Attention: Mr Simon LEUNG

Dear Sir

Agreement No. CE 45/2008 (CE)
Liantang/Heung Yuen Wai Boundary Control Point and Associated Works
Independent Environmental Checker – Investigation
Monthly EM&A Report (No. 56) – March 2018

With reference to the Monthly EM&A Report No. 56 for March 2018 (Version 3) certified by the ET Leader, please be noted that we have no adverse comments on the captioned submission. We herewith verify the captioned submission in accordance with Condition 5.4 of the Environmental Permit No. EP-404/2011/D.

Thank you for your attention and please do not hesitate to contact the undersigned on tel. 3995-8120 or by email to antony.wong@smec.com; or our Mr Arthur CHIU on tel. 3995-8144 or by email to arthur.chiu@smec.com.

Yours faithfully

Antony WONG
Independent Environmental Checker

EXECUTIVE SUMMARY

ES01 This is the **56th** monthly EM&A report presenting the monitoring results and inspection findings for the reporting period from **1 to 31 March 2018** (hereinafter 'the Reporting Period').

ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

ES02 To facilitate the project management and implementation, Liantang/Heung Yuen Wai Boundary Control Point and Associated Works of the Project is divided to seven CEDD contracts including Contract 2 (CV/2012/08), Contract 3 (CV/2012/09), Contract 4 (NE/2014/02), Contract 5 (CV/2013/03), Contract 6 (CV/2013/08) and Contract 7 (NE/2014/03) and an ArshSD contract (Contract SS C505).

ES03 In the Reporting Period, the major construction works under Liantang/Heung Yuen Wai Boundary Control Point and Associated Works of the Project included Contract 2, Contract 3, Contract 4, Contract 6, Contract 7 and Contract SS C505. Environmental monitoring activities under the EM&A programme in the Reporting Period are summarized in the following table.

Environmental Aspect	Environmental Monitoring Parameters / Inspection	Reporting Period	
		Number of Monitoring Locations to undertake	Total Occasions
Air Quality	1-hour TSP	9	135
	24-hour TSP	9	50
Construction Noise	$L_{eq(30min)}$ Daytime	10	45
Water Quality	Water in-situ measurement and/or sampling	WM1 & WM1-C	14 Scheduled & 0 extra
		WM2A(a) & WM2A-Cx	14 Scheduled & 0 extra
		WM2B & WM2B-C	14 Scheduled & 0 extra (*)
		WM3x &WM3-C	14 Scheduled & 2 extra
		WM4, WM4-CA &WM4-CB	14 Scheduled & 0 extra
Ecology	Woodland compensation i) General Health condition of planted species ii) Survival of planted species	9 Quadrats and transect	0
Joint Site Inspection / Audit	IEC, ET, the Contractor and RE joint site Environmental Inspection and Auditing	Contract 2	5
		Contract 3	5
		Contract 4	5
		Contract 6	5
		Contract 7	5
		Contract SS C505 (#)	4

Remark:
(#) IEC only joined one (1) event of site inspection for Contract SS C505.
(*) In the whole Reporting Period, water sampling was unable to carry out at WM2B and WM2B-C due to shallow water (water depth under 150mm)

ACTION AND LIMIT (A/L) LEVELS EXCEEDANCE

ES04 In the Reporting Period, no air quality and construction noise exceedance and valid noise complaint was recorded. For water quality monitoring, a total of four (4) Limit Level exceedances were recorded under the Project. The summary of exceedance in the Reporting Period is shown below.

Environmental Aspect	Monitoring Parameters	Action Level	Limit Level	Event & Action			
				NOE Issued	Investigation Result	Project related exceedance	Corrective Actions
Air Quality	1-hour TSP	0	0	0	--	--	--
	24-hour TSP	0	0	0	--	--	--

Environmental Aspect	Monitoring Parameters	Action Level	Limit Level	Event & Action			
				NOE Issued	Investigation Result	Project related exceedance	Corrective Actions
Construction Noise	$L_{eq(30min)}$ Daytime	0	0	0	--	--	--
Water Quality	DO	0	0	0	-	--	--
	Turbidity	0	**2**	**2**	- All exceedances were not project related.	0	The Contractor should fully implement water quality mitigation measure.
	SS	0	**2**	**2**		0	

ES05 Investigation Report for all water quality exceedances was completed by ET. Investigation results revealed that the Contractor had properly implemented water quality mitigation measures such as well-maintained the wastewater treatment facility and covered the expose area with impervious sheet. It was concluded that all the exceedances were not related to the works under the Project. Nevertheless, the Contractor was reminded to fully implement the water quality mitigation measure throughout the constriction phase as far as practicable.

ENVIRONMENTAL COMPLAINT

ES06 In this Reporting Period, two (2) documented environmental complaints were received under the EM&A programme regarding to the dust and water quality issue on Sha Tau Kok Road and Lin Ma Hang Road. The investigation for the complaint was completed by ET. The IRs revealed that the conditions of all site exits under the Project were well maintained without mud and debris and no excessive water spraying and slurry was found on the complaint roads. Since there were many other heavy vehicles apart from the project using complaint roads and mitigation measures were properly implemented by the Contractor, it is considered that the complaints were not related to the works under the Project.

NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES07 No environmental summons and prosecutions were recorded in the Reporting Period.

REPORTING CHANGE

ES08 No reporting changes were made in the Reporting Period.

SITE INSPECTION

ES09 In this Reporting Period, joint site inspection to evaluate the site environmental performance at ***Contract 2*** has been carried out by the RE, IEC, ET and the Contractor on **1, 9, 16, 23 and 28 March 2018**. No non-compliance was noted during the site inspection.

ES10 In the Reporting Period, joint site inspection to evaluate the site environmental performance at ***Contract 3*** has been carried out by the RE, IEC, ET and the Contractor on **1, 8, 15, 21 and 29 March 2018**. No non-compliance was noted during the site inspection.

ES11 In the Reporting Period, joint site inspection to evaluate the site environmental performance at **Contract 4** has been carried out by the RE, IEC, ET and the Contractor on **2, 9, 16, 19 and 28 March 2018**. No non-compliance was noted.

ES12 In the Reporting Period, joint site inspection to evaluate the site environmental performance at ***Contract 6*** has been carried out by the RE, IEC, ET and the Contractor on **2, 8, 15, 22 and 29 March 2018**. No non-compliance was noted during the site inspection.

ES13 In the Reporting Period, joint site inspection for **Contract 7** to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on **2, 9, 16, 22 and 28 March 2018**. No non-compliance was noted during the site inspection.

ES14 In the Reporting Period, joint site inspection to evaluate the site environmental performance at ***Contract SS C505*** has been carried out by the RE, ET and the Contractor on **7, 14, 21 and 28 March 2018** in which IEC joined the site inspection on **28 March 2018**. No non-compliance was noted during the site inspection.

FUTURE KEY ISSUES

ES15 As wet season is approaching, preventive measures for muddy water or other water pollutants from site surface flow to local stream such as Kong Yiu Channel, Ma Wat Channel, Ping Yuen River, Kwan Tei River or public area should be properly maintained. The Contractors should paid special attention on water quality mitigation measures and fully implement according ISEMM of the EM&A Manual, in particular for working areas near Ma Wat Channel and Ping Yuen River.

ES16 In addition, all effluent discharge shall be ensure to fulfill Technical Memorandum of Effluent Discharged into Drainage and Sewerage Systems, inland and Coastal Waters criteria or discharge permits stipulation.

ES17 Construction noise would be a key environmental issue during construction work of the Project. Noise mitigation measures such as using quiet plants should be implemented in accordance with the EM&A requirement.

ES18 Since most of construction sites under the Project are located adjacent to villages, the Contractors should fully implement air quality mitigation measures to reduce construction dust emission.

Table of Contents

LIST OF TABLES

LIST OF APPENDICES

1 INTRODUCTION

1.1 PROJECT BACKGROUND

1.1.1 Civil Engineering and Development Department is the Project Proponent and the Permit Holder of *Agreement No. CE 45/2008 (CE) Liantang / Heung Yuen Wai Boundary Control Point and Associated Works*, which is a Designated Project to be implemented under Environmental Permit number EP-404/2011/D granted on 20 January 2017.

1.1.2 The Project consists of two main components: Construction of a Boundary Control Point (hereinafter referred as "BCP"); and Construction of a connecting road alignment. Layout plan of the Project is shown in ***Appendix A***.

1.1.3 The proposed BCP is located at the boundary with Shenzhen near the existing Chuk Yuen Village, comprising a main passenger building with passenger and cargo processing facilities and the associated customs, transport and ancillary facilities. The connecting road alignment consists of six main sections:

1) Lin Ma Hang to Frontier Closed Area (FCA) Boundary – this section comprises at-grade and viaducts and includes the improvement works at Lin Ma Hang Road;
2) Ping Yeung to Wo Keng Shan – this section stretches from the Frontier Closed Area Boundary to the tunnel portal at Cheung Shan and comprises at-grade and viaducts including an interchange at Ping Yeung;
3) North Tunnel – this section comprises the tunnel segment at Cheung Shan and includes a ventilation building at the portals on either end of the tunnel;
4) Sha Tau Kok Road – this section stretches from the tunnel portal at Wo Keng Shan to the tunnel portal south of Loi Tung and comprises at-grade and viaducts including an interchange at Sha Tau Kok and an administration building;
5) South Tunnel – this section comprises a tunnel segment that stretches from Loi Tung to Fanling and includes a ventilation building at the portals on either end of the tunnel as well as a ventilation building in the middle of the tunnel near Lau Shui Heung;
6) Fanling – this section comprises the at-grade, viaducts and interchange connection to the existing Fanling Highway.

1.1.4 Action-United Environmental Services & Consulting has been commissioned as an Independent ET to implement the relevant EM&A program in accordance with the approved EM&A Manual, as well as the associated duties. As part of the EM&A program, the baseline monitoring has carried out between **13 June 2013** and **12 July 2013** for all parameters including air quality, noise and water quality before construction work commencement. The Baseline Monitoring Report summarized the key findings and the rationale behind determining a set of Action and Limit Levels (A/L Levels) from the baseline data. Also, the Project baseline monitoring report which verified by the IEC has been submitted to EPD on **16 July 2013** for endorsement. The major construction works of the Project was commenced on **16 August 2013** in accordance with the EP Section 5.3 stipulation.

1.1.5 This is **56th** monthly EM&A report presenting the monitoring results and inspection findings for reporting period from **1** to **31 March 2018**.

1.2 REPORT STRUCTURE

1.2.1 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-

Section 1 *Introduction*
Section 2 *Project Organization and Construction Progress*
Section 3 *Summary of Impact Monitoring Requirements*
Section 4 *Air Quality Monitoring*
Section 5 *Construction Noise Monitoring*
Section 6 *Water Quality Monitoring*

2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

2.1 CONSTRUCTION CONTRACT PACKAGING

2.1.1 To facilitate the project management and implementation, the Project would be divided by the following contracts:

- Contract 2 (CV/2012/08)
- Contract 3 (CV/2012/09)
- Contract 4 (NE/2014/02)
- Contract 5 (CV/2013/03)
- Contract 6 (CV/2013/08)
- Contract 7 (NE/2014/03)
- ArchSD Contract No. SS C505

2.1.2 The details of each contracts is summarized below and the delineation of each contracts is shown in ***Appendix A***.

Contract 2 (CV/2012/08)

2.1.3 Contract 2 has awarded in December 2013 and construction work was commenced on 19 May 2014. Major Scope of Work of the Contract 2 is listed below:

- construction of an approximately 5.2km long dual two-lane connecting road (with about 0.4km of at-grade road and 4.8km of tunnel) connecting the Fanling Interchange with the proposed Sha Tau Kok Interchange;
- construction of a ventilation adit tunnel and the mid-ventilation building;
- construction of the north and south portal buildings of the Lung Shan Tunnel and their associated slope works;
- provision and installation of ventilation system, E&M works and building services works for Lung Shan tunnel and Cheung Shan tunnel and their portal buildings;
- construction of Tunnel Administration Building adjacent to Wo Keng Shan Road and the associated E&M and building services works; and
- construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 3 (CV/2012/09)

2.1.4 Contract 3 was awarded in July 2013 and construction work was commenced on 5 November 2013. Major Scope of Work of the Contract 3 is listed below:

- construction of four link roads connecting the existing Fanling Highway and the south portal of the Lung Shan Tunnel;
- realignment of the existing Tai Wo Service Road West and Tai Wo Service Road East;
- widening of the existing Fanling Highway (HyD's entrustment works);
- demolishing existing Kiu Tau vehicular bridge and Kiu Tau footbridge and reconstruction of the existing Kiu Tau Footbridge (HyD's entrustment works); and
- construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 4 (NE/2014/02)

2.1.5 Contract 4 has awarded in mid-April 2016 and construction work was commenced on 2 May 2017. The scope of work of the Contract 4 includes:

- design, supply, delivery, installation, testing and commissioning of a traffic control and surveillance system for the connecting road linking up the Liantang / Heung Yuen Wai Boundary Control Point and the existing Fanling Highway.

Contract 5 (CV/2013/03)

2.1.6 Contract 5 has awarded in April 2013 and construction work was commenced in August 2013. Major Scope of Work of the Contract 5 is listed below:

- site formation of about 23 hectares of land for the development of the BCP;
- construction of an approximately 1.6 km long perimeter road at the BCP including a 175m long depressed road;
- associated diversion/modification works at existing local roads and junctions including Lin Ma Hang Road;
- construction of pedestrian subway linking the BCP to Lin Ma Hang Road;
- provision of resite area with supporting infrastructure for reprovisioning of the affected village houses; and
- construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 6 (CV/2013/08)

2.1.7 Contract 6 has awarded in June 2015 and construction work was commenced on 23 October 2015. Major Scope of Work of the Contract 6 would be included below:

- construction of an approximately 4.6km long dual two-lane connecting road (with about 0.6km of at-grade road, 3.3km of viaduct and 0.7km of tunnel) connecting the BCP with the proposed Sha Tau Kok Road Interchange and the associated ventilation buildings;
- associated diversion/modification works at access roads to the resite of Chuk Yuen Village;
- provision of sewage collection, treatment and disposal facilities for the BCP and the resite of Chuk Yuen Village;
- construction of a pedestrian subway linking the BCP to Lin Ma Hang Road;
- provisioning of the affected facilities including Wo Keng Shan Road garden; and
- construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 7 (NE/2014/03)

2.1.8 Contract 7 has awarded in December 2015 and the construction works of Contract 7 was commenced on 15 February 2016. Major Scope of Work of the Contract 7 would be included below:

- construction of the Hong Kong Special Administrative Region (HKSAR) portion of four vehicular bridge
- construction of one pedestrian bridge crossing Shenzhen (SZ) River (cross boundary bridges)

ArchSD Contract No. SS C505

2.1.9 SS C505 has awarded in July 2015 and construction work was commenced on 1 September 2015. Major Scope of Work of the SS C505 would be included below:

- passenger-related facilities including processing kiosks and examination facilities for private cars and coaches, passenger clearance building and halls, the interior fitting works for the pedestrian bridge crossing Shenzhen River, etc.;
- cargo processing facilities including kiosks for clearance of goods vehicles, customs inspection platforms, X-ray building, etc.;
- accommodation for the facilities inside of the Government departments providing services in connection with the BCP;
- transport-related facilities inside the BCP including road networks, public transport interchange, transport drop-off and pick-up areas, vehicle holding areas and associated road furniture etc;
- a public carpark; and

- other ancillary facilities such as sewerage and drainage, building services provisions and electronic systems, associated environmental mitigation measure and landscape works.

2.2 PROJECT ORGANIZATION

2.2.1 The project organization is shown in ***Appendix B***. The responsibilities of respective parties are:

Civil Engineering and Development Department (CEDD)

2.2.2 CEDD is the Project Proponent and the Permit Holder of the EP of the development of the Project and will assume overall responsibility for the project. An Independent Environmental Checker (IEC) shall be employed by CEDD to audit the results of the EM&A works carried out by the ET.

Architectural Services Department (ArchSD)

2.2.3 ArchSD acts as the works agent for Development Bureau (DEVB), for Contract SS C505 Liantang/ Heung Yuen Wai Boundary Control Point (BCP) – BCP Buildings and Associated Facilities.

Environmental Protection Department (EPD)

2.2.4 EPD is the statutory enforcement body for environmental protection matters in Hong Kong.

Ronald Lu & Partners (Hong Kong) Ltd (The Architect)

2.2.5 Ronald Lu & Partners (Hong Kong) Ltd is appointed by ArchSD as an Architect for Contract SS C505 Liantang/ Heung Yuen Wai Boundary Control Point (BCP) – BCP Buildings and Associated Facilities. It responsible for overseeing the construction works of Contract SS C505 and for ensuring that the works are undertaken by the Contractor in accordance with the specification and contract requirements. The duties and responsibilities of the Architect with respect to EM&A are:

- Monitor the Contractors' compliance with contract specifications, including the implementation and operation of the environmental mitigation measures and their effectiveness
- Monitor Contractors' and ET's compliance with the requirements in the Environmental Permit (EP) and EM&A Manual
- Facilitate ET's implementation of the EM&A programme
- Participate in joint site inspection by the ET and IEC
- Oversee the implementation of the agreed Event / Action Plan in the event of any exceedance
- Adhere to the procedures for carrying out complaint investigation
- Liaison with DSD, Engineer/Engineer's Representative, ET, IEC and the Contractor of the "Construction of the DSD's Regulation of Shenzhen River Stage 4 (RSR 4)" Project discussing regarding the cumulative impact issues.

Engineer or Engineers Representative (ER)

2.2.6 The ER is responsible for overseeing the construction works and for ensuring that the works are undertaken by the Contractor in accordance with the specification and contract requirements. The duties and responsibilities of the ER with respect to EM&A are:

- Monitor the Contractors' compliance with contract specifications, including the implementation and operation of the environmental mitigation measures and their effectiveness
- Monitor Contractors's, ET's and IEC's compliance with the requirements in the Environmental Permit (EP) and EM&A Manual
- Facilitate ET's implementation of the EM&A programme
- Participate in joint site inspection by the ET and IEC
- Oversee the implementation of the agreed Event / Action Plan in the event of any exceedance

- Adhere to the procedures for carrying out complaint investigation
- Liaison with DSD, Engineer/Engineer's Representative, ET, IEC and the Contractor of the "Construction of the DSD's Regulaiton of Shenzhen River Stage 4 (RSR 4)" Project discussing regarding the cumulative impact issues.

The Contractor(s)

2.2.7 There will be one contractor for each individual works contract. Once the contractors are appointed, EPD, ET and IEC will be notified the details of the contractor.

2.2.8 The Contractor for Contracts under CEDD should report to the ER. For ArchSD Contract, the Contractor should report to the Architect or Architect's Representative (AR). The duties and responsibilities of the Contractor are:

- Comply with the relevant contract conditions and specifications on environmental protection
- Employ an Environmental Team (ET) to undertake monitoring, laboratory analysis and reporting of EM &A Facilitate ET's monitoring and site inspection activities
- Participate in the site inspections by the ET and IEC, and undertake any corrective actions
- Provide information / advice to the ET regarding works programme and activities which may contribute to the generation of adverse environmental impacts
- Submit proposals on mitigation measures in case of exceedances of Action and Limit levels in accordance with the Event / Action Plans
- Implement measures to reduce impact where Action and Limit levels are exceeded
- Adhere to the procedures for carrying out complaint investigation

Environmental Team (ET)

2.2.9 Once the ET is appointed, the EPD, CEDD, ER, Architect and IEC will be notified the details of the ET.

2.2.10 The ET shall not be in any way an associated body of the Contractor(s), and shall be employed by the Project Proponent/Contractor to conduct the EM&A programme. The ET should be managed by the ET Leader. The ET Leader shall be a person who has at least 7 years' experience in EM&A and has relevant professional qualifications. Suitably qualified staff should be included in the ET, and resources for the implementation of the EM&A programme should be allocated in time under the Contract(s), to enable fulfillment of the Project's EM&A requirements as specified in the EM&A Manual during construction of the Project. The ET shall report to the Project Proponent and the duties shall include:

- Monitor and audit various environmental parameters as required in this EM&A Manual
- Analyse the environmental monitoring and audit data, review the success of EM&A programme and the adequacy of mitigation measures implemented, confirm the validity of the EIA predictions and identify any adverse environmental impacts arising
- Carry out regular site inspection to investigate and audit the Contractors' site practice, equipment/plant and work methodologies with respect to pollution control and environmental mitigation, and effect proactive action to pre-empt problems
- Monitor compliance with conditions in the EP, environmental protection, pollution prevention and control regulations and contract specifications
- Audit environmental conditions on site
- Report on the environmental monitoring and audit results to EPD, the ER, the Architect, the lEC and Contractor or their delegated representatives
- Recommend suitable mitigation measures to the Contractor in the case of exceedance of Action and Limit levels in accordance with the Event and Action Plans
- Liaise with the IEC on all environmental performance matters and timely submit all relevant EM&A proforma for approval by IEC
- Advise the Contractor(s) on environmental improvement, awareness, enhancement measures etc., on site
- Adhere to the procedures for carrying out complaint investigation

- Liaison with the client departments, Engineer/Engineer's Representative, ET, lEC and the Contractor(s) of the concurrent projects as listed under Section 2.3 below regarding the cumulative impact issues.

