Dear Mr. Tam.

Contract No.: DC/2009/08

Construction of Yuen Long South Branch Sewers and Expansion of Ha Tsuen Sewage

Pumping Station

Monthly EM&A Report for Designated Project, November 2013 - IEC Verification

With reference to ET's captioned report (ET's ref.: TCS00491/09/600/R0517v2) received on 24 December 2013, we have no comment and hereby verify the captioned report <u>excluding</u> the Landscape and Visual Impact section of the report.

We request the ET to submit the separate submission of Landscape and Visual Impact section of the report as soon as possible, for the completion of the captioned report.

Should there be any queries, please feel free to contact us.

Yours sincerely,

F. C. TSANG

EXECUTIVE SUMMARY

ES01. This is the 46th Monthly Environmental Monitoring and Audit (EM&A) Report for the designated work of Project under Environmental Permit No.EP-327/2009/A (hereinafter 'the EP'), covering a period from 1 to 30 November 2013 (hereinafter 'the Reporting Period').

ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

ES02. Environmental monitoring activities under the EM&A programme in this Reporting Period are summarized in the following table.

Aspects	Environmental Monitoring Parameters / Inspection	Occasions
Aim Ovality	1-hour Total Suspended Particulates (TSP)	30
Air Quality	24-hour Total Suspended Particulates (TSP)	12
Construction Noise	L _{eq(30min)} Daytime	10
	Dissolved Oxygen	13
Water Quality	Turbidity	13
	Suspended Solids	13
Inspection / Audit	ET Weekly Environmental Site Inspection	4

BREACH OF ACTION AND LIMIT (A/L) LEVELS

ES03. In this reporting period, no exceedance was recorded in air quality and noise monitoring. For water quality monitoring, 2 Limit Level exceedances were recorded on 5 November 2013. The summary of breach of environmental performance is shown below.

Environmental	Monitoring	Action Level	Limit Level	Event & Action		
Aspects	Parameters			NOE Issued	Investigation	Corrective Actions
Air Quality	1-hour TSP	0	0	0		
Air Quality	24-hour TSP	0	0	0		
Construction Noise	L _{eq(30min)} Daytime	0	0	0		
	Dissolved Oxygen	0	1	1	Not work related	
Water Quality	Turbidity	0	1	1	Not work related	
	Suspended Solids	0	0	0		

Note: NOE – Notification of Exceedance

SITE INSPECTION

ES04. Regular environmental site inspections had been carried out by ET joined with the Contractor and ER on 5, 13, 19 and 26 November 2013. No non-compliance was observed during the inspections.

ENVIRONMENTAL COMPLAINT

ES05. No environmental complaint was recorded / received in this Reporting Period.

NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES06. No environmental summons and successful prosecutions were recorded in this Reporting Period.

REPORTING CHANGE

ES07. There are no reporting changes in this reporting month.

R0517v2

RECOMMENDATIONS

- ES08. During dry season, special attention should be paid to the dust mitigation measures to avoid fugitive dust emissions from loose soil surface or haul road. Nevertheless, mitigation measures implemented to control the surface runoff including wheel wash facilities, covering of the loose soil surface or stockpile with tarpaulin sheet, etc., should be properly maintained to prevent any muddy or sandy runoff from the loose soil surface overflow on the site boundary.
- ES09. Other environmental issues such as construction noise as well as waste management, as stipulated in the Environmental Monitoring and Audit Manual should be implemented and maintained, as appropriate.

1. INTRODUCTION

BACKGROUND

- 1.01 The China State Construction Engineering (Hong Kong) Limited (hereinafter "The Contractor") has been awarded by the Drainage Services Department (DSD) the Contract DC/2009/08 Construction of Yuen Long South Branch Sewers and Expansion of Ha Tsuen Sewage Pumping Station (the Project) in October 2009.
- 1.02 The Project involves construction of about 9km of sewers and rising mains with diameter ranging from 200-1500mm in Yuen Long South and Ha Tsuen areas, a sewage pumping station near Shui Tsiu San Tsuen Road in Yuen Long South, expansion of existing Ha Tsuen Sewage Pumping Station. The site layout plan is shown in *Appendix A*.
- 1.03 The expansion of Ha Tsuen Sewage Pumping Station is under a statutory EIA (Register No. AEIAR-072/2003) study for "Upgrading and expansion of San Wai Sewage Treatment Works and expansion of Ha Tsuen Sewage Pumping Station" commissioned by the DSD. An Environmental Permit (No. EP-327/2009/A) for upgrading and expansion of Sewage Treatment Works at San Wai (excluded for the Project) and Ha Tsuen Sewage Pumping Station has been obtained by DSD in January 2009 for the relevant works.
- 1.04 According to Section 25 of the Particular Specification (PS) and the Environmental Permit No. EP-327/2009/A, the scope of monitoring includes air quality, construction noise, water quality and environmental site audit. It should be undertaken in accordance with the Environmental Monitoring and Audit Manual as part of EIA report [AEIAR-072/2003] (hereafter "the EM&A Manual") by an independent Environmental Team (ET). Also, monitoring and audit works for landscaping and visual will be undertaken as part of the EM&A programme.
- 1.05 As the works of the Project has been commenced in different periods of time, the EM&A Report for the Project are split to two separate parts as follows:
 - (a) Expansion of Ha Tsuen Sewage Pumping Station (under Environmental Permit No.EP-327/2009/A);
 - (b) Construction of sewers and rising mains with diameter ranging from 200-1500mm in Yuen Long South and Ha Tsuen areas and a sewage pumping station near Shui Tsiu San Tsuen Road in Yuen Long South (the works without Environmental Permit)
- 1.06 Action-United Environmental Services and Consulting (AUES) has been commissioned by the Contractor as the ET to implement the relevant EM&A program. As part of the project EM&A program, baseline monitoring was conducted between 22 December 2009 and 18 January 2010 to determine the ambient environmental conditions before the project commence any major construction works at Ha Tsuen Sewage Pumping Station and it had been verified by IEC and endorsed by EPD.
- 1.07 This is the **46th** Monthly EM&A Report *Expansion of Ha Tsuen Sewage Pumping Station* (hereinafter 'this Report') for designated works of the Project under Environmental Permit No.EP-327/2009/A (hereinafter 'the EP'), covering a period from **1 to 30 November 2013**.

REPORT STRUCTURE

1.08 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-

~ .	_
SECTION 1	INTRODUCTION

SECTION 2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

SECTION 3 SUMMARY OF IMPACT MONITORING REQUIREMENTS

SECTION 4 IMPACT MONITORING RESULTS

SECTION 5 WASTE MANAGEMENT

SECTION 6 SITE INSPECTIONS

SECTION 7 ENVIRONMENTAL COMPLAINTS AND NON-COMPLIANCE

SECTION 8 IMPLEMENTATION STATUS OF MITIGATION MEASURES

SECTION 9 IMPACT FORECAST

SECTION 10 CONCLUSIONS AND RECOMMENDATIONS

2. PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

PROJECT ORGANIZATION AND MANAGEMENT STRUCTURE

2.01 Organization structure and contact details of the Contractor and relevant parties with respect to the on-site environmental management are shown in *Appendix B*.

CONSTRUCTION PROGRESS

- 2.02 The tentative master construction program is enclosed in *Appendix C*. Also, the major construction activities undertaken in this reporting month are listed below:
 - Sewerage works and pavement construction
 - Reinstatement works
 - Landscaping works

SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.03 Summary of the relevant permits, licences, and/or notifications on environmental protection for this Project in this reporting month is presented in *Table 2-1*.

Table 2-1 Status of Environmental Licenses and Permits

Item	Description	License/Permit Status
1	Environmental Permit (EP-327/2009/A)	Updated on 1 June 2010
II	Chemical Waste Producer Registration Registration No. 5213-511-C3570-01	Issued on 13 Nov 2009
3		Issued on 12 Jan 2010 Expiry date: 31 Jan 2015
	Billing Account for Disposal of Construction Waste (Account Number: 700947)	Issued on 7 October 2009

2.04 The baseline monitoring report - *Expansion of Ha Tsuen Sewage Pumping Station (Ref: TCS00491/09/600/R0023v6)* had been verified by IEC and endorsed by EPD.

3. SUMMARY OF IMPACT MONITORING REQUIREMENTS

3.01 The Environmental Monitoring and Audit requirements are set out in the EM&A Manual. Environmental issues such as air quality, construction noise and water quality were identified as the key issues during the construction phase of expansion of Ha Tsuen Sewage Pumping Station. Also, monitoring and audit works for landscaping and visual shall be undertaken as part of the EM&A programme.

MONITORING PARAMETERS

3.02 According to the EM&A Manual, the EM&A implemented by ET has to include air quality, construction noise and water quality; the landscape and visual impact shall be monitored by a competent landscape architect. The monitoring parameters are summarized in *Table 3-1*.

