<b>Annex I - List of written submissions from individuals</b>	

## Executive Summary

Plastics are light, durable and relatively inexpensive. They are commonly used in our daily lives. However, their massive production and consumption will cause pollution, as they can persist in the environment for hundreds of years, affecting our ecosystems, endangering animal lives and also threatening human health. In Hong Kong, around 11 000 tonnes of municipal solid waste (MSW) were disposed of at landfills per day in 2020, among which about 21%, i.e. around 2 300 tonnes per day, were plastics. With the passage of the relevant bill on Municipal Solid Waste Charging by the Legislative Council in August 2021, Hong Kong's waste management has entered into a new era. Moreover, the society is calling for more aggressive moves in waste reduction and circular economy.

Invited by the Government, the Council for Sustainable Development (SDC) launched a territory-wide public engagement (PE) exercise adopting a bottom-up and stakeholder-oriented approach. The PE aims to enhance public awareness of the problem with single-use plastics waste, and gauge the views of the community in the control of single-use plastics. The PE was conducted by first identifying priorities and challenges; secondly organising engagement events to gauge the views of the public and stakeholders; and lastly formulating recommendations for controlling single-use plastics. Hong Kong Productivity Council was commissioned as the Programme Director to assist the SDC to develop the methodology and PE document, as well as to implement the whole PE process. SDC also commissioned the Aristo Market Research and Consulting Company Limited to conduct a randomised telephone opinion survey.

The SDC appointed experts with relevant knowledge as co-opt members of its Strategy Sub-committee (SSC) to provide advice on a more definitive scope of the PE. Towards this end, the SSC organised three Focus Group Meetings (FGMs) in July 2021 to collect views from various stakeholders including retail and wholesale sector; logistics and e-commerce sector; food outlets and pre-packaged food sector; medical and health sector; chambers of commerce; recycling trade and suppliers for alternative materials; professional organisations; academics; green groups; and non-governmental organisations. The stakeholders were invited to give their initial views on the overall direction of the PE, with a view to outlining key issues for public discussion and suggesting ways to encourage public participation.

During the public interaction phase from 30 September to 29 December 2021, a total of 35 engagement events, including three town hall meetings, youth forum, activities for the elderly, school outreach and a series of briefing sessions for various key stakeholders and organisations were organised with around 2 600 people participated. The SDC actively engaged students and the elderly through organising lively and interesting interactive dramas cum briefing sessions to enhance their awareness on the importance of the control of single-use plastics. Meanwhile, a randomised telephone opinion survey to mobile phone users was also conducted from 15 October to 1 November 2021, to gauge the views of the general public on their basic understanding on the issue and their willingness to contribute to reducing the use of single-use plastics. In addition, 123 Supporting Organisations were enlisted by the SDC to provide assistance in disseminating information about the PE through their networks. To further publicise the PE and encourage wider public participation at all ages and backgrounds, the SDC also made use of Announcements in the Public Interest on television and radio, promotional posters and pamphlets, and dedicated website, etc.

After the public interaction phase, SDC received and analysed over 9 400 views collection forms, 60 written submissions from public and trades and successfully interviewed 1 003 persons via the randomised telephone opinion survey. After taking into account the feedbacks collected during the public interaction phase, the SDC has put forward 24 recommendations across five key areas, namely general principles on prioritising the control of single-use plastics, new control measures, enhancing the Plastic Shopping Bag Charging Scheme, publicity and public education, and green merchandise. Key recommendations include:

- banning the sale of single-use plastic products with readily available alternatives or products that are not essential, such as disposable plastic tableware sold at retail outlets;
- banning the free distribution of certain single-use plastic products that are currently distributed to consumers for free, such as umbrella bags;
- banning the manufacturing, sale and distribution of certain single-use plastic products, such as certain polyfoam products;
- formulating administrative and legislative measures to reduce the use of plastic packaging materials (including polyfoam);
- enhancing the Plastic Shopping Bag Charging Scheme currently in place by tightening the scope of exemption, increasing the charging level to \$1 or \$2 and monitoring flat-top bag distribution; and
- promoting green lifestyle through publicity and public education, such as developing green information-sharing platform, and supporting the research and development on plastic alternatives by relevant research fund.

In view of the prevailing epidemic situation, we believe the Government will carefully consider the recommendations and the appropriate timing of implementation.

## 1. Introduction & Background

- 1.1. Plastics are light, durable and inexpensive. They are commonly used in our daily lives. However, their massive production and consumption will cause pollution, as they can persist in the environment for hundreds of years, affecting our ecosystems, endangering animal lives and also threatening human health.
- 1.2. Single-use plastics are particularly harmful to the environment because they are usually made from low-value and hard-to-recycle plastics and are small in size, which make them difficult to be separated, sorted and cleaned for recycling. Also, these products are meant to be used only once or for a limited number of times before disposal. Thus, the control of single-use plastics has become a key global environmental issue and many places have put forward plans to tackle it.
- 1.3. According to the waste statistics released by the Environmental Protection Department (EPD) in 2020<sup>1</sup>, there were about 10 800 tonnes of municipal solid waste (MSW) disposed of at landfills every day and among them, 21.4% (i.e. around 2 300 tonnes per day) were plastics including plastic bags (plastic shopping bags and other plastic bags included), plastic beverage bottles, plastic / polyfoam dining wares and others. In February 2021, the Government announced the Waste Blueprint for Hong Kong 2035, setting out the strategies and measures to achieve the vision of "Waste Reduction·Resources Circulation·Zero Landfill". It mentions the need to explore Hong Kong's policy directions to reinforce going "plastic-free", and join hands with the international community to minimise the use of plastics, which includes promoting "plastic-free" at source, finding suitable plastic alternatives and progressively regulating single-use plastics. To this end, the Government consulted the public on the introduction of a new producer responsibility scheme on plastic beverage containers and the regulation of disposable plastic tableware in 2021.
- 1.4. In April 2021, the Council for Sustainable Development (SDC) accepted the Government's invitation to conduct a territory-wide public engagement (PE) on "Control of Single-use Plastics" in order to forge consensus among members of the public. The SDC has adopted a bottom-up and stakeholder oriented approach to identify the potential action areas and key issues for further public discussion and deliberation. A Strategy Sub-Committee (SSC) comprising representatives from relevant sectors and professionals was tasked to assist the SDC in the planning and implementation of the PE. A full list of SSC members is enclosed in **Annex A**. The SSC held two meetings in June and September 2021 respectively to deliberate on implementation of the PE.
- 1.5. Three Focus Group Meetings (FGMs) with key stakeholders were held in July 2021. A total of 66 participants from 63 organisations attended the FGMs to provide their initial views on the overall direction of the PE, with a view to outlining key issues for public discussion and suggesting ways to encourage public participation. Participants came from different industries and sectors including retail and wholesale sectors, logistic and e-commerce sectors, food outlets, pre-packaged food sectors, medical and health sector, chambers of commerce, recycling trade, suppliers for alternative materials, professional organisations, academics, green groups and non-governmental organisations (NGOs). Based on the views collected from the FGMs and advice of SSC as well as the findings from desktop research, the SDC compiled the PE Document and Pamphlet to engage the public and stakeholders in the public interaction phase, with a view to identifying ways to control the use of non-essential and hard-to-recycle single-use plastic items gradually.

<sup>1</sup> Monitoring of Solid Waste in Hong Kong - Waste Statistics for 2020:  
<https://www.wastereduction.gov.hk/sites/default/files/msw2020.pdf>

Figure 1.1 and Figure 1.2 Focus Group Meetings

Figure 1.3 PE Document

Figure 1.4 PE Pamphlet

1.6. The PE Document identified and set out the following key areas to facilitate in-depth and structured discussions by stakeholders and members of the public –

- (i) What are single-use plastics?
  - a. Definition and examples of single-use plastics
  - b. Why do we have to deal with single-use plastics?
- (ii) Where are we now?
  - a. Statistics of plastic waste disposal of in Hong Kong
  - b. On-going and past initiatives on management of single-use plastics in Hong Kong

- (iii) What should we do?
  - a. Action should be taken by us
  - b. Objectives of this PE
    - i. Which single-use plastic products to tackle, the approach of managing them and the timeline
    - ii. Explore ways to go green from consumer angle with a view to revolutionising the market
- (iv) Waste prevention - How?
  - a. What types of single-use plastics should be put under control?
  - b. When to control different types of single-use plastics?
    - i. Short-term (within 3 years)
    - ii. Medium-term (3 – 5 years)
  - c. How to control different types of single-use plastics?
    - i. Total ban or restriction
    - ii. Regulatory measures
    - iii. Voluntary measures
  - d. How to enhance existing measures of the Plastic Shopping Bag (PSB) Charging Scheme
    - i. Tighten the exemptions
    - ii. Avoid multiple layer of packaging
    - iii. Limit the number of exempted PSBs
    - iv. Adjust the charging level
- (v) Green lifestyle tips
  - a. Reuse, recycle and proper disposal
  - b. Green shopping habit
  - c. Emergence of green products
- (vi) Summary of this PE exercise

Through the public interaction phase of the PE, the SDC aimed to raise public awareness and understanding on impacts of single-use plastics on our ecosystems, animal lives and human health; and formulate the types of single-use plastics to be controlled and related regulatory means and timeline.

## 2. Report on Public Engagement Process

- 2.1. The PE on “Control of Single-use Plastics” is the ninth PE exercise undertaken by the SDC. A press conference was held on 30 September 2021 to formally launch the public interaction phase of the PE on “Control of Single-use Plastics” and release the PE Document, which lasted for three months until 29 December 2021.
- 2.2. The Hong Kong Productivity Council (HKPC) was commissioned as the Programme Director to assist SDC to design and implement the PE including organising focus group meetings to collect initial views from stakeholders on direction of the PE, preparation of the PE Document, arranging public engagement events for collecting views of key stakeholders and general members of the public, and conducting analysis on views and data collected.

Figure 2.1 Press Conference<sup>2</sup>

- 2.3. During the public interaction phase, the SDC conducted a total of 35 engagement events (including 3 town hall meetings on Hong Kong Island, in Kowloon and New Territories, youth forum, school outreach, etc.) with the participation of around 2 600 members of the public and stakeholders in total. These engagement sessions also included meetings / briefing sessions for Advisory and Statutory Bodies, relevant business and trade associations, professional institutes, some District Area Committees, Estate Management Advisory Committees, etc. A full list of the engagement events held during the public interaction phase is attached at **Annex B**.

<sup>2</sup> Source: Press Releases of The Government of the HKSAR, Subject “Public engagement on control of single-use plastics launched (with photo/video)” on 30 September 2021, Website: <https://www.info.gov.hk/gia/general/202109/30/P2021093000376.htm>

Figure 2.2 Three town hall meetings were held on Hong Kong Island, in Kowloon and the New territories. About 200 participants actively participated and expressed their views at the events

Figure 2.3 Town hall meetings, during which participants had in-depth exchange and discussions, enabled the SDC to collect views from the general public and different stakeholders directly

*Figure 2.4  
Business stakeholders and the International Chambers of Commerce were invited to participate in the PE briefing sessions to discuss and share relevant experiences*

*Figure 2.5  
Youth forum was held to initiate discussion among teenagers and facilitate sharing of views from their perspectives*

2.4. These events provided an important platform for gauging public and stakeholders' views on the issues set out in the PE Document. Some of the members of the SDC and SSC also attended the public interaction activities and listened and responded to the comments of the public and stakeholders.

*Figure 2.6  
PE briefing sessions were held at the meetings of the Southern, Tsuen Wan and Sham Shui Po Area Committees respectively, which enabled the SDC to understand the concerns of the local community towards the PE exercise*

*Figure 2.7  
PE briefing sessions were held at Lower Ngau Tau Kok Estate Management Advisory Committee meeting and Wo Che Estate Management Advisory Committee meeting respectively. Participants studied the PE Leaflet and expressed their views*

*Figure 2.8  
PE briefing sessions were held in five local universities.  
Students' awareness and understanding of the PE  
exercise were enhanced through the exchange*

*Figure 2.9  
Video conference was held between the  
SDC members and students for the  
discussion on the control of single-use  
plastics*

2.5. In order to reach out to the wider community, the SDC invited organisations from a wide range of sectors to be the Supporting Organisations (SOs) for this PE. A total of 123 organisations from different sectors, including business organisations, NGOs / school sponsoring bodies, professional organisations, public bodies, universities, tertiary institutions and education sector, youth groups, green groups and food and beverage sector, joined as SOs (the full list of SOs is at **Annex C**). The main role of SOs is to help disseminate information about the PE through their network (e.g. provide space for displaying promotional materials, broadcast Announcements in the Public Interest (APIs) / video clips, publicise the PE in newsletters / publications / website / other online channels) to different sectors of the community effectively and efficiently. Some SOs, on their own initiative, facilitated the SDC to give briefing sessions on PE to their members / stakeholders, and encouraged them to actively participate in the PE and provide their views on the issues set out in the PE Document.

Figure 2.10 A total of 123 supporting organisations from different sectors helped promote the information and activities of the PE exercise on their online platforms

2.6. The SDC publicised the PE through TV Announcements in the Public Interest (APIs), radio broadcast, promotional posters, pamphlets and dedicated website ([www.susdev.org.hk](http://www.susdev.org.hk)), with a view to facilitating the viewing of the PE Document by members of the public, and collecting views from the public and stakeholders through the online Views Collection Forms (VCFs) and PE sessions. The VCF is shown in Annex D. The public could also submit their views through written / email submission and mobile application. The dedicated website recorded a total of over 228 000 visits.

Figure 2.11

The PE exercise had been promoted through different publicity channels; amongst them, the promotional video of 「走塑全方位」 had attracted up to 12 000 hits on the Instagram page of Big Waster

Figure 2.12

Through the production of online promotional videos and the promotion on the Facebook page of Big Waster, public awareness of environmental protection was further enhanced. The general public joined in the online challenge to share their "plastic-free" shopping experience

- 2.7. On the other hand, the SDC had commissioned the Aristo Market Research & Consulting Company Limited (“Aristo”) to conduct a randomised telephone survey to further gauge the general public’s views on their basic understanding on the issue and their willingness to contribute to reducing the use of single-use plastics. A total of 1 003 persons were successfully interviewed within 20 days for this survey. The telephone survey report is shown in **Annex E**.
- 2.8. During the public interaction phase, feedback from the community was also received via various channels, including 37 articles from newspapers, 55 online articles and 72 topical discussions on social media. Lists of comments expressed on media, internet and social media are shown in **Annex F** and **Annex G**.
- 2.9. To actively engage the students and the elderly and to enhance their awareness on the importance of the control of single-use plastics, various lively and interesting interactive dramas cum briefing sessions were staged for them. Students and the elderly had actively participated in the drama interaction sessions which attracted much positive response. The dramas successfully enhanced their understanding on the impact of single-use plastics, and aroused their interest in pursuing a plastic-free living style.

Figure 2.13

This PE event was specially organised for the elderly. Through lively and interesting interactive dramas cum briefing sessions, the event attracted active response from the elderly on the issues

Figure 2.15

The elderly actively expressed their opinions and shared their experiences in practising "plastic-free" lifestyle

Figure 2.14

Interactive dramas cum briefing sessions were organised for teachers and students. The response from the students was very positive

2.10. During the 3-month public interaction phase, the SDC received views from various channels, including over 9 400 VCFs and 60 written submissions from individuals and companies / organisations in addition to views and comments expressed at the public interaction activities. A list of written submissions from organisations and companies as well as individuals are shown in **Annex H** and **Annex I** respectively.

2.11. Taking into account these findings, as well as views and suggestions raised by the SSC at the meetings held in February and March 2022, the SDC has formulated specific recommendations on control of single-use plastics in this report for consideration by the Government.

2.12. The completion of this SDC report marks the final stage of the public engagement process. We look forward to the Government's response to this report.

### **3. Recommendations**

3.1. All the views and feedback collected and received from the engagement events held, telephone interviews and the public interaction phase have been recorded and analysed. The results are summarised in **Chapter 5** below. These results provide a solid basis for SDC to formulate recommendations proposing the key directions for Hong Kong's control of single-use plastics.

3.2. The SDC has put forth 24 recommendations across five key areas:

- A. General principles on prioritising the control of single-use plastics
- B. New control measures
- C. Enhancing the Plastic Shopping Bag (PSB) Charging Scheme
- D. Publicity and public education
- E. Green merchandise

3.3. The recommendations consist of a series of short-term (within 3 years) and medium-term (3 - 5 years) initiatives, ranging from new control measures, enhancement of current scheme, stepping up education and raising awareness, to embracing green lifestyle.

#### **A. General principles on prioritising the control of single-use plastics**

3.4. The Government should demonstrate its determination to promote a plastic-free culture in society. The Government should stand steadfast in inculcating the concept of eliminating / minimal use of single-use plastics in the community. Single-use plastic items should only be used when they are absolutely essential (e.g. for health or hygiene reasons) and without non-plastic alternatives. Even when the above principles are met, the environmental impact of single-use plastics should still be minimised via reuse, recycle and proper disposal. When considering which single-use plastic products to tackle, it is recommended that the following key factors be taken into account:

- Degree of necessity
- Availability of reasonable alternatives
- Whether the plastic material is difficult to recycle

3.5. Currently, landfills are the major waste treatment outlet in Hong Kong. There is a lack of evidence that various "new plastics" in the market, including but not limited to biodegradable, compostable and bio-based plastics, would fully degrade in the actual and anaerobic landfill environment. Hence, any control measure on single-use plastics shall cover such "new plastics" as well. Besides, the mixing of these "new plastics" with plastics collected through current channels and processed by existing machineries will affect the recyclability of the latter as their material properties are different and the "new plastics" are difficult to be separated.

#### **B. New control measures**

##### **i. Banning the sale of single-use plastic product**

3.6. Imposing a ban on the sale of certain single-use plastic products is a powerful control measure suitable for single-use plastic products with readily available alternatives, or products that are not essential. The Government should review the effectiveness of relevant control measures from time to time and make adjustments where necessary.

*Short-term measure*

B1) Disposable plastic tableware sold at retail outlets, plastic stemmed cotton buds, inflatable cheer sticks and balloon sticks for parties / celebrations are some examples of such items as reflected in the public engagement process. Noting that the Government is planning to restrict the distribution of disposable plastic tableware at catering premises in phases, imposing a similar ban on the sale of such single-use plastic items at retail outlets, with exclusions under special circumstances, will serve to strengthen the effectiveness of the control measure in reducing disposable plastic tableware. The Government may also explore banning the sale of other single-use plastic products.

**ii. Banning the free distribution of single-use plastic product**

3.7. Some single-use plastic products are currently distributed to consumers for free. For such products, banning their sale may not be the most effective way of control. Instead, it is recommended that the Government explores banning the free distribution of such products.

*Short-term measure*

B2) As reflected from the public engagement process, some examples of such product include umbrella bag and hotel toiletries. The Government may also explore banning the free provision / distribution of other single-use plastic products.

B3) Appropriate alternatives like the use of umbrella dryer, installation of wall-mounted dispensers for shampoo / shower gel, providing water filter jugs instead of plastic bottled water should also be promoted.

**iii. Banning the manufacturing, sale and distribution of single-use plastic product**

3.8. Throughout the public engagement, the public has indicated concern towards various surge of “degradable plastic” products in the market, in particular, the fact that such product may not be able to fully degrade in Hong Kong’s waste management system.

*Short-term measure*

B4) In view of the environmental concerns of oxo-degradable plastics<sup>3</sup>, there is a trend of banning the manufacturing, sale and distribution of oxo-degradable plastic products in other places (e.g. Australia, European Union (EU), Scotland, New Zealand), the Government should follow suit on this front.

---

<sup>3</sup> Oxo-degradable plastics are produced by adding degradable additives to conventional plastics, which can accelerate the process of fragmentation when the plastics are exposed to UV radiation or heat. However, tiny plastic fragments will still remain after degradation.

