EXECUTIVE SUMMARY

This monthly EM&A report (No.31) has been prepared to document the impact monitoring works conducted for the Contract of the Remaining Engineering Infrastructure Works for Pak Shek Kok Development Package 2A (Contract No: TP 37/03) during the reporting period from 01 to 30 November 2007.

Construction Progress

The major construction works in this reporting month were as below:

Item	Construction Works
1	Roadworks along Road D1 and Road SL3
2	Roadworks and paver laying at Section 2
3	Installation of movement joint at MLS Bridge
4	Floor Finishing works and installation of handrails in MLS Subway
5	CCTV inspection for Section 2 and Section 3
6	Outstanding works and defect rectification works for Toilet No.2
7	Landscape softworks at Section 11 and 12
8	Outstanding works at works areas previously possessed by CWJV at Section 5 (Road L4)
9	Construction of crossing at Section 5
10	Drainage pipe rectification works for Section 6
11	Outstanding works at Section 7, 8, 9, and 10

Environmental Monitoring Progress

The summary of the monitoring activities in this monitoring month is listed below:

- Noise Monitoring (Day-time): 4 Occasion at 4 designated locations
- 24-hour TSP Monitoring: 5 Occasions at 3 designated locations
- 1-hour TSP Monitoring: 13 Occasions at 3 designated locations
- Weekly-site inspection: 3 Occasions

Noise Monitoring

No exceedances of Action and Limit levels for noise monitoring were recorded in the reporting month.

Air Monitoring

No exceedances of Action and Limit levels were recorded for 24-hr and 1-hr TSP monitoring in the reporting month.

Wastewater Monitoring

No wastewater monitoring was carried out in this reporting month since the effluent discharge point had been removed.

Site Inspection

Environmental site inspections conducted in this reporting month are presented as follows:

Concerned Parties	Dates of Audit / Inspection in November 2007
Weekly site inspection (ET)	10, 17, 23
Monthly site inspection (IEC/LWKJV/RE)	23

The observations were raised during this reporting month. The site inspection findings are presented as follows:

Item	Aspects	Findings	Action(s) taken by LWKJV	ET Verification
1	Air	Unpaved area at SA-3 was observed to be dry during the weekly site inspection on 23/11/07.	LWKJV replied to water the unpaved area more frequently especially during dry season..	Since the finding was noted at the last weekly site inspection in this reporting month, it will be verified in the coming month.
2	Air	Stockpiles at SA-3 were found partly covered during the weekly site inspection on 23/11/07.	LWKJV replied to cover all stockpile properly by using tarpaulin sheets...	Since the finding was noted at the last weekly site inspection in this reporting month, it will be verified in the coming month.
3	Chemical	Oil spillage from an air compressor was noted at SA-3 site entrance during weekly site inspections on 10/11/07 and 17/11/07.	LWKJV replied to remove the defect air compressor for repairing and clean up the contaminated soil as chemical waste.	During the last weekly site inspection on 23/11/07, the defect air compressor was removed for repairing.
4	Site Practice	Some 200L chemical containers outside storage area at SA-3 were found without drip tray during weekly site inspection on 23/11/07.	LWKJV replied to relocate the chemical containers to an appropriate storage area...	Since the finding was noted at the last weekly site inspection in this reporting month, it will be verified in the coming month.
5	Site Practice	Follow up action of incomplete finding in the previous month, environmental permit was post at MLS SA-1 site entrance during weekly site inspection on 10/11/07.	No further action should be taken since the finding was improved.	No further ET verification should be taken since the finding was improved.
6	Site Practice	Follow up action to the incomplete finding in the previous month, rubbish such as lunch boxes and aluminum cans were still noted on the ground nearby the Subway and the container at Void Abutment during the weekly site inspections on 10/11/07, 17/11/07 and 23/11/07.	LWKJV replied to collect and dispose of the rubbish immediately.	Since the finding was still noted at the last weekly site inspection in this reporting month, it will be verified in the coming month.

Waste Management

According to weekly site inspection, ET found that the Contractor followed the recommended procedures stipulated in the Waste Management Plan (WMP) on handling and disposal of wastes. 200m³ inert C&D materials and 56050kg general refuse were generated in this reporting month. All inert C&D materials were reused in the Contract and other wastes were handled under the instruction and procedure stated in the WMP in this reporting month.

