- 2.1.4 Contract 3 was awarded in July 2013 and construction work was commenced on 5 November 2013. Major Scope of Work of the Contract 3 is listed below:
  - construction of four link roads connecting the existing Fanling Highway and the south portal of the Lung Shan Tunnel;
  - realignment of the existing Tai Wo Service Road West and Tai Wo Service Road East;
  - widening of the existing Fanling Highway (HyD's entrustment works);
  - demolishing existing Kiu Tau vehicular bridge and Kiu Tau footbridge and reconstruction of the existing Kiu Tau Footbridge (HyD's entrustment works); and
  - construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

### Contract 4 (NE/2014/02)

- 2.1.5 Contract 4 has awarded in mid-April 2016. However, the major construction work still is not yet commenced. The scope of work of the Contract 4 includes:
  - design, supply, delivery, installation, testing and commissioning of a traffic control and surveillance system for the connecting road linking up the Liantang / Heung Yuen Wai Boundary Control Point and the existing Fanling Highway.

# Contract 5 (CV/2013/03)

- 2.1.6 Contract 5 has awarded in April 2013 and construction work was commenced in August 2013. Major Scope of Work of the Contract 5 is listed below:
  - site formation of about 23 hectares of land for the development of the BCP;
  - construction of an approximately 1.6 km long perimeter road at the BCP including a 175m long depressed road;
  - associated diversion/modification works at existing local roads and junctions including Lin Ma Hang Road;
  - construction of pedestrian subway linking the BCP to Lin Ma Hang Road;
  - provision of resite area with supporting infrastructure for reprovisioning of the affected village houses; and
  - construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

# Contract 6 (CV/2013/08)

- 2.1.7 Contract 6 has awarded in June 2015 and construction work was commenced on 23 October 2015. Major Scope of Work of the Contract 6 would be included below:
  - construction of an approximately 4.6km long dual two-lane connecting road (with about 0.6km of at-grade road, 3.3km of viaduct and 0.7km of tunnel) connecting the BCP with the proposed Sha Tau Kok Road Interchange and the associated ventilation buildings;
  - associated diversion/modification works at access roads to the resite of Chuk Yuen Village;
  - provision of sewage collection, treatment and disposal facilities for the BCP and the resite of Chuk Yuen Village;
  - construction of a pedestrian subway linking the BCP to Lin Ma Hang Road;
  - provisioning of the affected facilities including Wo Keng Shan Road garden; and
  - construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

### Contract 7 (NE/2014/03)

- 2.1.8 Contract 7 has awarded in December 2015 and the construction works of Contract 7 was commenced on 15 February 2016. Major Scope of Work of the Contract 7 would be included below:
  - construction of the Hong Kong Special Administrative Region (HKSAR) portion of four vehicular bridge
  - construction of one pedestrian bridge crossing Shenzhen (SZ) River (cross boundary bridges)

### ArchSD Contract No. SS C505

- 2.1.9 SS C505 has awarded in July 2015 and construction work was commenced on 1 September 2015. Major Scope of Work of the SS C505 would be included below:
  - passenger-related facilities including processing kiosks and examination facilities for private cars and coaches, passenger clearance building and halls, the interior fitting works for the pedestrian bridge crossing Shenzhen River, etc.;
  - cargo processing facilities including kiosks for clearance of goods vehicles, customs inspection platforms, X-ray building, etc.;
  - accommodation for the facilities inside of the Government departments providing services in connection with the BCP:
  - transport-related facilities inside the BCP including road networks, public transport interchange, transport drop-off and pick-up areas, vehicle holding areas and associated road furniture etc;
  - a public carpark; and

• other ancillary facilities such as sewerage and drainage, building services provisions and electronic systems, associated environmental mitigation measure and landscape works.

### 2.2 PROJECT ORGANIZATION

2.2.1 The project organization is shown in *Appendix B*. The responsibilities of respective parties are:

## Civil Engineering and Development Department (CEDD)

2.2.2 CEDD is the Project Proponent and the Permit Holder of the EP of the development of the Project and will assume overall responsibility for the project. An Independent Environmental Checker (IEC) shall be employed by CEDD to audit the results of the EM&A works carried out by the ET.

# <u>Architectural Services Department (ArchSD)</u>

2.2.3 ArchSD acts as the works agent for Development Bureau (DEVB), for Contract SS C505 Liantang/ Heung Yuen Wai Boundary Control Point (BCP) – BCP Buildings and Associated Facilities

# Environmental Protection Department (EPD)

2.2.4 EPD is the statutory enforcement body for environmental protection matters in Hong Kong.

# Ronald Lu & Partners (Hong Kong) Ltd (The Architect)

- 2.2.5 Ronald Lu & Partners (Hong Kong) Ltd is appointed by ArchSD as an Architect for Contract SS C505 Liantang/ Heung Yuen Wai Boundary Control Point (BCP) BCP Buildings and Associated Facilities. It responsible for overseeing the construction works of Contract SS C505 and for ensuring that the works are undertaken by the Contractor in accordance with the specification and contract requirements. The duties and responsibilities of the Architect with respect to EM&A are:
  - Monitor the Contractors' compliance with contract specifications, including the implementation and operation of the environmental mitigation measures and their effectiveness
  - Monitor Contractors' and ET's compliance with the requirements in the Environmental Permit (EP) and EM&A Manual
  - Facilitate ET's implementation of the EM&A programme
  - Participate in joint site inspection by the ET and IEC
  - Oversee the implementation of the agreed Event / Action Plan in the event of any exceedance
  - Adhere to the procedures for carrying out complaint investigation
  - Liaison with DSD, Engineer/Engineer's Representative, ET, IEC and the Contractor of the "Construction of the DSD's Regulation of Shenzhen River Stage 4 (RSR 4)" Project discussing regarding the cumulative impact issues.

### Engineer or Engineers Representative (ER)

- 2.2.6 The ER is responsible for overseeing the construction works and for ensuring that the works are undertaken by the Contractor in accordance with the specification and contract requirements. The duties and responsibilities of the ER with respect to EM&A are:
  - Monitor the Contractors' compliance with contract specifications, including the implementation and operation of the environmental mitigation measures and their effectiveness
  - Monitor Contractors's, ET's and IEC's compliance with the requirements in the Environmental Permit (EP) and EM&A Manual
  - Facilitate ET's implementation of the EM&A programme
  - Participate in joint site inspection by the ET and IEC
  - Oversee the implementation of the agreed Event / Action Plan in the event of any exceedance

- Adhere to the procedures for carrying out complaint investigation
- Liaison with DSD, Engineer/Engineer's Representative, ET, IEC and the Contractor of the "Construction of the DSD's Regulaiton of Shenzhen River Stage 4 (RSR 4)" Project discussing regarding the cumulative impact issues.

## *The Contractor(s)*

- 2.2.7 There will be one contractor for each individual works contract. Once the contractors are appointed, EPD, ET and IEC will be notified the details of the contractor.
- 2.2.8 The Contractor for Contracts under CEDD should report to the ER. For ArchSD Contract, the Contractor should report to the Architect or Architect's Representative (AR). The duties and responsibilities of the Contractor are:
  - Comply with the relevant contract conditions and specifications on environmental protection
  - Employ an Environmental Team (ET) to undertake monitoring, laboratory analysis and reporting of EM &A Facilitate ET's monitoring and site inspection activities
  - Participate in the site inspections by the ET and IEC, and undertake any corrective actions
  - Provide information / advice to the ET regarding works programme and activities which may contribute to the generation of adverse environmental impacts
  - Submit proposals on mitigation measures in case of exceedances of Action and Limit levels in accordance with the Event / Action Plans
  - Implement measures to reduce impact where Action and Limit levels are exceeded
  - Adhere to the procedures for carrying out complaint investigation

### Environmental Team (ET)

- 2.2.9 Once the ET is appointed, the EPD, CEDD, ER, Architect and IEC will be notified the details of the ET.
- 2.2.10 The ET shall not be in any way an associated body of the Contractor(s), and shall be employed by the Project Proponent/Contractor to conduct the EM&A programme. The ET should be managed by the ET Leader. The ET Leader shall be a person who has at least 7 years' experience in EM&A and has relevant professional qualifications. Suitably qualified staff should be included in the ET, and resources for the implementation of the EM&A programme should be allocated in time under the Contract(s), to enable fulfillment of the Project's EM&A requirements as specified in the EM&A Manual during construction of the Project. The ET shall report to the Project Proponent and the duties shall include:
  - Monitor and audit various environmental parameters as required in this EM&A Manual
  - Analyse the environmental monitoring and audit data, review the success of EM&A programme and the adequacy of mitigation measures implemented, confirm the validity of the EIA predictions and identify any adverse environmental impacts arising
  - Carry out regular site inspection to investigate and audit the Contractors' site practice, equipment/plant and work methodologies with respect to pollution control and environmental mitigation, and effect proactive action to pre-empt problems
  - Monitor compliance with conditions in the EP, environmental protection, pollution prevention and control regulations and contract specifications
  - Audit environmental conditions on site
  - Report on the environmental monitoring and audit results to EPD, the ER, the Architect, the IEC and Contractor or their delegated representatives
  - Recommend suitable mitigation measures to the Contractor in the case of exceedance of Action and Limit levels in accordance with the Event and Action Plans
  - Liaise with the IEC on all environmental performance matters and timely submit all relevant EM&A proforma for approval by IEC
  - Advise the Contractor(s) on environmental improvement, awareness, enhancement measures etc., on site
  - Adhere to the procedures for carrying out complaint investigation

• Liaison with the client departments, Engineer/Engineer's Representative, ET, IEC and the Contractor(s) of the concurrent projects as listed under Section 2.3 below regarding the cumulative impact issues.

# Independent Environmental Checker (IEC)

- 2.2.11 One IEC will be employed for this Project. Once the IEC is appointed, EPD, ER, the Architect and ET will be notified the details of the IEC.
- 2.2.12 The Independent Environmental Checker (IEC) should not be in any way an associated body of the Contractor or the ET for the Project. The IEC should be employed by the Permit Holder (i.e., CEDD) prior to the commencement of the construction of the Project. The IEC should have at least 10 years' experience in EM&A and have relevant professional qualifications. The appointment of IEC should be subject to the approval of EPD. The IEC should:
  - Provide proactive advice to the ER and the Project Proponent on EM&A matters related to the project, independent from the management of construction works, but empowered to audit the environmental performance of construction
  - Review and audit all aspects of the EM&A programme implemented by the ET
  - Review and verify the monitoring data and all submissions in connection with the EP and EM&A Manual submitted by the ET
  - Arrange and conduct regular, at least monthly site inspections of the works during construction phase, and ad hoc inspections if significant environmental problems are identified
  - Check compliance with the agreed Event / Action Plan in the event of any exceedance
  - Check compliance with the procedures for carrying out complaint investigation
  - Check the effectiveness of corrective measures
  - Feedback audit results to ET by signing off relevant EM&A proforma
  - Check that the mitigation measures are effectively implemented
  - Verify the log-book(s) mentioned in Condition 2.2 of the EP, notify the Director by fax, within one working day of receipt of notification from the ET Leader of each and every occurrence, change of circumstances or non-compliance with the EIA Report and/or the EP, which might affect the monitoring or control of adverse environmental impacts from the Project
  - Report the works conducted, the findings, recommendation and improvement of the site inspections, after reviewing ET's and Contractor's works, and advices to the ER and Project Proponent on a monthly basis
  - Liaison with the client departments, Engineer/Engineer's Representative, the Architect, ET, IEC and the Contractor of the concurrent projects as listed under Section 2.3 below regarding the cumulative impact issues.

# 2.3 CONCURRENT PROJECTS

- 2.3.1 The concurrent construction works that may be carried out include, but not limited to, the following:
  - (a) Regulation of Shenzhen River Stage IV;
  - (b) Widening of Fanling Highway Tai Hang to Wo Hop Shek Interchange Contract No. HY/2012/06;
  - (c) Construction of BCP facilities in Shenzhen.

## 2.4 CONSTRUCTION PROGRESS

2.4.1 In the Reporting Period, the major construction activity conducted under the Project is located in Contracts 2, 3, 6, 7 and SS C505 and they are summarized in below. Moreover, 3-month rolling construction program for all the current contracts is enclosed in *Appendix C*.

## Contract 2 (CV/2012/08)

2.4.2 The contract commenced in May 2014. In this Reporting Period, construction activities conducted are listed below:

Mid-Vent Portal

- Tunnel Boring Machine (TBM) south driver breakthrough
- Adit invert slab, waterproofing and lining
- Tube tunnel construction activities
- Structure connecting the adit tunnel and ventilation building superstructure

North Portal

- Slope stabilization and retaining wall
- Southbound TBM excavation and tunnel enlargement
- Construction of cross passage and internal structure
- North Bound Tunnel bench excavation
- ventilation building superstructure

South Portal

- Southbound and northbound Drill & Blast Excavation
- South ventilation and building superstructure
- Tunnel invert, waterproofing and lining
- Mucking out from tunnels

Admin Building

Building superstructure and E&M installation

### Contract 3 (CV/2012/09)

- 2.4.3 The Contract commenced in November 2013. In this Reporting Period, construction activities conducted are listed below:
  - Boundary Wall for Pumping Station
  - Cable detection and trial trenches
  - Construction of remaining base Slab of Box Culvert ID4
  - Demolition of existing Vehicular Bridge
  - Extended podium construction near Bored Pile Wall
  - Gabion wall construction
  - Installation Steel Column and Panel of Noise Barrier
  - Footbridge construction
  - Installation Works of Mini-pile
  - Noise barrier construction
  - Pier table construction
  - Pipe Jacking works for DN2200 Water Mains
  - Portal beam construction
  - Profile Barrier Construction on Viaduct
  - Road works
  - Roundabout modification works
  - Utilities Duct Laying
  - Viaduct segment erection
  - Water Main Laying

### Contract 4 (Contract number to be assigned)

2.4.4 The Contract was awarded in mid-April 2016 and the major construction work has not yet commenced.

### Contract 5 (CV/2013/03)

2.4.5 As advised by the ER, the construction works under Contract 5 was substantially completed on 31 August 2016.

## Contract 6 (CV/2013/08)

2.4.6 Contract 6 has awarded in June 2015 and construction work was commenced on 23 October 2015.

In this Reporting Period, construction activities conducted are listed below:

- Bored Piling
- Pile Cap Construction
- Bridge Pier Construction
- Bridge Segment Erection
- Tunnel Excavation
- Sewage Treatment Plant Construction

## Contract 7 (NE/2014/03)

- 2.4.7 Contract 7 has awarded in December 2015 and construction work was commenced on 15 February 2016. In this Reporting Period, construction activities conducted are listed below:
  - U-trough construction at Bridges A and E
  - Pile Caps Construction at Bridges A and E
  - 2<sup>nd</sup> floor slab construction at Bridge C

### Contract SS C505

- 2.4.8 Contract SS C505 has awarded in July 2015 and construction work was commenced on 1 September 2015. In this Reporting Period, construction activities conducted are listed below:
  - Building no. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13 and 36 construction
  - Excavation for drainage works for Building no. 4, 5, 6 & 7
  - On Grade Slab construction for Building no.36
  - Tower crane operation
  - Bridge construction works including construction of bridge column, retaining wall, pile cap, pier and abutment
  - Underground drainage works
  - Formwork and falsework for PTB's slab construction
  - Construction PTB M/F & 1/F flat slab
  - Steel beam works for maintenance platform for PTB
  - Pile cap construction for PTB, including excavation and backfilling works
  - Bridge deck construction for Bridges 1 5

## 2.5 SUMMARY OF ENVIRONMENTAL SUBMISSIONS

- 2.5.1 In according to the EP, the required documents have submitted to EPD which listed in below:
  - Project Layout Plans of Contracts 2, 3, 5, 6, 7 and SS C505
  - Landscape Plan
  - Topsoil Management Plan
  - Environmental Monitoring and Audit Programme
  - Baseline Monitoring Report (*TCS00690/13/600/R0030v3*) for the Project
  - Waste Management Plan of the Contracts 2, 3, 5, 6, 7 and SS C505
  - Contamination Assessment Plan (CAP) and Contamination Assessment Report (CAR) for Po Kat Tsai, Loi Tung and the workshops in Fanling
  - Vegetation Survey Report
  - Woodland Compensation Plan
  - Habitat Creation Management Plan
  - Wetland Compensation Plan
- 2.5.2 Summary of the relevant permits, licenses, and/or notifications on environmental protection for the Project of each contracts are presented in *Table 2-1*.

Table 2-1 Status of Environmental Licenses and Permits of the Contracts

# 3 SUMMARY OF IMPACT MONITORING REQUIREMENTS

#### 3.1 GENERAL

- 3.1.1 The Environmental Monitoring and Audit requirements are set out in the Approved EM&A manual. Environmental issues such as air quality, construction noise and water quality were identified as the key issues during the construction phase of the Project.
- 3.1.2 A summary of construction phase EM&A requirements are presented in the sub-sections below.

#### 3.2 MONITORING PARAMETERS

- 3.2.1 The EM&A program of construction phase monitoring shall cover the following environmental issues:
  - Air quality;
  - Construction noise; and
  - Water quality
- 3.2.2 A summary of the monitoring parameters is presented in *Table 3-1*.