B5) The Government may also explore banning the manufacturing / sale / distribution of other single-use plastic products, say, certain expanded polystyrene (EPS) (i.e. polyfoam) product as they are much bulkier and more difficult to recycle comparing with other plastics.

#### iv. Other regulatory / voluntary measures

- 3.9. Certain trade-specific single-use plastic products such as different types of packaging are serving key functions from logistics, hygiene and merchandise-protection perspectives.
- 3.10. It is recognised under the EU Directive on Packaging and Packaging Waste that packaging has a vital social and economic function, and any legislative requirements under the Directive should apply without prejudice to other relevant legislative requirements governing the quality and transport of packaging or packaged goods.
- 3.11. Further, it is pointed out in the said Directive that the amount of packaging shall be kept “to the minimum amount to maintain the necessary level of safety, hygiene and acceptance for the packed product and for the consumer”. Sustainable packaging should be used to minimise environmental impact and carbon footprint.

##### *Short-term measure*

B6) Throughout the PE process, it is generally recognised that it would be more difficult to phase out all packaging entirely due to logistics, hygiene and merchandise-protection reasons. At the same time, a strong call from the society to regulate excessive packaging is noted, especially those made of single-use plastics for use in retail, logistics trade and online shopping, as reflected in the views collected during the PE process. The Government should, with reference to the experiences of the governments and businesses in the Mainland and overseas, request the relevant trades to proactively reduce the use of plastic packaging materials (including polyfoam). Meanwhile, the Government should also explore using administrative and legislative means for effective control. Take local packaging as an example, local supermarkets may explore further plastic-reduction measures, such as avoiding the use of polyfoam for add-on packaging; minimising the repackaging of imported goods, and, if repackaging is necessary, to use non-plastic packaging / plastic packaging with recycled content as far as possible.

B7) There are views suggesting that the Government should, regardless of the origin of products, impose control measures across the board on plastic packaging materials of both local and imported products. The Government may take this into account when formulating suitable control measures on packaging.

##### *Medium-term measure*

B8) Consumers in general are willing to support brands which have shouldered more “corporate environment responsibility”. The Government should explore ways to enhance the transparency of environmental measures being put forward by the private sector.

## v. Preparatory arrangement is required for all regulatory measures

- 3.12. Before introducing any regulatory measures, the trade considers it necessary to introduce a preparatory period for allowing manufacturers, retailers and consumers to get prepared for the new arrangement and to clear existing stock. The Government may, with reference to the implementation of past regulatory measures / the practice of other places, design suitable transitional arrangement as appropriate. However, the transition period is suggested not to be too long and the regulatory measures should be reviewed from time to time to evaluate their effectiveness.

## C. Enhancing the Plastic Shopping Bag (PSB) Charging Scheme

- 3.13. The ultimate goal is to phase out free PSB. Shoppers are strongly encouraged to bring their own shopping bags (including freezer bags) and / or containers.

### *Short-term measure*

C1) The scope of exemption under the PSB Charging Scheme in place should be tightened in order to further reduce the use of PSB. Clear definitions of exempted products and implementation guidelines should be given to avoid grey areas.

C2) Many consider the present exemption for PSBs carrying frozen / chilled foodstuff can be removed. This may be due to the fact that most frozen / chilled foodstuff is already in airtight packaging, and that PSBs cannot serve any function to prevent the condensation of water droplets on frozen / chilled foodstuff or maintain their temperature.

C3) There are concerns towards multiple layers of packaging under the present Scheme, as PSBs carrying foodstuff in “non-airtight packaging” are exempted from PSB charge. It is recommended that for foodstuff that is already fully wrapped by any packaging, a free PSB should not be provided.

C4) The public generally consider the use of PSBs is necessary for carrying foodstuff without any packaging like raw meat and fresh fish and vegetables. For such cases, exemption should be provided.

C5) However, the public also consider the number of free PSB to be provided under this exemption (referring to recommendation C4) should be limited to one. That said, the public have no clear indication towards whether one free PSB should be provided for every piece of exempted product or should carry several pieces of one or more types of exempted products. As the matter would be affected by the types, sizes and quantities of the products in each purchase, it is recommended that flexibility be allowed, and more detailed guidelines on the operational arrangement be provided to avoid confusion.

C6) To remind the public that using PSBs is “with cost” and to further discourage their use, the present charging level of 50 cents is recommended to be increased with reference to the charging level of other cities.

C7) On the appropriate charging level, the public generally prefer a rounded amount to the nearest dollar, and raising the charge to \$1 or \$2 is considered useful in driving behavioural change. The retailers should be encouraged to use the PSB charge received for supporting or organizing green programmes or promotions. The Government may provide guidelines in this aspect.

C8) The Government should prepare detailed guidelines targeting different affected retail outlets to ensure smooth implementation of the enhanced Scheme.

C9) Tightening the scope of exemption is a substantial change to the Scheme. Retail outlets that are distributing free PSBs under the current exemptions may not be able to do so in the future, e.g. stores at the wet markets. Considering the potential impact on the retail sector’s operational arrangement, a preparatory period is recommended to allow smooth transition.

C10) With the passage of the Waste Disposal (Charging for Municipal Solid Waste) (Amendment) Bill 2018 in August 2021, under which the public will be required to use designated bags<sup>4</sup> for waste disposal, there is room to explore whether there could be synergy between the MSW Charging Scheme and the PSB Charging Scheme. For instance, whether the use of “dual use bags” that serve the functions of both PSBs and designated bags could be promoted.

*Short-term or medium-term measure*

C11) Retailers should be encouraged to offer designated bags at cashiers in lieu of PSBs to promote the use of “dual use bags” upon the implementation of MSW charging.

3.14. Quite some respondents have expressed concern towards the indiscriminate use of flat-top bags. In some retail outlets, flat-top bags are placed next to the fruit / vegetable section for customers’ free use without any supervision.

3.15. At the same time, it was noted that some local retailers / supermarkets had adopted the green practice of providing flat-top bags to customers only at check-out counters.

<sup>4</sup> Price of designated bags: \$0.11 per litre with nine different sizes and two designs (T-shirt and flat-top bag); for example 10L (\$1.1); 15L (\$1.7) and 20L (\$2.2)

*Short-term measure*

C12) There is a need for retail outlets to step up their monitoring of flat-top bag distribution. The present practice of some retailers of allowing customers to take flat-top bags freely may lead to potential abuse. Some good practices include:

- Do not place flat-top bags at the fresh fruit / vegetable stalls;
- Provide flat-top bags to customers only upon request; and
- Place a reminder next to the flat-top bags that they are not free unless exempted.

**D. Publicity and public education**

3.16 Publicity and public education are essential for promoting green lifestyle. We recommend that the Government could explore the following measures:

*Short-term measure*

D1) Green business practices are effective and efficient in reducing the generation of single-use plastics at source. The Government should prepare and promote green business practices in collaboration with sectors concerned.

D2) Green information-sharing is essential for reducing the society's reliance on single-use plastics and keeping the public informed of the characteristics, including the pros and cons, of available alternatives, such as those made of non-plastic materials, bio-degradable plastics, etc. for making well-informed choices. The Government should, in consultation with different stakeholders, including businesses, material suppliers and consumers, explore the development of an effective information-sharing platform on single-use plastics.

D3) The Government should step up public education to promote green concepts, for instance, the "Waste Hierarchy" where waste prevention should be the most preferred option and disposal the least; introduce readily available plastic alternatives and share waste statistics in relation to single-use plastics.

D4) Research and development (R&D) on plastic alternatives should be supported by relevant research fund such as Green Tech Fund and scholarships.

## E. Green merchandise

3.17. Consumers express their desire to purchase “greener products”, for instance, refillable / reusable products, products that are made of “green material” like recycled plastics, and products in simple packaging. During the public engagement, different ranges of “additional cost that consumers are willing to pay for greener products” were listed for respondents’ consideration, and the option of “additional 5 – 10% of product price” gained the most popularity. We recommend that the trades should take the above into account and assimilate green elements in their product designs / day-to-day operations / store policies (e.g. including more refill products, setting up a dedicated section for sustainable products, setting up refill stations, catering businesses to engage contractors to clean reusable cutleries instead of using disposable ones, considering providing discount / offer / reward on green or sustainable products, etc).

3.18. Consumers indicate that it is sometimes difficult to identify which single-use plastic merchandise is in fact “greener”, e.g. whether the product could be recycled, whether it contains recycled content, etc. A good practice for local manufacturers is to indicate relevant “green” information on their merchandise as far as possible, including the raw material of the product, how to recycle the product, etc.

3.19. A “carrot and stick” approach should be taken in the control of single-use plastics. On top of the possible regulatory measures mentioned above, it would be helpful to promote “plastic-free” by reward schemes. Some examples include providing discount to customers who bring their own containers / opt for no packaging / opt for in-store pick-up instead of delivery, trade awards for outstanding green brands / retail outlets, offering returnable shopping bags for a fee or deposit (i.e. customers can borrow a reusable bag and return it for a refund).

3.20. Retailers have a key role to play when it comes to promoting plastic alternatives and green lifestyle. Some ideas include:

- Encourage customers to bring their own freezer bag;
- Promote or sell reusable cotton / linen bags and turn it into a fashionable lifestyle, attracting the younger generation to change their habit;
- Re-use certain plastic packaging like boxes as far as possible;
- Replace single-use foam containers by reusable containers; and
- Provide suitable training to frontline staff for explaining green measures to customers.

3.21. Hong Kong Stock Exchange (HKEX) has published an Environmental, Social and Governance (ESG) Reporting Guide to facilitate all listed companies' preparation of their annual ESG report. Some companies have made plastic free pledge. SDC recommends that the HKEX should encourage the listed companies in Hong Kong to formulate a holistic waste management plan, which includes the management / reduction of single-use plastic in their operation as well as setting goals for achieving carbon neutrality. The aforementioned information-sharing platform will facilitate companies to adopt green corporate culture. Instilling changes at corporate level can bring about effective influence on their clients in shifting to greener lifestyle.

## 4. Methodology of Consolidating and Analysing Views

- 4.1 Different formats of views and comments were collected from stakeholders (e.g. companies / organisations) and general members of the public through different channels. All views and comments collected during the public interaction phase were categorised into different groups (e.g. public engagement events, views collection forms (VCFs), written submissions from organisations / companies, written submissions from individuals, media coverage and others). The lists of views and comments are summarised in **Annex F**, **Annex G**, **Annex H** and **Annex I**. The template of VCF is shown in **Annex D**.
- 4.2 According to the nature of the views and comments collected (e.g. closed questions and open-ended views), each question / view would be analysed based on quantitative (i.e. closed questions) and qualitative (i.e. open-ended views) approaches.

### (i) Quantitative approach

For closed questions (e.g. yes-no questions, multiple choices, and etc.), data was converted into numeric format for counting so as to provide percentages for different response options of each question. Frequency tables and graphs (e.g. barchart / piechart) were prepared for each closed question to visualise the trends of the response. All key views and concerns obtained were then be summarised in **Chapter 5** of this report.

Meanwhile, SDC also engaged Aristo Market Research & Consulting Company Limited to conduct a Telephone Opinion Survey to collect public views on the control of single-use plastics. Telephone enumerators interviewed mobile phone users who are Hong Kong residents of age 18 or above to conduct the survey. The main objectives of the survey are:

- To understand the public perception on controlling the use of single-use plastic items;
- To identify single-use plastic items that should be tackled; and
- To understand the public acceptance of the approaches for managing single-use plastic items.

HKPC compared the statistics collected from similar questions (e.g. types of single-use plastics should be put under control, adjustment of PSB charging level) of the VCF and Telephone Opinion Survey, and set out relevant conclusions.

### (ii) Qualitative approach

Dedicated personnel were assigned to review detailed comments in VCFs, written submissions, compendiums of all PE engagement events (including town hall meetings), as well as through other relevant channels (e.g. social media, online articles). HKPC developed a framework, which is shown in Table 4.1, to reflect all the issues covered in the PE Document and relevant comments received during the public interaction phase. HKPC then grouped all the open-ended responses based on their represented sectors and the key comments in each category were further analysed and summarised.

Table 4.1 Views Analysis Framework

<p>A. Concern with Environmental Issues, including:</p> <ul style="list-style-type: none"> <li>• Single-use plastics are littered in the natural environment, which causes pollution and harm to wildlife</li> <li>• Use of single-use plastics increases carbon footprint and poses climate change hazard</li> <li>• Single-use plastics are difficult to recycle and take up valuable landfill space</li> <li>• The society’s over-reliance on single-use plastics promotes a wasteful culture</li> <li>• Control on single-use plastics to achieve carbon neutrality</li> <li>• Control on single-use plastics to achieve circular economy</li> <li>• Others</li> </ul>
<p>B. Types of Single-use Plastics Should be Put under Control, including:</p> <ul style="list-style-type: none"> <li>• Local product packaging</li> <li>• Local retail packaging</li> <li>• Local packaging for logistics and online shopping</li> <li>• Festival and celebration products</li> <li>• Toiletries distributed by hotels</li> <li>• Others - Supplementary tool sold together with a product for its usage / consumption, such as plastic straw attached to a paper beverage carton</li> <li>• Others - Other toiletries like plastic stemmed cotton buds</li> <li>• Others - Miscellaneous items for meetings, conventions and exhibitions, such as signage</li> <li>• Other suggested products</li> </ul>
<p>C. Timeframe for Implementation of Control Measures, including:</p> <ul style="list-style-type: none"> <li>• Short-term (within 3 years)</li> <li>• Medium-term (3-5 years)</li> <li>• Other timeframe</li> </ul>
<p>D. Approach for Control Measures, including:</p> <ul style="list-style-type: none"> <li>• Total ban</li> <li>• Regulatory measures</li> <li>• Voluntary measures</li> <li>• Other comments</li> </ul>
<p>E. Enhancement on the Existing PSB Charging Scheme, including:</p> <ul style="list-style-type: none"> <li>• Removing the current exemption for PSB carrying frozen / chilled foodstuff in airtight packaging</li> <li>• Removing the current exemption for PSB carrying foodstuff already fully wrapped by non-airtight packaging</li> <li>• Exempting only one PSB for carrying foodstuff not fully wrapped by any packaging (e.g. bread sold at bakeries, fruits sold at wet market)</li> <li>• Adjusting the minimum charging level (in HKD) as to discourage people from using PSBs</li> <li>• Total ban of PSB</li> </ul>

F. Provision of Recyclable Information on Single-use Plastic Products by Manufacturer (Recyclability and Percentage of Recycled Content)
G. Development of a Platform for Sharing Information on Plastic Alternatives
H. Extent of Green Purchase Considerations that Affect Consumer’s Choice, including: <ul style="list-style-type: none"> <li>• Whether the product can be re-used</li> <li>• Whether “green material” is used</li> <li>• The brand’s “corporate environmental responsibility”</li> <li>• Whether the product is not over-packaged</li> </ul>
I. Willingness to Pay More Money for Reducing the Use of Single-use Plastics
J. Alternatives to Single-use Plastics

4.3 After review by dedicated personnel, written submissions which were identical or from the same template were classified into petitions. We thus ended up with 6 petitions in total.

4.4 Finally, HKPC systematically presented the consolidated views and analysis in **Chapter 5** of this report and put forth its conclusions in **Chapter 6**.

## 5. Summary of Views Analysis

### 5.1 Quantitative Analysis of the Views Collection Forms

#### 5.1.1 Quantity of VCFs

5.1.1.1 A total of 9 424 VCFs were received in the three-month public interaction period ending on 29 December 2021 and subsequently processed, including 2 148 online VCFs received through the dedicated website and 7 276 paper VCFs, after excluding duplicate online VCFs (i.e. VCFs with identical data from identical IP address and received within a 60 second period, and VCFs submitting with “testing” in the open-ended question and no responses in other questions). Among these VCFs, 553 VCFs were received from Organisations (Org), 63 VCFs were received from Companies (Com) and 8 808 VCFs were received from Individuals (Ind)<sup>5</sup>. The SDC considers that every voice counts, so all responses in the VCFs are included in the analysis unless excluded for specific reasons mentioned above.

#### 5.1.2 Statistical analysis

5.1.2.1 As mentioned in **Chapter 4**, for closed questions (e.g. yes-no questions, multiple choices, and etc.), data was converted into numeric format for counting so as to provide percentages for different response options of each question. Some percentages might not add up to the total or 100 because of rounding.

5.1.2.2 Please note that the VCFs are not a random sample of the population, so statistical tests, which assume random samples, are not appropriate and we cannot project the views expressed to the population.

---

<sup>5</sup> For the online VCFs, 28 were excluded as potential duplicates / testing records because identical VCFs were submitted within 60 seconds from the same IP address or the VCFs were submitted with “testing” in the open-ended question and no responses in the other questions. For the paper VCFs received, 472 were not identified as either Organisations or Individuals, so they were counted as Individuals. Moreover, for respondents who had chosen “Others” in their identity, if they had provided us with their “Name of Organisations / Companies”, we regrouped them into specific type of organisations, companies or individuals based on their work nature.

### 5.1.3 Background information

*Table 5.1 Background Categories*

<b>Background Categories</b>	<b>Count</b>	<b>Percentage</b>
Organisations	553	5.9%
Companies	63	0.7%
Individuals	8 808	93.5%
<b>Total</b>	<b>9 424</b>	<b>100.0%</b>

5.1.3.1 As seen in Table 5.1, of the 9 424 number of respondents who answered the VCF, 93.5% were Individuals, 5.9% were Organisations and 0.7% were Companies.

*Table 5.2 Organisation Sub-type*

<b>Organisation Sub-type</b>	<b>Count</b>	<b>Percentage</b>
Professional Bodies / Institutions	418	75.6%
Public Organisations	84	15.2%
Green Groups	32	5.8%
Industry Associations	7	1.3%
Others	12	2.2%
<b>Total</b>	<b>553</b>	<b>100.0%</b>

5.1.3.2 As seen in Table 5.2, of the 553 organisations that stated their types, 75.6% were Professional Bodies / Institutions, 15.2% were Public Organisations, 5.8% were Green Groups, 1.3% were Industry Associations and 2.2% were Others.

### 5.1.4 Concern with Environmental Issues

Table 5.3 Degree of concern of single-use plastics to the natural environment

<b>Single-use plastics are littered in the natural environment, which causes pollution and harm to wildlife</b>	<b>Org</b>	<b>Com</b>	<b>Ind</b>	<b>Total</b>
Not concerned	33 6.0%	0 0.0%	347 4.0%	380 4.0%
Not very concerned	28 5.1%	1 1.6%	283 3.2%	312 3.3%
Neutral	103 18.7%	2 3.2%	1 939 22.1%	2 044 21.8%
Concerned	173 31.3%	13 20.6%	2 842 32.4%	3 028 32.2%
Very concerned	197 35.7%	46 73.0%	3 075 35.0%	3 318 35.3%
Don't know	18 3.3%	1 1.6%	294 3.3%	313 3.3%
<b>Base</b>	<b>552</b>	<b>63</b>	<b>8 780</b>	<b>9 395<sup>6</sup></b>

5.1.4.1 As seen in Table 5.3, over 65% of organisations, companies and individuals reported they were concerned or very concerned that it would cause pollution and harm to wildlife if single-use plastics were littered in the natural environment. Less than 8% of responses were not concerned or not very concerned about this environmental issue.