Table 3-1 Summary of Monitoring Parameters

Environmental Aspect	Parameters				
Air Quality	1-hour Total Suspended Particulates (hereinafter '1-hr TSP'); and				
	• 24-hour Total Suspended Particulates (hereinafter '24-hr TSP').				
	• A-weighted equivalent continuous sound pressure level (30min) (hereinafter 'L _{eq(30min)} ') during the normal working hours; and				
Construction Noise	• A-weighted equivalent continuous sound pressure level (5min) (hereinafter ' $L_{\text{eq}(5\text{min})}$ ') for construction work during the restricted hours.				
Water Quality – Local	In Situ Measurement - Dissolved Oxygen (DO) and Turbidity				
Stream Course	Laboratory Analysis - Suspended Solids (SS)				
Water Quality –	In Situ Measurement - pH value				
Effluent Discharge	• Laboratory Analysis - SS and Chemical oxygen demand (COD)				
Landscape and Visual Resources	 Vegetation survey undertaken on an "area" basis to identify representative types and species composition; Assessment of landscape character; and Tree survey report (The inspection findings will be submitted) 				
	separately).				

MONITORING LOCATIONS

Monitoring Location Stipulation in the EM&A Manual

3.03 According to *EM&A Manual Sections 2.2.1.18*, 3.4.1.1 & 4.4.1.4, and Figures 2.1, 2.2, 3.1, 3.2 and 4.2, there are four air quality and noise monitoring stations and one water quality monitoring station identified as sensitive receivers during construction phase of the Project. For the four designated air quality and noise monitoring stations, two are located within the San Wai STW and other two are within the existing Ha Tsuen Sewage Pumping Station. Also, a local stream course of water quality monitoring station is identified in Tin Shui Wai Nullah. Besides, the area of landscape and visual monitoring is recommended for the entire selected route and within compounds in accordance with *the EM&A Manual Section 6.3.1.1*.

Air Quality

- 3.04 In order to identify and seek for the access for the air quality monitoring locations designated in the EM&A Manual, site inspection and the premises request about the monitoring locations have been carried out by the Contractor and ET. The designated monitoring location Yeung Chun Pui Care & Attention Home located at Sha Chau Lei Road has been identified, but the premise was granted by CEDD existing project CV/2008/03 for air quality monitoring. Also, the access to premises at the other designated air quality monitoring station at Tin Shing Court was refused by the incorporated owners.
- 3.05 In this case, the alternative location Ho Tak Sum Primary School as one sensitive receiver

mentioned in the EIA Report (Register No. AEIAR-072/2003) was proposed to be the replacement to undertake air quality monitoring during the expansion works of Ha Tsuen Sewage Pumping Station in accordance with the EM&A Manual Clauses 2.2.1.20. Simultaneously, air quality monitoring at the designated location Yeung Chun Pui Care & Attention Home was proposed to be performed. The proposal and recommendation was agreed by IEC and as endorsed by EPD.

- 3.06 As requested by the occupants of Yeung Chun Pui Care & Attention Home (AM2) due to safety reasons, the High Volume Air Sampler (HVS) for AM2 was relocated to a nearby location on 27 October 2011. Details of the relocation were given in the October 2011 Monthly EM&A Report.
- 3.07 As reported to the RE and IEC on 16 October 2012, the power supply for the HVS at AM2 was disconnected since the office that provides the electric support has been dismantled. A new location AM2(a) was therefore proposed. The proposal of new location AM2(a) has been formally submit to EPD on 14 November 2012 prior agreement by the RE and IEC. No further comments were received from EPD regards on the proposal.
- 3.08 Details of monitoring stations are presented in *Table 3-2* and illustrated in *Appendix D*.

Table 3-2 Air Quality Monitoring Stations

Monitoring Location ID	Identified Address	Remarks
AM1	Ho Tak Sum Primary School	Replace the Designated Monitoring Station Tin Shing Court
AM2(a)	Site Office opposite to the original location Yeung Chun Pui Care & Attention Home	Replace the Designated Monitoring Station Yeung Chun Pui Care & Attention Home

Construction Noise

- 3.09 Similar to the air quality monitoring, the construction noise monitoring stations undertaken for EM&A programme is agreed by IEC and as endorsed by EPD.
- 3.10 Details of the monitoring stations are presented in *Table 3-3* and shown in *Appendix D*.

Table 3-3 Construction Noise Monitoring Stations

Monitoring Location ID	Identified Address	Remarks	
NM1	Ho Tak Sum Primary School	Replace the Designated Monitoring Station Tin Shing Court	
NM2	Yeung Chun Pui Care & Attention Home	Designated in the EM&A Manual	

Water Quality

- 3.11 One designated location of a local stream course, Tin Shui Wai Nullah, is proposed to carry out water quality monitoring in accordance with the EM&A Manual. The designated sampling location R1 is located at the midpoint between two pedestrian flyovers athwart Tin Shui Wai Nullah, which are 320 meters apart. There are technical difficulty and safety issue to sample at R1. So, a new sampling point located at approximately 160m upstream of the R1 (hereinafter as R1b) was therefore proposed for the local stream water quality impact monitoring and was verified by IEC, without comment from EPD.
- 3.12 Details of the monitoring station are presented in *Table 3-4* and shown in *Appendix D*.

Table 3-4 Local	Stream Water	· Quality 1	Monitoring Station
-----------------	--------------	-------------	--------------------

Monitoring Location ID	Identified Address	Remarks
	The athwart Tin Shui	About 160 m upstream from the designated location
R1b	Wai Nullah pedestrian	as stipulated in the EM&A Manual and is closer to
	flyover	the existing Ha Tsuen Sewage Pumping Station

3.13 According to the EM&A Manual Section 4.3.1.5, the effluent water quality monitoring should be carried out at representative discharge point(s) where effluent from the construction sites is discharged into the local water course after being treated in a wastewater treatment system.

Landscape and Visual

3.14 The inspection area would be around the works area at Ha Tsuen Sewage Pumping Station. During construction regular inspections of the retained and transplanted trees should be made to ensure the effectiveness of the hoarding.

MONITORING FREQUENCY

3.15 According to the *EM&A Manual* Sections 2.2.1.27, 3.6 and 4.4.1.8, impact monitoring covers air quality, noise and water quality of local stream course.

Air Quality Monitoring

Parameters: 1-hour TSP and 24-hour TSP.

<u>Frequency</u>: Once every six days for 24-hour TSP and three times every six days for 1-hour

TSP.

<u>Duration</u>: Throughout the construction period.

Noise Monitoring

<u>Parameters</u>: One set of $L_{eq(30min)}$ as 6 consecutive $L_{eq(5min)}$ between 0700-1900 hours on

normal weekdays.

 $L_{eq(5min)}$, L_{10} and L_{90} during the construction undertaken during Restricted Hours (19:00 to 07:00 hours next of normal working day and full day of public holiday

and Sunday)

Frequency: Once every six days during 0700-1900 hours on normal weekdays. Restricted

Hour monitoring should depend on conditions stipulated in Construction Noise

Permit.

<u>Duration</u>: Throughout the construction period.

Water Quality Monitoring of Local Stream Course

<u>Parameters:</u> DO, Turbidity and SS. <u>Frequency:</u> 3 days per week.

<u>Depths</u>: mid-depth

<u>Duration</u>: Throughout the construction period and the interval between 2 sets of

monitoring is not less than 36 hours

Water Quality Monitoring of Effluent Discharge

Parameters: pH, COD and SS.

<u>Frequency</u>: Depend on conditions stipulated in discharge license under **Section 20** of the

Water Pollution Control Ordinance.

Duration: Throughout the construction period

Landscape and Visual Monitoring

<u>Parameters</u>: Site inspection with broad scope of audit as listed in the EM&A Manual

Frequency: Once every 2 weeks

<u>Duration</u>: Throughout the construction period

3.16 Post-project monitoring will be performed at water quality monitoring station of the local stream course. The requirements that are same as baseline monitoring are presented below:

<u>Parameters:</u> DO, Turbidity and SS. <u>Frequency:</u> 3 days per week. Depths: mid-depth

Duration: 4 weeks and the interval between 2 sets of monitoring is not less than 36 hours

upon completion of the construction activities

MONITORING METHODOLOGY AND EQUIPMENT

Air Quality

3.17 The air quality monitoring equipment for 1-hour and 24-hour TSP are listed in *Table 3-5* and the specification of equipment was submitted before the EM&A programme commencement.

Table 3-5 Air Quality Monitoring Equipment

Equipment	Description
1-hour TSP	
Portable dust meter	TSI DustTrak Aerosol Monitor Model 8520
24-hour TSP	
High Volume Air Sampler	Thermo Anderson GS 2310 HVS
Calibration Kit	TISCH Model TE-5025A

1-hour TSP

- 3.18 The 1-hour TSP monitoring is conducted with a portable dust meter, brand named, TSI DustTrak Aerosol Monitor Model 8520 which is a portable, battery-operated laser photometer. The 1-hour TSP meter provides a real time 1-hour TSP measurement based on 90° light scattering. The 1-hour TSP monitor consists of the following:
 - (a.) A pump to draw sample aerosol through the optic chamber where TSP is measured;
 - (b.) A sheath air system isolates the aerosol in the chamber to keep the optics clean for maximum reliability; and
 - (c.) A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.
- 3.19 The 1-hour TSP meter is used within the valid period following manufacturer's Operation and Service Manual.

