Dear Sir,

RE: CONTRACT NO. CM 13/2016

INDEPENDENT ENVIRONMENTAL CHECKER FOR OPERATIONAL ENVIRONMENTAL MONITORING AND AUDIT FOR SIU HO WAN SEWAGE TREATMENT WORKS (SHWSTW) MONTHLY ENVIRONMENTAL MONITORING AND AUDIT (EM&A) REPORT (JUNE 2021)

Reference is made to the submission of Monthly Environmental Monitoring and Audit (EM&A) Report for June 2021 (Report No.: 0041/17/ED/0633A) from the Environmental Team (ET), Fugro Technical Services Ltd., received on 12 July 2021 via email.

We would like to inform you that we have no adverse comment on the captioned submission and hereby verify the same in accordance with Condition 4.3 of the Environmental Permit (EP) for the captioned Project (Permit No.: EP-076/2000).

Should you have any queries, please feel free to contact the undersigned, or our Ms. Joanne NG at 2815 7028.

Yours faithfully,

For and on behalf of **Allied Environmental Consultants Ltd.**

Grace M. H. KWOK Independent Environmental Checker

Report No.: 0041/17/ED/0633A

EXECUTIVE SUMMARY

This Monthly Environmental Monitoring and Audit (EM&A) Report is prepared for Contract No. CM 14/2016 – "Environmental Monitoring and Audit for Operation of Siu Ho Wan Sewage Treatment Works" (hereafter referred to as "the Contract") for the Drainage Services Department (DSD) of Hong Kong Special Administrative Region. Fugro Technical Services Limited (hereafter referred to as "FTS") was appointed as the Environmental Team (ET) by DSD, to implement the Environmental Monitoring & Audit (EM&A) programme in accordance with the Operational EM&A Plan of the Contract.

The Contract is part of the "Upgrading of Siu Ho Wan Sewage Treatment Works" (hereinafter referred as "the Project)" which was classified as "Designated Project" under Schedule 2 of the Environmental Impact Assessment Ordinance (EIAO) (Cap 499) and Environmental Impact Assessment (EIA) Report (Register No. EIAR-124BC) was completed in September 1997. The current Environmental Permit (EP) No. EP-076/2000 was issued in August 2000 to DSD.

In accordance with the EP, an approved operational EM&A Plan was submitted. According to the approved EM&A plan, air quality monitoring (i.e. H_2S concentration monitoring, odour patrol monitoring and olfactometry analysis of H_2S), in addition, water quality monitoring, sediment quality monitoring, benthic survey, Chinese White Dolphin (CWD) monitoring and waste management are the key environmental concern of the Project.

This is the Forty-seventh Monthly EM&A Report for the Project which summarizes findings of the EM&A works during the reporting period from 1 June 2021 to 30 June 2021 (the "reporting period").

Breaches of Action and Limit Levels

Odour patrol monitoring was resumed from January 2020 and carried out on 4, 10, 16, 22 and 29 June 2021. The modified odour patrol monitoring plan including updated Event and Action Plan was approved on March 2020, and modified odour patrol monitoring was commenced from 20 March 2020. No exceedances of Action/Limit levels at Air Sensitive Receivers (ASR) and odour patrol points were recorded and no non-compliance of odour monitoring at ASR were recorded in the reporting period.

Water quality monitoring, sediment quality monitoring and benthic survey were carried out on 18 June 2021. No specific Action/Limit level has to be followed since the purpose of the monitoring is to collect data for future purpose.

Complaint Log

There were no complaints received in relation to environmental impact during the reporting period.

Notifications of Summons and Successful Prosecutions

There were no notifications of summons or prosecutions received during the reporting period.

Report No.: 0041/17/ED/0633A

Page 2

Summary of the Environmental Mitigations Measures

Mitigation measures specified in the EP and EIA Report such as aeration, chemical dosing system, covering or enclosing the pressing and sludge thickening facilities and ventilating air to a biological treatment unit prior to stack exhaust were implemented during the reporting period.

Future Key Issues

The key issues to be considered in the succeeding reporting month include:

Potential environmental impacts arising from the operations of Siu Ho Wan Sewage Treatment Works (SHWSTW) are mainly associated with air quality, water quality, sediment quality, benthic ecology, waste management and distribution and abundance of Chinese White Dolphins (CWDs).

According to the approved EM&A plan, a correlation study has to be carried out to establish the relationship of H₂S concentration (ppb) with the odour unit (OU/m³). H₂S measurement and olfactometry analysis conducted between August 2017 and May 2018 was considered as unlikely way to establish the relationship of H₂S concentration (ppb) with the odour unit (OU/m³). Since six months air quality monitoring and additional three months air quality monitoring had been conducted according to Section 2.2 of OEM&A Plan without any complaint or non-compliance recorded, air quality monitoring was temporarily suspension on air quality monitoring, a review on air quality monitoring had been carried out to determine reasonable odour-related criteria and was submitted to EPD for approval on 24 March 2020. Comments from EPD was received on 1 April 2020 and the review is currently under revision for further submission to the EPD.

Page 3

Report No.: 0041/17/ED/0633A

1. INTRODUCTION

1.1 Background

- 1.1.1 The Project "Upgrading of Siu Ho Wan Sewage Treatment Works" is to upgrade SHWSTW from the preliminary treatment level to Chemically Enhanced Primary Treatment (CEPT) level with Ultraviolet (UV) disinfection facilities. The Project is required to comply with the Environmental Permit (EP) in respect of the construction and operation phases of the Plant.
- 1.1.2 Under the EIAO, the Project was classified as "Designated Project". The Environmental Impact Assessment (EIA) study was completed in September 1997 with the EIA Report of Register No. EIAR-124BC, Operational Environmental Monitoring and Audit (EM&A) Plan and the EP of No. EP-076/2000 was issued in August 2000 to Drainage Services Department (DSD).
- 1.1.3 The CEPT part has been completed and was put into operation in March 2005. The UV disinfection works were substantially completed in December 2006. It is considered that the operation of the Project shall be deemed to start when the UV disinfection facilities have been completely installed and tested.

1.2 **Project Description**

1.2.1 The project proponent was DSD. AECOM was commissioned by DSD as the Engineer for the Project. Allied Environmental Consultants Limited (AEC) was commissioned by DSD as the Independent Environmental Checker (IEC) in the operation phase of the Project. FTS was appointed as the ET by DSD to implement the EM&A programme for the operation phase of the Project including air quality monitoring, water quality monitoring, sediment quality and benthic survey and CWDs monitoring.

1.3 **Project Organization**

1.3.1 The project organization for environmental works is shown in **Appendix A**. The contact person and telephone numbers of key personnel for the captioned project are shown in **Table 1.1**.

| Organization | Role | Contact Person | Telephone No. | Fax No. |
|--------------|-----------------------------------------------|-----------------|------------------|-----------|
| DSD | Project Proponent Representative | Mr. Marcus Lau | 2594 7218 | 3104 6426 |
| AECOM | Engineer Representative (ER) | Ms. Joanne Tsoi | 3922 9423 | 3922 9797 |
| AEC | Independent Environmental Checker (IEC) | Ms. Grace Kwok | 2815 7028 | 2815 5399 |
| FTS | ET Leader (ETL) | Mr. Colin Yung | 3565 4114 | 2450 8032 |

1.4 Works Undertaken during the Reporting Period

- 1.4.1 During this reporting period, the principal work activities included:
 - Perform comprehensive operation and maintenance services for the electrical, mechanical and electronic systems/equipment at SHWSTW.
 - Alleviate as far as practicable the impact that the facilities and sewage systems imposed on the environment of Hong Kong.

2. AIR QUALITY MONITORING

2.1 Methodology of H₂S Concentration Monitoring

2.1.1 15-min H₂S concentration was measured using a Jerome 631-X analyzer. This analyzer is capable of measuring H₂S concentration in the range of 1 ppb to 50 ppm with a resolution of 1 ppb and operates within a temperature range of 0°C to 40°C at an air flow rate of 0.15 L/min. Odour gas samples were drawn by built-in a suction pump of the analyzer and passed through a gold film sensor. The trace level of H₂S of the samples were determined electrochemically on the gold film sensor. Meteorological conditions including temperature, wind speed, wind direction and relative humidity were also measured at the time of the monitoring. Table 2.1 summarizes the equipment used in H₂S monitoring.