Independent Environmental Checker (IEC)

2.2.11 One IEC will be employed for this Project. Once the IEC is appointed, EPD, ER, the Architect and ET will be notified the details of the IEC.

2.2.12 The Independent Environmental Checker (IEC) should not be in any way an associated body of the Contractor or the ET for the Project. The IEC should be employed by the Permit Holder (i.e., CEDD) prior to the commencement of the construction of the Project. The IEC should have at least 10 years' experience in EM&A and have relevant professional qualifications. The appointment of IEC should be subject to the approval of EPD. The IEC should:

- Provide proactive advice to the ER and the Project Proponent on EM&A matters related to the project, independent from the management of construction works, but empowered to audit the environmental performance of construction
- Review and audit all aspects of the EM&A programme implemented by the ET
- Review and verify the monitoring data and all submissions in connection with the EP and EM&A Manual submitted by the ET
- Arrange and conduct regular, at least monthly site inspections of the works during construction phase, and ad hoc inspections if significant environmental problems are identified
- Check compliance with the agreed Event / Action Plan in the event of any exceedance
- Check compliance with the procedures for carrying out complaint investigation
- Check the effectiveness of corrective measures
- Feedback audit results to ET by signing off relevant EM&A proforma
- Check that the mitigation measures are effectively implemented
- Verify the log-book(s) mentioned in Condition 2.2 of the EP, notify the Director by fax, within one working day of receipt of notification from the ET Leader of each and every occurrence, change of circumstances or non-compliance with the EIA Report and/or the EP, which might affect the monitoring or control of adverse environmental impacts from the Project
- Report the works conducted, the findings, recommendation and improvement of the site inspections, after reviewing ET's and Contractor's works, and advices to the ER and Project Proponent on a monthly basis
- Liaison with the client departments, Engineer/Engineer's Representative, the Architect, ET, lEC and the Contractor of the concurrent projects as listed under Section 2.3 below regarding the cumulative impact issues.

2.3 CONCURRENT PROJECTS

2.3.1 The concurrent construction works that may be carried out include, but not limited to, the following:

(a) Regulation of Shenzhen River Stage IV;

(b) Widening of Fanling Highway – Tai Hang to Wo Hop Shek Interchange – Contract No. HY/2012/06;

(c) Construction of BCP facilities in Shenzhen.

2.4 CONSTRUCTION PROGRESS

2.4.1 In the Reporting Period, the major construction activity conducted under the Project is located in Contracts 2, 3, 6, 7 and SS C505 and they are summarized in below. Moreover, 3-month rolling construction program for all the current contracts is enclosed in ***Appendix C***.

Contract 2 (CV/2012/08)

2.4.2 The contract commenced in May 2014. In this Reporting Period, construction activities conducted are listed below:

Mid-Vent Portal	• Cavern internal structure and tunnel E&M activities • Construction of C&C structure and permanent drainage • Structure connecting adit and ventilation building • Ventilation building superstructure and backfilling activities • Ventilation building fitting out and E&M installation
North Portal	• Southbound and Northbound tunnel waterproofing and lining • Construction of cross passage and internal structure • Tunnel backfilling and E&M installation • Tunnel Boring Machine (TBM) North drive excavation and mucking out • North ventilation building structure and internal structure • Construction of retaining wall and permanent drainage • Site formation and construction of slip road • Cleansing on existing drainage system • Construction of temporary utility bridge across the mid-platform
South Portal	• Tunnel waterproofing, lining and backfilling. • Tunnel internal structure and cross passage • Construction of retaining wall and backfilling activities • South ventilation building external wall finishing, fitting out and E&M installations
Admin Building	• Construction of fence wall and permanent drainage • Admin building fitting out, underground utilities and E&M installation • Construction of building permanent access.

Contract 3 (CV/2012/09)

2.4.3 The Contract commenced in November 2013. In this Reporting Period, construction activities conducted are listed below:

- Cable Detection and Trial Trenches
- Remaining Works on New Kiu Tau Footbridge
- Noise Barrier Construction
- Road pavement works
- Demolition of Existing Kiu Tau Vehicular Bridge
- Water main laying works (on Grade and on bridge deck)
- Installation of Noise barrier steel column & panel, and sign gantry
- Parapet Installation on bridge deck
- Road Drainage Work
- Construction of Profile Barrier & Planter Wall on Bridge Deck
- Stressing of External Tendon
- Bitumen paving on bridge deck
- Installation of deck cell inside the bridge deck
- Installation of movement joint on the bridge
- Construction of Retaining Wall Behind Abutment
- Landscaping works

Contract 4 (NE/2014/02)

2.4.4 The Contract was awarded in mid-April 2016 and the construction work was commenced on 2 May 2017. In this Reporting Period, construction activities conducted are listed below:

- System design and testing
- E&M installation at Admin Building
- E&M installation at Ventilation Building
- High mast erection

- E&M installation at OHVD in tunnel

Contract 5 (CV/2013/03)

2.4.5 The construction works under Contract 5 was substantially completed on 31 August 2016.

Contract 6 (CV/2013/08)

2.4.6 Contract 6 has awarded in June 2015 and construction work was commenced on 23 October 2015. In this Reporting Period, construction activities conducted are listed below:

- Bridge construction
- Tunneling Works
- Sewage Treatment Plant Construction
- Tunnel Ventilation Building Construction
- Slip Road/At-grade Road/Periphery Road Construction

Contract 7 (NE/2014/03)

2.4.7 Contract 7 has awarded in December 2015 and construction work was commenced on 15 February 2016. In this Reporting Period, construction activities conducted are listed below:

- Deck construction at Bridge A
- Column and deck construction at Bridge E
- Profile barrier construction at Bridges D & E
- Installation of Façade at Bridge C
- Installation of BMU at roof of Bridge C

Contract SS C505

2.4.8 Contract SS C505 has awarded in July 2015 and construction work was commenced on 1 September 2015. In this Reporting Period, construction activities conducted are listed below:

- Building no. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31 and 41 constructions
- Constructions of Steel Canopies (Building no. 32, 33, 34 and 35)
- Constructions of Master Water Meter Room 1, 2 and 3 (Building no. 42, 43, 44)
- Tower crane operation
- Bridge 1 - 5 construction works including retaining wall, road and finishes works
- Underground drainage works, Road Works, CLP Cable laying and Landscaping
- Formwork and falsework for PTB's slab and internal wall construction
- Construction PTB M/F, 1/F, 2/F and Roof flat slab
- Construction PTB non-structural wall, Underground Drainage and Utilities, Fence Wall, Southern Entrance Construction
- Backfilling works
- PTB Major Plant Rooms ABWF & MEP Installation, Lift and Escalator Installation by NSC
- Integrated ABWF & MEP Works in PTB, Building no. 1, 2, 3, 4, 5, 6, 7, 11, 14, 18, 36 and 41
- Elevated Walkway E1, E2, E3 and E4 construction
- Tower Crane Dismantling Works

2.5 SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.5.1 In according to the EP, the required documents have submitted to EPD which listed in below:

- Project Layout Plans of Contracts 2, 3, 4, 5, 6, 7 and SS C505
- Landscape Plan
- Topsoil Management Plan
- Environmental Monitoring and Audit Programme
- Baseline Monitoring Report (TCS00690/13/600/R0030v3) for the Project
- Waste Management Plan of the Contracts 2, 3, 4, 5, 6, 7 and SS C505
- Contamination Assessment Plan (CAP) and Contamination Assessment Report (CAR) for Po Kat Tsai, Loi Tung and the workshops in Fanling

- Vegetation Survey Report
- Woodland Compensation Plan
- Habitat Creation Management Plan
- Wetland Compensation Plan

2.5.2 Summary of the relevant permits, licenses, and/or notifications on environmental protection for the Project of each contracts are presented in ***Table 2-1***.

Table 2-1 Status of Environmental Licenses and Permits of the Contracts

Item	Description	License/Permit Status			
		Ref. no.		Effective Date	Expiry Date
Contract 2					
1	Air pollution Control (Construction Dust) Regulation	Ref No.: 368864		31 Dec 2013	Till Contract ends
2	Chemical Waste Producer Registration	***North Portal*** Waste Producers Number: No.5213-652-D2523-01		25 Mar 2014	Till Contract ends
		Mid-Vent Portal Waste Producers Number: No.5213-634-D2524-01		25 Mar 2014	Till Contract ends
		South Portal Waste Producers Number: No.5213-634-D2526-01		9 Apr 2014	Till Contract ends
3	Water Pollution Control Ordinance - Discharge License	No.WT00018374-2014 (South Portal)		3 Mar 2014	28 Feb 2019
		No. WT00023063-2015 (North Portal)		18 Dec 2015	31 Mar 2019
		No.: W5/1I392 (Admin Building)		28 Mar 2014	31 Mar 2019
		No.: WT00025594-2016 (Mid-Vent Portal)		7 Oct 2016	31 Mar 2019
4	Waste Disposal Regulation - Billing Account for Disposal of Construction Waste	Account No. 7019105		8 Jan 2014	Till Contract ends
5	Construction Noise Permit	GW-RN0744-17	North Portal	15-Nov-2017	09-May-2018
		GW-RN0747-17		15-Nov-2017	09-May-2018

3 SUMMARY OF IMPACT MONITORING REQUIREMENTS

3.1 GENERAL

3.1.1 The Environmental Monitoring and Audit requirements are set out in the Approved EM&A manual. Environmental issues such as air quality, construction noise and water quality were identified as the key issues during the construction phase of the Project.

3.1.2 A summary of construction phase EM&A requirements are presented in the sub-sections below.

3.2 MONITORING PARAMETERS

3.2.1 The EM&A program of construction phase monitoring shall cover the following environmental issues:

- Air quality;
- Construction noise; and
- Water quality

3.2.2 A summary of the monitoring parameters is presented in ***Table 3-1.***

Table 3-1 Summary of EM&A Requirements

Environmental Issue	Parameters
Air Quality	• 1-hour TSP by Real-Time Portable Dust Meter; and • 24-hour TSP by High Volume Air Sampler.
Noise	• $L_{eq(30min)}$ in normal working days (Monday to Saturday) 07:00-19:00 except public holiday; and • 3 sets of consecutive $L_{eq(5min)}$ on restricted hours i.e. 19:00 to 07:00 next day, and whole day of public holiday or Sunday • Supplementary information for data auditing, statistical results such as L_{10} and L_{90} shall also be obtained for reference.
Water Quality	**In-situ Measurements** • Dissolved Oxygen Concentration (mg/L); • Dissolved Oxygen Saturation (%); • Turbidity (NTU); • pH unit; • Water depth (m); and • Temperature (℃).
	Laboratory Analysis • Suspended Solids (mg/L)

3.3 MONITORING LOCATIONS

3.3.1 The designated monitoring locations as recommended in the *EM&A Manual* are shown in ***Appendix D***. As the access to some of the designated monitoring locations was questionable due to safety reason or denied by the landlords, alternative locations therefore have had proposed. The latest alternative monitoring locations has been updated in the revised EM&A Programme (Rev.7) which approved by EPD on 7 April 2017. ***Table 3-2***, ***Table 3-3*** and ***Table 3-4*** are respectively listed the air quality, construction noise and water quality monitoring locations for the Project and a map showing these monitoring stations is presented in ***Appendix E***.

Table 3-2 Impact Monitoring Stations - Air Quality

Station ID	Description	Works Area	Related to the Work Contract
AM1b^	Open area at Tsung Yuen Ha Village	BCP	SS C505 Contract 7
AM2	Village House near Lin Ma Hang Road	LMH to Frontier Closed Area	Contract 6
AM3	Ta Kwu Ling Fire Service Station of Ta Kwu Ling Village.	LMH to Frontier Closed Area	Contract 6

Station ID	Description	Works Area	Related to the Work Contract
AM4b^	House no. 10B1 Nga Yiu Ha Village	LMH to Frontier Closed Area	Contract 6
AM5a^	Ping Yeung Village House	Ping Yeung to Wo Keng Shan	Contract 6
AM6	Wo Keng Shan Village House	Ping Yeung to Wo Keng Shan	Contract 6
AM7b@	Loi Tung Village House	Sha Tau Kok Road	Contract 2 Contract 6
AM8	Po Kat Tsai Village No. 4	Po Kat Tsai	Contract 2
AM9b#	Nam Wa Po Village House No. 80	Fanling	Contract 3

 # Proposal for the change of air quality monitoring location from AM9a to AM9b was submitted to EPD on 4 Nov 2013 after verified by the IEC and it was approved by EPD (EPD's ref.: (15) in EP 2/N7/A/52 Pt.10 dated 8 Nov 2013).
** Proposal for the change of air quality monitoring location from AM1to AM1a was submitted to EPD on 24 March 2014 after verified by the IEC. It was approved by EPD (EPD's ref.: (6) in EP 2/N7/A/52 Pt.12 dated 9 Jun 2014).*
@ Proposal for the change of air quality monitoring location from AM7a to AM7b was submitted to EPD on 4 June 2014 after verified by the IEC. It was approved by EPD (EPD's ref.: (7) in EP 2/N7/A/52 Pt.12 dated 9 Jun 2014).
^ Proposal for change of air quality monitoring locations was enclosed in the updated EM&A Programme which approval by EPD on 29 Mar 2016.

Table 3-3 Impact Monitoring Stations - Construction Noise

Station ID	Description	Works Area	Related to the Work Contract
NM1	Tsung Yuen Ha Village House No. 63	BCP	SS C505 Contract 7
NM2a#	Village House near Lin Ma Hang Road	Lin Ma Hang to Frontier Closed Area	Contract 6
NM3	Ping Yeung Village House (facade facing northeast)	Ping Yeung to Wo Keng Shan	Contract 6
NM4	Wo Keng Shan Village House	Ping Yeung to Wo Keng Shan	Contract 6
NM5	Village House, Loi Tung	Sha Tau Kok Road	Contract 2, Contract 6
NM6	Tai Tong Wu Village House 2	Sha Tau Kok Road	Contract 2, Contract 6
NM7	Po Kat Tsai Village	Po Kat Tsai	Contract 2
NM8	Village House, Tong Hang	Fanling	Contract 2 Contract 3
NM9	Village House, Kiu Tau Village	Fanling	Contract 3
NM10	Nam Wa Po Village House No. 80	Fanling	Contract 3

 # Proposal for the change of construction noise monitoring location from NM2 to NM2a was verified by the IEC on 6 May 2016 and was effective on 9 May 2016.

Table 3-4 Impact Monitoring Stations - Water Quality

Station ID	Description	Coordinates of Designated / Alternative Location		Nature of the location	Related to the Work Contract
		Easting	Northing		
WM1	Downstream of Kong Yiu Channel	833 679	845 421	Alternative location located at upstream 51m of the designated location	SS C505 Contract 6
WM1-Control	Upstream of Kong Yiu Channel	834 185	845 917	NA	SS C505 Contract 6
WM2A	Downstream of River Ganges	834 204	844 471	Alternative location located at upstream 81m of the designated location	Contract 6
WM2A(a)*	Downstream of River Ganges	834 191	844 474	Alternative location located at upstream 70m of the designated location	Contract 6
WM2A-Controlx#	Upstream of River Ganges	835 377	844 188	Alternative location located at upstream 160m of the designated location	Contract 6
WM2B	Downstream of River Ganges	835 433	843 397	NA	Contract 6
WM2B-Control	Upstream of River Ganges	835 835	843 351	Alternative location located at downstream 31m of the designated location	Contract 6
WM3x#	Downstream of River Indus	836 206	842 270	Alternative location located at downstream 180m of the designated location	Contract 2 Contract 6
WM3-Control	Upstream of River Indus	836 763	842 400	Alternative location located at downstream 26m of the designated location	Contract 2 Contract 6
WM4	Downstream of Ma Wat Channel	833 850	838 338	Alternative location located at upstream 11m of the designated location	Contract 2 Contract 3
WM4–Control A	Kau Lung Hang Stream	834 028	837 695	Alternative location located at downstream 28m of the designated location	Contract 2 Contract 3
WM4–Control B	Upstream of Ma Wat Channel	833760	837395	Alternative location located at upstream 15m of the designated location	Contract 2 Contract 3

Note: EPD has approved the revised EM&A Programme (Rev.7) which proposed that (1) if the measured water depth of the monitoring station is lower than 150 mm, alternative location based on the criteria were selected to perform water monitoring; and (2) If no suitable alternative location could be found within 15m far from the original location, the sampling at that location will be cancelled since sampling at too far from the designated location could not make a representative sample in accordance with the updated EM&A Programme (Rev. 07) (Section 4.1.4) (EPD ref.: ( ) in EP2/N7/A/52 Ax(1) Pt.20 dated 7 April 2017)

(*) Proposal for the change of water monitoring location from WM2A to WM2A(a) was verified by the IEC and it was approved by EPD. (EPD's ref. (10) in EP 2/N7/A/52 Pt.19)

(#) Proposal for the change of water quality monitoring location (WM3x and WM2A-Cx was included in the EM&A Programme Rev .05 which approved by EPD on 29 March 2016 (EPD ref.: (3) in EP2/N7/A/52 Ax(1) Pt.19)

3.4 MONITORING FREQUENCY AND PERIOD

The requirements of impact monitoring are stipulated in *Sections 2.1.6, 3.1.5* and *4.1.6* of the

approved *EM&A Manual* and presented as follows.

Air Quality Monitoring

3.4.1 Frequency of impact air quality monitoring is as follows:

- 1-hour TSP 3 times every six days during course of works
- 24-hour TSP Once every 6 days during course of works.

Noise Monitoring

3.4.2 One set of $L_{eq(30min)}$ as 6 consecutive $L_{eq(5min)}$ between 0700-1900 hours on normal weekdays and once every week during course of works. If construction work necessary to carry out at other time periods, i.e. restricted time period (19:00 to 07:00 the next morning and whole day on public holidays) (hereinafter referred as "the restricted hours"), additional weekly impact monitoring for $L_{eq(5min)}$ measurement shall be employed during respective restricted hours periods.. Supplementary information for data auditing, statistical results such as L_{10} and L_{90} shall also be obtained for reference.

Water Quality Monitoring

3.4.3 The water quality monitoring frequency shall be 3 days per week during course of works. The interval between two sets of monitoring shall not be less than 36 hours.

3.5 MONITORING EQUIPMENT

Air Quality Monitoring

3.5.1 The 24-hour and 1-hour TSP levels shall be measured by following the standard high volume sampling method as set out in the *Title 40 of the Code of Federal Regulations, Chapter 1 (Part 50), Appendix B*. If the ET proposes to use a direct reading dust meter to measure 1-hour TSP levels, it shall submit sufficient information to the IEC to approve.

3.5.2 The filter paper of 24-hour TSP measurement shall be determined by HOKLAS accredited laboratory.

3.5.3 All equipment to be used for air quality monitoring is listed in ***Table 3-5***.

Table 3-5 Air Quality Monitoring Equipment

Equipment	Model
24-Hr TSP	
High Volume Air Sampler	TISCH High Volume Air Sampler, HVS Model TE-5170*
Calibration Kit	TISCH Model TE-5025A*
1-Hour TSP	
Portable Dust Meter	Sibata LD-3B Laser Dust monitor Particle Mass Profiler & Counter*

** Instrument was used in the Reporting Period and the calibration certificate could be referred in Appendix F.*

Wind Data Monitoring Equipment

3.5.4 According to the approved EM&A Manual, wind data monitoring equipment shall also be provided and set up for logging wind speed and wind direction near the dust monitoring locations. The equipment installation location shall be proposed by the ET and agreed with the IEC. For installation and operation of wind data monitoring equipment, the following points shall be observed:

1) The wind sensors should be installed 10 m above ground so that they are clear of obstructions or turbulence caused by buildings.
2) The wind data should be captured by a data logger. The data shall be downloaded for analysis at least once a month.
3) The wind data monitoring equipment should be re-calibrated at least once every six months.

4) Wind direction should be divided into 16 sectors of 22.5 degrees each.

3.5.5 ET has liaised with the landlords of the successful granted HVS installation premises. However, the owners rejected to provide premises for wind data monitoring equipment installation.

3.5.6 Under this situation, the ET proposed alternative methods to obtain representative wind data. Meteorological information as extracted from "the Hong Kong Observatory Ta Kwu Ling Station" is alternative method to obtain representative wind data. For Ta Kwu Ling Station, it is located nearby the Project site. Moreover, this station is located at 15m above mean sea level while its anemometer is located at 13m above the existing ground which in compliance with the general setting up requirement. Furthermore, this station also can be to provide the humidity, rainfall, and air pressure and temperature etc. meteorological information. In Hong Kong of a lot development projects, weather information extracted from Hong Kong Observatory is common alternative method if weather station installation not allowed.

Noise Monitoring

3.5.7 Sound level meter in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. The sound level meter shall be checked using an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m/s.

3.5.8 Noise monitoring equipment to be used for monitoring is listed in ***Table 3-6***.

Table 3-6 Construction Noise Monitoring Equipment

Equipment	Model
Integrating Sound Level Meter	B&K Type 2238* or Rion NL-31* or Rion NL-52*
Calibrator	B&K Type 4231* or Quest QC-20* or Rion NC-74*
Portable Wind Speed Indicator	Testo Anemometer

** Instrument was used in the Reporting Period and the calibration certificate could be referred in Appendix F.*

3.5.9 Sound level meters listed above comply with the *International Electrotechnical Commission Publications 651: 1979 (Type 1)* and *804: 1985 (Type 1)* specifications, as recommended in TM issued under the NCO. The acoustic calibrator and sound level meter to be used in the impact monitoring will be calibrated yearly.

