EXECUTIVE SUMMARY

Introduction

1. Aurecon Hong Kong Ltd. (Aurecon) is commissioned by Dragages Hong Kong Limited (Contractor) as the Environmental Team to undertake the Environmental Monitoring and Audit (EM&A) programme for the Works Contract 1601 - Kwu Tung Station on East Rail Line to ensure that the environmental performance of the Works Contractor complies with the requirements specified in the Environmental Permit (EP no. FEP-06/129/2002/I), Environmental Review Report (ERR) and Updated EM&A Manual under this EP for the Kwu Tung Station on the East Rail Line and other relevant statutory requirements.

This is the 1st Monthly EM&A Report for the Contract 1601 Kwu Tung Station on East Rail Line which summaries findings of the EM&A programme during the reporting period from 1 November 2023 to 30 November 2023.

Breaches of Action and Limit Levels

Air Quality

2. No Action and Limit Level exceedance was recorded for air quality monitoring in the reporting month.

Construction Noise

3. No Action and Limit Level exceedance was recorded for construction noise monitoring in the reporting month.

Environmental Non-Compliance

4. No environmental non-compliance was recorded in the reporting month.

Complaint log

5. No complaint was received in the reporting period.

Notification of Summons and Successful Prosecutions

6. No notifications of summons and successful prosecutions were received in the reporting period.

Reporting Changes

7. There were no reporting changes in the reporting month.

Future Key Issues

8. The main works will be anticipated in the next three months are as follow:

Upper Platform and KTU Site (Above-ground); KTU(Below-ground):

- Site clearance and installation (Above-ground Works)
- Haul road formation (Above-ground Works)
- Hoarding erection (Above-ground Works)
- Modification of existing facilities inside the tunnel (below-ground)
- Station excavation work

9. Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality, waste management and landscape and visual impact issues.

1 PROJECT INFORMATION

1.1 Background

- 1.1.1 The Environmental Impact Assessment (EIA) report for “Sheung Shui to Lok Ma Chau Spur Line” (Register No.: AEIAR-052/2002) (hereafter called the “approved EIA”) conducted by Kowloon-Canton Railway Corporation (KCRC) was approved in 2002, and addressed the environmental impacts caused by the LMC Spur Line. As far as the railway station at Kwu Tung is concerned, the approved EIA had considered the potential construction and operational impacts for the railway station at Kwu Tung enabling works including the station box structure.
- 1.1.2 In December 2020, the MTR Corporation Limited (i.e., MTRCL, hereafter called the Project Proponent) was invited by the Government to commence the detail planning and design of the railway station at Kwu Tung.
- 1.1.3 The construction and operation of the LMC Spur Line constitutes to Item A.2 Designated Project (DP) “A railway and its associated stations”, under Part I Schedule 2 of Environmental Impact Assessment Ordinance (EIAO). KCRC had applied for and had been granted numbers of Environmental Permits (EPs) and Further Environmental Permits (FEP) for its construction and operation of LMC Spur Line, including the existing tunnel box and enabling works.
- 1.1.4 In order to expand the scope of the FEP (No. FEP-06/129/2002/H) held by MTRCL to cover the construction and operation of the proposed Kwu Tung Station on the East Rail Line (hereinafter called “the Project”), variation of this FEP was required. The Environmental Review Report (ERR) had been prepared and submitted under the VEP application. The VEP application had been approved and a new Environmental Permit (No. FEP- 06/129/2002/I) was granted by EPD on 24 December 2021.
- 1.1.5 Wellab Limited was appointed as the Environmental Team (ET) by Kum Shing (K.F.) Construction Company Limited to undertake the EM&A services for the Project under the “Contract 1633 – Alteration and Addition Works at Kwu Tung for East Rail Line Protection Works” for the period from 20 February 2023 to 31 October 2023.
- 1.1.6 Aurecon Hong Kong Limited (Aurecon) has been appointed as the Environmental Team (ET) by Dragages Hong Kong Limited (Contractor) to undertake the EM&A services for the Project under the “Contract 1601 – Kwu Tung Station on East Rail Line” (hereinafter called the “Works Contract”) from 1 November 2023. Weekly environmental site inspections and environmental monitoring as scheduled under EM&A programme with effect from 1 November 2023 was conducted by Aurecon.
- 1.1.7 This is the 1st monthly Environmental Monitoring and Audit (EM&A) Report for Contract 1601 Kwu Tung Station on East Rail Line under Environmental Permit No. FEP-06/129/2002/I. This report was prepared by Aurecon Hong Kong Ltd. (Aurecon) presenting the EM&A works carried out during the reporting period from 1 to 30 November 2023.
- 1.1.8 The scope of works under the Kwu Tung Station on the East Rail Line comprises the following:
- Excavation of the fill material above the existing tunnel box;
 - Modification of existing tunnel box structures;
 - Construction of concourse and platform areas;
 - Construction of back-of-house areas;
 - Construction of entrances, Ventilation Buildings (VB) and Fire Rescue Stairs (FRS);
 - Modification of existing Emergency Access Point (EAP)/ Emergency Egress Point (EEP);
 - Relocation of existing EVA and associated facilities; and
 - Construction of other station associated facilities and underground adit.
- 1.1.9 The construction area of the Project is shown in **Figure 1**.

