Attention: Mr. C. L. Lau

10 September 2022

Dear Mr. Lau,

## RE: Contract No. CV/2015/07 Handling of Surplus Public Fill (2016-2018) <u>Revised Appendices of Monthly EM&A Report (No. 55) for November 2021 for the Tseung</u> <u>Kwan O Area 137 Fill Bank</u>

Reference is made to your submission of revised Appendices D2 to D5 of the Monthly EM&A Report for November 2021 for the TKO Area 137 Fill Bank we received by email on 10 September 2022. We are pleased to inform you that we have no adverse comment on the revised appendices.

Thank you for your attention. Please do not hesitate to contact us should you have any queries.

Yours faithfully,

Toang Fandbearg

F. C. Tsang Independent Environmental Checker

Monthly EM&A Report No.55

東業德勤測試顧問有限公司

### EXECUTIVE SUMMARY

This monthly Environmental Monitoring and Audit (EM&A) report No.55 was prepared by ETS-Testconsult Ltd (ET) for "Contract No: CV/2015/07 – Handling of Surplus Public Fill (2016-2018) – Tseung Kwan O (TKO) Area 137 Fill Bank" (The Project).

This report documented the findings of EM&A Works conducted during the operation phase of Fill Bank at TKO Area 137 in November 2021.

### Site Activities

As informed by the Contractor, the site activities in this reporting period were as below:

- 1. Operation of the Public Fill Reception Facilities at Tseung Kwan O Fill Bank (TKOFB);
- 2. Delivery of public fill to Taishan at TKOFB;
- 3. Operation of dewatering plant and expanded dewatering plant at TKOFB;
- 4. Operation of Crushing plant at TKOFB;
- 5. Enhancement of Mobile Data Network at TKOFB (Installation, Operation and Maintenance);
- 6. Installation, Operation and Maintenance of Artificial Intelligent System for Crushing Plant Nos. 2, 3 and 4 (Model QJ241) at TKOFB;
- 7. Operation of the Integrated Public Fill Reception at TKOFB;
- 8. Operation and Maintenance of Wash House at TKOFB;
- 9. Enhancement and maintenance of Wheel Washing Facility at TKOFB;
- 10. Personnel Position Tracking and Proximity Detection System of Moving Plant at TKOFB;
- 11. Setting up a Digital Works Supervision System (DWSS) for TKOFB;
- 12. Carrying out of preliminary sorting of public fill for 3RS project at TKOFB;
- 13. Installation of New RFID System for the pre-sorting works at TKOFB; and
- 14. Construction and installation of 2 nos. Wash Houses at TKOFB

### Environmental Monitoring Progress

The summary of the monitoring activities in this monitoring period is listed below:

- Noise Monitoring (Day-time): 1 Occasion at 1 designated location
- 24-hour TSP Monitoring: 5 Occasions at 2 designated locations
- 1-hour TSP Monitoring: 15 Occasions at 2 designated locations
- Marine Water Quality Monitoring: 8 Occasions at 2 designated locations
- Weekly-site inspection: 5 Occasions

### Noise Monitoring

No exceedance of Action and Limit levels for noise monitoring was recorded in the reporting period.

### Air Monitoring

No exceedance of Action and Limit levels was recorded for 1-hr and 24-hr TSP monitoring in the reporting period.

### Marine Water Quality Monitoring

According to the summary of marine water monitoring results, no exceedance of Action and Limit levels was recorded in this reporting period.

### Weekly Site Inspections

In general, performance on environmental mitigation measures implemented was found to be satisfactory in this reporting period. The major findings observed during site inspections are presented in the Section 7.0.

### Environmental Complaints, Notification of summons and successful prosecutions

One complaint was received on 25 November 2021; no notification of summons or successful prosecutions with respect to environmental issues was received in this reporting period.

### Future Key Issues

Based on site inspections and forecast of engineering works in coming month, key issues to be considered are as follows:

- Noise and air quality impact due to site works;
- Maintain wheel washing facilities properly;
- Maintain all drainage and desilting facilities properly;
- Use and maintain silt curtain properly;
- Clean up the fill material on concrete pavement along the BHA frequently;
- Sufficient drip trays for all oil drums / chemical containers;
- Implement all necessary preventive measures to avoid oil leakage. In the event an oil leakage happens, the Contractor should properly remove the leaked oil and handle the contaminated soil and all materials using for this cleaning works as chemical waste;
- Maintain good site practice and waste management to minimize environmental impacts at the site; and
- Follow-up improvements on waste management issues.

### 1.0 INTRODUCTION

*China Harbour – Zhen Hua Joint Ve*nture (CHZH-JV) appointed Environmental Team (ET) of ETS-Testconsult Limited (ETL) to undertake the Environmental Monitoring and Audit (EM&A) for the "Contract No: CV/2015/07 –Handling of Surplus Public Fill (2016-2018) – Tseung Kwan O (TKO) Area 137 Fill Bank" (The Project).

In accordance with the Environmental Permit (No.: EP-134/2002/N) (the EP), an EM&A programme should be implemented in accordance with the procedures and requirements in the EM&A Manual of the approved EIA report (Registration No. AEIAR-060/2002). The EM&A programme for this study as stated in Section 2.3.1 of the EM&A Manual covers the following environmental aspects during the establishment, operation and removal phases of the Fill Bank at Tseung Kwan O Area 137:

- Fugitive Dust;
- Noise generation from onsite activities;
- Water Quality; and
- Landscape and Visual.

The EM&A programme requires environmental monitoring for air quality, noise and water quality and environmental site inspections for air quality, noise, water quality, landscape and visual, and waste management. The EM&A requirements for each parameter described in the following sections include:

- All monitoring parameters;
- Monitoring schedules for the reporting period and forthcoming months;
- Action and Limit levels for all environmental parameters;
- Event/Action Plans;
- Environmental mitigation measures, as recommended in the Project EIA study final report; and
- Environmental requirements in contract documents.

Baseline monitoring was completed in August and October 2002 by MateriaLab. Action and Limit Levels were established for air and water quality parameters based on the baseline monitoring results.

This report documented the findings of EM&A Works conducted during the operation phase of Fill Bank at Tseung Kwan O Area 137 in November 2021.

### 2.0 **PROJECT INFORMATION**

### 2.1 Scope of the Project

The scale and scope of the Project as stated in the EP include:

- Site clearance;
- Construction of a temporary storm water system;
- Stockpiling of 6 million m<sup>3</sup> of public fill;
- Setting up two barging points: one at the TKO Basin and one at the Construction and Demolition Material Sorting Facility (C&DMSF) for transporting the stockpiled public fill by barges;
- Setting up a temporary barging point at the existing Explosive Off-loading Barging Point located in the south-eastern part of Area 137 for the month of May 2004 to December 2004 for transporting the stockpiled public fill by barge;
- Construction and operation of a Construction and Demolition Material Sorting Facility (C&DMSF);
- Setting up a Construction and Demolition Material Crushing Facility at the TKO Basin; and
- Remove the temporary fill bank.

### 2.2 Site Description

TKO Area 137 Fill Bank is located at the southern end of Wan Po Road. In the vicinity of the site are other industrial uses such as SENT landfill, TKO Industrial Estate, etc. Both Island Resort and Fullview Garden are also situated at more than 1.8km from the site. Other existing Air Sensitive Receivers (ASRs) and Noise Sensitive Receivers (NSRs), including resident developments and schools, are located at a further distance away from TKO Area 137.

### 2.3 Work Programme

Details of work programme are shown in Appendix G.

### 2.4 **Project Organization and Management Structure**

The project organization chart is shown in Appendix A.

### 2.5 Contact Details of Key Personnel

The key personnel contact names and telephone numbers are shown in Table 2.1.

Table 2.1	<b>Contact Details</b>	of Key	v Personnel

Organization	Name of Key Staff	Project Role	Tel. No.	Fax No.
CEDD	Leo Lam, T M Yeung, May Lau	Engineer's Representative	2762 5555	2714 0113
IEC (Acuity)	Mr. F C Tsang	IEC	2698 9097	2333 1316
Contractor (CHZH-JV)	Zhou Chang Ying	Senior Project Manager	9626 6299	2247 4108
ET (ETL)	C. L. Lau	ET Leader	2946 7791	2695 3944

### 3.0 WORK PROGRESS IN THIS REPORTING PERIOD

As informed by the Contractor, the activities in the reporting period include:

- 1. Operation of the Public Fill Reception Facilities at TKOFB;
- 2. Delivery of public fill to Taishan at TKOFB;
- 3. Operation of dewatering plant and expanded dewatering plant at TKOFB;
- 4. Operation of Crushing plant at TKOFB;
- 5. Enhancement of Mobile Data Network at TKOFB (Installation, Operation and Maintenance);
- 6. Installation, Operation and Maintenance of Artificial Intelligent System for Crushing Plant Nos. 2, 3 and 4 (Model QJ241) at TKOFB;
- 7. Operation of the Integrated Public Fill Reception at TKOFB;
- 8. Operation and Maintenance of Wash House at TKOFB;
- 9. Enhancement and maintenance of Wheel Washing Facility at TKOFB;
- 10. Personnel Position Tracking and Proximity Detection System of Moving Plant at TKOFB;
- 11. Setting up a Digital Works Supervision System (DWSS) for TKOFB;
- 12. Carrying out of preliminary sorting of public fill for 3RS project at TKOFB;
- 13. Installation of New RFID System for the pre-sorting works at TKOFB; and
- 14. Construction and installation of 2 nos. Wash Houses at TKOFB

### 4.0 AIR QUALITY MONITORING

### 4.1 Monitoring Requirement

TSP levels were monitored in the reporting period in accordance with the EM&A Manual. Table 4.4 shows the Action and Limit Levels for the environmental monitoring works.

### 4.2 Monitoring Equipment

Both 1-hour and 24-hour TSP air quality monitoring was performed using a GMWS2310 High Volume Air Sampler (HVS) located at each of the designated monitoring station. Table 4.1 summarizes the equipment used in the air quality monitoring programme. A copy of the calibration certificates for the HVS and calibrator are attached in Appendix B1.

Table 4.1	Air Quality Monitoring	Equipment
-----------	------------------------	-----------

Equipment	Model and Make		
HVS	Greasby GMWS2310		
Calibrator	Tisch TE-5025A		

### 4.3 Monitoring Parameters, Frequency and Duration

Table 4.2 summarizes the monitoring parameters, monitoring duration and frequencies of air quality monitoring.

	Table 4.2 Monitoring pa	arameters, duration, frequ	uency of air quality monitoring
Parameter		Duration	Frequency
	24-hr TSP	24 hr	Once every six days
1-hr TSP		1 hr	Three times per every six days

### 4.4 Monitoring Locations

Table 4.3 tabulates the air quality monitoring locations of this project.