Table 2.1 Equipment used for H₂S Concentration Monitoring

| Equipment | Manufacturer | Serial | Sensor |
|-----------------------------------------------|---------------------|--------|------------------|
| | / Model | Number | Number |
| Gold Film Hydrogen Sulphide Analyzer | JEROME X631 0003 | 2966 | 14-11-23- R2D |

2.2 Methodology of Modified Odour Patrol Monitoring

- 2.2.1 Due to the complaint case received on 28 November 2019, a modified version of odour patrol monitoring is proposed and approved on 13 March 2020. According to the approved proposal for odour patrol monitoring plan (0041/17/ED/0524G), a modified version of odour patrol monitoring was commenced on 20 March 2020 to ensure the mitigation measures are effectively implemented. The modified odour patrol conducted once per week by two independent trained personnel/competent persons (the "patrollists") patrolling and sniffing along the SHWSTW boundary and the air sensitive receivers (ASRs).
- 2.2.2 The odour monitoring should not be undertaken on rainy days. Subject to the prevailing weather forecast condition, odour patrol shall be conducted by two patrollists at the downwind locations. During the patrol, the sequence should start from less odourous locations to stronger odourous locations.

Page 5

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

Report No.: 0041/17/ED/0633A

Page 6

- 2.2.3 The two patrollists shall be satisfied the below requirements during odour patrol:
 - Have their individual odour threshold of n-butanol in nitrogen gas in the range of 20 to 80 ppb/V required by the European Standard menthod: BS EN13725.
 - Be free from any respiratory illnesses.
 - Not be allowed to smoke, eat, drink (except water) or use chewing gum or sweets 30min before and during odour patrol.
 - Take great care not to cause any interference with their own perception or that of others by lack of personal hygiene or the use of perfumes, deodorants, body lotions or cosmetics.
 - Not communicate with each other about the results of their choices.
- 2.2.4 During the odour patrol monitoring, the meteorological and surrounding information are recorded as follows:
 - i. Prevailing Weather Condition;
 - ii. Wind Direction;
 - iii. Wind Speed;
 - iv. Location where Odour is detected;
 - v. Source of Odour detected;
 - vi. Perceived intensity of Odour detected;
 - viii. Duration of Odour detected; and
 - ix. Characteristics of Odour detected
- 2.2.5 The perceived intensity is to be divided into 5 levels which are ranked in a descending order as follows:

| Table 2.2 | Categories of Odour Inte | ensity for Modified | Odour Patrol Monitoring |
|-----------|--------------------------|---------------------|-------------------------|
|-----------|--------------------------|---------------------|-------------------------|

| Odour | Odour | Classification Criteria |
|-------|--------------|---------------------------------------------------------------------------------------------|
| Level | Intensity | |
| 0 | Not detected | No odour perceived or an odour so weak that it cannot be easily characterised or described. |
| _ | | |
| 1 | Slight | Slight identifiable odour, and slight chance to have odour nuisance. |
| 2 | Moderate | Moderate identifiable odour, and moderate chance to have odour nuisance. |
| 3 | Strong | Strong identifiable, likely to have odour nuisance. |
| 4 | Extreme | Extreme severe odour, and unacceptable odour level. |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

Report No.: 0041/17/ED/0633A

Page 7

2.3 Methodology of Odour Sampling and Olfactometry Analysis

- 2.3.1 Odour gas samples were collected in a Nalophan sampling bag placed inside a vacuum airtight sampler using passive sampling technique. Approximately 60 liter of gas sample was collected at each sampling. All samples collected on the sampling day were returned to laboratory for olfactometry analysis within 24 hours and analyzed within 2 hours upon receiving.
- 2.3.2 ALS Technichem (HK) Pty Ltd. (HOKLAS Reg. No. 066), was the appointed laboratory for olfactometry analysis of the gas sample.
- 2.3.3 The odour concentration of the samples were determined by Forced-choice Dynamic Olfactometer in accordance with the European Standard Method: BS EN13725. Testing were also performed by a panel of six members who have been trained to comply with the requirement of European Standard Method: BS EN13725. All testing were completed within 24 hours upon sampling.

2.4 Monitoring Location

- 2.4.1 H₂S concentration monitoring and odour sampling at ASR, Cheung Tung Road near the Bus Depot at the west of the Siu Ho Wan Treatment Plant, were temporarily suspended from 14 May 2018. The location of ASR is shown in **Figure 1**.
- 2.4.2 9 odour patrol points is chosen to conduct the modified odour patrol for collecting more representative data and identify the particular source of odour in the site. The nine odour patrol points is as below:

| Odour | Description | |
|--------------|--------------------------------------------|--|
| Patrol Point | | |
| OD1 | Eastern Site Boundary | |
| OD2 | Southern Site Boundary | |
| OD3 | Western Site Boundary | |
| OD4 | Northern Site Boundary | |
| OD5 | Spur Road near Discovery Bay Tunnel Outlet | |
| OD6 | Cheung Tung Road near the Bus Depot | |
| OD7 | Cheung Tung Road near O·PARK1 | |
| OD8 | Sham Shui Kok Dr near MTR Depot | |
| OD9 | Discovery Bay Tunnel Toll Plaza | |

| Table 2.3 | Odour Patrol Point |
|-----------|---------------------------|
| | |

Note:

As access permission from the company of Discovery Bay Tunnel is under requisition progress, OD5 (Spur Road near Discovery Bay Tunnel Outlet) was not covered in odour patrol monitoring in the reporting period temporarily.

Report No.: 0041/17/ED/0633A

Page 8

2.4.3 The odour patrol points of modified odour patrol is shown in **Figure 2**.

2.5 Monitoring Frequency and Duration

2.5.1 The durations and frequencies of H₂S concentration measurement, odour patrolling and odour sampling are summarized in **Table 2.4** below.

Table 2.4 Durations and Frequencies of Air Quality Monitoring Programme

| | Duration | Frequency |
|------------------------------------------------|-------------------------|---------------------------------------------------------------------|
| H ₂ S concentration | | ¹ Weekly basis for 6 months during the initial operation |
| monitoring | 15 minutes | stage |
| Odour patrol | | ⁴ Weekly basis |
| Odour sampling for olfactometry analysis | ³ 15 minutes | ² First week of the odour patrol monitoring |
| | | |

Remark:

1) In case excessive odour nuisance was detected during the odour patrol monitoring or the standard of the 5 odour units cannot be complied with during the odour panel monitoring, the odour patrol monitoring and H_2S concentration monitoring shall be extended for a period of three months to cater for the warm-up period of the functioning of the additional mitigation measures.

2) In case the relationship between H₂S concentration (ppb) with the odour unit (OU/m³) cannot conclude from the correlation study carried out at the first week of the odour patrol monitoring due to invalid data, additional odour sampling for olfactometry analysis shall be carried out for the correlation study.

3) Sufficient air samples (approximate 60L) may be collected in less than 15 minutes during odour sampling.
4) As advice by EPD on the odour complaint received in November 2019, odour patrol monitoring was resumed on weekly basis from 15 January 2020.

2.5.2 The monitoring schedule for the present and next reporting period is provided in Appendix B.

2.6 Event and Action Plan

Table OF

2.6.1 According to the approved proposal for odour patrol monitoring plan (0041/17/ED/0524G), updated Action and limit levels for air quality monitoring are presented in **Table 2.5**.

| Table 2.5 A | ction and Limit Levels for Air Quality | | nng | | |

Report No.: 0041/17/ED/0633A

Page 9

2.6.2 The event and action plan for air quality monitoring is provided in **Appendix C**.

2.7 Quality Assurance and Quality Control

- 2.7.1 A control sample was collected by purging odour-free nitrogen gas from a certified gas cylinder on site at each sampling.
- 2.7.2 Calibration of the analyzer is conducted every year at the laboratory of the manufacturer.
- 2.7.3 In order to ensure the analyzer is functioning properly, manual sensor regeneration and zero adjustment were performed before each set of odour monitoring.

2.8 Monitoring Results and Observations

- 2.8.1 As advice by EPD on the odour complaint received in November 2019, odour patrol monitoring was resumed on weekly basis. Due to the raining on 28 June 2021, the odour patrol monitoring was rescheduled to 29 June 2021. The odour patrol monitoring was carried out on 4, 10, 16, 22 and 29 June 2021. As access permission from the company of Discovery Bay Tunnel is under requisition progress, OD5 (Spur Road near Discovery Bay Tunnel Outlet) was not covered in odour patrol monitoring in the reporting period temporarily.
- 2.8.2 The meteorological data including temperature, wind speed and direction of the reporting period at ASR is summarised in **Table 2.6**.

