

Annex

Additional emission reduction control measures for the PRD Economic Zone

The following set out the additional control measures recommended in the Mid-term Review for the PRD Economic Zone:-

- (a) requiring all new coal-fired power plants to install de-NO_x equipment;
- (b) considering the formulation of more stringent local emissions standards for boilers by 2010 to reduce emissions from industrial and non-industrial boilers;
- (c) strengthening implementation of cleaner production standards for printing industries within PRD Economic Zone to require printing inks to comply with the green industrial standards, and promote adoption of product certification by the majority of the printing enterprises;
- (d) considering the formulation of emission control strategy on local vessels for implementation before 2010;
- (e) strengthening the adoption of cleaner production practices in paint production industry with both mandatory and voluntary schemes;
- (f) considering the introduction of a labeling scheme for VOC-containing products by phases;
- (g) requiring VOC-containing products such as pesticides, detergents, adhesive products to meet green labeling requirements by phases; and
- (h) developing a public awareness programme to promote the use of products with low VOC contents.