Table 4.3	Air quality monitoring locations
-----------	----------------------------------

Monitoring station	Location
TKO-A1	Site Egress
TKO-A2a	CREO

### 4.5 Monitoring Methodology

### Both 1-hr and 24-hr air quality monitoring (High Volume Sampler)

### Instrumentation

High volume sampler, as HVS, (Greasby GMWS2310) complete with appropriate sampling inlets were employed for both 1-hour and 24-hour TSP monitoring. The sampler is composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with that required by USEPA standard Title 40, Code of Federation Regulations Chapter 1 (Part 50).

### Installation

The installation of HVS refers to the requirement stated in EM&A Manual.

### **Operation/Analytical Procedures**

Operating/analytical procedures for the operation of HVS are as below:

- Prior to the commencement of the dust sampling, the flow rate of the high volume sampler was properly set (between 0.6m<sup>3</sup>/min and 1.7m<sup>3</sup>/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50. The flow rate was indicated on the flow rate chart.
- For TSP sampling, fiberglass filters (Whatman G653) were used.
- The power supply was checked to ensure the sampler worked properly.
- On sampling, the sampler was operated 5 minutes to establish thermal equilibrium before placing any filter media at designated air monitoring station.
- The filter holding frame was then removed by loosening the four nuts and carefully a weighted and conditioned filter was centered with the stamped number upwards, on a supporting screen.
- The filter was aligned on the screen so that the gasket formed an air-tight seal on the outer edges of the filter. Then the filter holder frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- The programmable timer will be set for a sampling month of 1 hour or 24 hours. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number.).
- After sampling, the filter was transferred from the filter holder of the HVS to a sealed plastic bag and sent to the laboratory for weighting. The elapsed time was also recoded.
- Before weighting, all filters were equilibrated in a desiccator for 24 hour with the temperature of 25°C <u>+</u> 3°C and the relative humidity (RH) <50% <u>+</u>5%.
- All measurement procedures in Section 2.3 of the EM&A Manual were followed during the reporting period.

### Maintenance & Calibration

- HVS and their accessories should be maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
- HVS should be calibrated at bi-monthly intervals.

### Wind Data Monitoring

Wind data (wind speed and wind direction) were directly extracted from Tseung Kwan O Station of Hong Kong Observatory. All wind data during this reporting period are shown in Appendix E.

### 4.6 Action and Limit Levels

Table 4.4 shows the Action and Limit levels for 24-hr TSP and 1-hr TSP monitoring.

Table 4.4Action and Limit Levels for 24-hr TSP and 1-hr TSP

Monitoring Location	24-hr TSP (μg/m³)		1-hr TSP (μg/m³)	
Monitoring Location	Action Level	Limit Level	Action Level	Limit Level
TKO-A1	210	260	376	500
TKO-A2a *	210	260	376	500

Remark (\*): Since dust monitoring stations TKO-A2 and TKO-A2a are located close to the major dust emission sources and also close to the same sensitive receptor and no significant difference between them on the prevailing meteorological conditions, the baseline data from TKO-A2 (August and September 2002 by MateriaLab) can also be valid in the case of TKO-A2a.

### 4.7 Event-Action Plans

Please refer to Appendix F for details.

### 4.8 Results and Observation

### 4.8.1 1-hour and 24-hour TSP Monitoring results

Monitoring data of both 1-hour and 24-hour TSP monitoring carried out in this reporting period are summarized in Appendix B2. Graphical presentation of 1-hour and 24-hour TSP monitoring results for the reporting period is shown in Appendix B3. Wind data included wind speed and wind direction was extracted from Tseung Kwan O Station of Hong Kong Observatory during this reporting period and is presented in Appendix E.

No exceedance of Action and Limit Level of 1-hr TSP and 24-hour TSP monitoring results was recorded during the reporting period.

### 4.8.2 Observation

Generally, the Contractor implemented sufficient dust mitigation measures, including operation of the mist spraying systems at the CEDD Combined Reception Office and crushing plants. And the site egress area provided wheel washing facilities; Road dampening, water bowsers and automatic water sprinklers on the main haul roads. Other dust sources near TKO Area 137 also included operation of the temporary Construction Waste Sorting Facilities (CWSF) and dumping activities at the SENT Landfill.

### 5.0 Noise Monitoring

### 5.1 Monitoring Requirements

Noise monitoring was conducted at 1 monitoring station as specified in the approved EM&A Monitoring Proposal for good site practice. The equipment, parameter, frequency, duration, methodology, calibration details, results and observations of the noise monitoring for the reporting period are presented in this section.

### 5.2 Monitoring Equipment

An Integrating Sound Level Meter was used for noise monitoring. It was a Type 1 sound level meter capable of giving a continuous readout of the noise level reading including equivalent continuous sound pressure level ( $L_{eq}$ ) and percentile sound pressure level (Lx). It complies with International Electro Technical Commission Publications IEC 61672 Type 1 specification, and speed in m/s was used to monitor the wind speed.

Table 5.1 summarizes noise monitoring equipment model being used. A copy of the calibration certificate for noise meter and calibrator are attached in Appendix C1

### Table 5.1Noise Monitoring Equipment

Equipment	Model		
Sound Level Meter	Rion NL-31 / Rion NL-52		
Sound Level Calibrator	Rion NC-73 / Castle GA607		

### 5.3 Monitoring Parameters, Duration and Frequency

Duration, frequencies and parameters of noise measurement are presented in Table 5.2.

	Table 5.2 Duration, Frequencies and Parameters of Noise Monitoring			
Time		Duration/min	Parameters	Frequency
	Day-time: 0700-1900 hrs on normal weekday	30	L <sub>eq</sub> , L <sub>10</sub> , L <sub>90</sub>	Once per month

### 5.4 Monitoring Locations

One Noise monitoring was conducted at the noise monitoring location, TKO-N1 as shown in Figure 2 during the reporting period. Table 5.3 describes the location of the monitoring station.

### Table 5.3Noise Monitoring Location

Monitoring station Location		Type of Measurement	
TKO-N1	Outside site Egress along Wan Po Road	Free Field	

### 5.5 Monitoring Procedures and Calibration Details

**Operation/Analysis Procedures** 

- The Sound Level Meter was set on a tripod at a height of 1.2m above the ground.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
  - Frequency weighting: A
  - Time weighting : Fast
  - Time measurement : 30 mins
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94 dB at 1000HZ. If the difference in the calibration level before and after measurement was more than 1dB, the measurement would be considered invalid and repeat measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with a portable wind meter.
- During the monitoring period, the Leq, L10 and L90 were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- Correction factor of +3dB(A) should be made to the free Field measurements.
- Noise monitoring would be cancelled in the presence of fog, rain, wind with a steady speed exceeding 5m/s, or wind gusts exceeding 10m/s.

### Maintenance and Calibration

- The microphone head of the sound level meter and calibrator are cleaned with soft cloth in quarterly intervals.
- The meter is sent to the supplier or HOKLAS laboratory to check and calibrated in yearly intervals.

### 5.6 Action and Limit Levels

The Action and Limit levels for noise levels derived as illustrated in Table 5.4.

### Table 5.4 Action and Limit Levels for noise monitoring

Time Period	Action	Limit			
0700-1900 hrs on normal weekdays	When one documented complaint is received	75 dB(A)			

### 5.7 Event-Action Plans

Please refer to the Appendix F for details.

### 5.8 Results and Observation

### 5.8.1 Results

Only Day-time noise monitoring was carried out at monitoring station TKO-N1 in this reporting period. The detail of the noise monitoring is provided in Appendix C2. Graphical presentation of the monitoring result for the reporting period is shown in Appendix C3. Since no documented complaints on noise issue were received in this reporting period, no Action Level exceedance was recorded. Besides, no exceedance in Limit Level was recorded according to the result from Day-time monitoring.

### 5.8.2 Observation

The major noise source during the monitoring event was the dump truck traffic and crushing plant.

### 6.0 MARINE WATER QUALITY MONITORING

### 6.1 Monitoring Requirements

In accordance with the EM&A Manual, impact marine water quality monitoring was conducted three days per week. Measurements were taken at both mid-flood and mid-ebb tides at three depths (i.e. 1m below surface, mid depth and 1m from seabed) at Control Station, C1 and Monitoring Station, M4.

### 6.2 Monitoring Locations

For the Reclamation Project, there were 4 Designated Monitoring Stations and 2 Designated Control Stations specified in the EM&A Manual. Upon the completion of the monitoring programme under Stage 2 reclamation works, the ET started monitoring events at the impact station M4 and the control station C1 from 18 May 2004 onwards.

Figure 1 shows the location of the marine water quality monitoring stations. Table 6.1 describes the locations of the monitoring stations in the reporting period.

Station Description	Code	HK Metric Grid E	HK Metric Grid N	
Control Station (Ebb tide)	TKO-C1	844 740.208	815 371.502	
Monitoring Station, Tung Lung Chau Fish Culture Zone	TKO-M4	847 741.029	812 977.878	

 Table 6.1
 Locations of Marine Water Monitoring Stations

According to Environmental Permit (Permit no.:EP-134/2002/N) Condition 3.2, water quality survey/monitoring shall be conducted at control station C1a, monitoring stations M4a and M5 for the period from two weeks before commencement of operation of the additional 5 barging points to 4 weeks after cessation of their operation. The water quality survey/monitoring frequency and parameters at stations C1a, M4a and M5 shall be same as the requirements set out in the EM&A Manual and the monitoring results shall be incorporated in the monthly EM&A reports.

Due to "Hong Kong International Airport, Three Runway System Project Contract 3206 – Main Reclamation Works "(3RS project) operation of the additional barging point at TKO Area 137, the ET started monitoring events at the impact station M4a, M5 and the control station C1a from 14 May 2018 onwards.

Figure 4 shows the location of water control station C1a and water monitoring station M4a and M5.

Table 6.2 describes the locations of the additional marine water monitoring stations

Table 6.2	Locations of Additional Marine Water Monitoring Stations (3RS project)

Station Description	Code	HK Metric Grid E	HK Metric Grid N
Control Station (Ebb tide)	C1a	845647	814146
lean and Manifering Ofation	M4a	845922	813973
Impact Monitoring Station	M5	847005	813678

### 6.3 Monitoring Parameters

Monitoring of the marine water quality parameters are listed in Table 6.3. Table 6.3 Marine Water Quality Monitoring Parameters

In-situ measurement	Laboratory analysis
Depth (m)	Suspended solids (mg/L)
Temperature ( $^{\circ}$ C)	
Dissolved Oxygen (mg/L and % saturation)	
Turbidity (NTU)	
Salinity (ppt)	

### 6.4 Monitoring Frequency

The monitoring frequency of the marine water monitoring is summarized in Table 6.4.

Table 6.4Monitoring frequency of the marine water

Parameter	Frequency	No. of Location	No. of Depths
Temperature		2	
Salinity		(TKO-C1 and TKO-	3
Dissolved Oxygen (DO)	3 days/week,	M4)	(Surface, mid-depth
Turbidity	2 tides/day	and 3	& bottom)
Suspended solids (SS)		(C1a, M4a and M5)	

### 6.5 Monitoring Methodology and Equipment Used

### For Location of the monitoring stations

### Global Positing System (GPS)

A hand-held digital GPS was used to identify the designated monitoring stations prior to water sampling.

