Dear Sirs

Agreement No. HATS 02/2016  
Services for Independent Environmental Checker (IEC) for  
Contract No. DC/2013/10 – Design, Build and Operate San Wai Sewage Treatment Works – Phase 1  
Monthly Environmental Monitoring and Audit Report No.38 (June 2020)

We refer to email of 13 July 2020 from ETS-Testconsult Limited attaching the Monthly Environmental Monitoring and Audit Report No. 38 (June 2020).

We have no comment and hereby verify the Monthly Environmental Monitoring and Audit Report No. 38 (June 2020) in accordance with Clause 5.4 of the Environmental Permit no. EP-464/2013.

Should you have any queries, please do not hesitate to contact the undersigned or our Mr Francis Lau on 2618 2831.

Yours faithfully  
ANewR CONSULTING LIMITED

Adi Lee  
Independent Environmental Checker

## EXECUTIVE SUMMARY

This Monthly Environmental Monitoring and Audit (EM&A) Report is prepared for Contract No. DC/2013/10 - Design, Build and Operate San Wai Sewage Treatment Works – Stage 1 (the Project) (hereafter referred to as “the Contract”). The Contract was awarded to ATAL-DEGREMONT-CHINA HARBOUR JOINT VENTURE (ADCJV) by the Drainage Services Department (DSD) and ETS-Testconsult Limited was appointed as the Environmental Team (ET) by ADCJV to implement the EM&A program in compliance with the EP and the EM&A Manuals.

According to the Section 25 of the Particular Specification (PS) and the Environmental Permit No. EP-464/2013, an EM&A programme should be implemented in accordance with the procedures and requirements in the EM&A Manual of the approved EIA report (Registration No. AEIAR-072/2003). The scope of monitoring works includes air quality, construction noise, water quality and environmental site audit.

Baseline monitoring was completed in April 2017. Action and Limit Levels were established for air quality, noise and water quality parameters based on the baseline monitoring results.

This is the thirty-eighth Monthly Environmental Monitoring and Audit (EM&A) Report for the Contract which summaries findings of the EM&A works conducted during the reporting period from 01 June to 30 June 2020.

### **Site Activities**

As informed by the Contractor, site activities were carried out in this reporting month:

- *Water Tightness Test;*
- *Internal ABWF;*
- *Coating;*
- *Superstructure (RC);*
- *Internal Coating;*
- *External ABWF;*
- *Remaining Works on the Roof;*
- *Slopes and Retaining Wall;*
- *Emergency Vehicle Access Road*
- *Underground Utilities Along EVA*

### **Environmental Monitoring and Audit Progress**

The monthly EM&A programme was undertaken in accordance with the EM&A Manual for this Contract. The summary of the monitoring activities in this reporting month is listed below:

- *24-hour TSP Monitoring: 6 Occasions at 2 designated locations*
- *1-hour TSP Monitoring: 18 Occasions at 2 designated locations*
- *Noise Monitoring (Day-time): 6 Occasions at 2 designated locations*
- *Water Quality Monitoring: 13 Occasions at 1 designated location*
- *Weekly Site inspection: 4 Occasions*

### **Air Quality Monitoring**

No exceedance of Action and Limit levels was recorded for 1-hr and 24-hr TSP monitoring in the reporting month.

### **Noise Monitoring**

No exceedance of Action and Limit levels for noise monitoring was recorded in the reporting month.

### **Water Quality Monitoring**

According to the summary of water monitoring results, no exceedance of Action and Limit levels was recorded in this reporting month.

### **Weekly Site Inspections**

In general, performance on environmental mitigation measures implemented was found to be satisfactory in this reporting month. The major findings observed during site inspections are presented in the **Section 5.0**.

### **Complaint Log**

There was no complaint received in relation to the environmental impact during the reporting period.

### **Notifications of Summons and Successful Prosecutions**

There were no notifications of summons or prosecutions received during the reporting period.

### **Reporting Change**

There were no reporting changes during the reporting period.

### **Future Key Issues**

The future key issues to be undertaken in the upcoming month are as follows:

- *Chemical and waste management;*
- *Treatment of runoff and wastewater prior to discharge; and*
- *Dust and Noise generated from construction activities*

## 1. INTRODUCTION

### 1.1. Basic Project Information

**1.1.1.** This Monthly Environmental Monitoring and Audit (EM&A) Report is prepared for Contract No. DC/2013/10 - Design, Build and Operate San Wai Sewage Treatment Works – Stage 1 (the Project) (hereafter referred to as “the Contract”). The Contract was awarded to ATAL-DEGREMONT-CHINA HARBOUR JOINT VENTURE (ADCJV) by the Drainage Services Department (DSD) and ETS-Testconsult Limited was appointed as the Environmental Team (ET) by ADCJV to implement the EM&A program in compliance with the EP and the EM&A Manuals.

**1.1.2.** The project involves expansion of the preliminary treatment works at San Wai STW from 164,000 m<sup>3</sup>/d to 200,000 m<sup>3</sup>/d Average Dry Weather Flow, upgrading the preliminary treatment level to CEPT and adding centralized disinfection. The site layout plan is shown in **Appendix A**.

**1.1.3.** According to the Section 25 of the Particular Specification (PS) and the Environmental Permit No. EP-464/2013, an EM&A programme should be implemented by an independent Environmental Team (ET) in accordance with the procedures and requirements in the EM&A Manual of the approved EIA report (Registration No. AEIAR-072/2003). These documents are available through the EIA Ordinance Register. The construction works of the Contract commenced on 16 May 2017.

**1.1.4.** The scope of monitoring works includes air quality, construction noise, water quality and environmental site audit. The EM&A requirements for each parameter described in the following sections include:

- *All monitoring parameters;*
- *Monitoring schedules for the reporting month and forthcoming months;*
- *Action and Limit levels for all environmental parameters;*
- *Event/Action Plans;*
- *Environmental mitigation measures, as recommended in the Project EIA study final report; and*
- *Environmental requirements in contract documents.*

**1.1.5.** As part of the project EM&A program, baseline monitoring was conducted from 21 March 2017 to 15 April 2017 to determine the ambient environmental conditions before the project commence any major construction works and it had been verified by IEC and endorsed by EPD.

**1.1.6.** This is the thirty-eighth Monthly Environmental Monitoring and Audit (EM&A) Report for the Contract which summaries the audit findings of the EM&A programme during the reporting period from 01 June to 30 June 2020.

### 1.2. Project Organization

**1.2.1.** The project organization structure and lines of communication with respect to the on-site environmental management structure is shown in **Appendix B**. The key personnel contact names and numbers are summarized in **Table 1.1**.

**Table 1.1 Contact Information of Key Personnel**

| Party                                                           | Position                  | Name of Key Staff | Tel. No.  | E-mail                        |
|-----------------------------------------------------------------|---------------------------|-------------------|-----------|-------------------------------|
| Supervising Officer<br>(AECOM Asia Co. Ltd.)                    | Resident Engineer         | Mr. Patrick Leung | 5222 6561 | patrick.leung@swstw-aecom.com |
| Independent Environmental Checker<br>(ANewR Consulting Limited) | Technical Director        | Mr. Adi Lee       | 2618 2836 | aymlee@anewr.com              |
| Contractor<br>(ATAL-DEGREMONT-CHINA HARBOUR JOINT VENTURE)      | Environmental Officer     | Mr. Johnny So     | 9513 8899 | johnny.so@c302.chcchk.com     |
| Environmental Team<br>(ETS-Testconsult Ltd.)                    | Environmental Team Leader | Mr. C. L. Lau     | 2946 7791 | env@ets-testconsult.com       |

### 1.3. Construction Programme

1.3.1. A copy of the Contractor's construction programme is provided in **Appendix C**.

### 1.4. Construction Works Undertaken During the Reporting Period

1.4.1. A summary of the construction activities undertaken during this reporting period is shown below:

- *Water Tightness Test;*
- *Internal ABWF;*
- *Coating;*
- *Superstructure (RC);*
- *Internal Coating;*
- *External ABWF;*
- *Remaining Works on the Roof;*
- *Slopes and Retaining Wall;*
- *Emergency Vehicle Access Road*
- *Underground Utilities Along EVA*

## 2. AIR QUALITY MONITORING

### 2.1. Monitoring Requirements

2.1.1. 1-hr and 24-hr TSP levels were monitored in the reporting month in accordance with the EM&A Manual. Two air monitoring locations were selected which was shown in **Figure 1**.

### 2.2. Monitoring Equipment

#### 1-hour TSP Monitoring

1-hour TSP levels were measured by using dust meter which are capable of producing comparable results as the by high volume sampling method, to indicate short event impacts. The dust meter is compliant to the clause 1.2.5 of "General Technical Requirement of Environmental Monitoring" and clause 2.2 of "Generic Environmental Monitoring and Audit Manual".

**Table 2.1** summarized the dust meter model used during the baseline monitoring. Copies of calibration certificates for dust meters were attached in **Appendix D1**.

**Table 2.1 Air Quality Monitoring Equipment**

| Equipment                 | Model                      |
|---------------------------|----------------------------|
| Dust Meter                | SIBATA LD-3B / SIBATA LD-5 |
| High volume sampler (HVS) | Greasby GMW (GS2310)       |
| Calibrator                | Tisch TE-5025A             |

**1-hr air quality monitoring (Dust Meter)**

Measuring Procedures

The measuring procedures of the dust meter are in accordance with the Manufacturer's instruction Manual as follows:

- Press POWER to ON, check the battery indicator to ensure whether the power supply is enough to conduct the TSP monitoring;
- Press TIMER SET to Manual;
- Press START/STOP SWITCH to start the TSP monitoring;
- Press START/STOP SWITCH to stop the TSP monitoring after monitoring complete;
- Record measured COUNT directly from the dust meter and calculate the TSP level by using the equation of the certificate.