Project Organization

1.1.10 The project organization and contact details are shown in **Figure 3**.

Summary of Construction Works Undertaken During Reporting Month

1.1.11 The major site activities undertaken in the reporting month included:

Upper Platform and KTU Site:

- Site clearance and installation (Above-ground Works)
- Haul road formation (Above-ground Works)
- Hoarding erection (Above-ground Works)

Construction Programme

1.1.12 Construction Programme from the Contractor is given in **Appendix A**.

Status of Environmental Licenses, Notifications and Permits

1.1.13 A summary of the status of the relevant permits, licenses and/or notifications on environmental protection for this project is presented in **Table 1.1**.

Table 1.1 Relevant Environmental Licenses, Permits and/or Notifications

Environmental License / Permit / Notification	Reference Number	Valid From	Valid Till	Status
Environmental Permit for whole project	FEP-06/129/2002/1	24/12/2021	N/A	Valid
Notification pursuant to Air Pollution Control (Construction Dust) Regulation	Ref No.: 497363	22/09/2023	N/A	Valid
Billing Account for Disposal of Construction Waste	Account No.: 7048687	16/10/2023	N/A	Valid
Registration of Chemical Waste Producer	500017	TBA	N/A	Submitted on 23/11/2023
Effluent Discharge License under Water Pollution Control Ordinance	500018	TBA	N/A	Submitted on 23/11/2023

2 AIR QUALITY MONITORING

2.1 Monitoring Requirement

2.1.1 According to the Updated EM&A Manual of the Project, 1 - hour Total Suspended Particulate shall be conducted at least 3 times every six days. A sampling frequency shall be strictly observed at all the monitoring stations.

2.2 Monitoring Location

2.2.1 According to Section 5.5.7 of the Updated EM&A Manual, five air quality monitoring locations, namely CD1a, CD2a, CD3a, CD4a, CD5a are covered under the Project as shown in **Figure 2**. The locations of the existing air sensitive receivers (ASR) around the Project as identified in the ERR are shown in **Figure 2a**. **Table 2.1** describes the location of the air quality monitoring stations.

Table 2.1 Location for Air Quality Monitoring Locations

Monitoring Station ID	Description
CD1a	Village Houses along Ma Tso Lung Road
CD2a	Village Houses near Shek Tsai Leng
CD3a	Village Houses along Ho Sheung Heung Road
CD4a	Construction site office of Advance Site Formation and Engineering Infrastructure Works at Kwu Tung North and Fanling North New Development Areas – Contract No. ND/2019/01
CD5a	Dills Corner Garden

2.3 Monitoring Equipment

2.3.1 Upon approval of the IEC, 1-hour TSP levels can be measured by direct reading method with using handheld dust meter, which is capable of producing comparable results as that by the high-volume sampling method, to indicate short event impacts.

2.3.2 The proposed use of handheld dust meter was submitted to the IEC and agreement was obtained from the IEC in accordance with Section 5.4.5 of the Updated EM&A Manual.

2.3.3 **Table 2.2** summarizes the equipment used in the air quality monitoring programme. Copies of calibration certificates are attached in **Appendix B**.

Table 2.2 Air Quality Monitoring Equipment

Equipment	Model	Serial Number
Portable Dust Meter – 1- hour TSP	SIBATA Digital Dust Indicator (Model: LD-5R)	0Z4545
		851816
		882106
		882150

2.3.4 In accordance with Section 5.6.3 and 5.6.4 of the Updated EM&A Manual, meteorological information extracted from “Hong Kong Observatory - Ta Kwu Ling Weather Station” is used as the alternative method to obtain representative wind data. For Ta Kwu Ling Weather Station, it is located nearby the Project site and situated at approximately 15m above mean sea level. The station’s wind data monitoring equipment is set above the existing ground 10 meters in compliance with the general setting up requirements. Furthermore, this station also provides other meteorological information, such as humidity, rainfall, air pressure and temperature etc.

2.4 Monitoring Parameters, Frequency and Duration

2.4.1 The parameters, duration and frequency for air quality impact monitoring is given in **Table 2.3**. Monitoring stations CD1a, CD2a, CD3a, CD4a and CD5a were set up in accordance to the requirements for placement of equipment, as set out in Section 5.5.7 of the Updated EM&A manual of the Project.

Table 2.3 Air Quality Monitoring Parameters, Frequency and Duration

Parameters	Frequency
1 – hour TSP	3 times for every 6 days

2.5 Monitoring Methodology and QA/QC Procedure

1-hour TSP Air Quality Monitoring

Instrumentation

2.5.1 The measuring procedures of the handheld dust meter are in accordance with the Manufacturer’s Instruction Manual as follows:

2.5.2 Handheld dust meter was deployed for the air quality monitoring location as shown in **Table 2.1**.

2.5.3 The measuring procedures and equipment set-up of the 1-hour dust meters were in accordance with the Manufacturer’s Instruction Manual as follow:

- Securely fix the meter at a level of 0.9m to 1.9m from ground, at a position with unrestricted airflow around the meter.
- Pull up the air sampling inlet cover.
- Change the Mode 0 to BG with once.
- Push Start/Stop switch once.
- Turn the knob to SENSLADJ and press it.
- Push Start/Stop switch once.
- Return the knob to the position MEASURE slowly.
- Push the timer set switch to set measuring time.
- Remove the cap and make a measurement.