### For Water Depth measurement

Echo Sounder

A portable, battery-operated echo sounder was used for the determination of water depth at each designated monitoring station.

### For In-situ Water Quality Measurement

All in-situ monitoring instruments were checked, calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme before use, and subsequently recalibrated at 3 monthly intervals or sometimes longer throughout all stages of the water quality monitoring.

### Dissolved Oxygen, Salinity, Turbidity and Temperature Measuring Equipment

A portable, weatherproof multiparameter water quality meter (YSI Pro DSS) which complete with cable, sensor and DC power source were used for measuring DO, turbidity, salinity, pH and temperature:

ENA16024 Monthly EM&A Report No.55

東業德勤測試顧問有限公司 ETS-TESTCONSULT LTD.

- a dissolved oxygen level in the range of 0 to 50 mg/L and 0-500 % saturation;
- a turbidity in range 0-4000 NTU;
- a salinity in range 0-70 ppt;
- a temperature of -5-70 degree Celsius

A membrane electrode with automatic temperature compensation complete with a cable was installed.

### For Water Sampling and Sample Analysis

In-situ monitoring was carried out at three depths: 1 meter below water surface, at mid-depth and 1 meter above the seabed. At each sampling depth, duplicate readings of dissolved oxygen content and turbidity were taken. The probes were drop into water, two consecutive measurements of dissolved oxygen (DO), dissolved oxygen saturation (DOS), turbidity and salinity were taken. The difference between the two readings of each set was more than 25% of the value of the first reading while a third measurement would be conducted to ensure data precision.

### Water Sampler

A water sampler comprising a transparent PVC cylinder, with a capacity of not less than 2 liters, was lowered into the water body at the predetermined depth. The both opening ends of the sampler were then closed accordingly by dead weight and water samples were collected.

### Water Container

The sample container, made by high-density polythene, was rinsed with a portion of the water sample. The water sample was then transferred to the container, labelled with a unique sample ID and sealed with a screw cap. The water samples were stored in a cool box maintained at 4°C. The water samples were then delivered to a local HOKLAS-accredited laboratory (Environmental Laboratory, ETS-Testconsult Ltd, HOKLAS Registration No. 022) on the same day for analysis.

The summary of testing method of testing parameter as recommended by EIA or required by EPD, with the QA/QC results in accordance with the requirement of HOKLAS or international accredited scheme is shown in Table 6.5.

Table 6.5 Summary of		
Laboratory Analysis	Testing Procedure	Detection Limit
Total suspended solids	In house method based on APHA 19 <sup>th</sup> ed 2540D	1.0 mg/L

### Table 6.5Summary of testing procedures

### In-situ measurement

All in-situ monitoring instruments were checked, calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme before use. Responses of sensors and electrodes were checked with certified standard solutions before each use. The DO sensor was calibrated by wet bulb method and a zero check in distilled water was performed with the turbidity and salinity sensor before the strat of measurement.

At each measurement/sampling depth, two consecutive measurements of dissolved oxygen (DO), dissolved oxygen saturation (DOS), turbidity and salinity were taken. For DO, DOS, Turbidity and Salinity, measurements were conducted three days per week at both mid-ebb and mid-flood tides at three depths (i.e. 1m below surface, mid depth and 1m from seabed). The duplicate measurements were averaged if the difference was not greater than 25%. If the difference is greater than 25%, repeat measurement will be required to be carried out.

Table 6.6 shows the equipment used for in-situ monitoring of water quality. The calibration certificates are attached in Appendix D1.

ENA16024 Monthly EM&A Report No.55

Table 6.6         Details of Marine Water Quality Monitoring Equipment (In-site measurement)					
Parameter	Model	Date of Due Date		Equipment No.	
Coordinate of Monitoring stations	Garmin eTrex 10			ET/EW/005/09	
Dissolved Oxygen (Saturation), Temperature, Salinity, Turbidity	YSI Pro DSS Multiparameter Water Quality Meter	03/11/21	02/02/22	ET/EW/008/011*	
Water Depth	Speedtech SM-5			ET/EW/002/08	

Remark:(\*) indicates the instrument should be calibrated on use.

#### 6.6 **Action and Limit Level**

Table 6 7

The water quality criteria, namely Action and Limit (A/L) levels are presented in the table below.

Parameter	Action Level	Limit Level		
DO (mg/L)	<u>Surface &amp; Middle</u> <5.45 mg/L (5%-ile of baseline data) <u>Bottom</u> <4.72 mg/L (5%-ile of baseline data)	<u>Surface &amp; Middle</u> <5.10 mg/L (1%-ile of baseline data) <u>Bottom</u> <2.00 mg/L		
SS (mg/L) (Depth- averaged)	>6.74 mg/L (95%-ile of baseline data) or >120% of the upstream control station's SS at the same tide on the same day	>7.67 mg/L (99%-ile of baseline data) or >130% of the upstream control station's SS at the same tide on the same day		
Turbidity (NTU) (Depth- averaged)	>4.28 NTU (95%-ile of baseline data) or >120% of the upstream control station's turbidity at the same tide on the same day	>4.58 NTU (99%-ile of baseline data) or >130% of the upstream control station's turbidity at the same tide on the same day		

The water quality Action and Limit Levels (3RS project) are presented in the table below.

Table 6.8 Water Quality Action and Limit Levels (3RS project)

Water Quality Action and Limit Levels

Parameter	Action Level	Limit Level
DO (mg/L)	Surface & Middle	Surface & Middle
	<5.5 mg/L	<4.00 mg/L (1%-ile of baseline data)
	Bottom	Bottom
	<5.2 mg/L	<2.00 mg/L
SS (mg/L) (Depth- averaged)	>4.9 mg/L or >120% of the upstream control station's SS at the same tide on the same day	>5.2 mg/L or >130% of the upstream control station's SS at the same tide on the same day
Turbidity (NTU) (Depth- averaged)	>3.9NTU or >120% of the upstream control station's turbidity at the same tide on the same day	>4.2 NTU or >130% of the upstream control station's turbidity at the same tide on the same day

#### 6.7 **Event and Action Plan**

Please refer to the Appendix F for details.

#### 6.8 Monitoring Duration in this reporting period

Below is the time schedule for the marine water quality monitoring events that were conducted in this reporting period:

. .

ENA16024 Monthly EM&A Report No.55

Table 6.9	Time Schedu	le of Impact M	larine Water Qua	-	g	
			November 202	21		
Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
	1	2	3	4	5	6
7	8	9	10	11	12	13
14	15	16	17	18	19	20
21	22	23	24	25	26	27
28	29	, 30				

Remark:  $(\mathbf{\nabla}) =$  Marine water quality monitoring carried out by ET.

As the tidal period is not within working hour, water monitoring (Mid-ebb & flood) in 10, 19, 22, 24, & 26 November 2021 have been cancelled. The daily marine water quality monitoring duration are detailed in Appendix D2.

### 6.9 Marine Water Quality Monitoring Results

The impact water quality measurement results are detailed in Appendix D2. Appendix D3 presents the water quality monitoring data and graphical presentations of monitoring results. The summary of marine water quality exceedances is shown in Table 6.10.

	Station	Exceedance DO Turbidity SS		Total							
	Station	Level	Flood	Ebb	Flood	Ebb	Flood	Ebb	Flood	Ebb	
	TKO-M4	Action	0	0	0	0	0	0	0	0	
	1KU-1V14	Limit	0	0	0	0	0	0	0	0	

 Table 6.10
 Summary of Impact Marine Water Quality Exceedances

The impact water quality measurement results (3RS project) are detailed in Appendix D4. Appendix D5 presents the water quality monitoring data and graphical presentations of monitoring results. The summary of marine water quality exceedances (3RS project) is shown in Table 6.11.

10010-0.11	Carminary									
Station	Exceedance	DO		Turbidity		S	S	Total		
Station	Level	Flood	Ebb	Flood	Ebb	Flood	Ebb	Flood	Ebb	
M4a	Action	0	0	0	0	0	0	0	0	
IVI4d	Limit	0	0	0	0	0	0	0	0	
ME	Action	0	0	0	0	0	0	0	0	
M5	Limit	0	0	0	0	0	0	0	0	

 Table 6.11
 Summary of Impact Marine Water Quality Exceedances (3RS project)

According to the summary of marine water monitoring results, no exceedance of Action and limit levels was recorded for this reporting period.

### 7.0 ENVIRONMENTAL AUDIT

### 7.1 Weekly ET Site Inspections and EPD's Site Inspection

### 7.1.1 Weekly ET Site Inspections

Weekly ET site inspections were carried out by ET to monitor the timely implementation of proper environmental pollution control and mitigation measures for the Project. In this reporting period, five weekly site inspections were conducted (02, 10, 17, 24 and 29 November 2021). Table 7.1 presents the key findings of weekly ET site inspection in this reporting period.

Table 7.1	Key Findings of Weekl	y ET Site Audits in this re	porting period					
Date	Key Findings	Action(s) Taken recommended by ET	Action(s) Taken by the Contractor during the ET weekly site audit	Rectification Status by ET				
02 November 2021	Dust emission were observed near workshop	Provide water spray to control dust emission properly.	Water sprays were provided.	Closed				
10 November 2021	Oil stain were observed near Workshop	To clean the oil stain properly		Follow-up				
17 November 2021	Oil stain were observed near Workshop	To clean the oil stain properly	Oil stain were cleaned	Closed				
24 November 2021	No defective work or observation was recorded during the weekly ET site inspection No defective work or observation was recorded during the weekly ET site inspection							
29 November 2021								

### 7.1.2 EPD's Site Inspection

No EPD's site inspection was carried out at TKO137 Fill Blank in this reporting period.

### 7.2 Review of Environmental Monitoring Procedures

The monitoring works conducted by the Environmental Team were inspected regularly. The observations for the monitoring works were recorded and summarized as follows:

### Air Quality Monitoring

- The monitoring team recorded the observations around the monitoring stations within and outside of the site.
- The monitoring team recorded the temperature, air pressure and general weather condition on the monitoring day.

### Noise Monitoring

- The monitoring team recorded the observations around the monitoring station, which might affect the results.
- Major noise sources were identified and recorded.

### Water Quality Monitoring

• The monitoring team recorded the observations around the monitoring stations, which might affect the results.

### 7.3 Assessment of Environmental Monitoring Results

All monitoring results were audited against the Action and Limit levels and any exceedance would be validated.

No exceedance was recorded in water quality, air quality and noise monitoring in this reporting period.

The monitoring results in this reporting period were comparable with those of baseline month. Detailed discussions were given in Section 4, 5 and 6 of this Report.