Water Quality Monitoring

3.5.10 DO and water temperature should be measured in-situ by a DO/temperature meter. The instrument should be portable and weatherproof using a DC power source. It should have a membrane electrode with automatic temperature compensation complete with a cable. The equipment should be capable of measuring:

- a DO level in the range of 0-20 mg/l and 0-200% saturation; and
- a temperature of between 0 and 45 degree Celsius.

3.5.11 A portable pH meter capable of measuring a range between 0.0 and 14.0 should be provided to measure pH under the specified conditions accordingly to the APHA Standard Methods.

3.5.12 The instrument should be portable and weatherproof using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0-1000 NTU.

3.5.13 A portable, battery-operated echo sounder or tape measure will be used for the determination of water depth at each designated monitoring station as appropriate.

3.5.14 A water sampler e.g. Kahlsico Water Sampler, which is a transparent PVC cylinder with capacity not less than 2 litres, will be used for water sampling if water depth over than 0.5m. For

sampling from very shallow water depths e.g. <0.5 m, water sample collection will be directly from water surface below 100mm use sampling plastic bottle to avoid inclusion of bottom sediment or humus. Moreover, Teflon/stainless steel bailer or self-made sampling buckets maybe used for water sampling. The equipment used for sampling will be depended the sampling location and depth situations.

3.5.15 Water samples for laboratory measurement of SS will be collected in high density polythene bottles, packed in ice (cooled to 4 ºC without being frozen), and delivered to the laboratory in the same day as the samples were collected.

3.5.16 Analysis of suspended solids should be carried out in a HOKLAS or other accredited laboratory. Water samples of about 1L should be collected at the monitoring stations for carrying out the laboratory suspended solids determination. The SS determination work should start within 24 hours after collection of the water samples. The SS analyses should follow the *APHA Standard Methods 2540D* with Limit of Reporting of 2 mg/L.

3.5.17 Water quality monitoring equipment used in the impact monitoring is listed in ***Table 3-7***. Suspended solids (SS) analysis is carried out by a local HOKLAS-accredited laboratory, namely *ALS Technichem (HK) Pty Ltd*.

Table 3-7 Water Quality Monitoring Equipment

Equipment	Model
Water Depth Detector	Eagle Sonar or tape measures
Water Sampler	A 2-litre transparent PVC cylinder with latex cups at both ends or teflon/stainless steel bailer or self-made sampling bucket
Thermometer & DO meter	YSI Professional Plus /YSI PRO20 Handheld Dissolved Oxygen Instrument/ YSI 550A Multifunctional Meter*/ YSI Professional DSS
pH meter	YSI Professional Plus / AZ8685 pH pen-style meter*/ YSI 6820/ 650MDS/ YSI Professional DSS
Turbidimeter	Hach 2100Q*/ YSI 6820/ 650MDS/ YSI Professional DSS
Sample Container	High density polythene bottles (provided by laboratory)
Storage Container	'Willow' 33-liter plastic cool box with Ice pad

** Instrument was used in the Reporting Period and the calibration certificate could be referred in Appendix F.*

3.6 MONITORING METHODOLOGY

1-hour TSP Monitoring

3.6.1 The 1-hour TSP monitor was a brand named "Sibata LD-3B Laser Dust monitor Particle Mass Profiler & Counter" which is a portable, battery-operated laser photometer. The 1-hour TSP meter provides a real time 1-hour TSP measurement based on 90^{o} light scattering. The 1-hour TSP monitor consists of the following:

(a.) A pump to draw sample aerosol through the optic chamber where TSP is measured;

(b.) A sheath air system to isolate the aerosol in the chamber to keep the optics clean for maximum reliability; and

(c.) A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.

3.6.2 The 1-hour TSP meter is used within the valid period as follow manufacturer's Operation and Service Manual.

24-hour TSP Monitoring

3.6.3 The equipment used for 24-hour TSP measurement is Tisch Environmental, Inc. Model TE-5170 TSP high volume air sampling system, which complied with *EPA Code of Federal Regulation, Appendix B to Part 50*. The High Volume Air Sampler (HVS) consists of the following:

(a.) An anodized aluminum shelter;
(b.) A 8"x10" stainless steel filter holder;
(c.) A blower motor assembly;
(d.) A continuous flow/pressure recorder;
(e.) A motor speed-voltage control/elapsed time indicator;
(f.) A 7-day mechanical timer, and
(g.) A power supply of 220v/50 Hz

3.6.4 The HVS is operated and calibrated on a regular basis in accordance with the manufacturer's instruction using Tisch Calibration Kit Model TE-5025A. Calibration would carry out in two month interval.

3.6.5 24-hour TSP is collected by the ET on filters of HVS and quantified by a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (ALS), upon receipt of the samples. The ET keep all the sampled 24-hour TSP filters in normal air conditioned room conditions, i.e. 70% RH (Relative Humidity) and 25°C, for six months prior to disposal.

Noise Monitoring

3.6.6 Noise measurements were taken in terms of the A-weighted equivalent sound pressure level (L_{eq}) measured in decibels dB(A). Supplementary statistical results (L_{10} and L_{90}) were also obtained for reference.

3.6.7 During the monitoring, all noise measurements would be performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (L_{eq}). $Leq_{(30min)}$ in six consecutive $Leq_{(5min)}$ measurements will use as the monitoring parameter for the time period between 0700-1900 hours on weekdays; $Leq_{(5min)}$ measurements would be used as monitoring parameter for other time periods (e.g. during restricted hours), if necessary.

3.6.8 Prior of noise measurement, the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency. The checking is performed before and after the noise measurement.

Water Quality

3.6.9 Water quality monitoring is conducted at the designated or alternative locations. The sampling procedures with the in-situ monitoring are presented as below:

Sampling Procedure

3.6.10 A Digital Global Positioning System (GPS) is used to identify the designated monitoring stations prior to water sampling. A portable, battery-operated echo sounder or tape measurement is used for the determination of water depth at each station. At each station, water sample would be collected from 0.1m below water surface or the water surface to prevent the river bed sediment for stirring.

3.6.11 If the water level of a monitoring station is too shallow when sampling, sediment would be disturbed which affecting the accuracy of water quality monitoring. In order to avoid disturbing sediment, depth limits should be set up for the water sampling for the ease of reference. When the measured water depth of the monitoring station (both control and impact stations) is lower than 150mm, water monitoring would not be to perform at that monitoring location. Instead, the monitoring location will be moved to a temporary alternative location monitoring location based on the criteria below:-

(a) the alternative location should be either upstream or downstream of the original location and at the same the river/drain channel
(b) the alternative location should be within 15m far from the original location
(c) if no suitable alternative location could be found within 15m far from the original location, the sampling at that location will be cancelled since sampling at too far from the designated

location could not make a representative sample.

3.6.12 The sample container will be rinsed with a portion of the water sample. The water sample then will be transferred to the high-density polythene bottles as provided by the laboratory, labeled with a unique sample number and sealed with a screw cap.

3.6.13 Before sampling, general information such as the date and time of sampling, weather condition as well as the personnel responsible for the monitoring would be recorded on the field data sheet.

3.6.14 A 'Willow' 33-liter plastic cool box packed with ice will be used to preserve the water samples prior to arrival at the laboratory for chemical determination. The water temperature of the cool box is maintained at a temperature as close to 4^0C as possible without being frozen. Samples collected are delivered to the laboratory upon collection.

In-situ Measurement

3.6.15 YSI PRO20 Handheld Dissolved Oxygen Instrument is used for water in-situ measures, which automates the measurements and data logging of temperature, dissolved oxygen and dissolved oxygen saturation.

3.6.16 A portable AZ Model 8685 is used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 – 14 and readable to 0.1.

3.6.17 A portable Hach 2100Q Turbidimeter is used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 – 1000 NTU.

3.6.18 All in-situ measurement equipment are calibrated by HOKLAS accredited laboratory of three month interval.

Laboratory Analysis

3.6.19 All water samples analyzed Suspended Solids (SS) will be carried out by a local HOKLAS-accredited testing laboratory (ALS Technichem (HK) Pty Ltd HOKLAS registration no. 66). SS determination using *APHA Standard Methods 2540D* as specified in the *EM&A Manual* will start within 48 hours of water sample receipt.

3.7 EQUIPMENT CALIBRATION

3.7.1 Calibration of the HVS is performed upon installation and thereafter at bimonthly intervals in accordance with the manufacturer's instruction using the certified standard calibrator (TISCH Model TE-5025A). Moreover, the Calibration Kit would be calibrated annually. The calibration data are properly documented and the records are maintained by ET for future reference.

3.7.2 The 1-hour TSP meter was calibrated by the supplier prior to purchase. Zero response of the equipment would be checked before and after each monitoring event. Annually calibration with the High Volume Sampler (HVS) in same condition would be undertaken by the Laboratory.

3.7.3 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at yearly basis.

3.7.4 All water quality monitoring equipment would be calibrated by HOKLAS accredited laboratory of three month intervals.

3.7.5 The calibration certificates of all monitoring equipment used for the impact monitoring program in the Reporting Period and the HOKLAS accredited certificate of laboratory are attached in ***Appendix F***.

3.8 DERIVATION OF ACTION/LIMIT (A/L) LEVELS

3.8.1 The baseline results form the basis for determining the environmental acceptance criteria for the impact monitoring. According to the approved Environmental Monitoring and Audit Manual, the air quality, construction noise and water quality criteria were set up, namely Action and Limit levels are listed in ***Tables 3-8, 3-9*** and ***3-10***.

Table 3-8 Action and Limit Levels for Air Quality Monitoring

Monitoring Station	Action Level (μg /m^3)		Limit Level (μg/m^3)	
	1-hour TSP	24-hour TSP	1-hour TSP	24-hour TSP
AM1b	265	143	500	260
AM2	268	149		
AM3	269	145		
AM4b	267	148		
AM5a	268	143		
AM6	269	148		
AM7b	275	156		
AM8	269	144		
AM9b	271	151		

Table 3-9 Action and Limit Levels for Construction Noise

Monitoring Location	Action Level	Limit Level in dB(A)
	Time Period: 0700-1900 hours on normal weekdays	
NM1, NM2a, NM3, NM4, NM5, NM6, NM7, NM8, NM9, NM10	When one or more documented complaints are received	75 dB(A)[Note 1 & Note 2]

Note 1: Acceptable Noise Levels for school should be reduced to 70 dB(A) and65 dB(A) during examination period.

Note 2: If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the NCA have to be followed.

Table 3-10 Action and Limit Levels for Water Quality

Parameter	Performance criteria	Monitoring Location				
		WM1	WM2A(a)	WM2B	WM3x	WM4
DO (mg/L)	Action Level	(*)4.23	(**)4.00	(*)4.74	(**)4.00	(*)4.14
	Limit Level	(#)4.19	(**)4.00	(#)4.60	(**)4.00	(#)4.08
Turbidity (NTU)	Action Level	51.3	24.9	11.4	13.4	35.2
		AND 120% of upstream control station of the same day				
	Limit Level	67.6	33.8	12.3	14.0	38.4
		AND 130% of upstream control station of the same day				
SS (mg/L)	Action Level	54.5	14.6	11.8	12.6	39.4
		AND 120% of upstream control station of the same day				
	Limit Level	64.9	17.3	12.4	12.9	45.5
		AND 130% of upstream control station of the same day				

Remarks:

(*) *The Proposed **Action Level** of Dissolved Oxygen is adopted to be used 5%-ile of baseline data*

(**) *The Proposed **Action & Limit Level** of Dissolved Oxygen is used 4mg/L*

(#) *The Proposed **Limit Level** of Dissolved Oxygen is adopted to be used 1%-ile of baseline data*

3.8.2 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan which presented in ***Appendix G.***

3.9 DATA MANAGEMENT AND DATA QA/QC CONTROL

3.9.1 All monitoring data will be handled by the ET's in-house data recording and management system.

The monitoring data recorded in the equipment will be downloaded directly from the equipment at the end of each monitoring day. The downloaded monitoring data will input into a computerized database maintained by the ET. The laboratory results will be input directly into the computerized database and checked by personnel other than those who input the data.

3.9.2 For monitoring parameters that require laboratory analysis, the local laboratory shall follow the QA/QC requirements as set out under the HOKLAS scheme for the relevant laboratory tests.

4 AIR QUALITY MONITORING

4.1 GENERAL

4.1.1 In the Reporting Period, construction works under the project have been commenced in Contracts 2, 3, 4, 6, 7 and Contract SS C505. Hence, air quality monitoring was performed at all designated locations.

4.1.2 The air quality monitoring schedule is presented in ***Appendix H*** and the monitoring results are summarized in the following sub-sections.

4.2 AIR QUALITY MONITORING RESULTS

4.2.1 In the Reporting Period, a total of ***135*** events of 1-hour TSP and ***50*** events 24-hours TSP monitoring were carried out and the monitoring results are summarized in ***Tables 4-1 to 4-9***. The detailed 24-hour TSP monitoring data are presented in ***Appendix I*** and the relevant graphical plots are shown in ***Appendix J***.

4.2.2 As shown in ***Tables 4-1 to 4-9***, all the 1-hour TSP and 24-hour TSP monitoring results were below the Action/Limit Levels. No Notification of Exceedance (NOE) was issued in this Reporting Period.

4.2.3 The meteorological data during the impact monitoring days are summarized in ***Appendix K***.

5 CONSTRUCTION NOISE MONITORING

5.1 GENERAL

5.1.1 In the Reporting Period, construction works under the project have been commenced in Contracts 2, 3, 4, 6, 7 and Contract SS C505 and noise monitoring was performed at all designated locations.

5.1.2 The noise monitoring schedule is presented in ***Appendix H*** and the monitoring results are summarized in the following sub-sections.

5.2 NOISE MONITORING RESULTS

5.2.1 In the Reporting Period, a total of **45** events noise measurements were carried out at the designated locations. The sound level meter was set in 1m from the exterior of the building façade including noise monitoring locations NM1, NM3, NM4, NM5, NM6, NM7, NM8 and NM9. Therefore, no façade correction (+3 dB(A)) is added according to acoustical principles and EPD guidelines. However, free-field status were performed at NM2a and NM10 and façade correction (+3 dB(A)) has added according to the requirement in this month. The noise monitoring results at the designated locations are summarized in ***Tables 5-1 and 5-2.*** The detailed noise monitoring data are presented in ***Appendix I*** and the relevant graphical plots are shown in ***Appendix J***.

Table 5-1 Summary of Construction Noise Monitoring Results

Construction Noise Level ($L_{eq30min}$), dB(A)					
Date	**NM1**	**NM2a(*)**	**NM8**	**NM9**	**NM10(*)**

22-Mar-18	58	72	56	58	59
28-Mar-18	51	68	59	61	61
Limit Level	**75 dB(A)**				

Remarks

(*) façade correction (+3 dB(A) is added according to acoustical principles and EPD guidelines

Table 5-2 Summary of Construction Noise Monitoring Results

Construction Noise Level ($L_{eq30min}$), dB(A)					
Date	**NM3**	**NM4**	**NM5**	**NM6**	**NM7**
9-Mar-18	61	65	52	57	59
15-Mar-18	59	65	58	61	61
20-Mar-18	55	63	57	61	64
26-Mar-18	63	61	51	59	65
29-Mar-18	55	62	53	57	58
Limit Level	**75 dB(A)**				

5.2.2 As shown in ***Tables 5-1 and 5-2***, no construction noise measurement results that exceeded the Limit Level were recorded. Moreover, no valid noise complaint (which triggered Action Level exceedance) was recorded in the Reporting Period.

6 WATER QUALITY MONITORING

6.1 GENERAL

6.1.1 In the Reporting Period, construction works under the project has been commenced in Contracts 2, 3, 4, 6, 7 and Contract SS C505 and water quality monitoring was performed at all designated locations. The water quality monitoring schedule is presented in ***Appendix H***. The monitoring results are summarized in the following sub-sections.

6.2 RESULTS OF WATER QUALITY MONITORING

6.2.1 In the Reporting Period, a total of **fourteen (14)** sampling days was scheduled to carry out for all designated locations with their control stations. Since exceedances were recorded at WM3x, according to "*Event and Action Plan*" stipulation, 2 additional water quality monitoring day were conducted for WM3x and its control stations.

6.2.2 The key monitoring parameters including Dissolved Oxygen, Turbidity and Suspended Solids are summarized in ***Tables 6-1 to 6-5***. Breaches of water quality monitoring criteria are shown in ***Table 6-6***. Detailed monitoring database including in-situ measurements and laboratory analysis data are shown in ***Appendix I*** and the relevant graphical plot are shown in ***Appendix J***.

WM2B	0	0	0	0	0	0	0	0	0	0
WM3x	0	0	0	**2**	0	**2**	0	**4**	0	0
WM4	0	0	0	0	0	0	0	0	0	0
No of Exceedance	0	0	0	**2**	0	**2**	0	**4**	0	0

6.2.3 In this Reporting Period, a total of four (4) Limit Level exceedances, namely two (2) Limit Level exceedance of turbidity and two (2) Limit Level exceedances of Suspended Solids were recorded for the Project and they are summarized in ***Table 6-5***. Investigation Reports for all water quality exceedances were completed by ET. Investigation results revealed that the Contractor had properly implemented water quality mitigation measures such as well-maintained the wastewater treatment facility and covered the expose area with impervious sheet. It was concluded that the exceedances recorded at WM3x were not caused by the works under the Project.

6.2.4 NOE was issued to relevant parties upon confirmation of the monitoring result. The investigation results and summary of exceedances are summarized in ***Table 6-6***. The details of the completed investigation reports for the exceedances are attached in ***Appendix N***.

Table 6-6 Summary of Water Quality Exceedance in the Reporting Period

Date of Exceedance	Location	Exceeded Parameter	Cause of Water Quality Exceedance In Brief
1 and 3 March 2018	WM3x	NTU & SS	Upon detection of the exceedances, inspection was carried out at the channel adjacent to related site areas of Contract 2 and Contract 6, no deteriorated water quality was observed from both Sites. Moreover, weekly site inspection revealed that both Contractors had properly implemented water quality mitigation measures and no adverse water quality impact was recorded. It is considered that the exceedances were related to other source of turbid water, possibly from storm water of Sha Tau Kok Road or adjacent villages and not caused by the works under the Project.

7 ECOLOGY MONITORING

7.1 GENERAL

7.1.1 Ecology monitoring for woodland compensation was shall be conducted at bi-monthly interval for the first year and the monitoring frequency would be reduced to quarterly from the second year.

7.1.2 The Ecology Monitoring for period of December 2017 to February 2018 was carried out on 8th and 22nd January 2018 by transects inspection and quadrat monitoring. Therefore, the Quarterly Ecological Monitoring Report (Dec 2017 - Feb 2018) was submitted to EPD in March 2018 as standalone as supplementary of the EM&A Report.

8 WASTE MANAGEMENT

8.1 GENERAL WASTE MANAGEMENT

8.1.1 Waste management was carried out in accordance with the Waste Management Plan (WMP) for each contract.

8.2 RECORDS OF WASTE QUANTITIES

8.2.1 All types of waste arising from the construction work are classified into the following:

- Construction & Demolition (C&D) Material;
- Chemical Waste;
- General Refuse; and
- Excavated Soil.

8.2.2 The quantities of waste for disposal in this Reporting Period are summarized in ***Tables 8-1*** and ***8-2*** and the Monthly Summary Waste Flow Table is shown in ***Appendix L***. Whenever possible, materials were reused on-site as far as practicable.

Table 8-1 Summary of Quantities of Inert C&D Materials for the Project

Type of Waste	Contract 2		Contract 3		Contract 4		Contract 6		Contract 7		Contract SS C505		Total Qty.
	Qty.	Disposal location	Qty.	Disposal location	Qty.	Disposal location	Qty.	Disposal location	Qty.	Disposal location	Qty.	Disposal location

Chemical Wastes ('000kg) #	**9.9040**	Licensed collector	0	-	0	--	0	--	0	--	0	--	**9.904**
General Refuses ('000m^3)	**0.6290**	NENT	**0.085**	NENT	0	--	**0.725**	NENT	**0.2**	NENT	**2.711**	NENT	**4.35**

Remark #: Unit of recycled metal, recycled paper/ cardboard packing, recycled plastic and chemical waste for Contract 3 was in ('000m^3).

9 SITE INSPECTION

9.1 REQUIREMENTS

9.1.1 According to the approved EM&A Manual, the environmental site inspection shall be formulation by ET Leader. Weekly environmental site inspections should carry out to confirm the environmental performance.

9.2 FINDINGS / DEFICIENCIES DURING THE REPORTING MONTH

Contract 2

9.2.1 In the Reporting Period, joint site inspection for Contract 2 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on **1, 9, 16, 23 and 28 March 2018**. No non-compliance was noted.

9.2.2 The findings / deficiencies of ***Contract 2*** that observed during the weekly site inspection are listed in ***Table 9-1***.