**Table 3-1** Summary of EM&A Requirements

<b>Environmental Issue</b>	Parameters
Air Quality	1-hour TSP by Real-Time Portable Dust Meter; and
All Quality	24-hour TSP by High Volume Air Sampler.
	• L <sub>eq(30min)</sub> in normal working days (Monday to Saturday) 07:00-19:00 except public holiday; and
Noise	• 3 sets of consecutive L <sub>eq(5min)</sub> on restricted hours i.e. 19:00 to 07:00
110136	next day, and whole day of public holiday or Sunday
	Supplementary information for data auditing, statistical results such
	as $L_{10}$ and $L_{90}$ shall also be obtained for reference.
	In-situ Measurements
	<ul> <li>Dissolved Oxygen Concentration (mg/L);</li> </ul>
	• Dissolved Oxygen Saturation (%);
	Turbidity (NTU);
Water Quality	• pH unit;
	Water depth (m); and
	• Temperature (°C).
	Laboratory Analysis
	Suspended Solids (mg/L)

# 3.3 MONITORING LOCATIONS

3.3.1 The designated monitoring locations as recommended in the *EM&A Manual* are shown in *Appendix D*. As the access to some of the designated monitoring locations was questionable due to safety reason or denied by the landlords, alternative locations therefore have had proposed. The proposed alternative monitoring locations has updated in the revised EM&A Programme which verified by IEC and certified by ET Leader prior submitted to EPD on 10 July 2013. *Table 3-2*, *Table 3-3* and *Table 3-4* are respectively listed the air quality, construction noise and water quality monitoring locations for the Project and a map showing these monitoring stations is presented in *Appendix E*.

**Table 3-2** Impact Monitoring Stations - Air Quality

Station ID	Description	Works Area	Related to the Work Contract
AM1b^	Open area at Tsung Yuen Ha Village	BCP	SS C505
			Contract 7
AM2	Village House near Lin Ma Hang Road	LMH to Frontier	Contract 6
		Closed Area	
AM3	Ta Kwu Ling Fire Service Station of Ta	LMH to Frontier	Contract 6

Station ID	Description	Works Area	Related to the Work Contract
	Kwu Ling Village.	Closed Area	
AM4b^	House no. 10B1 Nga Yiu Ha Village	LMH to Frontier	Contract 6
		Closed Area	
AM5a^	Ping Yeung Village House	Ping Yeung to	Contract 6
		Wo Keng Shan	
AM6	Wo Keng Shan Village House	Ping Yeung to	Contract 6
		Wo Keng Shan	
AM7b <sup>@</sup>	Loi Tung Village House	Sha Tau Kok	Contract 2
		Road	Contract 6
AM8	Po Kat Tsai Village No. 4	Po Kat Tsai	Contract 2
AM9b#	Nam Wa Po Village House No. 80	Fanling	Contract 3

<sup>#</sup> Proposal for the change of air quality monitoring location from AM9a to AM9b was submitted to EPD on 4 Nov 2013 after verified by the IEC and it was approved by EPD (EPD's ref.: (15) in EP 2/N7/A/52 Pt.10 dated 8 Nov 2013).

**Table 3-3** Impact Monitoring Stations - Construction Noise

Station ID	Description	Works Area	Related to the Work Contract
NM1	Tsung Yuen Ha Village House No. 63	ВСР	SS C505 Contract 7
NM2a#	Village House near Lin Ma Hang Road	Lin Ma Hang to Frontier Closed Area	Contract 6
NM3	Ping Yeung Village House (facade facing northeast)	Ping Yeung to Wo Keng Shan	Contract 6
NM4	Wo Keng Shan Village House	Ping Yeung to Wo Keng Shan	Contract 6
NM5	Village House, Loi Tung	Sha Tau Kok Road	Contract 2, Contract 6
NM6	Tai Tong Wu Village House 2	Sha Tau Kok Road	Contract 2, Contract 6
NM7	Po Kat Tsai Village	Po Kat Tsai	Contract 2
NM8	Village House, Tong Hang	Fanling	Contract 2 Contract 3
NM9	Village House, Kiu Tau Village	Fanling	Contract 3
NM10	Nam Wa Po Village House No. 80	Fanling	Contract 3

<sup>#</sup> Proposal for the change of construction noise monitoring location from NM2 to NM2a was verified by the IEC on 6 May 2016 and was effective on 9 May 2016.

<sup>\*</sup> Proposal for the change of air quality monitoring location from AM1to AM1a was submitted to EPD on 24 March 2014 after verified by the IEC. It was approved by EPD (EPD's ref.: (6) in EP 2/N7/A/52 Pt.12 dated 9 Jun 2014).

<sup>@</sup> Proposal for the change of air quality monitoring location from AM7a to AM7b was submitted to EPD on 4 June 2014 after verified by the IEC. It was approved by EPD (EPD's ref.: (7) in EP 2/N7/A/52 Pt.12 dated 9 Jun 2014).

<sup>^</sup> Proposal for change of air quality monitoring locations was enclosed in the updated EM&A Programme which approval by EPD on 29 Mar 2016.

Table 3-4 Impact Monitoring Stations - Water Quality

		Coordi	nates of		
Station ID	Description	Designated / Alternative Location		Nature of the location	Related to the Work Contract
		Easting	Northing		Contract
WM1	Downstream of Kong Yiu Channel	833 679	845 421	Alternative location located at upstream 51m of the designated location	SS C505 Contract 6
WM1- Control	Upstream of Kong Yiu Channel	834 185	845 917	NA	SS C505 Contract 6
WM2A	Downstream of River Ganges	834 204	844 471	Alternative location located at upstream 81m of the designated location	Contract 6
WM2A(a)*	Downstream of River Ganges	834 191	844 474	Alternative location located at upstream 70m of the designated location	Contract 6
WM2A- Controlx#	Upstream of River Ganges	835 377	844 188	Alternative location located at upstream 160m of the designated location	Contract 6
WM2B	Downstream of River Ganges	835 433	843 397	NA	Contract 6
WM2B- Control	Upstream of River Ganges	835 835	843 351	Alternative location located at downstream 31m of the designated location	Contract 6
WM3x#	Downstream of River Indus	836 206	842 270	Alternative location located at downstream 180m of the designated location	Contract 2 Contract 6
WM3- Control	Upstream of River Indus	836 763	842 400	Alternative location located at downstream 26m of the designated location	Contract 2 Contract 6
WM4	Downstream of Ma Wat Channel	833 850	838 338	Alternative location located at upstream 11m of the designated location	Contract 2 Contract 3
WM4– Control A	Kau Lung Hang Stream	834 028	837 695	Alternative location located at downstream 28m of the designated location	Contract 2 Contract 3
WM4– Control B	Upstream of Ma Wat Channel	833760	837395	Alternative location located at upstream 15m of the designated location	Contract 2 Contract 3

Note: EPD has approved the revised EM&A Programme on 29<sup>th</sup> March 2016. If the measured water depth of the monitoring station is lower than 150 mm, alternative location (WM3x and WM2A-Controlx) based on the criteria were selected to perform water monitoring in accordance with the updated EM&A Programme (Rev. 05) (Section 4.1.4)

### 3.4 MONITORING FREQUENCY AND PERIOD

The requirements of impact monitoring are stipulated in *Sections 2.1.6*, *3.1.5* and *4.1.6* of the approved *EM&A Manual* and presented as follows.

## Air Quality Monitoring

- 3.4.1 Frequency of impact air quality monitoring is as follows:
  - 1-hour TSP 3 times every six days during course of works

<sup>\*</sup> Proposal for the change of water monitoring location from WM2A to WM2A(a) was verified by the IEC and it was approved by EPD. (EPD's ref. (10) in EP 2/N7/A/52 Pt.19)

24-hour TSP Once every 6 days during course of works.

## Noise Monitoring

3.4.2 One set of  $L_{eq(30min)}$  as 6 consecutive  $L_{eq(5min)}$  between 0700-1900 hours on normal weekdays and once every week during course of works. If construction work necessary to carry out at other time periods, i.e. restricted time period (19:00 to 07:00 the next morning and whole day on public holidays) (hereinafter referred as "the restricted hours"), additional weekly impact monitoring for  $L_{eq(5min)}$  measurement shall be employed during respective restricted hours periods.. Supplementary information for data auditing, statistical results such as  $L_{10}$  and  $L_{90}$  shall also be obtained for reference.

## Water Quality Monitoring

3.4.3 The water quality monitoring frequency shall be 3 days per week during course of works. The interval between two sets of monitoring shall not be less than 36 hours.

### 3.5 MONITORING EQUIPMENT

### Air Quality Monitoring

- 3.5.1 The 24-hour and 1-hour TSP levels shall be measured by following the standard high volume sampling method as set out in the *Title 40 of the Code of Federal Regulations, Chapter 1 (Part 50), Appendix B*. If the ET proposes to use a direct reading dust meter to measure 1-hour TSP levels, it shall submit sufficient information to the IEC to approve.
- 3.5.2 The filter paper of 24-hour TSP measurement shall be determined by HOKLAS accredited laboratory.
- 3.5.3 All equipment to be used for air quality monitoring is listed in *Table 3-5*.

Table 3-5 Air Quality Monitoring Equipment

Equipment	Model			
24-Hr TSP				
High Volume Air Sampler	TISCH High Volume Air Sampler, HVS Model TE-5170*			
Calibration Kit	TISCH Model TE-5025A*			
1-Hour TSP				
Portable Dust Meter	Sibata LD-3B Laser Dust monitor Particle Mass Profiler & Counter*			

<sup>\*</sup> Instrument was used in the Reporting Period and the calibration certificate could be referred in Appendix F.

## Wind Data Monitoring Equipment

- 3.5.4 According to the approved EM&A Manual, wind data monitoring equipment shall also be provided and set up for logging wind speed and wind direction near the dust monitoring locations. The equipment installation location shall be proposed by the ET and agreed with the IEC. For installation and operation of wind data monitoring equipment, the following points shall be observed:
  - 1) The wind sensors should be installed 10 m above ground so that they are clear of obstructions or turbulence caused by buildings.
  - 2) The wind data should be captured by a data logger. The data shall be downloaded for analysis at least once a month.
  - 3) The wind data monitoring equipment should be re-calibrated at least once every six months
  - 4) Wind direction should be divided into 16 sectors of 22.5 degrees each.
- 3.5.5 ET has liaised with the landlords of the successful granted HVS installation premises. However, the owners rejected to provide premises for wind data monitoring equipment installation.

3.5.6 Under this situation, the ET proposed alternative methods to obtain representative wind data. Meteorological information as extracted from "the Hong Kong Observatory Ta Kwu Ling Station" is alternative method to obtain representative wind data. For Ta Kwu Ling Station, it is located nearby the Project site. Moreover, this station is located at 15m above mean sea level while its anemometer is located at 13m above the existing ground which in compliance with the general setting up requirement. Furthermore, this station also can be to provide the humidity, rainfall, and air pressure and temperature etc. meteorological information. In Hong Kong of a lot development projects, weather information extracted from Hong Kong Observatory is common alternative method if weather station installation not allowed.

### Noise Monitoring

- 3.5.7 Sound level meter in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. The sound level meter shall be checked using an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m/s.
- 3.5.8 Noise monitoring equipment to be used for monitoring is listed in *Table 3-6*.

**Table 3-6** Construction Noise Monitoring Equipment

Equipment	Model
Integrating Sound Level Meter	B&K Type 2238* or Rion NL-31 or Rion NL-52*
Calibrator	B&K Type 4231* or Cesva CB-5 or Rion NC-74*
Portable Wind Speed Indicator	Testo Anemometer

<sup>\*</sup> Instrument was used in the Reporting Period and the calibration certificate could be referred in Appendix F.

3.5.9 Sound level meters listed above comply with the *International Electrotechnical Commission Publications 651: 1979 (Type 1)* and *804: 1985 (Type 1)* specifications, as recommended in TM issued under the NCO. The acoustic calibrator and sound level meter to be used in the impact monitoring will be calibrated yearly.

### Water Quality Monitoring

- 3.5.10 DO and water temperature should be measured in-situ by a DO/temperature meter. The instrument should be portable and weatherproof using a DC power source. It should have a membrane electrode with automatic temperature compensation complete with a cable. The equipment should be capable of measuring:
  - a DO level in the range of 0-20 mg/l and 0-200% saturation; and
  - a temperature of between 0 and 45 degree Celsius.
- 3.5.11 A portable pH meter capable of measuring a range between 0.0 and 14.0 should be provided to measure pH under the specified conditions accordingly to the APHA Standard Methods.
- 3.5.12 The instrument should be portable and weatherproof using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0-1000 NTU.
- 3.5.13 A portable, battery-operated echo sounder or tape measure will be used for the determination of water depth at each designated monitoring station as appropriate.
- 3.5.14 A water sampler e.g. Kahlsico Water Sampler, which is a transparent PVC cylinder with capacity not less than 2 litres, will be used for water sampling if water depth over than 0.5m. For sampling from very shallow water depths e.g. <0.5 m, water sample collection will be directly from water surface below 100mm use sampling plastic bottle to avoid inclusion of bottom sediment or humus. Moreover, Teflon/stainless steel bailer or self-made sampling buckets maybe used for water sampling. The equipment used for sampling will be depended the sampling location and depth situations.

- 3.5.15 Water samples for laboratory measurement of SS will be collected in high density polythene bottles, packed in ice (cooled to 4 °C without being frozen), and delivered to the laboratory in the same day as the samples were collected.
- 3.5.16 Analysis of suspended solids should be carried out in a HOKLAS or other accredited laboratory. Water samples of about 1L should be collected at the monitoring stations for carrying out the laboratory suspended solids determination. The SS determination work should start within 24 hours after collection of the water samples. The SS analyses should follow the *APHA Standard Methods 2540D* with Limit of Reporting of 2 mg/L.
- 3.5.17 Water quality monitoring equipment used in the impact monitoring is listed in *Table 3-7*. Suspended solids (SS) analysis is carried out by a local HOKLAS-accredited laboratory, namely *ALS Technichem (HK) Pty Ltd*.

**Table 3-7** Water Quality Monitoring Equipment

Equipment	Model	
Water Depth Detector	Eagle Sonar or tape measures	
Water Sampler	A 2-litre transparent PVC cylinder with latex cups at both ends or teflon/stainless steel bailer or self-made sampling bucket	
Thermometer & DO meter	YSI Professional Plus /YSI PRO20 Handheld Dissolved Oxygen Instrument*/ YSI 550A Multifunctional Meter*/ YSI Professional DSS	
pH meter	YSI Professional Plus / AZ8685 pH pen-style meter*/ YSI 6820/650MDS/ YSI Professional DSS	
Turbidimeter	Hach 2100Q*/ YSI 6820/ 650MDS/ YSI Professional DSS	
Sample Container	High density polythene bottles (provided by laboratory)	
Storage Container	'Willow' 33-liter plastic cool box with Ice pad	

<sup>\*</sup> Instrument was used in the Reporting Period and the calibration certificate could be referred in Appendix F.

#### 3.6 MONITORING METHODOLOGY

### 1-hour TSP Monitoring

- 3.6.1 The 1-hour TSP monitor was a brand named "Sibata LD-3B Laser Dust monitor Particle Mass Profiler & Counter" which is a portable, battery-operated laser photometer. The 1-hour TSP meter provides a real time 1-hour TSP measurement based on 90° light scattering. The 1-hour TSP monitor consists of the following:
  - (a.) A pump to draw sample aerosol through the optic chamber where TSP is measured;
  - (b.) A sheath air system to isolate the aerosol in the chamber to keep the optics clean for maximum reliability; and
  - (c.) A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.
- 3.6.2 The 1-hour TSP meter is used within the valid period as follow manufacturer's Operation and Service Manual.

# 24-hour TSP Monitoring

- 3.6.3 The equipment used for 24-hour TSP measurement is Tisch Environmental, Inc. Model TE-5170 TSP high volume air sampling system, which complied with *EPA Code of Federal Regulation, Appendix B to Part 50*. The High Volume Air Sampler (HVS) consists of the following:
  - (a.) An anodized aluminum shelter;
  - (b.) A 8"x10" stainless steel filter holder;
  - (c.) A blower motor assembly;
  - (d.) A continuous flow/pressure recorder;

- (e.) A motor speed-voltage control/elapsed time indicator;
- (f.) A 7-day mechanical timer, and
- (g.) A power supply of 220v/50 Hz
- 3.6.4 The HVS is operated and calibrated on a regular basis in accordance with the manufacturer's instruction using Tisch Calibration Kit Model TE-5025A. Calibration would carry out in two month interval.
- 3.6.5 24-hour TSP is collected by the ET on filters of HVS and quantified by a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (ALS), upon receipt of the samples. The ET keep all the sampled 24-hour TSP filters in normal air conditioned room conditions, i.e. 70% RH (Relative Humidity) and 25°C, for six months prior to disposal.

### **Noise Monitoring**

- Noise measurements were taken in terms of the A-weighted equivalent sound pressure level ( $L_{eq}$ ) measured in decibels dB(A). Supplementary statistical results ( $L_{10}$  and  $L_{90}$ ) were also obtained for reference.
- 3.6.7 During the monitoring, all noise measurements would be performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level ( $L_{eq}$ ). Leq<sub>(30min)</sub> in six consecutive Leq<sub>(5min)</sub> measurements will use as the monitoring parameter for the time period between 0700-1900 hours on weekdays; Leq<sub>(5min)</sub> measurements would be used as monitoring parameter for other time periods (e.g. during restricted hours), if necessary.
- 3.6.8 Prior of noise measurement, the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency. The checking is performed before and after the noise measurement.