Maintenance & Calibration (QA/QC)

- Dust meter should be checked at 3-month intervals and calibrated at half-year intervals throughout all stages of air quality monitoring.

**24-hr air quality monitoring (HVS)**

Instrumentation

High volume sampler, as HVS, (Greasby GMWS2310) complete with appropriate sampling inlets were employed for both 1-hour and 24-hour TSP monitoring. The sampler is composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with that required by USEPA standard Title 40, Code of Federation Regulations Chapter 1 (Part 50).

Installation

The installation of HVS refers to the requirement stated in EM&A Manual.

Operation/Analytical Procedures

Operating/analytical procedures for the operation of HVS are as below:

- Prior to the commencement of the dust sampling, the flow rate of the high volume sampler was properly set (between 0.6m<sup>3</sup>/min and 1.7m<sup>3</sup>/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50. The flow rate was indicated on the flow rate chart.
- For TSP sampling, fiberglass filters (Whatman G653) were used.
- The power supply was checked to ensure the sampler worked properly.
- On sampling, the sampler was operated 5 minutes to establish thermal equilibrium before placing any filter media at designated air monitoring station.
- The filter holding frame was then removed by loosening the four nuts and carefully a weighted and conditioned filter was centered with the stamped number upwards, on a supporting screen.
- The filter was aligned on the screen so that the gasket formed an air-tight seal on the outer edges of the filter. Then the filter holder frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- The programmable timer will be set for a sampling month of 1 hour or 24 hours. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number.).
- After sampling, the filter was transferred from the filter holder of the HVS to a sealed plastic bag and sent to the laboratory for weighting. The elapsed time was also recoded.
- Before weighting, all filters were equilibrated in desiccators for 24 hour with the temperature of 25°C ± 3°C and the relative humidity (RH) <50% ±5%.

#### Maintenance & Calibration (QA/QC)

- HVS and their accessories should be maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
- HVS should be calibrated at bi-monthly intervals.

#### Wind Data Monitoring

Wind data (wind speed and wind direction) were directly extracted from Hong Kong Observatory. All wind data during this reporting month are shown in **Appendix G**.

### 2.3. Monitoring Parameters, Frequency and Duration

- 2.3.1. **Table 2.2** summarizes the monitoring parameters, monitoring duration and frequencies of impact air quality monitoring.

**Table 2.2 Monitoring Parameters, Duration and Frequencies of Impact Air Quality Monitoring**

| Parameter | Duration         | Frequency              |
|-----------|------------------|------------------------|
| 1-hr TSP  | 1 hr (0800-1900) | Three times per 6 days |
| 24-hr TSP | 24 hr            | Once per 6 days        |

- 2.3.2. In this reporting period, a total of 18 occasions of 1-hour TSP monitoring and 6 events of 24-hour TSP monitoring were undertaken and the schedule was shown in **Table 2.3**

**Table 2.3 Time Schedule of Impact Air Quality Monitoring**

| June 2020 |        |         |           |          |        |          |

Remark: ( ▼ ) = Air quality monitoring carried out by ET

### 2.4. Action and Limit Levels

The criteria for Action and Limit levels have been set out in the contract document of the Project as follows:

**Table 2.4 The criteria of Action and Limit Levels for Air Quality**

| Parameters                                     | Action                                                                                                              | Limit                        |
|------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|------------------------------|
| 1-hour TSP Level ( $\mu\text{g}/\text{m}^3$ )  | For baseline level $\leq 384\mu\text{g}/\text{m}^3$ ,<br>Action level = (baseline level plus*1.3 + Limit Level) / 2 | 500 $\mu\text{g}/\text{m}^3$ |
|                                                | For baseline level $> 384\mu\text{g}/\text{m}^3$ ,<br>Action level = Limit Level                                    |                              |
| 24-hour TSP Level ( $\mu\text{g}/\text{m}^3$ ) | For baseline level $< 200\mu\text{g}/\text{m}^3$ ,<br>Action level = (baseline level plus*1.3 + Limit Level) / 2    | 260 $\mu\text{g}/\text{m}^3$ |
|                                                | For baseline level $\geq 200\mu\text{g}/\text{m}^3$ ,<br>Action level = Limit Level                                 |                              |

Following the criteria shown in **Table 2.4**, the Action and Limit levels for 1-hour TSP derived as illustrated in **Table 2.5**.

**Table 2.5 Action and Limit Levels for 1-hour TSP and 24-hour TSP**

| Air Quality Monitoring Station | 1-hr TSP ( $\mu\text{g}/\text{m}^3$ ) |             | 24-hr TSP ( $\mu\text{g}/\text{m}^3$ ) |             |
|--------------------------------|---------------------------------------|-------------|----------------------------------------|-------------|
|                                | Action Level                          | Limit Level | Action Level                           | Limit Level |
| ASR1a                          | 309                                   | 500         | 260                                    | 260         |
| ASR2b                          | 292                                   | 500         | 228                                    | 260         |

## 2.5. Results and Observations

### 2.5.1. 1-hour and 24-hour TSP Monitoring Results

Monitoring data of both 1-hour and 24-hour TSP monitoring carried out in this reporting month are summarized in **Appendix D2**. Graphical presentation of 1-hour and 24-hour TSP monitoring results for the reporting month is shown in **Appendix D3**. Wind data included wind speed and wind direction was extracted from Hong Kong Observatory during this reporting month and is presented in **Appendix G**.

No exceedance of Action and Limit Level of 1-hr TSP and 24-hour TSP monitoring results was recorded during the reporting month.

### 2.5.2. Observation

Generally, 1-hour TSP and 24-hour TSP monitoring results fluctuated well below the Action Level in this reporting period. The major dust source observed near the monitoring stations was mainly from vehicles passing by the container yards and general earth works. It can be concluded that the contractor implemented sufficient dust mitigation measures during this reporting month.

## 2.6. Event and Action Plan

If the impact monitoring results exceed the Action and Limit Levels, the actions specified in **Table 2.6** shall be carried out.

**Table 2.6 Event and Action Plan for Air Quality (Dust) during Construction Phase**

| EVENT                                                           | ACTION                                                                                                                                                       |                                                                                                                                     |                                                                                                                                             |                                                                                                                                                                   |
|-----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                 | ET                                                                                                                                                           | IEC                                                                                                                                 | ER                                                                                                                                          | CONTRACTOR                                                                                                                                                        |
| Action Level being exceeded for one sample                      | 1. Identify source;<br>2. Inform IEC and ER;<br>3. Repeat measurement to confirm finding;<br>4. Increase monitoring frequency to daily.                      | 1. Check monitoring data submitted by ET;<br>2. Check Contractor's working method.                                                  | 1. Notify Contractor.                                                                                                                       | 1. Rectify any unacceptable practice;<br>2. Amend working methods if appropriate.                                                                                 |
| Action Level being exceeded for two or more consecutive samples | 1. Identify source;<br>2. Inform IEC and ER;<br>3. Repeat measurements to confirm findings;<br>4. Increase monitoring frequency to daily;<br>5. Discuss with | 1. Check monitoring data submitted by ET;<br>2. Check Contractor's working method;<br>3. Discuss with ET and Contractor on possible | 1. Confirm receipt of notification of failure in writing;<br>2. Notify Contractor;<br>3. Ensure remedial measures are properly implemented. | 1. Submit proposals for remedial actions to IEC within 3 working days of notification;<br>2. Implement the agreed proposals;<br>3. Amend proposal if appropriate. |

| EVENT                                     | ACTION                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                           |

### 3. NOISE MONITORING

#### 3.1. Monitoring Requirements

3.1.1. Noise levels ( $L_{eq}$ ,  $L_{10}$  and  $L_{90}$ ) were monitored in the reporting month in accordance with the EM&A Manual.

#### 3.2. Monitoring Equipment

Sound level meters used for impact noise monitoring were Type 1 sound level meters capable of giving a continuous readout of the noise level reading including equivalent continuous sound pressure

level ( $L_{eq}$ ) and percentile sound pressure level ( $L_x$ ). They complied with International Electro technical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1). **Table 3.1** summarized the noise monitoring equipment model used during the baseline monitoring. Copies of calibration certificates for noise meters and calibrators were attached in **Appendix E1**.

**Table 3.1 Noise Monitoring Equipment**

| Noise Monitoring Equipment | Model                     |
|----------------------------|---------------------------|
| Sound Level Meter          | Rion NL-52                |
| Sound Level Calibrator     | Rion NC-73 / Castle GA607 |

### 3.3. Monitoring Duration and Frequency

**3.3.1.** Impact noise monitoring for the A-weighted levels  $L_{eq}$ ,  $L_{10}$  and  $L_{90}$  in 30-minute interval was recorded once per 6 days.

**3.3.2.** In this reporting period, a total of 6 occasions of noise monitoring were undertaken and the schedule was shown in **Table 3.2**

**Table 3.2 Time Schedule of Impact Noise Monitoring**

| June 2020 |        |         |           |          |        |          |

Remark: ( ▼ ) = Noise monitoring carried out by ET

### 3.4. Monitoring Locations

Two noise monitoring stations, NSR1a (晉榮貨櫃服務有限公司) and NSR2b (永康貨櫃服務有限公司) which shown in **Figure 1**, were required to perform impact noise monitoring during this reporting period.

The impact noise monitoring programme was summarized in **Table 3.3**.

**Table 3.3 Noise Monitoring Stations**

| Noise monitoring station | Type of Measurement |
|--------------------------|---------------------|
| NSR1a                    | Façade              |
| NSR2b                    | Façade              |

### 3.5. Monitoring Methodology

#### Instrumentation

Integrating Sound Level Meters were employed for noise monitoring.