- 2.8.4 According to the approved EM&A plan, a correlation study has to be carried out to establish the relationship of H₂S concentration (ppb) with the odour unit (OU/m³). H₂S measurement and olfactometry analysis conducted between August 2017 and May 2018 was considered as unlikely way to establish the relationship of H₂S concentration (ppb) with the odour unit (OU/m³). Since six months air quality monitoring and additional three months air quality monitoring had been conducted according to Section 2.2 of OEM&A Plan without any complaint or non-compliance recorded, air quality monitoring was temporarily suspension on air quality monitoring was approved by EPD's memo dated 14 May 2018. In order to recommence the monitoring, a review on air quality monitoring had been carried out to determine reasonable odour-related criteria and was submitted to EPD for approval on 24 March 2020. Comments from EPD was received on 1 April 2020 and the review is currently under revision for further submission to the EPD.
- 2.8.5 No exceedances of Action/Limit levels at ASR were recorded as no complaint was received during the reporting period.
- 2.8.6 Odour mitigation measures such as aeration, chemical dosing system, covering or enclosing the pressing and sludge thickening facilities and ventilating air to a biological treatment unit prior to stack exhaust were implemented during the reporting period.

3. WATER QUALITY MONITORING

3.1 Monitoring Station

3.1.1 In accordance with Section 5 of the EM&A Plan, water quality monitoring should be carried out at eight designated monitoring stations (two impact stations and six control stations) during the first five years of the operational phase of the Project. The monitoring stations shall be the same monitoring stations that were used for the baseline monitoring programme and have been approved by EPD. The coordinates of the monitoring stations are shown in **Table 3.1** and their locations are shown in **Figure 3**.

| | Sampling Location | Easting | Northing |
|---|------------------------------------|---------|----------|
| А | The Brothers, Control Station | 816 100 | 822 500 |
| В | The Brothers, Control Station | 816 680 | 822 440 |
| С | Siu Ho Wan Outfall, Impact Station | 816 800 | 820 180 |
| D | Siu Ho Wan Outfall, Impact Station | 817 160 | 820 360 |
| Е | Cheung Sok, Control Station | 819 817 | 821 655 |
| F | Cheung Sok, Control Station | 820 158 | 821 922 |
| G | Tai Ching Chau, Control Station | 822 214 | 822 692 |
| Н | Tai Ching Chau, Control Station | 822 494 | 822 939 |

3.2 Monitoring Parameter

3.2.1 The monitoring parameters for water quality monitoring are summarized in **Table 3.2**.

Table 3.2Parameters for Water Quality Monitoring

| Monitoring Parameters | | | | | | |
|-------------------------------------|---------------------------------------------------|--|--|--|--|--|
| In-situ Measurement | Laboratory Analysis | | | | | |
| Dissolved oxygen (mg/L) | <i>E. coli</i> (cfu/100ml) | | | | | |
| Temperature (degree Celsius) | 5-day BOD (mg/l) | | | | | |
| pH value | Suspended Solids (mg/l) | | | | | |
| Water depth (m) | Ammonia as N (mg/l) | | | | | |
| Salinity (ppt) | Nitrate as N (mg/l) | | | | | |
| Turbidity (NTU) | Nitrite as N (mg/l) | | | | | |
| Current Speed (m/s) | Total inorganic nitrogen (mg/l) | | | | | |
| Current Direction (degree magnetic) | Total phosphorus (soluble and particulate) (mg/l) | | | | | |

Report No.: 0041/17/ED/0633A

Page 13

- 3.2.2 Apart from the parameters listed in the **Table 3.2**, other relevant supplementary information such as monitoring location, time, weather conditions and any special phenomena will be also recorded.
- 3.2.3 The tidal data will be obtained from the tide gauge installed in Ma Wan Marine Traffic Station, managed by the Hydrographic Office of Marine Department. Location of the tide gauge is shown in **Figure 4**.

3.3 Monitoring Equipment

3.3.1 A multifunctional meter (YSI 6920 V2/ Aqua TROLL 600) will be used to measure dissolved oxygen (DO), concentration, DO saturation, temperature, salinity, pH and turbidity, simultaneously at the same location and water depth. An Acoustic Doppler Current Profiler (ADCP) integrated with echo sounder function will be used to measure water depth, current velocity (speed and direction). The data measured by ADCP will then be downloaded on site to computer on-board. The water depth data measured by the ADCP shall be electronically logged and available for output. All measurement data from the multiparameter monitoring device and ADCP will be integrated with the GPS data from the DGPS logging device, so that data collected at a specific time and location can be shown. The water sampler will be equipped with a multiparameter monitoring device (with water depth probe to determine the exact sampling depth at which a sample is collected). The equipment employed for the monitoring and sampling and their specifications are presented in **Table 3.3. Table 3.4** summarizes the equipment used in water quality monitoring. Copy of the calibration certificates for water quality monitoring equipment are presented in **Appendix E**.

| Parameter | Equipment | Model | Range | Equipment Accuracy |
|--------------------------------------------------------|-----------------------------------------|---------------------------------------------------------------------------------------------------|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UXVAAA | Water Quality Monitoring Device | YSI 6920V2-2-M Sonde Aqua TROLL 600 Multiparameter Sonde | Turb: 0-1000NTU Depth: 0-61 meters | Temp: ±0.15°C DO: ±0.1mg/L or 1% (whichever greater) for 0- 20mg/L; ±15% for 20- 50mg/L (with correction for salinity and temperature) Sal: ±1% or 0.1ppt (whichever greater) pH: ±0.2 units Turb: ±2% or 0.3NTU (whichever greater) Depth: ±0.12m |
| Water Depth, Current Speed, Current Direction | Acoustic Doppler Current Profiler | RiverSurveyor M9 | Water Depth: 0-80m | Water Depth: 1% Current speed: ±0.25% of measured velocity or ±0.2cm/s Current direction: ±2degree magnetic |
| Positioning | DGPS | Simrad MX521B Smart Antenna with Simrad MX610 CDU | NA | GPS: ±1m |
| Water Sampling | Water Sampler | Aquatic Research Transparent PC Vertical Water Sampler 2.2L / 3L / 5L | NA | NA |

Table 3.4Equipment used for Water Quality Monitoring

| Equipment | Manufacturer / Model | Serial Number |
|--------------------------------------|----------------------------------------|---------------|
| Water Quality Monitoring Device | Aqua TROLL 600 Multiparameter Sonde | 489724 |
| Acoustic Doppler Current Profiler | RiverSurveyor M9 | 5906 |

- 3.3.2 Apart from the equipment mentioned in Section 3.3.1, a Class III commercially licensed vessel will be used as survey vessel. DGPS logging device with accuracy of ±1m at 95% confidence level will be installed on the survey vessel to ascertain that measurement can be made accurately on the specific transects. All GPS data collected during the whole survey will be automatically and electronically logged. Powered winch will be used on-board the Survey Vessel to assist the monitoring. Experienced supervisor will be present all throughout the monitoring activities on-board the survey vessel.
- 3.3.3 Water samples will be collected by water sampler and stored in high density polythene bottles and sterilized glass bottles (for bacterial analysis), packed in ice (cooled to 4°C without being frozen), and delivered to the laboratory on the same day of collection for analysis. All sampling bottles will be pre-rinsed with the same water samples. The sampling bottles will then be taken to a HOKLAS accredited laboratory for analysis of *E. coli*, BOD₅, Suspended Solids, NH₃-N, NO₃-N, NO₂-N, Total inorganic nitrogen, Total phosphorus (soluble and particulate).