Table 9-1 Site Observations for Contract 2

Date	Findings / Deficiencies	Follow-Up Status
1 March 2018	• No adverse environmental issue was observed.	NA
9 March 2018	• Wheel washing facility was observed out of work. The Contractor was advised to provide proper mitigation for wheel washing. (Mid-Vent) • The Contractor was reminded to keep all pH record properly.	• Wheel washing was provided at site entrance. • Not required for reminder.
16 March 2018	• Mud trails were observed at site entrance. The Contractor was advised to clean it to avoid dust emission. (Mid-Vent) • Accumulation of construction and general waste were observed mixed together. The Contractor was advised to perform on-site sorting and dispose waste regularly. (Mid-Vent) • The Contractor was reminded to ensure all pH value of discharge water comply with WPCO standard.	• Each vehicle is wheel washed before leaving the MVP site and no mud trial was found at the site entrance. • General refuses are segregated from the C&D wastes. • Not required for reminder.
23 March 2018	• General refuse cumulated inside the storage pit was observed. General refuse cumulated inside the pit should be cleaned. (North Portal) • Mud and sediment cumulated inside the store basin should be cleaned. (North Portal) • Heavy smoke emitted from cherry picker was observed. Proper maintenance should be provided to maintain plants using on-site are in good condition. (North Portal)	• General refuses have been removed. • The mud and sediment accumulated at the bottom of the basin has been removed.
28 March 2018	• Dry haul road was observed, the Contractor should provide water spraying to minimize dust generation from the haul road. (South Portal) • Dirt and debris on pedestrian road at the site exit was observed. The Contractor should clean up the dusty material and maintain cleanliness. (Admin Building)	• The Contractor will continue to provide water spraying to minimize dust generation from the haul road. • The dirt and debris have been removed.

Contract 3

9.2.3 In the Reporting Period, joint site inspection for Contract 3 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on **1, 8, 15, 21 and 29 March 2018**. No non-compliance was noted.

9.2.4 The findings / deficiencies of ***Contract 3*** that observed during the weekly site inspection are listed in ***Table 9-2***.

Table 9-2 Site Observations for Contract 3

Date	Findings / Deficiencies	Follow-Up Status
1 Mar 2018	• No adverse environmental issue was observed.	NA
8 Mar 2018	• The Contractor was reminded to maintain the sandbag bund at ID4.	• Not required for reminder.
15 Mar 2018	• No adverse environmental issue was observed.	NA
21 Mar 2018	• Water dripping form the viaduct was observed, the Contractor should properly remove any stagnant water on the viaduct after rain. (Tai Wo Service Road East) • Excavation next to the channel was observed, the Contractor should provide mitigation measures to prevent muddy runoff entering the river channel. • The Contractor was reminded to provide dust suppression measure during dry season.	• Concrete bund was provided to prevent water leaking from the viaduct. • The exposed slopes are covered with tarpaulin sheets to avoid muddy runoff entering the river channel. • Not required for reminder.
29 Mar 2018	• The Contractor was reminded to improve and maintain the setup of water diversion at BC02.	• Not required for reminder.

Contract 4

9.2.5 In the Reporting Period, joint site inspection for Contract 4 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on **2, 9, 16, 19 and 28 March 2018**. No non-compliance was noted.

9.2.6 The findings / deficiencies of ***Contract 4*** that observed during the weekly site inspection are listed in ***Table 9-3***.

Table 9-3 Site Observations for Contract 4

Date	Findings / Deficiencies	Follow-Up Status
2 Mar 2018	• No adverse environmental issue was observed.	• NA
9 Mar 2018	• No adverse environmental issue was observed.	• NA
16 Mar 2018	• No adverse environmental issue was observed.	• NA
19 Mar 2018	• No adverse environmental issue was observed.	• NA
28 Mar 2018	• No adverse environmental issue was observed.	• NA

Contract 6

9.2.7 In the Reporting Period, joint site inspection for Contract 6 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on **2, 8, 15, 22 and 29 March 2018**. No non-compliance was noted.

9.2.8 The findings / deficiencies of ***Contract 6*** that observed during the weekly site inspection are listed in ***Table 9-4***.

Table 9-4 Site Observations for Contract 6

Date	Findings / Deficiencies	Follow-Up Status
2 Mar 2018	• The Contractor was reminded to maintain the cleanliness at site exit and public footpath at Gate 1 and Gate 2.	• Not required for reminder.
8 Mar 2018	• The Contractor was reminded at maintain the cleanliness at site exit in Gate 1.	• Not required for reminder.
15 Mar 2018	• Dirt and debris on pedestrian road were observed at Gate 1, the Contractor should maintain the cleanliness at the pedestrian road and ensure no surface runoff entering the public area from the site. • The Contractor was reminded to maintain and clean the U-channel for water diversion. (Location: D08)	• The pedestrian road is maintained clean and tidy. • Not required for reminder.
22 Mar 2018	• The Contractor was reminded to maintain cleanliness at site exit and public area.	• Not required for reminder.
29 Mar 2018	• No adverse environmental issue was observed.	• NA

Contract SS C505

9.2.9 In the Reporting Period, joint site inspection for Contract SS C505 to evaluate the site environmental performance has been carried out by the RE, ET and the Contractor on **7, 14, 21 and 28 March 2018** in which IEC joined the site inspection on **28 March 2018**. No non-compliance was noted.

9.2.10 The findings / deficiencies of ***Contract SS C505*** that observed during the weekly site inspection are listed in ***Table 9-5***.

Table 9-5 Site Observations for Contract SS C505

Date	Findings / Deficiencies	Follow-Up Status
28 Feb 2018 (last reproting period)	• Food wastes were observed on the roof of PTB. The Contractor was advised to perform housekeeping regularly. • The Contractor was reminded to cover stockpiles entirely after construction work.	• Food wastes were removed and disposed properly. • Not required for reminder.
7 Mar 2018	• The Contractor was reminded to clean the stagnant water on the ground of PTB.	• Not required for reminder.
14 Mar 2018	• No adverse environmental issue was observed.	• NA
21 Mar 2018	• Concrete breaking without water spraying was observed at stockpile area. The Contractor was advised to provide water spraying for dusty activity to avoid dust emission.	• Water spraying was implemented during concrete activity.
28 Mar 2018	• Oil leakage was observed on the ground of 1/F in front of PTB. The Contractor should clean the oil leakage and dispose of as chemical wastes. Besides, the Contractor should also provide proper label for chemical container and place chemical containers inside drip tray.	• To be followed.

Contract 7

9.2.11 In the Reporting Period, joint site inspection for Contract 7 to evaluate the site environmental performance has been carried out by the RE, IEC, ET and the Contractor on **2, 9, 16, 22 and 28 March 2018**. No non-compliance was noted.

9.2.12 The findings / deficiencies of ***Contract 7*** that observed during the weekly site inspection are listed in ***Table 9-6***.

Table 9-6 Site Observations for Contract 7

Date	Findings / Deficiencies	Follow-Up Status
2 Mar 2018	• No adverse environmental issue was observed during site inspection.	• NA.
9 Mar 2018	• The Contractor was reminded to provide proper mitigation measure along site boundary near Bridge E to avoid potential runoff out of site.	• Not required for reminder.
16 Mar 2018	• Accumulation of general waste was observed on the ground. The Contractor was advised to dispose it regularly. • Open stockpiles were observed near bridge E. The Contractor was advised to cover it to prevent dust emission.	• The scattered general waste was cleaned. • Stockpiles are covered to prevent dust emission.
22 Mar 2018	• The Contractor was reminded that wastewater should be treated before discharge and to comply with the discharge license. Besides, wastewater treatment facility should be provided and maintained. • Wet season is coming, it was remidned that preventive measures for surface runoff should be enhanced and maintained.	• Not required for reminder. • Not required for reminder.
28 Mar 2018	• Leakage of waste water from sedimentation tank was observed near site entrance. The Contractor was advised to have regular maintenance on sedimentation tanks near site entrance. • The Contractor was reminded to provide proper mitigation measure along site boundary to avoid potential runoff out of site. • The Contractor was reminded to remove sediment at discharge area near site entrance.	• Proper maintenance was carried out on the sedimentation tanks. • Not required for reminder. • Not required for reminder.

9.2.13 General housekeeping such as daily site tidiness and cleanliness should be maintained for all Contracts. Furthermore, the Contractors were reminded to implement Waste Management Plan of the Project.

10 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

10.1 ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTIONS

10.1.1 In the Reporting Period, two (2) documented environmental complaints were received under the EM&A program of the Project which related to dust and water quality issue. No summons and prosecution under the EM&A Programme was lodged for all Contracts. The status of the outstanding investigation report in previous months is summarized below.

Date of complaint	Complaint Detail	Investigation Status
24 January 2018 (pervious reporting period)	A complaint was raised by EPD regarding observations of some spoils was dropped into the sea during the offloading operation at Cheung Sha Wan Pier.	Investigation was carried out at Cheung Sha Wan Pier on 9 Feb. The IR revealed that the operation of the jetty is managed by Tapbo Civil Engineering Company Limit as a transfer station for unloading excavated materials from various sources and it was not a newly constructed barging point for the Project use. The unloaded materials of Contract 2 will be subsequently delivered to the designated disposal ground, TM38 or TKO137. Dust mitigation measures and preventive measures to avoid spoil from dropping into the sea were provided during spoils offloading. It is considered that no breaches of EP's conditions and improper disposal were involved. The IR was completed by ET without comment by IEC which enclosed in ***Appendix O***.
4 March 2018	A public complaint was received via 1823 regarding the cleanliness of Lin Ma Hang Road. (Dust and Water Quality)	Investigation was carried out for related Contract 6, Contract 7 and Contract SS C505 accordingly. The IR revealed that the conditions of all site exits under the project were well maintained without mud and debris and no excessive water spraying and slurry was found on LMH road. However, a deficiency at Gate 1 under Contract 6 was observed and rectified immediately without affecting the public. Since there were many other heavy vehicles apart from the project using LMH Road and certain number of unknown exit sites without proper management along LMH Road, it is considered that the complaint was not related to the works under the Project. The IR was completed by ET without comment by IEC which enclosed in ***Appendix O***.
28 February 2018 (received by ET on 6 Mar 2018)	A public complaint was received from Project Hotline regarding the cleanliness of Sha Tau Kok (STK) Road – Ma Mei Ha Section (Dust and Water Quality)	Investigation was carried out for related Contract 2 and Contract 6 accordingly. The IR revealed that the Contractors have been well maintained the wheel washing facilities and no dust and soil carrying by site vehicles to STK road were observed. The complaint was suspected to be caused by frequent use of dump truck transporting loose material to NENT and the majority of dump truck was not belong to LT/HYW project. The IR was completed by ET without comment by IEC which enclosed in ***Appendix O***.

10.1.2 The statistical summary of environmental complaint is presented in ***Tables 10-1, 10-2*** and ***10-3***.

Table 10-1 Statistical Summary of Environmental Complaints

11 IMPLEMENTATION STATUS OF MITIGATION MEASURES

11.1 GENERAL REQUIREMENTS

11.1.1 The environmental mitigation measures that recommended in the Implementation Schedule for Environmental Mitigation Measures (ISEMM) in the approved EM&A Manual covered the issues of dust, noise, water and waste and they are summarized presented in ***Appendix M.***

11.1.2 All contracts under the Project shall be implementing the required environmental mitigation measures according to the approved EM&A Manual as subject to the site condition. Environmental mitigation measures generally implemented by Contracts 2, 3, 4, 5, 6, 7 and Contract SS C505 in this Reporting Period are summarized in ***Table 11-1***.

Table 11-1 Environmental Mitigation Measures

Issues	Environmental Mitigation Measures
Water Quality	• Wastewater to be treated by the wastewater treatment facilities i.e. sedimentation tank or similar facility before discharge.
Air Quality	• Maintain damp / wet surface on access road • Low vehicular speed within the works areas. • All vehicles must use wheel washing facility before off site • Sprayed water during breaking works • A cleaning truck was regularly performed on the public road to prevent fugitive dust emission
Noise	• Restrain operation time of plants from 07:00 to 19:00 on any working day except for Public Holiday and Sunday. • Keep good maintenance of plants • Place noisy plants away from residence or school • Provide noise barriers or hoarding to enclose the noisy plants or works • Shut down the plants when not in used.
Waste and Chemical Management	• On-site sorting prior to disposal • Follow requirements and procedures of the "Trip-ticket System" • Predict required quantity of concrete accurately • Collect the unused fresh concrete at designated locations in the sites for subsequent disposal
General	• The site was generally kept tidy and clean.

11.2 TENTATIVE CONSTRUCTION ACTIVITIES IN THE COMING MONTH

11.2.1 As advised by the ER, the construction works under Contract 5 was substantially completed on 31 August 2016. Construction activities for other Contracts in the coming month are listed below:

Contract 2

Mid-Vent Portal	• Construction of Cut and Cover structure and backfilling • Construction of adit enlargement internal structure • Stud tunnel internal structure and E&M installation • Ventilation building superstructure, fence wall, internal fitting out and E&M installation • Structure connecting adit tunnel and ventilation building • Permanent drainage and underground utilities
North Portal	• Construction of retaining wall, permanent drainage, site formation and slip road • Tunnel waterproofing, lining, backfilling and E&M installation • Construction of cross passage and internal structure • TBM North drive excavation • North ventilation building superstructure, internal structure and backfilling • Drainage cleansing and construction of temporary utility bridge across the mid-platform
South Portal	• Waterproofing and lining activities inside the tunnel

	• Construction of tunnel cross passage, tunnel backfilling and E&M installation • South ventilation building fitting out and E&M installation • Construction of retaining walls and backfilling activities
Admin Building	• Construction of permanent drainage, permanent drainage, fence wall and underground utilities • Building internal structure, fitting out, E&M installation and soft landscaping

Contract 3

- Cable detection and trial trenches
- Remaining works on new Footbridge
- Noise barrier construction
- Road pavement works
- Demolition of Existing Kiu Tau Vehicular Bridge
- Water main laying works
- Installation of Noise barrier steel column & panel, and sign gantry (on Grade and on bridge deck)
- Parapet Installation on bridge deck
- Road Drainage Works
- Construction of profile barrier & Planter wall on Bridge deck
- Stressing of external tendon
- Bitumen paving on bridge deck
- Installation of deck cell light inside the bridge deck
- Installation of movement joint on the bridge
- Construction of retaining wall behind abutment
- Landscaping works

Contract 4

- System design and testing
- E&M installation at Admin Building
- E&M installation at Ventilation Building
- High mast erection
- E&A installation at OHVD in tunnel

Contract 6

- Bridge construction
- Tunnel Works
- Sewage Treatment Plant Construction
- Tunnel Ventilation Building Construction
- Slip Road/At-grade Road/Periphery Road Construction

Contract 7

- U-trough and abutment construction at Bridge E
- Deck construction at Bridge A and E
- Profile barrier construction at Bridge B and D
- Construction of Façade and BMU at Bridge C

Contract SS C505

- Building no. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31 and 41 constructions
- Constructions of Steel Canopies (Building no. 32, 33, 34 and 35)
- Constructions of Master Water Meter Room 1, 2 and 3 (Building no. 42, 43, 44)
- Tower crane operation
- Bridge 1 - 5 construction works including retaining wall, road and finishes works

- Steel Canopies construction
- Underground drainage works, Road Works, CLP Cable laying and Landscaping
- Formwork and falsework for PTB's slab and internal wall construction
- Construction PTB M/F, 1/F, 2/F and Roof flat slab
- Construction PTB non-structural wall, Underground Drainage and Utilities, Fence Wall, Southern Entrance Construction
- Backfilling works
- PTB Major Plant Rooms ABWF & MEP Installation, Lift and Escalator Installation by NSC
- Integrated ABWF & MEP Works in PTB, Building no. 1, 2, 3, 4, 5, 6, 7, 11, 14, 18, 36 and 41
- Elevated Walkway E1, E2, E3 and E4 construction
- Tower Crane Dismantling Works

11.3 KEY ISSUES FOR THE COMING MONTH

11.3.1 Key issues to be considered in the coming month for Contracts 2, 3, 4, 6, 7 and SS C505 include:

- Implementation of control measures for rainstorm;
- Regular clearance of stagnant water during wet season;
- Implementation of dust suppression measures at all times;
- Potential wastewater quality impact due to surface runoff;
- Potential fugitive dust quality impact due from the dry/loose/exposure soil surface/dusty material;
- Disposal of empty engine oil containers within site area;
- Ensure dust suppression measures are implemented properly;
- Sediment catch-pits and silt removal facilities should be regularly maintained;
- Management of chemical wastes;
- Discharge of site effluent to the nearby wetland, stockpiling or disposal of materials, and any dredging or construction area at this area are prohibited;
- Follow-up of improvement on general waste management issues; and
- Implementation of construction noise preventative control measures

12 CONCLUSIONS AND RECOMMENDATIONS

12.1 CONCLUSIONS

12.1.1 This is the **56th** monthly EM&A report presenting the monitoring results and inspection findings for the Reporting Period from **1** to **31 March 2018**.

12.1.2 For air quality monitoring, no 1-hour TSP and 24-hour TSP monitoring results triggered the Action or Limit Levels were recorded.

12.1.3 In the Reporting Period, no construction noise measurement results that exceeded the Limit Level were recorded. Moreover, no valid noise complaint which triggered an Action Level exceedance was recorded.

12.1.4 For water quality monitoring, a total of 4 LL exceedances, namely 2 LL exceedance of turbidity and 2 LL exceedances of Suspended Solids were recorded. Investigation reports revealed that the Contractor had properly implemented water quality mitigation measures such as well-maintained the wastewater treatment facility and covered the expose area with impervious sheet. It was concluded that all the exceedances were not related to the works under the Project.

12.1.5 In this Reporting Period, 2 environmental complaints were received regarding to the dust and water quality issue on Sha Tau Kok Road and Lin Ma Hang Road. The investigation for the complaint was completed by ET. The IRs revealed that the conditions of all site exits under the Project were well maintained without mud and debris and no excessive water spraying and slurry was found on the complaint roads. Since there were many other heavy vehicles apart from the project using complaint roads and mitigation measures were properly implemented by the Contractor, it is considered that the complaints were not related to the works under the Project.

12.1.6 In the Reporting Period, no environmental summons and prosecution under the EM&A Programme was lodged for all Contracts.

12.1.7 During the Reporting Period, weekly joint site inspection by the RE, IEC, ET with the relevant Main-contractor were carried out for Contracts 2, 3, 4, 6 and 7 in accordance with the EM&A Manual stipulation. For Contract SS C505, weekly joint site inspection was carried out by the RE, IEC, ET and main-contractor whereas IEC performed monthly site inspection. No non-compliance observed during the site inspection.

12.2 RECOMMENDATIONS

12.2.1 As wet season is approaching, preventive measures for muddy water or other water pollutants from site surface flow to local stream such as Kong Yiu Channel, Ma Wat Channel, Ping Yuen River, Kwan Tei River or public area should be properly maintained. The Contractors should paid special attention on water quality mitigation measures and fully implement according ISEMM of the EM&A Manual, in particular for working areas near Ma Wat Channel and Ping Yuen River.

12.2.2 In addition, all effluent discharge shall be ensure to fulfill Technical Memorandum of Effluent Discharged into Drainage and Sewerage Systems, inland and Coastal Waters criteria or discharge permits stipulation.

12.2.3 Construction noise would be a key environmental issue during construction work of the Project. Noise mitigation measures such as using quiet plants should be implemented in accordance with the EM&A requirement.

12.2.4 Since most of construction sites under the Project are located adjacent to villages, the Contractors should fully implement air quality mitigation measures to reduce construction dust emission.

12.2.5 Furthermore, daily cleaning and weekly tidiness shall be properly performed and maintained. In addition, mosquito control should be kept to prevent mosquito breeding on site.

Appendix C

3-month rolling construction program

Contract 2

Liantang / Heung Yuen Wai Boundary Control Point and Associated Works
CEDD Contract No: CV/2012/08
Main Contractor: Dragages Hong Kong Ltd

Tentative Three Months (March, April and May 2018) Construction Rolling Progam

Item	Construction Activites
1	Admin Bldg - Construction of permanent access, permanent drainage, fence wall and underground utilities
2	Admin Bldg - Building internal structure, fit out, E&M installation and soft landscaping
3	Mid Vent Portal - Construction of C&C structure and backfilling activities
4	Mid Vent Portal - Construction of adit enlargement internal structure
5	Mid Vent Portal - Stud tunnel internal structure and E&M installation
6	Mid-Vent Portal - Ventilation building superstructure, fence wall, internal fit out and E&M installation
7	Mid Vent Portal - Structure connecting adit tunnel and ventilation building
8	Mid-Vent Portal - Permanent drainage & underground utilities
9	North Portal - Construction of retaining wall, permanent drainage, site formation and slip road
10	North Portal - Tunnel waterproofing, lining, backfilling and E&M installation
11	North Portal - Construction of tunnel cross passage and internal structure
12	North Portal - TBM North drive breakthrough
13	North Portal - North ventilation building superstructure, internal structure and backfilling
14	North Portal - Drainage cleansing and construction of temporary utility bridge across the mid-platform
15	South Portal - Waterproofing and lining activities inside the tunnle.
16	Sorth Portal - Construction of tunnel cross passage, tunnel backfilling and E&M installation
17	South Portal - South ventilation building internal fit out and E&M installation
18	South Portal - Construction of retaining walls and backfilling activities

Contract 3

Liantang / Heung Yuen Wai Boundary Control Point and Associated Works
CEDD Contract No: CV/2012/09
Main Contractor: Chun Wo Construction Ltd

俊和建築工程有限公司
CHUN WO CONSTRUCTION & ENGINEERING CO., LTD.