#### Operation/Analysis Procedures

- The Sound Level Meter was set on a tripod at a height of 1.2m above the ground.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:

- Frequency weighting : A
- Time weighting : Fast
- Time measurement : 30 mins
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94 dB at 1000HZ. If the difference in the calibration level before and after measurement was more than 1 dB(A), the measurement would be considered invalid and repeat measurement would be required after re-calibration or repair of the equipment.
- During the monitoring period, the  $L_{eq}$ ,  $L_{10}$  and  $L_{90}$  were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- 3dB(A) correction had been added to the results if noise measurements were free-field.
- Noise monitoring would be cancelled in the presence of fog, rain, storm, wind with a steady speed exceeding 5m/s, or wind gusts exceeding 10m/s.

#### Maintenance and Calibration (QA/QC)

- The microphone head of the sound level meter and calibrator are cleaned with soft cloth at quarterly intervals.
- The meters are sent to the HOKLAS accredited laboratory or equivalent to check and calibrated at yearly intervals.

### 3.6. Actions and Limit Level

The Action and Limit Levels were established in **Table 3.4** for noise monitoring.

**Table 3.4 Action and Limit Levels for Noise Monitoring**

| Time Period                    | Action                                    | Limit     |
|--------------------------------|-------------------------------------------|-----------|
| 0700 –1900 hrs normal weekdays | When one documented complaint is received | 75 dB(A)* |

Remark: (\*)70dB(A) for schools and 65dB(A) for schools during school examination period

### 3.7. Results and Observations

#### 3.7.1. Results

Monitoring data of noise monitoring carried out in this reporting month are summarized in **Appendix E2**. Graphical presentation of noise monitoring results for the reporting month is shown in **Appendix E3**.

No exceedance of Action and Limit Level of noise monitoring results was recorded during the reporting month.

#### 3.7.2. Observation

The noise monitoring data were found to be lower than the limit level. The major noise source during the monitoring event was the vehicles passing through the container yard entrance and the general earth works inside the construction site.

### 3.8. Event and Action Plan

If the impact monitoring results exceed the Action and Limit Levels, the actions specified in **Table 3.5** shall be carried out.

**Table 3.5 Event/Action Plan for Construction Noise**

| EVENT        | ACTION                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              | ET                                                                                                                                                                                                                                                                                                                                                                                                                                                       | IEC                                                                                                                                                                                                                                                                                                                            | ER                                                                                                                                                                                                                                                                                                                                                                                                                           | CONTRACTOR                                                                                                                                                                                                                                                                                                                                                                                                           |

#### 4. WATER QUALITY MONITORING

##### 4.1. Monitoring Requirements

- 4.1.1. Water quality was monitored in the reporting month in accordance with the EM&A Manual at one alternative water quality monitoring station, R1b (at Tin Shui Wai Nullah) which shown in **Figure 2**.

##### 4.2. Monitoring Methodology and Equipment

###### For In-situ Water Quality Measurement

###### **Dissolved Oxygen (DO) measuring equipment**

A portable, weatherproof DO-measuring meter with built-in salinity compensation (e.g. YSI 85, YSI Pro 2030 or equivalent) was used in the baseline monitoring. It can be capable for measuring dissolved oxygen level in the range of 0-20 mg/L and 0-200 % saturation.

###### For Water Sampling and Sample Analysis

###### **Water Sampler**

A water sampler comprising a metal bucket was lowered into the water body.

###### **Water Container**

The sample container, made by high-density polythene, was rinsed with a portion of the water sample. The water sample was then transferred to the container, labelled with a unique sample ID and sealed with a screw cap. The water samples were stored in a cool box maintained at 4°C. The water samples will then be delivered to Environmental Laboratory of ETS-Testconsult Ltd (HOKLAS Registration No. 022) on the same day for analysis according to the Standard Method APHA 19ed.

The summary of testing methods of testing parameters required was shown in **Table 4.1**.

**Table 4.1 Summary of Testing Procedures for water samples**

| Parameters             | Testing Procedure                                        | Detection Limit |
|------------------------|----------------------------------------------------------|-----------------|
| Turbidity              | Dissolved Oxygen Meter Measurement                       | 0.1 NTU         |
| Dissolved Oxygen       | In house method refer to APHA 19 <sup>th</sup> ed 2130 B | 0.01 mg/L       |
| Total suspended solids | In house method refer to APHA 19 <sup>th</sup> ed 2540D  | 0.1 mg/L        |

##### 4.3. Monitoring Frequency

- 4.3.1. Water samples were collected 3 times per week in 1 monitoring station. Three parameters including turbidity, dissolved oxygen and total suspended solids would be tested.

**Table 4.2 Monitoring Frequency of Water Quality Monitoring**

| Parameters             | Frequency        | No. of sampling stations |
|------------------------|------------------|--------------------------|
| Turbidity              | 3 times per week | 1 station                |
| Dissolved Oxygen       |                  |                          |
| Total suspended solids |                  |                          |

**4.3.2.** In this reporting period, a total of 13 occasions of water quality monitoring were undertaken and the schedule was shown in **Table 4.3**

**Table 4.3 Time Schedule of Impact Water Quality Monitoring**

| June 2020 |        |         |           |          |        |          |
|-----------|--------|---------|-----------|----------|--------|----------|
| Sunday    | Monday | Tuesday | Wednesday | Thursday | Friday | Saturday |
|           | 1      | 2       | 3         | 4        | 5      | 6        |
| 7         | 8      | 9 ▼     | 10        | 11 ▼     | 12     | 13 ▼     |
| 14        | 15     | 16 ▼    | 17        | 18 ▼     | 19     | 20 ▼     |
| 21        | 22 ▼   | 23      | 24 ▼      | 25       | 26     | 27 ▼     |
| 28        | 29     | 30      |           |          |        |          |

Remark: ( ▼ ) = Water quality monitoring carried out by ET

#### **4.4. Quality Assurance (QA) / Quality Control (QC)**

For in-situ measurements, at each measurement / sampling, two consecutive measurements of turbidity and dissolved oxygen (DO) were taken. The probes were retrieved out of the water after the first measurement and then re-deployed for the second measurement. If the difference between the first and second measurement is greater than 25% the reading will be discarded and the measurements will be repeated.

For laboratory analysis of water, test method of all test parameters and the QA/QC samples were carried out in accordance with the requirements of HOKLAS.

For our QA/QC procedure, one QC sample, one duplicate sample and one sample spike of every batch of 20 samples were analyzed.

The calibration certifications of water quality monitoring equipments were shown in **Appendix F1**.

#### **4.5. Actions and Limit Levels**

The criteria for Action and Limit Levels have been set out as follows:

**Table 4.4 The criteria of Action and Limit Levels for Water Quality**

| Parameters       | Unit | Action Level            | Limit Level             |
|------------------|------|-------------------------|-------------------------|
| Turbidity        | NTU  | 95%ile of baseline data | 99%ile of baseline data |
| Dissolved Oxygen | mg/L | 5%ile of baseline data  | 1%ile of baseline data  |
| Suspended solids | mg/L | 95%ile of baseline data | 99%ile of baseline data |

Following the criteria shown in **Table 4.4**, the Action and Limit Levels for monitoring parameters derived as illustrated in **Table 4.5**.

**Table 4.5 Action and Limit Levels for Water Quality**

| Parameters       | Unit | Action | Limit |
|------------------|------|--------|-------|
| Turbidity        | NTU  | 19.8   | 20.5  |
| Dissolved Oxygen | mg/L | 1.84   | 1.81  |
| Suspended Solid  | mg/L | 17.0   | 17.8  |

#### 4.6. Result and Observation

##### 4.6.1. Result

Monitoring data of water quality monitoring carried out in this reporting month are summarized in **Appendix F2**. Graphical presentation of the monitoring results for the reporting month is shown in **Appendix F3**.

No exceedance of Action and Limit Level of water quality monitoring results was recorded during the reporting month.

##### 4.6.2. Observation

Generally, the turbidity and suspended solids were found to be lower than the action level. Besides, all results of dissolved oxygen measured in this reporting month were higher than the action level.

#### 4.7. Event and Action Plan

If the impact monitoring results of the individual parameters exceed the Action and Limit Levels, the actions specified in **Table 4.6** shall be carried out.

**Table 4.6 Event and Action Plan for Water Quality**

| Event                                           | Action                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                              |  |

## 5. ENVIRONMENTAL SITE INSPECTION AND AUDIT

### 5.1. Site Inspection

- 5.1.1.** Site Inspections were carried out on a weekly basis to monitor the implementation of proper environmental pollution control mitigation measures for the project. During the reporting period, site inspections were carried out on 05, 12, 19 and 26 June 2020.
- 5.1.2.** Observations for the site inspections within this reporting period are summarized in **Table 5.1** and inspection checklists are attached in **Appendix H**.

**Table 5.1 Summary of observation of site inspections**

| Date         | Observations/<br>Reminders                                                                                                                                                   | Follow-up Action                                                                                              | Closed Date  |

## 5.2. Landscape and Visual Audit

5.2.1. Landscape and visual audits were undertaken at least once every two weeks throughout the construction period by a competent landscape architect. During the reporting period, audits were carried out on 12 and 26 June 2020.

5.2.2. Observations and reminders were summarized in the landscape and visual impact assessment checklists which are attached in **Appendix I**.

## 5.3. Advice on the Solid and Liquid Waste Management Status

5.3.1. All types of waste arising from the construction work are classified into the following:

- Construction & Demolition (C&D) Material;
- Chemical Waste;
- General Refuse; and
- Excavated Soil

5.3.2. The quantities of waste for disposal in this Reporting Period are summarized in **Table 5.2** and **Table 5.3** and the Monthly Summary Waste Flow Table is shown in **Appendix J**. Whenever possible, materials were reused on-site as far as practicable.