2.6 Maintenance/Calibration

2.6.1 The following maintenance/calibration was required for the direct dust meters:

- Check and calibrate the dust meter by high volume sampler (HVS) to check the validity and accuracy of the results measured by direct reading method. Calibration of dust meter should be carried out every six months throughout all stages of the air quality monitoring. The calibration certificates of the monitoring equipment are presented in **Appendix B**.
- The correlation coefficient was checked to establish the correlation relationship between the handheld dust meter and HVS. The correlation factor was determined by comparing the results of HVS and handheld dust meter.
- Checking is made prior to air quality monitoring commencing to ensure all equipment is in good working condition with necessary power supply. Zero count test were conducted before and after each monitoring event.

- The calibration of environmental equipment used was cross checked by the IEC to confirm the precision of the application.

2.7 Environmental Quality Performance Limits

2.7.1 The baseline monitoring results formed the basis for determining the air quality criteria for the impact monitoring. The ET shall compare the impact monitoring results with air quality criteria set up for 1-hour TSP. Based on the baseline dust monitoring data and the derivation criteria specified above, the Action/Limit Levels are presented in **Table 2.4**.

Table 2.4 Action and Limit Levels for 1-hour TSP

Monitoring Location	Action Level ($\mu\text{g}/\text{m}^3$)	Limit Level ($\mu\text{g}/\text{m}^3$)
CD1a	275	500
CD2a	279	
CD3a	279	
CD4a	281	
CD5a	280	

2.8 Results and Observations

2.8.1 The Impact air quality monitoring result are summarized in **Table 2.5**. Detailed monitoring results and graphical presentations of air quality monitoring results are shown in **Appendix D**.

Table 2.5 Summary of 1 - hour TSP Monitoring Results

Monitoring Location	Average ($\mu\text{g}/\text{m}^3$)	Range ($\mu\text{g}/\text{m}^3$)	Action Level ($\mu\text{g}/\text{m}^3$)	Limit Level, ($\mu\text{g}/\text{m}^3$)
CD1a	26	14 - 39	275	500
CD2a	28	15 - 41	279	
CD3a	23	10 - 43	279	
CD4a	21	16 - 34	281	
CD5a	28	16 - 38	280	

2.8.2 The schedule of air quality monitoring in the reporting month is shown in **Appendix C**.

2.8.3 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedances was recorded.

2.8.4 At CD4a, major dust source included vehicle emission and dust from traffic. At CD5a, major dust sources included excavation, dump truck, and vehicle emission observed in other construction sites nearby CD5a. No other sources dust emission was observed at CD1a, CD2a, CD3a and CD4a during air quality monitoring.

2.8.5 The weather information during the reporting period is summarized in **Appendix F**.

2.9 Event and Action Plan

2.9.1 Should non-compliance of the air quality criteria occur, actions in accordance with the Action Plan in **Appendix G** shall be carried out.

3 NOISE MONITORING

3.1 Monitoring Requirements

- 3.1.1 In accordance with the Updated EM&A Manual, construction noise monitoring shall be conducted in terms of the A-weighted equivalent continuous sound pressure level (L_{eq}) to monitor the construction noise arising from the construction activities.
- 3.1.2 The regular monitoring frequency for each monitoring station was on a weekly basis and one set of measurements between 0700 and 1900 hours on normal weekdays shall be conducted. **Table 3.1** shows the established Action and Limit Levels for the environmental monitoring works.

Table 3.1 Action and Limit Levels for Construction Noise

Time Period	Action Level	Limit Level
0700-1900 hrs on normal weekdays	When one documented complaint is received	75 dB(A)

3.2 Monitoring Location

- 3.2.1 According to Section 6.5.4 of the Updated EM&A Manual, impact noise monitoring was conducted at one designated noise monitoring stations as shown in **Figure 3**. The locations of the existing noise sensitive receivers (NSR) around the Project as identified in the ERR are shown in **Figure 3b**. **Table 3.2** describes the locations of the noise monitoring stations.

Table 3.2 Location of Noise Monitoring Stations

Monitoring Station(s)	Location(s)
CN1a	Dills Corner Garden

3.3 Monitoring Equipment

- 3.3.1 As referred to the requirements of the Technical Memorandum (TM) issued under the NCO, the sound level meters in compliance with the International Electro technical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications should be used for carrying out the noise monitoring. Immediately prior to and following each noise measurement, the accuracy of the sound level meter should be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. The measurements may be accepted as valid only if the difference between calibration levels obtained before and after the noise measurement is less than 1.0 dB (94 dB \pm 0.1 dB).
- 3.3.2 **Table 3.3** summarizes the noise monitoring equipment used. Copies of calibration certificates are attached in **Appendix B**.

Table 3.3 Noise Monitoring Equipment

Equipment	Manufacturer	Model	Serial Number
Sound Level Meter	NTi Audio	XL2	A2A-09696-E0
Acoustical Calibrator	RION	NC-75	34724243
			34724245

3.4 Monitoring Parameters, Frequency and Duration

3.4.1 The parameters and frequencies of impact noise monitoring is summarized in **Table 3.4**. Monitoring stations CN1a was set up in accordance with the requirements for placement of equipment, as set out in Section 6.5.4 of the Updated EM&A manual of the Project.

Table 3.4 Noise Quality Monitoring Parameters, Frequency and Duration

Parameters and duration	Frequency	Measurement
30-mins measurement at each monitoring station between 0700 and 1900 on normal weekdays. L_{eq} , L_{10} and L_{90} would be recorded.	Once per week	Free – field ^[1]

Remarks:

[1] Correction of +3dB (A) for Free-field measurement.