Tentative Three Months (March, April and May 2018) Construction Rolling Progam

Item	Construction Activites
1	Cable detection and trial trenches
2	Remaining works on new Footbridge
3	Noise barrier construction
4	Road pavement works
5	Demolition of Existing Kiu Tau Vehicular Bridge
6	Water main laying works (on Grade and on bridge deck)
7	Installation of Noise barrier steel column & panel, and sign gantry (on Grade and on bridge deck)
8	Parapet Installation on bridge deck
9	Road Drainage Works
10	Construction of profile barrier & Planter wall on Bridge deck
11	Stressing of external tendon
12	Bitumen paving on bridge deck
13	Installation of deck cell light inside the bridge deck
14	Installation of movement joint on the bridge
15	Construction of retaining wall behind abutment
16	Landscaping works

Contract 4

Liantang / Heung Yuen Wai Boundary Control Point and Associated Works
CEDD Contract No: NE/2014/02
Main Contractor: Siemens Ltd.

SIEMENS
Ingenuity for life

Tentative Three Months (March, April and May 2018) Construction Rolling Progam

Item	Construction Activites
1	System design and testing
2	E&M installation at admin building
3	E&M installation at Ventilation Building
4	E&A installation at OHVD in tunnel
5	High mast erection

Contract 6

Liantang / Heung Yuen Wai Boundary Control Point and Associated Works
CEDD Contract No: CV/2013/08
Main Contractor: CRBE-CEC-Kaden Joint Venture

CRBC-CEC-KADEN Joint Venture

Tentative Three Months (March, April and May 2018) Construction Rolling Progam

Item	Construction Activites
1	Bridge Construction
2	Tunneling Works
3	Sewage Treatment Plant Construction
4	Tunnel Ventilation Building Construction
5	Slip Road/At-grade Road/Periphery Road Construction

Contract 7

Liantang / Heung Yuen Wai Boundary Control Point and Associated Works
CEDD Contract No: NE/2014/03
Main Contractor: Kwan On-Richwell-SCG Joint Venture

均安 - 顯豐機械 - 上海建工 聯營
Kwan On - Richwell - SCG JV

Tentative Three Months (March, April and May 2018) Construction Rolling Progam

Item	Construction Activites
1	U-tough and abutment construction at Bridge E
2	Deck construction at Bridge A and E
3	Profile barrier construction at Bridges B and D
4	Construction of Façade and BMU at Bridge C

Contract SS C505

Liantang / Heung Yuen Wai Boundary Control Point and Associated Works
ArchSD Contract No: SSC505
Main Contractor: Leighton

Tentative Three Months (March, April and May 2018) Construction Rolling Progam

Item	Construction Activites
1	Passenger Terminal Building - Structure Works, Backfiling & Drainage, Under Ground Utilities, Fence Wall and Slab Construction
2	Passenger Terminal Building - ABWF Works & Integrated MEP Installation, Nonstructure Wall Erection and Southern Entrance Construction
3	Passenger Terminal Building - Major Plant Rooms ABWF Works & MEP Installation, and Lift & Escalator Installation by NSC
4	PTB Roof & Upper Roof Roofting Works - Outstanding Structure Works and Concrete Repairing
5	PTB - Coach & Private Car Kiosks (Inbound) - Structures Works
6	PTB - Private Car Examination Buildings and MXRVSS (Inbound) - Structures and Steel Structures Works, ABWF & MEP Installation
7	C&ED Detector Dog Base - External Structure Works and Integrated ABWF & MEP Works
8	HKPF Building and Observation Tower - Structures, External Works, Integrated ABWF & MEP Works
9	Fire Station and Drill Tower - Structures, External Works, Integradted ABWF & MEP Works
10	Cargo Examination Building (Inbound) - Structure, Steel Structure Works, External Works and Integrated ABWF & MEP Works
11	Cargo Examination Building (Outbound) - Steel Structure Works and Integrated ABWF & MEP Works
12	Fixed X-ray Vehicle Inspection System (FXRVIS) Buildings (Inbound) - Structures, External Works and Integrated ABWF & MEP Works
13	Fixed X-ray Vehicle Inspection System (FXRVIS) Buildings (Outbound) - Structures, External Works and Integrated ABWF & MEP Works
14	MXRVSS (Inbound) - Structure Works
15	MXRVSS (Outbound) - Structure Works
16	GV Kiosk (Inbound) - Structures Works, Steel Structure Works, Integrated ABWF and MEP Works
17	GV Kiosk (Outbound) - Substructures and Structures Works, Steel Structure Works, Integrated ABWF & MEP Works
18	Public Toilets (Inbound) - Structure Works
19	Public Toilets (Outbound) - Structures Works
20	Disinsection Facilities (Inbound) - Substructure and Structure Works, Integrated ABWF & MEP Works
21	Disinsection Facilities (Outbound) - Substructure and Structure Works
22	Weigh Station - Substructure and Structure Works, Integrated ABWF and MEP Works
23	EUVSS & Monitoring Room - Substructure and Structure Works, Steel Structure Works
24	Refuse Collection Point - Structures, Integrated ABWF and MEP Works
25	Traffic Control Office (Inbound) - Structure Works, Integrated ABWF and MEP Works
26	Traffic Control Office (Outbound) - Structure Works, Integrated ABWF and MEP Works
27	Inspection Post - Structure Works
28	Guard Booth (Inbound/Outbound/Vehicle Detention Area) - Structure Works, Integrated ABWF and MEP Works
29	Steel Canopies - Structure Works
30	Fire Hydrant Tank & Pump Room - Integrated ABWF and MEP Works
31	Irrigation Pump Room - Structures works and Integrated ABWF & MEP Works
32	Master Water Meter Room 1,2,3 - Structures Works and Integrated ABWF and MEP Works
33	Elevated Walkway (E1, E2, E3 & E4) - Structures and Structural Steel Works
34	Vehicular bridges 1-5 - Retaining walls, Road and Finishes Works
35	External Works - CLP Cable & Power ON Transfer room
36	External Works - Water Meter Room Connection (Inbound)
37	External Works - Underground Utilities, Structures and Inspection (Inbound & Outbound Areas)
38	External Works - Road Works
39	Bridge C (C7 Portion) - Integrated ABWF & MEP Works
38	Tower Crane Dismantling Works

DATA TABULATION

Vstd	(x axis) Qstd	(y axis)		Va	(x axis) Qa	(y axis)
0.9967	0.6827	1.4149		0.9957	0.6820	0.8851
0.9925	0.9534	2.0010		0.9915	0.9524	1.2517
0.9904	1.0672	2.2372		0.9894	1.0661	1.3995
0.9894	1.1192	2.3464		0.9884	1.1181	1.4678
0.9840	1.3499	2.8299		0.9830	1.3485	1.7702
Qstd slope (m) =		2.11965		Qa slope (m) =		1.32729
intercept (b) =		-0.02696		intercept (b) =		-0.01686
coefficient (r) =		0.99991		coefficient (r) =		0.99991
y axis = SQRT[H2O(Pa/760)(298/Ta)]				y axis = SQRT[H2O(Ta/Pa)]		

CALCULATIONS

Vstd = Diff. Vol[(Pa-Diff. Hg)/760](298/Ta)
Qstd = Vstd/Time

Va = Diff Vol [(Pa-Diff Hg)/Pa]
Qa = Va/Time

For subsequent flow rate calculations:

Qstd = 1/m{[SQRT(H2O(Pa/760)(298/Ta))]- b}
Qa = 1/m{[SQRT H2O(Ta/Pa)]- b}

Equipment Verification Report (TSP)

Equipment Calibrated:

Type:	Laser Dust monitor
Manufacturer:	Sibata LD-3B
Serial No.	2X6145
Equipment Ref:	EQ105
Job Order	HK1815073

Standard Equipment:

Standard Equipment:	Higher Volume Sampler
Location & Location ID:	AUES office (calibration room)
Equipment Ref:	HVS 018
Last Calibration Date:	1 December 2017

Equipment Verification Results:

Testing Date: 5 January 2018

Hour	Time	Mean Temp °C	Mean Pressure (hPa)	Concentration in mg/m³ (Standard Equipment)	Total Count (Calibrated Equipment)	Count/Minute (Total Count/60min)
2hr07min	10:27 ~ 12:34	19.3	1015.3	0.011	511	4.0
2hr01min	12:38 ~ 14:39	19.3	1015.3	0.012	598	4.9
2hr08min	14:42 ~ 16:50	19.3	1015.3	0.036	2111	16.5

Sensitivity Adjustment Scale Setting (Before Calibration) 583 (CPM)

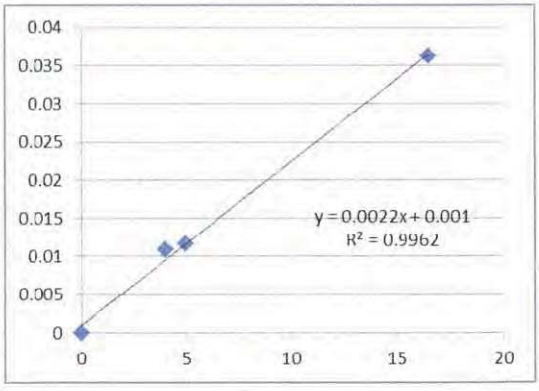
Sensitivity Adjustment Scale Setting (After Calibration) 583 (CPM)

Linear Regression of Y or X

Slope (K-factor): 0.0022

Correlation Coefficient 0.9981

Date of Issue 9 January 2018



Remarks:

1. **Strong** Correlation (R>0.8)
2. Factor 0.0022 should be apply for TSP monitoring

*If R<0.5, repair or re-verification is required for the equipment

ITEM TESTED / 送檢項目 (Job No. / 序引編號 : IC17-0924) Date of Receipt / 收件日期 : 14 July 2017

Description / 儀器名稱 : Sound Level Meter
Manufacturer / 製造商 : Rion
Model No. / 型號 : NL-52
Serial No. / 編號 : 00464681
Supplied By / 委託者 : Action-United Environmental Services and Consulting
Unit A, 20/F., Gold King Industrial Building,
35-41 Tai Lin Pai Road, Kwai Chung, N.T.

TEST CONDITIONS / 測試條件

Temperature / 溫度 : (23 ± 2)°C Relative Humidity / 相對濕度 : (55 ± 20)%
Line Voltage / 電壓 : ---

TEST SPECIFICATIONS / 測試規範

Calibration check

DATE OF TEST / 測試日期 : 22 July 2017

TEST RESULTS / 測試結果

The results apply to the particular unit-under-test only.
The results do not exceed manufacturer's specification.
The results are detailed in the subsequent page(s).

The test equipment used for calibration are traceable to National Standards via :
- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory
- Agilent Technologies / Keysight Technologies
- Rohde & Schwarz Laboratory, Germany
- Fluke Everett Service Center, USA

Tested By 測試 : H T Wong
Technical Officer

Certified By 核證 : K C Lee
Engineer

Certificate of Calibration
校正證書

Certificate No. : C174097
證書編號

1. The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 12 hours, and switched on to warm up for over 10 minutes before the commencement of the test.

2. Self-calibration was performed before the test.

3. The results presented are the mean of 3 measurements at each calibration point.

4. Test equipment :

Equipment ID	Description	Certificate No.
CL280	40 MHz Arbitrary Waveform Generator	C170048
CL281	Multifunction Acoustic Calibrator	PA160023

5. Test procedure : MA101N.

6. Results :

6.1 Sound Pressure Level

6.1.1 Reference Sound Pressure Level

UUT Setting				Applied Value		UUT	IEC 61672
Range (dB)	Function	Frequency Weighting	Time Weighting	Level (dB)	Freq. (kHz)	Reading (dB)	Class 1 Spec. (dB)
30 - 130	L_A	A	Fast	94.00	1	93.7	± 1.1

6.1.2 Linearity

UUT Setting				Applied Value		UUT
Range (dB)	Function	Frequency Weighting	Time Weighting	Level (dB)	Freq. (kHz)	Reading (dB)
30 - 130	L_A	A	Fast	94.00	1	93.7 (Ref.)
				104.00		103.7
				114.00		113.7

IEC 61672 Class 1 Spec. : ± 0.6 dB per 10 dB step and ± 1.1 dB for overall different.

6.2 Time Weighting

UUT Setting				Applied Value		UUT	IEC 61672
Range (dB)	Function	Frequency Weighting	Time Weighting	Level (dB)	Freq. (kHz)	Reading (dB)	Class 1 Spec. (dB)
30 - 130	L_A	A	Fast	94.00	1	93.7	Ref.
			Slow			93.7	± 0.3

Certificate of Calibration
校正證書

Certificate No. : C174097
證書編號

Remarks : - UUT Microphone Model No. : UC-59 & S/N : 07619

- Mfr's Spec. : IEC 61672 Class 1

- Uncertainties of Applied Value :

94 dB	63 Hz - 125 Hz	: ± 0.35 dB
	250 Hz - 500 Hz	: ± 0.30 dB
	1 kHz	: ± 0.20 dB
	2 kHz - 4 kHz	: ± 0.35 dB
	8 kHz	: ± 0.45 dB
	12.5 kHz	: ± 0.70 dB
104 dB	1 kHz	: ± 0.10 dB (Ref. 94 dB)
114 dB	1 kHz	: ± 0.10 dB (Ref. 94 dB)

- The uncertainties are for a confidence probability of not less than 95 %.

Note :
Only the original copy or the laboratory's certified true copy is valid.

The values given in this Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

Certificate of Calibration
校正證書

Certificate No. : C172288
證書編號

ITEM TESTED / 送檢項目 (Job No. / 序引編號 : IC17-0924) Date of Receipt / 收件日期 : 24 April 2017

Description / 儀器名稱 : Integrating Sound Level Meter (EQ006)
Manufacturer / 製造商 : Brüel & Kjær
Model No. / 型號 : 2238
Serial No. / 編號 : 2285762
Supplied By / 委託者 : Action-United Environmental Services and Consulting
Unit A, 20/F., Gold King Industrial Building,
35-41 Tai Lin Pai Road, Kwai Chung, N.T.

TEST CONDITIONS / 測試條件

Temperature / 溫度 : (23 ± 2)°C Relative Humidity / 相對濕度 : (55 ± 20)%
Line Voltage / 電壓 : ---

TEST SPECIFICATIONS / 測試規範

Calibration check

DATE OF TEST / 測試日期 : 28 April 2017

TEST RESULTS / 測試結果

The results apply to the particular unit-under-test only.
The results do not exceed manufacturer's specification.
The results are detailed in the subsequent page(s).

The test equipment used for calibration are traceable to National Standards via :
- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory
- Agilent Technologies / Keysight Technologies
- Rohde & Schwarz Laboratory, Germany
- Fluke Everett Service Center, USA

Tested By 測試 : H T Wong
Technical Officer

Certified By 核證 : K C Lee
Project Engineer

Date of Issue 簽發日期 : 2 May 2017

Certificate of Calibration
校正證書

Certificate No. : C172288
證書編號

1. The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 12 hours, and switched on to warm up for over 10 minutes before the commencement of the test.

2. Self-calibration using laboratory acoustic calibrator was performed before the test from 6.1.1.2 to 6.4.

3. The results presented are the mean of 3 measurements at each calibration point.

4. Test equipment :

Equipment ID	Description	Certificate No.
CL280	40 MHz Arbitrary Waveform Generator	C170048
CL281	Multifunction Acoustic Calibrator	PA160023

5. Test procedure : MA101N.

6. Results :

6.1 Sound Pressure Level

6.1.1 Reference Sound Pressure Level

6.1.1.1 Before Self-calibration

UUT Setting				Applied Value		UUT Reading (dB)
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Level (dB)	Freq. (kHz)	
50 - 130	L_{AFP}	A	F	94.00	1	94.1

6.1.1.2 After Self-calibration

UUT Setting				Applied Value		UUT Reading (dB)	IEC 60651 Type 1 Spec. (dB)
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Level (dB)	Freq. (kHz)		
50 - 130	L_{AFP}	A	F	94.00	1	94.0	± 0.7

6.1.2 Linearity

UUT Setting				Applied Value		UUT Reading (dB)
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Level (dB)	Freq. (kHz)	
50 - 130	L_{AFP}	A	F	94.00	1	94.0 (Ref.)
				104.00		104.0
				114.00		114.0

IEC 60651 Type 1 Spec. : ± 0.4 dB per 10 dB step and ± 0.7 dB for overall different.

Certificate of Calibration
校正證書

Certificate No. : C172288
證書編號

6.2 Time Weighting

6.2.1 Continuous Signal

UUT Setting				Applied Value		UUT Reading (dB)	IEC 60651 Type 1 Spec. (dB)
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Level (dB)	Freq. (kHz)		
50 - 130	L_{AFP}	A	F	94.00	1	94.0	Ref.
	L_{ASP}		S			94.1	± 0.1
	L_{AIP}		I			94.1	± 0.1

6.2.2 Tone Burst Signal (2 kHz)

UUT Setting				Applied Value		UUT Reading (dB)	IEC 60651 Type 1 Spec. (dB)
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Level (dB)	Burst Duration		
30 - 110	L_{AFP}	A	F	106.0	Continuous	106.0	Ref.
	L_{AFMax}				200 ms	105.0	-1.0 ± 1.0
	L_{ASP}		S		Continuous	106.0	Ref.
	L_{ASMax}				500 ms	102.0	-4.1 ± 1.0

6.3 Frequency Weighting

6.3.1 A-Weighting

UUT Setting				Applied Value		UUT Reading (dB)	IEC 60651 Type 1 Spec. (dB)
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Level (dB)	Freq.		
50 - 130	L_{AFP}	A	F	94.00	31.5 Hz	55.1	-39.4 ± 1.5
					63 Hz	68.0	-26.2 ± 1.5
					125 Hz	77.8	-16.1 ± 1.0
					250 Hz	85.3	-8.6 ± 1.0
					500 Hz	90.8	-3.2 ± 1.0
					1 kHz	94.0	Ref.
					2 kHz	95.2	+1.2 ± 1.0
					4 kHz	95.0	+1.0 ± 1.0
					8 kHz	92.9	-1.1 (+1.5 ; -3.0)
					12.5 kHz	89.8	-4.3 (+3.0 ; -6.0)

6.3.2 C-Weighting

UUT Setting				Applied Value		UUT Reading (dB)	IEC 60651 Type 1 Spec. (dB)
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Level (dB)	Freq.		
50 - 130	L_{CFP}	C	F	94.00	31.5 Hz	91.5	-3.0 ± 1.5
					63 Hz	93.4	-0.8 ± 1.5
					125 Hz	93.9	-0.2 ± 1.0
					250 Hz	94.1	0.0 ± 1.0
					500 Hz	94.1	0.0 ± 1.0
					1 kHz	94.1	Ref.
					2 kHz	93.9	-0.2 ± 1.0
					4 kHz	93.2	-0.8 ± 1.0
					8 kHz	91.0	-3.0 (+1.5 ; -3.0)
					12.5 kHz	87.9	-6.2 (+3.0 ; -6.0)

6.4 Time Averaging

UUT Setting				Applied Value					UUT Reading (dB)	IEC 60804 Type 1 Spec. (dB)
Range (dB)	Parameter	Frequency Weighting	Integrating Time	Frequency (kHz)	Burst Duration (ms)	Burst Duty Factor	Burst Level (dB)	Equivalent Level (dB)		
30 - 110	L_{Aeq}	A	10 sec.	4	1	1/10	110.0	100	100.0	± 0.5
						$1/10^2$		90	89.9	± 0.5
			60 sec.			$1/10^3$		80	79.2	± 1.0
			5 min.			$1/10^4$		70	69.2	± 1.0

Remarks : - UUT Microphone Model No. : 4188 & S/N : 2812705

- Mfr's Spec. : IEC 60651 Type 1 & IEC 60804 Type 1

- Uncertainties of Applied Value :

94 dB	: 31.5 Hz - 125 Hz	: ± 0.35 dB
	250 Hz - 500 Hz	: ± 0.30 dB
	1 kHz	: ± 0.20 dB
	2 kHz - 4 kHz	: ± 0.35 dB
	8 kHz	: ± 0.45 dB
	12.5 kHz	: ± 0.70 dB
104 dB	: 1 kHz	: ± 0.10 dB (Ref. 94 dB)
114 dB	: 1 kHz	: ± 0.10 dB (Ref. 94 dB)
Burst equivalent level		: ± 0.2 dB (Ref. 110 dB continuous sound level)

- The uncertainties are for a confidence probability of not less than 95 %.

Certificate of Calibration
校正證書

Certificate No. : C172284
證書編號

1. The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 12 hours before the commencement of the test.

2. The results presented are the mean of 3 measurements at each calibration point.

3. Test equipment :

Equipment ID	Description	Certificate No.
CL130	Universal Counter	C163709
CL281	Multifunction Acoustic Calibrator	PA160023
TST150A	Measuring Amplifier	C161175

4. Test procedure : MA100N.

5. Results :

5.1 Sound Level Accuracy

UUT Nominal Value	Measured Value (dB)	Mfr's Spec. (dB)	Uncertainty of Measured Value (dB)
94 dB, 1 kHz	94.0	± 0.2	± 0.2
114 dB, 1 kHz	114.1		

5.2 Frequency Accuracy

UUT Nominal Value (kHz)	Measured Value (kHz)	Mfr's Spec.	Uncertainty of Measured Value (Hz)
1	1.000 0	1 kHz ± 0.1 %	± 0.1

Remark : The uncertainties are for a confidence probability of not less than 95 %.

Note :
Only the original copy or the laboratory's certified true copy is valid.