Table 5.4 Degree of concern of single-use plastics on carbon footprint and climate change

<b>Use of single-use plastics increases carbon footprint and poses climate change hazard</b>	<b>Org</b>	<b>Com</b>	<b>Ind</b>	<b>Total</b>
Not concerned	32 5.8%	0 0.0%	304 3.5%	336 3.6%
Not very concerned	23 4.2%	2 3.2%	372 4.2%	397 4.2%
Neutral	128 23.2%	2 3.2%	2 160 24.6%	2 290 24.4%
Concerned	177 32.1%	12 19.0%	2 715 30.9%	2 904 30.9%
Very concerned	168 30.4%	45 71.4%	2 829 32.2%	3 042 32.4%
Don't know	24 4.3%	2 3.2%	402 4.6%	428 4.6%
<b>Base</b>	<b>552</b>	<b>63</b>	<b>8 782</b>	<b>9 397<sup>7</sup></b>

<sup>6</sup> 29 respondents did not answer this question and therefore were excluded in the figures from the base.

<sup>7</sup> 27 respondents did not answer this question and therefore were excluded in the figures from the base.

5.1.4.2 As seen in Table 5.4, over 60% of organisations, companies and individuals reported they were concerned or very concerned that the use of single-use plastics increased carbon footprint and posed climate change hazard. Less than 8% of responses are not concerned or not very concerned.

*Table 5.5 Degree of concern of recyclability of single-use plastics and landfill situation*

<b>Single-use plastics are difficult to recycle and take up valuable landfill space</b>	<b>Org</b>	<b>Com</b>	<b>Ind</b>	<b>Total</b>
Not concerned	29 5.3%	0 0.0%	323 3.7%	352 3.7%
Not very concerned	26 4.7%	2 3.2%	397 4.5%	425 4.5%
Neutral	120 21.7%	5 8.1%	2 156 24.5%	2 281 24.3%
Concerned	163 29.5%	11 17.7%	2 557 29.1%	2 731 29.1%
Very concerned	193 35.0%	42 67.7%	2 992 34.1%	3 227 34.3%
Don't know	21 3.8%	2 3.2%	359 4.1%	382 4.1%
<b>Base</b>	<b>552</b>	<b>62</b>	<b>8 784</b>	<b>9 398<sup>8</sup></b>

5.1.4.3 As seen in Table 5.5, over 60% of organisations, companies and individuals reported they were concerned or very concerned that the single-use plastics were difficult to recycle and took up valuable landfill space. Less than 8.5% of responses were not concerned or not very concerned.

*Table 5.6 Degree of concern of wasteful culture associated with single-use plastics*

<b>The society's over-reliance on single-use plastics promotes a wasteful culture</b>	<b>Org</b>	<b>Com</b>	<b>Ind</b>	<b>Total</b>
Not concerned	32 5.8%	1 1.6%	356 4.1%	389 4.1%
Not very concerned	22 4.0%	2 3.2%	394 4.5%	418 4.5%
Neutral	110 19.9%	5 7.9%	2 138 24.4%	2 253 24.0%
Concerned	180 32.6%	12 19.0%	2 438 27.8%	2 630 28.0%
Very concerned	181 32.8%	42 66.7%	3 007 34.3%	3 230 34.4%
Don't know	27 4.9%	1 1.6%	445 5.1%	473 5.0%
<b>Base</b>	<b>552</b>	<b>63</b>	<b>8 778</b>	<b>9 393<sup>9</sup></b>

<sup>8</sup> 26 respondents did not answer this question and therefore were excluded in the figures from the base.

<sup>9</sup> 31 respondents did not answer this question and therefore were excluded in the figures from the base.

5.1.4.4 As seen in Table 5.6, over 60% of organisations, companies and individual reported they were concerned or very concerned that the society’s over-reliance on single-use plastics promoted a wasteful culture. Less than 9% of responses were not concerned or not very concerned about this environmental issue.

Figure 5.1 Summary on degree of concern

5.1.4.5 As seen in Figure 5.1, more than 60% of the responses were concerned and very concerned on each issue in general.

### 5.1.5 Products to be put under control, timeframe and approach on control

Table 5.7 Support for controlling local product packaging

Support for controlling local product packaging		Org	Com	Ind	Total
Control	Yes	457 82.6%	56 88.9%	7 757 88.1%	8 270 87.8%
	No	93 16.8%	6 9.5%	907 10.3%	1 006 10.7%

<sup>20</sup> There is 1 invalid entry for this question so we have excluded it from the base.

5.1.5.10 As seen in Table 5.16, 15.8% of organisations, companies and individuals reported they agreed to the control of other single-use plastics. 5.8% and 4.3% of them indicated that actions should be taken in short-term (within 3 years) and medium-term (3 - 5 years) respectively but 76.3% did not provide input. 5.0% of them reflected that total ban should be in place for those items, followed by regulatory measure (4.3% and voluntary measure (3.0%). 86.6% did not provide input on the approach. Among the suggestions provided, the top 3 mostly suggested items were single-use tableware (26.5%), followed by shopping bags (17.2%) then plastic beverage containers (15.1%). Some other items also include plastic straws, Styrofoam, plastic containers, excessive package, etc.

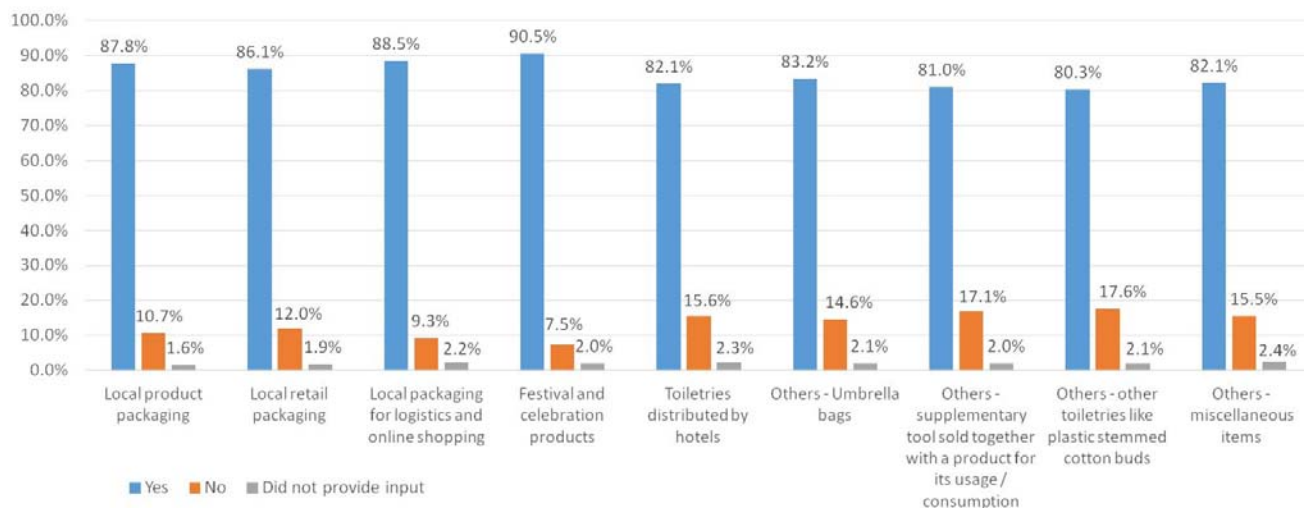

Figure 5.2 Summary on the types of products that should be controlled

5.1.5.11 As seen in Figure 5.2, more than 80% respondents agreed to imposing control on each type of products in general.

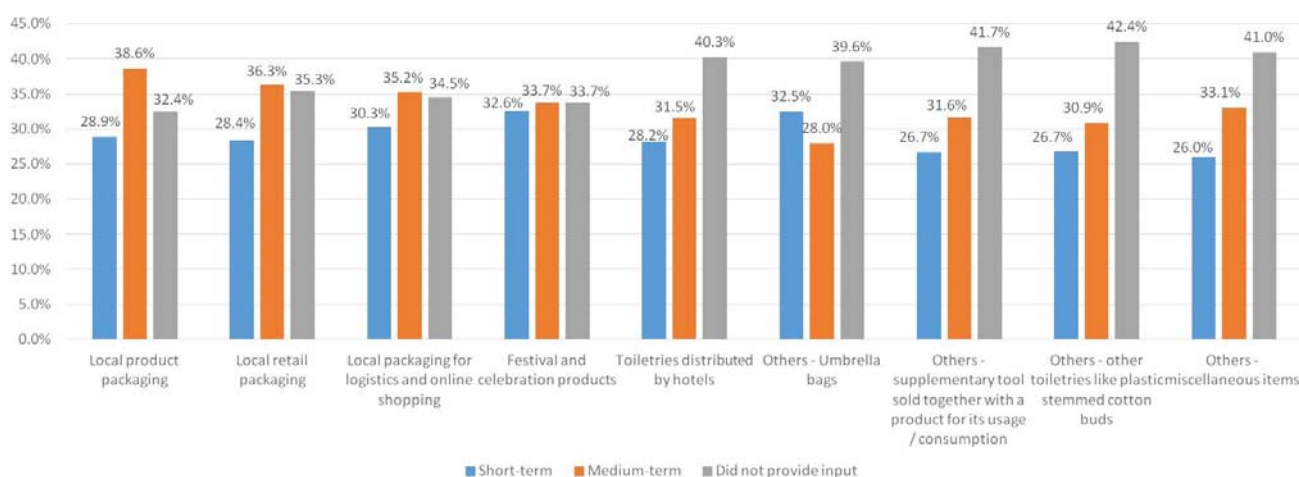

Figure 5.3 Summary on actions to be taken for those to be controlled

5.1.5.12 As seen in Figure 5.3, supports were shown for both short and medium term control (about 60% in total).

Figure 5.4 Summary on approach on controlling the single-use plastic products

5.1.5.13 As seen in Figure 5.4, majority supported to control single-use plastics by regulatory measures (such as charging, producer responsibility scheme, etc.), except for umbrella bags with the majority supporting a total ban.

### 5.1.6 Support for enhancing existing measure of the Plastic Shopping Bag (PSB) Charging Scheme

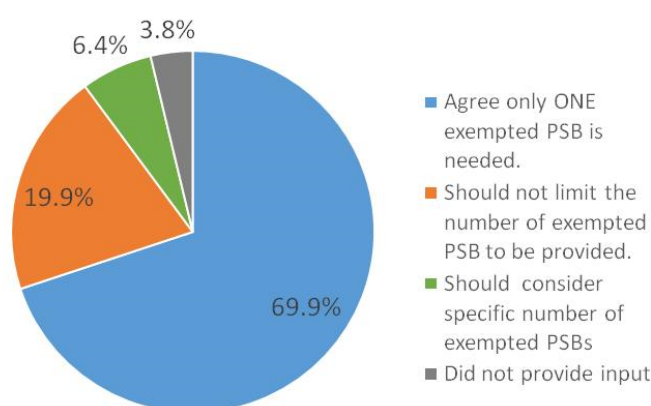

Figure 5.7 Summary on Support for exempting only ONE PSB for carrying foodstuff not fully wrapped by any packaging

5.1.6.3 As seen in Table 5.19 and Figure 5.7, 69.9% of the feedback agreed to exempting only ONE PSB for carrying foodstuff not fully wrapped by any packaging, of which 72.7% organisations, 68.3% companies and 69.8% individuals agreed to this initiative. 19.9% of the feedback disagreed with restricting the number of exempted PSB to be provided. 6.4% reflected that a certain number of exempted PSBs should be provided, of which about 36.0% reflected that no exempted PSB should be provided (Table 5.19(i)), about 37% reflected more than one exempted PSB should be provided, and about 27.0% did not provide input or did not specify clearly.

Table 5.20 Views on the minimum charging level that can discourage people to use a PSB

Views on the minimum charging level that can discourage people to use a PSB	Org	Com	Ind	Total
HK\$1	180 32.5%	16 25.4%	2 748 31.2%	2 944 31.3%
HK\$1.5	69 12.5%	7 11.1%	1 019 11.6%	1 095 11.6%

Figure 5.8 Support on Views on the minimum charging level that can discourage people to use a PSB

5.1.6.4 As seen in Table 5.20 and Figure 5.8, 32.7% of the feedback reflected that charging HK\$2 on each PSB could discourage them from using, whereas 31.3% and 11.6% reflected that HK\$1 and HK\$1.5 could already discourage them from using PSBs respectively. 21.3% suggested other amounts, of which 65.3% suggested more than HK\$2, 18.7% suggested less than HK\$1, 5.9% suggested no need charging and about 10% did not specify or invalid. In general, over 60% respondents chose each of HK\$1 or HK\$2.

Figure 5.12 Summary on Willingness to pay more for reducing the use of single-use plastics

5.1.10.1 As seen in Table 5.27, the majority (almost 33%) of organisations, companies and individuals were willing to pay 5% – 10% more of the product price to support the reduction of the use of single-use plastics. As seen in Figure 5.12, 22.8% of these three groups were willing to pay less than 5% of product price for reducing the use of single-use plastics, 20.8% were willing to pay 11 – 15% of product price, while 19.5% were willing to pay more than 15% of product price.

<sup>27</sup> 406 respondents did not answer this question and therefore were excluded in the figures from the base.

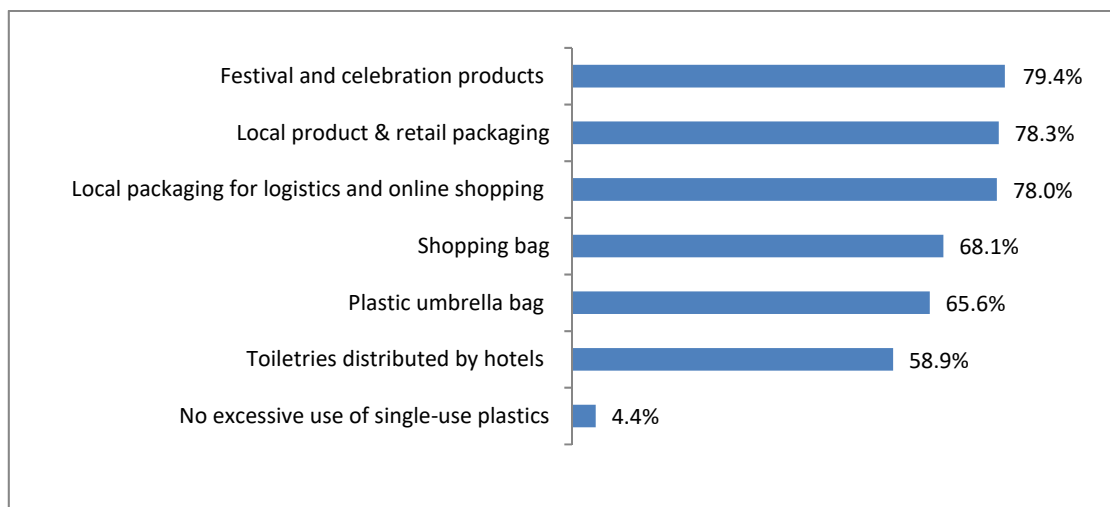

## 5.2 Telephone Survey Results

### 5.2.1 Background of Randomised Telephone Survey

5.2.1.1 As mentioned in **Chapter 2**, a randomised telephone survey was also conducted to further gauge the general public's views on their basic understanding on the issue and their willingness to contribute for reducing the use of single-use plastics. A total of 1 003 mobile phone users who are Hong Kong residents of age 18 or above were successfully interviewed within 20 days for this survey. The telephone survey detailed report and questionnaire are shown in **Annex E**.

### 5.2.2 Views on the Excessive Use of Single-use Plastics

5.2.2.1 Nearly 80% of respondents (79.4%) opined that “Festival and celebration products” was being used excessively, followed by “Local product & retail packaging” (78.3%), and “Local packaging for logistics and online shopping” (78.0%). Only 4.4% of respondents believed that there was no excessive use of single-use plastics in Hong Kong. This illustrated the majority of respondents was of the view that the excessive use of single-use plastics occurred in everyday life.

*Figure 5.13 Views on the Excessive Use of Single-use Plastics (multiple answers, % of agreed responses)*

### 5.2.3 Perception on the Awareness of Reducing the Use of Single-use Plastics

5.2.3.1 In terms of respondents' perception on the awareness of reducing the use of single-use plastics among residents, about half (49.9%) opined that the awareness was insufficient. By contrast, nearly 40% of respondents (38.0%) considered such awareness sufficient and 12.1% had “No comment”.

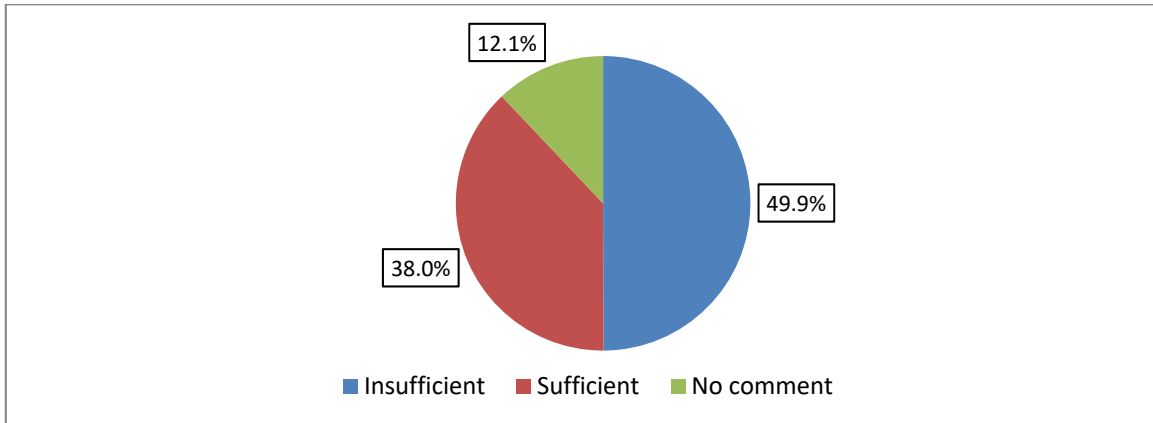

Figure 5.14 Perception on the Awareness of Reducing the Use of Single-use Plastics

#### 5.2.4 Views on imposing stricter control on single-use plastics items for alleviating the excessive use

5.2.4.1 Nearly 60% of respondents (57.0%) agreed to imposing stricter control on single-use plastics items for alleviating the excessive use while nearly 30% of respondents (29.9%) took the opposite view and 13.0% indicated “No comment”.

Figure 5.15 Views on imposing Stricter Control on Single-use Plastic Items for alleviating the excessive use

#### 5.2.5 Habits to reduce the use of single-use plastics in daily life

5.2.5.1 When asked about the habits of reducing the use of single-use plastics in daily life, the majority of the respondents (90.6%) indicated having the habits on bringing own shopping bag, followed by avoiding the use of single-use plastics umbrella bag (67.3%), purchasing products in simple packaging (64.5%) and reducing online shopping (52.5%). Only a few of respondents (2.4%) indicated that they did not have any specific habits to reduce the use of single-use plastics in everyday life.

Figure 5.16 Habits to Reduce the Use of Single-use Plastics in Daily Life (Multiple answers, % of “Yes” responses)

## 5.2.6 Views on the Plastic Shopping Bags (PSB) Charging Scheme - tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging

5.2.6.1 When asked whether the exemption should be tightened for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging, over half of respondents (54.7%) agreed that the exemption should be tightened, whereas more than 30% of respondents (32.9%) disagreed with the suggestion and 12.4% indicated “No comment”.

Figure 5.17 Views on the PSB Charging Scheme – Tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging

## 5.2.7 Views on the PSB Charging Scheme – Adjust the charge on PSBs that can reduce the use of plastic shopping bags

5.2.7.1 On the issue of whether raising the charge for PSBs may reduce the use of plastic bags, nearly 45% of respondents (44.2%) disagreed that raising the charge on PSBs can reduce the use of PSBs by the general public while 36.3% of respondents agreed to the suggestion. Nearly 20% of respondents (19.6%) indicated “No comment”.

