

OUR REF 180579-0401

YOUR REF (15) in EP2/N7/75 pt.2

DATE 4 March 2016

Environmental Protection Department
27/F, Southorn Centre,
130 Hennessy Road,
Wanchai, Hong Kong

For the attention of Ms. Holy To

Dear Sirs,

Agreement No. CE 63/2012 (DS)
Expansion of Sha Tau Kok Sewage Treatment Works, Phase 1
- Investigation, Design and Construction
Preliminary Sediment Quality Report

We refer to your letter (ref. (15) in EP2/N7/75 pt.2) dated 19 November 2015 expressing no comment on the Sediment Sampling and Testing Plan (Issue 3) for the above captioned Project. Please find enclosed a copy of the Preliminary Sediment Quality Report (PSQR) for your review.

Since only Category L sediments are found, further biological screening is not required. Subject to DEP approval, the PSQR is therefore deemed to be the formal Sediment Quality Report (SQR).

Should you have any queries, please do not hesitate to contact the undersigned or our Mr. Manuel Chua at 26087314 (chuawo@bv.com).

Yours faithfully,
For and on behalf of
BLACK & VEATCH HONG KONG LIMITED

CHRISTINA S. C. KO
PROJECT MANAGER

1 Introduction

1.1 Project Background

Drainage Services Department (DSD) is undertaking a project named Expansion of Sha Tau Kok Sewage Treatment Works, Phase 1 – Investigation, Design and Construction (the Project) under Agreement No. CE 63/2012 (DS). The Project is to expand the treatment capacity of the existing Sha Tau Kok Sewage Treatment Works (STKSTW) from 1,660 m³/day to 10,000 m³/day in 2 phases.

The works for this Project in Sha Tau Kok mainly comprises of the following items and the layout plan is shown in **Figure 1**.

- Increase the treatment capacity of Sha Tau Kok Sewage Treatment Works (STKSTW) to 5,000 m³/day at Average Dry Weather Flow (ADWF) by 2020, with suitable allowance to cater for a further increase of treatment capacity to 10,000 m³/day at ADWF after 2030 in Phase 2.
- Construct a temporary sewage treatment plant (TSTP).
- Demolish the existing Sha Tau Kok Sewage Pumping Station (STKSPS) and decommission the rising main between STKSPS and STKSTW.
- Construct a new gravity sewer.
- Decommission the existing submarine outfall and construct a new one.

The existing submarine outfall is inadequate to cope with the increased sewage flow in the future after expansion of the STKSTW. In addition, the existing submarine outfall is discharging near-shore of Starling Inlet which may lead to unacceptable water quality impact to surrounding marine water sensitive receivers including the nearby Sha Tau Kok Fish Culture Zone. A new submarine outfall is required to be constructed to discharge the treated effluent further from shore within Starling Inlet. The discharge point of the proposed submarine outfall will be located in the water near Ah Kung Au.

The proposed submarine outfall of 1.7 km long and diameter of 450 mm will be constructed by trenchless method under the seabed of Starling Inlet to minimize the need for marine sediment dredging works. A diffuser is proposed at the discharge location. Localised excavation of marine sediment is required to facilitate its construction. Based on the engineering design, the existing seabed will be exposed for a length of approximately 54m by excavation method. The trapezoidal trench will be approximately 22m top wide (3m bottom wide) and 4.5m deep. The total volume of marine sediment requiring disposal is expected to be about 3,040 m³. The location of the proposed excavation area is shown in **Figure 2**.

The Project is a Designated Project (DP) under the Environmental Impact Assessment Ordinance (EIAO) (Cap 499). The Environmental Impact Assessment (EIA) Study Brief (No. ESB-253/2012) has been issued by Environmental Protection Department (EPD) on 17 December 2012.

In order to fulfil the requirement in Appendix F, para. 3(i) of EIA Study Brief (No. ESB-253/2012), a Sediment Sampling and Testing Plan (SSTP), which presented the review of existing sediment data and the proposal for sampling and chemical testing of the sediment, was submitted and approved by EPD on 19 November 2015. A separate SSTP/Sediment Quality Report in accordance with ETWB TC(W) No. 34/2002 – Management of Dredged/Excavated Sediment will be prepared when applying for the dumping

permit under the Dumping at Sea Ordinance (DASO). The rationale for sediment removal / disposal will be agreed with Marine Fill Committee (MFC) of CEDD.