**Table 5.2 Summary of Quantities of Inert C&D Materials**

| Type of Waste                                      | Quantity | Disposal Location     |
|----------------------------------------------------|----------|-----------------------|
| Reused in this Contract (Inert) (m <sup>3</sup> )  | 0        | --                    |
| Reused in other Projects (Inert) (m <sup>3</sup> ) | 0        | --                    |
| Disposed as Public Fill (Inert) (m <sup>3</sup> )  | 861      | Tuen Mun 38 Fill Bank |

**Table 5.3 Summary of Quantities of C&D Materials**

| Type of Waste                           | Quantity | Disposal Location                          |
|-----------------------------------------|----------|--------------------------------------------|
| Recycled Metal (kg)                     | 0        | --                                         |
| Recycled Paper / Cardboard Packing (kg) | 0        | --                                         |
| Recycled Plastic (kg)                   | 0        | --                                         |
| Chemical Wastes (kg)                    | 0        | --                                         |
| General Refuses (m <sup>3</sup> )       | 101,120  | North East New Territories (NENT) Landfill |

5.3.3. To control over the site performance on waste management, the Contractor shall ensure that all solid and liquid waste management works are in full compliance with the relevant license/permit requirements, such as the effluent discharge license and the chemical waste producer registration. The Contractor is also reminded to implement the recommended environmental mitigation measures according to the EM&A Manual based on actual site conditions.

## 5.4. Discharge License and Results of Effluent Monitoring

5.4.1. Effluent quality was monitored in the reporting month in accordance with the EM&A Manual at the discharge point. A discharge license under Water Pollution Control Ordinance was obtained by the Contractor upon commencement of the Project. Self-monitoring would be performed as per the requirement under the discharge license. According to the EM&A Manual, pH, chemical oxygen demand and total suspended solid are required to be analysed at least once every two week.

**5.4.2.** Effluent water samples were scheduled to be collected on 09 June 2020. As only Wetsep at P1 was operated on 09 June 2020, the effluent water samples were sampled at P1 on 09 June 2020. Since Wetsep was not operated on 23 June 2020, no water sampling was conducted on 23 June 2020. The required testing parameter including pH, chemical oxygen demand and total suspended solid were carried out in a HOKLAS laboratory. The methods of chemical oxygen demand and total suspended solid determination follow APHA 19ed 5220 B and APHA 19ed 2540 D respectively. The laboratory reports for the discharge water are presented in **Appendix N**.

**5.4.3.** For effluent quality monitoring as per the discharge license requirement, the results complied with the discharge license requirement.

## **5.5. Environmental Licenses and Permits**

**5.5.1.** The valid environmental licenses and permits during the reporting period are summarized in **Appendix K**.

## **5.6. Implementation Status of Environmental Mitigation Measures**

**5.6.1.** The environmental mitigation measures that recommended in the Environmental Monitoring and Audit Manual covered the issues of dust, noise, water and waste and they are summarized as following:

### **Dust Mitigation Measures**

- a. The working area for the uprooting of trees, shrubs, or vegetation or for the removal of boulders, poles, pillars or temporary or permanent structures should be sprayed with water or a dust suppression chemical immediately before, during and immediately after the operation so as to maintain the entire surface wet;
- b. All demolished items (including trees, shrubs, vegetation, boulders, poles, pillars, structures, debris, rubbish and other items arising from site clearance) that may dislodge dust particles should be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides within a day of demolition;
- c. Vehicle washing facilities including a high pressure water jet should be provided at every discernible or designated vehicle exit point;
- d. The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores;
- e. Where a site boundary adjoins a road, street, service and or other area accessible to the public, hoarding of not less than 2.4m from ground level should be provided along the entire length of that portion of the site boundary except for a site entrance or exit;
- f. Every main haul road (i.e. any course inside a construction site having a vehicle passing rate of higher than 4 in any 30 minutes) should be paved with concrete, bituminous materials, hardcores or metal plates, and kept clear of dusty materials; or sprayed with water or a dust suppression chemical so as to maintain the entire road surface wet;
- g. The portion of any road leading only to a construction site that is within 30m of a discernible or designated vehicle entrance or exit should be kept clear of dusty materials;
- h. Immediately before leaving a construction site, every vehicle should be washed to remove any dusty materials from its body and wheels;
- i. Where a vehicle leaving a construction site is carrying a load of dusty materials, the load should be covered entirely by clean impervious sheeting to ensure that the dusty materials do not leak from the vehicle;
- j. The working area of any excavation or earth moving operation should be sprayed with water or a dusty suppression chemical immediately before, during and immediately after the operation so as to maintain the entire surface wet;
- k. Exposed earth shall be properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen, shotcrete or other suitable surface stabilizer within 6 months after the last construction activity on the construction site or part of the construction site where the exposed earth lies;
- l. Any stockpile of dusty material should be either covered entirely by impervious sheeting; placed in an area sheltered on the top and the 3 sides; or sprayed with water or a dust suppression chemical so as to maintain the entire surface wet.

**Noise Mitigation Measures**

- a. Quiet plants should be used in order to reduce the noise impacts to protect the nearby NSRs.
- b. Temporary and Movable Noise Barriers should be used in order to reduce the noise impact to the surrounding sensitive receivers
- c. The contractor should site noisy equipment and activities as far from sensitive receivers as practical.
- d. Idle equipment should be turned off or throttled down.
- e. Construction activities should be planned so that parallel operation of several sets of equipment close to a given receiver is avoided
- f. Construction plant should be properly maintained and operated.

**Water Quality Mitigation Measures**

- a. Exposed stockpiles should be covered with tarpaulin or impervious sheets before a rainstorm occurs;
- b. The exposed soil surfaces should also be properly protected to minimize dust emission;
- c. The stockpiles of materials should be placed in the locations away from the drainage channel so as to avoid releasing materials into the channel;
- d. Wheel washing facilities should be provided at site exits to ensure that earth, mud and debris would not be carried out of the works areas by vehicles;
- e. Provision of site drainage systems and treatment facilities would be required to minimize the water pollution;
- f. A discharge license needs to be applied from EPD for discharging effluent from the construction site;
- g. The treated effluent quality is required to meet the requirements specified in the discharge license;
- h. Provision of chemical toilets is required to collect sewage from workforce. The chemical toilets should be cleaned on a regular basis;
- i. A licensed waste collector should be employed to clean the chemical toilets and temporary storage tank on a regular basis;
- j. Illegal disposal of chemicals should be strictly prohibited;
- k. Registration as a chemical waste producer is required if chemical wastes are generated and need to be disposed of. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes;
- l. Disposal of chemical wastes should be carried out in compliance with the Waste Disposal Ordinance. The Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes published under the Waste Disposal Ordinance should be used as a guideline for handling chemical wastes;
- m. The impact from accidental spillage of chemicals can be effectively controlled through good management practices.

**Waste Management Mitigation Measures**

- a. Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal;
- b. To encourage collection of aluminium cans by individual collectors, separate bins should be provided to segregate this waste from other general refuse generated by the workforce;
- c. Any unused chemicals or those with remaining functional capacity should be recycled;
- d. Prior to disposal of C&D waste, it is recommended that wood, steel and other metals be separated for re-use and/or recycling and inert waste as fill material to minimize the quantity of waste to be disposed of to landfill;
- e. Proper storage and site practices to minimize the potential for damage or contamination of construction materials; and
- f. Plan and stock construction materials carefully to minimize amount of waste generated and avoid unnecessary generation of waste.

**5.6.2.** An updated summary of the Environmental Mitigation Implementation Schedule (EMIS) is presented in **Appendix L**. Most of the necessary mitigation measures were implemented properly. Any deficiencies were noted in the remarks of the schedule.

## 5.7. Summary of Exceedance of the Environmental Quality Performance Limit

- 5.7.1. There was no Action and Limit level exceedance of 1-hour and 24-hr TSP monitoring was recorded at station ASR1a and ASR2b during this reporting month.
- 5.7.2. There was no Action and Limit Level exceedance for noise recorded at station NSR1a and NSR2b during the reporting period.
- 5.7.3. There was no Action and Limit Level exceedance for water quality monitoring recorded at station R1b during the reporting period.

## 5.8. Summary of Complaints, Notification of Summons and Successful Prosecution

- 5.8.1. There were no complaints received during the reporting period.
- 5.8.2. There were no notifications of summons or prosecutions received during the reporting period.
- 5.8.3. A summary of environmental complaints, notifications of summons and successful prosecutions was given in **Table 5.4**.

**Table 5.4 Summary of Environmental Complaints Notification of Summons and Successful Prosecution**

| Reporting Period                                                 | Cumulative Statistic |                          |                         |
|------------------------------------------------------------------|----------------------|--------------------------|-------------------------|
|                                                                  | Complaints           | Notifications of summons | Successful prosecutions |
| The reporting period                                             | 0                    | 0                        | 0                       |
| From commencement date of construction to end of reporting month | 0                    | 0                        | 0                       |

## 6. FUTURE KEY ISSUES

### 6.1. Construction Programme for the Coming Months

- 6.1.1. As informed by the Contractor, the major construction activities for July 2020 are included:

- *Water Tightness Test;*
- *Internal ABWF;*
- *External ABWF;*
- *Coating;*
- *Superstructure (RC);*
- *Remaining Works on the Roof;*
- *ABWF;*
- *Slopes and Retaining Wall;*
- *Underground Utilities Along EVA;*

### 6.2. Key Issues for the Coming Month

**Key issues to be considered in the coming month include:**

- *Chemical and waste management;*
- *Treatment of runoff and wastewater prior to discharge; and*
- *Dust and Noise generated from construction activities;*

**Mitigation measures to be required in the coming month:****Air Quality Impact**

- To provide adequate water spraying in the worksite;
- To operate and maintain automatic wheel washing facilities properly;
- To provide road sweeping site entrance and public roads outside site entrance;
- To ensure implementation of the dust mitigation measures for the site activities;
- To maintain proper operation of the mist spraying system;
- To provide proper maintenance for vehicles and machines on site; and
- To investigate any other dust sources around the air sensitive receivers

**Noise**

- To switch off equipment if not in use;
- To operate silent equipment;
- To identify the noise sources inside and outside of the site; and
- To follow up any exceedance caused by the construction work inside the worksite

**Water Quality Impact**

- To ensure the drainage system was maintained properly;
- To maintain the existing silt trap to ensure good efficiency of wheel wash facilities;
- To avoid stagnant water in the drip trays due to rainfall;
- To avoid any stagnant water or provide insecticide to avoid mosquito breeding

**Chemical and Waste Management**

- To remove waste from the site regularly;
- To properly store and handle chemical wastes on site;
- To implement trip ticket system for all the imported public fill and general refuse disposal;
- To maintain proper housekeeping;
- To identify C&D material by packaging, labelling, storage, transportation and disposal in accordance with statutory regulations.

