Dear Sir,

Сору **Environmental Impact Assessment Study and** the Associated Site Investigation for Uprating the Safety, Reliability, and Efficiency of the Aged Mechanical and Electrical Plant at **Tsuen Wan No.1 Pumping Station** 

Recly Ref.: Action Requi

Received

Inits. Action Info.

I attach at Appendix I the methodology to be used for demolition of the underground diesel fuel storage tanks for your noise impact assessment.

In the meantime, I attach at Appendix II a copy of the Preliminary Environmental Review Report of the project which may provide relevant information for your EIA study.

Yours faithfully,

Sillarboth

### Attention : Mr W C Fung

Dear Sir,

EIA Study and the Associated Site Investigation for Uprating the Safety, Reliability, Efficiency of the Aged Mechanical and Electrical Plant at Tsuen Wan No 1 Pumping Station Powered Mechanical Equipment for Demolition of Diesel Fuel Storage Tanks

We refer to your letter Ref. (15) in WSD/ST 469/00 PL2 dated 19.2.2001 and the telephone conversation (Mr YK Kwong/Ms Sherry Tsang) this morning regarding the methodology for demolition of underground fuel tanks. We would like to seek your confirmation on the following Power Mechanical Equipment (PME) that would be included in the construction noise assessment:

Power Mechanical Equipment	CNP No.	Sound Power Levels, dB	Quantity
Hand Held Breakers, mass <= 10kg	023	108	· 1
Air Compressor, air flow <=10m <sup>3</sup> /min	001	100	1
Excavator	081	112	1
Crane-mounted Truck	048	112	1

If you require any further information, please do not hesitate to contact us.

Yours faithfully

Frankii Chii Sam Tsoi

Associate Director

**APPENDIX 6 – Environmental Mitigation Implementation Schedule** 

### Implementation Schedule

	EM&A		Location/ Duration of measures/ Timing		In	nplementa	tion Stag	je**	Relevant Legislation &
EIA* Ref.	Log Ref.	Environmental Protection Measures*	of completion of measures	Implementation Agent	Des	С	0	Dec	Guidelines
		Construction Noise Impact							
Section 4.3.5	A1	1) use of good site practices to limit noise emissions by considering the following:	Throughout the construction phase within the site areas	To be implemented by Contractor(s)				1	Noise Control Ordinance and EIAO TM
		- Scheduling of construction works outside school examination period/ during summer holidays							
		- Sequencing of Plant Operation							
		- Limiting the operating time of construction equipment on site. Excavator and crane, mounted trucks to be operated for 20minutes in every 30-minute period and hand held breakers for 15 minutes.							
		- Selection of quiet plants which complied with the BS 5228 Part 1 or TM Standards							
		- Use of 3.5m high hoarding along the site boundary, or movable noise barrier to screen noise at ground level zone. For high-rise Noise Sensitive Receivers, cantilevered top cover should be considered. The surface density of these barriers and hoarding need to be not less than 13kg/m <sup>2</sup> .							
		- Well-maintained plant should be operated on-site and plant should be serviced regularly during the construction programme							
		- Machines and plant (such as trucks, cranes) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum							
		- Plant known to emit noise strongly in one direction, where possible, be orientated so that the noise is directed away from nearby NSRs							
		- Silencers or mufflers on construction equipment should be properly fitted and maintained during the construction works							
		<u>Air Quality</u>							
Section 5.4	B1	1) The contractor is obliged to follow the procedures and requirements given in the Air Pollution Control (Construction Dust) Regulation	Throughout the construction phase within the site areas	To be implemented by Contractor(s)				1	Air Pollution Control (Construction Dust) Regulation Schedule
		- Spray the area at which demolition work takes place with water or a dust suppression chemical immediately prior to, during and immediately after the demolition activities so as to maintain the entire surface wet.							
		- Cover all demolished items (including tress, shrubs, vegetation, boulders, poles, pillars, structures, debris, rubbish and other items arising from site clearance) entirely by impervious sheeting or place them in an area sheltered on the top and the 3 sides within a day of demolition.							
		- Open stockpiles should be avoided or covered							
		- Use of wind shield or dust extractor at the loading and unloading areas							
		- Use of tarpaulin to cover all dusty material on the transport vehicle							
		- Side enclosure and covering of any aggregate or dusty material storage piles				1			
		- Provision of temporary or movable barriers between the site and sensitive receivers				1			
		- Position of all plant at the maximum separation distance from receiver if possible						 	
		Land Contamination							
Section 6.6	C1	Personal Protective Equipment (PPE) such as safety hat, chemical protective gloves, masks (for both dust and vapour) eye goggles, protective clothing and protective footwear etc. shall be provided to staff who would be involved in the decommissioning works. No works should be allowed without the suitable PPE.	Throughout the construction phase within the site areas	To be implemented by Contractor(s)				1	
		Workers shall inspect and check their PPE before, during and after use. In cases where any of the PPE is impaired, the worker shall stop work immediately and inform the site agent. The worker shall not be allowed to re-start his work until the impaired PPE is replaced.							
		Workers shall always maintain basic hygiene standard (e.g. hand wash before leaving the contaminated work zone). Workers shall also be responsible for cleaning and storing their own PPE in a secure place before leaving the site.							
		Eating, drinking and smoking must be strictly prohibited within the site area.							