### 7.4 Advice on the Solid and Liquid Waste Management Status

The Contractor usually disposed of non-inert waste, including general refuse and materials segregated from the existing stockpiles, to SENT landfill. Table 7.2 summarizes data on offsite waste disposal in this reporting period and the Monthly Summary Waste Flow Table is shown in Appendix K.

Table 7.2 Actual amounts of Waste generated in this reporting period									
	Waste Type	Actual Amount	Disposal Locations						
	Public Fill ('000m <sup>3</sup> )	0	TKO 137 Fill Bank						
	C&D Waste ('000kg)	56.01	SENT Landfill / Refuse Collection Point						
	Chemical Waste (kg/L)	0 (L)	Collected by licensed collector						

Table 7.2	Actual amounts of Waste generated in this reporting period
	Actual amounts of Waste generated in this reporting period

The Contractor should provide sufficient preventive measures during equipment maintenance works so as to avoid oil leakage on the ground. In the event of any oil leakage, the Contractor should clean up the polluted soil and handle all the materials used for this cleaning works as chemical waste.

Concrete bunding has erected outside the CEDD combined reception office and near the automatic wheel washing facilities for storing generator sets and oil drums. The drain outlet of all the bunded areas should be plugged properly. Besides, pre-cast drip trays were provided for oil drums at several areas, such as workshop and chemical storage area. The Contractor should collect and dispose of any stagnant water accumulated in the concrete bunding and drip trays and handle them as chemical waste.

The Contractor should use suitable containers with proper labels to store chemical wastes in accordance with Code of Practice on the Packaging, Labeling and Storage of Chemical Waste. The Contractor should also advise their workers of the proper procedures in handling the chemical waste. All the trip tickets for chemical waste disposal were properly kept in the site office.

The Contractor was reminded to increase the frequency of inspection and cleaning of the site drainage system, including permanent desilting chambers, desilting facilities, oil interceptor bypass tank, DP3 and DP4 and all the trapezoidal channels. Moreover, the Contractor should apply approved pesticides in the stagnant water ponds.

All the runoff from the parking area should be pumped to the desilting facilities and oil interceptors to remove suspended solids and oil & grease prior to discharge.

#### 8.0 Status of Environmental Licensing and Permitting

All permits/licenses valid in this reporting period are summarized in Table 8.1.

Table 8.1	Summar	of environmental licensing and permit status
	Ourman	of environmental licensing and permit status

Description	Permit No.	mit No. Valid Period		Section

### 9.0 ENVIRONMENTAL NON-CONFORMANCE

### 9.1 Summary of air quality, noise and marine water quality

No Action and Limit level exceedance of 1-hour and 24-hr TSP monitoring was recorded in this reporting period.

Since no documented complaints on noise issue were received in this reporting period, no Action Level exceedance was recorded. Besides, no exceedance in Limit Level was recorded according to the result from Day-time monitoring.

According to the summary of marine water monitoring results, no exceedance of Action and Limit levels was recorded for this reporting period.

### 9.2 Summary of Environmental Complaints

One complaint was received in this reporting period.

### 9.3 Summary of Notification of Summons and successful Prosecution

There was no notification of summons and successful prosecution respect to environmental issues registered in this reporting period.

### **10.0 IMPLEMENTATION STATUS**

### **10.1** Implementation Status of Environmental Mitigation Measures

An updated summary of the Environmental Mitigation Implementation Schedule (EMIS) is presented in Appendix I. Most of the necessary mitigation measures were implemented properly. Any deficiencies were noted in the remarks of the schedule.

### 10.2 Implementation Status of Event and Action Plan

Since no exceedance of Action and Limit level of air quality, noise and marine water monitoring results was recorded for this reporting period, no further action was required.

# 10.3 Implementation Status of Environmental Complaint, Notifications of Summons and Successful Prosecutions Handling

One complaint was received on 25 November 2021, which was forwarded to ET by email on 26 November 2021, from public against 投訴將軍澳 137 公眾填料庫地盤灑水不足, 大量塵埃, 吹到 TVB 電視城一帶, 問題一直無改善, 要求環保署跟進及電郵回覆。As a result of the complaint, the Contractor implemented mitigation measures including providing regular water spraying by water lorries, operating mist spraying systems at the site area properly and providing regular cleaning at the site haul road to reduce dust emission.

No notification of summons and prosecutions were received in this reporting period.

A summary of environmental complaints, notifications of summons and successful prosecutions was given in Table 10.1 and further details of the complaint could be found in the Complaint Log (Appendix N).

	Complaints	logged	Summons	served	Successful prosecution received							
	November 2021 Cumulative 1 13		November 2021	Cumulative	November 2021 Cumulative							
			1 13 0 0		0	0						

 Table 10.1
 Summary of Environmental Complaints and Prosecutions

### 11.0 CONCLUSIONS AND RECOMMENDATIONS

### **Conclusions**

Impact monitoring of air quality, noise and water quality were carried out at designated locations in accordance with the EM&A Manual in this reporting period.

No Action and Limit level exceedance of 1-hour and 24-hr TSP monitoring was recorded in this reporting period.

Since no documented complaints on noise issue were received in this reporting period, no Action Level exceedance was recorded. Besides, no exceedance in Limit Level was recorded according to the result from Day-time monitoring.

According to the summary of marine water monitoring results, no exceedance of Action and Limit levels was recorded for this reporting period.

One complaint was received on 25 November 2021; no prosecutions and notifications of summons were received in this reporting period.

According to the ET weekly site inspections carried out in this reporting period, the Contractor generally implemented sufficient dust mitigation measures, including operation of the mist spraying systems, provision of automatic water sprinklers at the crushing plants and automatic wheel washing facilities, dampening of haul roads and stockpiling areas.

### **Recommendations**

According to the environmental site inspections performed in the reporting period, the following recommendations were provided:

### Air Quality

- Ensure the frequency of water spraying on haul roads, crushing plant, unloading areas and stockpiles to be sufficient to suppress the dust sources;
- Provide proper maintenance for the powered mechanical equipment and barges to avoid emission of dark smoke;
- Provide water spraying onto the truckloads during inspection of fill material;
- Provide continuously water spraying system for crushing plant including receiving point and unloading point;
- Provide enclosed conveyor belt for transporting the crushed material directly to the unloading point
- Provide dust screen fenced for crushing plant, and the receiving point of crushing facility would be situated inside an enclosure with one side opening for vehicular access;
- Conduct road sweeping on all paved haul roads and public roads especially outside and near the site egress by the road sweeper. Undertake water spraying on stockpiling area by water bowser;
- Erect adequate speed limit signs to advise the truck drivers of the speed limit;
- Operate mist spraying systems and automatic water sprinklers in the Fill Bank;
- Implement the dust mitigation measures for the site activities;
- Designate proper haul roads to ensure effective water spraying; and
- Ensure all vehicles to be washed before leaving the site egress by provision, operation and maintenance of automatic wheel washing facilities.

### Noise

- Conduct noisy activities at a farther location from the NSRs.
- Proper schedule of noisy operation and use of quiet machineries on site.

### Water Quality

- Maintain the drainage system, including the trapezoidal channels, permanent desilting chambers, regularly;
- Operate and maintain the silt curtains regularly;
- Operate the cleaning vessel within the TKO Basin regularly;
- Clean up the fill material on the concrete pavement at BHA frequently; and
- Remove the stagnant water or provide approved pesticides for the stagnant water in the permanent desilting chambers, if any.

### Landscape and Visual

- Provide hydroseeding on the exposed slopes, on which the final profile has been formed;
- Erect all the site hoarding/chaining fences in accordance with agreed design at proper location;
- Maintain the hydroseeded slopes in accordance with the Landscape Plan.

### Chemical and Waste Management

- Remove waste materials from the site to avoid accumulation regularly;
- Handle and store chemical wastes properly;
- Remove unwanted material in the existing stockpiles and avoid further dumping of such material;
- Provide and maintain sufficient drip trays for diesel drums, chemical containers, chemical waste storage drums and diesel operated generator set;
- Maintain mesh screen on top of the additional drainage to avoid improper dumping of rubbish;
- Maintain good housekeeping at the workshop area;
- Ensure sufficient tarpaulin sheets are provided to cover drip trays; and
- Avoid soil being polluted during oil filling and equipment maintenance; hence, properly remove and store the contaminated soil, if any

### 12.0 FUTURE KEY ISSUES

### 12.1 Work Programme for the Coming Month

- 1. Operation of the public fill reception facilities at TKOFB;
- 2. Delivery of public fill to Taishan at TKOFB;
- 3. Operation of dewatering plant and expanded dewatering plant at TKOFB;
- 4. Operation of Crushing Plant at TKOFB;
- 5. Operation of Additional Filter Press at expanded dewatering plant at TKOFB;
- 6. Operation of Integrated Public Fill Reception Platform at TKOFB;
- Construction and Maintenance of the Drainage Systems along the Concrete Paved Road at TKOFB to Temporary Construction Waste Sorting Facility;
- 8. Enhancement of Mobile Data Network at TKOFB (Installation, Operation and Maintenance);
- 9. Setting up a Digital Works Supervision System (DWSS) for TKOFB;
- 10. Installation, Operation and Maintenance of Artificial Intelligence System for Crushing Plant Nos. 2,3 and 4 (Model QJ241) at TKOFB;
- 11. Upgrading the CCTV surveillance system at TKOFB;
- 12. Modification and Operation of the Wash House at TKOFB;
- 13. Carrying out preliminary sorting of Public Fill for 3RS project at TKOFB;
- 14. Providing input for piezometer measurement of the GI works at TKOFB;
- 15. Construction and installation of 2 nos. Wash House at TKOFB

### 12.2 Key Issues for the Coming Month

### Key issues to be considered in the coming month include:

- Chemical and waste management;
- Treatment of runoff and wastewater prior to discharge;
- Dust generated from loading and unloading activities;
- Dust generated from dump trucks traffic;
- Regular checking of the drainage system;
- Flood prevention; and
- Noise from operation of the crushing plant.

### Mitigation measures to be required in the coming month:

### Air Quality Impact

- To provide adequate water spraying on haul roads and working platform;
- To operate and maintain automatic wheel washing facilities properly;
- To dampen the fill material prior to unloading or movement;
- To provide road sweeping on haul road near site egress and public roads outside site egress;
- To ensure implementation of the dust mitigation measures for the site activities;
- To maintain proper operation of the mist spraying system;
- To provide proper maintenance for vehicles and machines on site; and
- To investigate any other dust sources around the air sensitive receivers

### <u>Noise</u>

- To switch off equipment if not in use;
- To operate silent equipment;
- To identify the noise sources inside and outside of the site;
- To follow up any exceedance caused by the Fill Bank operation; and
- To re-schedule the work activities in the event of valid noise exceedance.