24-hour TSP

- 3.20 The equipment used for 24-hour TSP measurement is Thermo Andersen Model GS2310 TSP high volume air sampling system, which complied with EPA Code of Federal Regulation, Appendix B to Part 50. The High Volume Air Sampler (HVS) consists of the following:
 - (a.) An anodized aluminum shelter;
 - (b.) A 8"x10" stainless steel filter holder;
 - (c.) A blower motor assembly;
 - (d.) A continuous flow/pressure recorder;
 - (e.) A motor speed-voltage control/elapsed time indicator;
 - (f.) A 7-day mechanical timer; and
 - (g.) A power supply of 220V/50 Hz.
- 3.21 The HVS was operated and calibrated on a regular basis in accordance to the manufacturer's instruction using the NIST-certified standard calibrator (Tisch Calibration Kit Model TE-5025A). One point checking would be carried out in two-month interval while full point checking every six months.
- 3.22 24-hour TSP was collected by the ET on filters of HVS and quantified by a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (ALS), upon receipt of the samples. The

ET kept all the sampled 24-hour TSP filters in normal room conditions for six months before disposal.

Noise

3.23 The equipment for noise monitoring is summarized in *Table 3-6* and the specification was submitted before the EM&A programme commencement.

Table 3-6 Noise Monitoring Equipment

Equipment	Description
Integrating Sound Level Meter	B&K Type 2238
Calibrator	B&K Type 4231
Portable Wind Speed Indicator	Testo Anemometer

- 3.24 Sound level meters listed above comply with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications, as recommended in Technical Memorandum issued under the Noise Control Ordinance (NCO).
- 3.25 Noise measurements were taken in terms of the A-weighted equivalent continuous sound pressure level (L_{eq}) measured in decibels (dB). Supplementary statistical results (L_{10} and L_{90}) were also obtained for reference.
- 3.26 During the construction noise monitoring, all noise measurements were performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level ($L_{\rm eq}$). $L_{\rm eq(30min)}$ in six consecutive $L_{\rm eq(5min)}$ measurements were used as the monitoring parameter for the time period between 0700-1900 hours on weekdays; and also $L_{\rm eq(15min)}$ in three consecutive $L_{\rm eq(5min)}$ measurements were used as monitoring parameter for other time periods (e.g. during restricted hours).
- 3.27 No noise extension cable was used to link the microphone with sound level meter for the measurement. The microphone was set about 1.2m height above ground and oriented such that it was pointed to the site with the microphone facing perpendicular to the line of sight. The windshield was fitted for all measurements. The monitoring locations NM1 and NM2 were normally set in a free field situation.
- 3.28 In prior of impact noise measurement, the accuracy of the sound level meter was checked using an acoustic calibrator generating a known sound pressure level at a known frequency. The checking was performed before and after the noise measurement. Also, the wind speed was checked with a portable wind speed meter. No fog and rain were encountered during the noise measurement, and the wind speed and gusts were also below 5m/s and 10m/s respectively.

Water quality of Local Stream Course

3.29 The equipment for water quality monitoring is summarized in *Table 3-7* and the specifications were submitted before the EM&A programme commencement.

Table 3-7 Water Quality Monitoring Equipment

Equipment	Model / Description
Water Sampler	Teflon bailer / bucket
Thermometer & DO meter	DO meter YSI 550A
Turbidimeter	Turbidimeter HACH 2100Q
Sample Container	High density polythene bottles (provided by laboratory)
Storage Container	'Willow' 33-litter plastic cool box

3.30 Water quality monitoring was conducted at mid-depth of the water column.

Dissolved Oxygen (DO) and Turbidity

A multiple meter, a DO meter brand named YSI 550A and Turbidimeter brand named HACH

2100Q were used for monitoring. Before each round of monitoring, the multiple meter, is calibrated by the wet bulb method with distilled water. Calibration of the equipment is performed by ALS on quarterly basis.

Suspended Solids (SS)

3.31 SS was determined by ALS upon receipt of the water samples using HOKLAS accredited analytical methods namely ALS Method EA-025.

Water Sampler

3.32 Water samples were collected by the ET using a plastic sampler, which has a volume of not less than 2 litres and can be sealed at both ends with cups to prevent metal contamination. The sampler was rinsed before collection with the sample to be taken. The water sample was collected at mid-depth level at the selected monitoring location for SS determination.

Sample Container

3.33 Water sample was contained in screw-cap PE (Poly-Ethylene) sampling bottle (1,000ml) to be provided by HOKLAS accredited laboratory ALS. Where appropriate, the sampling bottle was rinsed with the water to be contained in prior. Water sample was then transferred from the sampler to the sample bottles to 95% bottle capacity to allow possible volume expansion during delivery and storage.

Sample Storage

3.34 A 'Willow' 33-liter plastic cool box packed with ice was used to preserve the collected water samples prior to arrival at the laboratory. The water temperature of the cool box was maintained at a temperature as close to 4°C as possible without being frozen. Samples were delivered to laboratory within 24 hours and analyzed within 2 days of delivery or within the holding time as advised by the laboratory.

EQUIPMENT CALIBRATION

- 3.35 Calibration of the HVS was performed upon installation in accordance with the manufacturer's instruction using the NIST-certified standard calibrator (Tisch Calibration Kit Model TE-5025A). The calibration data are properly documented and the records are maintained by ET for future reference.
- 3.36 The 1-hour TSP meter was calibrated by the supplier prior to purchase. Zero response of the equipment was checked before and after each monitoring event. In-house calibration with the High Volume Sampler (HVS) in same condition was undertaken in yearly basis.
- 3.37 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at yearly basis.
- 3.38 All updated calibration certificates of the monitoring equipment used for the impact monitoring program in this Reporting Month are attached in *Appendix E*.

METEOROLOGICAL INFORMATION

3.39 The meteorological information in this reporting month was downloaded from Lau Fau Shan Station of the Hong Kong Observatory (HKO) and presented in *Appendix F*.

DATA MANAGEMENT AND DATA QA/QC CONTROL

- 3.40 The impact monitoring data are handled by the ET's systematic data recording and management, which complies with in-house Quality Management System. Standard Field Data Sheets (FDS) are used in the impact monitoring program.
- 3.41 The monitoring data recorded in the equipment e.g. 1-hour TSP meters and noise meters are downloaded directly from the equipment at the end of each monitoring day. The downloaded monitoring data are input into a computerized database properly maintained by the ET. The

- laboratory results or water quality in-situ measurement records are input directly into the computerized database and QA/QC checked by personnel other than those who input the data.
- 3.42 For monitoring activities that require laboratory analysis, the local laboratory follows the QA/QC requirements as set out under the HOKLAS scheme for all laboratory testing.

DETERMINATION OF ACTION/LIMIT (A/L) LEVELS

3.43 According to the EM&A Manual, the air quality, construction noise and water quality criteria were set up, namely Action and Limit levels are listed in *Tables 3-8*, *3-9* and *3-10* as below:-

Table 3-8 Action and Limit Levels for Air Quality Monitoring

Monitoring	Action Lev	rel (μg/m³)	Limit Level (μg /m³)		
Location	1-hour	24-hour	1-hour	24-hour	
AM1	305	162	500	260	
AM2	310	190	500	260	

Table 3-9 Action and Limit Levels for Construction Noise

Monitoring	Action Level	Limit Level in dB(A)					
Location	0700-1900 hrs on normal weekdays						
NM1	When one or more documented complaints are	70 dB(A) of $L_{\rm eq(30min)}$ during normal hours from 0700 to 1900 hours on normal weekdays, reduced to 65 dB(A) during school examination periods					
NM2	received	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$					

Note: * *Reduces to 65 dB(A) during the school examination periods.*

Table 3-10 Action and Limit Levels for a Local Stream Water Quality Monitoring (R1b)

Parameter	Action Level	Limit Level
DO (mg/L)	4.6	4 mg/L or 40% saturation at 15°C
Turbidity (NTU)	15.6	16.2
SS (mg/L)	31.5	31.9

3.44 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan enclosed in *Appendix G*.

4. IMPACT MONITORING RESULTS

4.01 The impact monitoring schedule for air quality, noise and water quality in this Reporting Period is shown in *Appendix H*. The monitoring results are presented in the following sub-sections.

RESULTS OF AIR QUALITY MONITORING

4.02 In this Reporting Period, a total of 12 events of 24-hour TSP monitoring and 30 events of 1-hour TSP monitoring were undertaken and the results are summarized in *Tables 4-1 and 4-2*. The 24-hour TSP raw data sheets are shown in *Appendix I*. Also, the graphical plots for the 24-hour and 1-hour TSP monitoring result are shown in *Appendix J*.