The values given in this Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. REPORT OF EQUIPMENT PERFORMANCE CHECK/CALIBRATION

CONTACT:	MR BEN TAM	**WORK ORDER:**	HK1818150
CLIENT:	ACTION UNITED ENVIRONMENT SERVICES AND CONSULTING	**SUB- BATCH:**	0
ADDRESS:	RM A 20/F., GOLD KING IND BLDG, NO. 35- 41 TAI LIN PAI ROAD, KWAI CHUNG, N.T., HONG KONG.	**LABORATORY:**	HONG KONG
		DATE RECEIVED:	23- Feb- 2018
		DATE OF ISSUE:	02- Mar- 2018

COMMENTS

The performance of the equipment stated in this report is checked with independent reference material and results compared against a calibrated secondary source.
The "Tolerance Limit" quoted is the acceptance criteria applicable for similar equipment used by the ALS Hong Kong laboratory or quoted from relevant international standards.
The "Next Calibration Date" is recommended according to best practice principals as practised by the ALS Hong Kong laboratory or quoted from relevant international standards.

Scope of Test:	Dissolved Oxygen and Temperature
Equipment Type:	Dissolved Oxygen Meter
Brand Name:	YSI
Model No.:	550A
Serial No.:	16A104433
Equipment No.:	- -
Date of Calibration:	27 February, 2018

NOTES

This is the Final Report and supersedes any preliminary report with this batch number.
Results apply to sample(s) as submitted. All pages of this report have been checked and approved for release.

REPORT OF EQUIPMENT PERFORMANCE CHECK/CALIBRATION

Work Order: HK1818150
Sub- Batch: 0
Date of Issue: 02- Mar- 2018
Client: ACTION UNITED ENVIRONMENT SERVICES AND CONSULTING

Equipment Type: Dissolved Oxygen Meter
Brand Name: YSI
Model No.: 550A
Serial No.: 16A104433
Equipment No.: - -
Date of Calibration: 27 February, 2018 Date of next Calibration: 27 May, 2018

Parameters:

Dissolved Oxygen **Method Ref: APHA (21st edition), 4500O: G**

Expected Reading (mg/L)	Displayed Reading (mg/L)	Tolerance (mg/L)
2.42	2.37	- 0.05
5.55	5.47	- 0.08
8.58	8.41	- 0.17
	Tolerance Limit (mg/L)	± 0.20

Temperature **Method Ref: Section 6 of International Accreditation New Zealand Technical Guide No. 3 Second edition March 2008: Working Thermometer Calibration Procedure.**

Expected Reading (^{o}C)	Displayed Reading (^{o}C)	Tolerance (^{o}C)
10.5	10.8	+ 0.3
21.5	21.3	- 0.2
39.0	38.8	- 0.2
	Tolerance Limit (^{o}C)	± 2.0

Remark: "Displayed Reading" presents the figures shown on item under calibration / checking regardless of equipment precision or significant figures.

Event and Action Plan

Event and Action Plan for Air Quality

Event	ET	IEC	ER	Action Contractor
Action Level				
1. Exceedance for one sample	1. Identify source, investigate the causes of exceedance and propose remedial measures; 2. Inform IEC and ER; 3. Repeat measurement to confirm finding; 4. Increase monitoring frequency to daily.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method.	1. Notify Contractor.	1. Rectify any unacceptable practice; 2. Amend working methods if appropriate.
2. Exceedance for two or more consecutive samples	1. Identify source; 2. Inform IEC and ER; 3. Advise the ER on the effectiveness of the proposed remedial measures; 4. Repeat measurements to confirm findings; 5. Increase monitoring frequency to daily; 6. Discuss with IEC and Contractor on remedial actions required; 7. If exceedance continues, arrange meeting with IEC and ER; 8. If exceedance stops, cease additional monitoring.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method; 3. Discuss with ET and Contractor on possible remedial measures; 4. Advise the ET on the effectiveness of the proposed remedial measures; 5. Monitor the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Ensure remedial measures properly implemented.	1. Submit proposals for remedial to ER within 3 working days of notification; 2. Implement the agreed proposals; 3. Amend proposal if appropriate.
Limit Level				
1. Exceedance for one sample	1. Identify source, investigate the causes of exceedance and propose remedial measures; 2. Inform ER, Contractor and EPD; 3. Repeat measurement to confirm finding; 4. Increase monitoring frequency to daily; 5. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method; 3. Discuss with ET and Contractor on possible remedial measures; 4. Advise the ER on the effectiveness of the proposed remedial measures; 5. Monitor theimplementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Ensure remedial measures properly implemented.	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; 4. Amend proposal if appropriate.
2. Exceedance for two or more consecutive samples	1. Notify IEC, ER, Contractor and EPD; 2. Identify source; 3. Repeat measurement to confirm findings; 4. Increase monitoring frequency to daily; 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; 6. Arrange meeting with IEC and ER to discuss the remedial actions to be taken; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; 8. If exceedance stops, cease additional monitoring.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method; 3. Discuss amongst ER, ET, and Contractor on the potential remedial actions; 4. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; 5. Monitor the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; 4. Ensure remedial measures properly implemented; 5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; 4. Resubmit proposals if problem still not under control; 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated.

Event and Action Plan for Construction Noise

Event	Action			
	ET	IEC	ER	Contractor
Action Level	1. Notify ER, IEC and Contractor; 2. Carry out investigation; 3. Report the results of investigation to the IEC, ER and Contractor; 4. Discuss with the IEC and Contractor on remedial measures required; 5. Increase monitoring frequency to check mitigation effectiveness.	1. Review the investigation results submitted by the ET; 2. Review the proposed remedial measures by the Contractor and advise the ER accordingly; 3. Advise the ER on the effectiveness of the proposed remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; 4. Supervise the implementation of remedial measures.	1. Submit noise mitigation proposals to IEC and ER; 2. Implement noise mitigation proposals.
Limit Level	1. Inform IEC, ER, Contractor and EPD; 2. Repeat measurements to confirm findings; 3. Increase monitoring frequency; 4. Identify source and investigate the cause of exceedance; 5. Carry out analysis of Contractor's working procedures; 6. Discuss with the IEC, Contractor and ER on remedial measures required; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; 8. If exceedance stops, cease additional monitoring.	1. Discuss amongst ER, ET, and Contractor on the potential remedial actions; 2. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; 4. Supervise the implementation of remedial measures; 5. If exceedance continues, consider stopping the Contractor to continue working on that portion of work which causes the exceedance until the exceedance is abated.	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC and ER within 3 working days of notification; 3. Implement the agreed proposals; 4. Submit further proposal if problem still not under control; 5. Stop the relevant portion of works as instructed by the ER until the exceedance is abated.

Event and Action Plan for Water Quality

EVENT	ACTION			
	ET	IEC	ER	CONTRACTOR
Action level being exceeded by one sampling day	1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC and Contractor; 6. Repeat measurement on next day of exceedance.	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; 3. Assess the effectiveness of the implemented mitigation measures	1. Discuss with IEC on the proposed mitigation measures; 2. Make agreement on the mitigation measures to be implemented; 3. Assess the effectiveness of the implemented mitigation measures	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IEC and propose mitigation measures to IEC and ER; 6. Implement the agreed mitigation measures.
Action Level being exceeded by more than two consecutive sampling days	1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC and Contractor; 6. Ensure mitigation measures are implemented; 7. Prepare to increase the monitoring frequency to daily; 8. Repeat measurement on next day of exceedance.	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; 3. Assess the effectiveness of the implemented mitigation measures	1. Discuss with IEC on the proposed mitigation measures; 2. Make agreement on the mitigation measures to be implemented; 3. Assess the effectiveness of the implemented mitigation measures	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IEC and propose mitigation measures to IEC and ER within 2 working days; 6. Implement the agreed mitigation measures.
Limit Level being exceeded by one sampling day	1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC, Contractor and EPD; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC, ER and Contractor; 6. Ensure mitigation measures are implemented; 7. Increase the monitoring frequency to daily until no exceedance of Limit Level.	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; 3. Assess the effectiveness of the implemented mitigation measures	1. Discuss with IEC, ET and Contractor on the proposed mitigation measures; 2. Request Contractor to critically review the working methods; 3. Make agreement on the mitigation measures to be implemented; 4. Assess the effectiveness of the implemented mitigation measures	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; 6. Implement the agreed mitigation measures.
Limit level being exceeded by more than one consecutive sampling days	1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC, Contractor and EPD; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC, ER and Contractor; 6. Ensure mitigation measures are implemented; 7. Increase the monitoring frequency to daily until no exceedance of Limit Level for two consecutive days.	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; 3. Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IEC, ET and Contractor on the proposed mitigation measures; 2. Request Contractor to critically review the working methods; 3. Make agreement on the mitigation measures to be implemented; 4. Assess the effectiveness of the implemented mitigation measures; 5. Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the construction activities until no exceedance of Limit Level.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; 6. Implement the agreed mitigation measures; 7. As directed by the ER, to slow down or to stop all or part of the construction activities.

Appendix H

Impact Monitoring Schedule

Impact Monitoring Schedule for Reporting Period – March 2018

Date		Dust Monitoring		Noise Monitoring	Water Quality
		1-hour TSP	24-hour TSP		
Thu	1-Mar-18		AM4b, AM5, AM6, AM7b & AM8		All Water Quality Monitoring Locations
Fri	2-Mar-18				
Sat	3-Mar-18	AM4b, AM5, AM6, AM7b & AM8			All Water Quality Monitoring Locations
Sun	4-Mar-18				
Mon	5-Mar-18	AM1b, AM2, AM3 & AM9b		NM1, NM2a, NM8, NM9 & NM10	All Water Quality Monitoring Locations
Tue	6-Mar-18		AM1b, AM2, AM3 & AM9b		
Wed	7-Mar-18		AM4b, AM5, AM6, AM7b & AM8		All Water Quality Monitoring Locations
Thu	8-Mar-18				
Fri	9-Mar-18	AM4b, AM5, AM6, AM7b & AM8		NM3, NM4, NM5, NM6 & NM7	All Water Quality Monitoring Locations
Sat	10-Mar-18	AM1b, AM2, AM3 & AM9b			
Sun	11-Mar-18				
Mon	12-Mar-18		AM1b, AM2, AM3 & AM9b		All Water Quality Monitoring Locations
Tue	13-Mar-18		AM4b, AM5, AM6, AM7b & AM8		
Wed	14-Mar-18				All Water Quality Monitoring Locations
Thu	15-Mar-18	AM4b, AM5, AM6, AM7b & AM8		NM3, NM4, NM5, NM6 & NM7	
Fri	16-Mar-18	AM1b, AM2, AM3 & AM9b		NM1, NM2a, NM8, NM9 & NM10	All Water Quality Monitoring Locations
Sat	17-Mar-18		AM1b, AM2, AM3 & AM9b		
Sun	18-Mar-18				
Mon	19-Mar-18		AM4b, AM5, AM6, AM7b & AM8		All Water Quality Monitoring Locations

Note:

1. Assume the density of soil fill is 2 ton/m^3.
2. Assume the density of rock and broken concrete is 2.5 ton/m^3.
3. Assume each truck of C&D wastes is 5m^3.
4. The inert C&D materials except slurry and bentonite are disposed at Tuen Mun 38.
5. The slurry and bentonite are disposed at Tseung Kwun O 137.
6. The non-inert C&D wastes are disposed at NENT.
7. Assume the density of metal is 7,850 kg/m^3.
8. Assume the density of plastic is 941 kg/m^3.
9. Assume the density of paper is 800 kg/m^3.

Notes:

(1) The performance targets are given in PS Clause 6(14).

(2) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.

(3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material.

(4) The Contractor shall also submit the latest forecast of the total amount of C&D materials expected to be generated from the Works, together with a breakdown of the nature where the total amount of C&D materials expected to be generated from the Works if equal to or exceed 50,000 m^3.

SUMMARY TABLE FOR WORK PROCESSES OR ACTIVITIES REQUIRING TIMBER FOR TEMPORARY WORKS

Contract No.: CV/2012/09

Contract Title: Liantang /Heung Yuen Wai Boundary Control Point Site Formation and Infrastructure Works - Contract 3

Item No.	Description of Works Process or Activity [see note (a) below]	Justifications for Using Timber in Temporary Construction Works	Est. Quantities of Timber Used (m^3)	Actual Quantities Used (m^3)	Remarks
1	Formwork for Construction of Retaining Wall NB67	Easy handling by manpower	81.85	81.85	
		Total Estimated Quantity of Timber Used	81.85		

Notes:

(a) The Contractor shall list out all the work items requiring timber for use in temporary construction works. Several minor work items may be grouped into one for ease of updating.

(b) The summary table shall be submitted to the Engineer's Representative monthly together with the Waste Flow Table for review and monitoring in accordance with the PS Clause 25.24(11)..

Description of mode and details of recycling if any for the month e.g. XX kg of used timber was sent to YY site for transformation into fertilizers					
5.0 kg of cans and 5.0 kg of plastic bottles were sent to Lau Choi Kee Co. Ltd. for recycling.	830.0 kg of scrap metal were sent to Lau Choi Kee Co. Ltd. for recycling.	220.86 tons of scrap metals were sent to Prosperity Metal Recycle Ltd., Hop Hing Metal Works and Win Link Trading Ltd. for recycling.	1,661.60 tons of broken concrete were sent to Tailor Recycled Aggregates Ltd. for recycling.		

Notes:
(1) The performance targets are given in the Particular Specification on Environmental Management Plan.
(2) The waste flow table shall also include construction waste that are specified in the Contract to be imported for use at the site.
(3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material.
(4) Broken concrete for recycling into aggregates.
(5) If necessary, use the conversion factor: 1 full load of dumping truck being equivalent to 6.5 m^3 by volume.

Appendix M

Implementation Schedule for Environmental Mitigation Measures

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
Air Quality Impact (Construction)							
3.6.1.1	2.1	**General Dust Control Measures** The following dust suppression measures should be implemented: ■ Frequent water spraying for active construction areas (4 times per day for active areas in Po Kak Tsai and 8 times per day for all other active areas), including areas with heavy construction and slope cutting activities ■ 80% of stockpile areas should be covered by impervious sheets ■ Speed of trucks within the site should be controlled to about 10 km/hr ■ All haul roads within the site should be paved to avoid dust emission due to vehicular movement	To minimize adverse dust emission generated from various construction activities of the works sites	Contractor	Construction Works Sites	During Construction	EIA Recommendation and Air Pollution Control (Construction Dust) Regulation
3.6.1.2	2.1	**Best Practice for Dust Control** The relevant best practices for dust control as stipulated in the Air Pollution Control (Construction Dust) Regulation should be adopted to further reduce the construction dust impacts of the Project. These best practices include: *Good site management* ■ The Contractor should maintain high standard of housekeeping to prevent emission of fugitive dust. ■ Loading, unloading, handling and storage of raw materials, wastes or by-products should be carried out in a manner so as to minimize the release of visible dust emission. ■ Any piles of materials accumulated on or around the work areas should be cleaned up regularly. ■ Cleaning, repair and maintenance of all plant facilities within the work areas should be carried out in a manner minimizing generation of fugitive dust emissions. ■ The material should be handled properly to prevent fugitive dust emission before cleaning. *Disturbed Parts of the Roads* ■ Each and every main temporary access should be paved with	To minimize adverse dust emission generated from various construction activities of the works sites	Contractor	Construction Works Sites	During Construction	EIA Recommendation and Air Pollution Control (Construction Dust) Regulation

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		concrete, bituminous hardcore materials or metal plates and kept clear of dusty materials; or ■ Unpaved parts of the road should be sprayed with water or a dust suppression chemical so as to keep the entire road surface wet. *Exposed Earth* ■ Exposed earth should be properly treated by compaction, hydroseeding, vegetation planting or seating with latex, vinyl, bitumen within six months after the last construction activity on the site or part of the site where the exposed earth lies. *Loading, Unloading or Transfer of Dusty Materials* ■ All dusty materials should be sprayed with water immediately prior to any loading or transfer operation so as to keep the dusty material wet. *Debris Handling* ■ Any debris should be covered entirely by impervious sheeting or stored in a debris collection area sheltered on the top and the three sides. ■ Before debris is dumped into a chute, water should be sprayed so that it remains wet when it is dumped. *Transport of Dusty Materials* ■ Vehicle used for transporting dusty materials/spoils should be covered with tarpaulin or similar material. The cover should extend over the edges of the sides and tailboards. *Wheel washing* ■ Vehicle wheel washing facilities should be provided at each construction site exit. Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels. *Use of vehicles* ■ Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels. ■ Where a vehicle leaving the construction site is carrying a load of dusty materials, the load should be covered entirely by clean impervious sheeting to ensure that the dusty materials do not leak from the vehicle.				

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		Site hoarding ■ Where a site boundary adjoins a road, street, service lane or other area accessible to the public, hoarding of not less than 2.4m high from ground level should be provided along the entire length of that portion of the site boundary except for a site entrance or exit. *Blasting* ■ The areas within 30m from the blasting area should be wetted with water prior to blasting.					
Air Quality Impact (Operation)							
3.5.2.2	2.2	The following odour containment and control measures will be provided for the proposed sewage treatment work at the BCP site: ■ The treatment work will be totally enclosed. Negative pressure ventilation will be provided within the enclosure to avoid any fugitive odorous emission from the treatment work. ■ Further odour containment will be achieved by covering or confining the sewage channels, sewage tanks, and equipment with potential odour emission. ■ Proper mixing will be provided at the equalization and sludge holding tanks to prevent sewage septicity. ■ Chemical or biological deodorisation facilities with a minimum odour removal efficiency of 90% will be provided to treat potential odorous emissions from the treatment plant including sewage channels / tanks, filter press and screening facilities so as to minimize any potential odour impact to the nearby ASRs.	To minimize potential odour impact from operation of the proposed sewage treatment work at BCP	DSD	BCP	Operation Phase	EIA recommendation
Noise Impact (Construction)							
4.4.1.4	3.1	**Adoption of Quieter PME** Use of the recommended quieter PME such as those given in the BS5228: Part 1:2009 and presented in **Table 4.14**, which can be found in Hong Kong.	To minimize the construction air-borne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and Noise Control Ordinance (NCO)

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
4.4.1.4	3.1	**Use of Movable Noise Barrier** The use of movable barrier for certain PME can further alleviate the construction noise impacts. In general, a 5 dB(A) reduction for movable PME and 10 dB(A) for stationary PME can be achieved depending on the actual design of the movable noise barrier. The Contractor shall be responsible for design of the movable noise barrier with due consideration given to the size of the PME and the requirement for intercepting the line of sight between the NSRs and PME. Barrier material with surface mass in excess of 7 kg/m^2 is recommended to achieve the predicted screening effect.	To minimize the construction air-borne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO
4.4.1.4	3.1	**Use of Noise Enclosure/ Acoustic Shed** The use of noise enclosure or acoustic shed is to cover stationary PME such as air compressor and concrete pump. With the adoption of the noise enclosure, the PME could be completely screened, and noise reduction of 15 dB(A) can be achieved according to the GW-TM.	To minimize the construction air-borne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO
4.4.1.4	3.1	**Use of Noise Insulating Fabric** Noise insulating fabric can be adopted for certain PME (e.g. drill rig, pilling auger etc). The insulating fabric should be lapped such that there are no openings or gaps on the joints. Technical data from manufacturers state that by using the Fabric, a noise reduction of over 10 dB(A) can be achieved on noise level.	To minimize the construction air-borne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
4.4.1.4	3.1	**Good Site Practice** The good site practices listed below should be followed during each phase of construction: • Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction programme; • Silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction programme; • Mobile plant, if any, should be sited as far from NSRs as possible; • Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; • Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs; and • Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction activities.	To minimize the construction air-borne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO
Noise Impact (Operation)							
		Road Traffic Noise					
Table 4.42 and Figure 4.20.1 to 4.20.4	3.2	Erection of noise barrier/ enclosure along the viaduct section.	To minimize the road traffic noise along the connecting road of BCP	Contractor	Loi Tung and Fanling Highway Interchange	Before Operation	EIAO and NCO
		Fixed Plant Noise					
Table 4.46	3.2	Specification of the maximum allowable sound power levels of the proposed fixed plants during daytime and night-time.	To minimize the fixed plant noise impact	Managing Authority of the buildings / Contractor	BCP, Administration Building and all ventilation buildings	Before Operation	EIA recommendation, EIAO and NCO

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
4.5.2.4	3.2	The following noise reduction measures shall be considered as far as practicable during operation: • Choose quieter plant such as those which have been effectively silenced; • Include noise levels specification when ordering new plant (including chillier and E/M equipment); • Locate fixed plant/louver away from any NSRs as far as practicable; • Locate fixed plant in walled plant rooms or in specially designed enclosures; • Locate noisy machines in a basement or a completely separate building; • Install direct noise mitigation measures including silencers, acoustic louvers and acoustic enclosure where necessary; and • Develop and implement a regularly scheduled plant maintenance programme so that equipment is properly operated and serviced in order to maintain a controlled level of noise.	To minimize the fixed plant noise impact	Managing Authority of the buildings / Contractor	BCP, Administration Building and all ventilation buildings	Before Operation	EIAO and NCO
Water Quality Impact (Construction)							
5.6.1.1	4.1	**Construction site runoff and drainage** The site practices outlined in ProPECC Note PN 1/94 should be followed as far as practicable in order to minimise surface runoff and the chance of erosion. The following measures are recommended to protect water quality and when properly implemented should be sufficient to adequately control site discharges so as to avoid water quality impacts: ▪ At the start of site establishment, perimeter cut-off drains to direct off-site water around the site should be constructed with internal drainage works and erosion and sedimentation control facilities implemented. Channels (both temporary and permanent drainage pipes and culverts), earth bunds or sand bag barriers should be provided on site to direct stormwater to silt removal facilities. The design of the temporary on-site drainage system should be undertaken by the Contractor prior to the commencement of construction. ▪ The dikes or embankments for flood protection should be implemented around the boundaries of earthwork areas.	To control site runoff and drainage; prevent high sediment loading from reaching the nearby watercourses	Contractor	Construction Works Sites	Construction Phase	Practice Note for Professional Persons on Construction Site Drainage (ProPECC Note PN 1/94)