Figure 5.18 Views on the PSB Charging Scheme – Adjust the Charge on PSBs

### 5.2.8 Views on the PSB Charging Scheme – Suitable charging level for PSB with deterrent effect

5.2.8.1 Among the respondents who agreed to raising the charge of PSBs, nearly half of them (48.2%) indicated that increasing the charge level to \$1.0 can discourage the general public from using a PSB, followed by \$2.0 (23.6%) and \$3.0 (10.9%). Only 1.1% of respondents opined that raising the charge level for PSBs to \$1.5 can discourage residents from using a PSB. A suitable charging level with deterrent effect is averaged at around \$2.2.

Figure 5.19 Views on the PSB Charging Scheme – Suitable charging level for PSBs with deterrent effect

### 5.2.9 Willingness to pay more to reduce the Use of Single-use Plastics

5.2.9.1 When asked about their willingness to pay more to reduce the use of single-use plastics, more than 40% of respondents (41.9%) responded that they were unwilling to pay more to reduce the use of single-use plastics, whereas 33.2% of respondents were willing to pay more and 24.8% had “No comment”.

Figure 5.20 Willingness to Pay More to Reduce the Use of Single-use Plastics

### 5.2.10 Quantitative view representing the willingness to pay more for non-plastic / reusable alternatives

5.2.10.1 Among the respondents who were willing to pay more to reduce the use of single-use plastics, more than half of them (52.5%) indicated that they were willing to pay \$0.5 - \$1 (which is 5 - 10% of the product price) for non-plastic / reusable alternatives assuming the price of a single-use plastic item is \$10, followed by 34.6% for less than \$0.5 (which is less than 5% of the product price) and 10.6% for \$1.1 - \$1.5 (which is 11 - 15% of the product price). Only a few of them (2.3%) were willing to pay more than \$1.5 (which is more than 15% of the product price) for non-plastic / reusable alternatives.

Figure 5.21 The Amount of Money that People are Willing to Pay for Non-plastic / Reusable Alternatives if the Single-use Plastic Item is \$10

### **5.3 Qualitative Analysis on comments collected from public interaction activities and written submissions**

5.3.1 All comments from the public engagement activities and the written submissions were categorised and analysed using qualitative methods. The results of the analysis were carried out according to the following groupings of 1) General Public, 2) Youth, 3) Elderly, 4) Retail and Food Beverage (F&B) Sector, 5) General Business Groups, Alternative Materials Sector, Hospitality, Logistics and Delivery Sector, Property Management Sector and Recycling Sector, 6) Professional Groups and 7) Green Groups and Non-governmental Organisations. The views about the previous public consultations, including the Producer Responsibility Scheme on Plastic Beverage Containers and the Regulation of Disposable Plastic Tableware, and other comments on this public engagement (e.g. the design of the VCF) were also received in this public engagement exercise. For details of all the comments, please refer to the compendiums.

#### **5.3.2 General Public**

##### **5.3.2.1 Concern with environmental issues**

The majority of the respondents expressed their concerns about the pollution and harm brought to the wildlife if single-use plastics were littered in the natural environment. For instance, they indicated that plastic wastes were most harmful to the environment, and some of them preferred no plastic to be existed in natural environment by 2030. Also, there were concerns about the difficulty in recycling single-use plastics and the limited availability of landfill space in Hong Kong. Respondents also expressed concern towards the recycling standard of the single-use plastics products and the city's chronic problem of expanded polystyrene boxes. They urged the Government to implement measures to reduce waste generation and disposal in order to prevent saturation of the landfills.

Moreover, some respondents indicated their concerns over impact of single-use plastics on carbon footprint and climate change problems, as well as the achievement of carbon neutrality and circular economy. Over-reliance on single-use plastics products led to an increase in carbon footprint and caused climate change. They hoped the Government would formulate new policies and plans for tackling single-use plastics problem as well as achieving carbon neutrality targets in Hong Kong. Besides, they brought up the concept of circular economy which promoted regenerated economic activities through reducing waste generation and new product designs.

##### **5.3.2.2 Types of single-use plastics to be controlled**

The types of single-use plastic products to be controlled as suggested by the general public are shown in the following:

- 1) Local product packaging
- 2) Local retail packaging
- 3) Local packaging for logistics and online shopping
- 4) Festival and celebration products – single-use tableware sold at retail outlets
- 5) Festival and celebration products – cheer sticks and glow sticks
- 6) Toiletries distributed by hotels

- 7) Umbrella bags
- 8) Other suggested items (e.g. packaging for imported products, expanded polystyrene etc.)

The majority of general public supported the control of all the proposed types of single-use plastics mentioned in the public engagement document.

To tackle the single-use plastics problem, some respondents opined that the Government should regulate numerous types of packaging materials for local products, such as shrink-packaging materials and coated packaging materials. For local retail packaging, some respondents indicated their concerns towards the use of packaging in the local retail sector such as foam trays and platters for fresh fruit and meat. Meanwhile, some respondents suggested that the Government should regulate local packaging for logistics and online shopping to prevent over-packaging. Besides, they recommended that shops provide consumers with choice of simple packaging.

Among the festival and celebration products mentioned in the public engagement exercise, some respondents agreed that single-use tableware sold at retail outlets should be regulated by charging or replacement with alternatives including biodegradable products as an example. Besides, some respondents agreed that cheer sticks and glow sticks should be regulated.

As reflected by the general public, hotel toiletries was another type of plastic product that should be put under control. They suggested that hotels should stop the free distribution of small-bottled single-use plastics products to their guests and install wall-mounted dispensers for shampoo and shower gel in each bathroom, or provide large refillable containers for the toiletries. On the other hand, some suggested the hotel industry could offer small-bottled shampoo and shower gel to hotel guests with a charge on request only.

Several respondents agreed that umbrella bags should also be put under control as alternatives such as reusable umbrella bags and umbrella dryers were available in the market. They suggested the Government should strengthen the support for recycling facilities for umbrella bags and provide more umbrella dryers in malls.

Furthermore, many of the respondents suggested other single-use plastics items, which were not mentioned in the public engagement document, should also be put under control, including packaging for imported products, polystyrene containers etc.

### **5.3.2.3 Timeframe for implementation of control measures**

A number of respondents suggested that the Government should control single-use plastics in three different timeframes, including short term (i.e. within 3 years), as soon as possible and within a specific timeframe. As suggested, priority should be given to controlling the single-use plastic products that were 1) with alternatives, 2) non-essential and 3) harmful to the environment within 3 years. In particular, they emphasised that the control of expanded polystyrene and hotel toiletries should commence within 3 years. In tackling the overall plastics waste situation in Hong Kong, the respondents urged the Government to tighten the exemption for plastic shopping bags and tackle the over-packaging problems of online shopping and logistics as soon as possible. Moreover, some respondents suggested that the Government should set realistic goals for tackling the plastics problem

in Hong Kong, and proposed a complete phasing out of single-use plastics in the environment by 2030.

#### **5.3.2.4 Approach for control measures**

Many respondents agreed that regulatory measures should be taken in the control of single-use plastics. In particular, they would like the Government to regulate the plastic coding on products for resin identification and plastics products claimed to be biodegradable. Besides, they suggested that the Government should control single-use plastics by targeting at producers and consumers through producer responsibility schemes and the user-pay principle respectively. Stronger deterrent effect was expected through adopting these measures.

To further enhance the recycling channels and initiatives, the provision of clear guidelines to the industries such as guidelines on recycling procedures and labelling standards of plastics packaging were strongly recommended. In addition, some respondents suggested that the Government should enhance the recycling facilities in the society such as installing more reverse vending machines for plastic bottles and improving the rebate scheme in recycling outlets (e.g. GREEN\$ Electronic Participation Incentive Scheme).

Furthermore, most respondents emphasised the importance of education and agreed that the Government should step up public education to promote green concepts and plastics-free culture (e.g. “shop naked” and utilisation of plastics alternatives) in society. They expected that behavioural changes, such as bringing their own bags for shopping and participating in proper recycling, would be initiated through education and promotion.

#### **5.3.2.5 Enhancement on the existing Plastic Shopping Bag (PSB) Charging Scheme**

On the review of the existing PSB Charging Scheme, the public in general preferred to adjust the minimum PSB charging level so as to discourage people from using PSBs. Relatively more respondents suggested adjusting the PSB charging level to HK\$1, while some others suggested upward adjustments to HK\$2 and HK\$5. Many respondents indicated their concerns towards the indiscriminate use of flat-top bags for frozen / chilled foodstuff. Some of them suggested removing or tightening the current exemption for PSB carrying frozen / chilled foodstuff in airtight packaging since these products were already well-packed. A number of views from the general public preferred to remove the current exemption for PSB carrying foodstuff already fully wrapped by non-airtight packaging and tighten the exemption for PSB carrying foodstuff not fully wrapped by any packaging (e.g. bread sold at bakeries, fruits sold at wet markets). For example, it was unnecessary to provide plastic bags for many items (e.g. fruit) that were currently exempted, or to provide each exempted item with an individual plastic bag (e.g. bread). Furthermore, some suggested the Government should increase the transparency on the revenue flow generated from the PSB Charging Scheme and introduce “dual use bag” which serves the function of both PSBs and designated garbage bags for waste disposal under the up-coming MSW charging scheme.

### **5.3.2.6 Provision of recyclable information on single-use plastic products by manufacturer and development of a platform for sharing information on plastic alternatives**

Some respondents supported the provision of information on the recycling of single-use plastics products and the development of a platform for sharing information on plastics alternatives. They suggested that the provision of green information on products (i.e. recyclability and percentage of recycled content) could facilitate consumers in making wise-purchase choice and encourage recycling. Developing an information sharing platform for plastics alternatives could help gather information, encourage more people to use plastics alternatives and even drive public education campaign.

### **5.3.2.7 Alternatives to single-use plastics**

Some of the respondents expressed their concerns towards the alternatives to single-use plastics. In particular, most of them supported researching into new materials or introducing new methods to replace plastics. For instance, they suggested that the Government should reinforce the cooperation between research institutes in research and development (R&D) on plastics alternatives. Furthermore, to support the R&D on new material development, some suggested the Government should provide financial incentives such as subsidies and tax reduction to the related industries as motivation.

## **5.3.3 Youth**

### **5.3.3.1 Concern with environmental issues**

The respondents from the youth in general were concerned with the environmental issues associated with single-use plastics. Pollution to the environment, carbon footprint and the limited availability of landfill space were their main concerns. Some suggested the Government should release statistical data to summarise the types, categories and sources of the plastics wastes which were being sent to landfills. Also, some suggested the Government should adopt life-cycle analysis to measure the amount of carbon dioxide emission produced by each of the single-use plastic products in order to deepen the public's understanding and further promote a green living culture in the community, and therefore help eliminate the negative impacts brought to the environment.

### **5.3.3.2 Types of single-use plastics to be controlled**

The types of plastic products to be controlled as suggested by the youth are shown in the following:

- 1) Local product packaging
- 2) Local packaging for logistics and online shopping
- 3) Festival and celebration products
- 4) Other suggested items such as polystyrene and uncontaminated single-use plastics laboratory utensils

Some respondents pointed out that retailers should provide packaging options for customers as packaging for some local fresh fruit and meat was unnecessary. Some respondents indicated their concerns over waste generated by packaging of local logistics and online shopping and suggested the Government to face up the problem. Besides, they agreed that festival and celebration products such as gift packaging should be put under control. Control of other items such as polystyrene and uncontaminated single-use plastic laboratory utensils was also suggested.

### **5.3.3.3 Approach for control measures**

The majority of the respondents opined that adoption of regulatory measures and enhancing recycling channels and initiatives were more effective in the control of single-use plastics. As suggested, the Government should implement measures to regulate and monitor the use of single-use plastics such as local logistics and online shopping packaging and local retail packaging in Hong Kong. Some of them proposed the implementation of producer's responsibility scheme to tackle the over-packaging problem. Furthermore, they suggested the Government provide a comprehensive recycling programme and clear recycling guidelines to different stakeholders in the society for enhancing plastics recycling. The provision of financial incentives such as subsidies and funding support was also suggested. In addition, some youth respondents supported a total ban on the use of plastic shopping bags and plastic products packaging.

### **5.3.3.4 Enhancement on the existing Plastic Shopping Bag (PSB) Charging Scheme**

Most respondents agreed that enhancement to the existing PSB Charging Scheme was needed. Some of them preferred the adjustment of the minimum PSB charging level (but did not propose any value) so as to discourage people from using PSBs, while some of them supported putting a total ban on the use of PSB. Besides, some respondents expressed their concern over the abuse of flat-top bags for frozen / chilled foodstuff.

### **5.3.3.5 Provision of recyclable information on single-use plastic products by manufacturer and development of a platform for sharing information on plastic alternatives**

There was a number of supportive views from the youth on the provision of recyclable information on single-use plastic products and the development of a platform for sharing information on plastic alternatives. Examples included providing relevant information and guidance on environmental-friendly products and developing an information sharing platform for plastic alternatives that could help guiding consumers on green purchase.

### **5.3.3.6 Extent of green purchase considerations that affect consumers' choice**

As reflected by the youth sector, over-packaging of a product was a key concern that discouraged their purchase. Most respondents noted that some packaging was unnecessary, while some products were over-packaged which made unpacking difficult. The minority of respondents reflected that the reusability of a product was a factor that affected their consumption choice. The durability of plastic products should be strengthened with a view to increasing the lifespan of plastic products.

### **5.3.3.7 Alternatives to single-use plastics**

In addition, the majority of respondents indicated their concerns over the price of plastic alternatives and the standards of biodegradable plastic materials in Hong Kong. For the former, most agreed that the price of plastic alternatives was expensive and might not be affordable by the general public. Some proposed the use of easily consumable materials such as packaging made from beeswax to substitute plastic packaging. For the latter, they suggested the Government to provide clear guidelines on biodegradable products and also to consider regulating biodegradable products in the future.

## **5.3.4 Elderly**

### **5.3.4.1 Types of single-use plastics to be controlled**

Specific views from the elderly were received that certain festival and celebration products such as mooncakes were usually over-packaged. Sample bottles of cosmetic products were also wasteful and thus should be put under control.

### **5.3.4.2 Approach for control measures**

Some respondents from the elderly agreed to putting a total ban on the manufacturing and importing of single-use plastic products. They believed that this would be the most effective measure in controlling the single-use plastics. Besides, they supported the adoption of voluntary measures to control the distribution of hotels toiletries. They suggested the hotel industries should reduce toiletries distribution to guests, as wall-mounted dispensers for shampoo and shower gel were available in most hotel bathrooms.

### **5.3.4.3 Enhancement on the existing Plastic Shopping Bag (PSB) Charging Scheme**

Some of the elderly believed that there was no need to set up exemptions under the PSB Charging Scheme since PSB was not a necessity. For example, bakeries used to use paper bags for packaging instead of PSBs.

## **5.3.5 Retail and Food and Beverage Sector**

### **5.3.5.1 Concern with environmental issues**

The retail and F&B sector was concerned with environmental issues associated with single-use plastics. Some respondents expressed their concern over the realisation of a circular economy. They believed that Hong Kong could achieve a circular economy if more recycling channels would be provided. Other respondents expressed their concern over the difficulty in recycling single-use plastics and the limited availability of landfill space in Hong Kong. They pointed out that plastic alternatives such as bamboo-made products, regardless of their rate of degradation, also took up space in landfills. Some respondents indicated concern over the pollution and harm brought to the wildlife if single-use plastics were littered in the natural environment.

### **5.3.5.2 Types of single-use plastics to be controlled**

The types of single-use plastic products to be controlled as suggested by the retail and F&B sector are shown in the following:

- 1) Local product packaging
- 2) Local packaging for logistics and online shopping
- 3) Festival and celebration products, especially disposable tableware sold at retail outlets
- 4) Toiletries distributed by hotels
- 5) Others - Supplementary tool sold together with a product for its usage / consumption, such as plastic straw attached to a paper beverage carton

Some respondents indicated that bottles of personal care products of local packaging should also be covered in the control of single-use plastics. A respondent pointed out that the Government should provide the industries with clear guidelines on the handling of local packaging for logistics and online shopping. Some suggested that bottles of personal healthcare products, tetra-paks, non-recyclable plastics in the local context, plastics with wide availability of sustainable alternatives, sustainable alternatives offering similar functionality in meeting hygiene, health and safety standards, as well as those with low impact on business operation / costs to consumers, should also be included in the scope of the regulation. A respondent from the retail sector indicated that their company had been trying to seek alternatives such as paper or bamboo straws to replace plastic straws attached to a paper beverage carton.

Noting that the Government was planning to regulate the distribution of disposable plastic tableware at catering premises in phases, respondents from the F&B sector considered that a similar ban should be imposed on the sale of such single-use plastic items at retail outlets, with exclusions under special circumstances, with a view to strengthening the effectiveness of the control measure. Respondents from the retail sector added that clear guidelines on the definition as well as a transition period for the trade to clear existing stock were necessary if the Government planned to ban the sale of such tableware.

### **5.3.5.3 Timeframe for implementation of control measures**

The retail and F&B sector did not propose a clear timeframe for the control measures but supported using a progressive approach in regulating different types of single-use plastics with clear targets and timelines. They expected there would be a transition period for market adoption after the policy was formulated.

### **5.3.5.4 Approach for control measures**

Many respondents supported adoption of voluntary measures such as educating the public with proper recycling concepts, promoting programmes on single-use plastics as well as providing incentives to the industries which engaged in eco-design packaging etc. An equal number of respondents supported implementation of a total ban and enhancing recycling channels and initiatives for the regulation of single-use plastics. They suggested a total ban may be applied to the single-use plastic products which were non-essential and had readily affordable sustainable alternatives, while others would be handled through the provision of a comprehensive recycling network such as

providing more collection outlets for recyclables, improving the rebate scheme of GREEN@COMMUNITY etc.

#### **5.3.5.5 Enhancement on the existing Plastic Shopping Bag (PSB) Charging Scheme**

A minority of respondents was concerned about the enhancement of the PSB Charging Scheme. A respondent urged the Government to review the existing PSB Charging Scheme and adjust the charging level (but did not propose a new charging level) as well as the exemption areas for PSB, noting that the charging level on PSB and consumer's behavior had impact on each other.

#### **5.3.5.6 Provision of recyclable information on single-use plastic products by manufacturer**

The provision of recyclable information on single-use plastic products was supported by some respondents from the retail sector. To facilitate consumers to identify greener products and ways for recycling, the respondents suggested that the Government should consider providing product labelling guidelines on materials compositions and recycling instructions.

#### **5.3.5.7 Development of a platform for sharing information on plastic alternatives**

The development of a platform for sharing information on plastic alternatives was supported by a number of respondents. They believed that this could help facilitate information sharing between industries on the selection and identification of plastic alternatives such as environmental-friendly materials used for product packaging. Furthermore, as suggested, guidelines and suppliers' information should be included in the sharing platform to facilitate identification of sustainable alternatives.

#### **5.3.5.8 Alternatives to single-use plastics**

Some respondents proposed that the Government should make available information on biodegradable plastic materials to consumers. Without such information on biodegradable plastics, they were afraid that biodegradable plastics were not properly handled by local waste management recovery and recycling infrastructures. Lowering the price for plastic alternatives was also suggested. For instance, it was suggested that the catering sector could explore dishwashing services with reasonable and affordable prices and hence minimise the use of single-use plastics cutlery and containers in their business. Besides, they supported research and development on plastic alternatives in Hong Kong. The Government should provide technical support to the industries for new materials development such as reusable plastic bags.

## **5.3.6 General Business Groups, Alternative Materials Sector, Hospitality, Logistics and Delivery Sector, Property Management Sector and Recycling Sector**

### **5.3.6.1 Concern with environmental issues**

The majority of respondents in these sectors expressed their concern over the limited availability of landfill space in Hong Kong. For instance, respondents from the general business sector pointed out that the disposal of single-use plastics was one of the reasons leading to landfill saturation, and landfill sites should not be considered a sustainable solution for plastics waste disposal. Some respondents from the recycling sector indicated the seriousness of the plastics waste issues in landfills, in which around 2 300 tonnes out of 11 000 tonnes of municipal solid waste were plastics wastes. Some respondents from the alternative material sector urged the Government to tackle the problem of plastics wastes and hence alleviate the pressure on landfills in Hong Kong. Some also observed that the society was too dependent on single-use plastics. For example, the abuse of flat-top bags for frozen / chilled foodstuff might lead to a wasteful culture.

