EXECUTIVE SUMMARY

1. This Baseline Environmental Monitoring Report is prepared by Cinotech Consultants Ltd. for two designated projects (DPs) under two environmental permits (EPs). The title of the designated projects under Environmental Permit No.: EP-344/2009 is "New sewage pumping stations serving Kai Tak Development" (hereafter referred to as "the Project 1") and under Environmental Permit No.: EP-337/2009 is New distributor roads serving the planned Kai Tak Development" (hereafter referred to as "the Project 2")

2. According to the Environmental Monitoring and Audit Manual (EM&A Manual) of the Kai Tak Development (KTD) Schedule 3 Environmental Impact Assessment (EIA) Report, the baseline monitoring at the designated monitoring stations as required in KTD EM&A Manual under two EPs, have already been conducted in Contract No. KLN/2010/04 – Environmental Monitoring Works for Kai Tak Development under Schedule 3 of KTD. The baseline monitoring data under Contract No. KLN/2010/04 are considered suitable to be adopted for Project 1 and Project 2 based on the following reasons:

   - To avoid the establishment of two sets of environmental monitoring results at the same monitoring stations including the Action and Limit Levels for air quality for KTD; and
   - The baseline environmental monitoring results under Contract No. KLN/2010/04 was collected in Year 2010. The baseline data is more representative to show the ambient condition before the commencement of construction works at KTD.
   - The environmental monitoring requirements of EM&A Manual of KTD Schedule 3 EIA Report are identical with the EM&A Manual under Two DPs. So, the baseline monitoring carried out for the Schedule 3 KTD Project (Contract No. KLN/2010/04) has complied the requirements stipulated in Section 2 and 3 of the KTD EM&A Manual for the two EPs.

3. Therefore, this report presents the baseline air quality and noise monitoring works extracted from Contract No. KLN/2010/04.

4. The baseline environmental monitoring works for the parameters of 1-hour and 24-hour Total Suspended Particulates (TSP) and noise conducted at each monitoring stations are as follows:

1. INTRODUCTION

Background

1.1 The Kai Tak Development (KTD) is located in the south-eastern part of Kowloon Peninsula, comprising the apron and runway areas of the former Kai Tak Airport and existing waterfront areas at To Kwa Wan, Ma Tau Kok, Kowloon Bay, Kwun Tong and Cha Kwo Ling. It covers a land area of about 328 hectares. Stage 2 infrastructure works at North Apron Area of Kai Tak Airport for Public Housing and Government Office Developments is one of the construction stages of KTD. It contains various Schedule 2 DPs including new distributor roads serving the planned KTD and new sewage pumping stations serving the planned KTD. The general layout of Project 1 and Project 2 is shown in **Figure 1**.

1.2 Two Environmental Permits (EPs) No. EP-344/2009 and EP-337/2009 were also issued on 23 April 2009 for new sewage pumping stations serving the planned KTD and new distributor roads serving the planned KTD respecitvely to Civil Engineering and Development Department as the Permit Holder.

1.3 A study of environmental impact assessment (EIA) was undertaken to consider the key issues of air quality, noise, water quality, waste, land contamination, cultural heritage and landscape and visual impact, and identify possible mitigation measures associated with the works. An EIA Report (Regiser No. AEIAR-130/2009) was approved by the Environmental Protection Department (EPD) on 4 April 2009.

1.4 Cinotech Consultants Limited (Cinotech) was commissioned by Peako Engineering Co., Ltd. (the Contractor) to undertake the role of the Environmental Team (ET) for the Contract No. KL/2010/03 - Kai Tak Development – Stage 2 Infrastructure Works at North Apron Area of Kai Tak Airport for Residential Development and Government Facilities. The construction work under KL/2010/03 comprises the construction of Road D2 & Sewage Puming Station PS1A which forms a part of the works under two EPs (EP-337/2009 and EP-344/2009).

1.5 This Baseline Environmental Monitoring Report is prepared by Cinotech Consultants Ltd. for two DPs which cover the construction works under Contract No. KL/2010/03.

Purpose of the Report

1.6 As the baseline monitoring data under Contract No. KLN/2010/04 are considered suitable to be adopted for two DPs, this report presents the baseline levels for the air quality and noise extracted from Contract No. KLN/2010/04. These baseline levels will be used as the basis for compliance check during the impact monitoring in construction stage of the Project 1 and/or Project 2. This Report presents the locations, equipment, period, methodology, results and observations for the air quality and noise monitoring during the baseline period.