### Water Quality Impact

- To maintain the drainage system in the Fill Bank;
- To ensure the cleanliness of oil interceptor bypass tanks and all the drainage channels;
- To maintain the existing silt trap to ensure good efficiency of wheel wash facilities;
- To repair, inspect and maintain the silt curtains regularly;
- To provide covers for the drip trays to avoid stagnant water pond due to rainfall;
- To deploy a cleaning vessel to remove floating rubbish in the TKO Basin;
- To clean up the concrete paved area at Portion I every night to avoid fill materials from being washed into the sea;
- To avoid any stagnant water or provide insecticide to avoid mosquito breeding in the Fill Bank.
- To prevent untreated wastewater directly discharge into nullahs; and
- To provide desilting facilities such as granular rock filter and geotextile filter at nullah.

### Chemical and Waste Management

- To remove waste from the site regularly;
- To properly store and handle chemical wastes on site;
- To implement trip ticket system for all the imported public fill and general refuse disposal;
- To provide and manage sufficiently sized drip trays for diesel drums or chemical containers;
- To remove existing unwanted material in the stockpiles and avoid improper disposal at the Fill Bank through inspection of imported truckloads;
- To maintain proper housekeeping at the workshop area;
- To remove the oil stains in the event of leakage and handle all materials using for this cleaning works as chemical waste;
- To maintain mesh screen on top of the additional drainage, DP3 opening to avoid improper dumping of rubbish into this channel; and
- To identify C&D material by packaging, labeling, storage, transportation and disposal in accordance with statutory regulations.

### 12.3 Monitoring Schedule for the Coming Month

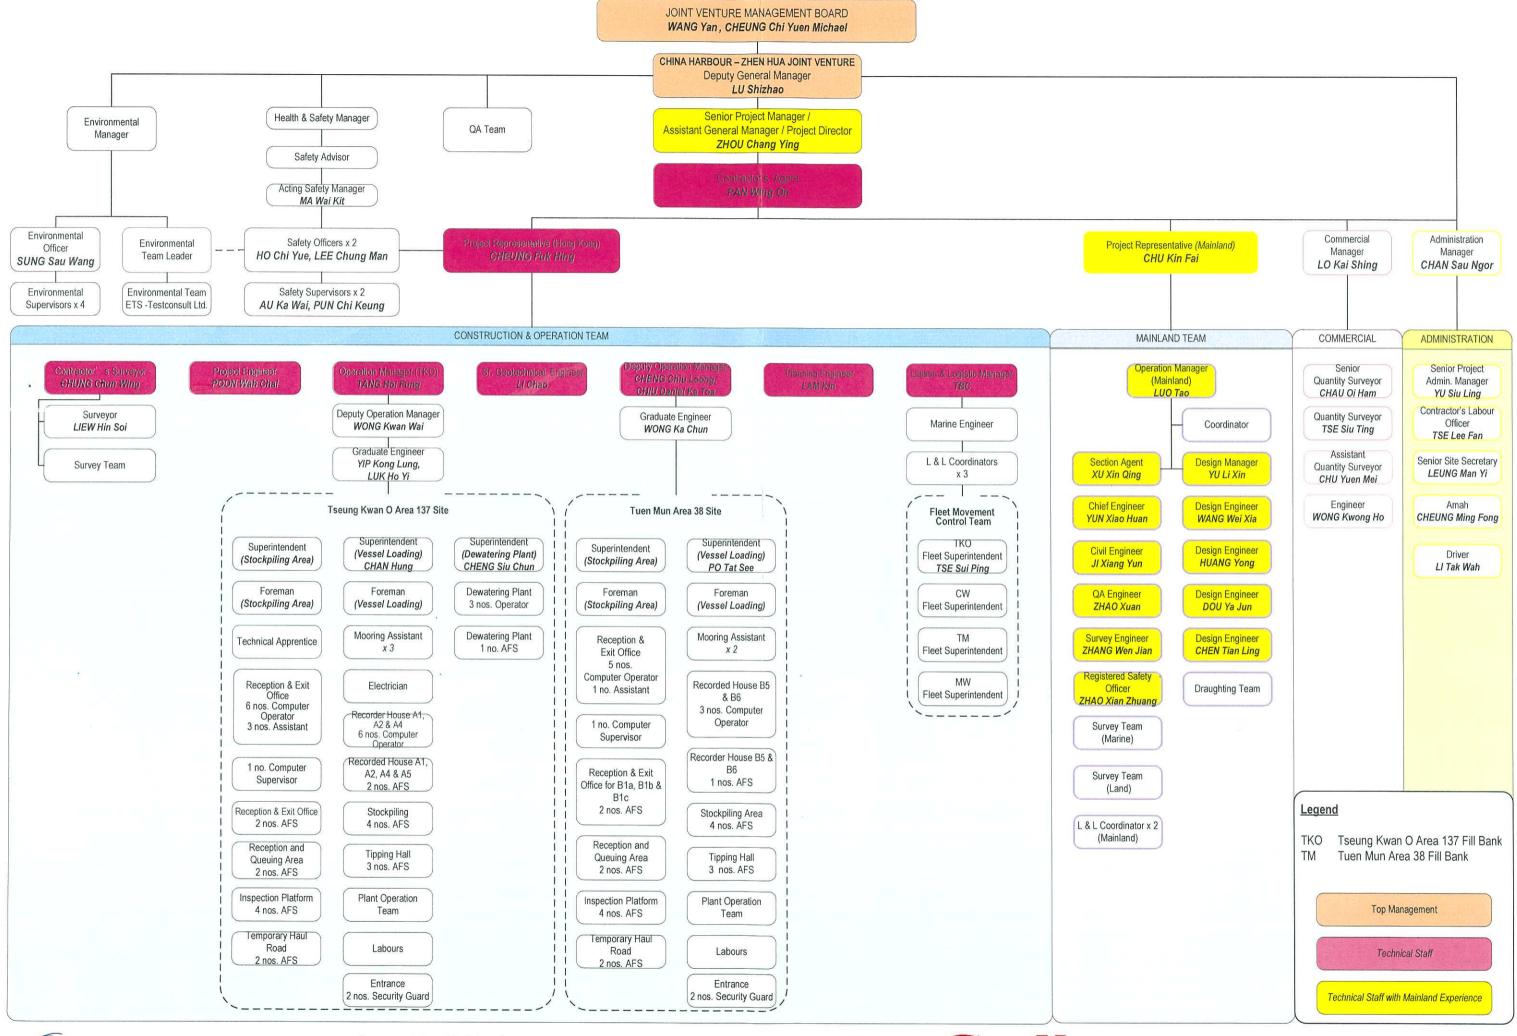

The proposed EM&A program of the coming month and predicted tide schedule from the Hong Kong Observatory are attached in Appendix L.

### **Calibration Report** of **High Volume Air Sampler**

759.06 mm Hg

### Sampler 9795 Calibration Curve Site: Tseung Kwan O 137 (TKO-A1)

Temp.:

Acceptance Criteria : Correlation coefficient (r) of the calibration curve greater than 0.990 after a 5-point calibration

The high volume sampler complies\* / does not comply\* with the specified requirements and is deemed acceptable\*/ unacceptable\* for use.

1. Min Calibrated by Mal MAK, Kei Wai

### **Electrical signal tests**

### 3. Electrical signal tests of frequency weightings (A weighting)

Frequency	Attenuation (dB)	IEC 61672 Type 1 Spec.
31.5 Hz	-39.6	- 39.4 dB, ± 2 dB
63 Hz	-26.3	- 26.2 dB, ± 1.5 dB
125 Hz	-16.3	- 16.1 dB, ± 1.5 dB
250 Hz	-8.7	- $8.6 \text{ dB}, \pm 1 \text{ dB}$
500 Hz	-3.3	- 3.2 dB, ± 1.4 dB
1 kHz	0.0 (Ref)	$0  dB, \pm 1.1  dB$
2 kHz	+1.2	$+$ 1.2 dB, $\pm$ 1.6 dB
4 kHz	+0.9	$+$ 1.0 dB, $\pm$ 1.6 dB
8 kHz	-1.1	- 1.1 dB, +2.1 dB ~ -3.1 dB
16 kHz	-8.0	- 6.6 dB, + 3.5 dB ~ - 17.0 dB

Uncertainty :  $\pm 0.1 \text{ dB}$

#### 4. Frequency & Time weightings at 1 kHz

4.1 Frequency Weighting (Fast)

UUT	Applied	UUT	Difference	IEC 61672
Setting	Value (dB)	Reading (dB)	(dB)	Type 1 Spec.
A	94.0	94.0 (Ref.)		± 0.4 dB
С	94.0	94.0	0.0	
Z	94.0	94.0	0.0	

#### 4.2 Time Weighting (A-weighted)

	(			
UUT	Applied	UUT	Difference	IEC 61672
Setting	Value (dB)	Reading (dB)	(dB)	Type 1 Spec.
Fast	94.0	94.0 (Ref.)		± 0.3 dB
Slow	94.0	94.0	0.0	
Time-averaging	94.0	94.0	0.0	

Uncertainty :  $\pm 0.1 \text{ dB}$ 

Remarks : 1. UUT : Unit-Under-Test

- 2. The uncertainty claimed is for a confidence probability of not less than 95%.
- 3. Atmospheric Pressure : 1 007hPa.
- 4. Microphone model: UC-59, S/N : 16103.
- 5. Preamplifier model : NH-25, S/N : 98718.
- 6. Firmware Version: 2.0
- 7. Power Supply Check: OK
- 8. The UUT was adjusted with the laboratory's sound calibrator at the reference sound pressure level before the calibration.