**6.3. Environmental Monitoring and Site Inspection Schedule for the Coming Month**

- 6.3.1.** The tentative schedule for environmental monitoring and site inspection schedule for July 2020 is provided in **Appendix M**.

**7. CONCLUSION****7.1. Conclusions**

- 7.1.1.** There was no Action and Limit level exceedance of 1-hour and 24-hr TSP monitoring was recorded at station ASR1a and ASR2b during this reporting month.
- 7.1.2.** There was no Action and Limit Level exceedance for noise recorded at station NSR1a and NSR2b during the reporting period.
- 7.1.3.** There was no Action and Limit Level exceedance for water quality monitoring recorded at station R1b during the reporting period.
- 7.1.4.** There were no complaints received during the reporting period.
- 7.1.5.** There were no notifications of summons or prosecutions received during the reporting period.

**Internal Calibration Report**  
**of**  
**Dust Monitor**

**Manufacturer :** SIBATA (LD-3B) **Date of Calibration :** 16 April 2020

**Serial No. :** 014746 (ET/EA/001/06) **Calibration Due Date :** 15 October 2020

**Method :** Parallel measurement (Three-point calibration) by placing the Dust Monitor and High Volume Air Sampler together under the same environmental condition

|                |                                          |    |                                   |     |
|----------------|------------------------------------------|----|-----------------------------------|-----|
| <b>Results</b> | Dust Monitor (CPM)                       | 28 | 75                                | 169 |
|                | TSP ( $\mu\text{g}/\text{m}^3$ )         | 52 | 113                               | 281 |
|                | High Volume Air Sampler Serial No.: 1177 |    | Calibration Due Date: 29 May 2020 |     |

Acceptance Criteria : Correlation coefficient (r) of the calibration curve greater than 0.990 after three-point calibration.

The Dust Trak Monitor complies \* / does not comply \* with the internal calibration procedures and is deemed acceptable \* / unacceptable \* for use.

(\*) : 3dB(A) correction was added to the results during the free-field noise measurements

## **Appendix E1**

### **Calibration Certificates for Impact Noise Monitoring Equipment**

## Summary of Calibration Certificates for Noise Monitoring Equipment used in this reporting month

| Equipment                           | Equip No.    | Serial No. | Calib. Date | Due Date   |
|-------------------------------------|--------------|------------|-------------|------------|
| Sound Level Calibrator (Rion NC-73) | ET/EN/002/01 | 10196943   | 18/10/2019  | 17/10/2020 |
| Sound Level Meter (Rion NL-31)      | ET/EN/003/12 | 00773032   | 16/12/2019  | 15/12/2020 |
| Sound Level Meter (Rion NL-52)      | ET/EN/003/17 | 00264519   | 06/04/2020  | 05/04/2021 |
| Sound Level Meter (Rion NL-52)      | ET/EN/003/18 | 00264520   | 03/03/2020  | 02/03/2021 |

# Calibration Certificate

Certificate No. **910146**

Page 1 of 2 Pages

**Customer :** ETS-Testconsult Limited

**Address :** 8/F., Block B, Veristrong Industrial Centre, 34-36 Au Pui Wan St., Fotan, Hong Kong.

**Order No. :** Q94052

**Date of receipt :** 11-Oct-19

## Item Tested

**Description :** Sound Level Calibrator

**Manufacturer :** Rion

**I.D. :** ET/EN/002/01

**Model :** NC-73

**Serial No. :** 10196943

## Test Conditions

**Date of Test :** 18-Oct-19

**Supply Voltage :** --

**Ambient Temperature :**  $(23 \pm 3)^{\circ}\text{C}$

**Relative Humidity :**  $(50 \pm 25) \%$

## Test Specifications

Calibration check.

Ref. Document/Procedure : F21, Z02.

## Test Results

All results were within the manufacturer's specification.

The results are shown in the attached page(s).

Main Test equipment used:

| <u>Equipment No.</u> | <u>Description</u>     | <u>Cert. No.</u> | <u>Traceable to</u> |
|----------------------|------------------------|------------------|---------------------|
| S014                 | Spectrum Analyzer      | 906710           | NIM-PRC & SCL-HKSAR |
| S240                 | Sound Level Calibrator | 904042           | NIM-PRC & SCL-HKSAR |
| S041                 | Universal Counter      | 902477           | SCL-HKSAR           |
| S206                 | Sound Level Meter      | 904050           | SCL-HKSAR           |

The values given in this Calibration Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Hong Kong Calibration Ltd. shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to International System of Units (SI), or by reference to a natural constant.  
The test results apply to the above Unit-Under-Test only

**Calibrated by :** 

Kin Wong

**Approved by :** 

Alan Chu

**Date:** 18-Oct-19

This Certificate is issued by:

Hong Kong Calibration Ltd.

Unit 8B, 24/F., Well Fung Industrial Centre, No. 58-76, Ta Chuen Ping Street, Kwai Chung, NT, Hong Kong.

# Calibration Certificate

Certificate No. **910146**

Page 2 of 2 Pages

Results :

**1. Level Accuracy (at 1 kHz)**

| UUT Nominal Value | Measured Value | Mfr's Spec. |
|-------------------|----------------|-------------|
| 94 dB             | 93.8 dB        | $\pm 1$ dB  |

Uncertainty :  $\pm 0.2$  dB

**2. Frequency Accuracy**

| UUT Nominal Value | Measured Value | Mfr's Spec. |
|-------------------|----------------|-------------|
| 1 kHz             | 0.983 kHz      | $\pm 2$ %   |

Uncertainty :  $\pm 0.1$  %

**3. Level Stability : 0.0 dB**

Uncertainty :  $\pm 0.01$  dB

**4. Total Harmonic Distortion :  $< 0.3$  %**

Mfr's Spec. :  $< 3$  %

Uncertainty :  $\pm 2.3$  % of reading

Remark : 1. UUT : Unit-Under-Test

2. The uncertainty claimed is for a confidence probability of not less than 95%.

3. Atmospheric Pressure : 1 004 hPa.

Customer : ETS-Testconsult Limited

Address : 8/F., Block B, Veristrong Industrial Centre, 34-36 Au Pui Wan St., Fotan, Hong Kong.

Order No. : Q01189

Date of receipt : 31-Mar-20

## Item Tested

Description : Sound Level Meter

Manufacturer : Rion

Model : NL-52

I.D. : ET/EN/003/17

Serial No. : 00264519

## Test Conditions

Date of Test : 6-Apr-20

Ambient Temperature :  $(23 \pm 3)^{\circ}\text{C}$

Supply Voltage : --

Relative Humidity :  $(50 \pm 25) \%$

## Test Specifications

Calibration check.

Ref. Document/Procedure: Z01, IEC 61672.

## Test Results

All results were within the IEC 61672 Type 1 or manufacturer's specification.

The results are shown in the attached page(s).

Main Test equipment used:

| <u>Equipment No.</u> | <u>Description</u>       | <u>Cert. No.</u> | <u>Traceable to</u> |
|----------------------|--------------------------|------------------|---------------------|
| S017A                | Multi-Function Generator | 906713           | SCL-HKSAR           |
| S240                 | Sound Level Calibrator   | 904042           | NIM-PRC & SCL-HKSAR |

The values given in this Calibration Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Hong Kong Calibration Ltd. shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to International System of Units (SI), or by reference to a natural constant.  
The test results apply to the above Unit-Under-Test only

### 4.1 Frequency Weighting (Fast)

| UUT Setting | Applied Value (dB) | UUT Reading (dB) | Difference (dB) | IEC 61672 Type 1 Spec. |
|-------------|--------------------|------------------|-----------------|------------------------|
| A           | 94.0               | 94.0 (Ref.)      | - -             | ± 0.4 dB               |
| C           | 94.0               | 94.0             | 0.0             |                        |
| Z           | 94.0               | 94.0             | 0.0             |                        |

### 4.2 Time Weighting (A-weighted)

| UUT Setting    | Applied Value (dB) | UUT Reading (dB) | Difference (dB) | IEC 61672 Type 1 Spec. |
|----------------|--------------------|------------------|-----------------|------------------------|
| Fast           | 94.0               | 94.0 (Ref.)      | - -             | ± 0.3 dB               |
| Slow           | 94.0               | 94.0             | 0.0             |                        |
| Time-averaging | 94.0               | 94.0             | 0.0             |                        |

Uncertainty : ± 0.1 dB

Remarks : 1. UUT : Unit-Under-Test

2. The uncertainty claimed is for a confidence probability of not less than 95%.

3. Atmospheric Pressure : 1 008 hPa.

4. Preamplifier model : NH-25 , S/N : 64646.

5. Firmware Version: 1.7

6. Power Supply Check: OK

7. The UUT was adjusted with the supplied sound calibrator at the reference sound pressure level before the calibration.

----- END -----

## Calibration Report of Dissolved Oxygen Meter (*In situ* Measurement)

Equipment Ref. No. : ET/EW/008/006 Manufacturer : YSI  
Model No. : Pro 2030 Serial No. : 12A100554  
Calibration Date : 3/3/2020 Calibration Due Date : 2/6/2020