### **5.3.6.2 Types of single-use plastics to be controlled**

The types of single-use plastic products to be controlled as suggested by these sectors are shown in the following:

- 1) Local product packaging
- 2) Local retail packaging
- 3) Festival and celebration products (e.g. glow sticks)
- 4) Toiletries distributed by hotels
- 5) Umbrella bags
- 6) Other suggested items (e.g. packaging for imported products etc.)

Among all, most respondents supported that local retail packaging and hotel toiletries should be put under control. For local retail packaging, some of them suggested the Government to implement control measure such as using only one plastic box / a layer of plastic wrap to pack vegetables and fruits. Besides, with reference to the practice in Mainland China, some respondents suggested that hotels should not take the initiative to distribute toiletries to hotel guests. Some respondents agreed that local product packaging (e.g. personal care bottles), festival and celebration products (e.g. glow sticks) and umbrella bags should also be put under control. Moreover, as reflected, the Government should consider regulating imported plastic packaging products and some single-use plastic products which were currently not being recycled (e.g. fruit baskets) in the future.

### **5.3.6.3 Timeframe for implementation of control measures**

Some respondents supported regulating single-use plastics such as hotel toiletries in the short term (i.e. within 3 years) while some urged the Government to tackle all single-use packaging immediately. Furthermore, some respondents did not propose a clear timeframe for control but suggested the Government not to use an “across-the-board” approach for regulating single-use plastics in Hong Kong, otherwise it would be hard for them to follow.

#### **5.3.6.4 Approach for control measures**

The vast majority of respondents supported using regulatory measures. Most of them emphasised the importance of handling plastics waste in Hong Kong, in which they suggested the implementation of legislation to tackle this issue. Examples of regulatory measures included producer responsibility scheme, plastics waste charging, plastic bottle deposit scheme, etc. Furthermore, they agreed that voluntary measures also served as an important means to control single-use plastics. In particular, they agreed that education was the key. Some examples of voluntary measures included strengthening public education, promoting green concepts and encouraging the manufacturers to adopt environmental-friendly packaging.

#### **5.3.6.5 Enhancement on the existing Plastic Shopping Bag (PSB) Charging Scheme**

For the enhancement of the existing PSB Charging Scheme, some respondents preferred to adjust the minimum PSB charging level to discourage people from using PSBs. For instance, some suggested the minimum charging level of a PSB should be set at HK\$1.5. Some suggested that the current exemption for PSB carrying frozen / chilled foodstuff in airtight packaging and PSB carrying foodstuff already fully wrapped by non-airtight packaging should be removed. They believed that many of the exempted PSBs were avoidable. Other views about the PSB charging scheme were also received. They included stepping up enforcement to combat the provision of exempted PSBs by the retailers illegally and stepping up public education to encourage people to minimise using PSBs.

#### **5.3.6.6 Provision of recyclable information on single-use plastic products by manufacturer**

To facilitate consumers to identify greener products, some of the respondents suggested the Government to encourage and support the manufacturers to include the recyclability and percentage of recycled content of a single-use plastic product through voluntary measures. Some of the respondents indicated the information on recycling of single-use plastics should be presented in a standardised and regulated format. They suggested the Government should help verify the recyclable information, which helped to increase the credibility.

#### **5.3.6.7 Development of a platform for sharing information on plastic alternatives**

The development of a platform for sharing information on plastic alternatives was supported by a number of respondents. They agreed that this platform was necessary as it provided clear directions for people to choose alternative products.

#### **5.3.6.8 Willingness to pay more money for reducing the use of single-use plastics**

Some of the respondents expressed willingness to pay extra for the same products made of non-plastic materials / reusable alternatives, which they would pay less than 5% of the original product price. On the other hand, some pointed out their willingness to pay extra money for some products would be affected by different factors and it was not possible to put a specific value on this issue.

### **5.3.6.9 Alternatives to single-use plastics**

Most respondents suggested the Government should provide financial incentives (e.g. tax reduction, subsidies) to local companies and research institutions to support them in research and development for plastic alternatives. They believed that this could enhance the application of environmentally friendly materials among industries, as a result, facilitating Hong Kong to transform into a green society and achieve circular economy. Also, some of them suggested the Government should learn from overseas experiences such as Canada and Europe, etc. and adopt biodegradable products (e.g. biodegradable shopping bags) as alternatives to replace single-use plastics.

### **5.3.7 Professional Groups**

#### **5.3.7.1 Concern with environmental issues**

Some respondents were concerned with environmental issues associated with single-use plastics, particularly the decomposition of single-use plastics into microplastics which will enter the aquatic ecosystem and eventually cause contamination in food chain. There was a specific view that the associated damage to local country parks should be of great concern. Some respondents expressed concern over the increase in carbon footprint and climate change hazard due to the use of single-use plastics, while some were concerned about the difficulty in recycling single-use plastics which posed further burden on the landfills. Also, some respondents were concerned about the widespread of wasteful culture due to over-reliance on single-use plastics. There was a specific view suggesting the Government to promote and develop circular economy so as to enhance the efficiency of the value chain.

#### **5.3.7.2 Types of single-use plastics to be controlled**

The types of single-use plastic products to be controlled are shown in the following:

- 1) Local product packaging
- 2) Local retail packaging
- 3) Local packaging for logistics and online shopping
- 4) Festival and celebration products - cheer stick, glow stick, single-use tableware sold at retail outlets and others
- 5) Toiletries distributed by hotels
- 6) Umbrella bags
- 7) Others - Supplementary tool sold together with a product for its usage / consumption such as plastic straw attached to a paper beverage carton and other toiletries like plastic stemmed cotton buds
- 8) Miscellaneous items for meetings, conventions and exhibitions, such as signage

Some respondents expressed that most single-use plastics were non-essential / unnecessary, excessive, difficult to recycle or already have more sustainable alternatives in market, for example, cotton bud with stem made of bamboo / paper / wood for the replacement of plastic-stemmed cotton bud and paper straws for the replacement of plastic straws. Hence, control measures should be placed to control the use and sale of single-use plastics to reduce waste generation. Besides, some respondents suggested the need to control single-use plastics made of oxo-degradable plastics, microplastics, Polyvinyl Chloride (PVC), foam type packaging materials and polystyrene.

### **5.3.7.3 Timeframe for implementation of control measures**

Regarding the timeframe for controlling the use of single-use plastics, some respondents pointed out the need to control the use of those single-use plastics which already had more sustainable alternatives in market, were non-essential to daily life or under direct control by the business sector in the short term (within 3 years), such as umbrella bags and plastic-stemmed cotton bud. Also, some respondents expressed that some single-use plastics should be controlled in the medium term (3 - 5 years) for allowing sufficient time for relevant business stakeholders and consumers to prepare and adapt to the change.

### **5.3.7.4 Approach for control measures**

A majority of the respondents agreed to the adoption of voluntary measures to control the use of single-use plastics, which included but not limited to the integration of green elements in product design; promoting sustainable consumption and source separation through public education / activities; and use of sustainable alternatives, etc. On the other hand, a large group of respondents agreed to the adoption of regulatory measures, such as levy, to control the use of single-use plastics. Some respondents agreed to a total ban on the use of those single-use plastics which were non-essential to daily life, difficult to recycle or already had sustainable alternatives in market. Some respondents raised that providing incentives, enhancing recycling network and strengthening the education of waste management in school curriculum would be effective approaches. Meanwhile, some respondents suggested that the Government should take a more holistic approach / integrated waste management approach, which could be reinforced by statutory auditing / reporting frameworks, so as to monitor the effectiveness of controlling the use of single-use plastics, minimise the shift to the heavy use of other materials and reduce the use of raw materials.

### **5.3.7.5 Enhancement on the existing Plastic Shopping Bag (PSB) Charging Scheme**

For the enhancement of the existing PSB Charging Scheme, a number of respondents agreed to the removal of PSB exemption for frozen / chilled foodstuff in air-tight packaging. Some respondents agreed to removing the PSB exemption for foodstuff already fully wrapped by non-airtight packaging and provide only one free PSB for foodstuff not fully wrapped by any packaging. However, a few respondents expressed concerns over the hygiene problem, especially under the pandemic of Coronavirus Disease (COVID-19), and opposed the removal of the exemption. Also, there was a specific view suggesting that the Government should set a preparatory period, and provide sufficient promotion and education during the period to allow retailers and consumers to adapt to new and more environmentally-friendly modes of selling and shopping practices before removing the exemptions. Besides, some respondents considered the need to increase the minimum PSB charging level, with a majority of them suggesting HK\$1 as the minimum PSB charging level. There was a specific view pointing to the need for the Government to totally ban PSB as the ultimate goal following the enhancement measures. Meanwhile, some respondents expressed concern over the use and distribution of reusable shopping bags made of polypropylene, which claimed to be “environmentally-friendly” but were actually made from plastic. There was also a need to increase the transparency on the use of PSB charge received by the trade.

### **5.3.7.6 Provision of recyclable information on single-use plastic products by manufacturer**

To facilitate consumers to identify greener products and increase awareness in recycling, some respondents suggested that the Government should standardise the information provided on single-use products, including specification on the recyclability, the use of raw and recycled materials, etc. The information could be provided in the format of packaging label or QR code.

### **5.3.7.7 Development of a platform for sharing information on plastic alternatives**

The development of a platform for sharing information on plastic alternatives was agreed by a number of respondents. They suggested that the platform should be accessible by the general public, material suppliers and business sectors, so as to help them identify green alternatives and reduce the use of single-use plastics as well as to facilitate communication among relevant stakeholders. Also, there was a specific view pointing out that the Government should introduce certificates / labels for sustainable alternatives to help consumers identify the products.

### **5.3.7.8 Willingness to pay more money for reducing the use of single-use plastics**

Some respondents expressed willingness to pay extra for the same products made of non-plastic materials / reusable alternatives, with a majority of them willing to pay extra 5% - 10% of the product price.

### **5.3.7.9 Alternatives to single-use plastics**

For the use of plastic alternatives, some respondents suggested that the Government should regulate on the safety and other requirements of the products (e.g. increase the recyclability of the products) through the producer responsibility scheme. Also, some respondents suggested that the Government might provide financial / technical / research support for the development of new alternative materials.

## **5.3.8 Green groups and Non-government organisations (NGOs)**

### **5.3.8.1 Concern with environmental issues**

A number of respondents were concerned with environmental issues associated with single-use plastics, particularly the associated water pollution and the sequential impacts on marine life and food chain contamination. There was concern over the increase in carbon footprint and climate change hazard due to the use of single-use plastics. Some of the respondents expressed their concerns about landfill burden associated with the use of single-use plastics and mentioned that all single-use products, including single-use alternatives, would take up landfill space. Also, some respondents were concerned about the widespread of wasteful culture due to over-reliance of single-use plastics, for example disposable face masks were relatively popular among citizens when compared with the reusable alternatives. There was a specific view over the need to transition the use of plastics and other materials to circular economy. Besides, some of the respondents indicated concerns over insufficient recycling facilities to collect or process recyclables locally.

### **5.3.8.2 Types of single-use plastics to be controlled**

The types of single-use plastic products to be controlled are shown in the following:

- 1) Local product packaging
- 2) Local retail packaging
- 3) Local packaging for logistics and online shopping
- 4) Festival and celebration products - cheer sticks, glow sticks, single-use tableware sold at retail outlets and others
- 5) Toiletries distributed by hotels
- 6) Umbrella bags
- 7) Others - Supplementary tool sold together with a product for its usage / consumption, such as plastic straw attached to a paper beverage carton, and other toiletries like plastic stemmed cotton buds
- 8) Miscellaneous items for meetings, conventions and exhibitions, such as signage

Some of the respondents reflected that there was availability of alternatives for some single-use plastics, for example single-origin recyclable packs made of paperboard or cardboard for the replacement of typical plastic foam tray for packaging, strawless lids and paper straws for the replacement of plastic straws. Also, some respondents indicated the need to control single-use plastics which already had alternatives. Some suggested the need to control products related to micro-plastics. Some pointed out the need to explore controlling the packaging of imported products as most products in local market were imported. Some respondents expressed that it would be important for the Government to formulate a more detailed list of single-use plastics under control and the list should be regularly reviewed and updated to include newly emerging single-use plastics.

### **5.3.8.3 Timeframe for implementation of control measures**

Most of the respondents supported relevant control measures to be rolled out in the short term (within 3 years); while some particularly suggested the immediate need to control local packaging for logistics and online shopping, festival and celebration products, toiletries distributed by hotels, umbrella bags and other toiletries. Meanwhile, some of the respondents considered the control measures targeting certain single-use plastics should be implemented by 2025. Also, some suggested the Government should set target and timeframe on the control of single-use plastics.

### **5.3.8.4 Approach for control measures**

There were two large groups of supporters advocating respectively the adoption of total ban and regulatory measures to control the use of single-use plastics. For the coverage of single-use plastics under total ban, some of the respondents specifically pointed to single-use plastics which already had alternatives (e.g. umbrella bags, plastic straws, etc.) and were hard to be recycled (e.g. PVC, EPS, etc.), unnecessary or excessive (e.g. local retail packaging for fruit or vegetables). For regulatory measures, some of the respondents suggested the Government should set guidelines on packaging materials (e.g. percentage of the use of recyclable / recycled materials, ratio of the weight of packaging materials to the weight of products, etc.), implement producer responsibility scheme which could be modulated with charging fee. Besides, another group of respondents suggested the

adoption of voluntary measures to control the use of single-use plastics, for example, launching green charter schemes with relevant stakeholders, educating the public with the proper recycling concepts, supporting funding, innovation schemes and pilot schemes related to sustainable packaging, etc. Some of the respondents expressed the need to enhance recycling facilities in the community and increase the logistic transparency between collectors and recyclers. Besides, there was a specific view suggesting the use of economic incentive to help control the use of single-use plastics. Additionally, some of the respondents suggested the Government to set reduction target for waste plastics.

#### **5.3.8.5 Enhancement on the existing Plastic Shopping Bag (PSB) Charging Scheme**

For the enhancement of the existing PSB Charging Scheme, no respondents expressed objection to the need for enhancement measures, including the removal of certain exemptions on PSB, limiting only one exempted PSB for foodstuff not fully wrapped by any packaging and adjusting the minimum PSB charging level. For respondents favoring the increase of PSB charging level, they supported the charging level to be at minimum of HK\$1 and over HK\$2 was also proposed. Some of the respondents suggested the Government should extend the coverage of the PSB charging scheme to shopping bags made of all materials, for example paper shopping bags. Also, some of the respondents were concerned over the use of PSB charges received by retail stores and suggested the Government to increase transparency on this issue. A respondent suggested the enhancement of the PSB charging scheme followed by a total ban by 2025.

#### **5.3.8.6 Provision of recyclable information on single-use plastic products by manufacturer**

To facilitate consumers to identify greener products and increase awareness in recycling, some of the respondents suggested that certain information should be featured in the format of a label on single-use plastics, say the recyclability, use of recycled materials, end-of-life treatment, etc. Some of the respondents suggested the Government to explore regulating the label of recyclable information to enhance the tractability of the information.

#### **5.3.8.7 Development of a platform for sharing information on plastic alternatives**

The development of a platform for sharing information on plastic alternatives was supported by a number of respondents. They suggested the platform be accessible to the general public and relevant stakeholders to help consumers identify green alternatives and reduce the use of single-use plastics as well as to facilitate communication among relevant stakeholders.

#### **5.3.8.8 Extent of green purchase considerations that affect consumers' choice**

Moreover, some of the respondents considered green purchase consideration important to reduce carbon footprint, protect the environment and reduce landfill burden.

### **5.3.8.9 Willingness to pay more money for reducing the use of single-use plastics**

Regarding the willingness to pay extra for the same products made of non-plastic materials / reusable alternatives, some of the respondents expressed willingness on this issue. Besides, a specific view pointed out that the Government should intervene in the price of non-plastic materials / reusable alternatives through various measures, for example tax or PRS modulated fee so as to adjust the final incremental cost imposed on consumers.

### **5.3.8.10 Alternatives to single-use plastics**

For the use of plastic alternatives, some of the respondents were concerned over the compatibility of modified plastics (including biodegradable plastics) with local recycling or waste treatment facilities for full degradation and the possible environmental pollution in the form of micro-plastics. They suggested the Government should set guidelines on modified plastics, the guideline may include information on whether such products were compatible with local waste treatment facilities and explore restricting the use of those products not meeting certain standards.

## **6. Closing remarks**

- 6.1. The three-month public interaction phase of PE on Control of Single-use Plastics was completed on 29 December 2021. The SDC, with the support of its SSC, has reviewed the analysis and consolidated the views and comments expressed by the public and stakeholders. The submission of this recommendation report to the Government marks the final stage of the PE process.
- 6.2. Feedback solicited from the PE process has revealed that public awareness for control of single-use plastics items, especially non-essential and hard-to-recycle single-use plastic items are high. Indiscriminate use of single-use plastics would bring negative impact on our environment. Controlling single-use plastics can also help Hong Kong move towards the goal of achieving carbon neutrality before 2050.
- 6.3. In the process of formulating practical and actionable strategies, the SDC has endeavoured to balance views from public and different sectors of the society. In this light, the SDC has put forward 24 recommendations across five key areas, namely general principles on prioritising the control of single-use plastics, new control measures, enhancing the Plastic Shopping Bag Charging Scheme, publicity and public education, and green merchandise. In light of the impact brought about by the prevailing pandemic, we believe the Government will carefully consider the recommendations and the appropriate timing of implementation.