1.7 The photographic records of the Site at the time of the Contractor's possession of the site including new distributor road D2 serving the planned KTD and new sewage pumping station PS1A serving the planned KTD, as baseline monitoring for the

Landscape and Visual Impacts, as required by the EM&A Manual are also presented in this Baseline Report.

SEEKING PERMISSION FROM PREMISES OWNER FOR SETTING UP MONITORING STATION

AM1 - Rhythm Garden

2.3 We have conducted a site visit with the representatives of Property Management Company on 20th August 2010 at Rhythm Garden for selecting the most representative location for environmental monitoring. We have called and sent letter to the responsible staff of the Property Management Company to explain the purpose and details regarding the environmental monitoring since June 2010. However, the notification of not permitted to set up of environmental (air quality) monitoring equipments at Rhythm Garden has been received from the Property Management Company of Rhythm Garden on 1st November 2010. No reason for rejection was provided.

2.4 Alternative air quality monitoring station was then proposed to be conducted at Kai Tak Operational Base (AM1(A)) in accordance with the following reasons:

- close to the air sensitive receiver (Kai Tak Operational Base);
- located in vicinity of the construction site (major dust emission source); and
- the station is sited to monitor Total Suspended Particulates (TSP) concentrations at prevailing downwind direction of the construction site. No barrier effect to the construction site.

AM3 - Sky Tower

2.5 We have called and sent letter to the responsible staff of the Property Management Company to explain the purpose and details regarding the environmental monitoring since June 2010. However, the notification of not permitted to set up of HVS for 24-hour TSP at Sky Tower has been received from the Property Management Company of Sky Tower on 10th September 2010. No reason for rejection was provided and the Property Management of Sky Tower rejected to provide written reply.

2.6 Alternative air quality monitoring station was then proposed to be conducted at AM3(A) - Holy Trinity Bradbury Centre in accordance with the following reasons:

- close to the air sensitive receiver;
- located in vicinity of the construction site (major dust emission source); and
- the station is sited to monitor Total Suspended Particulates (TSP) concentrations at prevailing downwind direction of the construction site. No barrier effect to the construction site.

AM4 - Grand Waterfront

2.7 We have conducted a site visit with the representatives of Property Management Company on 20th August 2010 at Grand Waterfront for selecting the most representative location for environmental monitoring. We have called and sent letter to the responsible staff of the Property Management Company to explain the purpose and details regarding the environmental monitoring since June 2010. In order to try our best to request permission to set up monitoring station, we have attended the

Incorporated Owners' meeting on 5 November 2010 to further explain the environmental monitoring works to the residents.

2.8 However, the permission for setting up the air quality monitoring equipments (High Volume Sampler (HVS) for 24-hour TSP) was still not received from Grand Waterfront till the date of preparation of this report.

2.9 Alternative air quality monitoring station was then proposed to be conducted at AM4(A) - EMSD Workshops in accordance with the following reasons:

- close to the air sensitive receiver;
- located in vicinity of the construction site (major dust emission source); and
- the station is sited to monitor Total Suspended Particulates (TSP) concentrations at prevailing downwind direction of the construction site. No barrier effect to the construction site.

AM5 - CCC Kei To Secondary School

2.10 A letter for requesting permission to carry out baseline air quality monitoring works has been sent to school on 9th June 2010. However, the notification of not permitted to set up of HVS for 24-hour TSP at CCC Kei To Secondary School has been received from the school on 2nd July 2010. Please refer to the reply slip as attached in **Appendix A**.

2.11 Alternative air quality monitoring stations was proposed at Po Leung Kuk Ngan Po Ling College (AM5(A)) which was considered as a better alternative monitoring station for the Project 1 and/or Project 2 according to the following reasons:

- close to the air sensitive receiver (Po Leung Kuk Ngan Po Ling College);
- located in vicinity of CCC Kei To Secondary School which is designated air quality monitoring station in accordance with EM&A Manual; and
- The station is sited to monitor Total Suspended Particulates (TSP) concentrations at prevailing downwind direction of the construction site. No barrier effect to the construction site.