3.4 Laboratory Measurement and Analysis

3.4.1 ALS Technichem (HK) Pty Ltd (HOKLAS Reg. No. 066), is the appointed laboratory for analysis of water samples. The methods adopted by the laboratory and the reporting limits are detailed in **Table 3.5**.

| Analysis Description | Method | Reporting limits |
|--------------------------------------------|---------------------------------------------------------------|------------------|
| E. coli | DoE Section 7.8, 7.9.4.2& 7.9.4.4 plus in situ urease test | 1 cfu/100mL |
| 5-day Biochemical Oxygen Demand | APHA 5210B | 1 mg/L |
| Total Suspended Solid | APHA 2540D | 0.5 mg/L |
| Ammonia as N | APHA 4500 NH3: G | 0.005 mg/L |
| Nitrate as N | APHA 4500 NO3: I | 0.005 mg/L |
| Nitrite as N | APHA 4500 NO2 B&H | 0.005 mg/L |
| Total Inorganic Nitrogen | By Calculation | 0.01 mg/L |
| Total phosphorus (soluble and particulate) | APHA 4500 P: J | 0.01 mg/L |

Page 15

3.5 Monitoring Frequency and Duration

- 3.5.1 The water quality monitoring programme will be carried out once per two months for a period of five years of the operational phase of the Project.
- 3.5.2 Water quality monitoring for two tides at eight designated stations will be carried out for each monitoring event. For each station at each tide, duplicate samples for in-situ parameter and laboratory analysis at three designated water depths (1 m below water surface, mid-depth and 1 m above the seabed) will be taken and analyzed.
- 3.5.3 The monitoring schedule for the present and next reporting period is provided in **Appendix B**.

3.6 Quality Assurance / Quality Control

- 3.6.1 The equipment is in compliance with the requirements set out in the EM&A Plan. All in-situ monitoring instruments were calibrated by a HOKLAS-accredited laboratory or by standard solutions. Calibration of temperature, DO, salinity, pH and turbidity is conducted in three month interval.
- 3.6.2 During the measurements of DO concentration, DO saturation, salinity, turbidity, pH and temperature, duplicate readings will be taken. If the difference between the first and second readings of DO or turbidity is more than 25% of the value of the first reading, the reading was discarded and further readings will be taken.
- 3.6.3 The laboratory incorporates a variety of QA/QC monitoring programme into their testing system. Where applicable or available, the quality of the analysis will be monitored by conducting the following QC analysis:

For each batch of 20 samples:

- A minimal of 1 laboratory method blank will be analyzed;
- A minimal of 1 sample duplicate will be analyzed;
- A minimal of 1 sample matrix spike will be analyzed.

3.7 Event and Action Plan

3.7.1 Since the purpose of the water quality monitoring is to collect data for future propose, no specific event and action has to be followed.

3.8 Monitoring Results and Observations

3.8.1 Water quality monitoring is carried out was 18 June 2021. A summary of the in-situ water quality monitoring results are presented in **Table 3.6** (Mid-ebb) and **Table 3.7** (Mid-flood) respectively. The complete record and graphical presentation of the in-situ water quality monitoring results is given in **Appendix F.**

4. SEDIMENT QUALITY MONITORING AND BENTHIC SURVEY

4.1 Monitoring Station

4.1.1 In accordance with Section 6 of the EM&A Plan, sediment quality monitoring and benthic survey should be carried out at eight designated monitoring stations (two impact stations and six control stations) during the first five years of the operational phase of the Project. The proposed monitoring stations shall be the same monitoring stations that were used for the baseline monitoring programme and have been approved by EPD. The coordinates of the monitoring stations are shown in **Table 4.1** and their locations are shown in **Figure 3**.

| Table 4.1 Location of Sediment Quality Monitoring and Benthic Survey |
|------------------------------------------------------------------------------|
|------------------------------------------------------------------------------|

| | Sampling Location | Easting | Northing |
|---|------------------------------------|---------|----------|
| А | The Brothers, Control Station | 816 100 | 822 500 |
| В | The Brothers, Control Station | 816 680 | 822 440 |
| С | Siu Ho Wan Outfall, Impact Station | 816 800 | 820 180 |
| D | Siu Ho Wan Outfall, Impact Station | 817 160 | 820 360 |
| Е | Cheung Sok, Control Station | 819 817 | 821 655 |
| F | Cheung Sok, Control Station | 820 158 | 821 922 |
| G | Tai Ching Chau, Control Station | 822 214 | 822 692 |
| Н | Tai Ching Chau, Control Station | 822 494 | 822 939 |

4.2 Monitoring Parameter

4.2.1 The monitoring parameters for sediment quality monitoring and benthic survey are summarized in **Table 4.2**.

| Monitoring Paramet | |
|-----------------------------------------------------------|-------------------------------------|
| Sediment Quality Monitoring | Rinsate Blank for Benthic Survey |
| Grain size profile* (i.e. Particle Size Distribution) (%) | Cadmium (µg/L) |
| Total organic carbon* (%) | Chromium (µg/L) |
| pH value | Copper (µg/L) |
| Ammonia as N (mg-N/kg) | Lead (µg/L) |
| Total nitrogen (mg-N/kg) | Mercury ((µg/L) |
| Total phosphorus (mg-N/kg) | Nickel (µg/L) |
| Cadmium (mg/kg) | Zinc (µg/L) |
| Chromium (mg/kg) | Arsenic (µg/L) |
| Copper (mg/kg) | Silver (µg/L) |
| Lead (mg/kg) | |
| Mercury (mg/kg) | |
| Nickel (mg/kg) | |
| Zinc (mg/kg) | |
| Arsenic (mg/kg) | |
| Silver (mg/kg) | |

Table 4.2 Parameters for Sediment Quality Monitoring and Benthic Survey

Report No.: 0041/17/ED/0633A

Page 22

*Grain size profile and total organic carbon is determined from the sediment sampled collected for benthic survey.

- 4.2.2 Apart from the parameters listed in the Table 4.2, other relevant supplementary information such as monitoring location, time, weather conditions and any special phenomena will be also recorded.
- 4.2.3 The tidal data will be obtained from the tide gauge installed in Ma Wan Marine Traffic Station, managed by the Hydrographic Office of Marine Department. Location of the tide gauge is shown in **Figure 4**.

4.3 Sampling Equipment

- 4.3.1 Ponar grab sampler (capacity of ~ 1 litre) will be used for collection of samples for sediment analysis. The grab will be capable of collecting sufficient amount of surficial (top 5 cm) sediment for the required analysis in a single deployment at each sampling location. The grab will be constructed with non-contaminating material to prevent sample contamination. Photos of ponar grab sampler are shown in **Appendix J**.
- 4.3.2 A modified Van Veen grab sampler (capacity of ~ 11.3 litres) will be used for collecting sediment samples for benthic survey. The top of the grab will have openings to allow the easy flow of water through the grab as it descends. The openings will be covered with 0.5 mm mesh to prevent the loss of any benthic fauna once sediment samples are taken. In addition the top openings will be sealable by movable flaps which will close when the grab is hauled to surface. Photos of modified Van Veen grab sampler are shown in **Appendix J**.
- 4.3.3 Class III commercially licensed vessel will be used as survey vessel. DGPS logging device in the ADCP with accuracy of ±1m at 95% confidence level will be installed on the survey vessel to ascertain that measurement can be made accurately on the specific transects. All GPS data collected during the whole survey will be automatically and electronically logged. Powered winch will be used on-board the survey vessel to assist the monitoring. 4 fixed sieve stations will be equipped on survey vessel. Experienced supervisor will be present all throughout the monitoring activity on-board the survey vessel.

4.4 Sampling Procedure

Benthic Survey, Particle Size Distribution and TOC Analysis

4.4.1 A modified Van Veen grab sampler (capacity of ~ 11.3 litres) will be deployed using a winch at each of the benthic survey stations to collect single grab sample at each station. The grab sampler will be lowered through the water column slowly at a constant rate (approximately 30 cm/s) to prevent the formation of a pressure wave that may disturb surficial deposits. The grab will then be retrieved and evaluated on board of the survey vessel. Any sample showing uneven penetration or only partially filled with sediment shall be rejected. Samples will be placed in a plastic box with an identification card. Sub-samples (approximately 1 kg) will be splitted up for analysis of particle size distribution and TOC. The remaining sediment samples will be washed gently to separate the benthic organisms and the sediment using a watering hose with marine seawater supply, by a sieve stack (comprising 1 mm and 0.5 mm meshes). Benthic organisms remaining on the sieve will be removed into pre-labeled ziplock plastic bags. A 10% solution of buffered formalin containing Rose Bengal in seawater will be added to the bag to ensure tissue preservation. Samples will be sealed in plastic containers for transport to the laboratory for sorting and identification of benthic organisms.