## Water Quality

3.6.9 Water quality monitoring is conducted at the designated or alternative locations. The sampling procedures with the in-situ monitoring are presented as below:

## Sampling Procedure

- 3.6.10 A Digital Global Positioning System (GPS) is used to identify the designated monitoring stations prior to water sampling. A portable, battery-operated echo sounder or tape measurement is used for the determination of water depth at each station. At each station, water sample would be collected from 0.1m below water surface or the water surface to prevent the river bed sediment for stirring.
- 3.6.11 The sample container will be rinsed with a portion of the water sample. The water sample then will be transferred to the high-density polythene bottles as provided by the laboratory, labeled with a unique sample number and sealed with a screw cap.
- 3.6.12 Before sampling, general information such as the date and time of sampling, weather condition as well as the personnel responsible for the monitoring would be recorded on the field data sheet.
- 3.6.13 A 'Willow' 33-liter plastic cool box packed with ice will be used to preserve the water samples prior to arrival at the laboratory for chemical determination. The water temperature of the cool box is maintained at a temperature as close to 4<sup>o</sup>C as possible without being frozen. Samples collected are delivered to the laboratory upon collection.

# In-situ Measurement

3.6.14 YSI PRO20 Handheld Dissolved Oxygen Instrument/ YSI 550A Multifunctional Meter is used for water in-situ measures, which automates the measurements and data logging of temperature, dissolved oxygen and dissolved oxygen saturation.

- 3.6.15 A portable AZ Model 8685 is used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 14 and readable to 0.1.
- 3.6.16 A portable Hach 2100Q Turbidimeter is used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 1000 NTU.
- 3.6.17 All in-situ measurement equipment are calibrated by HOKLAS accredited laboratory of three month interval.

### Laboratory Analysis

3.6.18 All water samples analyzed Suspended Solids (SS) will be carried out by a local HOKLAS-accredited testing laboratory (ALS Technichem (HK) Pty Ltd HOKLAS registration no. 66). SS determination using *APHA Standard Methods* 2540D as specified in the *EM&A Manual* will start within 48 hours of water sample receipt.

## 3.7 EQUIPMENT CALIBRATION

- 3.7.1 Calibration of the HVS is performed upon installation and thereafter at bimonthly intervals in accordance with the manufacturer's instruction using the certified standard calibrator (TISCH Model TE-5025A). Moreover, the Calibration Kit would be calibrated annually. The calibration data are properly documented and the records are maintained by ET for future reference.
- 3.7.2 The 1-hour TSP meter was calibrated by the supplier prior to purchase. Zero response of the equipment would be checked before and after each monitoring event. Annually calibration with the High Volume Sampler (HVS) in same condition would be undertaken by the Laboratory.
- 3.7.3 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at yearly basis.
- 3.7.4 All water quality monitoring equipment would be calibrated by HOKLAS accredited laboratory of three month intervals.
- 3.7.5 The calibration certificates of all monitoring equipment used for the impact monitoring program in the Reporting Period and the HOKLAS accredited certificate of laboratory are attached in *Appendix F*.

# 3.8 DERIVATION OF ACTION/LIMIT (A/L) LEVELS

3.8.1 The baseline results form the basis for determining the environmental acceptance criteria for the impact monitoring. According to the approved Environmental Monitoring and Audit Manual, the air quality, construction noise and water quality criteria were set up, namely Action and Limit levels are listed in *Tables 3-8*, *3-9* and *3-10*.

Table 3-8 Action and Limit Levels for Air Quality Monitoring

Manitaring Station	Action Level (µg /m³)		Limit Level (μg/m³)	
Monitoring Station	1-hour TSP	24-hour TSP	1-hour TSP	24-hour TSP
AM1b	265	143		
AM2	268	149		
AM3	269	145		
AM4b	267	148		
AM5a	268	143	500	260
AM6	269	148		
AM7b	275	156		
AM8	269	144		
AM9b	271	151		

Table 3-9 Action and Limit Levels for Construction Noise

Monitoring Location	Action Level	Limit Level in dB(A)	
Within ing Location	Time Period: 0700-1900 hours on normal weekdays		
NM1, NM2a, NM3, NM4, NM5, NM6, NM7, NM8, NM9, NM10	When one or more documented complaints are received	75 dB(A) <sup>Note 1 &amp; Note 2</sup>	

Note 1: Acceptable Noise Levels for school should be reduced to 70 dB(A) and65 dB(A) during examination period

Table 3-10 Action and Limit Levels for Water Quality

Parameter	Performance		Monitoring Location					
Parameter	criteria	WM1	WM2A(a)	WM2B	WM3x	WM4		
DO	Action Level	(*)4.23	(**)4.00	<sup>(*)</sup> 4.74	(**)4.00	(*)4.14		
(mg/L)	Limit Level	<sup>(#)</sup> 4.19	(**)4.00	<sup>(#)</sup> 4.60	(**)4.00	<sup>(#)</sup> 4.08

	Action Level	AND	120% of ups	tream control s	tation of the s	ame day		
(NTU)	Limit Level	67.6	33.8	12.3	14.0	38.4		
	Lillit Level	AND	130% of ups	tream control s	tation of the s	ame day		
	Action Level	54.5	14.6	11.8	12.6	39.4		
SS (mg/I)	Action Level	AND	120% of ups	tream control s	tation of the s	ame day		
SS (mg/L)	Limit Laval	64.9 17.3 12.4 12.9						
	Limit Level	AND	130% of ups	tream control s	tation of the s	ame day		

### Remarks:

3.8.2 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan which presented in *Appendix G*.

# 3.9 DATA MANAGEMENT AND DATA QA/QC CONTROL

- 3.9.1 All monitoring data will be handled by the ET's in-house data recording and management system. The monitoring data recorded in the equipment will be downloaded directly from the equipment at the end of each monitoring day. The downloaded monitoring data will input into a computerized database maintained by the ET. The laboratory results will be input directly into the computerized database and checked by personnel other than those who input the data.
- For monitoring parameters that require laboratory analysis, the local laboratory shall follow the QA/QC requirements as set out under the HOKLAS scheme for the relevant laboratory tests.

Note 2: If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the NCA have to be followed.

<sup>(\*)</sup> The Proposed <u>Action Level</u> of Dissolved Oxygen is adopted to be used 5%-ile of baseline data (\*\*) The Proposed <u>Action & Limit Level</u> of Dissolved Oxygen is used 4mg/L

<sup>(#)</sup> The Proposed Limit Level of Dissolved Oxygen is adopted to be used 1%-ile of baseline data

# 4 AIR QUALITY MONITORING

### 4.1 GENERAL

- 4.1.1 In the Reporting Period, construction works under the project have been commenced in Contracts 2, 3, 6, 7 and Contract SS C505. Hence, air quality monitoring was performed at all designated locations.
- 4.1.2 The air quality monitoring schedule is presented in *Appendix H* and the monitoring results are summarized in the following sub-sections.

# 4.2 AIR QUALITY MONITORING RESULTS

4.2.1 In the Reporting Period, a total of 135 events of 1-hour TSP and 45 events 24-hours TSP monitoring were carried out and the monitoring results are summarized in Tables 4-1 to 4-9. The detailed 24-hour TSP monitoring data are presented in Appendix I and the relevant graphical plots are shown in Appendix J.

- 4.2.1 As shown in *Tables 4-1 to 4-9*, all the 1-hour TSP and 24-hour TSP monitoring results were below the Action/Limit Levels. No Notification of Exceedance (NOE) was issued in this Reporting Period.
- 4.2.2 The meteorological data during the impact monitoring days are summarized in *Appendix K*.

### 5 CONSTRUCTION NOISE MONITORING

### 5.1 GENERAL

- In the Reporting Period, construction works under the project have been commenced in Contracts 2, 3, 6, 7 and Contract SS C505 and noise monitoring was performed at all designated locations.
- 5.1.2 The noise monitoring schedule is presented in Appendix H and the monitoring results are summarized in the following sub-sections.

## 5.2 NOISE MONITORING RESULTS (NORMAL DAYTIME)

5.2.1 In the Reporting Period, a total of **40** event noise measurements were carried out at the designated locations. The sound level meter was set in 1m from the exterior of the building façade including noise monitoring locations NM1, NM3, NM4, NM5, NM6, NM7, NM8 and NM9. Therefore, no façade correction (+3 dB(A)) is added according to acoustical principles and EPD guidelines. However, free-field status were performed at NM2a and NM10 and façade correction (+3 dB(A)) has added according to the requirement in this month. The noise monitoring results at the designated locations are summarized in *Tables 5-1 and 5-2*. The detailed noise monitoring data are presented in *Appendix I* and the relevant graphical plots are shown in *Appendix J*.

Table 5-1 Summary of Construction Noise Monitoring Results

	Construction Noise Level (L <sub>eq30min</sub> ), dB(A)							
Date	NM1	NM2a <sup>(*)</sup>	NM8	NM9	NM10 <sup>(*)</sup>			
1-Feb-17	53	73	58	64	64			
7-Feb-17	59	73	58	64	68			
13-Feb-17	62	71	61	64	67			
24-Feb-17	59	65	59	67	65			
Limit Level	75 dB(A)							

Remarks

**Table 5-2** Summary of Construction Noise Monitoring Results

Construction Noise Level (L <sub>eq30min</sub> ), dB(A)							
Date	NM3	NM4	NM5	NM6	NM7		
2-Feb-17	56	63	55	58	60		
8-Feb-17	58	63	64	58	65		
14-Feb-17	60	62	53	61	55		
20-Feb-17	58	63	53	61	55		
Limit Level			75 dB(A)				

5.2.2 As shown in *Tables 5-1 and 5-2*, the noise level measured at all designated monitoring locations were below 75dB(A). Moreover, no valid noise complaint (which triggered Action Level exceedance) was recorded in the Reporting Period.

### 5.3 Noise Monitoring Results (Restricted Hours)

- 5.3.1 In the Reporting Period, CNPs were granted by Contracts 2, 3, 6, 7 and SS C505 for use of Powered Mechanical Equipment (PME) during restricted hour. As confirmed by both Contractors with their works schedules, construction works would be conducted at Contract 2, 3, 6 and SS C505 during restricted hours with the granted CNP. Noise monitoring was therefore conducted at the relevant noise monitoring locations during respective restricted hour periods.
- 5.3.2 Based on the works schedule by the Contractor of Contracts 2, 3, 6, 7 and SS C505, the involved noise monitoring locations included NM1, NM4, NM5, NM7, NM8, NM9 and NM10 and the noise monitoring results are summarized in *Tables 5-3 and 5-4*.

 $<sup>^{(*)}</sup>$  façade correction (+3 dB(A) is added according to acoustical principles and EPD guidelines

23-Feb-17	50	43	58				
Observation/ other noise source	vehicle parking, occasionally dogs barking	Noise from water flowing in the gully, occasionally dogs barking from village	from trains as NM8 close to train tracks and occasionally dogs barking	NM9 close to train tracks and	Traffic noise from highway and occasionally		

Remarks: If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the NCA have to be followed.

- (#) the monitoring date for NM9 and NM10 shall be the next day of the "Date"
- (\*) façade correction (+3 dB(A) is added according to acoustical principles and EPD guidelines

5.3.3 According to the site records by the monitoring team, no construction noise from the construction was noted during the course of monitoring at all locations. On the other hand, traffic noise was dominated at NM8 and NM9 since the monitoring locations were closed to the train tracks and occasionally noise from vehicle and dogs barking were recorded at all stations. Therefore, it is considered that the measurement results were likely to be the background noise.

# 6 WATER QUALITY MONITORING

#### 6.1 GENERAL

6.1.1 In the Reporting Period, construction works under the project has been commenced in Contracts 2, 3, 6, 7 and Contract SS C505 and water quality monitoring was performed at all designated locations. The water quality monitoring schedule is presented in *Appendix H*. The monitoring results are summarized in the following sub-sections.

## 6.2 RESULTS OF WATER QUALITY MONITORING

- 6.2.1 In the Reporting Period, a total of twelve (12) sampling days was scheduled to carry out for all designated locations with their control stations. Since exceedances were recorded at WM1, WM2A(a) and WM3x, according to "Event and Action Plan" stipulation, one (1) additional water quality monitoring day was conducted for WM1 and WM3x and two (2) additional water quality monitoring days were conducted for WM2A(a) its control stations in the reporting period.
- 6.2.2 The key monitoring parameters including Dissolved Oxygen, Turbidity and Suspended Solids are summarized in *Tables 6-1 to 6-5*. Breaches of water quality monitoring criteria are shown in *Table 6-6*. Detailed monitoring database including in-situ measurements and laboratory analysis data are shown in *Appendix I* and the relevant graphical plot are shown in *Appendix J*.

No of Exceedance	0	0	0	4	0	9	0	13	0	0

<sup>#</sup> Exceedances recorded at WM1 are under investigation.

6.2.3 In this Reporting Period, a total of thirteen (13) Limit Level (LL) exceedances, namely four (4)

<sup>\*\*</sup> Additional water quality monitoring at the exceeded location(s) due to two consecutive monitoring days indicated Limit Level exceedance.

<sup>\*</sup> Additional water quality monitoring at the exceeded location(s) due to two consecutive monitoring days indicated Limit Level exceedance.

LL exceedance of turbidity and nine (9) LL exceedances of Suspended Solids were recorded for the Project and they are summarized in *Table 6-5*. According to the investigation result, all exceedances recorded at WM2A(a) and WM3 were concluded as non-project related and the exceedances at WM1 was under investigation.

6.2.4 NOE was issued to relevant parties upon confirmation of the monitoring result. The investigation results and summary of exceedances are summarized in *Table 6-6*. The details of the completed investigation reports for the exceedances are attached in *Appendix N*.

Table 6-6 Summary of Water Quality Exceedance in the Reporting Period

Date of Exceedance	Location	Exceeded Parameter	Cause of Water Quality Exceedance In Brief
2 & 7 Feb 2017	WM2A(a)	SS	Investigation report revealed that the implementation of water mitigation measures on site was in order and no adverse water quality impact was observed. Moreover, there were no rain recorded on the exceedance days and muddy runoff from the site was unlikely to occur. It is considered that the exceedances on 2 and 7 February 2017 were due to the stirred up loose sediment of the river bed during sampling and not caused by the works under the Contract 6.
17 & 18 Feb 2017	WM2A(a)	NTU & SS	Investigation report revealed that the implementation of water mitigation measures on site was in order and no adverse water quality impact was observed. Moreover, there were no rain recorded on the exceedance days and muddy runoff from the site was unlikely to occur. It is considered that the exceedances on 2 and 7 February 2017 were due to the stirred up loose sediment of the river bed during sampling and not caused by the works under the Contract 6.
13 Feb 2017	WM3x	NTU & SS	Investigation report revealed that the water quality at WM3x was occasionally affected by the turbid water from the outfall from adjacent village as well as the runoff water from road washing at Sha Tak Kok Road. During site inspection in February 2017, it was observed that wastewater treatment facilities were maintained properly at both works area and no adverse water quality impact and muddy discharge was observed. It is concluded that the exceedances were unlikely caused by the works under Contracts 2 and 6.
24, 25 & 27 Feb 2017	WM2A(a)	NTU & SS	Investigation report revealed that muddy water was observed at upper steam near WM2A-C on 22 February 2017 which deteriorating the water quality throughout the river course. The source of muddy water was outside the site boundary and not related to works of Contact 6. It is considered the water quality at WM2A(a) on 24 February 2017 was affected by muddy water from upper upstream observed at previous days.  For exceedances on 25 and 27 February 2017, it is considered that the exceedances on were due to the stirred up loose sediment of the river bed during sampling and not caused by the works under the Contract 6.
24 Feb 2017	WM1	NTU & SS	The investigation is in progress.

## 7 ECOLOGY MONITORING

## 7.1 GENERAL

7.1.1 Ecology monitoring for woodland compensation was shall be conducted at bi-monthly interval. The last ecological monitoring report (Nov-Dec 2016) was submitted to EPD in January 2017. In the Reporting Report, ecological monitoring was conducted and the ecological monitoring report (Jan-Feb 2017) will be submitted as a stand-alone report.

#### 8 WASTE MANAGEMENT

#### 8.1 GENERAL WASTE MANAGEMENT

8.1.1 Waste management was carried out in accordance with the Waste Management Plan (WMP) for each contract.

## 8.2 RECORDS OF WASTE QUANTITIES

- 8.2.1 All types of waste arising from the construction work are classified into the following:
  - Construction & Demolition (C&D) Material;
  - Chemical Waste;
  - General Refuse; and
  - Excavated Soil.
- 8.2.2 The quantities of waste for disposal in this Reporting Period are summarized in *Tables 8-1* and 8-2 and the Monthly Summary Waste Flow Table is shown in *Appendix L*. Whenever possible, materials were reused on-site as far as practicable.