3.5 Monitoring Methodology and QA/QC Procedures

3.5.1 Noise measurement should be conducted as the following procedures:

- The sound level meter was set on a tripod at a point 1m from the exterior of the noise sensitive façade and at the position of 1.2m above the ground;
- For free field measurement, the meter was positioned away from any nearby reflective surfaces. Free field noise levels were adjusted with a correction of +3 dB(A);
- The battery condition was checked to ensure good functioning of the meter;
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - frequency weight: A
 - time weighting: Fast
 - measurement time: L_{eq} (30-mins) dB(A)
(As six consecutive L_{eq} (5-mins) during non-restricted hours (i.e., 0700-1900 hrs. on normal weekdays)
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re- calibration or repair of the equipment;
- During the monitoring period, the L_{eq} , L_{90} and L_{10} were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet;
- Noise measurement was paused temporarily during periods of high intrusive noise (e.g., dog barking, helicopter noise) if possible and observation record during measurement period should be provided; and
- Noise monitoring was cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s. The wind speed should be checked with a portable wind speed meter capable of measuring the wind speed in m/s.

3.6 Maintenance and Calibration

3.6.1 Maintenance and calibration procedures should also be carried out, including:

- The sound level meter and calibrator should be calibrated annually by a HOKLAS laboratory.
- The microphone head of the sound level meter and calibrator should be cleaned with a soft cloth at quarterly intervals.
- Immediately prior to and following each noise measurement, the accuracy of the sound level meter should be checked using an acoustic calibrator generating a known sound pressure level at

a known frequency. Measurements would be accepted as valid only if the calibration levels before and after the noise measurement agreed to within 1.0 dB.

- The calibration of environmental equipment used was cross checked by the IEC to confirm the precision of the application.

3.7 Results and Observations

3.7.1 The noise monitoring results are summarized in **Table 3.5**. Detailed monitoring results and graphical presentations of noise monitoring are shown in **Appendix E**.

Table 3.5 Summary of Noise Monitoring Results during in the Reporting Month

Monitoring Station	Time Period	Noise Level Leq (30-mins) dB(A) ^[1]	Limit Level dB(A)
CN1a	Daytime (0700 – 1900)	59.0 – 74.6	75

Remarks:

[1] Correction of +3dB (A) for Free-field measurement.

3.7.2 The schedule of noise monitoring in reporting month is shown in **Appendix C**.

3.7.3 Construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded. The summary of exceedance record in reporting month is shown in **Appendix H**.

3.7.4 At CN1a, major noise sources included excavation, dump truck, and road traffic observed in the construction sites nearby CN1a during noise monitoring.

3.7.5 The weather information for noise monitoring during reporting period is summarized in **Appendix F**.

3.8 Event and Action Plan

3.8.1 Should non-compliance of the noise monitoring criteria occur, actions in accordance with the Event and Action Plan in **Appendix G** shall be carried out.

4 LANDSCAPE AND VISUAL MONITORING

4.1 Monitoring Requirements

- 4.1.1 In accordance with Section 11.3 of the Updated EM&A Manual, site audit should be undertaken during the construction phase of the Project to check that the proposed landscape and visual mitigation measures are properly implemented and maintained as per their intended objectives.
- 4.1.2 Site inspections of the implementation of landscape and visual mitigation measures were conducted by ET at least once per month during the construction period. The observation and recommendations made during the audit sessions are summarized in **Table 5.1**. The implementation status is given in **Appendix I**.

5 ENVIRONMENTAL SITE INSPECTION

5.1 Site Audits

- 5.1.1 Site inspections were carried out on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures under the Contract. In the reporting period, site inspections were carried out on 01, 09, 14, 22 and 29 November 2023. The site inspection held on 14 November 2023 were joint inspection with the MTR's Representative, IEC, the Contractor, and the ET during the reporting period.
- 5.1.2 No non-conformance was identified during the site inspections in the reporting month. Key observations during the site inspections in the reporting period are summarized in **Table 5.1**.

Table 5.1 Observations and Recommendations of Site Audit

Date	Environmental Observation(s) / Recommendation(s)	Follow-up Status
2023 - 11- 01	No Major environmental issue was observed during the site inspection.	NA
2023 - 11- 09	NRMM label should be posted on the excavator.	Rectified on 10 November 2023.
2023 - 11- 14	No Major environmental issue was observed during the site inspection.	NA
2023 - 11- 22	No Major environmental issue was observed during the site inspection.	NA
2023 - 11- 29	No Major environmental issue was observed during the site inspection.	NA

5.2 Implementation Status of Environmental Mitigation Measures

- 5.2.1 In accordance with the Updated EM&A Manual, the mitigation measures detailed in the documents are recommended to be implemented during the construction phase. An updated summary of the Environmental Mitigation Implementation Schedule (EMIS) is provided in **Appendix I**.

5.3 Solid and Liquid Waste Management Status

- 5.3.1 In accordance with the Updated EM&A Manual, waste management was audited during weekly site audit to ensure that the recommended good practices and other measures recommended in the EMIS of the Updated EM&A Manual (provided in **Appendix I**) are properly implemented by the Contractor. Waste management practice including waste handling, storage, transportation, and disposal were audited.
- 5.3.2 The Contractor is advised to minimize the wastes generated through recycling or reusing. All mitigation measures stipulated in the Updated EM&A Manual shall be properly implemented. The status of implementation of waste management and reduction measures are summarized in **Appendix I**.
- 5.3.3 Waste generated from this Project includes inert C&D materials and non-inert C&D materials. Non inert C&D materials are made up of general refuse and waste that cannot be reused or recycled and have to be disposed of at the designated landfill sites. The amount of wastes generated by the construction works of the Project during the reporting month is shown in **Appendix J**.