Table 4-1 Summary of 24-hour and 1-hour TSP Monitoring Results – AM1

	24-hour	1-hour TSP (μg/m³)						
Date	TSP	Date	Start	1 st hour	2 nd hour	3 rd hour		
	$(\mu g/m^3)$		Time	measured	measured	measured		
1-Nov-13	29	5-Nov-13	13:12	100	113	121

(Range)	(50-138)	(Kang	(-)					

- 4.03 As shown in *Tables 4-1* and *4-2*, 1-hour and 24-hour TSP monitoring results fluctuated well below the Action Level in this Reporting Period.
- 4.04 The meteorological data during the impact monitoring days are summarized in *Appendix F*.

RESULTS OF CONSTRUCTION NOISE MONITORING

4.05 The noise monitoring results conducted at the designated locations are summarized in *Tables 4-3* and *4-4*. The graphical plots of the monitoring results are shown in *Appendix J*. The sound level were measured in a free field situation and, therefore, a façade correction of +3 dB(A) was added according to acoustical principles and EPD guidelines.

Table 4-3 Summary of Construction Noise Monitoring Results – NM1

Date	Start Time	$\begin{matrix} 1^{st} \\ L_{eq(5min)} \end{matrix}$	$L_{eq(5min)}^{2^{nd}}$	$L_{eq(5min)}^{3^{rd}}$	$L_{eq(5min)}^{4^{th}}$	$L_{eq(5min)}^{5^{th}}$	$L_{eq(5min)}^{6^{th}}$	$L_{eq(30min)}$	$\begin{array}{c} Corrected * \\ L_{eq(30min)} \end{array}$

22-Nov-13	10:14	58.0	57.4	58.6	59.0	59.1	61.1	59	62
28-Nov-13	10:31	60.3	57.9	58.9	59.1	59.1	59.1	59	62
Limit Le	-						70 dB(A)		

^(*) A façade correction of +3 dB(A) has been added according to acoustical principles and EPD guidelines.

4.06 In this Reporting Period, no noise complaint (which is an Action Level exceedance) was received. As shown in *Tables 4-3* and *4-4*, no Limit level exceedance was recorded and no corrective action was therefore required. The graphical plots of the monitoring results are shown in *Appendix J*.

RESULTS OF WATER QUALITY MONITORING - LOCAL STREAM COURSE

- 4.07 In this Reporting Period, a total of **13** sampling days were performed for water quality monitoring at R1b of the local stream course, Tin Shui Wai Nullah. The monitoring results including in-situ measurements and laboratory testing results are provided in *Appendix I*. The graphical plots of the monitoring results are shown in *Appendix J*.
- 4.08 Monitoring results of 3 key parameters: dissolved oxygen (DO), turbidity and suspended solids (SS) in this Reporting Period, are summarized in *Table 4-5*.

Table 4-5 Summaries of Water Quality Results – R1b

Sampling date	DO conc. (mg/L)	Turbidity (NTU)	SS (mg/L)
1-Nov-13	5.4	5.4	7.0
5-Nov-13	1.3	47.0	22.0
7-Nov-13	5.3	11.3	13.0
9-Nov-13	7.7	1.9	10.0
11-Nov-13	7.5	2.6	10.0
13-Nov-13	5.5	9.9	8.0
15-Nov-13	5.6	3.8	10.0
18-Nov-13	5.1	2.6	6.0
20-Nov-13	5.1	4.0	17.0
22-Nov-13	5.2	4.4	18.0
26-Nov-13	9.3	5.4	12.0
28-Nov-13	5.2	5.9	18.0
30-Nov-13	4.8	2.2	19.0

Remark: bold and highlighted indicates Limit Level exceedance.

- 4.09 During the Reporting Period, field measurements showed that water temperature and pH value of the local stream are within 19.2°C to 28.7°C and 7.3 to 8.2 respectively.
- 4.10 In Reporting Period, two (2) Limit Level exceedances were recorded at water samples collected from location "R1b" on 5 November 2013. NOEs were issued to relevant parties upon confirmation of the results. The investigation for the cause of exceedance was completed and the result is presented as follow:

- According to the site diary and records provided by the contractor, it was rainy on 5 November 2013 and construction activities within the DP site at Ha Tsuen Sewage Pumping Station were halted on 5 November 2013 during raining.
- For the DO exceedance, the construction activities at Ha Tsuen Sewage Pumping Station comprised none of DO depleting characteristics.
- No exceedance was recorded during the subsequent water quality monitoring on 7
 November 2013. The measured dissolved oxygen and turbidity values back to normal level
 after the rainy day.
- It is concluded that the exceedances were not related to the works under the Project.

RESULTS OF LANDSCAPE AND VISUAL IMPACT

4.11 The landscape and visual impacts monitoring results and findings will be submitted separately as a stand-alone document.

RESULTS OF EFFLUENT MONITORING

- 4.12 Monitoring of effluent quality should follow the requirements specified in Section 4.3 of the approved EM&A Manual. A discharge license under Water Pollution Control Ordinance has been obtained by the Contractor upon commencement of the Project. The licensee shall perform self-monitoring as and when required by the Authority.
- 4.13 Since no effluent discharge was made in this Reporting Period, no effluent quality monitoring was carried out by the Contractor.

5. WASTE MANAGEMENT

5.01 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

RECORDS OF WASTE QUANTITIES

- 5.02 All types of waste arising from the construction work are classified into the following:
 - Construction & Demolition (C&D) Material;
 - Chemical Waste;
 - General Refuse; and
 - Excavated Soil.
- 5.03 The quantities of waste for disposal in this Reporting Period are summarized in *Tables 5-1* and 5-2 and the Monthly Summary Waste Flow Table is shown in *Appendix K*. Whenever possible, materials were reused on-site as far as practicable.

Table 5-1 Summary of Quantities of Inert C&D Materials

Type of Waste	Quantity	Disposal Location
C&D Materials (Inert) (m ³)	0	-
Reused in this Contract (Inert) (m ³)	0	-
Reused in other Projects (Inert) (m ³)	0	-
Disposal as Public Fill (Inert) (m ³)	352	Tuen Mun Area 38

Table 5-2 Summary of Quantities of C&D Wastes

Type of Waste	Quantity	Disposal Location
Recycled Metal (kg)	0	-
Recycled Paper / Cardboard Packing (kg)	0	-
Recycled Plastic (kg)	0	-
Chemical Wastes (kg)	0	-
General Refuses (m ³)	1	NENT

5.04 To control over the site performance on waste management, the Contractor shall ensure that all solid and liquid waste management works are in full compliance with the relevant license/permit requirements, such as the effluent discharge license and the chemical waste producer registration. The Contractor is also reminded to implement the recommended environmental mitigation measures according to the EM&A Manual based on actual site conditions.

6. SITE INSPECTIONS

- According to the Environmental Monitoring and Audit Manual, the environmental site inspection should be formulated by ET Leader. Regular environmental site inspections had been carried out by ET joined with the Contractor and ER to confirm the environmental performance. During this Reporting Period, the joint site inspection was undertaken on 5, 13, 19 and 26 November 2013 to evaluate the site environmental performance. No non-compliance was noted.
- 6.02 Observations for the site inspections and monthly audit found at Ha Tsuen Sewage Pumping Station within this Reporting Period are summarized in *Table 6-1* and inspection checklists are attached in *Appendix L*.

Table 6-1 Site Observations in the Reporting Month

Date	Findings / Deficiencies	Follow-Up Status
5 November 2013	- Loss soil was observed at the Works Area of Sham Chung Tsuen, the Contractor should ensure the access road kept clear of dusty materials.	- Loss soil was cleaned at the Works Area of Sham Chung Tsuen on 13 November 2013.
13 November 2013	- Construction materials were observed close to the tree protection zone at Ha Tsuen Sewage Pumping Station, the Contractor was reminded not to store construction materials beneath the protection zone.	- Construction materials were removed from the tree protection zone at Ha Tsuen Sewage Pumping Station on 19 November 2013.
19 November 2013	- Scattered of general refuse was observed in Shui Tsui San Tsuen Sewage Pumping Station, housekeeping on site should be improved.	- General refuse in Shui Tsui San Tsuen Sewage Pumping Station was removed on 26 November 2013.
26 November 2013	No environmental issue was observed during the site inspection.	N/A

7. ENVIRONMENTAL COMPLAINTS AND NON-COMPLIANCE

ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTION

7.01 No environmental complaint, summons and prosecution was received in this Reporting Period. The statistical summary table of environmental complaint is presented in *Tables 7-1*, 7-2 and 7-3.