Environmental Complaints

No environmental complaints were received in this monitoring month.

Notification of summons and successful prosecutions

No notification of summons and prosecutions with respect to environmental issues were registered in this reporting month.

Future Key Issues

Based on the site inspections and forecast of engineering works in the coming month, key issues to be considered are as follows:

- Noise and air quality impact due to construction works;
- Maintain wheel washing facilities properly;
- Cleanup the access road regularly;
- Watering, hydro-seeding or covering all stockpiles with tarpaulin to avoid wind and water erosion;
- Diverting the silty runoff to sedimentation trap or sedimentation tanks;
- Maintain good site practice and waste management to minimize environmental impacts at the site;
- Follow-up improvements on waste management issues.

1.0 INTRODUCTION

Leader – Wai Kee (C&T) Joint Venture (LWKJV) appointed Environmental Team (ET) of ETS-Testconsult Limited (ETL) to undertake the Environmental Monitoring and Audit (EM&A) for Remaining Engineering Infrastructure Works for Pak Shek Kok Development Package 2A (Contract No.: TP 37/03).

In accordance with the Section 10 of Environmental Permit to Construct and Operate a Designate Project (EP-108/2001/AEP-108/2001), EM&A programme as set out in the EM&A Manual is required to be implemented. In accordance with the EM&A manual, environmental monitoring of air quality and noise is required for the Project. The EM&A requirement for each parameter are described in details in subsequent sections, including:

- All monitoring parameters;
- Action and Limit levels for all environmental parameters;
- Event-Action Plans;
- Environmental mitigation measures, as recommended in the project EIA study report;
- Environmental requirements in contract documents.

This monthly EM&A report summarizes the impact monitoring results and audit findings of the EM&A program during the reporting period from 01 to 30 November 2007.

2.0 PROJECT INFORMATION

2.1 Background

Remaining Engineering Infrastructure Works for Pak Shek Kok Development Package 2A (Contract No.: TP 37/03) was planned and designed by the Civil Engineering and Development Department (CEDD).

As the main Contractor of the captioned project: contracted by, LWKJV will follow the environmental monitoring recommendation stated at the EM&A Manual that was prepared with reference to the EIA Study for Feasibility Study on the Pak Shek Kok Development Area (PSKDA) Environmental Monitoring and Audit Manual under Agreement No. CE 90/96.

2.2 Site Description

Generally, the construction site is located at Pak Shek Kok development area. Surrounding the construction site, there are two air sensitive receivers: HKIB Staff Accommodation and Cheung Shue Tan Village and three noise sensitive receivers: HKIB Staff Accommodation, CUHK Residence No.10 and Cheung Shue Tan Village.

Figure 1and 2 show the noise and air monitoring locations of this project.

2.3 Construction Programme

Details of construction programme are shown in Appendix F.

2.4 Project Organization and Management Structure

The organization chart and lines of communication with respect to the on-site environmental management and monitoring program are shown in Appendix A.

2.5 Contact Details of Key Personnel

The key personnel contact names and telephone numbers, and construction programme are shown in table 2.1.

Table 2.1 Contact Details of Key Personnel

Organization	Project Role	Name of Key Staff	Tel. No.	Fax No.
CEDD	Mr. M. S. Lam	Employer	2158 5630	2693 2918
Hyder	Mr. Herman Fong	Engineer	2603 6638	2603 7883
LWJV	Mr. Bernard Tse	Project Manager	2442 1123	2442 9733
Hyder	Mr. Alexi Bhanja	Independent Environmental Checker	2911 2233	2805 5028
ETL	Mr. C.L. Lau	Environmental Team Leader	2946 7791	2695 3944

3.0 CONSTRUCTION PROGRESS IN THIS REPORTING MONTH

The site area of this project is shown in Appendix G.

A summary of the major construction activities undertaken in this monitoring month is shown in Table 3.1. The implementation of corresponding mitigation measures is summarized in Table 3.2.