Report No.: 0041/17/ED/0633A

Page 23

Sediment Quality Monitoring (Except Particle Size Distribution and TOC Analysis)

- 4.4.2 Ponar grab sampler (capacity of ~ 1 litres) will be deployed at each of the benthic survey stations to collect single grab sample at each station. The grab sampler should be lowered through the water column slowly at a constant rate (approximately 30 cm/s) to prevent the formation of a pressure wave that may disturb surficial deposits. The grab will then be retrieved and evaluated on board of the survey vessel. Any sample showing uneven penetration or only partially filled with sediment will be rejected. Samples will be placed in a plastic box with an identification card. Sediment samples will be then transferred into brand new soil jars with QA/QC monitoring for laboratory analysis. Samples will be preserved and stored in accordance with approved SOP of HOKLAS accredited laboratory and the recommendations stipulated in ETWB TC (W) No. 34/2002.
- 4.4.3 Sediment samples shall be collected and packed in ice (cooled to 4°C without being frozen), and delivered to the laboratory on the same day of collection for analysis.

4.5 Laboratory Measurement and Analysis

4.5.1 ALS Technichem (HK) Pty Ltd (HOKLAS Reg. No. 066), is the appointed laboratory for analysis of sediment samples. The methods adopted by the laboratory and the reporting limits are detailed in **Table 4.3**.

| Analysis Description | Method | Reporting limits |
|----------------------------|--------------------------------------------------------------------------------|------------------|
| Particle Size Distribution | Geospec 3: 2001 Test method 8.1, 8.5 and 8,7 (Wet Sieve and Hydrometer Method) | 1% |
| Total Organic Carbon | APHA 5310B | 0.05% |
| pH value | APHA 4500H: B | 0.1 pH unit |
| Ammonia as N | APHA 4500 NH3: B&G | 0.5 mg/kg |
| Total Nitrogen | APHA 4500 Norg: D & APHA 4500 NO3: I | 10 mg/kg |
| Total Phosphorus | APHA 4500P: B&H | 10 mg/kg |
| Cadmium | USEPA 6020A Digestion method: 3051A | 0.1 mg/kg |
| Chromium | | 0.5 mg/kg |
| Copper | | 0.2 mg/kg |
| Lead | | 0.2 mg/kg |
| Mercury | | 0.05 mg/kg |
| Nickel | | 0.2 mg/kg |
| Zinc | | 0.5 mg/kg |
| Arsenic | | 0.5 mg/kg |
| Silver | | 0.1 mg/kg |

Table 4.3 Laboratory Measurement/Analysis Methods and Reporting Limits

4.6 Taxonomic Identification of Benthic Organism

4.6.1 Taxonomic identification of benthic organisms will be performed using stereo dissecting and high-power compound microscopes where it is necessary. Benthic organisms will be counted and identified to lower taxonomic levels as far as practicable with biomass (wet weight, to 0.01gram) of each individual recorded. If breakage of soft-bodied organism occurs, only anterior portions of fragments will be counted, although all fragments will be retained and

Page 24

Report No.: 0041/17/ED/0633A

weighted for biomass determinations (wet weight, to 0.01gram). Data of species abundance and biomass will be recorded.

4.6.2 Data collected during surveys will be presented and summarized in tables and graphics. Species/taxon richness and abundance of marine benthic fauna communities will be analyzed by Shannon-Weiner diversity and Pielou's Evenness.

4.7 Monitoring Frequency and Duration

4.7.1 The sediment quality monitoring and benthic survey programmed shall be carried out once per two months for a period of five years of the operational phase of the Project. Since the purpose of the sediment quality monitoring and benthic survey is to collect data for future reference, only a single round of sediment quality monitoring and benthic survey at 8 designated locations will be carried out for each monitoring event. For each location, only a single sample will be taken and analyzed.

4.8 Quality Assurance / Quality Control

- 4.8.1 A rinsate blank will be collected in each monitoring location before each sediment sampling for benthic survey, so as to monitor the effectiveness of field decontamination procedure.
- 4.8.2 The laboratory incorporates a variety of QA/QC monitoring programme into their testing system. Where applicable or available, the quality of the analysis will be monitored by conducting the following QC analysis:

For each batch of 20 samples:

- A minimal of 1 laboratory method blank will be analyzed;
- A minimal of 1 sample duplicate will be analyzed;
- A minimal of 1 sample matrix spike will be analyzed.

4.9 Event and Action Plan

4.9.1 Since the purpose of the sediment quality monitoring and benthic survey is to collect data for future purpose, no specific event and action has to be followed.

4.10 Monitoring Results and Observations

4.10.1 Sediment quality monitoring and benthic survey is carried out on 18 June 2021. A summary of laboratory analysis results for the sediment quality monitoring and benthic survey are presented in **Table 4.4** and **Table 4.5** respectively. The complete record and graphical presentation of the sediment quality monitoring results is given in **Appendix H**.

| TOTAL | 292 | 48.13 | | | |

Table 4.7Summary of benthic survey data on 18 June 2021

- 4.10.5 The benthic survey results are analyzed and presented as below:
 - i) Abundance

A total of 292 benthic organisms was recorded from the eight monitoring stations during June 2021 monitoring period. Current monitoring results showed lower overall abundance compared to both dry (March 2004) and wet (August 2004) seasons baseline data; and to April 2021 results. The decrease in overall abundance was primarily due to the parallel decrease in arthropod abundance during the current monitoring period. A similar decrease was observed in April 2021 monitoring period. The change in season with generally higher temperatures and lower levels of dissolved oxygen in the water column may have cause the decreasing abundances of arthropods. This decrease with change in season was also observed in the previous monitoring years. Significant seasonal variation of the macrobenthic abundances was observed during the current monitoring period (F-value = 4.22; F-crit = 1.62; P-value = 7.62E-08).

The lowest abundance of 15 individuals (ind.) was recorded in Station H while the highest (58 ind.) was noted at Station A, both reference stations. Current abundances in the impact Stations C and D decreased relative to April 2021 monitoring results. It should be noted, however, that abundances in all stations have decreased compared to April 2021 results, which might be attributed to the natural seasonal variability of the macrobenthic communities. Same with the previous monitoring periods, differences in the total abundance across the monitoring stations were still statistically significant (F-value = 3.01; F-crit = 2.06; P-value = 0.005).

ii) Biomass

The total wet biomass recorded in the eight monitoring stations was 48.13 g with the highest biomass at the impact site Station D (28.86 g). The relatively higher biomass in Station D was due to the presence of larger molluscs in this station. Lowest (0.52 g) biomass was observed in Station E as this station was dominated by smaller organisms such as annelids. Relative to the April 2021 period, a general decrease in biomass was observed during the current monitoring period.

Website : www.fugro.com

Page 27

Report No.: 0041/17/ED/0633A

Hong Kong.

iii) Taxonomic Composition

A total of five phyla comprising of 25 families and about 28 genera were identified. During the current monitoring period, the annelids (73.63%) dominated the macrobenthic assemblage followed by the molluscs 11.64%), and arthropods (10.27%) while the group with the lowest dominance was the sipunculids (0.34%). The aforementioned decrease in arthropod abundance brought about a consequent change in community assemblage, a shift from arthropod-dominated community in April 2021 to annelid-dominated in June 2021. This shift in community assemblage with shift in season was also observed during the previous monitoring years.

iv) Diversity

Benthic diversity index (H') in the impact stations ranged from 1.93 to 2.36 while its values ranged from 1.14 to 2.43 in the reference stations. Impact stations remained to have relatively higher diversity values compared to reference stations. In terms of evenness index (J) values, current monitoring results showed that both the impact Stations C and D were able to maintain high evenness index. Current monitoring results indicated an overall increase in diversity and evenness values from the baseline survey condition.

The detailed benthic survey results are provided in **Appendix I**.

5. CHINESE WHITE DOLPHIN MONITORING

5.1 Data Interpretation

- 5.1.1 In accordance with Section 4.1 of the EM&A Plan, relevant information on the distribution and abundance of CWDs in Hong Kong should be obtained from the Agriculture, Fisheries and Conservation Department (AFCD), and be reviewed on a bimonthly basis during the operational phase of the Project for a period of 5 years.
- 5.1.2 The latest AFCD's report dated 21 July 2020, "*Monitoring of Marine Mammals in Hong Kong Waters (2019-20)*", in terms of the distribution and abundance of CWDs, was reviewed in the Monthly EM&A report in July 2020. According to the advice from AFCD, the data of distribution and abundance of CWDs would only be available in the annual reports for Monitoring of Marine Mammals In Hong Kong Waters which cover monitoring data from 1 April to 31 March (next year). The updated status of the distribution and abundance of CWDs will be provided once the annual report (2020-21) is uploaded to AFCD's webpage.