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		Temporary ditches should be provided to facilitate the runoff discharge into stormwater drainage system through a sediment/silt trap. The sediment/silt traps should be incorporated in the permanent drainage channels to enhance deposition rates, if practical. ▪ Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM standards under the WPCO. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC Note PN 1/94. Sizes may vary depending upon the flow rate. The detailed design of the sand/silt traps should be undertaken by the Contractor prior to the commencement of construction. ▪ All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly during rainstorms. Deposited silt and grit should be regularly removed, at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times. ▪ Measures should be taken to minimize the ingress of site drainage into excavations. If excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from foundation excavations should be discharged into storm drains via silt removal facilities. ▪ If surface excavation works cannot be avoided during the wet season (April to September), temporarily exposed slope/soil surfaces should be covered by tarpaulin or other means, as far as practicable, and temporary access roads should be protected by crushed stone or gravel, as excavation proceeds. Interception channels should be provided (e.g. along the crest/edge of the excavation) to prevent storm runoff from washing across exposed soil surfaces. Arrangements should always be in place to ensure that adequate surface protection measures can be safely carried out well before the arrival of a rainstorm. Other measures that need to be implemented before, during and after rainstorms are summarized in ProPECC Note PN 1/94. ▪ The overall slope of the site should be kept to a minimum to reduce					

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		the erosive potential of surface water flows. ▪ All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facility should be provided at construction site exit where practicable. Wash-water should have sand and silt settled out and removed regularly to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains. ▪ Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system. ▪ Manholes (including newly constructed ones) should be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and stormwater runoff being directed into foul sewers. ▪ Precautions should be taken at any time of the year when rainstorms are likely. Actions should be taken when a rainstorm is imminent or forecasted and actions to be taken during or after rainstorms are summarized in Appendix A2 of ProPECC Note PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events, especially for areas located near steep slopes. ▪ Bentonite slurries used in piling or slurry walling should be reconditioned and reused wherever practicable. Temporary enclosed storage locations should be provided on-site for any unused bentonite that needs to be transported away after all the related construction activities are completed. The requirements in ProPECC Note PN 1/94 should be adhered to in the handling and disposal of bentonite slurries.					
5.6.1.1	4.1	**Good site practices for works within water gathering grounds** The following conditions should be complied, if there is any works to be carried out within the water gathering grounds:	To minimize water quality impacts to the water gathering grounds	Contractor	Construction Works Sites within the water gathering	Construction Phase	ProPECC Note PN 1/94

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		▪ Adequate measures should be implemented to ensure no pollution or siltation occurs to the catchwaters and catchments. ▪ No earth, building materials, oil or fuel, soil, toxic materials or any materials that may possibly cause contamination to water gathering grounds are allowed to be stockpiled on site. ▪ All surplus spoil should be removed from water gathering grounds as soon as possible. ▪ Temporary drains with silt traps should be constructed at the site boundary before the commencement of any earthworks. ▪ Regular cleaning of silt traps should be carried out to ensure proper operation at all time. ▪ All excavated or filled surfaces which have the risk of erosion should always be protected form erosion. ▪ Facilities for washing the wheels of vehicles before leaving the site should be provided. ▪ Any construction plant which causes pollution to catchwaters or catchments due to the leakage of oil or fuel should be removed off site immediately. ▪ No maintenance activities which may generate chemical wastes should be undertaken in the water gathering grounds. Vehicle maintenance should be confined to designated paved areas only and any spillages should be cleared up immediately using absorbents and waste oils should be collected in designated tanks prior to disposal off site. All storm water run-off from these areas should be discharged via oil/petrol separators and sand/silt removal traps. ▪ Any soil contaminated with fuel leaked from plant should be removed off site and the voids arising from removal of contaminated soil should be replaced by suitable material approved by the Director of Water Supplies. ▪ Provision of temporary toilet facilities and use of chemicals or insecticide of any kind are subject to the approval of the Director of Water Supplies. ▪ Drainage plans should be submitted for approval by the Director of			grounds		

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		Water Supplies. ▪ An unimpeded access through the waterworks access road should always be maintained. ▪ Earthworks near catchwaters or streamcourses should only be carried out in dry season between October and March, ▪ Advance notice must be given before the commencement of works on site quoting WSD's approval letter reference.					
5.6.1.2	4.1	**Good site practices of general construction activities** Construction solid waste, debris and refuse generated on-site should be collected, handled and disposed of properly to avoid entering any nearby stormwater drain. Stockpiles of cement and other construction materials should be kept covered when not being used. Oils and fuels should only be stored in designated areas which have pollution prevention facilities. To prevent spillage of fuels and solvents to any nearby stormwater drain, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. The bund should be drained of rainwater after a rain event.	To minimize water quality impacts	Contractor	All construction works sites	Construction phase	EIA Recommendation
5.6.1.3	4.1	**Sewage effluent from construction workforce** Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site where necessary to handle sewage from the workforce. A licensed contractor should be employed to provide appropriate and adequate portable toilets and be responsible for appropriate disposal and maintenance.	To minimize water quality impacts	Contractor	All construction works sites with on-site sanitary facilities	Construction phase	EIA Recommendation and Water Pollution Control Ordinance (WPCO)
5.6.1.4	4.1	**Hydrogeological Impact** Grout injection works would be conducted before blasting, for sealing a limited area around the tunnel with a grout of a suitable strength for controlling the potential groundwater inflows. The pre-injection grouting method would be supplemented by post-injection grouting where necessary to further enhance the groundwater inflow control. On-site treatment for the groundwater ingress pumped out would be required to remove any contamination by grouting materials before discharge off-site.	To minimize water quality impacts	Contractor	Construction works sites of the drill and blast tunnel	Construction phase	EIA Recommendation and WPCO
Water Quality Impact (Operation)							
		No mitigation measure is required.					

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
Sewage and Sewerage Treatment Impact (Construction)							
6.7	5	The sewage generated by the on-site workforce should be collected in chemical toilets and disposed of off-site by a licensed waste collector.	To minimize water quality impacts	Contractor	All construction works sites with on-site sanitary facilities	Construction phase	EIA recommendation and WPCO
Sewage and Sewerage Treatment Impact (Operation)							
6.6.3	5	Sewage generated by the BCP and Chuk Yuen Village Resite will be collected and treated by the proposed on-site sewage treatment facility using Membrane Bioreactor treatment with a portion of the treated wastewater reused for irrigation and flushing within the BCP.	To minimize water quality impacts	DSD	BCP	Operation phase	EIA recommendation and WPCO
6.5.3	5	Sewage generated from the Administration Building will be discharged to the existing local sewerage system.	To minimize water quality impacts	DSD	Administration Building	Operation phase	EIA recommendation and WPCO
Waste Management Implication (Construction)							
7.6.1.1	6	**Good Site Practices** Adverse impacts related to waste management such as potential hazard, air, odour, noise, wastewater discharge and public transport as mentioned in section 3.4.7.2 (ii)(c) of the Study Brief are not expected to arise, provided that good site practices are strictly followed. Recommendations for good site practices during the construction activities include: ▪ Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site ▪ Training of site personnel in proper waste management and chemical handling procedures ▪ Provision of sufficient waste disposal points and regular collection of waste ▪ Dust suppression measures as required under the Air Pollution Control (Construction Dust) Regulation should be followed as far as practicable. Appropriate measures to minimise windblown litter and dust/odour during transportation of waste by covering trucks or in enclosed containers ▪ General refuse shall be removed away immediately for disposal. As	To minimize adverse environmental impact	Contractor	Construction works sites (general)	Construction Phase	EIA recommendation; Waste Disposal Ordinance; Waste Disposal (Chemical Wastes) (General) Regulation; and ETWB TC(W) No. 19/2005, Environmental Management on Construction Site

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		such odour is not anticipated to be an issue to distant sensitive receivers ▪ Provision of wheel washing facilities before the trucks leaving the works area so as to minimise dust introduction from public road ▪ Covers and water spraying system should be provided for the stockpiled C&D material to prevent dust impact or being washed away ▪ Designate different locations for storage of C&D material to enhance reuse ▪ Well planned programme for transportation of C&D material to lessen the off-site traffic impact. Well planned delivery programme for offsite disposal and imported filling material such that adverse noise impact from transporting of C&D material is not anticipated ▪ Site practices outlined in ProPECC PN 1/94 "Construction Site Drainage" should be adopted as far as practicable, such as cleaning and maintenance of drainage systems regularly ▪ Provision of cover for the stockpile material, sand bag or earth bund as barrier to prevent material from washing away and entering the drains					
7.6.1.2	6	**Waste Reduction Measures** Good management and control can prevent the generation of a significant amount of waste. Waste reduction is best achieved at the planning and design stage, as well as by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include: ▪ Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal ▪ Encourage collection of aluminium cans by providing separate labelled bins to enable this waste to be segregated from other general refuse generated by the work force ▪ Proper storage and site practices to minimise the potential for damage or contamination of construction materials ▪ Plan and stock construction materials carefully to minimise amount	To reduce the quantity of wastes	Contractor	Construction works sites (General)	Construction Phase	EIA recommendation and Waste Disposal Ordinance

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		of waste generated and avoid unnecessary generation of waste ▪ In addition to the above measures, specific mitigation measures are recommended below for the identified waste arising to minimise environmental impacts during handling, transportation and disposal of these wastes.					
7.6.1.3	6	**C&D Materials** In order to minimise impacts resulting from collection and transportation of C&D material for off-site disposal, the excavated materials should be reused on-site as backfilling material as far as practicable. The surplus rock and other inert C&D material would be disposed of at the Government's Public Fill Reception Facilities (PFRFs) at Tuen Mun Area 38 for beneficial use by other projects in the HKSAR as the last resort. C&D waste generated from general site clearance and tree felling works would require disposal to the designated landfill site. Other mitigation requirements are listed below: ▪ A Waste Management Plan should be prepared and implemented in accordance with ETWB TC(W) No. 19/2005 Environmental Management on Construction Site; and ▪ In order to monitor the disposal of C&D material and solid wastes at public filling facilities and landfills, and to control fly-tipping, a trip-ticket system (e.g. ETWB TCW No. 31/2004) should be included.	To minimize impacts resulting from C&D material	Contractor	Construction Works Sites (General)	Construction Phase	EIA recommendation; Waste Disposal Ordinance; and ETWB TCW No. 31/2004
7.6.1.4	6	**General refuse** General refuse should be stored in enclosed bins or compaction units separated from other C&D material. A reputable waste collector is to be employed by the Contractor to remove general refuse from the site separately. Preferably an enclosed and covered area should be provided to reduce the occurrence of 'wind blown' litter.	To minimize impacts resulting from collection and transportation of general refuse for off-site disposal	Contractor	Construction works sites (General)	Construction phase	Waste Disposal Ordinance and Public Health and Municipal Services Ordinance - Public Cleansing and Prevention of Nuisances Regulation
7.6.1.5	6	**Chemical waste** If chemical wastes are produced at the construction site, the Contractor will be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the *Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes*. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical	To minimize impacts resulting from collection and transportation of chemical waste for off-site disposal	Contractor	Construction works sites (General)	Construction phase	Waste Disposal (Chemical Waste) (General) Regulation and Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes

Investigation Report on Action or Limit Level Non-compliance

Project		CE 45/2008			
Date		1 March 2018	3 March 2018	1 March 2018	3 March 2018
Location		WM3x			
Time		10:55	9:44	10:55	9:44
Parameter		Turbidity (NTU)		Suspended Solids (mg/L)	
Action Level		13.4 AND 120% of upstream control station of the same day		12.6 AND 120% of upstream control station of the same day	
Limit Level		14.0 AND 130% of upstream control station of the same day		12.9 AND 130% of upstream control station of the same day	
Measured Level	**WM3-C**	1.6	3.5	3.5	7.5
	WM3x	**24.45**	**119.0**	**39.5**	**185.0**
Exceedance		**Limit Level**	**Limit Level**	**Limit Level**	**Limit Level**
Investigation Results, Recommendations & Mitigation Measures		1. According to the site information provided from the Contractor of C2 (DHK), the construction activities carried out on 1 and 3 March 2018 at upstream of WM3x were construction of fence wall and permanent drainage, fitting out and underground utilities for Admin Building and tunnel works at North Portal Site. The relevant works area under C2 and the water monitoring locations are illustrated in ***Figure 1***. 2. According to the site photo taken on 1 March 2018, the water quality observed at WM3x was slightly turbid and at WM3-C was clear. On 3 March 2018, turbid water was observed at WM3 while the water quality at WM3-C was clear. It was noted that the channel of WM3x also received the storm water from Sha Tau Kok Road and the adjacent villages. ***(Photos 1 to 4 & Figure 1***) 3. Joint site inspections with AECOM, IEC, DHK and ET were carried out on 23 February. At Admin Building Site, it was observed that site area was mostly hard paved and wastewater generated from the construction works was limited. The adjacent channel and catch pit receiving the wastewater from Admin Building and upstream area were clear and no adverse water quality impact was identified during site inspection. ***(Photos 5 to 7***) Inspection was carried out at North Portal Site on 23 February and 1 March 2018, it was observed wastewater treatment facilities were in place properly, and the water quality outside the discharge point at downstream Loi Tung Stream was visually clear. ***(Photos 8 & 9***) 4. Based on the above investigation, it is considered that the exceedances were related to other source of turbid water and not caused by the works under Contract 2. 5. According to Event and Action, the monitoring frequency at WM3x has been increased to daily due to the limit level exceedance recorded until no exceedances were triggered in consecutive days. There were no exceedances triggered in the monitoring result on 2 and 5 March 2018. Nevertheless, the Contractor should continually fully implement the water mitigation measures as recommended in the implementation schedule for environmental mitigation measures in the EM&A Manual.

Investigation Results, Recommendations & Mitigation Measures					

1. According to the site information provided by the Contractor of C6 (CCKJV), the construction activities at South Portal Site (upstream of WM3x) carried out on 1 and 3 March 2018 was mainly tunnel excavation and erection of bridge segment. The monitoring locations and works areas are illustrated in ***Figure 1***.

2. According to the site photo taken on 1 March 2018, the water quality observed at WM3x was slightly turbid and at WM3-C was clear. On 3 March 2018, turbid water was observed at WM3 while the water quality at WM3-C was clear. It was noted that the channel of WM3x also received the storm water from Sha Tau Kok Road and the adjacent villages. ***(Photos 1 to 4 and Figure 1***)

3. Inspection was carried out at the channel adjacent to site area of Contract 6, it was observed that the water quality in the channel of South Portal Site was clear and no deteriorated water quality was noted from South Portal Site. ***(Photos 5 & 6)***

4. Weekly joint site inspection by RE, Contractor, IEC and ET was conducted on 2 March 2018 to audit the site environmental performance. The findings of the inspection are summarized below:-

   (a) Wastewater treatment facilities at South Portal were function properly and the effluent was clear. ***(Photo 7 and 8)***

   (b) Site hoarding with sealed footing was installed and no runoff from the site area was anticipated.

   (c) The construction site was general in order and no adverse water quality impact was observed.

5. Based on the above investigation, it is considered that the exceedances were unlikely caused by the works under Contract 6.

6. According to Event and Action, the monitoring frequency at WM3x has been increased to daily due to the limit level exceedance recorded until no exceedances were triggered in consecutive days. There were no

	exceedances triggered in the monitoring result on 2 and 5 March 2018. Nevertheless, the Contractor should continually fully implement the water mitigation measures as recommended in the implementation schedule for environmental mitigation measures in the EM&A Manual.
Action to be taken	The Contractor is reminded to fully implement the water mitigation measures as recommended in the implementation schedule for environmental mitigation measures in the EM&A Manual.

Investigation Report on Environmental Complaint / Enquires

Complaint Log No.	CE 45/2008 – 71
Received Date by ET	29 January 2018 and 12 February 2018
Related Contracts	Contract 2
Complaint Details	(a) A complaint was received by RE on 24 January 2018 from EPD regarding observations of some of the spoil was dropped into the sea during the offloading operation at Cheung Sha Wan Pier. (b) On 12 February 2018, supplementary document was provided by RE from EPD regarding the operation of the Cheung Sha Wan Pier and suspicion of delivery of excavated materials to the Mainland China. The queries within the scope of investigation are shown below:- (i) 此新建的卸泥碼頭是否包含在CEDD工程項目環評報告之建築廢料管理計劃內經公眾諮詢及環保署長批准？ 那個部門、顧問公司或承建商管理？ (ii) 上述工程是否合法在其工地範圍以外或公眾堆填區以外地方進行裝卸、轉運建築廢料，有何措施監管？何人監管？ (iii) 運卸過程中塵土飛揚，建築廢料掉入海中是否違法？貴署會否執法？
Complaint Location	Cheung Sha Wan Pier (CSW Pier)
Date of Complaint	24 January 2018
Environmental Aspect	Waste Management
Complainant	Undisclosed
Complaint Route	From EPD
Investigation Result	1. A complaint was received by RE on 24 January 2018 from EPD regarding observations of some of the spoil was dropped into the sea during the offloading operation at CSW Pier. On 12 February 2018, supplementary document was provided by RE from EPD regarding the operation of the CSW Pier and suspicion of delivery of excavated materials to the Mainland China. The complaint location is located within Yuen Fat Wharf in Cheung Sha Wan where provides logistics services including cargo and goods transportation, distribution center management, etc. A section of the jetty has been rented and operated by Contractor of Contract 2 (hereinafter "DHK")'s Subcontractor as transfer station for unloading excavated materials from various sources including Contract 2. The location of the CSW Pier is shown in ***Figure 1***. 2. Upon receipt of the complaint, joint site inspection by RE, IEC, DHK and ET was carried out on 9th February 2018 at Cheung Sha Wan Pier. The observations during the site investigation are summarized in below. **Operation of the Jetty** (a) To efficiently manage the excavated materials generated from the Project, an updated Waste Management Plan (Rev. H) was made by DHK in November 2017 to include an alternative way for delivering the excavated materials to public fill banks not only by trucks but also by barges. The Waste

	Management Plan (Rev. H) was submitted to EPD on 1st November 2017 after certification by ETL and verification by IEC. EPD has issued comments on the plan to DHK on 5th January 2018 and revision was made by DHK on 24th February 2018. IEC provided comments to DHK on the revised WMP on 6th March 2018 and the WMP is currently being further revised by the DHK. (b) A section of jetty in Yuen Fat Wharf has been rented and operated by Tapbo Civil Engineering Company Limit as a transfer station for unloading and transferring excavated materials from various sources including Contract 2. The unloaded materials of Contract 2 will be subsequently delivered to the designated disposal ground, TM38 or TKO137, which mainly used on Sundays and Public Holidays. The jetty is also used by other projects in weekdays, Sundays and Public Holidays. (c) During the site investigation on 9th February 2018, it was observed that the tipping hall of the jetting (area of unloading from trucks to barges) was enclosed with top and two sides to minimise fugitive dust emission. (***Photo 2***) Water sprinklers were also provided as dust suspension measures. (***Photo 3***) (d) To avoid the spoil from dropping into the sea through the gap between the barge and jetting, each barge was closely oriented to the berth and dropping height was minimized. (***Photo 4***). Moreover, erection of tarpaulin on the opposite site of the barge was provided to avoid spoil spurting out (***Photo 5***). (e) In regard to the excavated materials delivery by vessel to the Fill Banks, specific vessel chits have been applied by DHK under trip-ticket system (TTS) (***Photo 6***). As advised by DHK, each barge currently deployed is registered with CEDD for delivery of spoils to TM38/TKO137. Transfer of spoil from one barge to another barge in the middle of the sea is not required. In additional, unloading operation onto registered barges are closely supervised by DHK and its Subcontractor's supervisor to avoid such maloperation. **<u>Delivery of Excavated Materials to Mainland China</u>** 3. On 12 February 2018, supplementary document was provided by RE from EPD regarding suspicion of delivery of excavated materials to the Mainland China. Investigation was carried out based on the documented record by DHK and findings are summarized in below. (a) On 11th November 2017, DHK submitted a proposal to RE to deliver the TBM excavated materials, as 'commodity' which outside the ambit of Waste Disposal Ordinance, to Mainland China (Zhongshan, 中山翠亨新區西二圍) and the materials will be used as backfilling in public project administered by Mainland China Local Government Authority (中山翠新區公共建設局). (b) As part of the proposal, a trial run was carried out on 13th January 2018 under supervision by RE's inspectorate in order to ensure that all operational procedures were satisfactorily demonstrated and relevant statutory requirements were

	fulfilled. In the trial run, the materials were transferred from a local derrick barge to a Mainland Chinese self-propelled closed-bottom vessel berthed side by side at the jetty and not in the middle of the sea. The spoils condition were semi-wet, no mitigation measure for dust suppression was considered necessary. The two barges were berthed closely to ensure no material dropping into the sea. (***Photo 7 and Figure 1***) The work was carefully and closely supervised to ensure no material dropping into the sea and no nuisance caused. 4. In our investigation, the operation of the jetty is managed by Tapbo Civil Engineering Company Limit as a transfer station for unloading excavated materials from various sources and it was not a newly constructed barging point for the Project use. The unloaded materials of Contract 2 will be subsequently delivered to the designated disposal ground, TM38 or TKO137. According to the EIA and EM&A programme, the route of waste disposal was not taken into account, therefore, no breaches of EP's conditions and improper disposal were considered involved. 5. In our site investigation, the sub-Contractor of DHK has implemented dust mitigation measures and spoils handling procedure for the unloading operation at the jetty. There was no evidence showing the spoil being transferred from barge to barge in the middle of the sea. Nevertheless, DHK was reminded to strictly follow the WMP, trip-ticket system and well maintain the performance of their sub-Contractor in the regard of the dust mitigation measures during spoil unloading procedure.