Table 7-1 Statistical Summary of Environmental Complaints

Donauting Davied	Environmental Complaint Statistics			
Reporting Period	Frequency Cumulative		Complaint Nature	
Feb – Dec 2010	3	3	Air(2)/Noise(1)	
Jan – Dec 2011	0	3	NA	
Jan – Dec 2012	0	3	NA	
Jan –Oct 2013	0	3	NA	
Nov 2013	0	3	NA	

Table 7-2 Statistical Summary of Environmental Summons

D (' D ' 1	Environmental Summon Statistics			
Reporting Period	Frequency	Frequency Cumulative		
Feb – Dec 2010	0	0	NA	
Jan – Dec 2011	0	0	NA	
Jan – Dec 2012	0	0	NA	
Jan –Oct 2013	0	0	NA	
Nov 2013	0	0	NA	

Table 7-3 Statistical Summary of Environmental Prosecution

Donouting Donied	Environmental Prosecution Statistics			
Reporting Period	Frequency Cumulative		Complaint Nature	
Feb – Dec 2010	0	0	NA	
Jan – Dec 2011	0	0	NA	
Jan – Dec 2012	0	0	NA	
Jan –Oct 2013	0	0	NA	
Nov 2013	0	0	NA	

8. IMPLEMENTATION STATUS OF MITIGATION MEASURES

8.01 The environmental mitigation measures that recommended in the Environmental Monitoring and Audit Manual covered the issues of dust, noise and waste and they are summarized as following:

Dust Mitigation Measure

- (a) The contractor shall frequently clean and water the site to minimize fugitive dust emissions.
- (b) Effective water sprays shall be used during the delivery and handling of aggregate, and other similar materials, when dust is likely to be created and to dampen all sited material during dry and windy weather.
- (c) Watering of exposed surfaces shall be exercised as often as possible depending on the circumstance.
- (d) Areas within the site where there is regular movement of vehicles must be regularly watered as often as necessary for effective suppression of dust or as often as directed by the Engineer.
- (e) Where dusty materials are being discharged to vehicle from a conveying system at a fixed transfer point, a three-sided roofed enclosure with a flexible curtain across the entry shall be provided. Exhausted fans shall be provided for this enclosure and vented to a suitable fabric filter system.
- (f) The Contractor shall restrict all motorized vehicles within the site, excluding those on public roads, to a maximum speed of 5km per hour and confine haulage and delivery vehicles to designated roadways inside the site.
- (g) Wheel washing facilities shall be installed and used by all vehicles leaving the site. No earth, mud, debris, dust and the like shall be deposited on public roads, water in wheel cleaning facility shall be changed at frequent intervals and sediments shall be removed regularly. The Contractor shall submit detailed proposals for the wheel cleaning facilities to the Engineer prior to construction of the facility. Such wheel washing facilities shall be usable prior to any earthworks excavating activity in the site.
- (h) Any material dropped in the roads will need to be cleaned up immediately to prevent dust nuisance.

Noise Mitigation Measure

- (a) During construction of the Project, temporary noise barriers should be used in order to reduce the noise impacts emanating from the construction sites on nearby Noise Sensitive Receivers (NSRs). The location of the temporary noise barriers should be along the site boundary of the expanded portion of Ha Tsuen Sewage Pumping Station.
- (b) Noisy equipment and activities should be sited by the Contractor as far from close-proximity sensitive receivers as practical. Prolonged operation of noisy equipment close to dwellings and schools should be avoided.
- (c) The Contractor should minimize construction noise exposure to the schools. Especially during examination periods, the Contractor should not carry out any construction activities. Activities shall be restricted to transit movements by construction vehicles during this period.
- (d) Noisy plant or processes should be replaced by quieter alternatives where possible. Silenced diesel and gasoline generators and power units, as well as silenced and super-silenced air compressors should be used.
- (e) Noisy activities should be scheduled to minimize exposure of nearby sensitive receivers to high levels of construction noise. For example, noisy activities can be scheduled for midday, or at times coinciding with periods of high background noise (such as during peak traffic hours).
- (f) Idle equipment should be turned off or throttled down. Noisy equipment should be properly maintained and used no more often than is necessary.
- (g) The power units of non-electric stationary plant and earth-moving plant should be quietened by vibration isolation and partial or full acoustic enclosures for individual noise-generating components.

- (h) Construction activities should be planned so that parallel operation of several sets of equipment close to a given receiver is avoided, thus reducing the cumulative impacts between operations. The numbers of operating items of powered mechanical equipment should be minimized.
- (i) Construction plant should be properly maintained (well-greased, damage and worn parts promptly replaced) and operated. Construction equipment often has silencing measures built in or added on, e.g. bulldozer silencers, compressor panels, and mufflers. Silencing measures should be properly maintained and utilized. Where possible, rubber or damping materials should be introduced between metal panels to avoid rattle and reverberation of noise.
- (j) Equipment known to emit sound strongly in one direction, should where possible, be oriented so that the noise is directed away from nearby NSRs.
- (k) Material stockpiles and other structures (such as site offices) should be effectively utilized, where practicable, to screen noise from on-site construction activities.
- (1) The Contractor should devise, arrange methods of working and carry out the works in such manner as to minimize noise impacts on the surrounding environment, and should provide experienced personnel with suitable training to ensure that these measures are implemented properly.

Water Quality Mitigation Measures

- (a) Exposed stockpiles should be covered with tarpaulin or impervious sheets before a rainstorm occurs;
- (b) The exposed soil surfaces should also be properly protected to minimize dust emission;
- (c) The stockpiles of materials should be placed in the locations away from the drainage channel so as to avoid releasing materials into the channel;
- (d) Wheel washing facilities should be provided at site exits to ensure that earth, mud and debris would not be carried out of the works areas by vehicles;
- (e) Provision of site drainage systems and treatment facilities would be required to minimize the water pollution;
- (f) A discharge licence needs to be applied from EPD for discharging effluent from the construction site;
- (g) The treated effluent quality is required to meet the requirements specified in the discharge licence:
- (h) Provision of chemical toilets is required to collect sewage from workforce. The chemical toilets should be cleaned on a regular basis;
- (i) Wastewater generated from kitchens should be discharged to public foul sewers or collected in a temporary storage tank if connection to public foul sewers is not feasible;
- (j) A licensed waste collector should be employed to clean the chemical toilets and temporary storage tank on a regular basis;
- (k) Illegal disposal of chemicals should be strictly prohibited;
- (l) Registration as a chemical waste producer is required if chemical wastes are generated and need to be disposed of. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes;
- (m) Disposal of chemical wastes should be carried out in compliance with the Waste Disposal Ordinance. The Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes published under the Waste Disposal Ordinance should be used as a guideline for handling chemical wastes; and
- (n) The impact from accidental spillage of chemicals can be effectively controlled through good management practices.

Waste Mitigation Measures

(a) Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal;

- (b) To encourage collection of aluminium cans by individual collectors, separate bins should be provided to segregate this waste from other general refuse generated by the workforce;
- (c) Any unused chemicals or those with remaining functional capacity should be recycled;
- (d) Prior to disposal of C&D waste, it is recommended that wood, steel and other metals be separated for re-use and/or recycling and inert waste as fill material to minimize the quantity of waste to be disposed of to landfill;
- (e) Proper storage and site practices to minimize the potential for damage or contamination of construction materials; and
- (f) Plan and stock construction materials carefully to minimize amount of waste generated and avoid unnecessary generation of waste.

Landscape and Visual Mitigation Measures

- (a) Prior to construction work the detailed tree survey should have been completed and, if appropriate, trees to be transplanted moved to their final positions.
- (b) The transplants and existing trees to be retained should be properly protected from damage by stout hoarding positioned as directed by a qualified Landscape Architect.
- (c) Hoarding will help screening the construction work from the view of passers by.
- (d) Typically a minimum of 4 months should be allowed prior to construction to prepare trees for transplanting.
- (e) During construction regular inspections of the retained and transplanted trees should be made to ensure the effectiveness of the hoarding.
- (f) Any topsoil excavated in the course of the works shall be stored and protected on site for reuse for restoration and screen planting works.
- 8.02 The Contractor had been implementing the required environmental mitigation measures according to the Environmental Monitoring and Audit Manual subject to the site condition. Environmental mitigation measures generally implemented by the Contractor in this Reporting Period are summarized in *Table 8-1*.

Table 8-1 Environmental Mitigation Measures

Issues	Environmental Mitigation Measures
Water	Wastewater were appropriately treated by treatment facilities;
Quality	• Drainage channels were provided to convey run-off into the treatment facilities;
	Drainage systems were regularly and adequately maintained.
	• De-silting facility was provided to treat the discharged water; also the treated water was reused for spraying the road surface;
	• Exposed stockpiles and exposed soil surfaces were covered with tarpaulin or impervious sheets to minimize dust emission;
	• The stockpiles of materials were placed in the locations away from the drainage channel so as to avoid releasing materials into the channel;
	• Wheel washing facilities has been provided at site exits to ensure that earth, mud and debris would not be carried out of the works areas by vehicles;
	• A discharge licence was issued by EPD for discharging effluent from the construction site;
	 A licensed waste collector have been applied from EPD; and
	 Illegal disposal of chemicals should be strictly prohibited.