6 ENVIRONMENTAL NON-COMFORMANCE

6.1 Summary of Exceedances

6.1.1 No exceedance of Action or Limit Levels of air quality was recorded in the reporting period.

6.1.2 No exceedance of Action or Limit Levels of construction noise was recorded in the reporting period.

6.2 Summary of Environmental Non-Compliance

6.2.1 No environmental non-compliance was recorded in the reporting period.

6.3 Summary of Environmental Complaint

6.3.1 There was no environmental complaint received in the reporting month. The Cumulative Complaint Log since the commencement of the Project is presented in **Appendix L**.

6.4 Summary of Environmental Summons and Successful Prosecution

6.4.1 There was no successful environmental prosecution or notification of summons received since the Project commencement. The Cumulative Log for environmental summon and successful prosecution since the commencement of the Project is presented in **Appendix K**.

7 FUTURE KEY ISSUES

7.1 Construction Programme for the upcoming reporting month

7.1.1 Major activities in the upcoming month:

Upper Platform and KTU Site (Above-ground); KTU(Below-ground):

- Site clearance and installation (Above-ground Works)
- Haul road formation (Above-ground Works)
- Hoarding erection (Above-ground Works)
- Modification of existing facilities inside the tunnel (below-ground)
- Station excavation work

7.2 Potential Environmental Impacts and Recommended Mitigation Measure in the Coming Month(s)

7.2.1 With reference to the site layout plan including the indication of coming three months construction site activities in **Appendix A**, potential environmental impacts arising from the above construction activities are mainly associated with construction dust, noise, water quality, waste management, landscape and visual. The foreseeable environmental impacts were taken into consideration of the planned mitigation measures in the coming months.

7.2.2 The major site activities, potential environmental and recommended mitigation measures for the coming three months are shown in **Table 7.1**.

7.3 Monitoring Schedule for the Next Month

7.3.1 The tentative environmental monitoring schedule for the next month is shown in **Appendix C**.

7.4 Construction Programme for the Next Month

7.4.1 A tentative construction programme is provided in **Appendix A**.

Table 7.1 Summary Table for Site Activities, Potential Environmental Impacts and Recommended Mitigation Measure in the Coming Months

Contract No.	Major Site Activities	Location	Potential Environmental Impact	Recommended Mitigation Measures
1601	I. 	<p>V. Station excavation work</p>		<ul style="list-style-type: none"> ➤ Construction Dust impact ➤ Noise Impact (Construction Phase) ➤ Water Quality Impact (Construction Phase) ➤ Waste Management (Construction Waste) 	

8 CONCLUSION AND RECOMMENDATIONS

8.1 Conclusions

- 8.1.1 This report summarized the Monitoring Results and Audits findings of the EM&A Programme Under the EP of the Project during the reporting period from 1 November to 30 November 2023.
- 8.1.2 1-hour TSP impact monitoring was carried out in the reporting month. No Action or Limit Level exceedance at CN1a, CD2a, CD3a, CD4a and CD5a was recorded during the period.
- 8.1.3 Day time construction noise monitoring was carried out in the reporting month. No Action or Limit Level exceedance at CN1a was recorded during the period.
- 8.1.4 Environmental site inspections were carried out on 01, 09, 14, 22 and 29 November 2023.
- 8.1.5 No environmental non-compliance was recorded in the reporting month.
- 8.1.6 No environmental complaint, notification of summons and successful prosecution was recorded in the reporting month.

8.2 Recommendations

- 8.2.1 According to the environmental audits performed in the reporting month, the following recommendation was made:

Air Quality

During dry season, the Contractors are reminded to pay special attention on the air quality mitigation measures such as watering of haul roads and exposed earth, loose soil construction surface, and covering of dusty materials with tarpaulin sheet should be implemented as far as practicable.

Water Quality

Water quality mitigation measures as recommended in the EM&A Manual should be fully implemented. The Contractor is reminded not to make any discharge before a discharge licence is granted.