Table 3.1 Major Construction Activities in this reporting month

Item	Construction Activities
1	Roadworks along Road D1 and Road SL3
2	Roadworks and paver laying at Section 2
3	Installation of movement joint at MLS Bridge
4	Floor Finishing works and installation of handrails in MLS Subway
5	CCTV inspection for Section 2 and Section 3
6	Outstanding works and defect rectification works for Toilet No.2
7	Landscape softworks at Section 11 and 12
8	Outstanding works at works areas previously possessed by CWJV at Section 5 (Road L4)
9	Construction of crossing at Section 5
10	Drainage pipe rectification works for Section 6
11	Outstanding works at Section 7, 8, 9, and 10

Table 3.2 Implementation of Environmental Mitigation Measures

General construction works	<ul style="list-style-type: none"> • Effective water sprays used on the site at potential dust emission sources such as haul roads and unpaved areas; • The heights from which fill materials are dropped should be controlled to a practical height to minimize the fugitive dust arising from unloading; • Minimize of exposed soil areas to reduce the potential for increased siltation and contamination of run-off; • Water, hydro-seed or cover the open stockpile and exposed loose soil areas by using clean tarpaulin sheets; • Provide proper and efficient drainage facilities (e.g. wheel washing facilities) and sedimentation system to ensure that site runoff should be treated before discharged to drains; • Remove the sand/rubbish accumulated in the drain/channel regularly; • Provide good site practice (e.g. selection of quieter plant and working methods and reduction in number of plant operating in critical areas close to NSRs) to limit noise emissions at source; • Remove the construction waste accumulated inside or outside the site regularly.
----------------------------	---

4.0 AIR QUALITY MONITORING

4.1 Monitoring Requirement

1-hour and 24-hour TSP monitoring were required to be conducted to monitor the air quality, at designated monitoring locations:

- HKIB Staff Accommodation (on ground floor near the entrance facing south-east);
- Cheung Shue Tan Village (near the outer building, temple) for 1-hr TSP monitoring;
- Cheung Shue Tan Village (in front of Man Kee Store) for 24-hr TSP monitoring;
- Near Wen Chih Tang at the CUHK.

4.2 Monitoring Equipment

Continuous 24-hour TSP air quality monitoring was performed using a GMWS2310 High Volume Air Sampler (HVS) located at each of the designated monitoring station. One portable dust meter was used to carry out the 1-hour TSP monitoring. Table 4.1 summarizes the equipment used in the air quality monitoring programme. A copy of the calibration certificates for the HVS and portable dust meter are attached in Appendix B1.

Table 4.1 Air Quality Monitoring Equipment

Equipment	Model and Make
HVS	Greasby GMWS2310
Calibrator	Tisch TE-5025A
1-hour TSP Dust Meter	TSI Model 8520 Dust Trak™ Aerosol Monitor

4.3 Monitoring Parameters, Frequency and Duration

Table 4.2 summarizes the monitoring parameters, monitoring duration and frequencies of air quality monitoring.

Table 4.2 Monitoring parameters, duration, frequencies of impact air quality monitoring

Parameter	Duration	Frequency
24-hr TSP	24 hr (0000-2400)	Once every six days
1-hr TSP	1 hr (0700-1900)	Three times every six days

4.4 Monitoring Locations and Schedule

Table 4.3 tabulates the air quality monitoring locations of this project.

Table 4.3 Air quality monitoring locations

Monitoring stations	Locations
AM1	HKIB Staff Accommodation (on ground floor near the entrance facing south-east) for 1-hr TSP monitoring
AM3	Cheung Shue Tan Village (near the outer building, temple) for 1-hr TSP monitoring
AM3A	Cheung Shue Tan (in front of Man Kee Store) for 24-hr TSP monitoring
AM5	Near Wen Chih Tang at the CUHK

The air quality monitoring schedule for 24-hr and 1-hr TSP monitoring at designated monitoring locations is summarized in table 4.4.

Table 4.4 Monitoring Schedule for the air quality monitoring stations

Air quality monitoring stations	Location	Monitoring Period							
		24-hr TSP				1-hr TSP			
		Start		Finish		Date	Start	Finish

4.5 Monitoring Methodology

24-hour TSP Monitoring

Instrumentation

High volume sampler, as HVS, (Greasby GMWS2310) complete with appropriate sampling inlets are employed for 24-hour TSP. The sampler is composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with that required by USEPA standard Title 40, Code of Federation Regulations Chapter 1 (Part 50).