Issues	Environmental Mitigation Measures
Air Quality	• Regular watering to reduce dust emissions from all exposed site surfac
	particularly during dry weather;
	• Frequent watering for particularly dusty construction areas and areas close to a
	sensitive receivers;
	• Cover all excavated or stockpile of dusty material by impervious sheeting of the state of the
	sprayed with water to maintain the entire surface wet;
	• Public roads around the site entrance/exit had been kept clean and free from dus
	• Tarpaulin covering of any dusty materials on a vehicle leaving the site;
	 Water sprinkler system was provided at haul road to reduce dust emission during the vehicles passing through the haul road;
	 The vehicle speed within the site is limited to 5km/hr; and
	 Wheel washing facilities have been provided at the site exit.
Noise	Good site practices to limit noise emissions at the sources;
	 Use of quiet plant and working methods according to EP-327/2009/A;
	 Use of site hoarding with noise barriers to screen noise at ground level of NSRs
	• Use of shrouds/temporary noise barriers to screen noise from relatively stat
	PMEs according to EP-327/2009/A;
	• Use of temporary noise barrier with surface density 7kg/m^2 to be assumed th
	the noise reduction is 10 dB(A) for stable plants and 5dB(A) for movable pla
	in accordance with approved EIA Report Appendix 4A Table 4A3.2;
	Idle equipment are turned off or throttled down;
	• No construction works shall be undertaken during school examination period
	the Ha Tsuen Sewage Pumping Station according to EP-327/2009/A; and
X 7 , 1	Alternative use of plant items within one worksite, where practicable.
Waste and Chemical	• Excavated material was reused on site as far as possible to minimize off-si
	disposal. Scrap metals or abandoned equipment was recycled if possible;
rianagomen	• Waste arising was kept to a minimum and be handled, transported and dispose of in a suitable manner;
	 The Contractor adopted a trip ticket system for the disposal of C&D materials
	any designed public filling facility and/ or landfill;
	• Chemical waste was handled in accordance with the Code of Practice on the
	Packaging, Handling and Storage of Chemical Wastes;
	• Segregation and storage of different types of waste in different containers, skip
	or stockpiles to enhance reuse or recycling of materials and their proper disposa
	• To encourage collection of aluminium cans by individual collectors, separa
	bins were provided to segregate this waste from other general refuse generate
	by the workforce;
	Any unused chemicals or those with remaining functional capacity we recoveled:
	recycled; • Prior to disposal of C&D waste, wood, steel and other metals were separated for
	re-use and recycling and inert waste as fill material to minimize the quantity
	waste to be disposed of to landfill;
	-
	-
	 Proper storage and site practices to minimize the potential for damage of contamination of construction materials; and Plan and stock construction materials carefully to minimize amount of was

Hoarding was erected around site boundary properly; The transplanted tree and landscaping plants were kept in regular inspection;
Landscape and Visual	 Proper storage and site practices to minimize the potential for damage contamination of construction materials; and Plan and stock construction materials carefully to minimize amount of was generated and avoid unnecessary generation of waste. Hoarding was erected around site boundary properly; The transplanted tree and landscaping plants were kept in regular inspection; All preserved trees were protected and fenced off properly;
•	 Proper storage and site practices to minimize the potential for damage contamination of construction materials; and Plan and stock construction materials carefully to minimize amount of was generated and avoid unnecessary generation of waste. Hoarding was erected around site boundary properly; The transplanted tree and landscaping plants were kept in regular inspection;

9. IMPACT FORCAST

KEY ISSUES FOR THE COMING MONTH

- 9.01 Key issues to be considered in the coming month include:
 - Implementation of dust suppression measures at all times;
 - Potential wastewater impact due to surface runoff;
 - Potential fugitive dust impact from the dry/loose/exposure soil surface/dusty material;
 - Disposal of empty engine oil containers within site area;
 - Ensure dust suppression measures are implemented properly;
 - Sediment catch-pits and silt removal facilities should be regularly maintained;
 - Management of chemical wastes;
 - Discharge of site effluent to the nearby nullah or storm drainage, stockpiling or disposal of materials, and any dredging or construction area in the nullah are prohibited;
 - Follow-up of improvement on general waste management issues; and
 - Implementation of construction noise preventative control measures.

10. CONCLUSIONS AND RECOMMENTATIONS

CONCLUSIONS

- 10.01 This is the **46**th Monthly EM&A Report for the designated work of the Project, covering the construction period from **1** to **30 November 2013**.
- 10.02 No 1-hour TSP and 24-hour TSP monitoring results that triggered the Action or Limit Level was recorded in this Reporting Period.
- 10.03 No noise complaint (which is an Action Level exceedance) was received and no construction noise measurement results exceeded the Limit Level were recorded in this Reporting Period.
- 10.04 For water quality monitoring, two (2) Limit Level exceedances were recorded which on 5 November 2013. Investigation report for the cause of exceedance was completed and it is concluded that the exceedance was not related to the works under the Project.
- 10.05 No effluent quality monitoring was carried out by the Contractor in this Reporting Period.
- 10.06 No documented complaint, notification of summons or successful prosecution was received.
- 10.07 Regular environmental site inspections had been carried out by ET joined with the Contractor and ER on 5, 13, 19 and 26 November 2013. No non-compliance was observed during the inspections. Overall, the environmental performance of the Project was therefore considered satisfactory.
- 10.08 The landscape and visual impacts monitoring results and findings will be submitted separately as a stand-alone document. The Contractor is reminded that the landscape and visual impacts site audit shall be carried out by a competent landscape architect, as a member of ET to implement the EM&A programme.

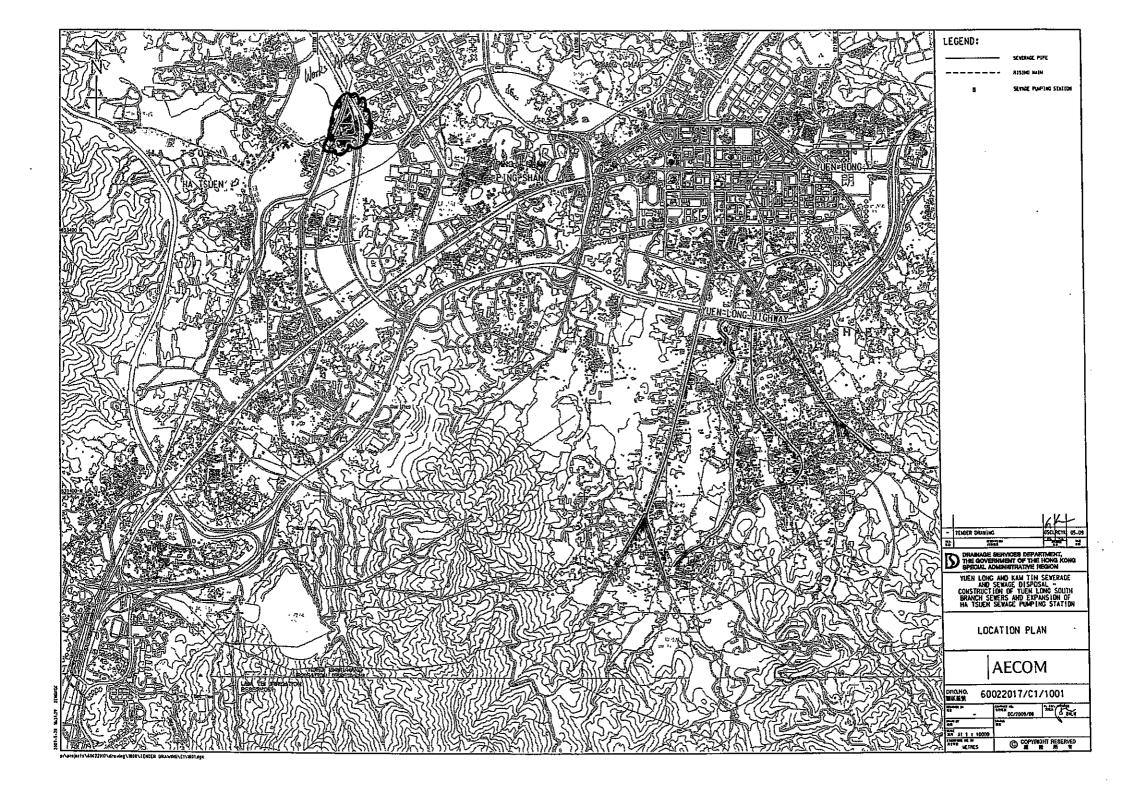

RECOMMENDATIONS

- 10.09 During dry season, special attention should be paid to the dust mitigation measures to avoid fugitive dust emissions from loose soil surface or haul road. Nevertheless, mitigation measures implemented to control the surface runoff including wheel wash facilities, covering of the loose soil surface or stockpile with tarpaulin sheet, etc., should be properly maintained to prevent any muddy or sandy runoff from the loose soil surface overflow on the site boundary.
- 10.10 Other environmental issues such as construction noise as well as waste management, as stipulated in the Environmental Monitoring and Audit Manual should be implemented and maintained, as appropriate.
- 10.11 To control the site performance on waste management, the Contractor shall ensure that all solid and liquid waste management works are fully in compliance with the relevant license/permit requirements, such as the effluent discharge license and the chemical waste producer registration.

