3%	26%	67%	4%

### Airplane Crash Frequencies

Desalination Plant	Distance from Runway Threshold (km)				Crash Frequency (/km <sup>2</sup> /yr)*					Chlorine drums Store Area (m <sup>2</sup> )**	Impact Frequency (/yr)
	07L/25R		07R/25L		07L	25R	07R	25L	Total		
	x	y	x	y	Take-off	Landing	Take-off	Landing			
Chlorine store	27.6	16	27.6	14.5	1.19E-21	4.57E-14	1.19E-19	9.50E-15	5.52E-14	1000	5.52E-17

\* Take-offs to the west on runways 25L/R, and landings from the west on runways 07L/R will not contribute to the crash frequencies impacting on the desalination plant

\*\* Size of chlorine drums storage area is about 28m x 20m. Conservatively assumed as 1000 m<sup>2</sup>.

### Distribution of landing/takeoff in the HK Int. airport (April08 - March09):-

Landing:

07L - 60%  
07R - 10%  
25R - 26%  
25L - 4%

Take-off:

07L - 3%  
07R - 67%  
25R - 2%  
25L - 28%