	EM&A		Location/ Duration of measures/ Timing		Ir	nplement	ation Stag	ge**	Relevant Legislation &
EIA* Ref.	Log Ref.	Environmental Protection Measures*	of completion of measures	Implementation Agent	Des	С	0	Dec	Guidelines
		The decommissioning works, particularly the breaking of the concrete chamber of the diesel storage tank and removal of the broken concrete, shall be carried out in dry weather condition to prevent any surface run-off. The decommissioning works shall be stopped immediately once surface water run-off caused by rainfall or otherwise is observed. Stockpiling of excavated material (i.e. broken concrete and the associated soils) shall be avoided. Where this cannot be avoided, temporary cover such as tarpaulin shall be provided for the stockpile material (if any). The site agent or other site management representatives must be informed if any worker feel uncomfortable physically or mentally during decommissioning works. All workers shall leave the work areas and the work shall be temporarily suspended until the reason for the uncomfortable has been identified.						•	
		yellow, red or black storm signals are hoisted. All stockpile materials (if any) shall be covered immediately by tarpaulin or other similar protective and waterproof materials. In the event that any suspended contaminated soils (e.g. discoloured soil or visual/olfactory signs of contamination) was observed, the site agent shall inform the relevant party (e.g. EPD Local Control Office). Samples of the suspended contaminated soils shall be collected for the analysis of Total Petroleum Hydrocarbon (TPH) to confirm whether the soil is contaminated.							
		<u>Cultural Heritage</u>							
ction 7.3	D1	1) Only agreed number of PME shall be used	Throughout the construction phase within the site areas	To be implemented by Contractor(s)				1	EIAO TM and Antiquities and Monuments Ordinance
		Waste Management							
ection 8.4	E1	<ol> <li>The following waste management hierarchy should be considered in general:</li> <li>Avoidance and minimisation (not generating waste through changing or improving practices and design);</li> </ol>	Throughout the construction phase within the site areas	To be implemented by Contractor(s)				1	Waste Disposal Ordinance
		- Reuse of materials, thus avoiding disposal (generally with only limited reprocessing);							
		- Recovery and recycling, thus avoiding disposal (although reprocessing may be required); and							
		- Treatment and disposal, according to relevant regulations, guidelines and good practice.							
		- Consult the Waste Disposal Authority on the final disposal locations of waste							
	E2	2) Excavated Inert Material							
		- Proper segregation to avoid possible contaminated materials being allowed for reused on site	Throughout the construction phase within the site areas	To be implemented by Contractor(s)				1	Waste Disposal Ordinance
	E3	3) Demolition Waste	Throughout the construction phase within the site areas	To be implemented by Contractor(s)				1	New Disposal Arrangements for Construction Waste
		- Proper segregation of demolition waste on site to increase the feasibility that certain components of waste can be recycled.							
		<ul> <li>Consult specialist collectors for recycling of dismantled diesel storage tanks and associated pipeline</li> <li>Disposal of at a specifies landfill, or at a public dump site (preferable) such as Pak Shek Kok Reclamation Public Filling Area and Tuen Mun Reclamation Public Filling Area</li> </ul>							
	E4	<ul> <li>4) Chemical Waste</li> <li>- Disposal of chemical waste should be via a licensed waste collector; be to a facility licensed to receive chemical waste, such as the Chemical Waste Treatment Centre</li> </ul>	Throughout the construction phase within the site areas	To be implemented by Contractor(s)					Code of Practice on the Packaging, Handling and Storag of Chemical Waste and Waste Disposal (Chemical Waste) (General) Regulation
		which also offers a chemical waste collection service and can supply the necessary storage containers.							