Table 8-1 Summary of Quantities of Inert C&D Materials for the Project

#### 9 SITE INSPECTION

#### 9.1 REQUIREMENTS

9.1.1 According to the approved EM&A Manual, the environmental site inspection shall be formulation by ET Leader. Weekly environmental site inspections should carry out to confirm the environmental performance.

## 9.2 FINDINGS / DEFICIENCIES DURING THE REPORTING MONTH

#### Contract 2

- 9.2.1 In the Reporting Period, joint site inspection for Contract 2 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on **3, 10, 17 and 24 February 2017**. No non-compliance was noted.
- 9.2.2 The findings / deficiencies of *Contract 2* that observed during the weekly site inspection are listed in *Table 9-1*.

Table 9-1 Site Observations for Contract 2

Date	Findings / Deficiencies	Follow-Up Status
3 February 2017	No adverse environmental issue was observed.	• NA
10 February 2017	Turbid water and mud cumulated inside the site cut off drainage system should be cleaned. (Mid-Vent)	The pit was designed for wastewater collection and diverting to sedimentation tank. The pump for emergercy use is now removed from the pir and no direct dishcharge could occur.
17 February 2017	Oil drum without drip tray was observed and it was also placed closely to the concrete U-channel. The Contractor should provide corresponding measures. (Mid-Vent)	The oil drum was removed away from the U-channel area.
	Some chemical containers without label was observed. The Contractor should provide corresponding measures. (Mid-Vent)	The chemical containers were propoely labelled.
	• It was reminded that the switch panel of wastewater treatment system for emergency use should have a designated person to keep the lock key, and the contact details should be shown on the switch panel.	Not required for reminder
	• The rainy season is coming soon, the Contractor was reminded to clean up the internal channel drainage as needed.	Not required for reminder
24 February 2017	As a reminder, the Contractor should seek for EPD approval if any changes for existing de-silting system under discharge license condition.	Not required for reminder

#### **Contract 3**

9.2.3 In the Reporting Period, joint site inspection for Contract 3 to evaluate the site environmental

performance has been carried out by the RE, IEC, ET and the Contractor on 2, 6, 15, 20 and 27 February 2017. No non-compliance was noted.

9.2.4 The findings / deficiencies of *Contract 3* that observed during the weekly site inspection are listed in *Table 9-2*.

Table 9-2 Site Observations for Contract 3

Date	Findings / Deficiencies	Follow-Up Status
2 February 2017	• No adverse environmental issue was observed.	• NA
6 February 2017	<ul> <li>No adverse environmental issue was observed.</li> </ul>	• NA
15 February 2017	• Exposed slope was observed, the Contractor should cover the slope with tarpaulin to prevent rainwater surface run-off entering the river. (Outfall 16)	Tarpaulin sheets were provided for exposed slope.
20 February 2017	• The contractor was reminded to closely monitor water quality of rain water collection channel.	Not required for reminder
27 February 2017	• The contractor was reminded to provide proper tree protection zone for retained tree at site area of old exit SA 6.	Not required for reminder

## Contract 6

- 9.2.5 In the Reporting Period, joint site inspection for Contract 6 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on **2**, **9**, **16 and 23 February 2017**. No non-compliance was noted.
- 9.2.6 The findings / deficiencies of *Contract 6* that observed during the weekly site inspection are listed in *Table 9-4*.

**Table 9-4 Site Observations for Contract 6** 

Date	Findings / Deficiencies	Follow-Up Status
2 February 2017	No adverse environmental issue was observed.	• NA
9 February 2017	No adverse environmental issue was observed.	• NA
16 February 2017	• Muddy trials at the site exit Dong Dong Shan (噹 噹山) had been observed. Follow-up action was immediately taken to maintain the cleanliness in public road. The contractor should maintain the vehicle washing system and the cleanliness in the public road.	The cleanliness of the site access has been improved and maintained.
	• As a reminder, vehicle washing procedure and the condition of the vehicular road in Bridge D was checked during the site inspection.	Not required for reminder.
23 February 2017	No adverse environmental issue was observed.	• NA

#### Contract SS C505

9.2.7 In the Reporting Period, joint site inspection for Contract SS C505 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on 1, 8,

**15 and 22 February 2017.** No non-compliance was noted.

9.2.8 The findings / deficiencies of *Contract SS C505* that observed during the weekly site inspection are listed in *Table 9-5*.

Table 9-5 Site Observations for Contract SS C505

Date	Findings / Deficiencies		Follow-Up Status
1 February 2017	• Chemical containers without drip tray were observed near Bridge 4. The Contractor should provide drip tray to the containers to avoid land contamination.	•	Chemical containers were placed into drip tray.
	The Contractor was reminded to dispose the general refuse on site regularly.	•	Not required for reminder.
8 February 2017	• Stagnant water was observed near PTB and under Tower Crane 10. The Contractor should remove the stagnant water to prevent mosquito breeding.	•	Stagnant water was removed.
15 February 2017	• Stagnant water was observed at bottom of PTB. The Contractor should remove the stagnant water to prevent mosquito breeding.	•	Stagnant water was removed.
	• Dusty stockpile without proper cover was observed near Building 4. The Contractor should cover the stockpile with tarpaulin sheet to reduce dust generation.	•	Dusty stockpile was proper covered.
22 February 2017	• Chemical containers without drip tray were observed at 1/F of PTB. The Contractor should provide trip tray to avoid land contamination.	•	Chemical container was removed.
	The Contractor was reminded to remove stagnant water on site after rainy days.	•	Not required for reminder.

#### Contract 7

- 9.2.9 In the Reporting Period, joint site inspection for Contract 7 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on 1, 7, 14, 21 and 28 February 2017. No non-compliance was noted.
- 9.2.10 The findings / deficiencies of *Contract* 7 that observed during the weekly site inspection are listed in *Table 9-6*.

**Table 9-6 Site Observations for Contract 7** 

Date	Findings / Deficiencies	Follow-Up Status
1 February 2017	<ul> <li>Dark smoke emission from excavator near Bridge E was observed. The Contractor should carry out maintenance work for the excavator.</li> <li>Dusty stockpile without proper cover was observed. The Contractor should cover the stockpile with tarpaulin sheet to reduce dust generation.</li> <li>The Contractor was reminded to spray water on haul road regularly to reduce dust generation.</li> </ul>	<ul> <li>Machinery         maintenance was         carried out.</li> <li>The dusty stockpile         was entirely covered         with tarpaulin sheet.</li> <li>Not required for         reminder.</li> </ul>

Date	Findings / Deficiencies	Follow-Up Status
7 February 2017	<ul> <li>No adverse environmental issue was observed</li> </ul>	• NA
14 February 2017	Waste oil cumulated inside the drip tray should be cleaned. (Bridge C)	• The waste oil was cleaned out from the drip tray.
21 February 2017	<ul> <li>No adverse environmental issue was observed</li> </ul>	• NA
28 February 2017	• It was reminded that stagnant water accumulated in drip tray should be cleaned regularly.	Not required for reminder.

9.2.11 General housekeeping such as daily site tidiness and cleanliness should be maintained for all Contracts. Furthermore, the Contractors were reminded to implement Waste Management Plan of the Project.

## **Other Contracts**

9.2.12 Since the construction work of Contract 5 has substantially completed and Contract 4 has not commenced, no site inspection was performed.

## 10 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

#### 10.1 ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTION

In the Reporting Period, no summons and prosecution under the EM&A Programme was lodged for all Contracts. However, one (1) documented environmental complaint regarding noise issue for Contract 6 in January 2017 was received in the Reporting Period. The investigation details for the complaint and status are presented below.

# <u>Investigation Result for the Documented Complaint received by EPD on 25 January 2017 (Contract 2) (last Reporting Period)</u>

- 10.1.2 EPD received a complaint from the public who provided photos and video showing grey slurry was discharging to Kwan Tei River. According to the photo and video provided, the river was polluted by the grey slurry and part of the harden slurry was deposited at the river side which seriously affecting the ecology of the river course. The complainant requested the related department to follow up and promptly clean up the slurry.
- 10.1.3 EPD stated that since the channel and stream was repeatedly being polluted and it seems that the discharge may be come from the construction site of CEDD's Contract No. CV/2012/08 Liantang / Heung Yuen Wai Boundary Control Point Site Formation & Infrastructure Works, Contract 2, near Po Kak Tsai.
- On EPD's inspection on 11 January 2017, the section of the channel just outside the construction site was clean without slurry. However, in EPD subsequent inspection on 25 January 2017 found that the aforesaid section was accumulated with grey slurry.
- 10.1.5 Joint site inspection among the RE, IEC, Contractor of Contract 2 (DHK) and ET was carried out on 27 January 2017 in Mid-Vent Portal works and its downstream channel for the complaint investigation. The observations during site inspection are summarized below.
  - (a) Wastewater treatment facility was implemented at construction site of Mid-Vent Portal works area. It comprises of 5 nos. of sedimentation tanks, 3 nos. of de-silting pit, a WetSep and an AquaSed. The treated water was stored in the recycle water silo and discharge would be made when the water silo is full.
  - (b) In view of the current site condition, the majority of wastewater was generated from the tunnel. The wastewater generated inside the tunnel was pumped to the wastewater treatment facility for treatment prior discharge at the approved discharge point.
  - (c) There was discharge made from the Mid-Vent Portal works area during the site inspection and the quality of discharge was visually clear.
  - (d) The sections of channel at downstream Mid-Vent Portal works area was found cumulated with mud and slurry at the channel bed.
- 10.1.6 As advised by DHK, cleansing of the channel at downstream of Mid-Vent Portal works area was carried out between 17 and 27 January 2017 as well as early February 2017 in accordance with the cleansing proposal which accepted by DSD on 16 January 2017. The cleansing proposal includes a combination of manual clearance, use of suction trucks and cleansing by clean water. DHK explained that the section of the stream where cleansing work was in progress, people might see muddy water flowing along the stream. Nevertheless, they had installed silt screens and sand trap during the cleansing work at downstream of the cleansing area to avoid silt and mud being washed downstream.
- 10.1.7 Subsequent joint site inspection among the RE, IEC, Contractor of Contract 2 (DHK) and ET was carried out on 3 and 10 February 2017 in Mid-Vent Portal works area and Kwan Tei River to follow up the complaint investigation. The observations during site inspection are summarized below.
  - (a) Wastewater treatment facility was implemented at construction site of Mid-Vent Portal works area and the setting and layout of the facility are the same as previous months.

- (b) There was discharge made from the Mid-Vent Portal works area during the site inspection on 3 and 10 February 2017 and the quality of discharge were visually clear.
- (c) The channels at downstream of Mid-Vent Portal works were clear of mud and slurry on 3 and 10 February 2017.
- (d) The water quality at Kwan Tei River was visually clear and the river channel was clear of mud and slurry on 3 and 10 February 2017.
- In our investigation, the suspected complaint location was where the cleansing work was in progress, so the public might see muddy water flowing along the stream. Nevertheless, DHK has installed silt screens and sand trap at the downstream area of the cleansing work to avoid the muddy water being washed downstream. As advised by DHK, they have cleared the sludge and DSD has no further comment during the joint inspection with DSD and AECOM on 8 February 2017.
- 10.1.9 As suggested by EPD, CEDD considers adding an additional water quality monitoring station in Kwan Tei River and the proposal for the additional monitoring work is under reviewed by CEDD. Nevertheless, ET will keep closely monitor the site condition and status of implemented mitigation measures by DHK in weekly site inspection.

# <u>Investigation Result for the Documented Complaint received by EPD in late January 2017</u> (Contract 6) (received by ET on 27 February 2017)

- 10.1.10 The investigation for the complaint is in progress.
- 10.1.11 The statistical summary table of environmental complaint is presented in *Tables 10-1*, *10-2* and *10-3*.

Table 10-1 Statistical Summary of Environmental Complaints

	Contract	Envi	ronmental Co	Project	
Reporting Period	No	Frequency	Cumulative	Complaint Nature	related complaint
19 May 2014 – 31 Jan 2017	Contract 2	0	26	<ul> <li>(16)Water Quality</li> <li>(7) Dust</li> <li>(2) Noise</li> <li>(1) dust &amp; noise</li> </ul>	(5) water (2) dust (1) noise

## The Other Contracts

10.1.12 Since the construction works at the Contract 5 was substantially completed and Contract 4 has not yet commenced, no environmental complaint, summons and prosecution under the EM&A Programme are registered in the Reporting Period.

#### 11 IMPLEMENTATION STATUS OF MITIGATION MEASURES

#### 11.1 GENERAL REQUIREMENTS

- The environmental mitigation measures that recommended in the Implementation Schedule for Environmental Mitigation Measures (ISEMM) in the approved EM&A Manual covered the issues of dust, noise, water and waste and they are summarized presented in *Appendix M*.
- All contracts under the Project shall be implementing the required environmental mitigation measures according to the approved EM&A Manual as subject to the site condition. Environmental mitigation measures generally implemented by Contracts 2, 3, 5, 6, 7 and Contract SS C505 in this Reporting Period are summarized in *Table 11-1*.

**Table 11-1 Environmental Mitigation Measures** 

Issues	Environmental Mitigation Measures
Water	• Wastewater to be treated by the wastewater treatment facilities i.e.
Quality	sedimentation tank or similar facility before discharge.
Air Quality	<ul> <li>Maintain damp / wet surface on access road</li> <li>Low vehicular speed within the works areas.</li> <li>All vehicles must use wheel washing facility before off site</li> <li>Sprayed water during breaking works</li> </ul>
	<ul> <li>A cleaning truck was regularly performed on the public road to prevent fugitive dust emission</li> </ul>
Noise	<ul> <li>Restrain operation time of plants from 07:00 to 19:00 on any working day except for Public Holiday and Sunday.</li> <li>Keep good maintenance of plants</li> <li>Place noisy plants away from residence or school</li> <li>Provide noise barriers or hoarding to enclose the noisy plants or works</li> <li>Shut down the plants when not in used.</li> </ul>
Waste and Chemical	<ul> <li>On-site sorting prior to disposal</li> <li>Follow requirements and procedures of the "Trip-ticket System"</li> </ul>
Management	<ul> <li>Predict required quantity of concrete accurately</li> <li>Collect the unused fresh concrete at designated locations in the sites for subsequent disposal</li> </ul>
General	The site was generally kept tidy and clean.

#### 11.2 TENTATIVE CONSTRUCTION ACTIVITIES IN THE COMING MONTH

11.2.1 As advised by the ER, the construction works under Contract 5 was substantially completed on 31 August 2016. Construction activities for other Contracts in the coming month are listed below:

Contract 2	
Mid-Vent Portal	Adit invert slab, water proofing and lining
	TBM U-turn
	<ul> <li>Tube tunnel construction activities</li> </ul>
	Structure connecting the adit tunnel, and ventilation building
	backfilling and superstructure works
North Portal	Southbound tunnel enlargement and Southbound tunnel bench
	excavation
	<ul> <li>Construction of cross passage and internal structure</li> </ul>
	<ul> <li>Retaining walls and slope stabilizations</li> </ul>
	North ventilation building superstructure
South Portal	<ul> <li>Southbound and Northbound D&amp;B excavation</li> </ul>
	South ventilation building superstructure
	• Tunnel invert, waterproofing and lining.
	Muck out from tunnels
Admin Building	Construction of permanent drainage and fencing wall
_	<ul> <li>Internal fitting out, E&amp;M and curtain wall installation</li> </ul>

## **Contract 3**

- Abutment construction
- Construction of Boundary Wall for Pumping Station
- Cable detection and trial trenches
- Demolition of Existing Vehicular Bridge
- Extended Podium Construction near Bored Pile Wall
- Footbridge construction
- Noise barrier construction
- Pier / Pier Table construction
- Portal construction
- Construction of Remaining Slab of Box Culvert ID04
- Retaining Wall construction
- Road works
- Roundabout Modification works
- Utilities duct laying
- Viaduct segment erection
- Water Main Laying
- Gabion wall construction
- Installation of noise barrier steel column and panel

#### **Contract 6**

- Bored Piling
- Pile Cap Construction
- Bridge Pier Construction
- Segment section
- Sewage Treatment Plant Construction
- Tunnel Works

#### **Contract 7**

- U-trough construction at Bridge A and Bridge E
- Pile caps construction at Bridge A and E
- Column construction at Bridge B and D
- 3<sup>rd</sup> floor construction of Bridge C

#### Contract SS C505

- Building no. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 18, 26, 30, 36 and 41 construction
- Excavation for drainage works for Building no. 4, 5, 6 & 7
- On Grade Slab construction for Building no.36
- Tower crane operation
- Bridge construction works including construction of bridge column, retaining wall, pile cap, pier, abutment, road and finishes works
- Underground drainage works
- Formwork and falsework for PTB's slab construction
- Construction PTB M/F & 1/F flat slab
- Steel beam works for maintenance platform for PTB
- PTB backfilling works
- Bridge deck construction for Bridges 1 5

## 11.3 KEY ISSUES FOR THE COMING MONTH

- 11.3.1 Key issues to be considered in the coming month for Contracts 2, 3, 6, 7 and SS C505 include:
  - Implementation of control measures for rainstorm;
  - Regular clearance of stagnant water during wet season;
  - Implementation of dust suppression measures at all times;

## Agreement No. CE 45/2008 (CE) Liantang/Heung Yuen Wai Boundary Control Point and Associated Works Monthly Environmental Monitoring & Audit Report (No.43) – February 2017

- Potential wastewater quality impact due to surface runoff;
- Potential fugitive dust quality impact due from the dry/loose/exposure soil surface/dusty material;
- Disposal of empty engine oil containers within site area;
- Ensure dust suppression measures are implemented properly;
- Sediment catch-pits and silt removal facilities should be regularly maintained;
- Management of chemical wastes;
- Discharge of site effluent to the nearby wetland, stockpiling or disposal of materials, and any dredging or construction area at this area are prohibited;
- Follow-up of improvement on general waste management issues; and
- Implementation of construction noise preventative control measures
- 11.3.2 Since the construction work of Contract 4 has not commenced, no environmental issue is presented.