Installation

The installation of HVS refers to the requirement stated in EM&A Manual.

Operation/Analytical Procedures

Operating/analytical procedures for the operation of HVS are as below:

Prior to the commencement of the dust sampling, the flow rate of the high volume sampler was properly set (between 0.6m³/min and 1.7m³/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50.

- For TSP sampling, fiberglass filters (GA-55) were used.
- The power supply was checked to ensure the sampler worked properly.
- On sampling, the sampler was operated 5 minutes to establish thermal equilibrium before placing any filter media at designated air monitoring station.
- The filter holding frame was then removed by loosening the four nuts and carefully a weighted and conditioned filter was centered with the stamped number upwards, on a supporting screen.
- The filter was aligned on the screen so that the gasket formed an air-tight seal on the outer edges of the filter. Then the filter holder frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- The programmable timer will be set for a sampling period of 24 hours. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number.).
- After sampling, the filter was transferred from the filter holder of the HVS to a sealed plastic bag and sent to the laboratory for weighting. The elapsed time was also recoded.
- Before weighting, all filters were equilibrated in a desiccator for 24 hour with the temperature of 25°C ± 3°C and the relative humidity (RH) <50% ±5%.

Maintenance & Calibration

- The HVS and their accessories should be maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
- HVS should be calibrated at bi-monthly intervals.

1-hour TSP Monitoring

Measuring Procedures

The measuring procedures of the 1-hr dust meter are in accordance with the Manufacturer's instruction Manual as follows:

- Set POWER to ON, check the battery indicator to ensure whether the power supply is enough to conduct the TSP monitoring;
- Calibrate the dust meter by zero check;
- Set the TIME CONSTANT of the dust meter;
- Press SAMPLE to start the TSP monitoring;
- Record the maximum, minimum and average reading directly from the dust meter by press STATISTICS when monitoring complete.

Maintenance & Calibration

- 1-hr dust meter should be checked at 3-month intervals and calibrated at 1-year intervals throughout all stages of impact air quality monitoring.

Wind Data Monitoring

Wind data (wind speed and wind direction) were directly extracted from Sha Tin Station (located at Sha Tin Race Course) of Hong Kong Observatory. All wind data during this reporting month are shown in Appendix D.

4.6 Action and Limit Levels

Action and Limit levels for 24-hr TSP and 1-hr TSP derived as illustrated in Table 4.5.

Table 4.5 Action and Limit Levels for 24-hr TSP and 1-hr TSP

Monitoring Location	24-hr TSP ($\mu\text{g}/\text{m}^3$)		1-hr TSP ($\mu\text{g}/\text{m}^3$)	
	Action Level	Limit Level	Action Level	Limit Level
AM1	164 *	260 *	325 *	500 *
AM3	---	---	306 **	500 **
AM3A	183 **	260 **	---	---
AM5	174	260	329	500

* = Reference to the information contained in the Baseline Monitoring Report submitted under the "Advance Engineering Infrastructure Works for Pak Shek Kok Development – Southern Access Road and Sewage Pumping Station No.3.

** = Reference to the information contained in the Baseline Monitoring Report submitted under the "Remaining Engineering Infrastructure Works for Pak Shek Kok Development Package 1 – Contract No. TP 35/02.

4.7 Event-Action Plans

Please refer to Appendix E for details.

4.8 Results

4.8.1 24-hour TSP Monitoring

All monitoring data of 24-hour TSP monitoring is provided in Appendix B2. Graphical presentation of 24-hour TSP monitoring results for the reporting month is shown in Appendix B3.

No exceedances of Action and Limit Level of 24-hour TSP monitoring results were recorded during the reporting month.

4.8.2 1-hour TSP Monitoring

1-hour TSP monitoring was carried out at monitoring stations, AM1 and AM3 in the reporting month. All monitoring data of 1-hour TSP monitoring is provided in Appendix B2. Graphical presentation of 1-hour TSP monitoring results for the reporting month is shown in Appendix B3.