M3 - Cognitio College

2.12 A letter for requesting permission to carry out baseline air quality monitoring works has been sent to school on 9th June 2010. However, the notification of not permitted to set up of HVS for 24-hour TSP at Cognitio College has been received from the school on 30th June 2010. The reason for rejection is large scale construction work will be conducted and will influence the monitoring. Please refer to the reply slip as attached in **Appendix A**.

2.13 Alternative noise monitoring stations was proposed at Kai Tak Operational Base (M3(A)) which was considered as a better alternative monitoring station for the Project 1 and/or Project 2 according to the following reasons:

- Close to the major site activities; and
- Assurance of minimal disturbance to the occupants during monitoring at the rooftop.

M5 – Nam Yuen

2.14 We have conducted a site visit on 20th August 2010, we found that there is no security guard and property management company (i.e no permission can be obtained to install the noise monitoring equipment or access to the monitoring station). Alternative noise monitoring station was then proposed at Kowloon City District Kaifong Association (M5(A)) and the reasons are as following:

- Close to the major site activities; and
- Assurance of minimal disturbance to the occupants during monitoring.

3. AIR QUALITY

Monitoring Requirements

3.1 In accordance with the EM&A Manual, baseline air quality monitoring (1-hour TSP and 24-hour average Total Suspended Particulate (TSP) levels) shall be carried out at all the designated monitoring locations for at least 14 consecutive days to obtain daily 24-hour TSP samples. 1-hour TSP sampling shall also be done at least 3 times per day while highest dust impact is expected.

Monitoring Equipment

3.2 1-hour TSP air quality monitoring was performed using direct reading dust meter and continuous 24-hour TSP air quality monitoring was performed using High Volume Sampler (HVS) associated with equipment and shelter complied with the specifications stipulated in the EM&A Manual. **Table 3.1** summarizes the equipment used in the baseline air quality monitoring programme. Copies of the calibration certificates for the equipment are presented in **Appendix B1**.

3.3 Wind data monitoring equipment was set at rooftop (about 9/F) of Kai Tak Operational Base for logging wind speed and wind direction such that the wind sensors are clear of obstructions or turbulence caused by building. The wind data monitoring equipment is re-calibrated at least once every six months and the wind directions are divided into 16 sectors of 22.5 degrees each. The location is shown in **Figure 4**.

Monitoring Locations

3.4 Baseline air quality monitoring was conducted at the 5 monitoring stations, as shown in **Figure 2**. **Table 3.2** describes the locations of the air quality monitoring stations.

Monitoring Methodology and QA/QC Procedure of Baseline Air Quality Monitoring

3.6 Weather data was recorded during the baseline period and is shown in **Appendix E**. The air temperature, precipitation and the relative humidity data was obtained from Hong Kong Observatory where the wind speed and wind direction were recorded by the installed Wind Anemometer. The general weather conditions (i.e. sunny, cloudy or rainy) were recorded by the field staff's observation on the monitoring days.

24 hour TSP and RSP Air Quality Monitoring

Instrumentation

3.7 High volume Samplers (HVS) completed with appropriate sampling inlets were employed for air quality monitoring. Each sampler was composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50).

HVS Installation

3.8 The following guidelines were adopted during the installation of HVS:

- Sufficient support was provided to secure the samplers against gusty wind.
- No two samplers were placed less than 2 meters apart.
- The distance between the sampler and an obstacle, such as buildings, was at least twice the height that the obstacle protrudes above the sampler.
- A minimum of 2 meters of separation from walls, parapets and penthouses was required for rooftop samples.
- A minimum of 2 meters separation from any supporting structure, measured horizontally was required.
- No furnaces or incineration flues were nearby.
- Airflow around the sampler was unrestricted.
- The samplers were more than 20 meters from the drip line.

- Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring.

Filters Preparation

3.9 Fiberglass filters (G810) were used [Note: these filters have a collection efficiency of larger than 99% for particles of 0.3 mm diameter]. A HOKLAS accredited laboratory, Wellab Ltd., was responsible for the preparation of 24-hr conditioned and pre-weighed filter papers for Cinotech's monitoring team.

3.10 All filters, which were prepared by Wellab Ltd., were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ±3 °C; the relative humidity (RH) was < 50% and not variable by more than ±5%. A convenient working RH was 40%.