Calibration Certificates for Impact Marine Water Quality Monitoring Equipments

#### Performance Check / Calibration of Multiparameter Water Quality Meter YSI Equipment Ref. No. : ET/EW/008/011 Manufacturer : Pro DSS Serial No. 18M101760 Model No. • 2/11/2021 Calibration Due Date Date of Calibration : 3/8/2021 :

#### <u>Results</u>

#### 1. Temperature

(Method Reference: Section 6 of internation Accreditation New Zealand Technical Guide no. 3 Second edition March 2008: Working Thermometer Calibration Procedure)

Reading of Reference Thermometer (°C)	Displayed Reading (°C)	Tolerance (°C)
21.4	21.6	+0.2
25.0	25.1	+0.1
28.6	28.7	+0.1

Tolerance Limit (°C): ± 2.0

#### 2. pH

#### (Method Reference: APHA 19ed 4500-H<sup>+</sup> B)

Expected Reading (pH unit)	Displayed Reading (pH unit)	Tolerance (pH unit)
4.00	4.02	+0.02
6.86	6.89	+0.03
9.18	9.17	-0.01

Tolerance Limit (pH unit): ± 0.10

#### 3. Conductivity

#### (Method Reference: APHA 19ed 2510 B)

Expected Reading (µS/cm)	Displayed Reading (µS/cm)	Tolerance (%)
146.9	148.0	+0.7
1412	1452	+2.8
12890	13116	+1.8
58760	61388	+4.5

Tolerance Limit ( $\mu$ S/cm):  $\pm$  10.0%

#### 4. Salinity

(Method Reference: APHA 19ed 2520 B)

Expected Reading (g/L)	Displayed Reading (g/L)	Tolerance (%)
10.0	9.55	-4.5
20.0	18.63	-6.8
30.0	28.75	-4.2

Tolerance Limit (g/L):  $\pm 10.0\%$ 

5. Dissolved Oxygen         Method Reference: APHA 19ed 4500-O G)         Expected Reading (mg/L)       Displayed Reading (mg/L)       Tolerance (mg/L)         1.52       1.58 $+0.06$ 4.33       4.40 $+0.07$ 6.26       6.29 $+0.03$ Folerance Limit (mg/L): $\pm 0.20$ Tolerance (%)         5. # Mid-Ebb Tide

Appendix D3

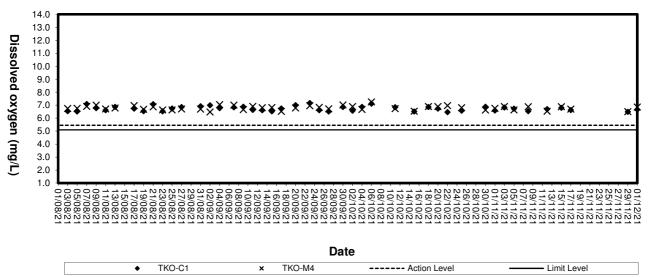

**Graphical Plots of Impact Marine Water Quality Monitoring Data** 

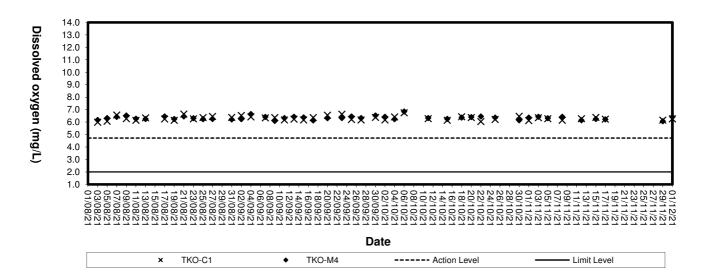

Dissolved Oxygen (Surface & Middle) at Mid-Flood Tide

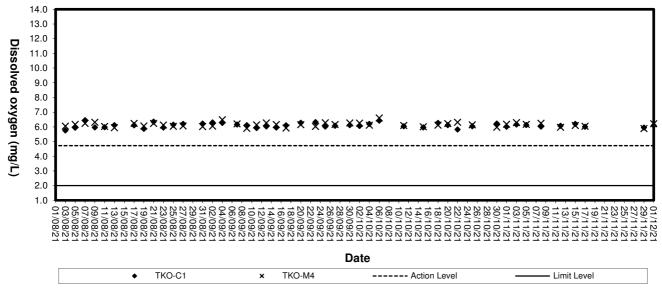

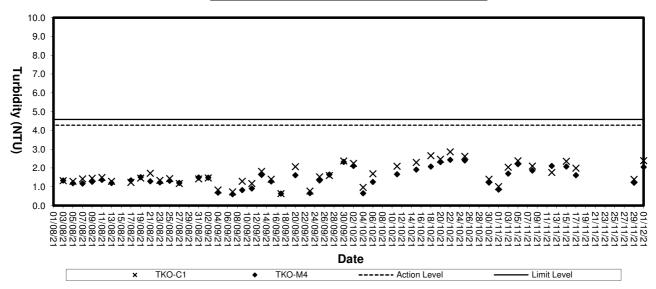

### Dissolved Oxygen (Bottom) at Mid-Flood Tide

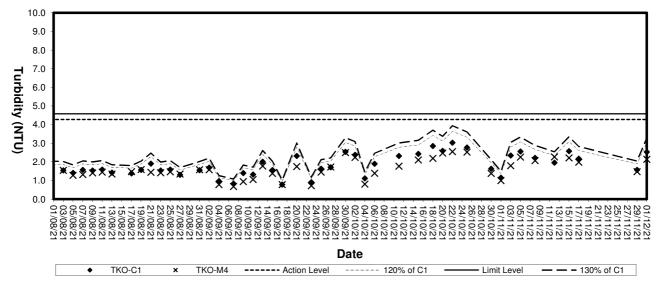

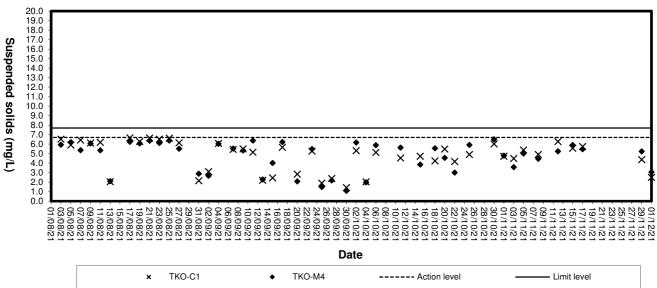

#### Turbidity (Depth-average) at Mid-Flood Tide

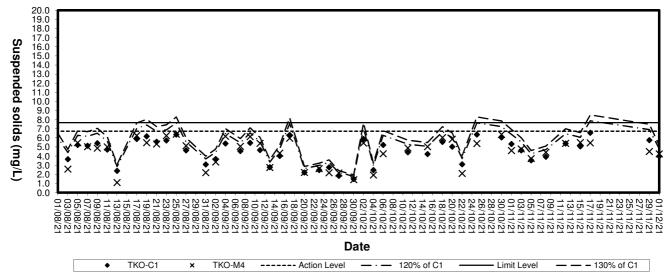

Suspended solids (Depth-average) at Mid-Flood Tide

Suspended Solids (Depth-average) at Mid-Ebb Tide

Appendix D4

Impact Marine Water Quality Monitoring Results (3RS Project)

#### Monitoring Station : TKO-C1a

Environmental Checklist		ment	tation s*	Remark
			N/A	
Fugitive Dust Emission				
<ul> <li>Dust control / mitigation measures shall be provided to prevent dust nuisance.</li> </ul>				
<ul> <li>A buffer zone of at least 100m shall be maintained between the edge of the stockpiling area and the nearest ASRs at the TKO Industrial Estate. Within the buffer zone, no dusty material shall be stockpiled and no loading / unloading and similar activities should be allowed.</li> </ul>	V			
Water sprays shall be provided and used to dampen materials.	$\checkmark$			
<ul> <li>Regular cleaning and watering the site shall be provided to minimize the fugitive dust emissions.</li> </ul>				
All vehicles shall be restrict to a maximum speed of 10 km per hour.	$\checkmark$			
<ul> <li>Any vehicle with open load carrying area used for moving materials which has the potential to create dust shall have properly fitting side and tail boards. Material having the potential to create dust shall not be loaded to a level higher than the side and tail boards, and shall be covered by a clean tarpaulin.</li> </ul>	1			
The designated site main haul road shall be paved or regular watering.				
Frequent watering of work site shall be at least three times per day.	$\checkmark$			
<ul> <li>Wheel washing facilities including high-pressure water jet shall be provided at the entrance of work site.</li> </ul>				
<ul> <li>Every vehicle shall be washed to remove any dusty materials from its body and wheels before leaving the fill bank.</li> </ul>	$\checkmark$			
All plant and equipment should be well maintained e.g. without black smoke emission.	1			
Open burning should be prohibited.				-
<ul> <li>The temporary slope surfaces, especially those facing to the north of the site shall be covered with impermeable sheet or sprayed with water or protected by other method approved by CEDD.</li> </ul>	√			
<ul> <li>Final slope surfaces, especially those facing to the north of the site shall be treated by compaction, followed by hydroseeding, vegetation planting or sealing with shot concrete, latex, vinyl, bitumen, or other suitable surface stabilizer approved by CEDD.</li> </ul>	√			
<ul> <li>When fill material is transfer by belt conveyor systems, the conveyors shall be enclosed on top and 2 sides.</li> </ul>	$$			
The belt scraper shall be equipped with bottom plates or other similar means to prevent falling of material from the return belt.	$\checkmark$			
<ul> <li>The level of stockpiling belt conveyor shall be adjustable such that the vertical distance between the belt conveyor and the material landing point is maintained at no more than 1m.</li> </ul>	√			
<ul> <li>Approval or exemption Non-road Mobile Machinery (NRMM) labels should be painted or securely fixed on regulated machines and non- road vehicles at a conspicuous position according to the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation (APCO Cap.311).</li> </ul>	1			
Noise Impact				<u></u>
<ul> <li>The approved method of working, equipment and sound-reducing measures (e.g. use of silenced type of equipment, etc.) shall be adapted.</li> </ul>	V			
<ul> <li>Only well maintained plant should be operated on-site and plant should be serviced regularly during the construction works.</li> </ul>	$\checkmark$			
<ul> <li>Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials.</li> </ul>	$\checkmark$			
Air compressors and hand held breakers should have noise labels.				
<ul> <li>Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.</li> </ul>			1	
<ul> <li>Noisy equipment and mobile plant shall always be site away from NSRs.</li> </ul>	1			