### Temperature Verification by Reference Thermometer (ET/0521/028)

|                       | Temperature Reading (°C) | Correction (°C) | Corrected Temperature (°C) | Difference (°C) |
|-----------------------|--------------------------|-----------------|----------------------------|-----------------|
| Reference Thermometer | 20.3                     | 0.0             | 20.3                       | -0.1            |
| DO Meter              | 20.2                     | 0.0             | 20.2                       |                 |

Criteria: Difference between corrected temperature from DO meter and reference thermometer :  $\leq \pm 0.5$  °C

### Zero Point Checking

|                         |      |
|-------------------------|------|
| DO meter reading (mg/L) | 0.02 |
|-------------------------|------|

Criteria: Zero checking: 0.0 mg/L

### Linearity Checking of Dissolved Oxygen Content by APHA 19ed 4500-O G

| Purging time, min | Expected DO value (mg/L)<br>(ET/0510/012) | DO meter reading (mg/L) | Difference of DO Content<br>(mg/L) |
|-------------------|-------------------------------------------|-------------------------|------------------------------------|
| 2                 | 6.51                                      | 6.40                    | 0.11                               |
| 5                 | 4.33                                      | 4.41                    | 0.08                               |
| 10                | 1.85                                      | 1.99                    | 0.14                               |

Criteria: Difference between DO meter reading and expected DO value:  $\leq \pm 0.30$  mg/L

### Salinity Checking by APHA 19ed 2520 B

|                                                  | Expected Salinity (ppt) | DO meter reading (ppt) |
|--------------------------------------------------|-------------------------|------------------------|
| Reagent No. of NaCl (10 ppt): CPE/012/4.7/005/12 | 10                      | 9.3                    |
| Reagent No. of NaCl (30 ppt): CPE/012/4.8/005/12 | 30                      | 28.2                   |

Criteria: Difference between DO meter reading and expected Salinity:  $\pm 10.0$  %

The equipment complies <sup>#</sup> / ~~does not comply~~ <sup>#</sup> with the specified requirements and is deemed acceptable <sup>#</sup> / unacceptable <sup>#</sup> for use.

## Performance Check of Turbidity Meter

Equipment Ref. No. : ET/0505/021 Manufacturer : HACH  
Model No. : 2100Q Serial No. : 17020C056013  
Date of Calibration : 25/4/20 Due Date : 24/7/2020

| Theoretical Value of Turbidity Standard (NTU) | Measured Value (NTU) | Difference % * |
|-----------------------------------------------|----------------------|----------------|
| 20                                            | 20.2                 | 1.0%           |
| 100                                           | 102                  | 2.0%           |
| 800                                           | 810                  | 1.2%           |

(\*) Difference = (Measured Value – Theoretical Value) / Theoretical Value x 100

Acceptance Criteria

Difference : -5 % to 5 %

The turbidity meter complies \* / ~~does not comply~~ \* with the specified requirements and is deemed acceptable \* / ~~unacceptable~~ \* for use. Measurements are traceable to national standards.

Remark(s):

- (#) 200ml sample was used for Suspended Solids analysis. Practical Quantitation Limit of Suspended Solids reported less than 5 mg/L. The results reported as <5 would be counted as zero for average measurement.

Remark(s):

1. Trace means rainfall less than 0.05 mm
2. § 1981-2010 Climatological Normal
3. The meteorological observations extracted from Hong Kong Observatory only shown the daily average and may be varied from the weather condition recorded during monitoring.

## Environmental Site Inspection Checklist – San Wai

Inspection Date: 05 June 2020 Inspected By: Frankie Tang  
Time: 14:30 Weather Condition: Fine  
Participants: Darren Lai, Tony Kwok, Teddy Yuen

| 1    | Permits/Licenses                                                                                                                                                                                                                                          | N/A                      | Yes                                 | No                       | Remarks |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------------------------|--------------------------|---------|
| 1.1  | Are Environmental Permit, license/ other permit displayed at major site exit and vehicle access?                                                                                                                                                          | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.2  | Are Construction Noise Permits available for inspection?                                                                                                                                                                                                  | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.3  | Is wastewater discharge license available for inspection?                                                                                                                                                                                                 | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.4  | Are trip tickets for chemical waste and construction waste disposal available for inspection?                                                                                                                                                             | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.5  | Are relevant license/permits for disposal of construction waste or excavated materials available for inspection?                                                                                                                                          | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2    | Air Quality                                                                                                                                                                                                                                               | N/A                      | Yes                                 | No                       | Remarks |
| 2.1  | Is open burning avoided?                                                                                                                                                                                                                                  | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.2  | Are speed controlled at 10 km/h on unpaved site areas?                                                                                                                                                                                                    | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.3  | Are plant and equipment well maintained (i.e. without black smoke from powered plant)?                                                                                                                                                                    | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.4  | Observed dust source(s):<br><input type="checkbox"/> Wind erosion<br><input type="checkbox"/> Vehicle/ Equipment Movements<br><input type="checkbox"/> Loading/ unloading of materials<br><input checked="" type="checkbox"/> Others: <u>Not observed</u> |                          |                                     |                          |         |
| 2.5  | Are the work sites wetted with water twice a day?                                                                                                                                                                                                         | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.6  | After removal of boulders, poles, pillars or temporary or permanent structures, are the entire surface sprayed with water or a dust suppression chemical immediately?                                                                                     | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.7  | Is the area involved demolished items covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides within a day of demolition?                                                                                       | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.8  | Are wheel washing facilities with high pressure water jet provided at all site exits if practicable?                                                                                                                                                      | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.9  | Are the areas of washing facilities and the road section between the washing facilities and the exit point paved with concrete, bituminous materials or hardcores?                                                                                        | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.10 | Are hoarding $\geq 2.4\text{m}$ tall provided beside roads or area with public access?                                                                                                                                                                    | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.11 | Are main haul road paved with concrete, bituminous materials, hardcores or metal plates, and kept clear of dusty materials; or sprayed with water or a dust suppression chemical?                                                                         | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.12 | Are construction site that is within 30m of a discernible or designated vehicle entrance or exit kept clear of dusty materials?                                                                                                                           | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.13 | Are all vehicles and plant cleaned before they leave the construction site?                                                                                                                                                                               | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.14 | Are loaded dump trucks covered by impervious sheeting appropriately                                                                                                                                                                                       | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |

|      |                                                                                                                                                                                                                                        |                                     |                                     |                          |  |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|--------------------------|--|
|      | before leaving the site?                                                                                                                                                                                                               |                                     | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |
| 2.15 | Are working areas of any excavation or earth moving operation sprayed with water or a dusty suppression chemical immediately?                                                                                                          | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |
| 2.16 | Is exposed earth properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen, concrete or other suitable surface stabilizer within 6 months after the last construction activity? | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.17 | Are stockpile of dusty material covered entirely by impervious sheeting; placed in an area sheltered on the top and the 3 sides; or sprayed with water or dust suppression chemical?                                                   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.18 | Are unpaved areas / designated roads watered regularly to avoid dust generation?                                                                                                                                                       | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |
| 2.19 | Are dusty materials covered entirely by impervious sheeting or sprayed with water?                                                                                                                                                     | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.20 | Is every stock of more than 20 bags of cement or dry pulverized fuel ash (PFA) covered entirely by impervious sheeting or placed in an area sheltered on the top and 3 sides?                                                          | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.21 | Are the approval or exempted NRMM labels painted or securely fixed on site machines or vehicles and displayed at a conspicuous position according to the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation?      | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |

| 3    | Noise                                                                                                                                                                                                                                                       | N/A                                 | Yes                                 | No                       | Remarks |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|--------------------------|---------|
| 3.1  | Are idle plant/equipments turned off or throttled down?                                                                                                                                                                                                     | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.2  | Are silenced equipments or quiet plants utilized?                                                                                                                                                                                                           | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.3  | Are the silencers or mufflers properly fitted on construction equipments and maintained regularly?                                                                                                                                                          | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.4  | Is temporary hoarding installed located on the site boundaries between noisy construction activities and NSRs?                                                                                                                                              | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.5  | Are noise barriers (typically density @14kg/m <sup>2</sup> ) acoustic mat or full enclosure close to noise plants including air compressor, generators and saw etc. provided to protect NSRs?                                                               | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.6  | Do air compressors have valid noise labels?                                                                                                                                                                                                                 | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.7  | Are compressor operated with doors closed?                                                                                                                                                                                                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.8  | QPME used with valid noise labels?                                                                                                                                                                                                                          | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.9  | Are construction activities planned so that parallel operation of several sets of equipment close to a given receiver is avoided?                                                                                                                           | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |

| 9.1                                        | Are the portable toilets maintained in a state, which will not deter the workers from utilizing these portable toilets?                                                                                                                                                                                 | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |                |

**Follow up actions for pervious Site Audit:** Follow up action to item on 29/5/20, all items were improved.

**Observations** Item 1: General refuse were observed near CEPT.  
Item 2: C&D material were observed near AB area.

**Corrective Actions – Mitigation Measures Implemented or Proposed (if any):**

Item 1 & 2: To clean the general refuse and C&D material properly.