1.2 Purpose of the Report

The purpose of this report is to:

- Report the findings of the sampling and testing work
- Present corresponding chemical testing results
- Estimate the volume of different types of sediment disposal

2 Sediment Sampling

2.1 Sampling Date, Locations and Method

The sediment sampling was conducted in accordance with the approved SSTP by the Contractor on 12 February 2016.

At the sampling location, surface grab sample was taken using Van Veen Grab Sampler lowered from a boat. For sampling below seabed level, gravity coring was employed. The sampling tube was manually driven from the boat into the seabed to obtain the sediment sample at the required depth.

The actual coring locations are shown in **Table 2.1** and illustrated in **Figure 2**. The actual coring locations are only slightly deviated from the proposed ones in the approved SSTP and are still within the proposed 54m x 22m dredging area.

Table 2.1: Actual Gravity Coring Sampling Locations

Sample Location	Easting	Northing	Sample Depth	No. of sample
S1	842479.2	845010.7	Surface (grab sample)	1
			0m – 0.3m below seabed	
			0.3m – 0.9m below seabed	1

2.2 Sample Handling, Preservation and Storage

The surface grab sample was transferred to sampling containers (sampling bottles and heavy duty plastic bags) provided by the laboratory.

The sampling tube was sealed with close fitting lids / caps at both ends of the sampling tubes.

All samples were labelled immediately after being taken. Each sample was clearly labelled, where appropriate, with "top", "bottom" and sample identity (e.g. sampling number, location, depth and date).

Sampling equipment used during the course of the investigation was decontaminated by manual washing and water rinsing before and after each sampling event. All disposable equipment was discarded after each use.

According to ETWB TC(W) No. 34/2002, 7L of sample was collected for chemical testing and biological testing as summarised in **Table 2.2**.

Table 2.2: Size of Samples Collected for Chemical and Biological Testing

Testing Parameters	Sample Size
Metals and metalloid	0.5 L
Organic	0.5 L
Biological response	6 L

Table 2.3 shows the sampling bottle and pre-treatment methods which was used and followed after the samples were delivered to the laboratory for testing.

Table 2.3: Types of Sample Bottle and Pre-treatment Methods

Testing Parameters	Sampling Bottle	Pre-treatment Procedure*
Metals and metalloid	High density polyethylene bottles	USEPA SW-846+ Chapter 3
Organic	Wide mouth Borosilicate glass bottles with Teflon lined lid	USEPA SW-846 Chapter 4
Biological Response	Wide mouth Borosilicate glass bottles with Teflon lined lid or high density polyethylene bottles	USEPA SW-846 Chapter 3 or Chapter 4 as appropriate

All samples were kept at 4°C in the dark but were not frozen. Samples were delivered to laboratory at the end of each working day and promptly analysed.

3 Chemical Screening

3.1 Analytical Methodology

Chemical Screening was undertaken for the parameters using the analytical methods and reporting limits described in **Table 3.1**.

Table 3.1: Parameters Proposed for Chemical Screening for Sediment Samples

Parameters	Preparation Method US EPA Method	Determination Method US EPA Method	Reporting Limit
Metals (mg/ kg dry wt.)			
Cadmium (Cd)	3050B	6020A or 7000A or 7131A	0.2
Chromium (Cr)	3050B	6010C or 7000A or 7190	8
Copper (Cu)	3050B	6010C or 7000A or 7210	7
Mercury (Hg)	7471A	7471A	0.05
Nickel (Ni)	3050B	6010C or 7000A or 7520	4
Lead (Pb)	3050B	6010C or 7000A or 7420	8
Silver (Ag)	3050B	6020A or 7000A or 7761	0.1
Zinc (Zn)	3050B	6010C or 7000A or 7950	20
Metalloids (mg/ kg dry wt.)			
Arsenic (As)	3050B	6020A or 7000A or 7061A	1
Organic-PAH (µg/kg dry wt.)			
Low Molecular Weight PAHs+	3550B or 3540C and 3630C	8260B or 8270C	55
High Molecular Weight PAHs++	3550B or 3540C and 3630C	8260B or 8270C	170
Organic-non-PAH (µg/kg dry wt.)			
Total PCBs+++	3550B or 3540C and 3665A	8082	3
Organometallics (µg TBT/L in interstitial water)			
Tributyltin	Krone et al. (1989)*- GC/MS UNEP/ IOC/ IAEA**	Krone et al. (1989)*- GC/MS UNEP/ IOC/ IAEA	0.015