EIA* Ref.	EM&A Log Ref.	Environmental Protection Measures*	Location/ Duration of measures/ Timing of completion of measures	Implementation Agent	Implementation Stage**				Relevant Legislation &
					Des	С	0	Dec	Guidelines
		- Chemical waste that is produced, as defined by Schedule 1 of the Waste Disposal (Chemical Waste) (General) Regulation, should be handled in accordance with the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. For mitigation measures, the guidelines covered under the construction phase mitigation of chemical wastes should be referred.						1	
		- Containers used for the storage of chemical wastes should be suitable for the substance they are holding, resistant to corrosion, maintained in a good condition, and securely closed; have a capacity of less than 450 liters unless the specification has been approved by the EPD; and display a label in English and Chinese in accordance with instructions prescribed in Schedule 2 of the regulation.							
		- The storage area for chemical wastes should be clearly labelled and used solely for the storage of chemical waste; enclosed on at least 3 sides; have an impermeable floor and bunding of sufficient capacity to accommodate 110% of the volume of the largest container or 20 % of the total volume of waste stored in that area, whichever is							
	E5	5) General Refuse	Throughout the construction phase within the site areas	To be implemented by Contractor(s)				1	Waste Disposal Ordinance
		<ul> <li>Remove general refuse from the site, separately from construction and chemical waste, on a daily or every second day basis to minimise odour, pest and litter impacts.</li> <li>Burning of refuse on site is prohibited</li> </ul>							
		Water Quality							
Section 9.4	F1	1) Construction Runoff	Throughout the construction phase within the site areas	To be implemented by Contractor(s)				1	ProPECC PN 1/94 and Water Pollution Control Ordinance
		- Follow the site practices outlined in ProPECC PN 1/94 as far as practicable in order to minimise surface runoff and the chance of erosion, and to reduce any suspended solids prior to discharge							
		- Minimise the exposed soil areas to reduce the contamination of runoff and erosion.							
		- Provide a designated area far from the nearby storm drain and fowl sewers for temporary stockpiling of topsoil.							
		- Provide temporary cover (I.e. tarpaulin) to minimise the generation of high SS runoff.							
		- Disposal of chemical waste should be via a licensed waste collector; be to a facility licensed to receive chemical waste, such as the Chemical Waste Treatment Centre which also offers a chemical waste collection service and can supply the necessary storage containers.							
	F2	2) Sewage Effluents	Throughout the construction phase within the site areas	To be implemented by Contractor(s)					ProPECC PN 1/94 and Water Pollution Control Ordinance
		- Existing toilet will be provided for the decommissioning workforce.		<u> </u>					

Note:

\* All recommendations and requirements resulted during the course of EIA/EA Process, including ACE and/or accepted public comment to the proposed project \*\* Des = Design, C = Construction, O = Operation, Dec = Decommissioning

Reassessment are necessary when there are changes in PME. Alternative measures which are proven to have equivalent or higher performance are acceptable.