Environmental Checklist		ement Stages	Remark
		No	
Water Quality			
<ul> <li>Drainage system should be adequate and well maintained to prevent flooding and overflow, especially after rain storms.</li> </ul>	√		
The permanent drainage channels should have sediment basin, traps and baffles and maintain properly.	$\checkmark$		
<ul> <li>Temporary intercepting drains should be used at the stockpiling area to divert polluted stormwater to the intercepting channels. Earth bunds and sand bay barriers shall be used to assist the diversion of polluted stormwater to the intercepting channels.</li> </ul>	V		
<ul> <li>Manholes should be covered and sealed.</li> </ul>			
<ul> <li>Unnecessary water retained in receptacles and standing water should be avoided to prevent mosquito breeding.</li> </ul>			
<ul> <li>A buffer distance of at least 100m shall be maintained between the boundary of the public fill stockpiling area and the sea front.</li> </ul>			
<ul> <li>A buffer distance of at least 20m shall be maintained between the boundary of the C&amp;DMSF and the seafront.</li> </ul>			
<ul> <li>The stormwater intercepting system shall be effective to collect of runoff and remove suspended solids before discharge.</li> </ul>			
<ul> <li>The temporary slope surfaces, especially those facing to the north of the site shall be covered with impermeable sheet or sprayed with water or protected by other method approved by CEDD.</li> </ul>	V		
<ul> <li>Final slope surfaces, especially those facing to the north of the site shall be treated by compaction, followed by hydroseeding, vegetation planting or sealing with shotconcrete, latex, vinyl, bitumen, or other suitable surface stabilizer approved by CEDD.</li> </ul>	V		
<ul> <li>Existing and newly constructed Catchpits, sand and silt removal facilities and intercepting channels shall be maintained, and the deposited silt and grit shall be removed weekly and on a need basis especially at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times.</li> </ul>	V		
<ul> <li>A wheel washing bay shall be provided at the site exit and wash-water shall have sand and silt settled out or removed before being discharged into storm drains.</li> </ul>	<b>√</b>		
<ul> <li>The section of construction road between wheel washing bay and the public road shall be paved with concrete, bituminous materials or hardcores to reduce vehicle tracking of soil and to prevent site run-off from entering public road drains.</li> </ul>	√		
<ul> <li>Sewage from toilets shall be discharged in to a foul sewer, or chemical toilets shall be provided. The chemical toilets (if use) shall be provided by a licensed contractor, who will be responsible for disposal and maintenance of these facilities.</li> </ul>			
<ul> <li>Oil intercept in addition of sand / silt removal facilities shall be provided at the car parking areas.</li> </ul>			
Oil interceptor shall be provided at work shop.	$\checkmark$		
<ul> <li>Tipping halls enclosed with top and 3-side to prevent spillage of material into marine water.</li> </ul>			
<ul> <li>The barges shall be in right size such that adequate clearance in maintained between the vessels and the seabed at all states of the tide to ensure the undue turbidity is not generated by turbulence from vessel movement or propeller wash.</li> </ul>	√		
<ul> <li>All vessels used for transportation of fill material shall have tight fitting seals to their bottom openings to prevent leakage of material during transport.</li> </ul>	√		
<ul> <li>Adequate environmental control measures shall be provided to prevent / avoid dropping of fill material into the sea during the transfer.</li> </ul>			
<ul> <li>Barges shall not be filled to a level which may cause the overflow of material during loading or transportation. Barge effluents shall be properly collected and treated before disposal.</li> </ul>	V		
<ul> <li>The work activities shall not cause any visible foam, oil, grease, scum, litter or other objectionable matters to be present on the water in the vicinity of the barging facilities.</li> </ul>			
<ul> <li>Existing silt curtain at the outward side of the basin near the Barging Handling Area (BHA) throughout the period shall be repair, maintain and service when there is public fill intake by barges to the Fill Bank in accordance with PS Clause 1.68. The total length of the silt curtains shall not be less than 160m, and a gap of about 80m shall be left open for access of barges. The silt curtain shall be properly maintained such that it can also serve the function of refuse containment boom to confine floating refuse.</li> </ul>			
<ul> <li>A waste collection vessel shall be deployed to remove floating debris.</li> </ul>	$\checkmark$		

Environmental Checklist		emen Stages		Remark
	Yes	No	N/A	
Landscape and Visual				
<ul> <li>The design of the fill bank and platform heights adopted should allow the fill bank to fit into the general topography of the surrounding land. Straight edged slopes should be avoided.</li> </ul>	V			
<ul> <li>The maximum stockpiling height at the fill bank shall be limited to a maximum of +35.2mPD.</li> </ul>	√			
<ul> <li>Surface of outer slopes of the fill bank shall preferably be hydroseeded or covered with geo-textile matting of appropriate colour (e.g. dark green / brown) once completed.</li> </ul>	$\checkmark$			
<ul> <li>The barging point and the C&amp;DMSF at the fill bank shall not be in operation from 07:00 pm to 08:00 am daily to avoid potential visual impact from glare.</li> </ul>	$\checkmark$			
Other Environmental Factors				
<ul> <li>C&amp;D waste sorted from mixed C&amp;D material shall be removed from the temporary buffer storage area on a daily basis and transfer to SENT landfill for disposal.</li> </ul>	V			
Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste.	$\checkmark$			
<ul> <li>Any unused materials or those with remaining functional capacity should be recycled and stored properly.</li> </ul>	V			
<ul> <li>All generators, fuel and oil storage are within bundle areas.</li> </ul>	$\checkmark$			
<ul> <li>Oil leakage from machinery, vehicle and plant is prevented.</li> </ul>	$\checkmark$			
The Environmental Permit should be displaced conspicuously on site.				
<ul> <li>Good site practices should be adopted to clean the rubbish and litter on a regular basis so as to prevent the rubbish and litter from dropping into the nearby environment.</li> </ul>	V			
<ul> <li>To encourage collection of aluminium cans by individual collectors, separate labelled bins should be provided to segregate this waste from other general refuse generated by the workforce.</li> </ul>	1			

# Summary of the Weekly Site Inspection:

Environmental Checklist				Remark
Fugitive Dust Emission				
Dust control / mitigation measures shall be provided to prevent dust nuisance.	$\checkmark$			
A buffer zone of at least 100m shall be maintained between the edge of the stockpiling area and the nearest ASRs at the TKO Industrial Estate. Within the buffer zone, no dusty material shall be stockpiled and no loading / unloading and similar activities should be allowed.	√			·
Water sprays shall be provided and used to dampen materials.	$\checkmark$			
Regular cleaning and watering the site shall be provided to minimize the fugitive dust emissions.	$\checkmark$			
All vehicles shall be restrict to a maximum speed of 10 km per hour.	$\checkmark$			
Any vehicle with open load carrying area used for moving materials which has the potential to create dust shall have properly fitting side and tail boards. Material having the potential to create dust shall not be loaded to a level higher than the side and tail boards, and shall be covered by a clean tarpaulin.	V			
The designated site main haul road shall be paved or regular watering.				
Frequent watering of work site shall be at least three times per day.	$\checkmark$			
Wheel washing facilities including high-pressure water jet shall be provided at the entrance of work site.				
Every vehicle shall be washed to remove any dusty materials from its body and wheels before leaving the fill bank.				
All plant and equipment should be well maintained e.g. without black smoke emission.				
Open burning should be prohibited.		ļ.,		
<ul> <li>The temporary slope surfaces, especially those facing to the north of the site shall be covered with impermeable sheet or sprayed with water or protected by other method approved by CEDD.</li> </ul>	V			
<ul> <li>Final slope surfaces, especially those facing to the north of the site shall be treated by compaction, followed by hydroseeding, vegetation planting or sealing with shot concrete, latex, vinyl, bitumen, or other suitable surface stabilizer approved by CEDD.</li> </ul>	√			
When fill material is transfer by belt conveyor systems, the conveyors shall be enclosed on top and 2 sides.				
The belt scraper shall be equipped with bottom plates or other similar means to prevent falling of material from the return belt.	√	1		
The level of stockpiling belt conveyor shall be adjustable such that the vertical distance between the belt conveyor and the material landing point is maintained at no more than 1m.	V			
<ul> <li>Approval or exemption Non-road Mobile Machinery (NRMM) labels should be painted or securely fixed on regulated machines and non- road vehicles at a conspicuous position according to the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation (APCO Cap.311).</li> </ul>	V			
Noise Impact				
<ul> <li>The approved method of working, equipment and sound-reducing measures (e.g. use of silenced type of equipment, etc.) shall be adapted.</li> </ul>	$\checkmark$			
<ul> <li>Only well maintained plant should be operated on-site and plant should be serviced regularly during the construction works.</li> </ul>	$\checkmark$			
<ul> <li>Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials.</li> </ul>	$\checkmark$			
<ul> <li>Air compressors and hand held breakers should have noise labels.</li> </ul>				
<ul> <li>Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.</li> </ul>				
<ul> <li>Noisy equipment and mobile plant shall always be site away from NSRs.</li> </ul>		1	+ +-

**Complaint Log** 

## **Complaint Logs**

Log Ref.	Location	Received Date	Details of Complaint	Investigation / Mitigation Action	Status
001	Barge handling area (BHA) at Tseung Kwan O 137	15 May 2017	One complaint received on 15 May 2017, which was forwarded to ET on 11 August 2017, from CEDD (Complaint NCF- N08/RE/00014875-17 Sent By CSO[RN]3 [CASE#2- 3943858817 Int.Comm. – WS170513A57354] against illegal dumping at sea without permit in TKO137 fill bank.	<ul> <li>Refer to the ET site investigation on 14 August 2017, the contractor clarified that the contractor conducted vessel loading test at Tseung Kwan O 137 Fill bank on 13 May 2017 and the material was then unloaded from the vessels.</li> <li>Follow up action to complaint by ET and contractor: Contractor under the valid dumping permit to dump fill materials and the site works shall be complied with the relevant environmental protection and pollution control ordinances.</li> <li>ET reminded contractor that the dump fill material under the valid dumping permit should be checked and confirmed. In addition, record should be kept for ET reference.</li> <li>Details of Action(s) Taken by the Contactor:</li> <li>The contractor started to dump fill materials from 19 May 2017 after receiving the valid dumping permit.</li> <li>The contractor dump fill materials were followed by the valid dumping permit and the permit was kept apply every three month</li> <li>The contractor kept the permit for ET reference.</li> </ul>	Closed
002	Tseung Kwan O 137 Fill Bank	12 Oct 2017	One complaint received on 12 October 2017, which was forwarded to ET on 18 October 2017, from public against dust emission at the fill bank and discharge of muddy water to the seafront.	<ul> <li>Refer to the ET weekly site inspection on 18 October 2017, no defective observation related to dust emission and discharge of water was recorded during the investigation.</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Regular water spraying by water lorries is provided for dust suppression inside the Fill Bank;</li> <li>Mist spraying systems at the site entrance are operated properly;</li> <li>Site vehicles are washed to remove any dusty materials from their bodies and wheels by using high pressure water jet manually at the entrance of work site before leaving;</li> <li>All dusty material is sprayed with water prior to loading, unloading or transfer so as to maintain the material wet;</li> <li>Site vehicle for transporting materials are covered properly by using clean tarpaulin sheets;</li> <li>Regular cleaning at the site haul road is provided to minimize the fugitive dust emission;</li> <li>Silt curtains are provided at the outward side of the basin near the Fill Bank;</li> <li>Drainage systems are adequate and maintained to prevent flooding and overflow;</li> <li>Catchpits, sand and silt removal facilities and intercepting channels are maintained and functioning properly.</li> </ul> </li> </ul>	Closed