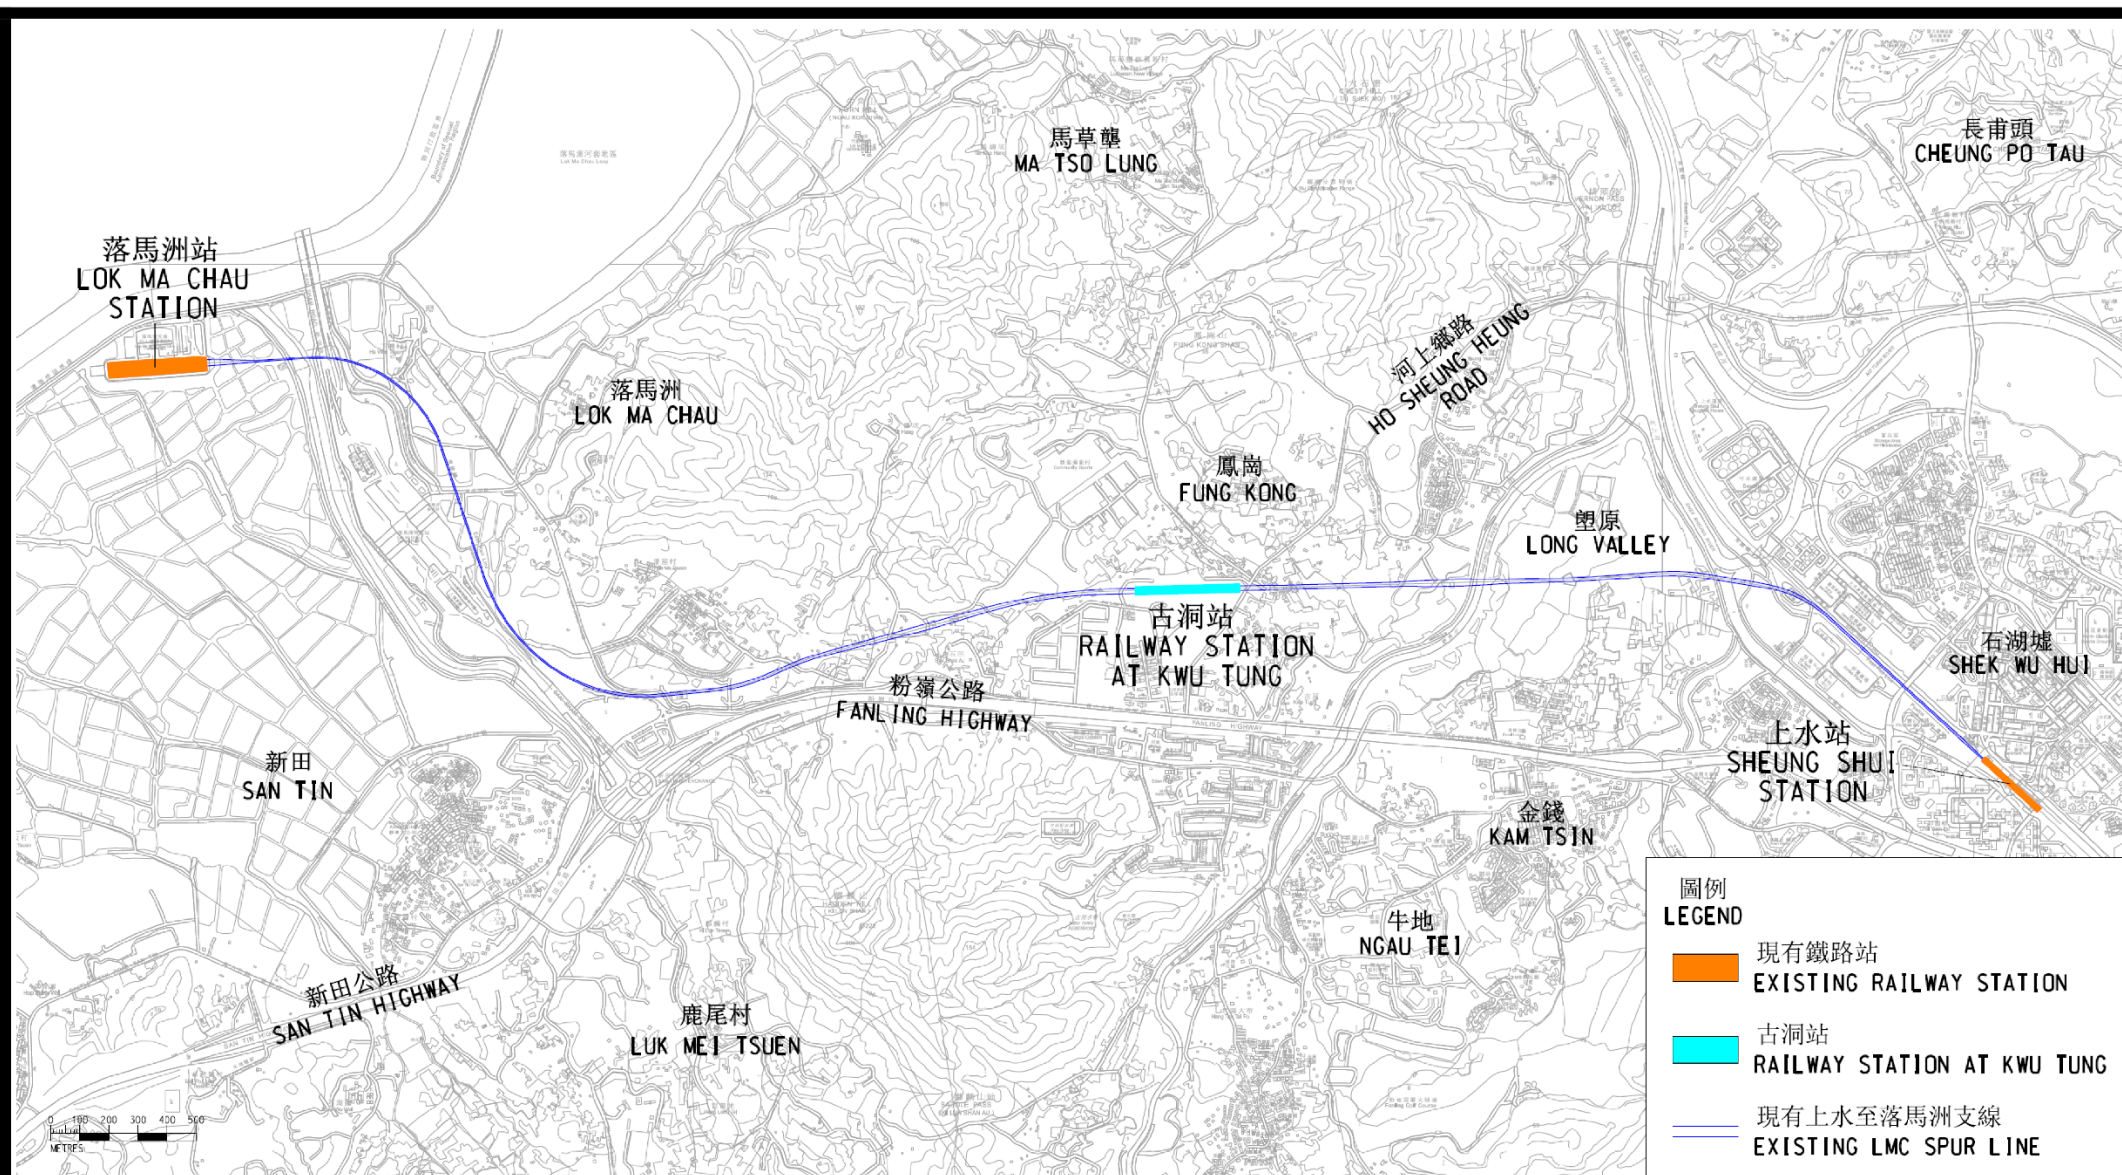

Construction Noise

Construction noise would be a key environmental issue during construction phase of the project. Noise mitigation measures such as using quieter plants and noise barriers should be implemented in accordance with the EM&A requirement.

Chemical Management

To provide sufficient drip trays with adequate capacity for all chemical/fuel containers to avoid potential leakage and contamination.

1. Calibration Precaution:

- The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 24 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- The results presented are the mean of 3 measurements at each calibration point.

2. Calibration Conditions:

Air Temperature: 21.5 °C
 Air Pressure: 1005 hPa
 Relative Humidity: 71.4 %

3. Calibration Equipment:

5. Calibration Results Applied

The results apply to the particular unit-under-test only. All calibration points are within manufacture's specification as IEC 61672 Class 1.

Uncertainties of Applied Value:

94 dB	31.5 Hz	± 0.15
	63 Hz	± 0.10
	125 Hz	± 0.05
	250 Hz	± 0.05
	500 Hz	± 0.05
	1000 Hz	± 0.05
	2000 Hz	± 0.05
	4000 Hz	± 0.05
104 dB	1000 Hz	± 0.05
114 dB	1000 Hz	± 0.05

The uncertainties are evaluated for a 95% confidence level.

Note:

The values given in this certification only related to the values measured at the time of the calibration and any uncertainties quoted will not allow for the equipment long-term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the calibration. (A+A)*L shall not be liable for any loss or damage resulting from the use of the equipment.

Submitted by:

Customer: *Acuity Sustainability Consulting Limited*
Address: *Unit E, 12/F, Ford Glory Plaza,
 Nos. 37-39 Wing Hong Street,
 Cheung Sha Wan, Kowloon,
 Hong Kong*

Upon receipt for calibration, the instrument was found to be:

- Within
- Outside

the allowable tolerance.

The test equipments used for calibration are traceable to National Standards via:

- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory

Date of receipt: 27 July 2023

Date of calibration: 3 August 2023

Date of NEXT calibration: 2 August 2024

Calibrated by: _____
Calibration Technician

Certified by: _____
Mr. Ng Yan Wa
Laboratory Manager

Date of issue: 3 August 2023

Certificate No.: APJ23-049-CC005

1. Calibration Precautions:

- The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 24 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- The results presented are the mean of 3 measurements at each calibration point.

2. Calibration Specifications:

Calibration check

3. Calibration Conditions:

Air Temperature: 22.6 °C
 Air Pressure: 1006 hPa
 Relative Humidity: 52.9 %

4. Calibration Equipment:

Test Equipment	Type	Serial No.	Calibration Report Number	Traceable to
Multifunction Calibrator	B&K 4226	2288467	AV220061	HOKLAS