No exceedances of Action and Limit Level of 1-hour TSP monitoring results were recorded during the reporting month.

5.0 Noise Monitoring

5.1 Monitoring Requirements

As the requirement in EM&A Manual, noise monitoring was conducted at designated monitoring locations:

- HKIB Staff Accommodation (on ground floor near the entrance facing south-east);
- Cheung Shue Tan Village (near the outer building, temple);
- CUHK Residence No.10;
- Near Wen Chih Tang at the CUHK.

5.2 Monitoring Equipment

Integrating Sound Level Meters were used for noise monitoring. They were Type 1 sound level meters capable of giving a continuous readout of the noise level reading including equivalent continuous sound pressure level (L_{eq}) and percentile sound pressure level (L_x). They comply with International Electro technical Commission Publications 651:1979 (Type1) and 804:1985 (Type1), and speed in m/s was used to monitor the wind speed.

Table 5.1 summarized noise monitoring equipment model being used. A copy of the calibration certificates for noise meters and calibrator are attached in Appendix C1.

Table 5.1 Noise Monitoring Equipment

Equipment	Model
Integrating Sound Level Meter	Rion NL-31 Sound Level Meter
Calibrator	Rion NL-73 Sound Level Calibrator
Portable Wind Speed Indicator	TSI Model 8340-M Air Velocity Meter

5.3 Monitoring Parameters, duration and Frequency

Noise monitoring for the A-weighted levels L_{eq} , L_{10} and L_{90} were recorded. The following guide on the regular monitoring frequency for each monitoring station on a per week basis when noise generating activities are underway:

- One set of measurements between 0700-1900 hours on normal weekdays (6 consecutive $L_{eq(5-min)}$);
- One set of measurements between 1900-2300 hours (3 consecutive $L_{eq(5-min)}$)*;
- One set of measurements between 2300-0700 hours of next day (3 consecutive $L_{eq(5-min)}$)*;
- One set of measurements between 0700-1900 hours on holidays (3 consecutive $L_{eq(5-min)}$)*.

(*): Noise monitoring to be conducted only when there is construction work.

Duration, frequencies and parameters of noise measurement are presented in Table 5.2.

Table 5.2 Duration, Frequencies and Parameters of Noise Monitoring

Time period	Duration/min	Parameters	Frequency
Day-time: 0700-1900 hrs on normal weekday	30	L_{eq} , L_{10} , L_{90}	Once per week
Evening-time: 1900-2300 hrs	15	L_{eq} , L_{10} , L_{90}	Once per week
Night-time: 2300-0700 hrs of next day	15	L_{eq} , L_{10} , L_{90}	Once per week
Holiday: 0700-1900 hrs	15	L_{eq} , L_{10} , L_{90}	Once per week

5.4 Monitoring Locations and Period

In this reporting month, there were five noise monitoring locations: HKIB Staff Accommodation, Cheung Shue Tan Village, CUHK Residence No.10 and Near Wen Chih Tang at the CUHK. The location of the monitoring stations are described in Table 5.3 and depicted in Figure 1.

Table 5.3 Noise Monitoring Locations

Noise Monitoring station	Location
NM1	HKIB Staff Accommodation (on ground floor near the entrance facing south-east)
NM2	CUHK Residence No.10
NM3	Cheung Shue Tan Village (near the outer building, a temple)
NM8	Near Wen Chih Tang at the CUHK

The noise-monitoring programme of monitoring locations (Day-time, Evening-time, Holiday and Night-time) is summarized in Table 5.4.