## Environmental Site Inspection Checklist – San Wai

Inspection Date:

12 June 2020

Inspected By:

Frankie Tong

Time:

9:00

Weather Condition:

Fine

Participants:

C.Y. Hung, Patrick Leung, Dennis Lai, Tony Leung, Alex Li

| 1    | Permits/Licenses                                                                                                                                                                                                                                          | N/A                      | Yes                                 | No                       | Remarks |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------------------------|--------------------------|---------|
| 1.1  | Are Environmental Permit, license/ other permit displayed at major site exit and vehicle access?                                                                                                                                                          | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.2  | Are Construction Noise Permits available for inspection?                                                                                                                                                                                                  | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.3  | Is wastewater discharge license available for inspection?                                                                                                                                                                                                 | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.4  | Are trip tickets for chemical waste and construction waste disposal available for inspection?                                                                                                                                                             | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.5  | Are relevant license/permits for disposal of construction waste or excavated materials available for inspection?                                                                                                                                          | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2    | Air Quality                                                                                                                                                                                                                                               | N/A                      | Yes                                 | No                       | Remarks |
| 2.1  | Is open burning avoided?                                                                                                                                                                                                                                  | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.2  | Are speed controlled at 10 km/h on unpaved site areas?                                                                                                                                                                                                    | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.3  | Are plant and equipment well maintained (i.e. without black smoke from powered plant)?                                                                                                                                                                    | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.4  | Observed dust source(s):<br><input type="checkbox"/> Wind erosion<br><input type="checkbox"/> Vehicle/ Equipment Movements<br><input type="checkbox"/> Loading/ unloading of materials<br><input checked="" type="checkbox"/> Others: <i>not observed</i> |                          |                                     |                          |         |
| 2.5  | Are the work sites wetted with water twice a day?                                                                                                                                                                                                         | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.6  | After removal of boulders, poles, pillars or temporary or permanent structures, are the entire surface sprayed with water or a dust suppression chemical immediately?                                                                                     | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.7  | Is the area involved demolished items covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides within a day of demolition?                                                                                       | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.8  | Are wheel washing facilities with high pressure water jet provided at all site exits if practicable?                                                                                                                                                      | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.9  | Are the areas of washing facilities and the road section between the washing facilities and the exit point paved with concrete, bituminous materials or hardcores?                                                                                        | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.10 | Are hoarding $\geq 2.4\text{m}$ tall provided beside roads or area with public access?                                                                                                                                                                    | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.11 | Are main haul road paved with concrete, bituminous materials, hardcores or metal plates, and kept clear of dusty materials; or sprayed with water or a dust suppression chemical?                                                                         | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.12 | Are construction site that is within 30m of a discernible or designated vehicle entrance or exit kept clear of dusty materials?                                                                                                                           | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.13 | Are all vehicles and plant cleaned before they leave the construction site?                                                                                                                                                                               | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.14 | Are loaded dump trucks covered by impervious sheeting appropriately                                                                                                                                                                                       | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |

|      |                                                                                                                                                                                                                                        |                                     |                                     |                          |  |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|--------------------------|--|
|      | before leaving the site?                                                                                                                                                                                                               |                                     | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |
| 2.15 | Are working areas of any excavation or earth moving operation sprayed with water or a dusty suppression chemical immediately?                                                                                                          | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |
| 2.16 | Is exposed earth properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen, concrete or other suitable surface stabilizer within 6 months after the last construction activity? | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.17 | Are stockpile of dusty material covered entirely by impervious sheeting; placed in an area sheltered on the top and the 3 sides; or sprayed with water or dust suppression chemical?                                                   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.18 | Are unpaved areas / designated roads watered regularly to avoid dust generation?                                                                                                                                                       | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |
| 2.19 | Are dusty materials covered entirely by impervious sheeting or sprayed with water?                                                                                                                                                     | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.20 | Is every stock of more than 20 bags of cement or dry pulverized fuel ash (PFA) covered entirely by impervious sheeting or placed in an area sheltered on the top and 3 sides?                                                          | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.21 | Are the approval or exempted NRMM labels painted or securely fixed on site machines or vehicles and displayed at a conspicuous position according to the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation?      | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |

| 3    | Noise                                                                                                                                                                                                                                            | N/A                                 | Yes                                 | No                       | Remarks |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|--------------------------|---------|
| 3.1  | Are idle plant/equipments turned off or throttled down?                                                                                                                                                                                          | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.2  | Are silenced equipments or quiet plants utilized?                                                                                                                                                                                                | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.3  | Are the silencers or mufflers properly fitted on construction equipments and maintained regularly?                                                                                                                                               | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.4  | Is temporary hoarding installed located on the site boundaries between noisy construction activities and NSRs?                                                                                                                                   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.5  | Are noise barriers (typically density @14kg/m <sup>2</sup> ) acoustic mat or full enclosure close to noise plants including air compressor, generators and saw etc. provided to protect NSRs?                                                    | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.6  | Do air compressors have valid noise labels?                                                                                                                                                                                                      | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.7  | Are compressor operated with doors closed?                                                                                                                                                                                                       | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.8  | QPME used with valid noise labels?                                                                                                                                                                                                               | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.9  | Are construction activities planned so that parallel operation of several sets of equipment close to a given receiver is avoided?                                                                                                                | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.10 | Major noise source(s):<br><input type="checkbox"/> Traffic<br><input checked="" type="checkbox"/> Construction activities inside of site<br><input type="checkbox"/> Construction activities outside of site<br><input type="checkbox"/> Others: |                                     |                                     |                          |         |

| 4   | Water Quality                                                                           | N/A                                 | Yes                      | No                       | Remarks |

| 9.1                                        | Are the portable toilets maintained in a state, which will not deter the workers from utilizing these portable toilets?                                                                                                                                                                                 | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |                |

**Follow up actions for pervious Site Audit:** Follow up action to item on 5/6/2020, all items were improved

**Observations** Item 1: Discarded C&D materials were observed near PF are.

Item 2: Stagnant water were observed near UV 1<sup>st</sup> floor.

Item 3: Stagnant water were observed near CSSB are.

**Corrective Actions – Mitigation Measures Implemented or Proposed (if any):**

Item 1: To clean the C&D material properly

Item 2 & 3: To clean the stagnant water to prevent mosquito breeding.

**Environmental Site Inspection Checklist – San Wai**

Inspection Date:

19 June 2020

Inspected By:

Frankie Tenny

Time:

10:00

Weather Condition:

Participants:

C.Y. Hung, Patrick Leung, Darren Lai, Tony Leung, Alex Li

| 1    | Permits/Licenses                                                                                                                                                                                                                                   | N/A                      | Yes                                 | No                       | Remarks |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------------------------|--------------------------|---------|
| 1.1  | Are Environmental Permit, license/ other permit displayed at major site exit and vehicle access?                                                                                                                                                   | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.2  | Are Construction Noise Permits available for inspection?                                                                                                                                                                                           | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.3  | Is wastewater discharge license available for inspection?                                                                                                                                                                                          | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.4  | Are trip tickets for chemical waste and construction waste disposal available for inspection?                                                                                                                                                      | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 1.5  | Are relevant license/permits for disposal of construction waste or excavated materials available for inspection?                                                                                                                                   | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2    | Air Quality                                                                                                                                                                                                                                        | N/A                      | Yes                                 | No                       | Remarks |
| 2.1  | Is open burning avoided?                                                                                                                                                                                                                           | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.2  | Are speed controlled at 10 km/h on unpaved site areas?                                                                                                                                                                                             | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.3  | Are plant and equipment well maintained (i.e. without black smoke from powered plant)?                                                                                                                                                             | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.4  | Observed dust source(s):<br><input type="checkbox"/> Wind erosion<br><input type="checkbox"/> Vehicle/ Equipment Movements<br><input type="checkbox"/> Loading/ unloading of materials<br><input checked="" type="checkbox"/> Others: Not observed |                          |                                     |                          |         |
| 2.5  | Are the work sites wetted with water twice a day?                                                                                                                                                                                                  | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.6  | After removal of boulders, poles, pillars or temporary or permanent structures, are the entire surface sprayed with water or a dust suppression chemical immediately?                                                                              | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.7  | Is the area involved demolished items covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides within a day of demolition?                                                                                | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.8  | Are wheel washing facilities with high pressure water jet provided at all site exits if practicable?                                                                                                                                               | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.9  | Are the areas of washing facilities and the road section between the washing facilities and the exit point paved with concrete, bituminous materials or hardcores?                                                                                 | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.10 | Are hoarding $\geq 2.4$ m tall provided beside roads or area with public access?                                                                                                                                                                   | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.11 | Are main haul road paved with concrete, bituminous materials, hardcores or metal plates, and kept clear of dusty materials; or sprayed with water or a dust suppression chemical?                                                                  | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.12 | Are construction site that is within 30m of a discernible or designated vehicle entrance or exit kept clear of dusty materials?                                                                                                                    | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.13 | Are all vehicles and plant cleaned before they leave the construction site?                                                                                                                                                                        | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 2.14 | Are loaded dump trucks covered by impervious sheeting appropriately                                                                                                                                                                                | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |

|      |                                                                                                                                                                                                                                        |                                     |                                     |                          |  |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|--------------------------|--|
|      | before leaving the site?                                                                                                                                                                                                               |                                     | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |
| 2.15 | Are working areas of any excavation or earth moving operation sprayed with water or a dusty suppression chemical immediately?                                                                                                          | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |
| 2.16 | Is exposed earth properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen, concrete or other suitable surface stabilizer within 6 months after the last construction activity? | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.17 | Are stockpile of dusty material covered entirely by impervious sheeting; placed in an area sheltered on the top and the 3 sides; or sprayed with water or dust suppression chemical?                                                   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.18 | Are unpaved areas / designated roads watered regularly to avoid dust generation?                                                                                                                                                       | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |
| 2.19 | Are dusty materials covered entirely by impervious sheeting or sprayed with water?                                                                                                                                                     | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.20 | Is every stock of more than 20 bags of cement or dry pulverized fuel ash (PFA) covered entirely by impervious sheeting or placed in an area sheltered on the top and 3 sides?                                                          | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |  |
| 2.21 | Are the approval or exempted NRMM labels painted or securely fixed on site machines or vehicles and displayed at a conspicuous position according to the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation?      | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |  |

| 3    | Noise                                                                                                                                                                                                                                            | N/A                                 | Yes                                 | No                       | Remarks |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|--------------------------|---------|
| 3.1  | Are idle plant/equipments turned off or throttled down?                                                                                                                                                                                          | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.2  | Are silenced equipments or quiet plants utilized?                                                                                                                                                                                                | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.3  | Are the silencers or mufflers properly fitted on construction equipments and maintained regularly?                                                                                                                                               | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.4  | Is temporary hoarding installed located on the site boundaries between noisy construction activities and NSRs?                                                                                                                                   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.5  | Are noise barriers (typically density @14kg/m <sup>2</sup> ) acoustic mat or full enclosure close to noise plants including air compressor, generators and saw etc. provided to protect NSRs?                                                    | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/> |         |
| 3.6  | Do air compressors have valid noise labels?                                                                                                                                                                                                      | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.7  | Are compressor operated with doors closed?                                                                                                                                                                                                       | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.8  | QPME used with valid noise labels?                                                                                                                                                                                                               | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |
| 3.9  | Are construction activities planned so that parallel operation of several sets of equipment close to a given receiver is avoided?                                                                                                                | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/> |         |

| 9.1                                        | Are the portable toilets maintained in a state, which will not deter the workers from utilizing these portable toilets?                                                                                                                                                                                 | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |                |

**Follow up actions for pervious Site Audit:** Follow up action to item on 12-6.20, all item were improved.

**Observations**

Item 1: Stagnant water were observed near DOI area.