Sound Level Meter	RION NA-28	30721812	AV220120	HOKLAS

5. Calibration Results

5.1 Sound Pressure Level

Nominal value dB	Accept lower level dB	Accept upper level dB	Measured value dB
94.0	93.6	94.4	94.0

Note:

The values given in this certification only related to the values measured at the time of the calibration.

Certificate No.: APJ23-049-CC005

ERR Ref.	EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation Status
<i>Construction Dust Impact</i>								
S7.5.3	D1	<p>The following dust suppression measures/practices should be incorporated:</p> <ul style="list-style-type: none"> • undertaking at all times to prevent dust nuisance as a result of the activities. Effective dust suppression measures, as necessary, should be installed to minimise air quality impacts, at the boundary of the site and at any sensitive receivers. • Frequently cleaning and watering the site to minimise fugitive dust emissions. • Effective water sprays shall be used during the delivery and handling of all raw sand, aggregate and other similar materials, when dust is likely to be created, to dampen all stored materials during dry and windy weather. • Watering of exposed surfaces shall be conducted as often as possible depending on the circumstances. • Areas within the site where there is a regular movement of vehicles shall have an approved hard surface, be kept clear of loose surface materials and / or regularly watered. • Where dusty materials are being discharged to vehicle from a conveying system at fixed transfer point, a three-sided roofed enclosure with a flexible curtain across the entry shall be provided. Exhaust fans shall be provided for this enclosure and vented to a suitable fabric filter system. • Confine haulage and delivery vehicles to designated roadways inside the site. If in the opinion of the Engineer, any motorised vehicle is causing dust nuisance, the Engineer may require that the vehicle be restricted to a maximum speed of 15 km per hour while within the site area. S13.6.2.2	LV2	<u>Compensatory Tree Planting</u> On-site and off-site tree compensation methods are being considered. The Project Proponent is still exploring the possible locations including the new development area at KTN NDA, LCSD park etc. of tree compensation and would continue to liaise with different government departments such as CEDD, LCSD, LandsD and AFCD etc. on the details for tree compensation. The following potential locations for tree compensation were identified and the actual locations are subject to further liaison with relevant parties:	Compensate for trees due to the Project	Contractor/ MTR Corporation	Onsite where possible. Otherwise consider offsite locations	Detailed design and operational phase	<ul style="list-style-type: none"> EIAO-TM DEVB TCW No. 4/2020 	N/A