#### 12 CONCLUSIONS AND RECOMMENDATIONS

#### 12.1 CONCLUSIONS

- 12.1.1 This is the **43<sup>rd</sup>** monthly EM&A report presenting the monitoring results and inspection findings for the Reporting Period from **1** to **28 February 2017**.
- 12.1.2 For air quality monitoring, no 1-hour and 24-hour TSP monitoring results triggered the Action or Limit Levels were recorded. No NOEs or the associated corrective actions were therefore issued.
- 12.1.3 In the Reporting Period, no construction noise measurement results that exceeded the Limit Level were recorded. Moreover, no valid noise complaint which triggered an Action Level exceedance was recorded.
- 12.1.4 For water quality monitoring, thirteen (13) LL exceedances, namely four (4) LL exceedance of turbidity and nine (9) LL exceedances of Suspended Solids were recorded. According to the investigation result, all exceedances recorded at WM2A(a) and WM3x were concluded as non-project related and the exceedances at WM1 was under investigation.
- 12.1.5 No environmental summons or successful prosecutions were recorded in the Reporting Period.
- 12.1.6 In this Reporting Period, one (1) documented environmental complaint regarding noise issue for Contract 6 in January 2017 was received. Investigation report for the complaint is in progress.
- During the Reporting Period, weekly joint site inspection by the RE, IEC, ET with the relevant Main-contractor were carried out for Contracts 2, 3, 6, 7 and SS C505 in accordance with the EM&A Manual stipulation. No non-compliance observed during the site inspection.

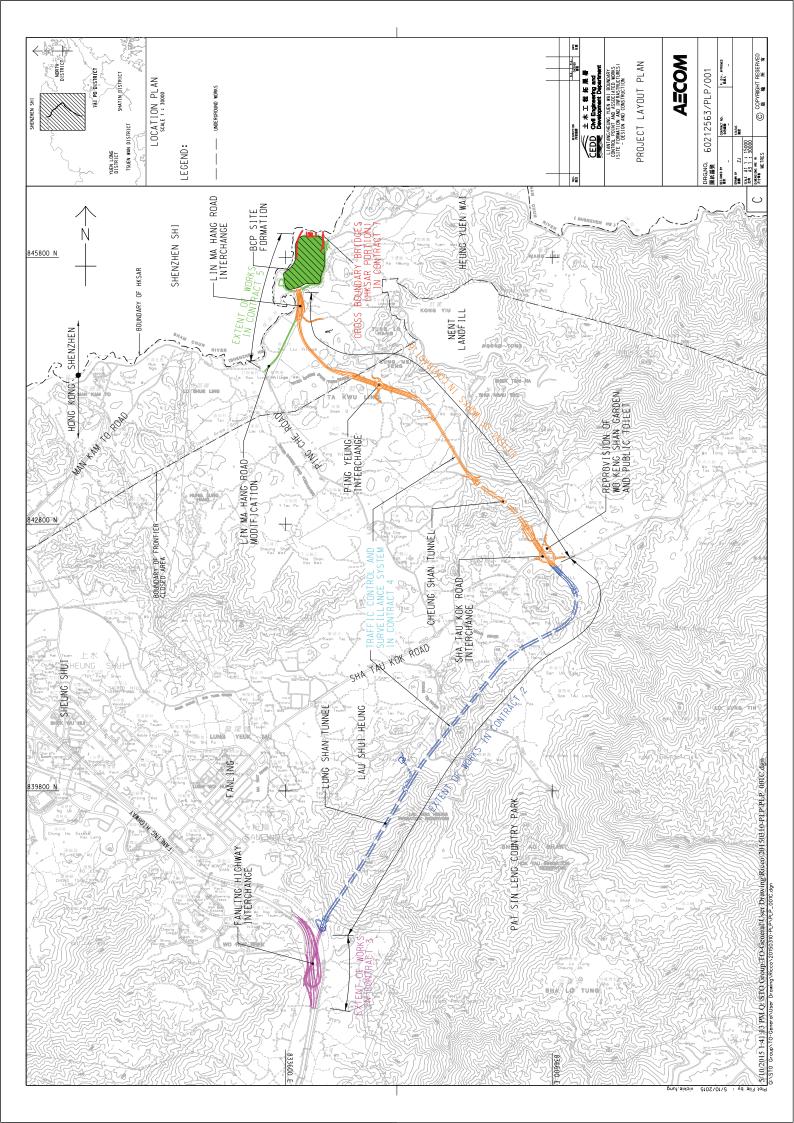

#### 12.2 RECOMMENDATIONS

- During dry season, special attention should be paid on the potential construction dust impact since most of the construction sites are adjacent to villages. The Contractor should fully implement the construction dust mitigation measures properly.
- 12.2.2 Preventive measures for muddy water or other water pollutants from site surface flow to local stream such as Kong Yiu Channel, Ma Wat Channel, Ping Yuen River, Kwan Tei River or public area should be properly maintained. The Contractors should paid special attention on water quality mitigation measures and fully implement according ISEMM of the EM&A Manual, in particular for working areas near Ma Wat Channel and Ping Yuen River. Moreover, all effluent discharge shall be ensure to fulfill Technical Memorandum of Effluent Discharged into Drainage and Sewerage Systems, inland and Coastal Waters criteria or discharge permits stipulation.
- 12.2.3 Construction noise would be a key environmental issue during construction work of the Project. Noise mitigation measures such as using quiet plants should be implemented in accordance with the EM&A requirement.
- Furthermore, daily cleaning and weekly tidiness shall be properly performed and maintained. In addition, mosquito control should be kept to prevent mosquito breeding on site.

## **Appendix C**

3-month rolling construction program

**Contract 2** 

Liantang / Heung Yuen Wai Boundary Control Point and Associated Works

CEDD Contract No: CV/2012/08

**Main Contractor: Dragages Hong Kong Ltd** 

## Tentative Three Months (March 2017 - May 2017) Construction Rolling Progam

Item	Major Construction Activites
1	Admin Bldg - Construction of permanent drainage and fencing wall
	Admin Bldg - Internal fitting out, E&M and curtain wall installation
3	Mid Vent Portal - Adit tunnel waterproofing and lining
4	Mid Vent Portal - TBM U-turn
5	Mid Vent Portal - Tube tunnel construction activities
6	Mid Vent Portal - Structure connecting the adit tunnel, ventilation building backfilling and superstructure works
7	North Portal - Southbound tunnel enlargement and Southbound tunnel bench excavation
8	North Portal - Construction of OHVD, cross passage and internal structure
9	North Portal - Retaining walls and slope stabilizations
10	North Portal - North ventilation building superstructure
11	South Portal - Northbound and Southbound tunnel D&B excavation
12	South Portal - South ventilation building superstructure works
13	South Portal - Tunnel invert, waterproofing and lining
14	South Portal - Mucking out from tunnels

**Contract 3** 

Liantang / Heung Yuen Wai Boundary Control Point and Associated Works

CEDD Contract No: CV/2012/09

**Main Contractor: Chun Wo Construction Ltd** 

## Tentative Three Months (February, March and April 2017) Construction Rolling Progam

1 Abutment Construction 2 Construction of Boundary Wall for DSD Pumping Station 3 Cable Detection and Trial Trenches 4 Demolition of Existing Vehicular Bridge 5 Extended Podium Construction near Bored Pile Wall 6 Footbridge Construction 7 Noise Barrier Construction 8 Pier / Pier Table Construction 9 Portal Construction 10 Construction of Remaining Base Slab of Box Culvert ID4 11 Retaining Wall Construction 12 Road Works 13 Roundabout Modification Works	
3 Cable Detection and Trial Trenches 4 Demolition of Existing Vehicular Bridge 5 Extended Podium Construction near Bored Pile Wall 6 Footbridge Construction 7 Noise Barrier Construction 8 Pier / Pier Table Construction 9 Portal Construction 10 Construction of Remaining Base Slab of Box Culvert ID4 11 Retaining Wall Construction 12 Road Works 13 Roundabout Modification Works	
4 Demolition of Existing Vehicular Bridge 5 Extended Podium Construction near Bored Pile Wall 6 Footbridge Construction 7 Noise Barrier Construction 8 Pier / Pier Table Construction 9 Portal Construction 10 Construction of Remaining Base Slab of Box Culvert ID4 11 Retaining Wall Construction 12 Road Works 13 Roundabout Modification Works

9 Portal Construction 10 Construction of Remaining Base Slab of Box Culvert ID4 11 Retaining Wall Construction 12 Road Works 13 Roundabout Modification Works	
10 Construction of Remaining Base Slab of Box Culvert ID4 11 Retaining Wall Construction 12 Road Works 13 Roundabout Modification Works	
<ul> <li>11 Retaining Wall Construction</li> <li>12 Road Works</li> <li>13 Roundabout Modification Works</li> </ul>	
12 Road Works 13 Roundabout Modification Works	
13 Roundabout Modification Works	
14 Utilities Duct Laying	
15 Viaduct Segment Erection	
16 Water Main Laying	
17 Gabion Wall Construction	
18 Installation Steel Column and Panel of Noise Barrier	

**Contract 6** 

**Liantang / Heung Yuen Wai Boundary Control Point and Associated Works** 

CEDD Contract No: CV/2013/08

**Main Contractor: CRBE-CEC-Kaden Joint Venture** 

## Tentative Three Months (February, March and April 2017) Construction Rolling Progam

Item	Construction Activities
	Construction Activites
1	Bored Piling
2	Pile Cap Construction
	Bridge Pier Constrcution
	Segment Erection
	Tunnel Works
6	Sewage Treatment Plant Construction

**Contract 7** 

CEDD Contract No: NE/2014/03

Main Contractor: Kwan On-Richwell-SCG Joint Venture

# Tentative Three Months(February 2017, March 2017 and April 2017) Construction Rolling Progam

Item	Construction Activites										
1	Bridge A - U-trough										
2	Bridge A - Pile Caps and Column										
3	Bridge B - Column and Deck										
4	Bridge C - Construction of 2nd and 3rd Floor Slab										
5	Bridge D - Column and Deck										
6	Bridge E - U-trough										
7	Bridge E - Pile Caps and Column										

**Contract SS C505** 

ArchSD Contract No: SSC505 Main Contractor: Leighton

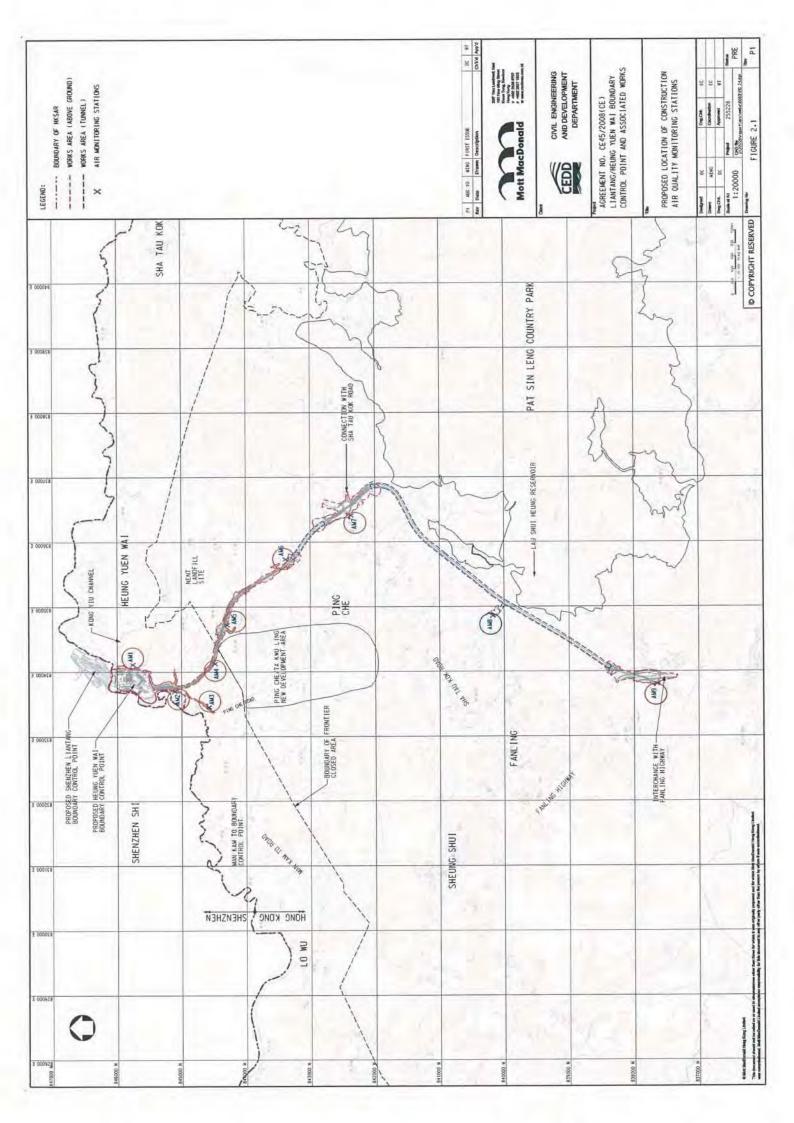

### Tentative Three Months (February, March and April 2017) Construction Rolling Progam

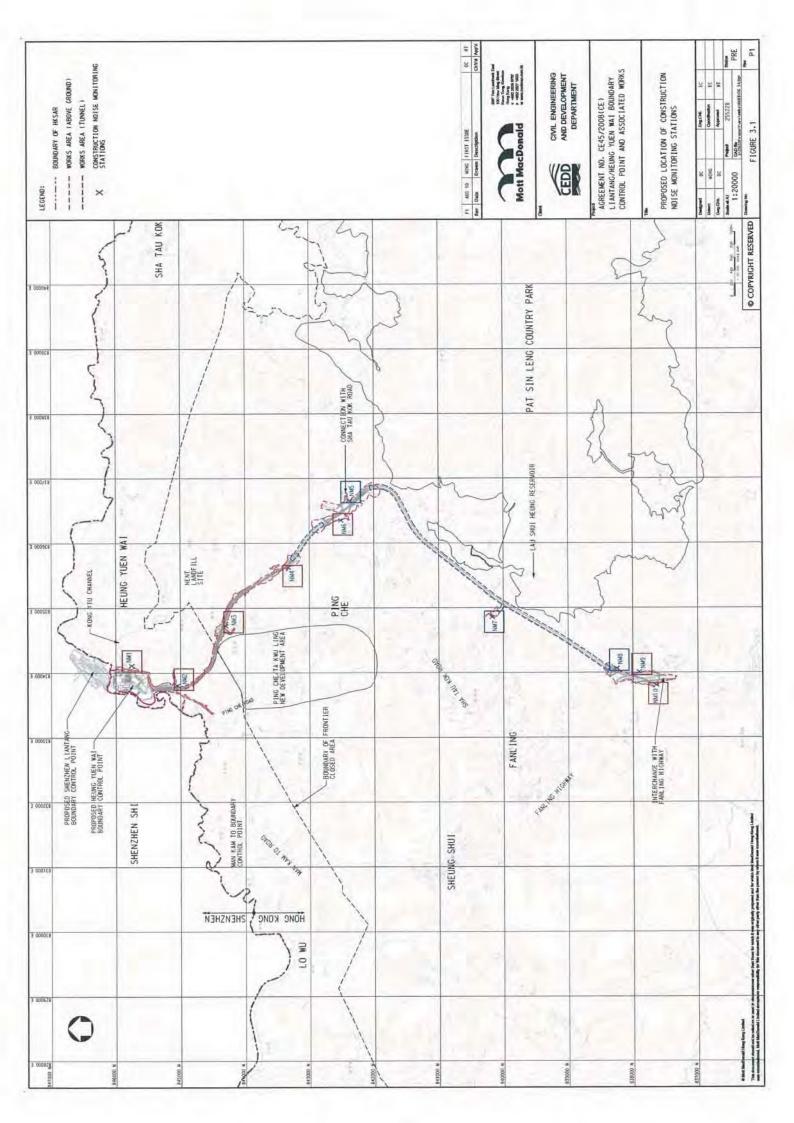

Item	Construction Activites
1	Passenger Terminal Building - Substructure Works
2	Passenger Terminal Building - RC Superstructure Works
3	Passenger Terminal Building - ABWF Works & Building Services Installation Works
4	C&ED Detector Dog Base - Substructure, RC structures and Integrated ABWF & BS Works
5	HKPF Building and Observation Tower - Substructure, RC structures, Integrated ABWF and BS Works
6	Fire Station and Drill Tower - Substructures, RC structures, Integradted ABWF and MEP Works
7	Cargo Examination Building (Inbound) - Underground Drainage & Utilities, RC Structure and Integrated ABWF & BS Works
8	Cargo Examination Building (Outbound) - Underground Drainage & Utilities and RC Structure, ABWF & BS Works
9	Fixed X-ray Vehicle Inspection System (FXRVIS) Buildings (Inbound) - Substructures, RC Structures and ABWF & BS Works
10	Fixed X-ray Vehicle Inspection System (FXRVIS) Buildings (Outbound) - Substructures, RC Structural Works and ABWF & BS V
11	GV Kiosk (Inbound) - Earthworks and Substructures
12	GV Kiosk (Outbound) - Earthworks and Substructures
13	Public Toilets (Inbound) - Earthworks
14	Public Toilets (Outbound) - Earthworks and Substructures
15	MXRVSS (Inbound) - Site Formation works
16	MXRVSS (Outbound) - Structures works
17	Traffic Control Office (Outbound) - Site Formation and Substructure Works
18	Refuse Collection Point - Site Formation and Substructure Works
19	Guard Booth (Outbound) - Site Formation Works
20	Fire Hydrant Tank & Pump Room - Structural Works, ABWF & BS works and Contractors Testing
21	Irrigation Pump Room - Site Formation and Substructure works
22	Elevated Walkway - Structure Works
23	Vehicular bridges - Pilecaps / Piers / abutment / retaining walls / portal, Bridge Decks, Road and Finishes Works
24	External Works in Portion 1 - Underground utilities, Road Works and Landscaping
25	External Works in Portion 2 - Underground utilities, Road Works and Landscaping