Note:

- (i) The reporting limits shown in this table are the most stringent limits which will be specified by Director of Environmental Protection (DEP). Project proponents should consult DEP on the required limits in the preparation of proposals for sampling and chemical testing of the sediments.
- (ii) Other equivalent methods may be used subject to the approval of DEP.
- (iii) +: Low molecular weight PAHs include acenaphthene, acenaphthylene, anthracene, flourene, naphthalene, and phenanthrene
- (iv) ++: High molecular weight PAHs include benzo[a]anthracene, benzo[a]pyrene, chrysene, dibenzo[a,h]anthracene, floranthene, pyrene, benzo[b]fluroanthene, benzo[k]fluoranthene, indeno[1,2,3-c,d]pyrene and benzo[g,h,i]perylene
- (v) +++: The reporting limit is for individual PCB congeners. Total PCBs include 2,4' diCB, 2,2',5 triCB, 2,4,4'triCB, 2,2',3,5'tetraCB, 2,2',5,5'tetraCB, 2,3',4,4'tetraCB, 3,3',4,4'tetraCB, 2,2',4,5,5'pentaCB, 2,3,3',4, 4'pentaCB, 2,3',4,4',5 pentaCB, 3,3',4,4',5 pentaCB, 2,2',3,3',4,4' hexaCB, 2,2',3,4,4',5' hexaCB, 2,2',4,4',5,5' hexaCB, 3,3',4,4',5,5' hexaCB, 2,2',3,3',4,4',5 heptaCB, 2,2',3,4,4',5,5' heptaCB, 2,2',3,4',5,5',6 heptaCB (ref: the "summation" column of Table 9.3 of Evaluation of Dredge Material Proposed for Discharge in Waters of the U.S.- Testing Manual (The Inland Testing Manual) published by USEPA).

- (vi) *: Krone et al. (1989), A method for analysis of butyltin species and measurement of butyltins in sediment and English Sole livers from Puget Sound, Marine Environmental Research 27 (1989) 1-18. Interstitial water to be obtained by centrifuging the sediment and collecting the overlying water.
- (vii) **: UNEP/ ICO/ IAEA's Marine Environment Laboratory reference methods. These methods are available free of charge from UNEP/ Water or Marine Environment Studies Laboratory at IAEA's Marine Environment Laboratory. Interstitial water to be obtained by centrifuging the sediment and collecting the overlying water.

3.2 Classification Criteria of Sediment

The sediment is classified into 3 categories based on its contaminant levels:

- Category L: Sediment with all contaminant levels not exceeding the Lower Chemical Exceedance Level (LCEL).
- Category M: Sediment with any one or more contaminant levels exceeding the Lower Chemical Exceedance Level (LCEL) and none exceeding the Upper Chemical Exceedance Level (UCEL).
- Category H: Sediment with any one or more contaminant levels exceeding the Upper Chemical Exceedance Level (UCEL).

3.3 Testing Laboratory

The chemical screening was conducted by ALS Technichem (HK) Pty Ltd.

3.4 Quality Control Measures

The laboratory Quality Assurance (QA) / Quality Control (QC) schedule as required by Hong Kong Laboratory Accreditation Scheme (HOKLAS) was conducted as follows:

- Method Blank:
For each batch of 20 samples, at least 1 method blank was analysed together with the samples.
- Sample Duplicate:
For each batch of 20 samples, at least 1 sample duplicate was tested.
- Method Analyte Spike:
For each batch of 20 samples, at least 1 method analyte spike was conducted.