## Annex A - Membership list of Strategy Sub-Committee

Professor Jonathan WONG Woon-chung, MH, JP (Chairperson)

Ms CHAN Shin-kwan

Professor Paul CHU Hoi-shan

Miss Natalie CHUNG Sum-yue

Professor Laurence HO Hoi-ming

Ms Grace KWOK May-han

Mr Jonathan LEUNG Chun

Ms Pamela MAR Chia-ming

Mr Simon NG Ka-wing

Mr Kevin ORR Ka-yeung

Miss Samanta PONG Sum-yee

Mr TAM Kent-chung

Mr Allan WONG Wing-ho

Dr Daniel YIP Chung-yin, JP

Dr Rita YU Man-sze

Dr William YU Yuen-ping

Mr Stephen CHAN Chit-kwai, BBS, JP \*

Mr Alfred CHANG Yu-ching \*

## Annex B - List of Public Interaction Activities

Date		Activity
1.	6-Oct-2021	Briefing - Airport Authority Hong Kong
2.	19-Oct-2021	Southern East Area Committee Meeting (with the participation of Members of the Southern South, West and North Area Committees)
3.	20-Oct-2021	School activity - True Light Girls' College
4.	3-Nov-2021	Tsuen Wan South Area Committee Meeting (with the participation of Members of the Tsuen Wan West and North Area Committees)
5.	4-Nov-2021	School activity - St. Rose of Lima's College
6.	4-Nov-2021	Briefing - Green Groups and Recycling Trade
7.	7-Nov-2021	Organic Aquaculture Festival 2021
8.	8-Nov-2021	School activity - The Chinese Foundation Secondary School
9.	10-Nov-2021	School activity - Buddhist Kok Kwong Secondary School
10.	11-Nov-2021	Lower Ngau Tau Kok Estate Management Advisory Committee Meeting
11.	12-Nov-2021	Briefing - Hong Kong Baptist University
12.	15-Nov-2021	Sham Shui Po West Area Committee Meeting (with the participation of Members of the Sham Shui Po Central and South, and East Area Committees)
13.	16-Nov-2021	Briefing - Chu Hai College of Higher Education
14.	19-Nov-2021	Youth Forum
15.	22-Nov-2021	Town Hall Meeting - Hong Kong Island

## **Annex C - List of Supporting Organisations**

### **(A) Business Organisations**

- 1 Business Environment Council
- 2 Dutch Chamber of Commerce in Hong Kong
- 3 Federation of Hong Kong Industries
- 4 Federation of Hong Kong Kowloon New Territories Hawker Associations
- 5 G.R.E.E.N. Hospitality
- 6 HK Recycling Chamber of Commerce
- 7 Hong Kong Association of Freight Forwarding and Logistics Ltd
- 8 Hong Kong China Chamber of Commerce
- 9 Hong Kong Convention and Exhibition Centre (Management) Limited
- 10 Hong Kong Cyberport
- 11 Hong Kong Economic and Trade Association
- 12 Hong Kong Exhibition & Convention Industry Association
- 13 Hong Kong General Association of Re-cycling Business
- 14 Hong Kong General Chamber of Pharmacy Ltd
- 15 Hong Kong Hotels Association
- 16 Hong Kong Professionals and Senior Executives Association
- 17 Hong Kong Recycle and Development Association
- 18 Hong Kong Recycled Materials & Re-production Business General Association Ltd.
- 19 Hong Kong Retail Management Association
- 20 Hong Kong Retail Technology Industry Association
- 21 Hong Kong Scrap Plastic Association
- 22 Hong Kong Small and Medium Enterprises Association
- 23 Hong Kong Waste Association
- 24 New Territories General Chamber of Commerce
- 25 New Zealand Chamber of Commerce in Hong Kong
- 26 Swedish Chamber of Commerce in Hong Kong
- 27 The Canadian Chamber of Commerce in Hong Kong
- 28 The Chinese General Chamber of Commerce
- 29 The Chinese Manufacturers' Association of Hong Kong
- 30 The Federation of Environmental And Hygienic Services
- 31 The Federation of Hong Kong Hotel Owners
- 32 The Hong Kong Chinese Enterprises Association
- 33 The Hong Kong Chinese Importers' & Exporters' Association
- 34 The Hong Kong Food Council
- 35 The Hong Kong Food, Drink & Grocery Association
- 36 The Hong Kong General Chamber of Small and Medium Business
- 37 The Hong Kong Research Institute of Textiles and Apparel Ltd
- 38 The Pharmaceutical Distributors Association of Hong Kong

### **(B) Concern Groups**

- 1 121C Society For Recycling
- 2 Bottless
- 3 Earthero Project
- 4 Eco-Education and Resources Centre
- 5 EcoDrive HK
- 6 Environmental Association Ltd.
- 7 Fong Chung Resources Management Co. Limited
- 8 Food For Good
- 9 Friends of the Earth (HK)

- 10 Green Come True
- 11 Green Council
- 12 Green Opportunity Limited
- 13 Green Power
- 14 Green Sense
- 15 Hong Kong Green Strategy Alliance
- 16 Kadoorie Farm & Botanic Garden
- 17 Natural Network
- 18 One Bite Social
- 19 Plastic Free Seas
- 20 The Conservancy Association
- 21 The Green Earth
- 22 The Jane Goodall Institute Hong Kong
- 23 World Green Organisation
- 24 World Wide Fund for Nature Hong Kong

**(C) Non-governmental Organisations/ School Sponsoring Bodies**

- 1 Buddhist Compassion Relief Tzu Chi Foundation Hong Kong
- 2 Christian Family Service Centre
- 3 East Kowloon District Residents Committee Limited
- 4 Fair Trade Hong Kong
- 5 Hong Chi Association
- 6 Hong Kong Outlying Islands Women's Association Limited
- 7 New Life Psychiatric Rehabilitation Association
- 8 North District Residents Association Limited
- 9 Ocean Park Hong Kong
- 10 Po Leung Kuk
- 11 Pok Oi Hospital
- 12 The Hong Kong Jockey Club
- 13 The Lok Sin Tong Benevolent Society, Kowloon
- 14 Tseung Kwan O Kai Fong Joint Association
- 15 Tung Wah Group of Hospitals
- 16 Yan Oi Tong

**(D) Professional Organisations**

- 1 Ecotech Professional Association of Hong Kong
- 2 Environmental Management Association of Hong Kong
- 3 Hong Kong Aided Primary School Heads Association
- 4 Hong Kong Environmental Industry Association
- 5 Hong Kong Green Building Council - Hong Kong Green Shop Alliance
- 6 Hong Kong Institute of Environmentalists
- 7 Hong Kong Institute of Qualified Environmental Professionals Limited
- 8 Hong Kong Organic Resource Centre
- 9 Hong Kong Subsidised Secondary Schools Council
- 10 Hong Kong Waste Management Association
- 11 International Facility Management Association Hong Kong Chapter
- 12 Subsidised Primary Schools Council
- 13 The Chartered Institution of Water and Environmental Management Hong Kong
- 14 The Hong Kong Association of Property Management Companies
- 15 The Hong Kong Institute of Architects
- 16 The Hong Kong Institution of Engineers (Environmental Division)
- 17 The Institute of Purchasing & Supply of Hong Kong
- 18 The Pharmaceutical Society of Hong Kong

**(E) Public Bodies**

- 1 Airport Authority Hong Kong
- 2 Consumer Council
- 3 Hong Kong Housing Society
- 4 Hong Kong Productivity Council
- 5 The Hong Kong Logistics Development Council

**(F) Universities, Tertiary Institutions and Education Sector**

- 1 Chu Hai College of Higher Education
- 2 City University of Hong Kong
- 3 Hong Kong Baptist University
- 4 Hong Kong Metropolitan University
- 5 Lingnan University
- 6 The Chinese University of Hong Kong
- 7 The Education University of Hong Kong
- 8 The Hang Seng University of Hong Kong
- 9 The Hong Kong Academy for Performing Arts
- 10 The Hong Kong University of Science and Technology

**(G) Youth Groups**

- 1 Chinese Young Men's Christian Association of Hong Kong
- 2 Ecobus
- 3 Hong Kong Young Women's Christian Association
- 4 Scout Association of Hong Kong
- 5 The Boys' Brigade, Hong Kong
- 6 The Hong Kong Federation of Youth Groups
- 7 The Hong Kong Girl Guides Association
- 8 V'air Hong Kong

**(H) Food and Beverage Sector**

- 1 Association of Restaurant Managers
- 2 Chamber of Food & Beverage Industry of Hong Kong
- 3 Hong Kong Federation of Restaurants & Related Trades
- 4 The Association for Hong Kong Catering Services Management Ltd.

## Annex D - Views collection form

Which of the following capacity are you using to respond to this views collection form?

<input type="checkbox"/> Professional Bodies / Institutions	<input type="checkbox"/> Public Organisations	<input type="checkbox"/> Green Groups
<input type="checkbox"/> Industry Associations	<input type="checkbox"/> Companies	<input type="checkbox"/> Others
Name of Organisations / Companies: _____		
<input type="checkbox"/> Individuals		

Email Address: \_\_\_\_\_

Question (1): How concerned are you about each of the following issues with single-use plastics?

**Answer:**

Issues	Extent of concern (1 - Not concern, 5 - very concern)					Don't know
	1	2	3	4	5	
Single-use plastics are littered in the natural environment, which causes pollution and harm to wildlife	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Use of single-use plastics increases carbon footprint and poses climate change hazard.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Single-use plastics are difficult to recycle and take up valuable landfill space.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
The society's over-reliance on single-use plastics promotes a wasteful culture.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Question (2): What types of product should be put under control? For those that should be controlled, should actions be taken in short-term (within 3 years) or medium-term (3 – 5 years)? What should be the approach for controlling them?  
 [Remark to readers: for more examples on single-use plastic product, please refer to p.7 of this public engagement document]

Answer:

Single-use plastic product	Need to control					No need to control
	Short-term / medium-term action? (Please ✓)		Approach (Please ✓) (Can choose more than one option)			
	Short-term	Medium-term	Total ban	Regulatory measure	Voluntary measure	
<b>Local product packaging</b> e.g. box for containing fruit / eggs	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>Local retail packaging</b> e.g. foam tray and platter for fresh fruit, meat, fish or poultry	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>Local packaging for logistics and online shopping</b> , e.g. plastic wrap and bubble wrap	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>Festival and celebration products</b> , e.g. inflatable cheer stick, glow stick, cutlery, stirrer, straw and plate	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>Toiletries distributed by hotels</b> , e.g. showering product in small bottle	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>Others</b> , including - <b>umbrella bag</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
- <b>supplementary tool sold together with a product for its usage / consumption</b> , such as plastic straw attached to a paper beverage carton	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
- <b>other toiletries like plastic stemmed cotton buds</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
- <b>miscellaneous items such as signage for meetings, conventions and exhibitions</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
- <b>others</b> (please specify _____)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Question (3): Enhancing existing measure - the Plastic Shopping Bag Charging Scheme

(3.1): Do you agree that the current exemption for Plastic Shopping Bag (PSB) carrying frozen/ chilled foodstuff in airtight packaging can be removed?

**Answer:**

Yes  No

(3.2): Do you agree that foodstuff already fully wrapped by non-airtight packaging should not be provided with free PSB?

**Answer:**

Yes  No

(3.3): Do you agree only ONE PSB should be exempted for carrying foodstuff not fully wrapped by any packaging (e.g. bread sold at bakeries, fruits sold at wet market)?

**Answer:**

Yes, I agree only ONE exempted PSB is needed.  No, we should not limit the number of exempted PSB to be provided.  No, I consider \_\_\_\_ (please specify the number) exempted PSBs should be provided.

(3.4): What is the minimum charging level that can discourage you from using a PSB (HKD)?

**Answer:**

\$1  \$1.5  \$2  others: \_\_\_\_\_ (please specify)

Question (4): Do you agree that, if more information on the recyclability and percentage of recycled content of a single-use plastic product is provided by the manufacturer, it would be helpful for consumers to make an informed purchase decision?

**Answer:**

Yes  No

Question (5): Do you agree there is a need to develop a platform for sharing information on plastic alternatives among different stakeholders (including businesses, material suppliers and consumers)?

Answer:

<input type="checkbox"/> Yes	<input type="checkbox"/> No
------------------------------	-----------------------------

Question (6): When there are different brands available for the same type of merchandise. Which of the following green considerations would affect your choice?

Answer:

Considerations	Would it affect your choice				
	Strongly affected	Slightly affected	Not very affecte	Not at all affected	Can't say/ don't know
Whether the product can be re-used (e.g. reusable metal cutlery vs single-use plastic cutlery for parties, reusable umbrella bags vs disposable umbrella bags)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Whether "green material" is used (e.g. products and packaging with recycled content)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
The brand's "corporate environmental responsibility" (e.g. the brand offers "take-back" service for the collection and subsequent recycling of their products)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Whether the product is not over-packaged	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Question (7): One of the reasons that plastics are so commonly used is their comparatively cheap price. Replacing plastics by non-plastic / reusable alternatives may drive up the costs of the products. To reduce the use of single-use plastics, are you willing to pay more? If yes, assuming that a single-use plastic item costs \$10, how much are you willing to pay for the same product made from non-plastic / reusable alternatives?

Answer:

<input type="checkbox"/> less than \$0.5 (i.e. less than 5% of product price)	<input type="checkbox"/> \$0.5 – 1 (i.e. 5 – 10% of product price)	<input type="checkbox"/> \$1.1 – 1.5 (i.e. 11 – 15% of product price)	<input type="checkbox"/> more than \$1.5 (i.e. more than 15% of product price)
---	--	---	--

( End )

<b>5. APPENDIX A - QUESTIONNAIRE.....</b>	<b>128</b>

## **1 Survey Background**

- 1.1 Plastics are light, durable and inexpensive. They are commonly used in our daily lives. However, their massive production and consumption will cause pollution, as they can persist in the environment for hundreds of years, affecting our ecosystems, endangering animal lives and also threatening human health. Plastics are mainly derived from fossil fuels. The process of extracting and transporting these fuels, and the subsequent refining and manufacturing of plastics, generate greenhouse gases that aggravates climate change. To achieve sustainable development, we need to avoid indiscriminate use of plastics. Single-use plastics are particularly harmful to the environment because they are usually made from low-value and hard-to-recycle plastics and are small in size, which make them difficult to be separated, sorted and cleaned for recycling. Also, these products are meant to be used only once or for a limited number of times and are usually disposed of right after use. Thus, the control of single-use plastics has become a key environmental issue globally and many places have put forward plans to tackle it.
- 1.2 In Hong Kong, plastic wastes disposed of at landfills increased by 19% from 2010 to 2020 whilst the population grew by only 6.5% over the same period. According to “Monitoring of Solid Waste in Hong Kong – Waste Statistics 2020”, 10 809 tonnes per day of overall municipal solid waste were disposed of at landfills in 2020, in which about 21%, i.e. around 2 300 tonnes of plastic wastes were disposed of at landfills per day, which is equivalent to the weight of 154 double-decker buses. The Government has been promoting a “plastic-free” culture and waste reduction at source. While these initiatives have been serving well for their specific purposes, it is time to move ahead to draw up a long-term plan to manage single-use plastics in a holistic manner. The public has to be extensively engaged in the process with a view to collecting public views on the approach, scope, priorities and timeline.
- 1.3 The Council for Sustainable Development (SDC) launched public interaction phase of the public engagement on control of single-use plastics. Aristo Market Research & Consulting Company Limited (Aristo) was commissioned by the SDC to conduct a telephone opinion survey to collect public views on controlling single-use plastics.

## **2 Survey objectives & methodology**

### **2.1 The main objectives of the survey are:**

- To understand the public perception on controlling the use of single-use plastic items;
- To identify single-use plastic items that should be tackled; and
- To understand public acceptance of different approaches for controlling single-use plastic items.

### **2.2 Coverage**

- 2.2.1 Telephone enumerators interviewed mobile phone users who are Hong Kong residents of age 18 or above for the Survey.

### **2.3 Data Collection Method**

- 2.3.1 Telephone interviews were conducted by our enumerators under close supervision. All the data was collected by using a Computer Assisted Telephone Interview (CATI) system which allows real-time data capture and consolidation.

## 2.4 Research Design

### **Sample size**

- 2.4.1 Aristo successfully interviewed a minimum number of 1 000 persons within 20 days for this survey. A successful interview is defined as a telephone interview with the target respondent completing respective questionnaire in full.

### **Sampling frame & selection procedures**

- 2.4.2 The telephone sample was selected in a two-stage random process. The first random process selected a sample of mobile telephone numbers. The Survey made use of the Numbering Plan provided by the Office of the Communications Authority (OFCA), which is open to the public.
- 2.4.3 The Numbering Plan contains details of all those telephone number prefixes assigned to different entities in Hong Kong, including fixed service number, mobile service number, page service number, etc. Aristo randomly generated the mobile telephone numbers using the known prefixes assigned by telecommunication services providers under this Numbering Plan. The duplicate numbers in the generated telephone number list were deleted to formulate our final sample frame.
- 2.4.4 When a respondent using the mobile telephone number generated by the above method was reached, the second random process was to select a target respondent who is aged 18 or above. If the respondent is under the age of 18, our enumerators said thank you and ended the telephone conversation without asking any further questions. If the respondent asked is 18 years old or above, then we invited the mobile phone user to participate in our telephone interview. The response rate was 55% with 1 003 successful telephone interviews.

### **Length of interview**

- 2.4.5 The interviewing time was a maximum of 4 minutes, including the demographic questions such as age, gender, education background, occupation and industry, etc.

### **Design of the questionnaire**

- 2.4.6 Aristo was responsible for the development of the questionnaire. The questions to be asked during the survey were based on the Views Collection Form designed for the Public Engagement on Control of Single-use Plastics. A list of questions to be asked were specified by the SDC before the survey. The questionnaire included the closed-ended and open-ended questions. We provided a draft questionnaire in English version at [Appendix 1](#). After the draft questionnaire had been approved, it was used in the pilot survey and was tested to ensure its feasibility before main fieldwork execution. After the questionnaire had been finalised, it was submitted to SDC for approval and used in the main fieldwork execution.

### **Use of Computer Assisted Telephone Interviewing Approach**

- 2.4.7 Aristo adopted the CATI approach under which enumerators conducted the telephone interviews with their mobile devices where questions were programmed into the system with logic check. We provided the CATI program, the scripting services and the hardware required by the Survey. The CATI enabled our enumerators just to follow the questionnaire flow shown on the screen and then input their answers directly to the computer. Once the questionnaire was completed, it was then uploaded to our server through a secure connection immediately.

- 2.4.8 Though we used CATI for the Survey, we still had our backup plan in case our system malfunctioned. We printed out some hard copies of the questionnaires so that enumerators could use them when necessary.

## 2.5 Quality Control Measures

### **Independent team to conduct quality checks**

- 2.5.1 To safeguard the quality of the Survey results without bias generated by any individual parties, an independent Quality Control Team was set up to implement quality control measures at various stages of the Survey period to ensure satisfactory standard of performance achieved for this Survey:

- ✓ Carry out independent checks of at least 15% of the questionnaires and interviews completed by each enumerator
- ✓ Quality checks on fieldwork level
- ✓ Quality checks at various stages of data processing

- 2.5.2 Besides the Quality Control Team, we also deployed another independent Editing Team to edit and code all the completed questionnaires. The personnel involved in this Editing Team were experienced in editing and coding questionnaires with similar scope of services and they had at least 2 years of experience in this area.

### **Quality check on fieldwork execution level**

- 2.5.3 To ascertain that our fieldwork execution was fully monitored, Aristo applied below measures for quality checks throughout the project:

- ✓ To secure the highest level of data integrity, Aristo appointed an experienced and professional staff to be the Fieldwork Manager who handled all operational issues with strict control over the whole data collection process.
- ✓ All enumerators and related staff were given a training session which provided interviewing techniques to cope with different sorts of questions as well as guidelines for interviewing professionally and appropriately and tips for in-depth probing on open-ended questions.
- ✓ Quality checks were implemented in which at least 15% of successfully enumerated cases completed by each enumerator were independently checked. Furthermore, those ineligible telephone numbers were also checked by each enumerator as well. All the quality control checkers were not enumerators of this Survey.
- ✓ To ensure data accuracy and consistency, all completed cases were checked and edited. This process was taken place as soon as any interviews were completed. It ensured that a vivid memory was drawn from the relevant enumerators for better recalling of incomplete or unclear answers. By doing so, any problems that arose in completed questionnaires were diagnosed and rectified immediately.
- ✓ During the quality check and editing process, the Fieldwork Manager identified the personnel who were suitable to participate in the Survey by studying the key performance indicators (KPIs) like several contact attempts, rate of a successful interview, consistency and accuracy during data

collection etc. The personnel who failed to demonstrate a satisfactory performance was opted out in this process.

- ✓ Onsite supervision was performed to monitor the enumerators' performance and live time surveillance was used in our office.

### **Quality check on data management level**

- 2.5.4 Proper data management measures were taken to attain the quality data. Validation rules were implemented to the questionnaire such as skipping, and a logical check was enforced directly in the CATI system so that the quality of the collected data was guaranteed. Missing data was detected simultaneously to prompt the enumerators to double-confirm the answers with the respondents during the telephone interview. If errors were found in the questionnaires and could not be clarified, those questionnaires would be voided.
- 2.5.5 Aristo had set up a double data entry system for inputting data into a computer program to ensure data integrity.

### **2.6 Data processing and analysis**

- 2.6.1 The data gathered from the mobile telephone interviews were subjected to both quantitative and qualitative data analyses if both closed-ended and open-ended questions were involved in the questionnaire.