5.1 Sound Level Accuracy

UUT Nominal Value	Measured Value (dB)	Mfr's Spec. (dB)	Uncertainty of Measured Value (dB)
94 dB, 1 kHz	94.0	± 0.2	± 0.2
114 dB, 1 kHz	114.0		

5.2 Frequency Accuracy

UUT Nominal Value	Measured Value	Mfr's	Uncertainty of Measured Value (Hz)
(kHz)	(kHz)	Spec.	
1	1.000 0	1 kHz ± 0.1 %	± 0.1

Remark: The uncertainties are for a confidence probability of not less than 95 %.

Note:

The values given in this Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to the Nation Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.

本設古所載校正用之測試器材均可溯源至國際標準。局部複印本證書畫先獲本實驗所書面批准。

WORK ORDER: HK1327383 LABORATORY: HONG KONG

DATE RECEIVED: DATE OF ISSUE:

07/10/2013

17/10/2013

COMMENTS

It is certified that the item under calibration/checking has been calibrated/checked by corresponding calibrated equipment in the laboratory.

Maximum Tolerance and calibration frequency stated in the report, unless otherwise stated, the internal aceptance criteria of ALS will be followed.

Scope of Test:

Dissolved Oxygen and Temperature

Equipment Type:

Dissolved Oxygen Meter

Brand Name: Model No.:

YSI 550A

Serial No.:

05F2063AZ

Equipment No.:

Date of Calibration: 16 October, 2013

NOTES

This is the Final Report and supersedes any preliminary report with this batch number. Results apply to sample(s) as submitted. All pages of this report have been checked and approved for release.

Event and Action Plan

DSD Contract No. DC/2009/08 – Construction of Yuen Long South Branch Sewers and Expansion of Ha Tsuen Sewage Pumping Station Event Action Plan – Air Quality

ENTENTE	ACTION										
EVENT	ET	IEC	ER	CONTRACTOR							
Action Level being exceeded for one sample	 Identify source; Inform IEC and ER; Repeat measurement to confirm finding; Increase monitoring frequency to daily. 	Check monitoring data submitted by ET; Check Contractor's working method.	Notify Contractor.	Rectify any unacceptable practice; Amend working methods if appropriate.							
Action Level being exceeded for two or more consecutive samples	 Identify source; Inform IEC and ER; Repeat measurements to confirm findings; Increase monitoring frequency to daily; Discuss with IEC and Contractor on remedial actions required; If exceedance continues, arrange meeting with IEC and ER; If exceedance stops, cease additional monitoring. 	 Check monitoring data submitted by ET; Check Contractor's working method; Discuss with ET and Contractor on possible remedial measures; Advise the ER on the effectiveness of the proposed remedial measures; Supervise implementation of remedial measures. 	Confirm receipt of notification of failure in writing; Notify Contractor; Ensure remedial measures are properly implemented.	 Submit proposals for remedial actions to IEC within 3 working days of notification; Implement the agreed proposals; Amend proposal if appropriate. 							
Limit Level being exceeded for one sample	 Identify source; Inform IEC, ER and EPD; Repeat measurement to confirm finding; Increase monitoring frequency to daily; Assess effectiveness of Contractor's remedial actions; Keep EPD and ER informed of the results. 	 Check monitoring data submitted by ET and Contractor's working method; Discuss with Contractor on the possible mitigation measures; Review the proposed mitigation measures submitted by Contractor and advise the ER accordingly. 	 Confirm receipt of notification of failure in writing; Notify Contractor; Check monitoring data and Contractor's working methods; Discuss with IEC and Contractor on potential remedial actions; Ensure remedial actions properly implemented. 	 Take immediate action to avoid further exceedance; Submit proposals for remedial actions to ER within 3 working days of notification; Implement the agreed proposals; Amend proposal if appropriate. 							
Limit Level being exceeded for two or more consecutive samples	 Identify source; Inform IEC, ER and EPD the causes & actions taken for the exceedances; Repeat measurement to confirm findings; Increase monitoring frequency to daily; Investigate the causes of exceedance; Arrange meeting with EPD and ER to discuss the remedial actions to be taken; Assess effectiveness of Contractor's remedial actions and keep EPD and ER informed of the results; If exceedance stops, cease additional monitoring. 	Check monitoring data submitted by ET and Contractor's working method; Discuss with Contractor on the possible mitigation measures; Review the proposed mitigation measures submitted by Contractor and advise the ER accordingly; Supervise the implementation of mitigation measures.	Confirm receipt of notification of failure in writing; Notify Contractor; Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; Discuss with IEC and the Contractor on potential remedial actions; Review Contractor's remedial actions whenever necessary to assure their effectiveness; If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	Take immediate action to avoid further exceedance; Submit proposals for remedial actions to ER within 3 working days of notification; Implement the agreed proposals; Resubmit proposals if problem still not resolved; Stop the relevant portion of works as determined by the ER until the exceedance is abated.							

EVENT		ACT	TION	
EVENI	ET	IEC	ER	CONTRACTOR
Action level	 Notify IEC and Contractor; Carry out investigation; Report the results of investigation to the IEC and Contractor; Discuss with the Contractor and formulate remedial measures; Increase monitoring frequency to check the effectiveness of mitigation measures. 	 Review the analyzed results submitted by the ET; Review the proposed remedial measures by the Contractor and advise the ER accordingly; Supervise the implementation of remedial measures. 	writing; 2. Notify Contractor; 3. Require Contractor to propose remedial measures for the analyzed noise problem; 4. Ensure mitigation measures are properly implemented.	IEC; 2. Implement noise mitigation proposals.
Limit level	 Notify IEC, ER, EPD & Contractor; Identify source; Repeat measurement to confirm findings; Increase monitoring frequency; Carry out analy sis of C ontractor's working procedures to determine possible mitigation to be implemented; Inform IEC, ER and EPD the causes and actions taken for the exceedances; Assess the effectiveness of Contractor's remedial actions and keep IEC, EPD and ER inform ed of the results; If exceedance stops, cease additional monitoring. 	Discuss amongst ER, ET, and Contractor on the potential remedial actions; Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; Supervise the implementation of remedial measures.	Confirm receipt of no tification in writing; Notify Contractor; Require Contractor to propose remedial measures for the analyzed noise problem; Ensure mitigation measures are properly implemented; If exceedances continue, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	Undertake immediate action to avoid further exceedance; Submit proposals for remedial actions to IEC within 3 working days of notification; Implement the agreed proposals; Resubmit proposals if problem still not under control; Stop the relevant portion of works as determined by ER, until the exceedance is abated.

DSD Contract No. DC/2009/08 – Construction of Yuen Long South Branch Sewers and Expansion of Ha Tsuen Sewage Pumping Station Event Action Plan – Water Quality (Local Stream)

Event		Action							
Event	ET Leader	IEC	ER	Contractor					
Action Level being exceeded by one sampling day	Repeat in-situ measurement to confirm findings; Identify reasons for non-compliance and sources of impact; Inform IEC and Contractor; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC and Contractor; Repeat measurement on next day of exceedance.	Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures.	Discuss with IEC on the proposed mitigation measures; make agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures.	Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Consider changes of working methods; Discuss with ET and IEC and propose mitigation measures to IEC and ER; Implement the agreed mitigation measures.					
Action Level being exceeded by more than two consecutive sampling days	Repeat in-situ measurement to confirm findings; Identify reasons for non-compliance and sources of impact; Inform IEC and Contractor; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC and Contractor; Ensure mitigation measures are implemented; Prepare to increase the monitoring frequency to daily; Repeat measurement on next day of exceedance.	Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures.	Discuss with IEC on the proposed mitigation measures; Make agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures.	Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Consider changes of working methods; Discuss with ET and IEC and propose mitigation measures to IEC and ER within 3 working days; Implement the agreed mitigation measures.					
Limit Level being exceeded by one sampling day	Repeat in-situ measurement to confirm findings; Identify reasons for non-compliance and sources of impact; Inform IEC, Contractor and EPD; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC, ER and Contractor; Ensure mitigation measures are implemented; Increase the monitoring frequency to daily until no exceedance of Limit Level.	Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures.	Discuss with IEC, ET and Contractor on the proposed mitigation measures; Request Contractor to critically review the working methods; Make agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures.	Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Consider changes of working methods; Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; Implement the agreed mitigation measures.					
Limit Level being exceeded by more than two consecutive sampling days	Repeat in-situ measurement to confirm findings; Identify reasons for non-compliance and sources of impact; Inform IEC, Contractor and EPD; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC, ER and Contractor; Ensure mitigation measures are implemented; Increase the monitoring frequency to daily until no exceedance of Limit Level for two consecutive days.	Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures.	Discuss with IEC, ET and Contractor on the proposed mitigation measures; Request Contractor to critically review the working methods; Make agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures; Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the marine work until no exceedance of Limit Level.	Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Consider changes of working methods; Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; Implement the agreed mitigation measures; As directed by the ER, to slow down or to stop all or part of the marine work or construction activities.