3.11 Wellab Ltd. has a comprehensive quality assurance and quality control programmes.

Operating/Analytical Procedures

3.12 Operating/analytical procedures for the air quality monitoring were highlighted as follows:

- Prior to the commencement of the dust sampling, the flow rate of the HVS was properly set (between 1.1 m3/min. and 1.4 m3/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50.
- The power supply was checked to ensure the sampler worked properly.
- On sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air quality monitoring station.
- The filter holding frame was then removed by loosening the four nuts and carefully a weighted and conditioned filter was centered with the stamped number upwards, on a supporting screen.
- The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- The shelter lid was closed and secured with the aluminum strip.
- The timer was then programmed. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
- After sampling, the filter was removed and sent to the Wellab Ltd. for weighing. The elapsed time was also recorded.
- Before weighing, all filters were equilibrated in a conditioning environment for 24 hours. The conditioning environment temperature should be between 25°C and 30°C and not vary by more than ±3°C; the relative humidity (RH) should be < 50% and not vary by more than ±5%. A convenient working RH is 40%. Weighing results were returned to Cinotech for further analysis of TSP concentrations collected by each filter.

Maintenance/Calibration

3.13 The following maintenance/calibration was required for the HVS:

- The high volume motors and their accessories were properly maintained. Appropriate maintenance such as routine motor brushes replacement and electrical wiring checking were made to ensure that the equipment and necessary power supply are in good working condition.
- All HVS were calibrated (five point calibration) using Calibration Kit prior to the commencement of the baseline monitoring and thereafter at bi-monthly intervals.

1 hour TSP Air Quality Monitoring

Measuring Procedures

3.14 The measuring procedures of the 1-hour dust meter are in accordance with the Manufacturer's Instruction Manual as follows:

- The 1-hour dust meter is placed at least 1.3 meters above ground.
- Set POWER to "ON" and make sure that the battery level was not flash or in low level.
- Allow the instrument to stand for about 3 minutes and then the cap of the air sampling inlet has been released.
- Push the knob at MEASURE position.
- Set time/mode setting to [BG] by pushing the time setting switch. Then, start the background measurement by pushing the start/stop switch once. It will take 6 sec. to complete the background measurement.
- Push the time setting switch to change the time setting display to [MANUAL] at the bottom left of the liquid crystal display. Finally, push the start/stop switch to stop the measuring after 1 hour sampling.
- Information such as sampling date, time, count value and site condition were recorded during the monitoring period.

Maintenance/Calibration

3.15 The following maintenance/calibration is required for the 1-hour dust meter;

- Check and calibrate the meter by HVS to check the validity and accuracy of the results measured by direct reading method at 2-month intervals throughout all stages of the air quality monitoring.

4.7 Weather data was recorded during the baseline period and is shown in **Appendix E**.

The air temperature, precipitation and the relative humidity data was obtained from Hong Kong Observatory where the wind speed and wind direction were recorded by the installed Wind Anemometer. The general weather conditions (i.e. sunny, cloudy or rainy) were recorded by the field staff's observation on the monitoring days.

Field Monitoring

4.8 The monitoring procedures are as follows:

- The microphone head of the sound level meter was positioned 1m exterior of the noise sensitive facade and lowered sufficiently so that the building's external wall acts as a reflecting surface.
- The battery condition was checked to ensure good functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:

  - frequency weighting: A
  - time weighting : Fast
  - time measurement: 5 minutes

- Prior to and after baseline noise measurement (at least 14 consecutive days), the meter was calibrated using the calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement is more than 1.0 dB, the measurement was considered invalid and repeat of noise measurement was required after re-calibration or repair of the equipment.
- Noise monitoring was carried out continuously for 24 hours during the 14 days baseline monitoring period. Monitoring data was recorded and stored automatically within the sound level meter system. At the end of the monitoring period, noise levels in term of Leq, L90 and L10 were recorded. In addition, site conditions and noise sources were recorded when the equipment were checked and inspected every two days.
- All the monitoring data within the sound level meter system was downloaded through the computer software, and all these data was checked and reviewed within the computer.

Maintenance and Calibration

4.9 Maintenance and Calibration procedures were as follows:

- The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.
- The sound level meter and calibrator were checked and calibrated at yearly intervals.
- Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

Summary of Baseline Noise Monitoring

4.10 The noise baseline monitoring data are summarized in **Tables 4.5 to 4.7**.

4.11 All baseline noise monitoring results are given in **Appendices C2 to C4**. Graphical presentations of the data are provided in **Appendix C5**. Weather conditions recorded during the baseline monitoring period are shown in **Appendix E**.
