

Annex 6G

Operational Phase Model
Results - Cooled Water
Discharges

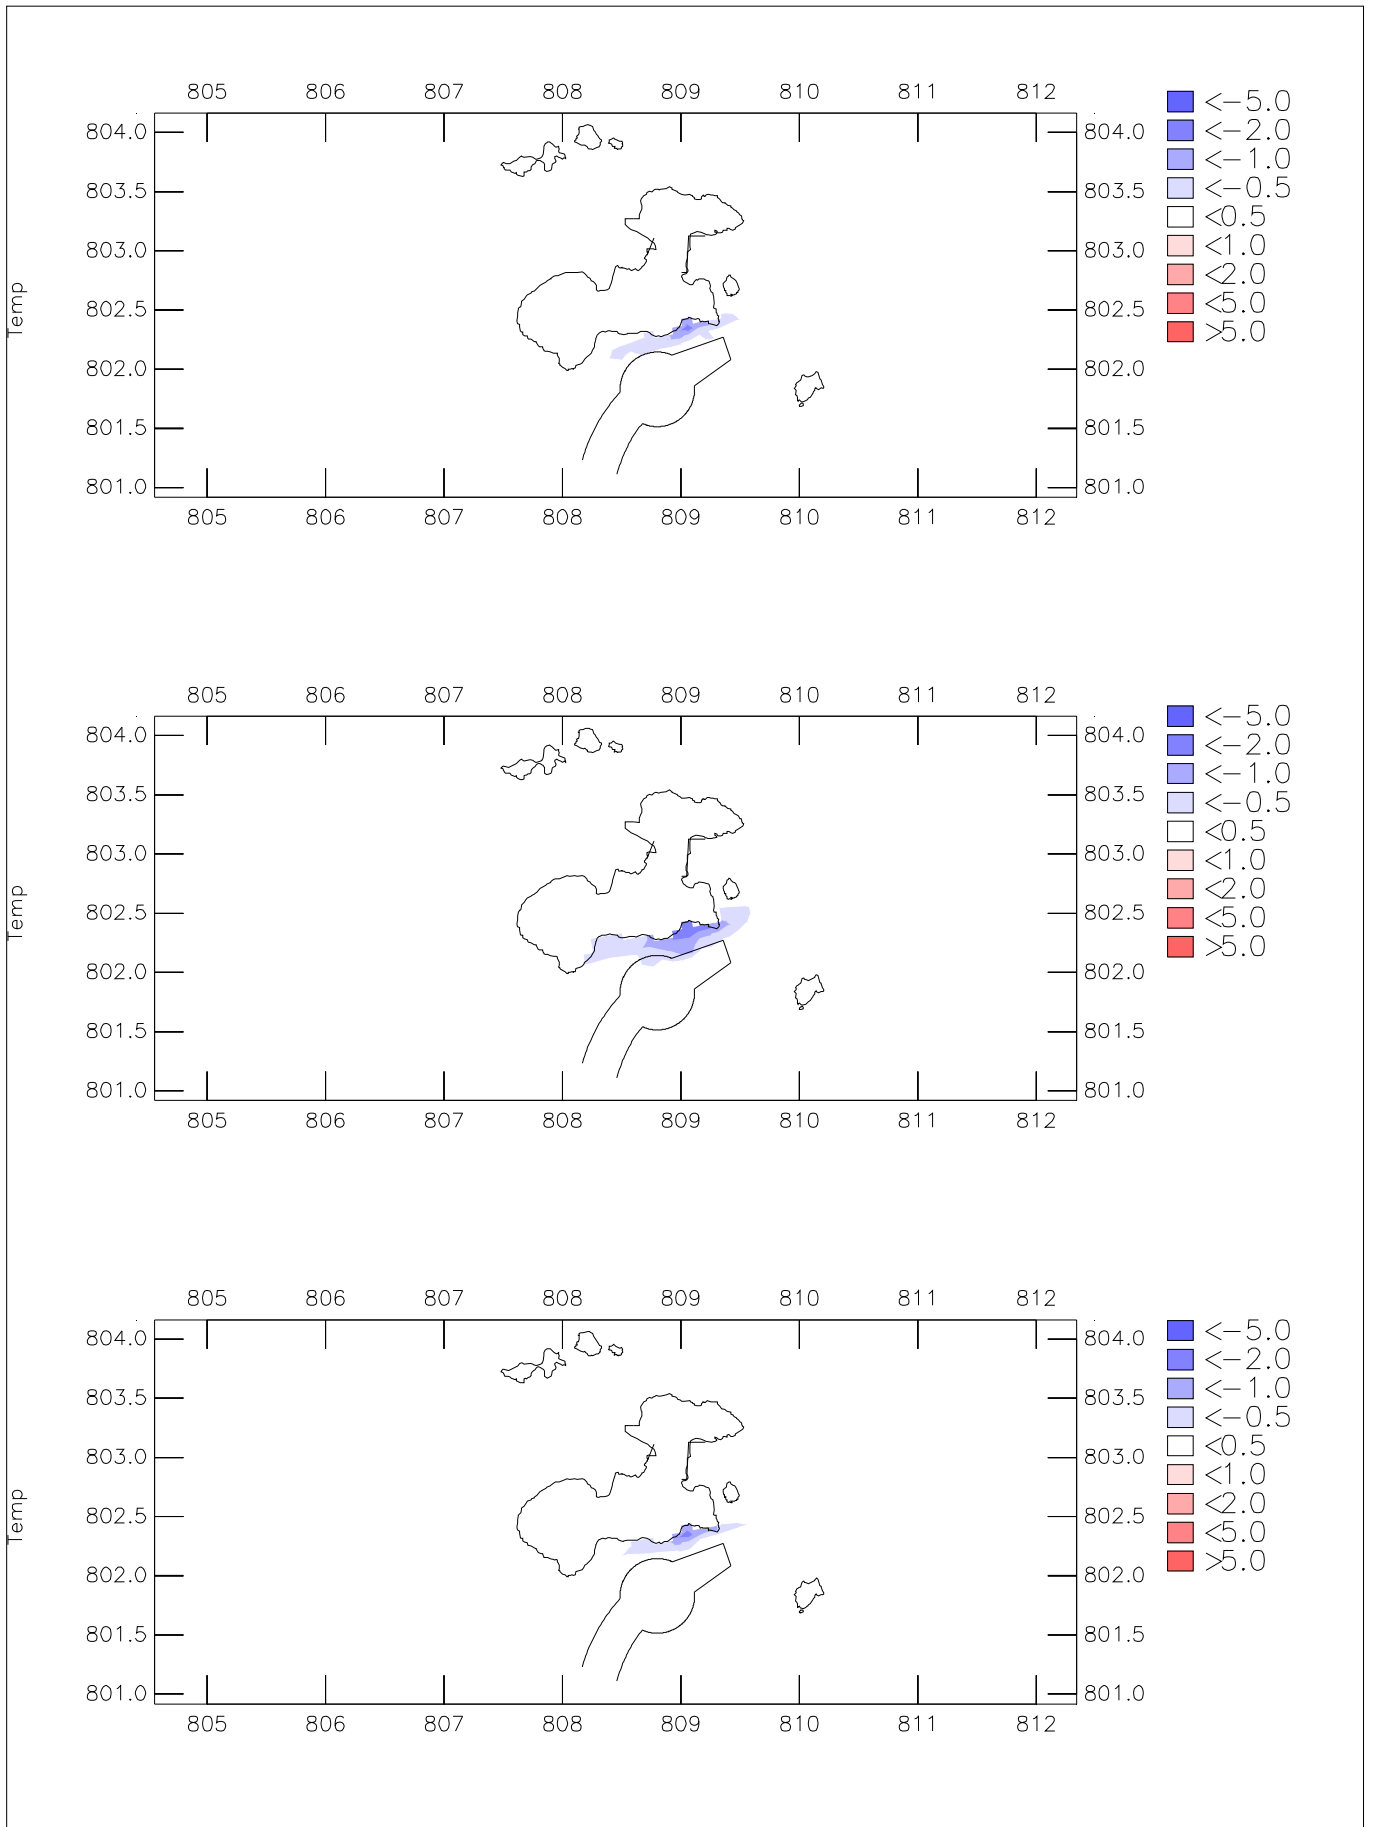

Maximum Reduction in Temperature relative to baseline (deg. C)

Maximum discharge: -12.5 deg.C - South Soko

Surface (upper), Bottom (middle), Depth-average (lower)

Maximum Operational Flow

Dry Season

<p>Maximum Reduction in Temperature relative to baseline (deg. C) Maximum discharge: -12.5 deg.C – South Soko Surface (upper), Bottom (middle), Depth-average (lower)</p>	<p>Maximum Operational Flow Wet Season</p>