### **Quantitative data analyses**

- 2.6.2 All the questionnaires were edited, coded and validated by Aristo. The coding manual, editing and validation rules were prepared in consultation with the SDC Secretariat and a clean data file was sent in excel format.
- 2.6.3 Statistical Package for Social Sciences (SPSS) was the main software employed to perform data analysis. Based on the structure of the finalised questionnaire as well as any hypotheses the SDC and / or researchers in mind, Aristo used inferential statistics which allowed making predictions ("inferences") from our data. From then, we took the data from samples and made generalisations about the population. For example, a certain percentage of people accepted using the cotton bags to replace the single-use plastic shopping bags, etc.
- 2.6.4 Besides SPSS outputs, data tables were generated with cross-tabulations of different variables. Tabulation plans were prepared and revised based on the comments by the SDC. These tabulation plans specified the ways in which the variables were to be cross-tabulated as well as any figures (e.g. top-2-boxes, bottom-2-boxes, means, medians, standard deviations) and / or significance testing required (and at which confidence interval) on the survey results. All these results would be subsequently presented in the form of reports as specified by the SDC.

## **Qualitative data analyses**

2.6.5 If there were any open-ended questions, those answers would be subject to a qualitative data analysis.

✓ *Coding*

- Keywords from the answers were extracted to compose a code list that was organised in a logical way (e.g. positive comments in a group and negative comments in another).

✓ *Categorisation and frequency count of keywords*

- Frequency counting of the keywords was performed on all the completed questionnaires. The resulting frequency counts were organised by meaningful categories to highlight any differences among the age groups.

✓ *Main themes*

- All open-ended answers were carefully scrutinised to explore any main themes emerging from different questions and / or respondents. These main themes might point to important information and even guided the direction of interpreting the survey results.

✓ *Verbatim*

- Open-ended answers which were particularly insightful or representative of main themes were singled out word-for-word for analysis and reporting. Keeping the verbatim intactly could ensure that the exact wording and the tone used in expressing the ideas were not lost in the process of coding and / or theme consolidation.

### 3 Details of Survey Findings

#### 3.1 Views on the Excessive Use of Single-use Plastics

3.1.1 Nearly 80% of respondents (79.4%) opined that “Festival and celebration products” was being used indiscriminately, followed by “Local product & retail packaging” (78.3%), and “Local packaging for logistics and online shopping” (78.0%). Only 4.4% of respondents believed that there was no excessive use of single-use plastics in Hong Kong. This illustrated the majority of respondents was of the view that the excessive use of single-use plastics occurred in everyday life.

Figure 1. Views on the Excessive Use of Single-use Plastics (multiple answers)

Base: All respondents

Remark: “Q1. Do you consider the following single-use plastics were being used excessively? (Yes / No)”

3.1.2 Females were more likely than males to be aware of the problem of using single-use plastics excessively. Among females, 81.6% opined that “Local product & retail packaging” was being used excessively, followed by “Festival and celebration products” and “Local packaging for logistics and online shopping” (both were 80.9%). On the other hand, “Festival and celebration products” received the highest corresponding percentage among male respondents, at 77.6%. Only a few male (5.0%) and female (3.8%) respondents thought that there was no excessive use of the single-use plastic items.

Figure 2. Views on the Excessive Use of Single-use Plastics (multiple answers) – by Gender

Base: All respondents

3.1.3 People aged 25 to 64 years old felt more than others that single-use plastics were being used excessively, especially in the group aged 25-34 and while visibly lower percentages among those aged 65 or above felt the use of all selected single-use plastic items excessively. 10.8% of respondents aged 65 or above replied that there was no such excessive use on the single-use plastics. In terms of age distribution, over 80% of respondents aged 18-24 (80.7%), 35-44 (84.4%), 45-54 (83.2%) and 55-64 (80.6%) opined that “Festival and celebration products” was being used excessively. Meanwhile, nearly 90% of respondents aged 25-34 (88.4%) and nearly 70% of respondents aged 65 or above (68.0%) found “Local packaging for logistics and online shopping” was being used excessively.

Figure 3. Views on the Excessive Use of Single-use Plastics (multiple answers) – by Age

Base: All respondents

3.1.4 Respondents with educational attainment of secondary education or above tended to be more aware of the problem of using single-use plastics excessively, whereas those with educational attainment of primary education or below had visibly lower awareness. 16.1% of respondents with educational attainment of primary education or below replied that there was no such excessive use on the single-use plastics. Regarding education level, about 85% of respondents with educational attainment of diploma or above (85.2%) opined that “Local product & retail packaging” was being used excessively. More than 80% of respondents with educational attainment of secondary (83.2%) opined that “Festival and celebration products” was being used excessively. Meanwhile, nearly 70% of respondents with educational attainment of primary or below (68.1%) found that “Local packaging for logistics and online shopping” was being used excessively.

Figure 4. Views on the Excessive Use of Single-use Plastics (multiple answers) – by Education Level

Base: All respondents

3.1.5 Analysed by personal monthly income, the high-income level at \$60,000 or above was more aware of the problem of using single-use plastics excessively. More than 25% of respondents in the income level of below \$8,000 (exclude no income) (27.2%) replied that there was no excessive use of single-use plastics. All respondents with a high-income level at \$60,000 or above (100%) opined that “Local product & retail packaging” and “Shopping bag” were being used excessively. Meanwhile, nearly 85% of respondents in the income group of \$40,000 - \$59,999 (86.5%), more than 80% of respondents in the income group of \$20,000 - \$39,999 (84.3%) and \$8,000 - \$19,999 (83.7%) opined that “Festival and celebration products” was being used excessively. Nearly 50% of respondents with an income level of below \$8,000 (exclude no income) (48.9%) and about 85% of respondents with no income (84.3%) opined that “Local packaging for logistics and online shopping” was being used excessively.

Figure 5. Views on the Excessive Use of Single-use Plastics (multiple answers) – by Personal Monthly Income

Base: All respondents

### 3.2 Perception on the Awareness of Reducing the Use of Single-use Plastics

3.2.1 In terms of respondents’ perception on the awareness of reducing the use of single-use plastics among residents, about half (49.9%) opined that the awareness was insufficient. By contrast, nearly 40% of respondents (38.0%) considered such awareness sufficient and 12.1% had “No comment”.

Figure 6. Perception on the Awareness of Reducing the Use of Single-use Plastics

Base: All respondents

Remark: “Q2. Do you think the awareness of Hong Kong residents of reducing the use of single-use plastics is sufficient?”

3.2.2 About half of females (50.0%) and males (49.9%) opined that perception on the awareness of reducing the use of single-use plastics among residents was insufficient. On the other hand, nearly 40% of females (38.7%) and males (37.1%) considered such awareness sufficient and rest of them had “No comment” (11.3% of females and 13.0% of males).

Figure 7. Perception on the Awareness of Reducing the Use of Single-use Plastics – by Gender

Base: All respondents

3.2.3 With respect to age distribution, more than half of respondents aged 18-24 (55.0%), 25-34 (50.0%), 35-44 (56.7%), 45-54 (58.7%) and 55-64 (51.5%) considered such awareness insufficient while nearly 50% of respondents aged 65 or above (48.4%) considered it sufficient.

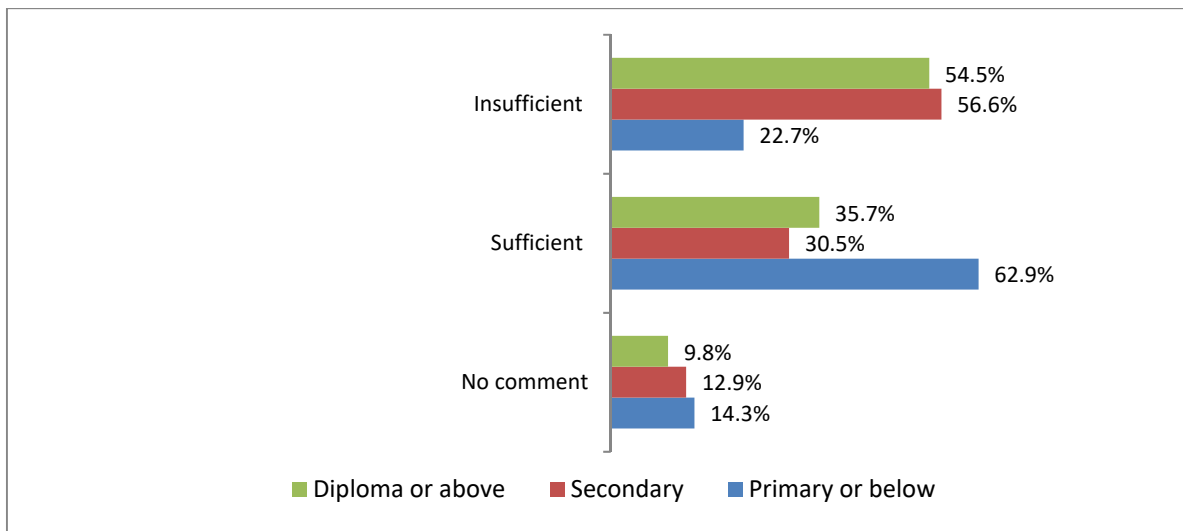

Figure 8. Perception on the Awareness of Reducing the Use of Single-use Plastics – by Age

Base: All respondents

3.2.4 Regarding the education level, nearly 55% of respondents with educational attainment at diploma or above (54.5%) and more than 55% of respondents with educational attainment at secondary (56.6%) levels tended to view the perception on the awareness of reducing the use of single-use plastics among residents as “Insufficient” while more than 60% of respondents with educational attainment at primary or below (62.9%) tended to hold an opposite view as compared to other education groups.

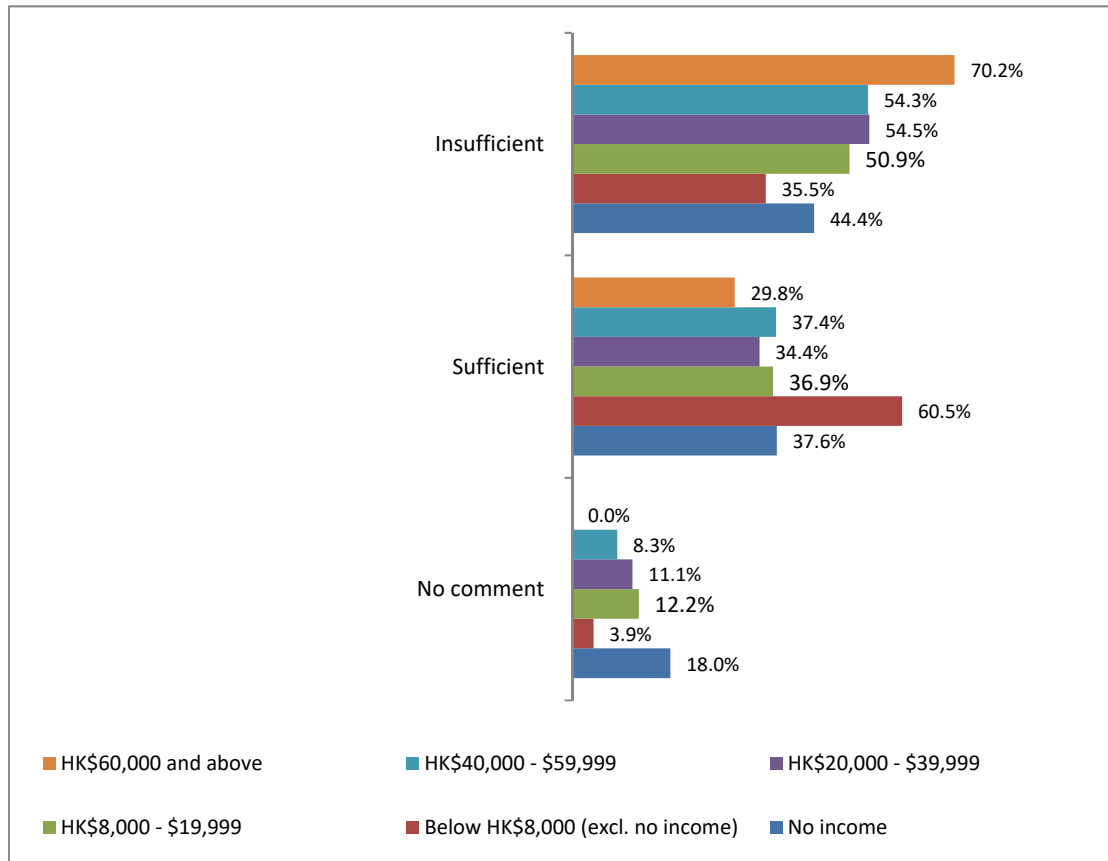

Figure 9. Perception on the Awareness of Reducing the Use of Single-use Plastics – by Education Level

Base: All respondents

3.2.5 Analysed by personal monthly income, about 70% of respondents with an income level at \$60,000 or above (70.2%), nearly 55% of respondents with an income level at \$20,000 - \$39,999 (54.5%) and \$40,000 - \$59,999 (54.3%), about 50% of respondents with an income level at \$8,000 - \$19,999 (50.9%) and nearly 45% of respondents with no income (44.4%) were found to view that the perception on the awareness of reducing the use of single-use plastics among residents as “Insufficient”. On the other hand, about 60% of respondents with the income level below \$8,000 (exclude no income) (60.5%) considered it sufficient.

Figure 10. Perception on the Awareness of Reducing the Use of Single-use Plastics – by Personal Monthly Income

Base: All respondents

### 3.3 Views on imposing stricter control on single-use plastics items for alleviating the excessive use

3.3.1 Nearly 60% of respondents (57.0%) agreed to imposing stricter control on single-use plastics items for alleviating the excessive use while nearly 30% of respondents (29.9%) took the opposite view and 13.0% indicated “No comment”.

Figure 11. Views on imposing Stricter Control on Single-use Plastic Items for alleviating the excessive use

Base: All respondents

Remark: “Q3. Do you agree to impose stricter control on single-use plastic items for alleviating the excessive use, such as banning the sale of certain single-use plastic products or restricting available free of charge? ”

3.3.2 In terms of gender, about 60% of females (59.5%) and over half of males (53.9%) agreed to imposing stricter control on single-use plastics items for alleviating the excessive use.

Figure 12. Views on imposing Stricter Control on Single-use Plastic Items for alleviating the excessive use – by Gender

Base: All respondents

3.3.3 Regarding age distribution, more than 55% of respondents aged 18-24 (57.9%) and 55-64 (56.1%), more than 65% of respondents aged 25-34 (67.7%), 35-44 (66.6%) and 45-54 (66.4%) agreed to imposing stricter control on single-use plastic items for alleviating the excessive use. Meanwhile, nearly half of respondents aged 65 or above (48.0%) indicted disapproval of the suggestion.

Figure 13. Views on imposing Stricter Control on Single-use Plastic Items for alleviating the excessive use – by Age

Base: All respondents

3.3.4 With respect to education level, nearly 70% of respondents with educational attainment at diploma or above level (69.3%) and nearly 60% of respondents with educational attainment at secondary level (58.6%) agreed to more strictly curb the excessive use of single-use plastic items while more than half of respondents with educational attainment at primary or below level (53.7%) disagreed with the suggestion. This demonstrated that respondents with higher education levels tended to accept the suggestion about imposing stricter control on single-use plastic items for alleviating the excessive use.

Figure 14. Views on imposing Stricter Control on Single-use Plastic Items for alleviating the excessive use – by Education Level

Base: All respondents

3.3.5 Analysed by personal monthly income, all respondents with a high-income level at \$60,000 or above (100.0%), more than 70% of respondents with an income level at \$40,000 - \$59,999 (71.9%), more than 60% of respondents with an income level at \$20,000 - \$39,999 (63.0%) and \$8,000 - \$19,999 (60.6%), and about 45% of respondents with no income (45.7%) were found to agree on imposing stricter control on single-use plastic items for alleviating the excessive use. On the other hand, nearly half of respondents with the income level below \$8,000 (exclude no income) (47.9%) were found to disagree with the suggestion.

Figure 15. Views on imposing Stricter Control on Single-use Plastic Items for alleviating the excessive use – by Personal Monthly Income

### 3.4 Habits to reduce the use of single-use plastics in daily life

3.4.1 When asked about the habits of reducing the use of single-use plastics in daily life, the majority of the respondents (90.6%) indicated having the habits on bringing own shopping bag, followed by avoiding the use of single-use plastics umbrella bag (67.3%), purchasing products in simple packaging (64.5%) and reducing online shopping (52.5%). Only a few of respondents (2.4%) indicated that they did not have any specific habits to reduce the use of single-use plastics in everyday life.

Figure 16. Habits to Reduce the Use of Single-use Plastics in Daily Life (Multiple answers)

Base: All respondents

Remark: “Q4. Do you have any habit to reduce the use of single-use plastics in daily life?”

3.4.2 Female accounted for the highest percentage on the habit of bringing their shopping bag at 96.4% among all habits, followed by avoiding the use of single-use plastics umbrella bag (69.3%) and purchasing products in simple packaging (68.9%). On the other hand, 83.5% of male respondents indicated that they would bring their own shopping bag. Only a few male (4.4%) and female (0.8%) respondents mentioned that they did not have any specific habits to decrease the use of single-use plastics in daily life.

Figure 17. Habits to Reduce the Use of Single-use Plastics in Daily Life (Multiple answers) – by Gender

Base: All respondents

3.4.3 Regarding the age distribution, nearly 75% of respondents aged 18-24 (74.1%), nearly 90% of respondents aged 45-54 (89.4%), more than 90% of respondents aged 25-34 (90.1%), 35-44 (92.8%), 55-64 (91.7%) and 65 or above (94.5%) were found to bring their shopping bag to reduce the use of single-use plastics in daily life.

Figure 18. Habits to Reduce the Use of Single-use Plastics in Daily Life (Multiple answers) – by Age

Base: All respondents

3.4.4 Regarding the education level, nearly 90% of respondents with educational attainment at diploma or above (88.5%), more than 90% of respondents with educational attainment at secondary (91.9%) and primary or below (91.6%) levels would bring their shopping bag in daily life to reduce the use of single-use plastics.

Figure 19. Habits to Reduce the Use of Single-use Plastics in Daily Life (Multiple answers) – by Education Level

Base: All respondents

3.4.5 Analysed by personal monthly income, all respondents with an income level at \$60,000 or above (100.0%), more than 90% of respondents with an income level at \$20,000 - \$39,999 (90.5%), \$8,000 - \$19,999 (90.3%), below \$8,000 (exclude no income) (96.5%), no income (90.0%) and over 80% of respondents with an income level of \$40,000 - \$59,999 (82.7%) were found to have the habit of bringing own shopping bag in daily life to reduce the use of single-use plastics.

### 3.5 Views on the Plastic Shopping Bag (PSB) Charging Scheme - tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging

3.5.1 When asked whether the exemption should be tightened for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging, over half of respondents (54.7%) agreed that the exemption should be tightened, whereas more than 30% of respondents (32.9%) disagreed with the suggestion and 12.4% indicated “No comment”.

Figure 21. Views on the PSB Charging Scheme – Tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging

Base: All respondents

Remark: “Q5. Do you agree that the current exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging provided by merchants should be tightened? ”

3.5.2 In terms of gender, over half of the females (56.5%) and males (52.4%) agreed to tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging.

Figure 22. Views on the PSB Charging Scheme – Tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging – by Gender

Base: All respondents

3.5.3 Regarding age distribution, more than 65% of respondents aged 25-34 (68.7%), about 65% of respondents aged 35-44 (64.5%), over 55% of respondents aged 18-24 (58.1%), 45-54 (57.0%) and 55-64 (55.5%) agreed that the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in

non-airtight packaging should be tightened while more than half of respondents aged 65 or above (52.1%) indicated disapproval of the suggestion.