Item 2: General refuse were observed near DOI area.

**Corrective Actions – Mitigation Measures Implemented or Proposed (if any):**

Item 1: To clean the stagnant water properly.

Item 2: To clean the general refuse properly.

| 2.7 | Are the tree root systems adequately protected from soil compaction due to storage of materials or operation of machinery? |  |  | ✓ |  |

**Summary/ Remarks:**

**Follow up actions taken by Contractor for previous comments:**

1. Trees at eastern boundary – most of the trees has been removed in accordance with the approved tree removal application. The few remaining trees existed are protected by the boundary fence.

**The contractor was reminded to rectify the following:**

1. Generally, contractor was reminded to keep on the tree protection and maintenance.

**New Observation:**

1. Grade change and construction activities are noted on site. Contractor was reminded not to disturb the TPZ.

**Reminders:**

1. Contractor was reminded to provide TPZ with robust fence, whenever possible, at the drip line of all retained trees unless the trees are well beyond the extend of construction activities.
2. Contractor was reminded not to disturb trees outside site along the boundary.

**Photo Record:**

| 2.7 | Are the tree root systems adequately protected from soil compaction due to storage of materials or operation of machinery? |  |  | ✓ |  |

### Summary/ Remarks:

#### Follow up actions taken by Contractor for previous comments:

1. Trees at eastern boundary – most of the trees has been removed in accordance with the approved tree removal application. The few remaining trees existed are protected by the boundary fence.

#### The contractor was reminded to rectify the following:

1. Generally, contractor was reminded to keep on the tree protection and maintenance.

#### New Observation:

1. Grade change and construction activities are noted on site. Contractor was reminded not to disturb the TPZ.

#### Reminders:

1. Contractor was reminded to provide TPZ with robust fence, whenever possible, at the drip line of all retained trees unless the trees are well beyond the extend of construction activities.
2. Contractor was reminded not to disturb trees outside site along the boundary.

#### Photo Record:

| Total | 5.010                                                      | 0.000                                    | 0.000                             | 0.000                    | 5.01                                             | 5.216                                  | 0.000                                             | 0.110                      | 0.000                             | 0.000          | 442.65                      |

- Notes: (1) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.  
 (2) Plastics refer to plastic bottles/ containers, plastic sheets/ foam from packaging materials.  
 (3) Broken concrete for recycling into aggregates.  
 (4) Assumption: The densities of subbase, Type A, Type B, Rockfill, Soil, Mix Rock and Soil, Reclaimed Asphalt Pave, Slurry are 2.0 ton/m<sup>3</sup>; the densities of Building debris and special fill materials are 2.1 ton/m<sup>3</sup>; the densities of Broken Concrete is 2.4 ton/m<sup>3</sup>.

| • The exposed soil surfaces should also be properly protected to minimize dust emission;                                                                                                                                                           | Site Area       | √ |  |  |  |
| • The stockpiles of materials should be placed in the locations away from the drainage channel so as to avoid releasing materials into the channel;                                                                                                | Site Area       | √ |  |  |  |
| • Wheel washing facilities should be provided at site exits to ensure that earth, mud and debris would not be carried out of the works areas by vehicles;                                                                                          | Site Exit       | √ |  |  |  |
| • Provision of site drainage systems and treatment facilities would be required to minimize the water pollution;                                                                                                                                   | Site Area       | √ |  |  |  |
| • A discharge license needs to be applied from EPD for discharging effluent from the construction site;                                                                                                                                            | --              | √ |  |  |  |
| • The treated effluent quality is required to meet the requirements specified in the discharge license;                                                                                                                                            | --              | √ |  |  |  |
| • Provision of chemical toilets is required to collect sewage from workforce. The chemical toilets should be cleaned on a regular basis;                                                                                                           | Chemical Toilet | √ |  |  |  |

|                                                                                                                                                                                                                                                                                                                                        |           |   |   |   |  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|---|---|---|--|
| • A licensed waste collector should be employed to clean the chemical toilets and temporary storage tank on a regular basis;                                                                                                                                                                                                           | --        | √ |   |   |  |
| • Illegal disposal of chemicals should be strictly prohibited;                                                                                                                                                                                                                                                                         | Site Area | √ |   |   |  |
| • Registration as a chemical waste producer is required if chemical wastes are generated and need to be disposed of. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes; | Site Area | √ |   |   |  |
| • Disposal of chemical wastes should be carried out in compliance with the Waste Disposal Ordinance. The Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes published under the Waste Disposal Ordinance should be used as a guideline for handling chemical wastes;                                          | Site Area | √ |   |   |  |
| • The impact from accidental spillage of chemicals can be effectively controlled through good management practices.                                                                                                                                                                                                                    | Site Area | √ |   |   |  |
| <b>Waste Management</b>                                                                                                                                                                                                                                                                                                                |           |   |   |   |  |
| • Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal;                                                                                                                                                               | Site Area | √ |   |   |  |
| • To encourage collection of aluminium cans by individual collectors, separate bins should be provided to segregate this waste from other general refuse generated by the workforce;                                                                                                                                                   | Site Area | √ |   |   |  |
| • Any unused chemicals or those with remaining functional capacity should be recycled;                                                                                                                                                                                                                                                 | Site Area | √ |   |   |  |
| • Prior to disposal of C&D waste, it is recommended that wood, steel and other metals be separated for re-use and/or recycling and inert waste as fill material to minimize the quantity of waste to be disposed of to landfill;                                                                                                       | Site Area | √ |   |   |  |
| • Proper storage and site practices to minimize the potential for damage or contamination of construction materials; and                                                                                                                                                                                                               | Site Area |   | √ |   |  |
| • Plan and stock construction materials carefully to minimize amount of waste generated and avoid unnecessary generation of waste.                                                                                                                                                                                                     | Site Area | √ |   |   |  |
| <b>Landscape and Visual</b>                                                                                                                                                                                                                                                                                                            |           |   |   |   |  |
| • Detailed tree survey should have been completed                                                                                                                                                                                                                                                                                      | Site Area | √ |   |   |  |
| • Trees should be transplanted to their final positions clear of the construction site                                                                                                                                                                                                                                                 | --        |   |   | √ |  |
| • Erect site hoarding to protect adjacent vegetation from damage                                                                                                                                                                                                                                                                       | Site Area | √ |   |   |  |

|                                                                                                                                                                                                       |           |   |  |   |  |

## TEST REPORT

### Testing of Water and Wastewater

Report No. : ENA05263  
Date of Issue : 23 June 2020  
Page No. : 1 of 1

#### Information Provided by Customer

Customer Name : ATAL-Degremont-China Harbour Joint Venture  
Customer Address : 19/F, China Harbour Building, 370-374 King's Road, North Point, Hong Kong  
Sample Source : Contract No. DC/2013/10 - Design, Build and Operate San Wai Sewage Treatment Works - Stage 1  
Sample Type : Wastewater  
Date of Sampling : 09 June 2020  
Sample Description : Sample was stored in 1L plastic bottle (for pH and Total Suspended Solids).  
Sample was stored in 500ml plastic bottle (for Chemical Oxygen Demand).  
Sample for Chemical Oxygen Demand was preserved by adding conc. H<sub>2</sub>SO<sub>4</sub> to pH <2.  
Sample was collected by the customer and refrigerated after received.

#### Laboratory Information

Date of Received : 09 June 2020  
Date of Testing Period : 09 to 11 June 2020  
Lab Ref. No. : W46971

#### Result

| Sample ID | Sample No. | Test                   | Method Used               | Result | Unit                |
|-----------|------------|------------------------|---------------------------|--------|---------------------|
| P1        | 01         | pH                     | In house method TPE/003/W | 8.6    | (at 25°C)           |
|           |            | Total Suspended Solids | In house method TPE/006/W | <5*    | mg/L                |
|           | 02         | Chemical Oxygen Demand | In house method TPE/002/W | <10    | mgO <sub>2</sub> /L |

#### Remark(s):

- The results relate only to the tested sample as received.
- \*200ml sample was used for Total Suspended Solids analysis. PQL of Total Suspended Solids reported less than 5 mg/L.
- Unless otherwise specific, the tests were carried out at the company address shown in the report.

Approved Signatory :

LAU, Chi Leung

HKAS has accredited this laboratory (Reg. No. HOKLAS 022) under HOKLAS for specific laboratory activities as listed in the HOKLAS directory of accredited laboratories. This report shall not be reproduced unless with prior written approval from this laboratory.