ERR Ref.	EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location /Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation Status
		<ul style="list-style-type: none"> • Town Plaza in KTN NDA; • LCSD sitting-out areas, parks, roadside tree pits and landscape areas in North District; • Hillside in the North District for whip tree planting; and Any other locations to be agreed with government departments. 						N/A N/A N/A
S13.6.2.1	LV3	<p><u>Screen Planting/ Vertical Greening</u></p> <p>Screen planting/ vertical greening could effectively constitute a fascinating landscape and blend the building with the surrounding greenery.</p>	Improve compatibility with the surrounding environment	Contractor/ MTR Corporation	All structures as feasible, final location to be confirmed at detailed design phase	Detailed design and operational phase	<ul style="list-style-type: none"> • EIAO-TM 	N/A
S13.7.2	LV4	<p><u>Architectural Aesthetic Design of Built Structure</u></p> <p>The design objectives are as follows:</p> <ul style="list-style-type: none"> • To minimise the visual impact within a densely populated residential area by creating a simple and elegant design; • To create a lean building massing, maximise the at grade green landscaping area to locals and minimise the visual impact; and • To introduce biophilic orientated design as far as practicable. It is aimed to integrate the above-ground structures to the future landscape design by others and contributes to the immediate surroundings, such as green roofing, green wall, green fifth elevation design and environmentally sustainable architecture. 	Improve visual amenity of the built structure	Contractor/ MTR Corporation	All structures as feasible, final location to be confirmed at detailed design phase	Detailed design and operational phase	<ul style="list-style-type: none"> • EIAO-TM 	N/A N/A N/A

EM&A Project								
S14.3.1.4	EM1	An Independent Environmental Checker needs to be employed as per the EM&A Manual.	Control EM&A performance	MTR Corporation	All construction sites	Construction Phase	<ul style="list-style-type: none"> EIAO Guidance Note No.4/2010 EIAO-TM 	Implemented
S14.3.1.3	EM2	<ul style="list-style-type: none"> An Environmental Team needs to be employed as per the EM&A Manual. An environmental impact monitoring needs to be implementing by the Environmental Team to ensure all the requirements given in the EM&A Manual are fully complied with. 	Perform environmental monitoring and auditing	Contractor/ MTR Corporation	All construction sites	Construction Phase	<ul style="list-style-type: none"> EIAO Guidance Note No.4/2010 EIAO-TM 	Implemented Implemented

Implementation status:	Responsibility	Description
Implemented		Mitigation measure was fully implemented
Implemented after Observation		Observation was made during site audit but improved/rectified by the contractor
To be improved		Observation/reminder was made during last site audit but not yet improved/rectified by the contractor
NC		Non-compliance of mitigation measure
Rectified		Non-compliance but rectified by the contractor
N/A		Not Applicable at this stage as no such site activities were conducted in the reporting period

Appendix J Waste Flow Table for Reporting Month

MONTHLY SUMMARY WASTE FLOW TABLE

YEAR: 2023

Month	Actual Quantities of Inert C&D Materials Generated Monthly					Actual Quantities of C&D Wastes Generated Monthly				
	Total Quantity of Inert C&D Material Generated (A+B+C)	Reused in the Contract (A)	Reused in other Project (B)	Disposed at Public Fill (C)	Imported Fill	Metal	Paper/ cardboard packaging	Plastic	Chemical Waste	Others, e.g. general refuse
	(in '000m ³)	(in '000m ³)	(in '000m ³)	(in '000m ³)	(in '000m ³)	(in '000 kg)	(in '000 kg)	(in '000 kg)	(in '000 kg)	(in '000m ³)

Assumption:

- i) Density of C&D material = 2.2 tons/m³
- ii) Density of general refuse = 1.6 tons/m³
- iii) Inert C&D material should refer to rock, soil, concrete debris and asphalt generated from site.

**Appendix K Cumulative statistics on Environmental
Complaints, Notifications of Summons and
Successful Prosecutions**

Statistic Summary of Environmental Complaints

Reporting Period	Environmental Complaints Statistics		
	Frequency	Nature	Follow-up Actions
1 November 2023 – 30 November 2023	0	N/A	N/A
Cumulative	0	N/A	N/A

Statistical Summary of Environmental Summons

Reporting Period	Environmental Summons Statistics		
	Frequency	Nature	Follow-up Actions
1 November 2023 – 30 November 2023	0	N/A	N/A
Cumulative	0	N/A	N/A

Statistical Summary of Environmental Prosecution