003	Tseung Kwan O 137 Fill Bank	09 April 2018	One complaint received on 09 April 2018, which was forwarded to ET on 18 April 2018, from public against the rocks and debris deposited on the road surface along Wan Po Road near TKO137 Fill Bank. The complainant complained that waste generated caused an environmental nuisance.	<ul> <li>Refer to the ET site investigation on 20 April 2018, the condition of Wan Po Road near TKO137 Fill Bank was found satisfactory. (Photos on ET follow-up investigation at TKO137 Fill Bank on 20 April 2018).</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Regular cleaning on Wan Po Road and the access road at the site exit by haul road cleaning team to remove mud and gravel is arranged eight times per month;</li> <li>Regular water spraying by water lorries is provided for road cleaning at Wan Po Road;</li> <li>Site vehicles are washed to remove any dusty materials from their bodies and wheels by using high pressure water jet manually at the entrance of work site before leaving;</li> <li>Site vehicles for transporting materials are covered properly by using clean tarpaulin sheets;</li> <li>Regular cleaning at the site haul road is provided.</li> </ul> </li> </ul>	Closed
004	Tseung Kwan O 137 Fill Bank	13 January 2019	One complaint received on 13 January 2019, which was forwarded to ET on 16 January 2019, from EPD (NCF-N08/RE/00001348-19) against 將軍澳 137 堆填區 內,缸車池污水,不經處理, 直接排到河道,河道係直接流 出大海,極度嚴重影響周遭環 境生態,污染程度極為嚴重, 促請政府有關部門嚴正跟進!	<ul> <li>After received the details of the complaint from the Contractor on 16 January 2019, ET have performed a site investigation on 21 January 2019 to investigate this event. During the site inspection, no muddy water was observed discharged from the Fill Bank to nearby environment.</li> <li>Besides, refer to the marine water monitoring results during that period, no exceedance was recorded on Turbidity and Suspended Solids. This reflects that this occurrence did not affect the condition of marine water near the TKO137Fill Bank.</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Drainage system were adequate and well maintained to prevent flooding and overflow;</li> <li>Sand and silt removal facilities, e.g. silting screen, were provided before the discharge point;</li> <li>Temporary intercepting drains were used at the stockpiling area to divert polluted stormwater to the intercepting channels. Earth bunds and sand bay barriers were used to assist the diversion of polluted stormwater to the intercepting channels were maintained, and the deposited silt and grit were removed weekly and on a need basis especially at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times;</li> </ul></li></ul>	Closed

005	Tseung Kwan O 137 Fill Bank	14 May 2019	One complaint received on 14 May 2019, which was forwarded to ET on 14 May 2019, from public against 投 訴將軍澳第 137 區填料庫, 有車出入沒有灑水傳出大量沙 塵,破壞環境,帶出大量沙泥 到馬路,造成污染及嚴重滋 擾,要求跟進。要求改善, 停止滋擾	<ul> <li>Refer to the ET site investigation on 15 May 2019, the condition of Wan Po Road near TKO137 Fill Bank was found satisfactory. (Photos on ET follow-up investigation at TKO137 Fill Bank on 15 May 2019).</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Regular cleaning on Wan Po Road and the access road at the site exit by haul road cleaning team to remove mud and gravel is arranged eight times per month;</li> <li>Regular water spraying by water lorries is provided for road cleaning at Wan Po Road;</li> <li>Site vehicles are washed to remove any dusty materials from their bodies and wheels by using high pressure water jet manually at the entrance of work site before leaving;</li> <li>Site vehicles for transporting materials are covered properly by using clean tarpaulin sheets;</li> <li>Regular cleaning at the site haul road is provided.</li> </ul> </li> </ul>	Closed
006	Tseung Kwan O 137 Fill Bank	11 June 2019	One complaint received on 04 June 2019, which was forwarded to ET on 11 June 2019, from public regarding the muddy water problem at 137 fill bank.	<ul> <li>After received the details of the complaint from the Contractor on 11 June 2019, ET have performed a site investigation on 14 June 2019 to investigate this event. During the site inspection, no muddy water was observed discharged from the Fill Bank to nearby environment.</li> <li>Besides, refer to the marine water monitoring results during that period, no exceedance was recorded on Turbidity and Suspended Solids during the concerning period. This reflects that this occurrence did not affect the condition of marine water near the TKO137Fill Bank.</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Drainage system were adequate and well maintained to prevent flooding and overflow;</li> <li>Sand and silt removal facilities, e.g. silting screen, were provided before the discharge point;</li> <li>Temporary intercepting drains were used at the stockpiling area to divert polluted stormwater to the intercepting channels. Earth bunds and sand bay barriers were used to assist the diversion of polluted stormwater to the intercepting channels were maintained, and the deposited silt and grit were removed weekly and on a need basis especially at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times;</li> </ul></li></ul>	Closed

007	Tseung Kwan O 137 Fill Bank	27 June 2019	One complaint received on 27 June 2019, which was forwarded to ET on 28 June 2019, from public against dust emission at the fill bank. The complainant complained that the dust caused an environmental nuisance.	<ul> <li>Refer to the ET site investigation on 02 July 2019, no defective observation related to dust emission was recorded during the investigation.</li> <li>No impact air quality monitoring result of 1-hr TSP and 24-hr TSP was exceeded Action and Limit Level at all monitoring stations from 24 to 28 June 2019.</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Regular water spraying by water lorries is provided for dust suppression inside the Fill Bank;</li> <li>Mist spraying systems at the site entrance are operated properly;</li> <li>Site vehicles are washed to remove any dusty materials from their bodies and wheels by using high pressure water jet manually at the entrance of work site before leaving;</li> <li>All dusty material is sprayed with water prior to loading, unloading or transfer so as to maintain the material wet;</li> <li>Truck speed within the site is limited within 10 km/h;</li> <li>Regular cleaning at the site haul road is provided to minimize the fugitive dust emission;</li> </ul> </li> </ul>	Closed
008	Tseung Kwan O 137 Fill Bank	17 July 2019	One complaint received on 17 July 2019, which was forwarded to ET on 17 July 2019, from public against 投 訴將軍澳堆填 137 區及收泥 頭區,於運作時產生大量沙 塵,嚴重污染周圍環境及影響 行人,情況已持續發生了幾日	<ul> <li>Refer to the ET site investigation on 19 July 2019, no defective observation related to dust emission was recorded during the investigation.</li> <li>No impact air quality monitoring result of 1-hr TSP and 24-hr TSP was exceeded Action and Limit Level at all monitoring stations from 2 to 17 July 2019.</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Regular water spraying by water lorries is provided for dust suppression inside the Fill Bank;</li> <li>Mist spraying systems at the site entrance are operated properly;</li> <li>Site vehicles are washed to remove any dusty materials from their bodies and wheels by using high pressure water jet manually at the entrance of work site before leaving;</li> <li>All dusty material is sprayed with water prior to loading, unloading or transfer so as to maintain the material wet;</li> <li>Truck speed within the site is limited within 10 km/h;</li> <li>Regular cleaning at the site haul road is provided to minimize the fugitive dust emission;</li> </ul> </li> </ul>	Closed

009	Tseung Kwan O 137 Fill Bank	26 July 2019	One complaint received on 26 July 2019, which was forwarded to ET on 26 July 2019, from public against 投 訴將軍澳第 137 區填料庫, 大風吹起引致塵埃飛揚,更吹 到 TVB,造成嚴重滋擾,要 求跟進及回覆。	<ul> <li>Refer to the ET site investigation on 29 July 2019, no defective observation related to dust emission was recorded during the investigation.</li> <li>No impact air quality monitoring result of 1-hr TSP and 24-hr TSP was exceeded Action and Limit Level at all monitoring stations from 23 to 29 July 2019.</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Regular water spraying by water lorries is provided for dust suppression inside the Fill Bank;</li> <li>Mist spraying systems at the site entrance are operated properly;</li> <li>Site vehicles are washed to remove any dusty materials from their bodies and wheels by using high pressure water jet manually at the entrance of work site before leaving;</li> <li>All dusty material is sprayed with water prior to loading, unloading or transfer so as to maintain the material wet;</li> <li>Truck speed within the site is limited within 10 km/h;</li> <li>Regular cleaning at the site haul road is provided to minimize the fugitive dust emission;</li> </ul> </li> </ul>	Closed
010	Tseung Kwan O 137 Fill Bank	09 September 2019	One complaint received on 09 September 2019, which was forwarded to ET on 09 September 2019, from public against 投訴將軍澳第 137 區 填料庫,大風吹起引致塵埃飛 揚,更吹到日出康城,造成嚴 重滋擾,要求跟進及回覆。	<ul> <li>Refer to the ET site investigation on 11 September 2019, no defective observation related to dust emission was recorded during the investigation.</li> <li>No impact air quality monitoring result of 1-hr TSP and 24-hr TSP was exceeded Action and Limit Level at all monitoring stations from 1 to 13 September 2019.</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Regular water spraying by water lorries is provided for dust suppression inside the Fill Bank;</li> <li>Mist spraying systems at the site entrance are operated properly;</li> <li>Site vehicles are washed to remove any dusty materials from their bodies and wheels by using high pressure water jet manually at the entrance of work site before leaving;</li> <li>All dusty material is sprayed with water prior to loading, unloading or transfer so as to maintain the material wet;</li> <li>Truck speed within the site is limited within 10 km/h;</li> <li>Regular cleaning at the site haul road is provided to minimize the fugitive dust emission;</li> </ul> </li> </ul>	Closed

011	Tseung Kwan O 137 Fill Bank	10 September 2019	One complaint received on 10 September 2019, which was forwarded to ET on 10 September 2019, from public against 投訴將軍澳 137 區經常 於處理建築廢料時沒有灑水,導 致沙塵滾滾,嚴重污染環境,要 求環保署跟進及回覆。	<ul> <li>Refer to the ET site investigation on 11 September 2019, no defective observation related to dust emission was recorded during the investigation.</li> <li>No impact air quality monitoring result of 1-hr TSP and 24-hr TSP was exceeded Action and Limit Level at all monitoring stations from 1 to 13 September 2019.</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Regular water spraying by water lorries is provided for dust suppression inside the Fill Bank;</li> <li>Mist spraying systems at the site entrance are operated properly;</li> <li>Site vehicles are washed to remove any dusty materials from their bodies and wheels by using high pressure water jet manually at the entrance of work site before leaving;</li> <li>All dusty material is sprayed with water prior to loading, unloading or transfer so as to maintain the material wet;</li> <li>Truck speed within the site is limited within 10 km/h;</li> <li>Regular cleaning at the site haul road is provided to minimize the fugitive dust emission;</li> </ul> </li> </ul>	Closed
012	Tseung Kwan O 137 Fill Bank	24 August 2021	One complaint received on 24 August 2021, which was forwarded to ET on 30 August 2021, from public against 投訴將軍澳第 137 區 公眾填料庫,灑水不足,泥頭 車引起大量塵埃。	<ul> <li>Refer to the ET site investigation on 30 August 2021, no defective observation related to dust emission was recorded during the investigation.</li> <li>No impact air quality monitoring result of 1-hr TSP and 24-hr TSP was exceeded Action and Limit Level at all monitoring stations from 20 August 2021 to 30 August 2021.</li> <li>Details of Action(s) Taken by the Contactor: <ul> <li>Repairing work on water truck was conducted.</li> <li>Regular water spraying by water lorries is provided for dust suppression inside the Fill Bank;</li> <li>Mist spraying systems at the site entrance are operated properly;</li> <li>Site vehicles are washed to remove any dusty materials from their bodies and wheels by using high pressure water jet manually at the entrance of work site before leaving;</li> <li>All dusty material is sprayed with water prior to loading, unloading or transfer so as to maintain the material wet;</li> <li>Truck speed within the site is limited within 10 km/h;</li> <li>Regular cleaning at the site haul road is provided to minimize the fugitive dust emission;</li> </ul> </li> </ul>	Closed