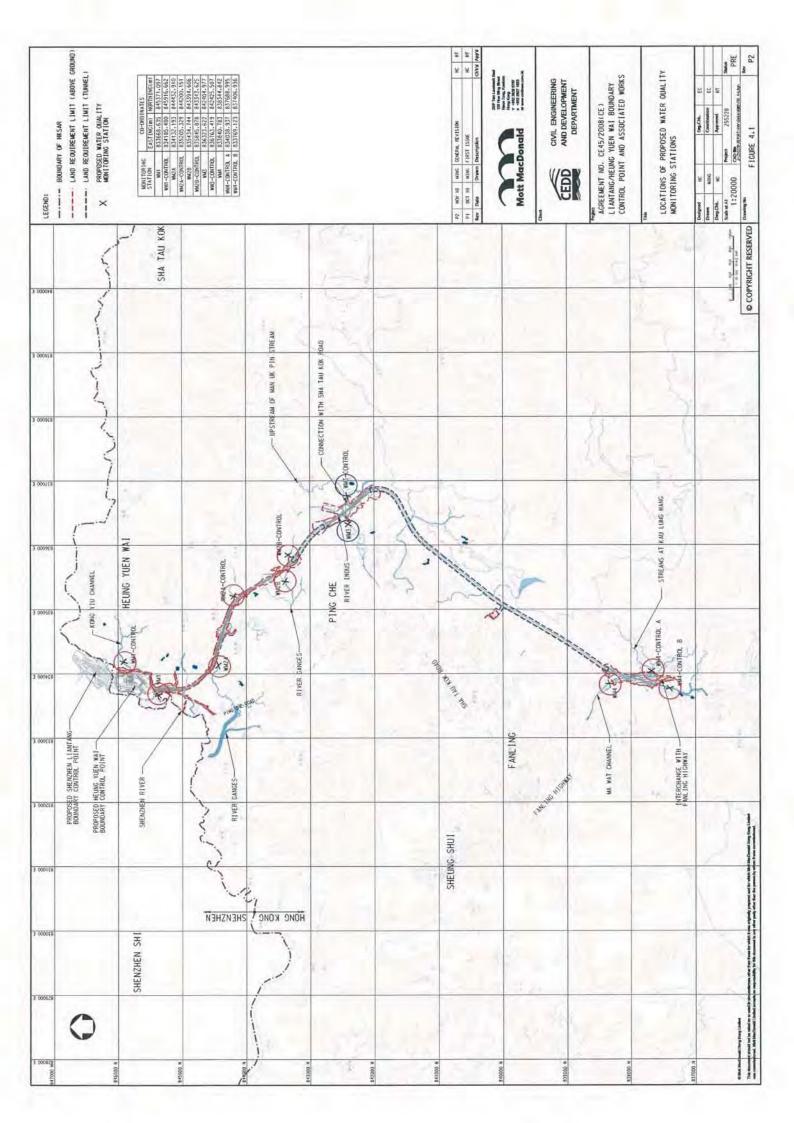

# Appendix D

Designated Monitoring Locations as Recommended in the Approved EM&A Manual

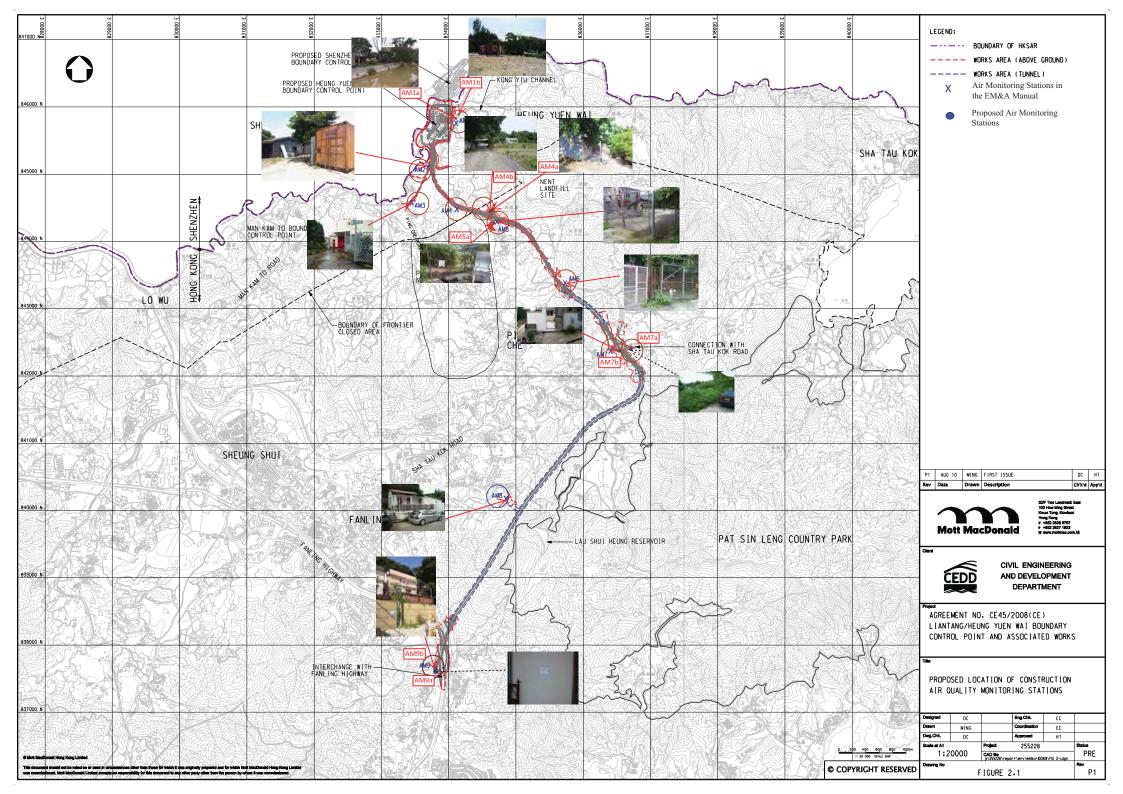

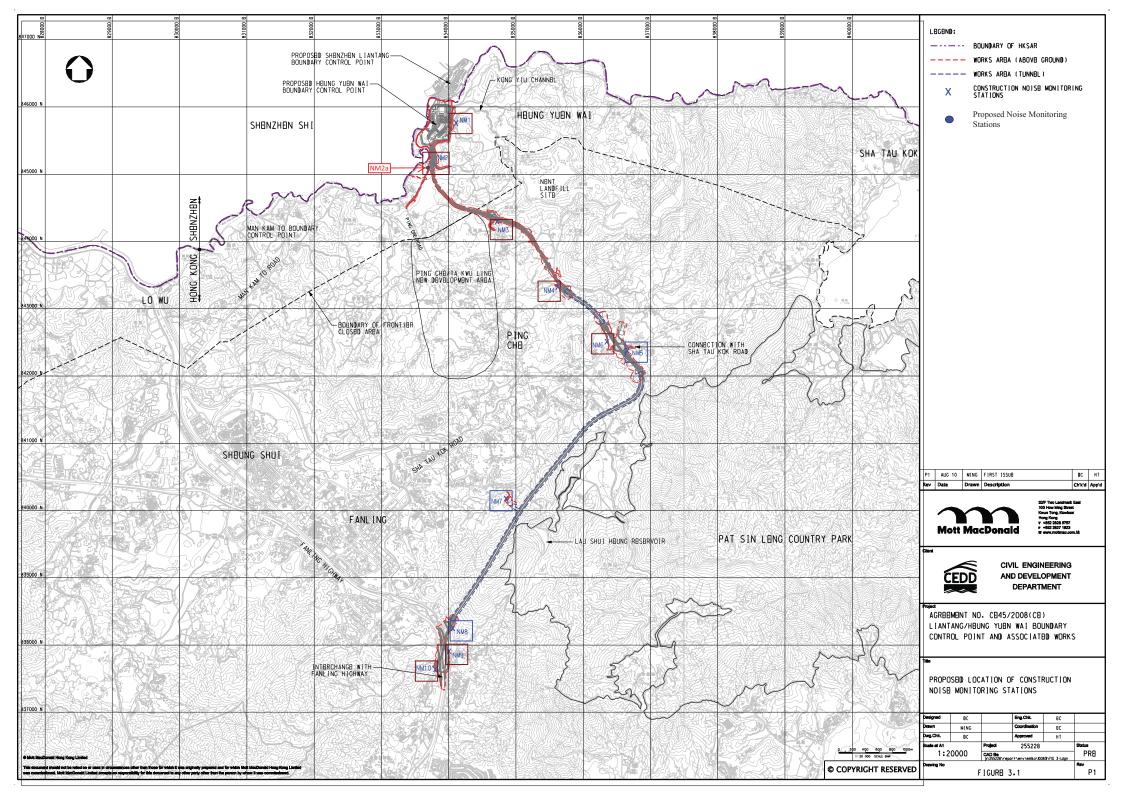

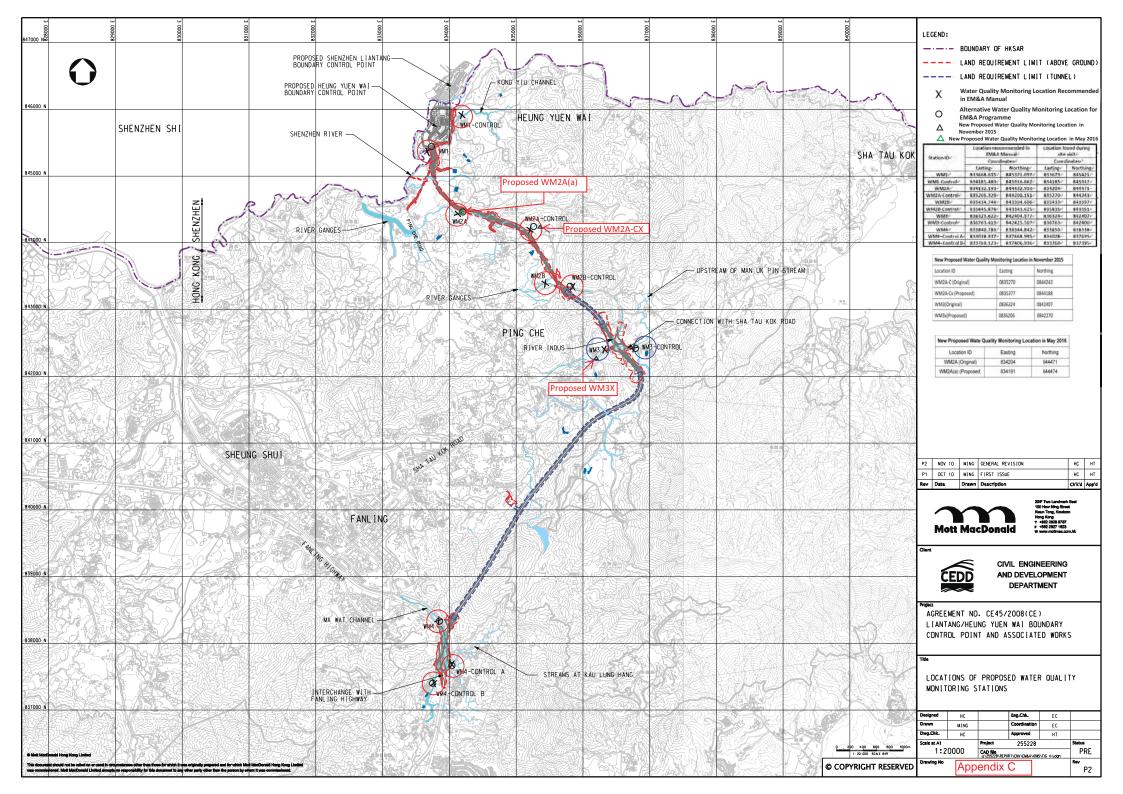

# **Appendix E**

**Monitoring Locations for Impact Monitoring** 

# **Appendix F**

Calibration Certificate of Monitoring Equipment and HOKLAS-accreditation Certificate of the Testing Laboratory

Location: Open area at Tsung Yuen Ha Village

Date of Calibration: 24/12/2016

Location ID: AM1b

Next Calibration Date: 24/2/2017

Technician: Fai So

### CALCULATIONS

Vstd = Diff. Vol[(Pa-Diff. Hg)/760](298/Ta)

Qstd = Vstd/Time

Va = Diff Vol [(Pa-Diff Hg)/Pa]

Qa = Va/Time

For subsequent flow rate calculations:

Qstd =  $1/m\{[SQRT(H2O(Pa/760)(298/Ta))] - b\}$  $Qa = 1/m\{[SQRT H2O(Ta/Pa)] - b\}$ 

# **Equipment Verification Report (TSP)**

### **Equipment Calibrated:**

Type: Laser Dust monitor

Manufacturer: Sibata LD-3B

Serial No. 2X6145

Equipment Ref: EQ105

Job Order HK1603558

### Standard Equipment:

Standard Equipment: Higher Volume Sampler

Location & Location ID: AUES office (calibration room)

Equipment Ref: HVS 018

Last Calibration Date: 2 January 2016

### **Equipment Verification Results:**

Testing Date: 4 to 6 January 2016

Hour	Time	Mean Temp °C	Mean Pressure (hPa)	Concentration in mg/m <sup>3</sup> (Standard Equipment)	Total Count (Calibrated Equipment)	Count/Minute (Total Count/60min)
2hr17min	17:30 ~ 19:47	20.6	1018.9	0.027	1602	11.7
2hr42min	17:00 ~ 19:42	20.7	1015.9	0.021	1522	9.3
2hr21min	18:00 ~ 20:21	20.9	1018.8	0.051	3347	23.6

Sensitivity Adjustment Scale Setting (Before Calibration) 593

Sensitivity Adjustment Scale Setting (After Calibration) 596

### Linear Regression of Y or X

Slope (K-factor): 0.0022

Correlation Coefficient 0.9985

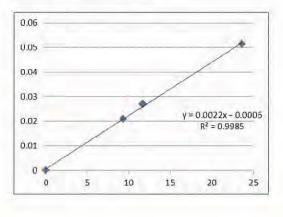

Date of Issue 11 January 2016

## Remarks:

1. Strong Correlation (R>0.8)

2. Factor 0.0022 should be apply for TSP monitoring

\*If R<0.5, repair or re-verification is required for the equipment

# **Equipment Verification Report (TSP)**

### **Equipment Calibrated:**

Type: Laser Dust monitor

Manufacturer: Sibata LD-3B

Serial No. 366409

Equipment Ref: EQ109

Job Order HK1603560

### Standard Equipment:

Standard Equipment: Higher Volume Sampler

Location & Location ID: AUES office (calibration room)

Equipment Ref: HVS 018

Last Calibration Date: 2 January 2016

# **Equipment Verification Results:**

Testing Date: 4 to 6 January 2016

Hour	Time	Mean Temp °C	Mean Pressure (hPa)	Concentration in mg/m <sup>3</sup> (Standard Equipment)	Total Count (Calibrated Equipment)	Count/Minute (Total Count/60min)
2hr17min	17:30 ~ 19:47	20.6	1018.9	0.027	1577	11.5
2hr42min	17:00 ~ 19:42	20.7	1015.9	0.021	1433	8.8
2hr21min	18:00 ~ 20:21	20.9	1018.8	0.051	3328	23.5

Sensitivity Adjustment Scale Setting (Before Calibration) 540 (CPM)

Sensitivity Adjustment Scale Setting (After Calibration) 540 (CPM)