Investigation Report on Environmental Complaint / Enquires

Log No.	CE 45/2008 – 73
Received Date by ET	6 March 2018
Contract under Investigation	Contract 6
Complaint Details	於打鼓嶺蓮塘口岸工程一帶，由燈柱編號 GD2263 至 GD2365 道路, 每天都有大量重型泥頭車及工程車輛出入地盤，進出車輛經常沒有清洗乾淨就出入道口，導致該地方經常佈滿地泥濘或灑水車灑水後到處泥漿，對居民影響甚遠，空氣質數極差，此問題已對居民影響甚久，煩請貴處盡快跟進
Location	Lin Ma Hang (LMH) Road between light post GD2263 and GD2365
Date of Complaint	4 March 2018
Environmental Aspect	Muddy water and Dust
Complainant	undisclosed
Complaint Route	Via 1823
Investigation Result	1. A public complaint was received via 1823 on 4 March 2018 regarding the cleanliness of Lin Ma Hang Road and the complaint location is shown in ***Figure 1***. Based on the complaint details, the concerns of the complainant related to the EM&A issues are summarized below:- (a) Large amount of dump trucks running on Lin Ma Hang Road causing dirt and debris accumulated on the road. Road washing by water tanker causing muddy water and slurry and the cleanliness of public road in between lamp posts GD2263 and GD2365 and some construction site exits was unsatisfactory. (b) The air quality of Lin Ma Hang Road was deteriorated by the dirt and debris which affecting the nearby villagers. 2. Joint site inspection by RE, IEC, Contractor of C6 (CCKJV) and ET was carried out on 8 March 2017 along the concerned section of LMH Road and construction site exits for complaint investigation. The observations during site inspection are summarized in below. (a) Starting from Ta Kwu Ling Police Station towards Lin Ma Hang, there were 8 unknown site exits found along LMH Road which all not belong to any Contracts of LT/HYW Project. The conditions of these site exits were generally fair and two of them were dusty. It was observed that mud and debris were cumulated on the kerbs and middle of LMH road. The maintenance party/ ownership of these site exits are unknown. ***(Photos 1 to 8 and Figure 1)*** (b) There were 3 vehicular site exits under LT/C6, namely "Bridge D", "Chuk Yuen Road" and "Bridge Y", along part of the concerned LMH Road. For these three site exits, wheel washing facilities were provided and properly maintained by CCKJV to avoid carrying of dust and soil to public road by site vehicles. The wastewater generated from wheel washing was directed to catchpit/ AquaSed for de-silting. The condition of these site exit and adjoined LMH Road was kept clear of mud and debris. ***(Photos 9 to 12 and Figure 1)***

Investigation Report on Environmental Complaint / Enquires

	(c) There were 3 vehicular site exits to access BCP works area, namely Gate 1, Gate 2 and Gate 3. All three gates area were shared by Contract SS C505 Contractor (Leighton) and LT/C6 Contractor. Gate 1 and Gate 2 are not in use most of the time whereas Gate 3 is the main access currently maintained by SS C505 Contractor. Wheel washing facilities were provided for all Gates exit. It was observed that offloading of sub base was conducted at Gate 1 and some of sub base was dropped on the footpath at the site exit. CCKJV was immediately clear the muddy trails and maintain the cleanliness of the site exit properly. ***(Photos 13 & 14)*** Beside, the condition of Gates 2 and 3 were satisfactory which kept clear of mud and debris. ***(Photos 15 & 16 and Figure 2)*** (d) CCKJV has deployed water tanker continuously running along LMH Road in every normal working day as dust suppression measures. Moreover, road sweeper was also deployed on LMH Road in order to remove debris and gravels on road surface and minimize generation of muddy water during rain. No over-water spraying and slurry was observed after road washing. ***(Photos 17 to 18)*** The route of water tanker and road sweeper are fully covered complaint area which shown in ***Figure 1***. 3. In addition, monitoring programme was executed under the project to closely monitor the air quality at the air sensitive receivers and immediate action would be undertaken in case of exceedance. Having reviewed the air quality monitoring results in February 2018, no exceedances were triggered at the air quality monitoring locations AM1, AM2 and AM3 which located along Lin Ma Hang Road. It is considered that the dust impact arising from the project was within acceptable level. 4. In our investigation, the conditions of all site exits were well maintained without mud and debris. The deficiency observed at Gate 1 was rectified immediately without affecting the public. Water spraying by water tanker on LMH is the major dust mitigation measures to suppress the fugitive dust when vehicle travelling on the road. During our regular inspection, no excessive water spraying and slurry was found on LMH road. Since there were many other heavy vehicles apart from the project using LMH Road and certain number of unknown exit sites without proper management along LMH Road, it is considered that the complaint was not related to the works under the Project. 5. Since the site arrangement is subject change all the time, the ET will keep closely inspect the site condition and cleanliness of adjoined roads in subsequent weekly site inspection.

Photo Record

Photo 1 (Unknown Exit 1)
The condition of unknown site exit 1 was fair but some mud and debris were found on the kerbs of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 2 (Unknown Exit 2)
The condition of unknown site exit 2 was dusty in which mud and debris were found at site exit and kerbs of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 3 (Unknown Exit 3)
The condition of unknown site exit 3 was fair but some mud and debris were found on the kerbs of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 4 (Unknown Exit 4)
The condition of unknown site exit 4 was fair but some mud and debris were found on the kerbs and middle of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 5 (Unknown Exit 5)
The condition of unknown site exit 5 was fair but some mud and debris were found on the kerbs and middle of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 6 (Unknown Exit 6)
The condition of unknown site exit 6 was fair but some mud and debris were found on the kerbs and middle of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 7 (Unknown Exit 7)
The condition of unknown site exit 7 was dusty in which mud and debris were found at site exit and kerbs of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 8 (Unknown Exit 8)
The condition of unknown site exit 8 was fair but some mud and debris were found on the kerbs and middle of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 9 (Bridge D Site Exit under LT/C6)
Wheel washing facilities were provided for Bridge D site exit and properly maintained by CCKJV. A bund was provided to prevent muddy water from flowing out of the site.

Photo 10 (Bridge D Site Exit under LT/C6)
The condition of Bridge D Site Exit under LT/C6 and adjoined LMH road was satisfactory without mud and debris.

Photo 11 (Chuk Yuen Rd Site exit under LT/C6)
Wheel washing facilities were provided for Chuk Yuen Rd site exit and properly maintained by CCKJV. The condition of Chuk Yuen Rd Site Exit and adjoined LMH road was satisfactory without mud and debris.

Photo 12 (Bridge Y Site Exit under LT/C6)
Wheel washing facilities were provided for Bridge Y site exit and properly maintained by CCKJV. The condition of Bridge Y site exit and adjoined LMH road was satisfactory without mud and debris.

Photo 13 (Gate 1)
Wheel washing facilities were provided for Gate 1 site exit which maintained by CCKJV. It was observed that offloading of sub base was conducted at Gate 1 and some of sub base was dropped on the footpath at the site exit.

Photo 13 (Gate 1)
CCKJV was immediately clear the muddy trails and maintain the cleanliness of the site exit properly.

Photo 15 (Gate 2)
Wheel washing facilities were provided for Gate 2 site exit and properly maintained by CCKJV. The condition of Gate 2 and adjoined LMH road was satisfactory without mud and debris.

Photo 16 (Gate 3)
Wheel washing facilities were provided for Gate 2 site exit and properly maintained by Leighton. The condition of Gate 3 and adjoined LMH road was satisfactory without mud and debris.

Photo 17
During the regular site inspection, it was observed that the road surface of LMH Road was wetted by water bowsers to suppress fugitive dust. No over-water spraying and slurry was observed after road washing.

Photo 18
Road sweeper was also deployed by CCKJV to enhance the road cleaning work in order to remove debris and gravels on road surface.

Location	Lin Ma Hang Road (LMH Road)
Date of Complaint	4 March 2018
Environmental Aspect	Muddy water and Dust
Complainant	undisclosed
Complaint Route	Via 1823
Investigation Result	1. A public complaint was received via 1823 on 4 March 2018 regarding the cleanliness of Lin Ma Hang Road and the complaint location is shown in ***Figure 1***. Based on the complaint details, the concerns of the complainant related to the EM&A issues are summarized below:- (a) Large amount of dump trucks running on Lin Ma Hang Road causing dirt and debris accumulated on the road. Water tanker caused muddy water and slurry while washing on Lin Ma Hang Road. The cleanliness of public road in between lamp posts GD2263 and GD2365 and some construction site exits was unsatisfactory. (b) The air quality of Lin Ma Hang Road was deteriorated by the dirt and debris which affecting the nearby villagers. 2. There were 3 works contracts along LMH Road namely, LT/C6 and LT/C7 under CEDD and Contract SS C505 under ASD, and the location plan is shown in ***Figures 1 & 2***. This Investigation Report is prepared for LT/C7 to address the complainant concerns as described in "Complaint Details'. According to the photo provided by the complainant, muddy trails were observed at the site exit of Contract 7. (***Photo 1***) Upon receipt of the complaint, joint site inspection by RE, IEC and ET was carried out on 8th March 2018 and also on 9th March 2018 with Contractor of C7 (KRSJV) for complaint investigation. The observations during site inspection on 8th & 9th March 2018 are summarized in below. (a) There was only one vehicular site exit under Contract 7 to access BCP works area. Wheel washing facilities including water jet were provided at exit site and wheel washing was carried out on a concrete ground before leaving the site. (***Photo 2***) (b) During investigation conducted by RE, IEC and ET on 8th March 2018, it was observed that the site exit of Contract 7 and the adjoined LMH road near lamp post GD2365 was kept clear of mud and debris. (***Photos 3 & 4***)

	(c) Subsequent joint site inspection was conducted among RE, IEC, KRSJV and ET on 9th March 2018. It was observed that wheel washing facilities and the related wastewater treatment system were properly maintained. No muddy trails and debris was observed at the site exit and adjoined LMH Road and the cleanliness at the site exit and adjoined LMH road was satisfactory. ***(Photo 5 & 6)***
	3. Furthermore, monitoring programme was executed under the project to closely monitor the air quality at the ASR and immediate action would be undertaken in case of exceedance. Having reviewed the air quality monitoring results in February 2018, no exceedances were triggered at the air quality monitoring location AM1b which located near BCP. It is considered that the dust impact arising from the project was within acceptable level.
	4. In our investigation, no cumulated muddy water and mud trails were observed at the site exit under Contract 7 and adjoined LMH Road during our inspections. It is considered that deficiency of complaint was a single incident and KRSJV was strongly reminded to maintain the daily operation of the wheel washing facilities and a clear warning sign should be erected at the site exit to remind the vehicle driver to carry out wheel washing before leaving the site.
	5. Nevertheless, the Contractor should continue fully implement and maintain the wheel washing procedure and dust mitigation measures as recommended in the implementation schedule for environmental mitigation measures in the EM&A Manual.

It is considered that the dust impact arising from the project was within acceptable level. 4. In our investigation, no cumulated muddy water and mud trails were observed at the site exit under Contract SS C505 and adjoined LMH Road during our inspections. Water spraying by water tanker on LMH is the major dust mitigation measures to suppress the fugitive dust when vehicle travelling on the road. Since there were many other heavy vehicles apart from the project using LMH Road and certain number of unknown exit sites without proper management along LMH Road, it is considered that the complaint was not related to the works under the Project. 5. As confirmed by Contract SS C505's construction teams, Gate 1 & 2 are currently totally blocked as there are road and UU works by LT/C6 near those two areas and therefore no more vehicles from Contract SSC505 would pass through Gate 1 or 2. As the site arrangement is subject change all the time, the ET will keep closely inspect the site condition and cleanliness of adjoined roads in subsequent weekly site inspection.

Architectural Services Department (ArchSD) Contract No: SS C505
Construction of Liantang/Heung Yuen Wai Boundary Control Point (BCP) – BCP Buildings and Associated Facilities

Investigation Report on Environmental Complaint / Enquires

Photo Record

Photo 1 (Unknown Exit 1)
The condition of unknown site exit 1 was fair but some mud and debris were found on the kerbs of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 2 (Unknown Exit 2)
The condition of unknown site exit 2 was dusty in which mud and debris were found at site exit and kerbs of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 3 (Unknown Exit 3)
The condition of unknown site exit 3 was fair but some mud and debris were found on the kerbs of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 4 (Unknown Exit 4)
The condition of unknown site exit 4 was fair but some mud and debris were found on the kerbs and middle of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 5 (Unknown Exit 5)
The condition of unknown site exit 5 was fair but some mud and debris were found on the kerbs and middle of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 6 (Unknown Exit 6)
The condition of unknown site exit 6 was fair but some mud and debris were found on the kerbs and middle of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 7 (Unknown Exit 7)
The condition of unknown site exit 7 was dusty in which mud and debris were found at site exit and kerbs of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 8 (Unknown Exit 8)
The condition of unknown site exit 8 was fair but some mud and debris were found on the kerbs and middle of LMH road. The maintenance party/ ownership of the site exit is unknown.

Photo 9 (Gate 1)
Wheel washing facilities were provided for Gate 1 site exit which maintained by CCKJV. It was observed that offloading of sub base was conducted at Gate 1 and some of sub base was dropped on the footpath at the site exit.

Photo 10 (Gate 1)
CCKJV was immediately clear the muddy trails and maintain the cleanliness of the site exit properly.

Photo 11 (Gate 2)
Wheel washing facilities were provided for Gate 2 site exit and properly maintained by CCKJV. The condition of Gate 2 and adjoined LMH road was satisfactory without mud and debris.

Photo 12 (Gate 3)
Wheel washing facilities were provided for Gate 2 site exit and properly maintained by Leighton. The condition of Gate 3 and adjoined LMH road was satisfactory without mud and debris.

 **Photo 13** During the regular site inspection, it was observed that the road surface of LMH Road was wetted by water bowsers to suppress fugitive dust. No over-water spraying and slurry was observed after road washing.	 **Photo 14** Road sweeper was also deployed to enhance the road cleaning work in order to remove debris and gravels on road surface.

Investigation Report on Environmental Complaint / Enquires

Log No.	CE 45/2008 – 74
Received Date by ET	6 March 2018
Related Contract under Investigation	Contract 2 and Contract 6
Complaint Details	投訴人致電工程熱線反映，沙頭角公路馬尾下段沿路骯髒及大塵，地盤出口濕滑及滿佈泥水，水馬亦不清潔。”
Location	Sha Tau Kok (STK) Road – Ma Mei Ha Section
Date of Complaint	28 February 2018
Environmental Aspect	Muddy water
Complainant	unknown
Complaint Route	Via Project Hotline
Investigation Result	1. A public complaint was received from Project Hotline on 28 February 2018 regarding the cleanliness of Sha Tau Kok (STK) Road – Ma Mei Ha Section as described in “Complaint Details”. The complaint location Sha Tau Kok Road - Ma Mei Ha Section and location plan of the related project site are shown in ***Figure 1***. 2. Joint site inspection was carried out by RE, IEC, Contractors and ET on 8th March 2018 on STK Road and related construction site exit under Contract 2 (LT/C2) and Contract 6 (LT/C6) for complaint investigation. The investigation was focusing on the environmental concerns about dust and wastewater issue and the cleanliness of the water filled road barrier was out of the scope of EM&A programme. The observations during the site inspection are summarized in below. (a) There was a temporary road side work area under LT/C6 located at Tai Tong Wu adjoined to STK Road for underground utility investigation work. ***(Photo 1)*** There was no exportation of spoil involved in that works area and manual sweeping would be deployed to maintain the cleanliness of the temporary work area. During the inspection, it was observed that the condition of STK was not dusty and no muddy water/ slurry was found near the works area. ***(Photo 2)*** However, road debris was observed at both middle and edges of the STK road which suspected to be caused by frequent use of dump truck transporting loose material to NENT and the majority of dump truck was not belong to LT/HYW project. ***(Photo 3)*** (b) The vehicle site exit of North Portal Site Area (LT/C2) was located on STK Road. Wheel washing facilities was provided within the construction site and site vehicle was cleaned prior leaving the site. ***(Photo 4)*** Cut-off drain was in place at the site exit to intercept site runoff from flowing to STK road. No muddy water/ slurry was found at the site exit after the wheel washing facilities. However, mud and debris was observed at both middle and edges of the exiting STK road which suspected to be caused by frequent use of dump truck transporting loose material to NENT and the majority of dump truck was not belong to LT/HYW project. ***(Photo 5)***

	(c) Another vehicle site exit for LT/C2 was Admin Building which located on Wo Keng Shan (WKS) Road. Wheel washing facilities was provided at the concrete ground within the construction site. ***(Photo 6)*** The wastewater from wheel washing was collected by a pit and pumped to wastewater treatment facility. No muddy water/ slurry was found at the site exit after the wheel washing facilities. ***(Photo 7)*** Moreover, no muddy trails and dust and soil carrying by site vehicles to public road were observed outside the site exit. ***(Photo 8)*** (d) There was no site exit belong to LT/C6 on STK Road and the main vehicle site exit for works area of Contract 6 was located on Wo Keng Shan (WKS) Road. Wheel washing facilities was provided concrete ground within the construction site and no muddy water/ slurry was found at the site exit after the wheel washing facilities. ***(Photos 9 & 10)*** No muddy trails and dust and soil carrying by site vehicles to public road were observed outside the site exit. ***(Photo 11)*** (e) Road washing/ cleaning by water tanker was provided along Wo Keng Shan Road to Sha Tau Kok Road as dust suppression measures. The condition of STK Road after road washing was in normal condition without excessive water/ slurry on road surface. ***(Photo 12)*** As advised by both Contractors, road washing was carried out in every normal working day (Mon-Sat), except for rainy day. Moreover, road sweeping has been deployed on the concerned roads twice a week to maintain cleanliness of the roads. 3. In addition, monitoring programme was executed under the project to closely monitor the air quality at the air sensitive receivers and immediate action would be undertaken in case of exceedance. Having reviewed the air quality monitoring results in the recent months on January and February 2018, no exceedances were triggered at the air quality monitoring location AM7b which located outside North Portal Site of Contract 2 and adjacent to the concern STK Road. It is considered that the dust impact arising from the project was within acceptable level. 4. In our investigation, the Contractors have been well maintained the wheel washing facilities and no dust and soil carrying by site vehicles to STK road were observed. Having inspected the existing condition of STK Road and WKS Road which far from the construction site, soil and debris were also found at the middle and edges of the road which suspected to be caused by frequent use of dump truck transporting loose material to NENT and the majority of dump truck was not belong to LT/HYW project. Therefore, it is considered that the complaint was not valid to the project. In particular dry season, ET will closely monitor the implementation of dust mitigation measures in the subsequent site inspections.

Photo Record

Photo 1
There was a temporary road side work area under LT/C6 located at Tai Tong Wu adjoined to STK Road for underground utility investigation work.

Photo 2
It was observed that the condition of STK Road was not dusty and no muddy water/ slurry was found near the works area.

Photo 3
Road debris was observed at both middle and edges of the STK road which suspected to be caused by frequent use of vehicle.

Photo 4 (North Portal under C2)
The vehicle site exit of North Portal Site Area (LT/C2) was located on STK Road. Wheel washing was provided within the construction site to ensure all site vehicles were washed prior leaving the site.

Photo 5 (North Portal under C2)
No muddy water/ slurry was found at the site exit after the wheel washing facilities. However, mud and debris was observed at both middle and edges of the STK road which suspected to be caused by frequent use of vehicle.

Photo 6 (Admin Building under C2)
Another vehicle site exit for LT/C2 was Admin Building which located on Wo Keng Shan (WKS) Road. Wheel washing facilities was provided at the concrete ground within the construction site.

Photo 7 (Admin Building under C2)
No muddy water/ slurry was found at the site exit after the wheel washing facilities.

Photo 8 (Admin Building under C2)
No muddy trails and dust and soil carrying by site vehicles to public road were observed outside the site exit.

Photo 9 (South Portal under C6)
Wheel washing facilities was provided concrete ground within the construction site.

Photo 10 (South Portal under C6)
No muddy water/ slurry was found at the site exit after the wheel washing facilities.

Photo 11 (South Portal under C6)
The overall view of the Wo Keng Shan Road from the site exit for both South Portal and no muddy trails and dust and soil carrying by site vehicles to public road were observed.

Photo 12
Road washing/ cleaning by water tanker was provided along Wo Keng Shan Road to Sha Tau Kok Road as dust suppression measures. The condition of STK Road after road washing was in normal condition without excessive water/ slurry on road surface.