Table 5.4 Monitoring Periods for noise monitoring stations

Monitoring stations	Monitoring Period				
	Day-time	Evening-time	Holiday	Night-time	
NM1	06/11/07 15:15	---	---	---	---
	13/11/07 11:02	---	---	---	---
	20/11/07 10:10	---	---	---	---

	13/11/07 17:30	---	---	---	---
	20/11/07 11:30	---	---	---	---
	27/11/07 11:15	---	---	---	---
NM3	06/11/07 08:30	---	---	---	---
	13/11/07 15:02	---	---	---	---
	20/11/07 18:10	---	---	---	---
	27/11/07 15:32	---	---	---	---
NM8	06/11/07 14:30	---	---	---	---
	13/11/07 16:17	---	---	---	---
	20/11/07 16:30	---	---	---	---
	27/11/07 16:47	---	---	---	---

5.5 Monitoring Procedures and Calibration Details

Operation/Analysis Procedures

- The Sound Level Meter was set on a tripod at a height of 1.2m above the ground.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - Frequency weighting: A
 - Time weighting : Fast
 - Time measurement : 5 mins
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94 dB at 1000HZ. If the difference in the calibration level before and after measurement was more than 1dB(A), the measurement would be considered invalid and repeat measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with a portable wind meter.
- During the monitoring period, the Leq, L10 and L90 were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- Free Field correction to the measurements should be made. Correction factor of +3dB(A) should be made to the free Field measurements.
- Noise monitoring would be cancelled in the presence of fog, rain, wind with a steady speed exceeding 5m/s, or wind gusts exceeding 10m/s.

Maintenance and Calibration

- The microphone head of the sound level meter and calibrator is cleaned with soft cloth at quarterly intervals.
- The meter is sent to be supplier or HOKLAS laboratory to check and calibrated at yearly intervals.

5.6 Action and Limit Levels

The Action and Limit levels for noise levels derived as illustrated in Table 5.5.

Table 5.5 Action and Limit Levels for noise monitoring

Time Period	Time Period	Action	Limit
Normal hours	0700-1900 hrs on normal weekdays	When one documented complaint is received	75 dB(A) *
Holiday	0700-1900 hrs on holidays		70 dB(A) **
Evening-time	1900-2300 hrs on all other days		
Night-time	2300-0700 hrs of next day		55 dB(A) **

* = Reduce to 70 dB(A) for schools and 65 dB(A) during school examination periods.

** = Area Sensitivity Rating (ASR) C is selected from the "Technical Memorandum on Noise from Construction Work Other Than Percussive Piling".

5.7 Event-Action Plans

Please refer to the Appendix E for details.

5.8 Results

Only Day-time noise monitoring were carried out at monitoring stations in this reporting month. No Evening-time, Night-time and Holiday noise monitoring were required since no construction works were processed during the night-time period. All noise levels are provided in Appendix C2. Graphical presentation of the monitoring results for the reporting month is shown in Appendix C3.

No Day-time noise monitoring results at all monitoring stations exceeded the Action Level since no documented complaints on noise issue were received in this reporting month. Besides, no exceedances in Limit Level were recorded according to the results from Day-time noise monitoring.

6.0 WASTEWATER MONITORING

Effluent Discharge License of this Project is valid from 06 December 2004 (Discharge Licence No.: 3246-Part A and Part B).

During this reporting month, no wastewater monitoring was required to be carried out since the wastewater monitoring had been carried out on 18 June 2007 and the Discharge Licence required carrying out wastewater monitoring at effluent discharge point quarterly.

No wastewater monitoring was carried out in this reporting month since the effluent discharge point had been removed.

7.0 ENVIRONMENTAL NON-CONFORMANCE

7.1 Summary of environmental monitoring

No exceedances of Action and Limit Level of 24-hour and 1-hour TSP monitoring results were recorded during the reporting month.

No day-time noise level measured at all monitoring stations exceeded the Action and Limit Level in the reporting month. No evening-time, night-time and holiday noise monitoring were required since no construction works were processed during these periods.

No wastewater monitoring was carried out in this reporting month since the effluent discharge point had been removed.

7.2 Summary of Environmental Complaints

No environmental complaints were received in this monitoring month.

7.3 Summary of Notification of Summons and Prosecution

There was no notification of summons respect to environmental issues registered in this month.

8.0 SITE INSPECTION

Weekly site inspections were carried out by the ET in this reporting month (10, 17 and 23 November 2007). Monthly joint site inspection at 23 November 2007 was carried out by Engineer's Representative, IEC and LWKJV. The implementation status of the mitigation measures on site inspections in this reporting month is presented in Appendix H.

8.1 Summary of the site inspection findings and Action(s) taken by LWKJV and ET

Summaries of the site inspection findings in this reporting month are shown in Table 8.1.