### Linear Regression of Y or X

Slope (K-factor): 0.0022

Correlation Coefficient 0.9975

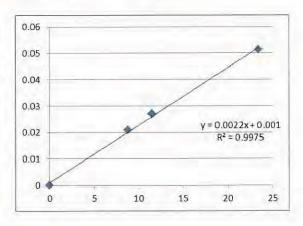

Date of Issue 11 January 2016

### Remarks:

1. Strong Correlation (R>0.8)

2. Factor 0.0022 should be apply for TSP monitoring

\*If R<0.5, repair or re-verification is required for the equipment

Plate		H2O (R)	H20	Qstd	I	IC .	LINEAR
No.	(in)	(in)	(in)	(m3/min)	(chart)	corrected	REGRESSION
18	6.1	6.1	12.2	1.776	56	56.56	Slope = 35.6871
13	4.7	4.7	9.4	1.560	49	49.49	Intercept = -6.1123
10	3.6	3.6	7.2	1.368	43	43.43	Corr. coeff. = 0.9967
8	2.3	2.3	4.6	1.096	34	34.34	
5	1.4	1.4	2.8	0.859	23	23.23	

#### Calculations:

Qstd = 1/m[Sqrt(H20(Pa/Pstd)(Tstd/Ta))-b]

IC = I[Sqrt(Pa/Pstd)(Tstd/Ta)]

Qstd = standard flow rate

IC = corrected chart respones

I = actual chart response

m = calibrator Qstd slope

b = calibrator Qstd intercept

Ta = actual temperature during calibration ( deg K )

Pstd = actual pressure during calibration ( mm Hg )

#### For subsequent calculation of sampler flow:

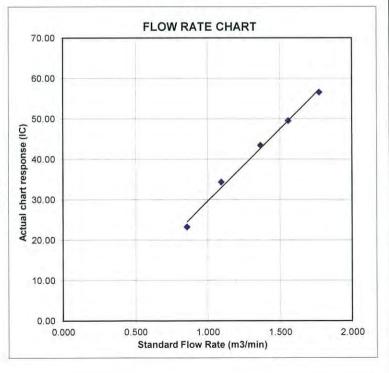

1/m(( I )[Sqrt(298/Tav)(Pav/760)]-b)

m = sampler slope

b = sampler intercept

I = chart response

Tav = daily average temperature

### **Equipment Calibrated:**

Type: Laser Dust monitor

Manufacturer: Sibata LD-3B

Serial No. 3Y6503

Equipment Ref: EQ112

Job Order HK1703461

### Standard Equipment:

Standard Equipment: Higher Volume Sampler

Location & Location ID: AUES office (calibration room)

Equipment Ref: HVS 018

Last Calibration Date: 25 November 2016

## **Equipment Verification Results:**

Testing Date: 9 January 2017

Hour	Time	Mean Temp °C	Mean Pressure (hPa)	Concentration in mg/m³ (Standard Equipment)	Total Count (Calibrated Equipment)	Count/Minute (Total Count/60min)	
3hr14min	09:10 ~ 12:24	20.6	1016.3	0.145	12647	65.3	
1hr57min 12:30 ~ 14:27		20.6	1016.3	0.069	3476	29.7	
1hr58min	14:35 ~ 16:33	20.6	1016.3	0.091	4876	41.0	

Sensitivity Adjustment Scale Setting (Before Calibration) 654 (CPM)

Sensitivity Adjustment Scale Setting (After Calibration) 658 (CPM)

#### Linear Regression of Y or X

Slope (K-factor): 0.0022

Correlation Coefficient 0.9997

Date of Issue 11 January 2017

## Remarks:

- 1. Strong Correlation (R>0.8)
- 2. Factor 0.0022 should be apply for TSP monitoring

\*If R<0.5, repair or re-verification is required for the equipment

# Certificate of Calibration

Certificate No.: C162177

證書編號

The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 12 hours, and switched on to 1. warm up for over 10 minutes before the commencement of the test.

Self-calibration using laboratory acoustic calibrator was performed before the test from 6.1.1.2 to 6.4. 2.

3. The results presented are the mean of 3 measurements at each calibration point.

4. Test equipment:

Equipment ID

N.T., HONG KONG

#### **COMMENTS**

The performance of the equipment stated in this report is checked with independent reference material and results compared against a calibrated secondary source.

The "Tolerance Limit" quoted is the acceptance criteria applicable for similar equipment used by the ALS Hong Kong laboratory or quoted from relevant international standards.

The "Next Calibration Date" is recommended according to best practice principals as practised by the ALS Hong Kong laboratory or quoted from relevant international standards.

Scope of Test: pH and Temperature

Description: pH Meter

Brand Name: AZ
Model No.: 8685
Serial No.: 1064457

Equipment No.: --

Date of Calibration: 14 November, 2016

#### **NOTES**

This is the Final Report and supersedes any preliminary report with this batch number.

Results apply to sample(s) as submitted. All pages of this report have been checked and approved for release.

**Event and Action Plan** 

## **Event and Action Plan for Air Quality**

Event	ET	IEC	ER	Action Contracto
Action Level				
Exceedance for one sample	Identify source, investigate the causes of exceedance and propose remedial measures;     Inform IEC and ER;     Repeat measurement to confirm finding;     Increase monitoring frequency to daily.	Check monitoring data submitted by ET;     Check Contractor's working method.	Notify Contractor.	Rectify any unacceptable practice;     Amend working methods if appropriate.
Exceedance for two or more consecutive samples	1. Identify source; 2. Inform IEC and ER; 3. Advise the ER on the effectiveness of the proposed remedial measures; 4. Repeat measurements to confirm findings; 5. Increase monitoring frequency to daily; 6. Discuss with IEC and Contractor on remedial actions required; 7. If exceedance continues, arrange meeting with IEC and ER; 8. If exceedance stops, cease additional monitoring.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method; 3. Discuss with ET and Contractor on possible remedial measures; 4. Advise the ET on the effectiveness of the proposed remedial measures; 5. Monitor the implementation of remedial measures.	Confirm receipt of notification of failure in writing;     Notify Contractor;     Ensure remedial measures properly implemented.	Submit proposals for remedial to ER within 3 working days of notification;     Implement the agreed proposals;     Amend proposal i appropriate.
Limit Level				
Exceedance for one sample	1. Identify source, investigate the causes of exceedance and propose remedial measures;     2. Inform ER, Contractor and EPD;     3. Repeat measurement to confirm finding;     4. Increase monitoring frequency to daily;     5. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method; 3. Discuss with ET and Contractor on possible remedial measures; 4. Advise the ER on the effectiveness of the proposed remedial measures; 5. Monitor theimplementation of remedial measures.	Confrm receipt of notification of failure in writing;     Notify Contractor;     Ensure remedial measures properly implemented.	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; 4. Amend proposal i appropriate.
Exceedance for two or more consecutive samples	1. Notify IEC, ER, Contractor	submitted by ET; 2. Check Contractor's working method; 3. Discuss amongst ER, ET, and Contractor on the potential remedial actions; 4. Review Contractor's remedial actions whenever necessary to assure their	1. Confrm receipt of notification of failure in writing; 2. Notify Contractor; 3. In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; 4. Ensure remedial measures properly implemented;	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; 4. Resubmit proposals if problem still not
	and ER to discuss the remedial actions to be taken; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; 8. If exceedance stops, cease additional monitoring.	the ER accordingly; 5. Monitor the implementation of remedial measures.	5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	under control; 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated.

## **Event and Action Plan for Construction Noise**

Event	ET	IEC	ER	Action Contractor
Action Level	Notify ER, IEC and Contractor;     Carry out investigation;     Report the results of investigation to the IEC, ER and Contractor;     Discuss with the IEC and Contractor on remedial measures required;     Increase monitoring frequency to check mitigation effectiveness.	Review the investigation results submitted by the ET;     Review the proposed remedial measures by the Contractor and advise the ER accordingly;     Advise the ER on the effectiveness of the proposed remedial measures.	Confirm receipt of notification of failure in writing;     Notify Contractor;     In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented;     Supervise the implementation of remedial measures.	Submit noise mitigation proposals to IEC and ER;     Implement noise mitigation proposals.
Limit Level	1. Inform IEC, ER, Contractor and EPD; 2. Repeat measurements to confirm findings; 3. Increase monitoring frequency; 4. Identify source and investigate the cause of exceedance; 5. Carry out analysis of Contractor's working procedures; 6. Discuss with the IEC, Contractor and ER on remedial measures required; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; 8. If exceedance stops.	Discuss amongst ER, ET, and Contractor on the potential remedial actions;     Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly.	1. Confirm receipt of notification of failure in writing: 2. Notify Contractor; 3. In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; 4. Supervise the implementation of remedial measures; 5. If exceedance continues, consider stopping the Contractor to continue working on that portion of work which causes the exceedance until the exceedance is abated.	1. Take immediate action to avoid further exceedance: 2. Submit proposals for remedial actions to IEC and ER within 3 working days of notification; 3. Implement the agreed proposals; 4. Submit further proposal if problem still not under control; 5. Stop the relevant portion of works as instructed by the ER until the exceedance is abated.

## **Event and Action Plan for Water Quality**

EVENT	BT	IEC	ER	ACTION CONTRACTOR
Action level being exceeded by one sampling day	1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC and Contractor; 6. Repeat measurement on next day of exceedance.	Discuss with ET and Contractor on the mitigation measures;     Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly;     Assess the effectiveness of the implemented mitigation measures	Discuss with IEC on the proposed mitigation measures;     Make agreement on the mitigation measures to be implemented;     Assess the effectiveness of the implemented mitigation measures	Inform the ER and confirm notification of the non-compliance in writing;     Rectify unacceptable practice;     Check all plant and equipment;     Consider changes of working methods;     Discuss with ET and IEC and propose mitigation measures to IEC and ER;     Implement the agreed mitigation measures.
Action Level being exceeded by more than two consecutive sampling days	1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working measures with IEC and Contractor; 6. Ensure mitigation measures with IEC and Contractor; 6. Ensure mitigation measures are implemented; 7. Prepare to increase the monitoring frequency to daily; 8. Repeat measurement on next day of	Discuss with ET and Contractor on the mitigation measures;     Reviaw proposals on mitigation measures submitted by Contractor and advise the ER accordingly;     Assess the effectiveness of the implemented mitigation measures	Discuss with IEC on the proposed mitigation measures;     Make agreement on the mitigation measures to be implemented;     Assess the effectiveness of the implemented mitigation measures	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IEC and propose mitigation measures to IEC and ER within 2 working days; 6. Implement the agreed mitigation measures.
Limit Level being exceeded by one sampling day	exceedance,  1. Repeat in-situ measurement to confirm findings;  2. Identify reasons for non-compliance and sources of impact;  3. Inform IEC, Contractor and EPD;  4. Check monitoring data, all plant, equipment and Contractor's working methods;  5. Discuss mitigation measures with IEC, ER and Contractor;  6. Ensure mitigation measures are implemented;  7. Increase the monitoring frequency to daily until no exceedance of Limit	Discuss with ET and Contractor on the mitigation measures;     Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly;     Assess the effectiveness of the implemented mitigation measures	Discuss with IEC, ET and Contractor on the proposed mitigation measures;     Request Contractor to critically review the working methods;     Make agreement on the mitigation measures to be implemented;     Assess the effectiveness of the implemented mitigation measures.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; 6. Implement the agreed mitigation measures.
Limit level being exceeded by more than one consecutive sampling days	Level.  1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC, Contractor and EPD; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC, ER and Contractor; 6. Ensure mitigation measures are implemented; 7. Increase the monitoring frequency to daily until no exceedance of Limit Level for two consecutive days.	Discuss with ET and Contractor on the mitigation measures;     Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly;     Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IEC, ET and Contractor on the proposed mitigation measures; 2. Request Contractor to critically review the working methods; 3. Make agreement on the mitigation measures to be implemented; 4. Assess the effectiveness of the implemented mitigation measures; 5. Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the construction activities until no exceedance of Limit Level.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; 6. Implement the agreed mitigation measures; 7. As directed by the ER, to slow down or to stop all or part of the construction activities.

Description of mode and details of recycling if any for the month e.g. XX kg of used timber was sent to YY site for transformation into fertilizers								
8kg of cans and 370kg of paper were sent to Kong Han for recycling.	36kg of plastic bottles were sent to Action Health for recycling.	34.37tons of scrap metals from LCAL and 142.81tons of scrap metal were sent for recycling						

### Notes:

- (1) The performance targets are given in the Particular Specification on Environmental Management Plan.
- (2) The waste flow table shall also include construction waste that are specified in the Contract to be imported for use at the site.
- (3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material.
- (4) Broken concrete for recycling into aggregates.
- (5) If necessary, use the conversion factor: 1 full load of dumping truck being equivalent to 6.5 m<sup>3</sup> by volume.

# **Appendix M**

Implementation Schedule for Environmental Mitigation Measures

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure	Who to implement the	Location of the measure	When to implement the measure?	What requirements or standards for the measure to
	nei.		& Main Concerns to address	measure?			achieve?
Air Quali	ty Impact (	Construction)					
3.6.1.1	2.1	<ul> <li>General Dust Control Measures</li> <li>The following dust suppression measures should be implemented:</li> <li>Frequent water spraying for active construction areas (4 times per day for active areas in Po Kak Tsai and 8 times per day for all other active areas), including areas with heavy construction and slope cutting activities</li> <li>80% of stockpile areas should be covered by impervious sheets</li> <li>Speed of trucks within the site should be controlled to about 10 km/hr</li> <li>All haul roads within the site should be paved to avoid dust</li> </ul>	To minimize adverse dust emission generated from various construction activities of the works sites	Contractor	Construction Works Sites	During Construction	EIA Recommendation and Air Pollution Control (Construction Dust) Regulation
		emission due to vehicular movement					
3.6.1.2	2.1	Best Practice for Dust Control  The relevant best practices for dust control as stipulated in the Air Pollution Control (Construction Dust) Regulation should be adopted to further reduce the construction dust impacts of the Project. These best practices include:  Good site management	To minimize adverse dust emission generated from various construction activities of the works sites		Construction Works Sites	During Construction	EIA Recommendation and Air Pollution Control (Construction Dust) Regulation
		<ul> <li>The Contractor should maintain high standard of housekeeping to prevent emission of fugitive dust.</li> <li>Loading, unloading, handling and storage of raw materials, wastes or by-products should be carried out in a manner so as to minimize the release of visible dust emission.</li> <li>Any piles of materials accumulated on or around the work areas</li> </ul>					
		<ul> <li>should be cleaned up regularly.</li> <li>Cleaning, repair and maintenance of all plant facilities within the work areas should be carried out in a manner minimizing generation of fugitive dust emissions.</li> <li>The material should be handled properly to prevent fugitive dust</li> </ul>					
		emission before cleaning.  Disturbed Parts of the Roads					
		■ Each and every main temporary access should be paved with					

Objectives of the What requirements Who to Recommended When to **Recommended Mitigation Measures** EM&A implement Location of the or standards for the EIA Ref. Measure implement the Ref. the measure measure to measure? & Main Concerns measure? achieve? to address

concrete, bituminous hardcore materials or metal plates and kept clear of dusty materials; or

 Unpaved parts of the road should be sprayed with water or a dust suppression chemical so as to keep the entire road surface wet.

#### Exposed Earth

Exposed earth should be properly treated by compaction, hydroseeding, vegetation planting or seating with latex, vinyl, bitumen within six months after the last construction activity on the site or part of the site where the exposed earth lies.

### Loading, Unloading or Transfer of Dusty Materials

 All dusty materials should be sprayed with water immediately prior to any loading or transfer operation so as to keep the dusty material wet.

#### Debris Handlina

- Any debris should be covered entirely by impervious sheeting or stored in a debris collection area sheltered on the top and the three sides.
- Before debris is dumped into a chute, water should be sprayed so that it remains wet when it is dumped.

#### Transport of Dusty Materials

 Vehicle used for transporting dusty materials/spoils should be covered with tarpaulin or similar material. The cover should extend over the edges of the sides and tailboards.

#### Wheel washing

Vehicle wheel washing facilities should be provided at each construction site exit. Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels.

#### Use of vehicles

- Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels.
- Where a vehicle leaving the construction site is carrying a load of dusty materials, the load should be covered entirely by clean impervious sheeting to ensure that the dusty materials do not leak from the vehicle.