Inspection Checklist

Proje	ct: DC/2009/08 Construction of Yuen Long South Branch Sewers and Expansion of Ha Tsuen PS	Inspected by	ototivo.		NA= 1/	Ma I/ D. Chausa				
Inspe	<u> </u>	RE's representative: IEC's representative:			IVII. K	.P. Cheung				
Date:	5 November 2013	ET's represen			Mr. D	onald Kwok				
Time:	10:00	Contractor's	epreser	ntative:	Mr. C	onmy Wong				
		Checklist No.			DC20	DC200908-05112013				
PART	A: GENERAL INFORMATION	Environmental Permit No.: EP-327/2009/A								
Weath		Rainy								
	erature: 22.6 °C High									
Humic Wind:	lity:	Calm								
PART										
IANI	B. GITE AGDIT									
		Not Observed	Yes	No	Follow up	Not Applicable	Photo/ Remarks			
Section	on 1: Water Quality					_				
1.01	Is an effluent discharge license obtained for the Project?		\checkmark							
1.02	Is the effluent discharged in accordance with the discharge licence?		\checkmark							
1.03	Is the discharge of turbid water avoided?									
1.04	Are there proper desilting facilities in the drainage systems to reduce SS levels in effluent?		\checkmark							
1.05	Are there channels, sandbags or bunds to divert the surface run-to sedimentation tanks/desilting system prior discharge?	off	\checkmark							
1.06	Are there any temporary perimeter channels provided at site boundaries to intercept storm runoff from crossing the site?	\checkmark								
1.07	Is temporary drainage system (within site boundaries) and the nearby permanent drainage system (outside site boundaries) are well maintained?		\checkmark							
1.08	As excavation proceeds, are temporary access roads protected b crushed stone or gravel?	у 🔲	\checkmark							
1.09	Are temporary exposed slopes properly covered?		\checkmark							
1.10	Are earthworks final surfaces well compacted or protected?		\checkmark							
1.11	Are manholes adequately covered or temporarily sealed?		\checkmark							
1.12	Are there any procedures and equipment for rainstorm protection	?	\checkmark							
1.13	Are wheel washing facilities well maintained?		\checkmark							
1.14	Is overflow runoff from wheel washing facilities avoided?		\checkmark							
1.15	Are there chemical toilets provided on site?		\checkmark							
1.16	Are chemical toilets properly maintained?		\checkmark							
1.17	Are the vehicle and plant servicing areas paved and located within roofed areas?					$\overline{\checkmark}$				
1.18	Is the oil leakage from the on-site vehicles/plants or spillage durin the fuel refilling avoided?	g	\checkmark							
1.19	Are there any measures to prevent oil leakage entering the temporary/permanent drainage system?	ne 🗌	\checkmark							
1.20	Are there any measures to collect spilt cement and concrete washings during concreting works?		\checkmark							
1.21	Are there any oil interceptors/grease traps in the drainage system for vehicle and plant servicing areas, canteen kitchen, etc?	s 🗸								
1.22	Are the oil interceptors/grease traps maintained properly?		\checkmark							

		Not Observed	Yes	No	Follow up	Not Applicable	Photo/ Remarks
1.23	Is used bentonite recycled where appropriate?					\checkmark	
1.24	Is the sediment laden runoff from the unpaved surface to avoid discharge into the nearby aquatic environments, mash lands and moat ponds?		\checkmark				
Section	on 2: Air Quality						
2.01	Are there wheel washing facilities with high pressure jets provided at every vehicle exit point?		\checkmark				
2.02	Are vehicles washed to remove any dusty materials from their bodies and wheels before leaving construction sites?		\checkmark				
2.03	Are the excavated materials or exposure soil surface sprayed with water during handling?		\checkmark				
2.04	Are stockpiles of dusty materials sprayed with water, covered or placed in sheltered areas?		\checkmark				
2.05	Is the exposed earth properly treated within six months after the last construction activities?		\checkmark				
2.06	Are the access roads sprayed with water to maintain the entire road surface wet or paved and speed control (<15km/hr)?		\checkmark				
2.07	Is the surface where any drilling, cutting, polishing or breaking operation continuously sprayed with water?		\checkmark				
2.08	Is the load on vehicles covered entirely by clean impervious sheeting?		\checkmark				
2.09	Is the loading of materials to a level higher than the side and tail boards during transportation by vehicles avoided?		\checkmark				
2.10	Is the road leading to the construction site within 30m of the vehicle entrance kept clear of dusty materials?		\checkmark				
2.11	Is dark smoke emission from plant/equipment avoided?		\checkmark				
2.12	Are de-bagging, batching and mixing processes carried out in sheltered areas (3-sided roofed enclosure) during the use of bagged cement?		\checkmark				
2.13	Are site vehicles travelling within the speed limit (<15km/hour)?		\checkmark				
2.14	Are hoardings of not less than 2.4m high provided along the site boundary, which adjoins areas accessible to the public?		\checkmark				
2.15	Is open burning avoided?		\checkmark				
2.16	Are any materials dropped on the roads (Outside the site boundaries) had clean up immediately?		\checkmark				
Section	on 3: Noise					-	
3.01	Are noisy equipment and activities positioned as far as practicable from the sensitive receivers?		\checkmark				
3.02	Is silenced equipment adopted?		\checkmark				
3.03	Is idle equipment turned off or throttled down?		\checkmark				
3.04	Are all plant and equipment well maintained and in good condition?		\checkmark				
3.05	Are noise barriers or enclosures provided at areas where construction activities cause noise impact on sensitive receivers?		\checkmark				
3.06	Are hand held breakers fitted with valid noise emission labels during operation?	\checkmark					
3.07	Are air compressors fitted with valid noise emission labels during operation?		\checkmark				
3.08	Are flaps and panels of mechanical equipment closed during operation?		\checkmark				
3.09	Are Construction Noise Permit(s) applied for percussive piling works?					\checkmark	
3.10	Are Construction Noise Permit(s) applied for general construction works during restricted hours?					\checkmark	
3.11	Are valid Construction Noise Permit(s) posted at site entrances?		\checkmark				
Section	on 4: Waste/Chemical Management					-	
4.01	Are receptacles available for general refuse collection?		\checkmark				

		Not Observed	Yes	No	Follow up	Not Applicable	Photo/ Remarks
4.02	Is general refuse sorting or recycling implemented?		\checkmark				
4.03	Is general refuse disposed of properly and regularly?		\checkmark				
4.04	Is the Contractor registered as a chemical waste producer?		\checkmark				
4.05	Are the chemical waste containers properly labelled?		\checkmark				
4.06	Are the chemical wastes stored in proper storage areas?		\checkmark				
4.07	Is the chemical waste storage area properly labelled?		\checkmark				
4.08	Is the chemical waste storage area used for storage of chemical waste only?		\checkmark				
4.09	Are incompatible chemical wastes stored in different areas?	\checkmark					
4.10	Are the chemical wastes disposed of by licensed collectors?	\checkmark					
4.11	Are trip tickets for chemical wastes disposal available for inspection?		\checkmark				
4.12	Are chemical/fuel storage areas bunded?		\checkmark				
4.13	Are designated areas identified for storage and sorting of construction wastes?		\checkmark				
4.14	Are construction wastes sorted on site?		\checkmark				
4.15	Are construction wastes reused?		\checkmark				
4.16	Are construction wastes disposed of properly?		\checkmark				
4.17	Are site hoardings and signboards made of durable materials instead of timber?		\checkmark				
4.18	Is trip ticket system implemented for the disposal of construction wastes and records available for inspection?		\checkmark				
4.19	Are appropriate procedures followed if contaminated material exists?		\checkmark				
4.20	Is relevant license/ permit for disposal of construction waste or excavated materials available for inspection?		\checkmark				
Section	on 5: Landscape & Visual						
5.01	Are retained and transplanted trees in health condition?		\checkmark				
5.02	Are retained and transplanted trees properly protected?		\checkmark				
5.03	Are surgery works carried out for the damaged trees?	\checkmark					
5.04	Is damage to trees outside site boundary due to construction activities avoided?		\checkmark				
5.05	Is the night-time lighting controlled to minimize glare to sensitive receivers?		\checkmark				
Section	on 6: Others						
6.01	Are relevant Environmental Permits posted at all vehicle site entrances/exits?		\checkmark				
6.02	Is mosquito control measures adequately implemented?		\checkmark				

Remarks:

Follow up of Last Site Inspection:

1. Stockpile of general refuse at Ha Tsuen Sewage Pumping Station was removed.

Observations recorded in this Site Inspection: (5-Nov-2013)

Photo 1. Loss soil was observed at the Works Area of Sham Chung Tsuen, the Contractor should ensure the access road kept clear of dusty materials.

General Reminder

• Stagnant water should be cleaned to prevent mosquito, especially after rainy days.

Remarks:

Follow up of Last Site Inspection:

1. Construction materials were removed from the tree protection zone at Ha Tsuen Sewage Pumping Station

Observations recorded in this Site Inspection: (19-Nov-2013)

Scattered of general refuse was observed in Shui Tsui San Tsuen Sewage Pumping Station, housekeeping on site should be improved.

General Reminder

- During dry season, dust control measures to avoid fugitive dust in the construction site should be properly provided and maintained, as appropriate.
- At Sham Chung Works Area, the Contractor was reminded to remove the C&D waste and improve the housekeeping of the site.