6. ADVICE ON IMPLEMENTATION STATUS OF ENVIRONMENTAL MITIGATION MEASURES

6.1 Implementation Status

6.1.1 Although no site inspection is prescribed during the operation of the Plant in accordance with the approved EM&A Plan, SHWSTW is reminded to fully and properly implement the mitigation measures specified in the EP and EIA Report. Mitigation measures such as aeration, chemical dosing system, covering or enclosing the pressing and sludge thickening facilities and ventilating air to a biological treatment prior to stack exhaust was implemented in the reporting period. A summary of mitigation measures implementation schedule is provided in **Appendix L**.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

Report No.: 0041/17/ED/0633A

Page 30

7. ADVICE ON THE SOLID AND LIQUID WASTE MANAGEMENT STATUS

- 7.1.1 SHWSTW is reminded to fully comply with EP conditions. All measures and recommendations in the EP, EIA Report and approved Waste Management Plan (WMP) shall be fully and properly implemented. During the reporting period, following measures in related to solid and liquid waste management were implemented:
 - The influent of waste water shall be treated by CEPT with UV disinfection;
 - Trip-ticket system shall be implemented for sludge and sediment;
 - The acceptance criteria for Landfill disposal should be followed;
 - Chemical waste should be properly handled and stored temporarily in designated chemical waste storage area on site in accordance with the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes.
- 7.1.2 A summary of mitigation measures implementation schedule is provided in Appendix L.

8. SUMMARY OF EXCEEDANCE OF THE ENVIRONMENTAL QUALITY PERFORMANCE LIMITS

- 8.1.1 Odour patrol monitoring was resumed and carried out on 4, 10, 16, 22 and 29 June 2021. No exceedances of Action/Limit levels at ASRs were recorded.
- 8.1.2 Water quality monitoring, sediment quality monitoring and benthic survey were carried out on 18 June 2021. No specific Action/Limit level has to be followed since the purpose of the monitoring is to collect data for future purpose.

9. SUMMARY OF ENVIRONMENTAL COMPLAINTS

9.1.1 No complaint (written or verbal), inspection notice, notification of summons or prosecution was received in relation to environmental impact during the report period. Summaries of complaints, notification of summons and successful prosecutions are presented in **Table 9.1** and **Table 9.2**.

| Environmental Parameters | Cumulative No. Brought Forward | No. of Complaints This Month | Cumulative Project- to-Date | | | | | |

10. FUTURE KEY ISSUES

10.1.1 The key issues to be considered in the coming reporting month include:

- i. Potential environmental impacts arising from the operation of SHWSTW are mainly associated with air quality, water quality, sediment quality, benthic ecology, waste management and distribution and abundance of CWDs.
- ii. According to the approved EM&A plan, a correlation study has to be carried out to establish the relationship of H₂S concentration (ppb) with the odour unit (OU/m³). H₂S measurement and olfactometry analysis conducted between August 2017 and May 2018 was considered as unlikely way to establish the relationship of H₂S concentration (ppb) with the odour unit (OU/m³). Since six months air quality monitoring and additional three months air quality monitoring had been conducted according to Section 2.2 of OEM&A Plan without any complaint or non-compliance recorded, air quality monitoring was temporarily suspension on air quality monitoring was approved by EPD's memo dated 14 May 2018. In order to recommence the monitoring, a review on air quality monitoring had been carried out to determine reasonable odour-related criteria and was submitted to EPD for approval on 24 March 2020. Comments from EPD was received on 1 April 2020 and the review is currently under revision for further submission to the EPD.

Report No.: 0041/17/ED/0633A

11. CONCLUSION

- 11.1.1 Odour patrol monitoring was resumed from January 2020 and carried out on 4, 10, 16, 22 and 29 June 2021. The modified odour patrol monitoring plan including updated Event and Action Plan was approved on March 2020, and odour patrol monitoring was commenced from 20 March 2020. No exceedances of Action/Limit levels at Air Sensitive Receivers (ASR) and odour patrol points were recorded and no non-compliance of odour monitoring at odour patrol points were recorded in the reporting period.
- 11.1.2 According to the approved EM&A plan, a correlation study has to be carried out to establish the relationship of H₂S concentration (ppb) with the odour unit (OU/m³). H₂S measurement and olfactometry analysis conducted between August 2017 and May 2018 was considered as unlikely way to establish the relationship of H₂S concentration (ppb) with the odour unit (OU/m³). Since six months air quality monitoring and additional three months air quality monitoring had been conducted according to Section 2.2 of OEM&A Plan without any complaint or non-compliance recorded, air quality monitoring was temporarily suspension on air quality monitoring was approved by EPD's memo dated 14 May 2018. In order to recommence the monitoring, a review on air quality monitoring had been carried out to determine reasonable odour-related criteria and was submitted to EPD for approval on 24 March 2020. Comments from EPD was received on 1 April 2020 and the review is currently under revision for further submission to the EPD.
- 11.1.3 Water quality monitoring, sediment quality monitoring and benthic survey were conducted on 18 June 2021 to collect data for future reference in accordance with Section 5.5 and 6.5 of the Operational EM&A Plan. The details of methodology and results collected of the monitoring were presented in Section 3 and Section 4. Heavy marine traffic and construction works from expansion of Hong Kong International Airport were observed nearby the Project site and its vicinity and may affect the water and sediment quality The above conditions may affect monitoring results.
- 11.1.4 The latest AFCD's report dated 21 July 2020, "*Monitoring of Marine Mammals in Hong Kong Waters (2019-20)*" in terms of the distribution and abundance of CWDs was reviewed in the Monthly EM&A report in July 2020. According to the advice from AFCD, the data of distribution and abundance of CWDs would only be available in the annual reports for Monitoring of Marine Mammals In Hong Kong Waters which cover monitoring data from 1 April to 31 March (next year). The updated status of the distribution and abundance of CWDs will be provided once the annual report (2020-21) is uploaded to AFCD"s webpage.
- 11.1.5 SHWSTW is reminded to fully *comply with EP conditions. All environmental mitigation measures* and recommendations in the EP, EIA Report and approved waste management plan shall be fully and properly implemented.
- 11.1.6 No complaint (written or verbal), inspection notice, notification of summons or prosecution was received in relation to environmental impact during the report period.

B. Salinity calibration

| Salinity, ppt | | | | | | | | | |
|---------------|----------|-----------|---------------------------------|--|--|--|--|--|--|
| Theoretical | Measured | Deviation | Maximum acceptable Deviation | | | | | | |
| 10 | 10.29 | +0.29 | ± 0.5 | | | | | | |
| 20 | 20.30 | +0.30 | ± 1.0 | | | | | | |
| 30 | 30.47 | +0.47 | ± 1.5 | | | | | | |
| 40 | 40.35 | +0.35 | ± 2.0 | | | | | | |

C. Dissolved Oxygen calibration

| TRAN | Dissolved oxygen content, mg/L | | |
|-----------|--------------------------------|---------------|--|
| Trial No. | By Titration | By D.O. meter | |
| 1 | 7.46 | 7.64 | |
| 2 | 7.51 | 7.69 | |
| 3 | 7.71 | 7.88 | |
| Average | 7.56 | 7.74 | |

Differences of D.O. Content between Wrinkler Titration and D.O. meter should be less than 0.4mg/L

ATTENTION: New Warranty Terms as of March 4, 2013:

This system is covered under a two year limited warranty that extends to all parts and labor for any malfunction due to workmanship or errors in the manufacturing process. The warranty is valid only if you properly maintain and operate this system under normal use as outlined in the User's Manual. The warranty does not cover shortcomings that are due to the design, or any incidental damages as a result of errors in the measurements.

SonTek will repair and/or replace, at its sole option, any product established to be defective with a product of like type. CLAIMS FOR LABOR COSTS AND/OR OTHER CHARGES RESULTING FROM THE USE OF SonTek GOODS AND/OR PRODUCTS ARE NOT COVERED BY THIS LIMITED WARRANTY.

SonTek DISCLAIMS ALL EXPRESS WARRANTIES OTHER THAN THOSE CONTAINED ABOVE AND ALL IMPLIED WARRANTIES, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY AND/OR FITNESS FOR A PARTICULAR PURPOSE. SonTek DISCLAIMS AND WILL NOT BE LIABLE, UNDER ANY CIRCUMSTANCE, IN CONTRACT, TORT OR WARRANTY, FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY KIND, INCLUDING BUT NOT LIMITED TO LOST PROFITS, BUSINESS INTERRUPTION LOSSES, LOSS OF GOODWILL, OR LOSS OF BUSINESS OR CUSTOMER RELATIONSHIPS.