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		Site hoarding  Where a site boundary adjoins a road, street, service lane or other area accessible to the public, hoarding of not less than 2.4m high from ground level should be provided along the entire length of that portion of the site boundary except for a site entrance or exit.  Blasting  The areas within 30m from the blasting area should be wetted with water prior to blasting.					
Air Qualit	ty Impact (	Operation)					
3.5.2.2	2.2	<ul> <li>The following odour containment and control measures will be provided for the proposed sewage treatment work at the BCP site:</li> <li>The treatment work will be totally enclosed. Negative pressure ventilation will be provided within the enclosure to avoid any fugitive odorous emission from the treatment work.</li> <li>Further odour containment will be achieved by covering or confining the sewage channels, sewage tanks, and equipment with potential odour emission.</li> <li>Proper mixing will be provided at the equalization and sludge holding tanks to prevent sewage septicity.</li> <li>Chemical or biological deodorisation facilities with a minimum odour removal efficiency of 90% will be provided to treat potential odorous emissions from the treatment plant including sewage channels / tanks, filter press and screening facilities so as to minimize any potential odour impact to the nearby ASRs.</li> </ul>	To minimize potential odour impact from operation of the proposed sewage treatment work at BCP	DSD	BCP	Operation Phase	EIA recommendation
Noise Imp	pact (Cons	truction)					
4.4.1.4	3.1	Adoption of Quieter PME Use of the recommended quieter PME such as those given in the BS5228: Part 1:2009 and presented in <b>Table 4.14</b> , which can be found in Hong Kong.	To minimize the construction air-borne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and Noise Control Ordinance (NCO)

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
4.4.1.4	3.1	Use of Movable Noise Barrier  The use of movable barrier for certain PME can further alleviate the construction noise impacts. In general, a 5 dB(A) reduction for movable PME and 10 dB(A) for stationary PME can be achieved depending on the actual design of the movable noise barrier. The Contractor shall be responsible for design of the movable noise barrier with due consideration given to the size of the PME and the requirement for intercepting the line of sight between the NSRs and PME. Barrier material with surface mass in excess of 7 kg/m² is recommended to achieve the predicted screening effect.	To minimize the construction airborne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO
4.4.1.4	3.1	Use of Noise Enclosure/ Acoustic Shed  The use of noise enclosure or acoustic shed is to cover stationary PME such as air compressor and concrete pump. With the adoption of the noise enclosure, the PME could be completely screened, and noise reduction of 15 dB(A) can be achieved according to the GW-TM.	To minimize the construction airborne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO
4.4.1.4	3.1	Use of Noise Insulating Fabric  Noise insulating fabric can be adopted for certain PME (e.g. drill rig, pilling auger etc). The insulating fabric should be lapped such that there are no openings or gaps on the joints. Technical data from manufacturers state that by using the Fabric, a noise reduction of over 10 dB(A) can be achieved on noise level.	To minimize the construction airborne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO

Water Qu	uality Impac	et (Construction)					
5.6.1.1	4.1	Construction site runoff and drainage	To control site	Contractor	Construction	Construction	Practice Note for
		The site practices outlined in ProPECC Note PN 1/94 should be followed as far as practicable in order to minimise surface runoff and the chance of erosion. The following measures are recommended to protect water quality and when properly implemented should be sufficient to adequately control site discharges so as to avoid water quality impacts:	runoff and drainage; prevent high sediment loading from reaching the nearby		Works Sites	Phase	Professional Person on Construction Site Drainage (ProPECC Note PN 1/94)
		At the start of site establishment, perimeter cut-off drains to direct off-site water around the site should be constructed with internal drainage works and erosion and sedimentation control facilities implemented. Channels (both temporary and permanent drainage pipes and culverts), earth bunds or sand bag barriers should be provided on site to direct stormwater to silt removal facilities. The design of the temporary on-site drainage system should be undertaken by the Contractor prior to the commencement of construction.	watercourses				
		The dikes or embankments for flood protection should be implemented around the boundaries of earthwork areas.					

Objectives of the What requirements Who to Recommended When to **Recommended Mitigation Measures** EM&A implement Location of the or standards for the Measure EIA Ref. implement the Ref. the measure measure to measure? & Main Concerns measure? achieve? to address

Temporary ditches should be provided to facilitate the runoff discharge into stormwater drainage system through a sediment/silt trap. The sediment/silt traps should be incorporated in the permanent drainage channels to enhance deposition rates, if practical.

- Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM standards under the WPCO. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC Note PN 1/94. Sizes may vary depending upon the flow rate. The detailed design of the sand/silt traps should be undertaken by the Contractor prior to the commencement of construction.
- All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly during rainstorms. Deposited silt and grit should be regularly removed, at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times.
- Measures should be taken to minimize the ingress of site drainage into excavations. If excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from foundation excavations should be discharged into storm drains via silt removal facilities.
- If surface excavation works cannot be avoided during the wet season (April to September), temporarily exposed slope/soil surfaces should be covered by tarpaulin or other means, as far as practicable, and temporary access roads should be protected by crushed stone or gravel, as excavation proceeds. Interception channels should be provided (e.g. along the crest/edge of the excavation) to prevent storm runoff from washing across exposed soil surfaces. Arrangements should always be in place to ensure that adequate surface protection measures can be safely carried out well before the arrival of a rainstorm. Other measures that need to be implemented before, during and after rainstorms are summarized in ProPECC Note PN 1/94.
- The overall slope of the site should be kept to a minimum to reduce

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the Recommended Measure	Who to implement the measure?	Location of the	When to implement the measure?	What requirements or standards for the measure to achieve?
	Ref.		& Main Concerns to address		measure		
		the erosive potential of surface water flows.	·				
		All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facility should be provided at construction site exit where practicable. Wash-water should have sand and silt settled out and removed regularly to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains.					
		Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.					
		Manholes (including newly constructed ones) should be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and stormwater runoff being directed into foul sewers.					
		Precautions should be taken at any time of the year when rainstorms are likely. Actions should be taken when a rainstorm is imminent or forecasted and actions to be taken during or after rainstorms are summarized in Appendix A2 of ProPECC Note PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events, especially for areas located near steep slopes.					
		■ Bentonite slurries used in piling or slurry walling should be reconditioned and reused wherever practicable. Temporary enclosed storage locations should be provided on-site for any unused bentonite that needs to be transported away after all the related construction activities are completed. The requirements in ProPECC Note PN 1/94 should be adhered to in the handling and disposal of bentonite slurries.					
5.6.1.1	4.1	Good site practices for works within water gathering grounds	To minimize water	Contractor	Construction	Construction	ProPECC Note PN
		The following conditions should be complied, if there is any works to be carried out within the water gathering grounds:	quality impacts to the water gathering grounds		Works Sites within the water gathering	Phase	1/94

Objectives of the What requirements Who to Recommended When to **Recommended Mitigation Measures** EM&A implement Location of the or standards for the Measure EIA Ref. implement the Ref. the measure measure to measure? & Main Concerns measure? achieve? to address grounds Adequate measures should be implemented to ensure no pollution

- or siltation occurs to the catchwaters and catchments.
- No earth, building materials, oil or fuel, soil, toxic materials or any materials that may possibly cause contamination to water gathering grounds are allowed to be stockpiled on site.
- All surplus spoil should be removed from water gathering grounds as soon as possible.
- Temporary drains with silt traps should be constructed at the site boundary before the commencement of any earthworks.
- Regular cleaning of silt traps should be carried out to ensure proper operation at all time.
- All excavated or filled surfaces which have the risk of erosion should always be protected form erosion.
- Facilities for washing the wheels of vehicles before leaving the site should be provided.
- Any construction plant which causes pollution to catchwaters or catchments due to the leakage of oil or fuel should be removed off site immediately.
- No maintenance activities which may generate chemical wastes should be undertaken in the water gathering grounds. Vehicle maintenance should be confined to designated paved areas only and any spillages should be cleared up immediately using absorbents and waste oils should be collected in designated tanks prior to disposal off site. All storm water run-off from these areas should be discharged via oil/petrol separators and sand/silt removal traps.
- Any soil contaminated with fuel leaked from plant should be removed off site and the voids arising from removal of contaminated soil should be replaced by suitable material approved by the Director of Water Supplies.
- Provision of temporary toilet facilities and use of chemicals or insecticide of any kind are subject to the approval of the Director of Water Supplies.
- Drainage plans should be submitted for approval by the Director of

Construction solid waste, debris and refuse generated on-site should be collected, handled and disposed of properly to avoid entering any nearby stormwater drain. Stockpiles of cement and other construction materials should be kept covered when not being used.  Oils and fuels should only be stored in designated areas which have pollution prevention facilities. To prevent spillage of fuels and solvents to any nearby stormwater drain, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. The bund should be drained of rainwater after a rain event.  5.6.1.3 4.1 Sewage effluent from construction workforce  Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site where necessary to handle sewage from the workforce. A licensed contractor should be employed to provide appropriate and adequate portable toilets and be responsible for appropriate disposal and maintenance.  5.6.1.4 4.1 Hydrogeological Impact  Grout injection works would be conducted before blasting, for sealing a limited area around the tunnel with a grout of a suitable strength for controlling the potential groundwater inflows. The pre-injection grouting method would be supplemented by post-injection grouting method would be supplemented by post-injection grouting where necessary to further enhance the groundwater inflows. 		of waste generated and avoid unnecessary generation of waste					
		In addition to the above measures, specific mitigation measures are recommended below for the identified waste arising to minimise environmental impacts during handling, transportation and disposal of these wastes.					
7.6.1.3	6	C&D Materials	To minimize	Contractor	Construction	Construction	EIA recommendation;
		In order to minimise impacts resulting from collection and transportation of C&D material for off-site disposal, the excavated materials should be reused on-site as backfilling material as far as practicable. The surplus rock and other inert C&D material would be disposed of at the Government's Public Fill Reception Facilities (PFRFs) at Tuen Mun Area 38 for beneficial use by other projects in the HKSAR as the last resort. C&D waste generated from general site clearance and tree felling works would require disposal to the designated landfill site. Other mitigation requirements are listed below:	impacts resulting from C&D material		Works Sites (General)	Phase	Waste Disposal Ordinance; and ETWB TCW No. 31/2004
		<ul> <li>A Waste Management Plan should be prepared and implemented in accordance with ETWB TC(W) No. 19/2005 Environmental Management on Construction Site; and</li> </ul>					
		In order to monitor the disposal of C&D material and solid wastes at public filling facilities and landfills, and to control fly-tipping, a trip-ticket system (e.g. ETWB TCW No. 31/2004) should be included.					
7.6.1.4	6	General refuse  General refuse should be stored in enclosed bins or compaction units separated from other C&D material. A reputable waste collector is to be employed by the Contractor to remove general refuse from the site separately. Preferably an enclosed and covered area should be provided to reduce the occurrence of 'wind blown' litter.	To minimize impacts resulting from collection and transportation of general refuse for off-site disposal	Contractor	Construction works sites (General)	Construction phase	Waste Disposal Ordinance and Public Health and Municipal Services Ordinance - Public Cleansing and Prevention of Nuisances Regulation
7.6.1.5	6	Chemical waste  If chemical wastes are produced at the construction site, the Contractor will be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical	To minimize impacts resulting from collection and transportation of chemical waste for off-site disposal	Contractor	Construction works sites (General)	Construction phase	Waste Disposal (Chemical Waste) (General) Regulation and Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes

#### Agreement No. CE 45/2008

# Liantang/ Heung Yuen Wai Boundary Control Point and Associated Works Investigation Report on Action or Limit Level Non-compliance

Project		CE 45/2008			
Date			uary 2017		
Location		WM2A(a)			
Time		T ,	0:00		
Parameter		Suspended solids (mg/L)			
<b>Action Level</b>		14.6 AND 120% of upstream control station of the	ne same day		
Limit Level		17.3 AND 130% of upstream control station of the			
Measured	WM2A-C	5.0	4.0		
Levels	WM2A(a)		32.5		
Exceedance			it level		
Investigation Recommend Mitigation M	ations &	According to the site information provided from Contract 6 (CCKJV), construction activities carrie February 2017 at Bridge D (upstream of WM2A segment installation. The monitoring locations are shown in Figure 1.  According to the site photo taken by the monitoring locations.	ed out on 2 and 7 (a)) were mainly and works area		
		<ol> <li>According to the site photo taken by the monitoring team on 7 February 2017, the water quality at the existing river concluding WM2A(a) and WM2A-C were clear. (<i>Photo 1</i> During the course of water sampling, it was noted that the sediment at the river bed was easily disturbed and stirred up.</li> </ol>			
		3. During weekly joint site inspection conducted at Bridge D of 9 February 2017, the water mitigation measures were primplemented. The observation during the site inspection summarized below.			
		(a) Works at Bridge D was mainly segment insta was no discharge due to nature of works. ( <i>Pho</i>			
		(b) Wastewater treatment facilities (3 nos. of provided for Bridge D. ( <i>Figures 1 and 2</i> )	AquaSed) were		
		(c) Sump pit was constructed to preliminary sett solids in the water before diverted to the Aq treatment.			
		(d) To minimize the muddy runoff from the site, of temporary bund was provided align the rive turbid runoff and discharge was made from the Contractor has covered the exposed slop practicable. ( <i>Photo 6 and 7</i> )	er course and no e site. Also The		
		In our investigation, the implementation of measures on site was in order and no adverse wat was observed. Moreover, there were no rain exceedance days and muddy runoff from the site occur. It is considered that the exceedances on 2	er quality impact recorded on the was unlikely to		

during sampling and not caused by the works under the Contract.

5. According to the Event and Action Plan, the frequency of water monitoring is increase to daily. Since the SS result required 5 working days to process, the need for repeated measurement could only rely on the result of turbidity which is in-situ measurement. There were no repeated monitoring on 3 and 8 February 2017 as no exceedance of turbidity recorded at the day before. Moreover, there were no exceedances recorded on 4 and 9 February 2017. Nevertheless, the Contractor should continually implement the water mitigation measures as recommended in the implementation schedule for environmental mitigation measures in the EM&A Manual.

2017 were due to the stirred up loose sediment of the river bed

Parameter		Turbidity (NTU)		Suspended solids (mg/L)			
Action Level		24.9 AND 120% of upstream control station of the same day		14.6 AND 120% of upstream control station of the same day			
Limit Level		33.8 AND 130% of upstream control station of the same day		17.3 AND 130% of upstream control station of the same day			
Measured	WM2A-C		36.4	5.5	5.0	<2	
Levels	WM2A(a)		169.0	219.5	34.0	33.5	
Investigation Results, Recommendations & Mitigation Measures			<ul> <li>Contract 6 (CCKJV), construction activities carried out on 24 to 27 February 2017 at Bridge D (upstream of WM2A(a)) were mainly segment installation. The monitoring locations and works area are shown in Figure 1.</li> <li>2. According to the site photo taken by the monitoring team on 24 February 2017, turbid water was observed at WM2A(a) was whereas the water quality at WM2A-C was clear. (<i>Photo 1 &amp; 2</i>) On 25 and 27 February 2017, the water quality at the existing river course including WM2A(a) and WM2A-C were clear. (<i>Photo 3 to 6</i>) During the course of water sampling, it was noted that the loose sediment at the river bed was easily disturbed and stirred up.</li> <li>3. According to the photos taken by ET on 22 February 2017, muddy water was observed at upper steam near WM2A-C which deteriorating the water quality throughout the river course. The source of muddy water was outside the site boundary and not related to works of Contact 6. (<i>Photo 7 &amp; 8</i>) Since the stream water was stored at the Nylon Dam before reaching WM2A(a) and thick sediment was cumulated at Nylon Dam, it is considered the water quality at WM2A(a) on 24 February 2017 was affected by muddy water from upper upstream observed at previous days.</li> </ul>				
			(a) Works at Bridge	due to nature of nent facilites we	works. ( <i>Photo 9</i> ere provided for	Bridge D and	

#### 10 and Figure 1)

- (c) Sump pit was constructed to preliminary settle the suspended solids in the water before diverted to the AquaSed for proper treatment.
- (d) To minimize the muddy runoff from the site, concrete block as temporary bund was provided align the river course and no turbid runoff and discharge was made from the site. Also The Contractor has covered the exposed slopes as far as practicable. (*Photo 11 & 12*)
- 5. In our investigation, the implementation of water mitigation measures on site was in order and no adverse water quality impact was observed. It is considered that the exceedances on 24 February 2017 were caused by the muddy water flowing from upper stream. For exceedances on 25 and 27 February 2017, they were likely due to the stirred up loose sediment of the river bed during sampling and not caused by the works under the Contract.
- 6. According to the Event and Action Plan, the frequency of water monitoring is increase to daily. Since the SS result required 5 working days to process, the need for repeated measurement could only rely on the result of turbidity which is in-situ measurement. There were no repeated monitoring on 28 February 2017 as no exceedance of turbidity recorded at the day before. Moreover, there were no exceedances recorded on 1 March 2017. Nevertheless, the Contractor should continually implement the water mitigation measures as recommended in the implementation schedule for environmental mitigation measures in the EM&A Manual.

Date :	9 March 2017			

#### **Photo Record**

**Photo 1**On 24 February 2017, turbid water was observed at WM2A(a).

Photo 2
On 24 February 2017, the water quality observed at WM2A-C was clear.

**Photo 3**On 25 February 2017, the water quality observed at WM2A(a) was clear.

**Photo 4**On 25 February 2017, the water quality observed at WM2A-C was clear.

**Photo 5** On 27 February 2017, the water quality observed at WM2A(a) was clear.

**Photo 6** On 27 February 2017, the water quality observed at WM2A-C was clear.

### **AUES**

#### Photo 7

According to the photos taken by ET on 22 February 2017, muddy water was observed at upper steam near WM2A-C which deteriorating the water quality throughout the river course. The source of muddy water was outside the site boundary and not related to works of Contact 6.

#### Photo 9

In February 2017, works carried out at Bridge D was mainly segment installation and there was no discharge due to nature of works.

#### Photo 8

According to the photos taken by ET on 22 February 2017, muddy water was observed at upper steam near WM2A-C which deteriorating the water quality throughout the river course. The source of muddy water was outside the site boundary and not related to works of Contact 6.

Photo 10

Wastewater treatment facilites were provided for Bridge D and the treated water being discharged was visuilaly clear.

## **AUES**

Photo 10

To minimize the muddy runoff from the site, concrete block as temporary bund was provided align the river course and no turbid runoff and discharge was made from the site.

Photo 12

To minimize the muddy runoff from the site, the Contractor has covered the exposed slopes as far as practicable.