Figure 23. Views on the PSB Charging Scheme – Tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging – by Age

Base: All respondents

3.5.4 Based on the education level, nearly 65% of respondents with educational attainment of diploma or above (64.3%) and more than 55% of respondents with educational attainment of secondary (57.0%) level agreed to tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging while about 60% of respondents with education attainment of primary or below level (60.1%) disapproved the suggestion. This demonstrated that respondents with higher education levels tended to accept the suggestion about tightening the exemption for plastic shopping bags carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging.

*Figure 24. Views on PSB Charging Scheme – Tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging – by Education Level*

Base: All respondents

3.5.5 Analysed by personal monthly income, more than 60% of respondents with an income level at \$60,000 or above (63.8%), \$40,000 - \$59,999 (69.5%), nearly 60% of respondents with an income level at \$20,000 - \$39,999 (58.1%), \$8,000 - \$19,999 (59.9%), \$8,000 - \$19,999 (59.9%) and over 45% of respondents with no income (46.7%) were found to agree to tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging. On the other hand, nearly 45% of respondents with the income level below \$8,000 (exclude no income) (43.5%) were found to disagree with the suggestion.

### 3.6 Views on the PSB Charging Scheme – Adjust the charge on PSBs that can reduce the use of plastic shopping bags by the general public

3.6.1 On the issue of whether raising the charge for PSBs may reduce the use of plastic bags by the general public, nearly 45% of respondents (44.2%) disagreed that raising the charge on PSBs may reduce the use of PSBs by the general public while 36.3% of respondents agreed to the suggestion. Nearly 20% of respondents (19.6%) indicated “No comment”.

Figure 26. Views on the PSB Charging Scheme – Adjust the Charge on PSBs

Base: All respondents

Remark: “Q6. Do you agree that raising the charge for PSBs can reduce their use? [SA]”

3.6.2 In terms of gender, males and females were found to have a similar pattern about the agreement on raising the charge on PSBs may reduce the use of PSBs by the general public. Nearly 45% of females (43.9%) and males (44.5%) disagreed that raising the charge on PSBs may reduce the use of PSBs by the general public.

Figure 27. Views on the PSB Charging Scheme – Adjust the Charge on PSBs – by Gender

Base: All respondents

3.6.3 Regarding age distribution, more than 40% of respondents aged 18-24 (42.7%), 35-44 (40.1%), 55-64 (42.9%) and over 60% of respondents aged 65 or above (61.4%) disagreed with raising the charge on PSBs may reduce the use of PSBs by the general public, whereas more than 45% of respondents with age 25-34 (46.4%) and nearly 45% of respondents aged 45-54 (43.4%) indicated approval of the suggestion.

Figure 28. Views on the PSB Charging Scheme – Adjust the Charge on PSBs – by Age

Base: All respondents

3.6.4 Based on the education level, about half of respondents with educational attainment at diploma or above level (50.2%) agreed on raising the charge on PSBs that may reduce the use of PSBs by the general public while nearly 70% of respondents with educational attainment at primary or below level (69.4%) disapproved the suggestion. This demonstrated that respondents with higher education levels tended to agree with raising the charge on PSBs.

Figure 29. Views on the PSB Charging Scheme – Adjust the Charge on PSBs – by Education Level

Base: All respondents

3.6.5 Analysed by personal monthly income, nearly 80% of respondents with an income level at \$60,000 or above (78.0%), more than half of respondents with an income level at \$40,000 - \$59,999 (51.9%) and over 40% of respondents with an income level at \$20,000 - \$39,999 (41.9%) were found to agree with raising the charge on PSBs. On the other hand, nearly 45% of respondents with the income level \$8,000 - \$19,999 (44.0%), over half of respondents with an income level at below \$8,000 (exclude no income) (52.8%) and over 60% of respondents with no income (63.8%) were found to disagree with the suggestion.

Figure 30. Views on the PSB Charging Scheme – Adjust the Charge on PSBs – by Personal Monthly Income

Base: All respondents

### 3.7 Views on the PSB Charging Scheme – Suitable charging level for PSB with deterrent effect

3.7.1 Among the respondents who agreed to raising the charge of PSBs, nearly half of them (48.2%) indicated that increasing the charge level to \$1.0 can discourage the general public from using a PSB, followed by \$2.0 (23.6%) and \$3.0 (10.9%). Only 1.1% of respondents opined that raising the charge level for PSBs to \$1.5 that can discourage residents from using a PSB. A suitable charging level with deterrent effect is averaged at around \$2.2.

Figure 31. Views on the PSB Charging Scheme – Suitable charging level for PSBs with deterrent effect

Base: All respondents who agreed to adjust the charge on PSBs

Remark: “Q7. What is the suitable charging level that can discourage the general public from using a plastic shopping bag? (Feel free to suggest any answer)”

3.7.2 In terms of gender, nearly half of females (46.4%) and about half of males (50.7%) suggested that raising the charging level to \$1.0 may discourage the general public from using a PSB.

Figure 32. Views on the PSB Charging Scheme – Suitable charging level for PSBs with deterrent effect - by Gender

Base: All respondents who agreed to adjust the charge on PSBs

3.7.3 Regarding age distribution, more than half of respondents aged 18-24 (52.7%) and aged 65 or above (51.1%), more than 45% of respondents aged 25-34 (49.5%), 45-54 (47.7%), 55-64 (47.8%) and nearly 45% of respondents aged 35-44 (44.5%) indicated that increasing the charging level to \$1.0 may discourage the general public from using a PSB.

Figure 33. Views on the PSB Charging Scheme – Suitable charging level for PSBs with deterrent effect - by Age

Base: All respondents who agreed to adjust the charge on PSBs

3.7.4 Regarding education level, nearly 45% of respondents with educational attainment at diploma or above (43.7%), nearly 55% of respondents with educational attainment at secondary (53.1%) level and more than 45% of respondents at primary or below (47.2%) level indicated that increasing the charging level to \$1.0 may discourage the general public from using a PSB.

Figure 34. Views on the PSB Charging Scheme – Suitable charging level for PSBs with deterrent effect - by Education Level

Base: All respondents who agreed to adjust the charge on PSBs

3.7.5 Analysed by personal monthly income, about 45% of respondents with an income level at \$60,000 or above (45.5%), nearly 45% of respondents with an income level at \$20,000 - \$39,999 (43.5%), nearly half of respondents with no income (49.9%), more than 55% of respondents with an income level at \$40,000 - \$59,999 (57.1%), more than 55% of respondents with an income level at \$40,000 - \$59,999 (57.1%) and \$8,000 - \$19,999 (57.4%) were found to suggest that increasing the charging level to \$1.0 that may discourage the general public from using a PSB. Over 45% of respondents with an income level below \$8,000 (exclude no income) (47.3%) commented that increasing the charging level to \$5.0 that may discourage the general public from using a PSB.

### 3.8 Willingness to pay more to reduce the Use of Single-use Plastics

3.8.1 When asked about their willingness to pay more to reduce the use of single-use plastics, more than 40% of respondents (41.9%) responded that they were unwilling to pay more to reduce the use of single-use plastics, whereas 33.2% of respondents were willing to pay more and 24.8% had “No comment”.

Figure 36. Willingness to Pay More to Reduce the Use of Single-use Plastics

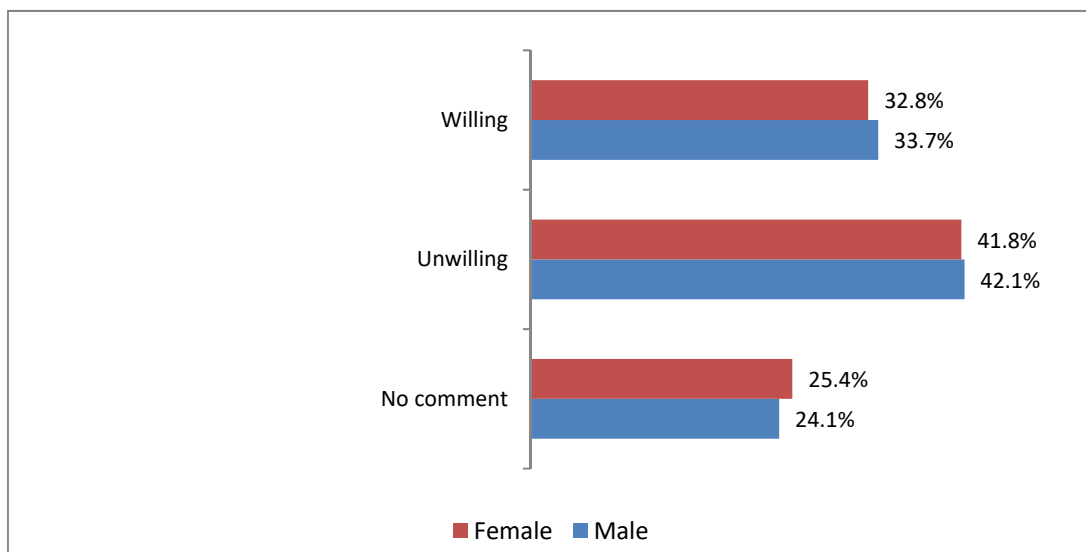

Base: All respondents

Remark: “Q8. One of the reasons that plastics are so commonly used is their comparatively cheap price. Replacing plastic by non-plastic / reusable alternatives may drive up the costs of the products. To reduce the use of single-use plastics, are you willing to pay more? [SA]”

3.8.2 In terms of gender, over 40% of females (41.8%) and males (42.1%) were unwilling to pay more to reduce the use of single-use plastics.

Figure 37. Willingness to Pay More to Reduce the Use of Single-use Plastics – by Gender

Base: All respondents

3.8.3 Regarding age distribution, more than 40% of respondents aged 18-24 (43.2%), 55-64 (42.6%), nearly 40% of respondents aged 35-44 (39.5%) and over 55% of respondents aged 65 or above (57.8%) were unwilling to pay more to reducing the use of single-use plastics while nearly 45% of respondents with age 25-34 (44.1%) and 45-54 (43.6%) were willing to pay more.

Figure 38. Willingness to Pay More to Reduce the Use of Single-use Plastics – by Age

Base: All respondents

3.8.4 Based on the education level, more than 45% of respondents with educational attainment at diploma or above level (46.6%) were willing to pay more to reduce the use of single-use plastics while over 60% of respondents with educational attainment at primary or below level (63.2%) and more than 40% of respondents with educational attainment at secondary (42.9%) level were unwilling to pay more. This demonstrated that respondents with higher education level are more willing to pay more to reduce the use of single-use plastics.

Figure 39. Willingness to Pay More to Reduce the Use of Single-use Plastics – by Education Level

3.9.3 Regarding age distribution, more than 65% of respondents aged 18-24 (66.4%), over 55% of respondents aged 25-34 (56.2%) and 55-64 (55.1%), over half of respondents with age 35-44 (53.9%) and nearly 45% of respondents aged 45-54 (44.8%) were willing to pay \$0.5 - \$1.0 (which is 5 – 10% of the product price) more for non-plastic / reusable alternatives while respondents aged 65 or above (51.7%) were willing to pay less than \$0.5 (which is less than 5% of the product price).

Figure 43. The Amount of Money that People is Willing to Pay for Non-plastic / Reusable Alternatives if the Single-use Plastic Item is \$10 – by Age

Base: All respondents who are willing to pay more to reduce the use of single-use plastics

3.9.4 Based on the education level, more than 55% of respondents with educational attainment at diploma or above level (57.3%) and nearly half of respondents with educational attainment at secondary (48.1%) level were willing to pay \$0.5 - \$1 for non-plastic / reusable alternatives while nearly 55% of respondents at education level of primary or below (53.8%) were willing to pay less than \$0.5. This demonstrated that respondents with higher educational levels are more willing to pay more for non-plastic / reusable alternatives.

Figure 44. *The Amount of Money that People is Willing to Pay for Non-plastic / Reusable Alternatives if the Single-use Plastic Item is \$10 – by Education Level*

Base: All respondents who are willing to pay more to reduce the use of single-use plastics

3.9.5 Analysed by personal monthly income, nearly 45% of respondents with an income level at \$60,000 or above (43.1%), more than half of respondents with the income levels at \$40,000 - \$59,999 (52.3%), \$20,000 - \$39,999 (56.4%), \$8,000 - \$19,999 (53.6%) and below \$8,000 (exclude no income) (50.5%) were found willing to pay \$0.5 - \$1.0 for non-plastic / reusable alternatives. Over 45% of respondents with no income (46.2%) were found willing to pay less than \$0.5.

Figure 45. The Amount of Money that People is Willing to Pay for Non-plastic / Reusable Alternatives if the Single-use Plastic Item is \$10 – by Personal Monthly Income

Base: All respondents who are willing to pay more to reduce the use of single-use plastics

## 4 Conclusion

- 4.1.1 The majority of the respondents was of the view that the excessive use of single-use plastics occurred in everyday life. Only 4.4% of the respondents considered that there was no excessive use of single-use plastics. Nearly 80% of the respondents (79.4%) opined that “Festival and celebration products” was being used excessively, followed by “Local product & retail packaging” (78.3%), and “Local packaging for logistics and online shopping” (78.0%).
- 4.1.2 Females were more likely than males to be aware of the problem of using single-use plastics excessively. Respondents aged 25 to 64 (especially in the group aged 25-34), with educational attainment at secondary or higher level and high-income group (\$60,000 or above) were more aware of the problems of using single-use plastics excessively.
- 4.1.3 About half of the respondents (49.9%) opined that the perception on the awareness of reducing the use of single-use plastics among residents was insufficient. However, older respondents (48.4%) tended to consider that the awareness on reducing the use of single-use plastics among residents was sufficient.
- 4.1.4 Nearly 60% of respondents (57.0%) agreed to imposing stricter control on single-use plastics items for alleviating the excessive use. Respondents with higher education levels or higher personal monthly income tended to accept the suggestion about a stricter control on the single-use plastic items with excessive usage problems.
- 4.1.5 The majority of the respondents (90.6%) had the habits of bringing their shopping bag, followed by avoiding the use of the single-use plastics umbrella bag (67.3%), purchasing products in simple packaging (64.5%) and reducing online shopping (52.5%).
- 4.1.6 Over half of respondents (54.7%) agreed to tighten the exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging. Respondents who were younger or with higher education levels tended to be more agreed on the tightening of exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging.
- 4.1.7 Nearly 45% of respondents (44.2%) disagreed that raising the charge on PSBs can reduce the use of PSBs by the general public while 36.3% of respondents agreed with the suggestion. Nearly 20% of respondents (19.6%) indicated “No comment” on raising the charge on PSBs. Respondents with higher education levels or with higher personal monthly income tended to agree on raising the charge on PSBs.
- 4.1.8 Among the respondents who agreed to raise the charge of PSBs, nearly half of them (48.2%) indicated that increasing the charging level to \$1.0 can discourage the general public from using a PSB, followed by \$2.0 (23.6%) and \$3.0 (10.9%). Only 1.1% of respondents opined that increasing the charging level to \$1.5 can discourage the general public from using a PSB.
- 4.1.9 More than 40% of respondents (41.9%) responded that they were unwilling to pay more to reduce the use of single-use plastics, whereas 33.2% of respondents were willing to pay more and 24.8% had “No comment”. Respondents with higher education levels or with higher personal monthly income were more willing to pay more to reduce the use of single-use plastics.
- 4.1.10 Among the respondents who were willing to pay more to reduce the use of single-use plastics, more than half of them (52.5%) indicated that they were willing to pay \$0.5 - \$1 (which is 5 – 10% of the product price) for non-plastic / reusable alternatives assuming the price of a single-use plastic item is \$10. Respondents with higher educational levels are more willing to pay more for non-plastic / reusable alternatives.

## 5. Appendix A - Questionnaire

Q1. Do you consider the following single-use plastics were being used excessively? (Yes/No) [Read out the following single-use plastic items to allow respondents to answer them one by one. For instance, if respondents answer “No” in all single-use plastic items, 7 should be chosen]

1. Shopping bag (including flat-top bag for frozen foodstuff or fresh fruit)
2. Local product & retail packaging (e.g. platter, box and plastic wrap)
3. Local packaging for logistics and online shopping (e.g. plastic wrap and bubble wrap)
4. Plastic umbrella bag
5. Festival and celebration products (e.g. balloon, banner, single-use tableware sold at retail outlets, cheer stick and glow stick)
6. Toiletries distributed by hotels (e.g. showering product in small bottle, shower cap, toothbrush and comb)
7. [Do not read out, if respondents answer “No” in 1-6, enumerator will choose this answer] No excessive use of single-use plastics

Q2. Do you think the awareness of Hong Kong residents of reducing the use of single-use plastics is sufficient? [SA]

1. Insufficient
2. Sufficient
3. No comment

Q3. Do you agree to impose stricter control on single-use plastic items for alleviating the excessive use, such as banning the sale of certain single-use plastic products or restricting available free of charge? [SA]

1. Agree
2. Disagree
3. No comment

Q4. Do you have any habit to reduce the use of single-use plastics in daily life? [Read out the following habits to allow respondents to answer them one by one. For instance, if respondents answer “No” in 1-5, 6 should be chosen]

1. Purchasing products in simple packaging
2. Bringing own shopping bag
3. Avoiding the use of single-use plastic umbrella bag
4. Reducing online shopping
5. Others, please specify: \_\_\_\_\_
6. [Do not read out, if respondents answer “No” in 1-5, enumerator will choose this answer] No specific habits

Q5. Do you agree that the current exemption for PSBs carrying frozen / chilled foodstuff or foodstuff in non-airtight packaging provided by merchants should be tightened? [SA]

1. Agree
2. Disagree
3. No comment

Q6. Do you agree that raising the charge for PSBs can reduce their use [SA]

1. Agree
2. Disagree
3. No comment

Q7. [Ask for Q6 = code 1 only] What is the suitable charging level that can discourage the general public from using a plastic shopping bag? (Feel free to suggest any answer)

Q8. One of the reasons that plastics are so commonly used is their comparatively cheap price. Replacing plastic by non-plastic / reusable alternatives may drive up the costs of the products. To reduce the use of single-use plastics, are you willing to pay more? [SA]

1. Willing
2. Unwilling
3. No comment

Q9. [Ask for Q8 = code 1 only] Assuming that a single-use plastic item costs \$10, how much are you willing to pay for the same product made from non-plastic / reusable alternatives? [SA]

1. Less than \$0.5 (i.e. less than 5% of product price)
2. \$0.5 - 1 (i.e. 5 - 10% of product price)
3. \$1.1 - 1.5 (i.e. 11 - 15% of product price)
4. More than \$1.5 (i.e. more than 15% of product price)

## Annex I - List of written submissions from individuals

All concerns and views from 30 written submissions from individuals including either by soft or hard copies were collected and included in the qualitative analysis.

*Table E.1: List of written submissions by individuals*

Item	Name of respondents
E001	Respondent (1)
E002	Respondent (2)
E003	Respondent (3)
E004	Respondent (4)
E005	Respondent (5)
E006	Respondent (6)
E007	Respondent (7)
E008	Respondent (8)
E009	Respondent (9)
E010	Respondent (10)
E011	Respondent (11)
E012	Respondent (12)
E013	Respondent (13)
E014	Respondent (14)
E015	Respondent (15)
E016	Respondent (16)
E017	Respondent (17)*
E018	Name was not provided (1)
E019	Name was not provided (2)#
E020	Name was not provided (3)
E021	Name was not provided (4)
E022	Name was not provided (5)^
E023	Name was not provided (6)
E024	Name was not provided (7)
E025	Name was not provided (8)
E026	Name was not provided (9)
E027	Name was not provided (10)
E028	Name was not provided (11)
E029	Name was not provided (12)
E030	Remain anonymous and keep opinions confidential

\*: A total of 3 identical written submissions were received via the same email address and post

#: 2 identical written submissions received via the same email address

^: A total of 4 identical written submissions were received via the same email address