If your system is not functioning properly, first try to identify the source of the problem. If additional support is required, we encourage you to contact us immediately. We will work to resolve the problem as quickly as possible.

If the system needs to be returned to the factory, please contact SonTek to obtain a Service Request (SR) number. We reserve the right to refuse receipt of shipments without SRs. We require the system to be shipped back in the original shipping container using the original packing material with all delivery costs covered by the customer (including all taxes and duties). If the system is returned without appropriate packing, the customer will be required to cover the cost of a new packaging crate and material.

The warranty for repairs performed at an authorized SonTek Service Center is one year.

General Comments

This report supersedes any previous report(s) with this reference. All pages of this report have been checked and approved for release. When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes. Testing period is from 18-Jun-2021 to 02-Jul-2021.

Key: LOR = Limit of reporting; CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

Specific Comments for Work Order: HK2124289

Sample(s) was/ were submitted by client. Sample(s) arrived laboratory in chilled condition. The result(s) related only to the item(s) tested.

Sample information (Project name, Sample ID, Sampling date/time, etc.) is provided by client.

Microbiological sample(s) was/ were collected in 125mL sterile plastic bottles containing sodium thiosulfate. Sample(s) arrived at the laboratory at 15:45.

NOT DETECTED denotes result(s) is (are) less than the Limit of Report (LOR).

EK063A - Total Inorganic Nitrogen is the sum of the Total Oxidizable Nitrogen and Ammonical Nitrogen.

EK067P - Total Phosphorus - Filtered is not HOKLAS accredited.

EP030 - The accredited LOR of Biochemical Oxygen Demand is 2mg/L. Results reported below LOR and with decimal value are for reference only.

General Comments

This report supersedes any previous report(s) with this reference. All pages of this report have been checked and approved for release. When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes. Testing period is from 18-Jun-2021 to 05-Jul-2021.

Key: LOR = Limit of reporting; CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

Specific Comments for Work Order: HK2124294

Sample(s) was/ were submitted by client. Sample(s) arrived laboratory in chilled condition. The result(s) related only to the item(s) tested.

Sample information (Project name, Sample ID, Sampling date/time, etc.) is provided by client.

Particle Size Distribution was subcontracted to and analysed by Gammon Construction Limited.

EA002SOIL - pH value is reported as at 25°C.

EK055S - Ammoniacal Nitrogen was determined on a 1:5 soil / 1M KCl solution extract.

EK059A - Nitrate and Nitrite were determined on a 1:5 soil / 1M KCl solution extract.

EA002SOIL - Calibration range of pH value is 4.0 - 10.0. Results exceeding this range is for reference only.

EK062A - Total Nitrogen is the sum of Total Oxidizable (NOx) and Total Kjeldahl Nitrogen.

EA002SOIL - Soil sample(s) analysed on as air-dry sample basis. pH value determined and reported on a 1:5 soil / water extract.

Water sample(s) digested by in-house method E-3005 prior to the determination of total metals. The in-house method is developed based on USEPA method 3005.

Sample(s) as received, digested by in-house method E-3051A prior to the determination of metals. The in-house method is developed based on USEPA method 3051A.

| | FOR SIU HO WAN SEWAGE TREATMENT | |
| | PLANT | |

General Comments

- Sample(s) was/ were submitted by client. Sample(s) arrived laboratory in chilled condition. The result(s) related only to the item(s) tested.
- Sample information (Project name, Sample ID, Sampling date/time, etc.) is provided by client.
- Particle Size Distribution was subcontracted to and analysed by Gammon Construction Limited.
- EA002SOIL pH value is reported as at 25°C.
- EK055S Ammoniacal Nitrogen was determined on a 1:5 soil / 1M KCl solution extract.
- EK059A Nitrate and Nitrite were determined on a 1:5 soil / 1M KCl solution extract.
- EA002SOIL Calibration range of pH value is 4.0 10.0. Results exceeding this range is for reference only.
- EK062A Total Nitrogen is the sum of Total Oxidizable (NOx) and Total Kjeldahl Nitrogen.
- EA002SOIL Soil sample(s) analysed on as air-dry sample basis. pH value determined and reported on a 1:5 soil / water extract.
- Water sample(s) digested by in-house method E-3005 prior to the determination of total metals. The in-house method is developed based on USEPA method 3005.
- Sample(s) as received, digested by in-house method E-3051A prior to the determination of metals. The in-house method is developed based on USEPA method 3051A.

Appendix I

Benthic Survey Report

Benthic Survey Report (18 June 2021)

Abundance

A total of 292 benthic organisms was recorded from the eight monitoring stations during June 2021 monitoring period. Current monitoring results showed lower overall abundance compared to both dry (March 2004) and wet (August 2004) seasons baseline data; and to April 2021 results (**Figure 1**). The decrease in overall abundance was primarily due to the parallel decrease in arthropod abundance during the current monitoring period. A similar decrease was observed in April 2021 monitoring period. The change in season with generally higher temperatures and lower levels of dissolved oxygen in the water column may have cause the decreasing abundances of arthropods. This decrease with change in season was also observed in the previous monitoring years. Significant seasonal variation of the macrobenthic abundances was observed during the current monitoring period (F-value = 4.22; F-crit = 1.62; P-value = 7.62E-08).

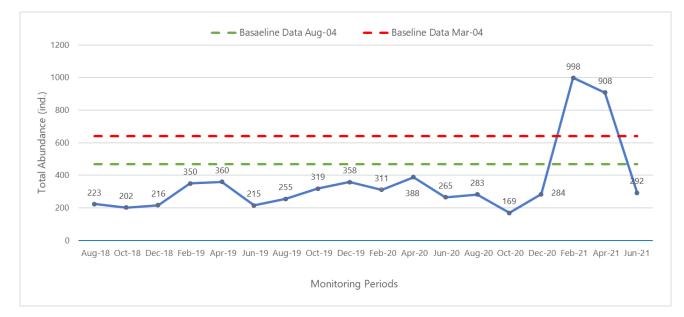

Figure 1. Total abundance (ind.) of benthic organisms across monitoring periods

The lowest abundance of 15 individuals (ind.) was recorded in Station H while the highest (58 ind.) was noted at Station A (**Figure 2**), both reference stations. Current abundances in the impact Stations C and D decreased relative to April 2021 monitoring results. It should be noted, however, that abundances in all stations have decreased compared to April 2021 results, which might be attributed to the natural seasonal variability of the macrobenthic communities. Same with the previous monitoring periods, differences in the total abundance across the monitoring stations were still statistically significant (F-value = 3.01; F-crit = 2.06; P-value = 0.005).

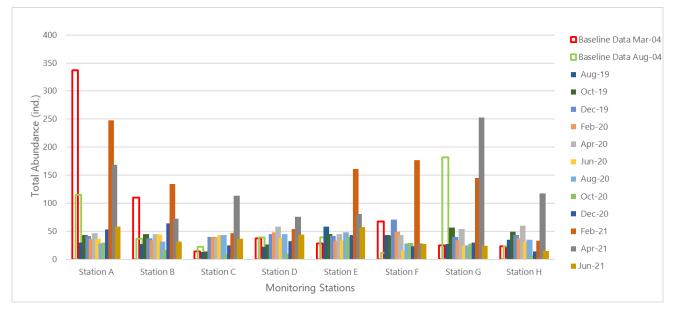

Figure 2. Total abundance (ind.) of benthic organisms across monitoring stations

Biomass

The total wet biomass recorded in the eight monitoring stations was 48.13 g with the highest biomass at the impact site Station D (28.86 g). The relatively higher biomass in Station D was due to the presence of larger molluscs in this station. Lowest (0.52 g) biomass was observed in Station E as this station was dominated by smaller organisms such as annelids. Relative to the April 2021 period, a general decrease in biomass was observed during the current monitoring period (**Figure 3**).