3.5 Chemical Testing Results and Sediment Classification

Table 3.2 summarises the chemical testing results of the sediment samples at the sampling location S1. Based on the testing results, the two sediment samples belong to Category L. As sediment samples of Category L are identified, biological screening is not required in accordance with ETWB TC(W) No. 34/2002.

The Chain of Custody (COC) forms and the chemical testing laboratory reports are presented in **Appendix A** and **Appendix B** respectively.

Table 3.2: Chemical Testing Results of Sediment Samples at Sampling Location S1

ALS Lab ID		HK1606127001	HK1606127002	Lower Chemical Exceedance Level (LCEL)	Upper Chemical Exceedance Level (UCEL)	10 x LCEL
Sample ID		S1 - Surface (Grab) + 0m-0.3m below seabed	S1 - 0.3m-0.9m below seabed			
Parameters	Unit (in dry wt. basis)					
Cadmium	mg/kg	0.3	<0.2	1.5	4	<u>15</u>
Chromium	mg/kg	36	21	80	160	<u>800</u>
Copper	mg/kg	37	25	65	110	<u>650</u>
Mercury	mg/kg	0.08	0.07	0.5	1	<u>5</u>
Nickel	mg/kg	20	11	40	40	<u>400</u>
Lead	mg/kg	58	43	75	110	<u>750</u>
Silver	mg/kg	0.9	0.2	1	2	<u>10</u>
Zinc	mg/kg	124	66	200	270	<u>2000</u>
Arsenic	mg/kg	9	7	12	42	<u>120</u>
Low Molecular Weight PAHs	µg/kg	<550	<550	550	3160	<u>5500</u>
High Molecular Weight PAHs	µg/kg	<1700	<1700	1700	9600	<u>17000</u>
Total PCBs	µg/kg	<18	<18	23	180	<u>230</u>
Tributyltin	µg TBT/L	<0.015	<0.015	0.15	0.15	<u>1.5</u>
Classification		L	L			

4 Sediment Disposal

From the chemical testing results in **Section 3**, only Category L sediment was identified. In accordance with ETWB TC(W) No. 34/2002, Type 1 – Open Sea Disposal should be used for Category L sediment. The volume of different types of sediment disposal are summarised in **Table 4.1**.

Table 4.1: Sediment Disposal Volume

Type of Disposal	Volume (m ³)
Type 1 – Open Sea Disposal	3,040
Type 1 – Open Sea Disposal (Dedicated Sites)	0
Type 2 – Confined Marine Disposal	0
Type 3 – Special Treatment / Disposal	0
Total Disposal Volume	3,040

5 Conclusion

On 12 February 2016, the sediment sampling work was conducted in accordance with the requirements of the approved SSTP. The sediment samples were first tested with chemical screening, and only Category L sediment samples were identified at sampling location S1. Therefore, in accordance with ETWB TC(W) No. 34/2002, no biological test was carried out and 3,040 m³ of dredged sediment would be disposed with Type 1 – Open Sea Disposal.

General Comments

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release. When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes. The completion date of analysis is: 20-EB-2016

Key: LOR = Limit of reporting; CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

Specific Comments for Work Order: HK1606127

Sample(s) were collected by ALS Technichem (HK) staff.

Sediment sample(s) analysed on an as received basis. Result(s) reported on a dry weight basis.

Sediment sample(s) as received, digested by In-house method E-ASTM D3974-09 prior to determination of metals. The In-house method is developed based on ASTM D3974-09 method.

Total PCBs results (Method: EP065) are not HOKLAS accredited. The values are calculated from summation of the 18 PCB congeners, based on Limit of Detection (LOD) of 1 µg/kg.
Low and High M.W. PAHs results (Method: EP076HK) are not HOKLAS accredited. Low M.W. PAHs is sum of Naphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene; High M.W. PAHs is sum of Fluoranthene, Pyrene, Benz(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenz(a,h)anthracene, Benzo(g,h,i)perylene.