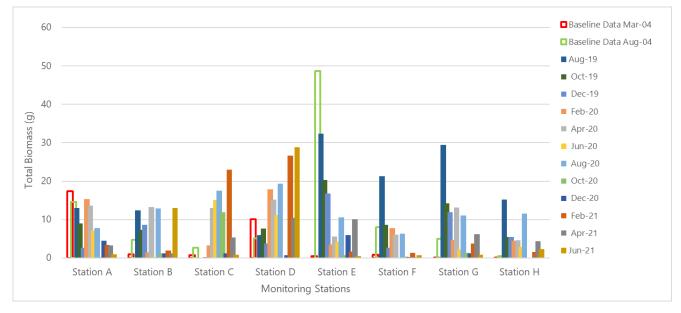

Figure 3. Total biomass (g) of benthic organisms

Taxonomic Composition

A total of five phyla comprising of 25 families and about 28 genera were identified. During the current monitoring period, the annelids (73.63%) dominated the macrobenthic assemblage followed by the molluscs 11.64%), and arthropods (10.27%) while the group with the lowest dominance was the

sipunculids (0.34%). The aforementioned decrease in arthropod abundance brought about a consequent change in community assemblage, a shift from arthropod-dominated community in April 2021 to annelid-dominated in June 2021. This shift in community assemblage with shift in season was also observed during the previous monitoring years.

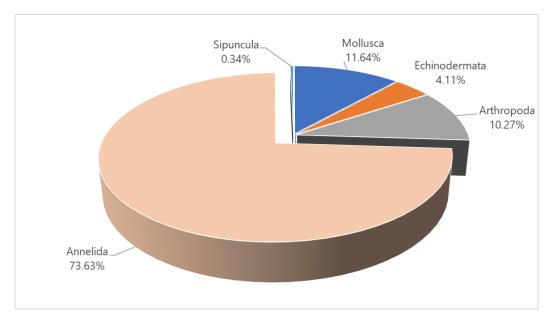

Figure 4. Percent composition of benthic organisms

Diversity

Benthic diversity index (*H*') in the impact stations ranged from 1.93 to 2.36 while its values ranged from 1.14 to 2.43 in the reference stations. Impact stations remained to have relatively higher diversity values compared to reference stations. In terms of evenness index (*J*) values, current monitoring results showed that both the impact Stations C and D were able to maintain high evenness index. Current monitoring results indicated an overall increase in diversity and evenness values from the baseline survey condition.

Abundance and biomass of macrobenthic organisms are shown in **Tables 1** and **2**, respectively. Data summary for different monitoring periods are presented in **Tables 3** to **7**. Representative photos of specimen and assemblages are shown in the last pages of this benthic survey report.

Report No.: 0041/17/ED/0633A

| EP Ref. | EIA Ref. | WMP Ref. | Environmental Protection Measures | Location of the measures | Implementation Status |
|------------|-------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|--------------------------|
| Air Qu | uality | | | | |
| NA | 4.5 | NA | Odour reduction measures like aeration, chemical dosing system shall be implemented to reduce any odour impacts to an acceptable level. | SHWSTW | Implemented |
| 3.4 | 4.5 | NA | Sewage treatment works including sludge thickening tanks, the sludge pump house and sludge press house shall be completely enclosed. | SHWSTW | Implemented |
| 3.4 | 4.5 | NA | Exhaust air shall be ventilated to an odour scrubber prior to discharge. Ventilating air to a biological treatment unit with 95% odour removal efficiency prior to stack exhaust shall be implemented | SHWSTW | Implemented |
| Water | Quality | • | | · | • |
| 3.3 | NA | 4.01 | To avoid impacts on the marine ecology due to effluent discharge, the disinfection facility as in Part B of the EP shall be equipped with an UV disinfection system capable of removing at least 99.9% of E.coli from the sewage | SHWSTW | Implemented |
| Waste | e Managei | nent | - | | |
| 3.6 | NA | NA | Transportation of sludge shall be carried out in fully enclosed containers, or be placed in sludge skips with tarpaulin covers | SHWSTW | Implemented |
| NA | NA | 5.02 | Trip-ticket system mentioned shall be implemented. Trip-ticket is required for each truckload delivered to the landfills facilities according to WBTC No. 31/2004. | SHWSTW | Implemented |
| NA | NA | 5.02 | The acceptance criteria for Landfill disposal shoula be followed, i.e. solid content of sludge waste should be more than 30%. | SHWSTW | Implemented |
| NA | NA | 5.02 | The disposal of grit & debris (if any) generated during primary screening works should follow the requirement set in the WMP Section 4.05. | SHWSTW | Implemented |
| NA | NA | 5.03 | The wet sludge should be temporarily stored at the sludge buffer tank. It should then be transported to the centrifuge building for dewatering and discharged to the container for disposal. The whole process should be managed by the automatic electronic electronic system and monitored by the operators during operation. | SHWSTW | Implemented |
| NA | NA | 5.04 | The other solid waste material such as sediment and grit, refuse containers or collection bags should be temporarily stored in slips at designated area. Operators should ensure sufficient space is identified and provided for temporary storage of waste materials to facilitate collection. Storage of waste material on site will be kept to a minimum to avoid nuisance to local residents. | SHWSTW | Implemented |
| NA | NA | 5.05 | Chemical wastes which likely to be generated by activities arise from the maintenance, shall followed the Waste Disposal (Chemical Waste) (General) Regulation, includes Schedule 1 of the Regulation. | SHWSTW | Implemented |
| NA | NA | 5.06 | In case of unlikely occurred chemical spillage, procedures should be followed as according to the WMP Section 5.06. | SHWSTW | Implemented |
| NA | NA | 5.07 | Temporary storage aareas should be identify and provided for the temporary storage of general | SHWSTW | Implemented |

Report No.: 0041/17/ED/0633A

| EP Ref. | EIA Ref. | WMP Ref. | Environmental Protection Measures | Location of the measures | Implementation Status |
|------------|-------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|--------------------------|
| | | | refuse to facilitate collection | | |
| NA | NA | 5.07 | Domestics wastes refuse generated on-site will be stored in enclosed bins or compaction units separately | SHWSTW | Implemented |
| NA | NA | 5.07 | Sufficient dustbins should be provided for domestic waste if required. | SHWSTW | Implemented |
| NA | NA | 5.07 | Domestics wastes should be cleared daily and will be disposed off to the nearest licensed landfill or refuse transfer station. | SHWSTW | Implemented |
| NA | NA | 5.07 | Spearate labeled bins should be provided to segregate the waste generated by workforce. Waste recycle collector should be employed to collect the segregated waste | SHWSTW | Implemented |
| NA | NA | 5.07 | Cardboard and paper packaging (for plant, equipment and materials) should be recovered on site, properly stockpiled in dry condition and covered to prevent cross contamination by other materials. | SHWSTW | Implemented |
| NA | NA | 5.07 | Office waste should be minimized through using papers on both sides. Communication by electronic means should be used as far as possible. | SHWSTW | Implemented |
| NA | NA | 5.07 | The burning of refuse on-site is prohibited by law and shall not be undertaken | SHWSTW | Implemented |
| NA | NA | 5.07 | Toilet wastewater shall be transported to the STW for treatment | SHWSTW | Implemented |
| NA | NA | 5.07 | Arrangement for collection of recyclable materials by recycling contractors should be followed as according to the WMP Section 5.07. | SHWSTW | Implemented |
| NA | NA | 5.08 | All recycling materials removed by the recycling contractors should be properly recorded before the removal. The natures and quantities of the recycling materials, the date of removal and the name of the recycling contractor should be recorded. | SHWSTW | Implemented |
| NA | NA | 5.09 | To maintain the site in a clean and tidy condition during the operation, general measures specified in the WMP should be implemented on site at all times. Regular site inspections shall be undertaken by the management team to ensure the measures are implemented. | SHWSTW | Implemented |
| NA | NA | 5.10 | Daily cleaning should be performed daily after work within the plant and the public areas immediately next to the site. | SHWSTW | Implemented |
| NA | NA | 5.11 | The work officer in charge of the corresponding area should perform daily inspection on the items mentioned in the WMP Section 5.10. If observations were discovered, the work officer should record the result of the inspection on an inspection checklist with photos taken and submitted to the inspectors or Chief Technical Officer for review on the following day. Any deficient should be rectified promptly. | SHWSTW | Implemented |
| NA | NA | 5.12 | Weekly tidying should be performed weekly within the site. | SHWSTW | Implemented |
| NA | NA | 5.13 | The inspector should perform Weekly Inspection on the items mentioned in the WMP Section 5.12. If observations were discovered, the work officer should record the result on an inspection checklist and submitted to the Chief Technical Officer for review on the following day. Any deficient should be rectified promptly. | SHWSTW | Implemented |