Table 8.1 The summary of the site inspection findings and Action(s) taken by LWKJV and ET

Item	Aspects	Findings	Action(s) taken by LWKJV	ET Verification
1	Air	Unpaved area at SA-3 was observed to be dry during the weekly site inspection on 23/11/07.	LWKJV replied to water the unpaved area more frequently especially during dry season..	Since the finding was noted at the last weekly site inspection in this reporting month, it will be verified in the coming month.
2	Air	Stockpiles at SA-3 were found partly covered during the weekly site inspection on 23/11/07.	LWKJV replied to cover all stockpile properly by using tarpaulin sheets...	Since the finding was noted at the last weekly site inspection in this reporting month, it will be verified in the coming month.
3	Chemical	Oil spillage from an air compressor was noted at SA-3 site entrance during weekly site inspections on 10/11/07 and 17/11/07.	LWKJV replied to remove the defect air compressor for repairing and clean up the contaminated soil as chemical waste.	During the last weekly site inspection on 23/11/07, the defect air compressor was removed for repairing.
4	Site Practice	Some 200L chemical containers outside storage area at SA-3 were found without drip tray during weekly site inspection on 23/11/07.	LWKJV replied to relocate the chemical containers to an appropriate storage area...	Since the finding was noted at the last weekly site inspection in this reporting month, it will be verified in the coming month.
5	Site Practice	Follow up action of incomplete finding in the previous month, environmental permit was post at MLS SA-1 site entrance during weekly site inspection on 10/11/07.	No further action should be taken since the finding was improved.	No further ET verification should be taken since the finding was improved.
6	Site Practice	Follow up action to the incomplete finding in the previous month, rubbish such as lunch boxes and aluminum cans were still noted on the ground nearby the Subway and the container at Void Abutment during the weekly site inspections on 10/11/07, 17/11/07 and 23/11/07.	LWKJV replied to collect and dispose of the rubbish immediately.	Since the finding was still noted at the last weekly site inspection in this reporting month, it will be verified in the coming month.

8.2 Status of Environmental Licensing and Permitting

All permits/licenses valid in this reporting month are summarized in Table 8.2.

Table 8.2 Summary of environmental licensing and permit status

Description	Permit No.	Valid Period		Section
		From	To	
Construction Noise Permit for the Construction Works of the Project at Pak Shek Kok Development Package 2A, Tai Po	GW-RN0310-07	22/07/07	30/12/07	<u>Group A</u> Two Poker, vibratory, hand-held (CNP170) Two Concrete lorry mixer (CNP044) One Excavator, tracked (CNP081) <u>Group B</u> One Asphalt Paver (CNP004) One Roller, Vibratory (CNP186) One Road Roller (CNP185) One Dump Truck (CNP067) <u>Group C</u> One Dump Truck (CNP067) One Excavator, tracked (CNP081) One Crane, mobile (diesel) (CNP048) One Lorry with crane
Construction Noise Permit for the Construction Works of the Project at Pak Shek Kok Development Package 2A adjacent to Ma Liu Shui Interchange, N.T.	GW-RN0413-07	28/09/07	30/12/07	One Lorry with crane One Lift platform (diesel) One Welding machine (electric)
Wastewater Discharge License	3246 – Part A	01/11/06	31/12/09	Discharge of trade Effluent, surface run-off and all other wastewater arising from the construction site and sedimentation tank to Coastal water or communal drain for the carriage of surface drainage water.
Wastewater Discharge License	3246 – Part B	06/12/04	05/12/09	Discharge of trade Effluent, surface run-off and all other wastewater arising from the construction site and on-site aerobic waste water treatment system to soak-away pit.
Chemical Waste Producer	5113-729-LL 1113-01	24/09/04	--	Spent lubricating oil, spent battery parts containing heavy metals

8.3 Recommendations on site inspection findings in Site Inspections of this month

Based on the site inspection findings, the recommendations are as below:

- All stockpiles should be covered with clean tarpaulin sheets, spraying with water or hydro-seeding to avoid wind and water erosion;
- Size of tarpaulin sheet should be larger than surface size of stockpile in order to resume normal function of tarpaulin sheet;
- The heights from which fill materials are dropped should be controlled to a practical height to minimize the fugitive dust arising from unloading or provide a canvas with larger surface area;
- Minimize of exposed soil areas to reduce the potential for increased siltation and contamination of run-off;
- Checking and maintaining all the site machines to prevent dust emission;
- Bigger sumpit for increasing wastewater input should provide for any necessary;
- Providing briefing to the concerned site staff on remedial actions, such as handling method of chemicals and chemical waste;
- Regular maintenance of excavator or any diesel cater machines should be provided in order to avoid any possible smoke nuisance;
- Provide good site practice (e.g. selection of quieter plant and working methods and reduction in number of plant operating in critical areas close to NSRs) to limit noise emissions at source; Maintain good waste management at the site.

9.0 WASTE MANAGEMENT

9.1 Waste Management Audit

Waste management audit was carried out by the ET on a weekly basis. The implementation status of the mitigation measures on waste management in this reporting month is presented in Appendix H.

9.2 Records of Waste Quantities

All type of wastes arising from the construction work are classified into the following:

- General refuse;
- Chemical waste;
- Construction & demolition (C&D) material.

The quantities of waste for disposal in this month are summarized in Table 9.1.

Table 9.1 Summary of Quantities of Waste for Disposal in this reporting month

	Type of Waste	Quantity	Disposal Location	Cumulative Quantity
Inert C&D Materials	Total Quantity Generated (m ³)	200	Reused in the Contract	129123
	Broken Concrete (m ³)	50	N/A	1211
	Reused in the Contract (m ³)	150	N/A	128000
	Reused in other Projects (m ³)	0	N/A	0
	Disposal as Public Fill (m ³)	0	N/A	0
C&D Waste	Metals (1000kg)	0	N/A	37.705
	Paper/Cardboard Packaging (1000kg)	0	N/A	2.806
	Plastics (1000kg)	0	N/A	0.083
	Chemical Waste (1000kg)	0	N/A	3.4
	Other, e.g. General Refuse (1000kg)	56.05	SENT	1886.77

10.0 IMPLEMENTATION STATUS

10.1 Implementation Status of Environmental Mitigation Measures

LWKJV has been implementing the required environmental mitigation measures according to the Mitigation Protection Measures stated in Implementation Schedule of the EM&A Manual. The implementation status of the environmental mitigation measures in this reporting month is presented in Appendix H.

Air Quality

The Contractor was reminded to water or cover all the stockpiles by using clean tarpaulin sheets. The Contractor was also reminded to cleanup the access road regularly to avoid dust emission and provide effective wheel washing facilities.

Noise

All mitigation measures stated in Appendix H were implemented properly in this reporting month.

Water Quality

The Contractor was reminded to provide more effort to implement mitigation measures, such as diverting site runoff to suitable treatment processes before discharge, sedimentation system and drainage facilities.

Waste Management

LWKJV has been implementing most mitigation measures on waste management.

10.2 Implementation Status of Event and Action Plan

There were no exceedances in air quality and noise monitoring parameters recorded in this monitoring month. No further mitigation measures were required.

10.3 Implementation Status of Environmental Complaint Handling

No complaints had been received during this monitoring month.

11.0 CONCLUSION

Impact monitoring of air quality and noise were carried out at designated locations in accordance with the EM&A Manual in this reporting month.

According to the summary of air and noise monitoring results, no exceedances of Action and Limit Level of 24-hour and 1-hour TSP monitoring results were recorded during the reporting month. Besides, No Day-time noise level measured at all monitoring stations exceeded the Action and Limit Level in the reporting month. No Evening-time, Night-time and Holiday noise monitoring were required since no construction works were processed during these periods.

No wastewater monitoring was carried out in this reporting month since the effluent discharge point had been removed.

According to the ET weekly site inspection and IEC monthly site audit carried out this month, it indicated that site practices of the LWKJV were generally undertaken in an environmentally acceptable manner and the overall site environmental performance was satisfactory.

12.0 FUTURE KEY ISSUES

12.1 Upcoming EM&A Schedule in coming two months

The Proposed EM&A program in coming two months are presented as following table:

Table 12.1 Upcoming EM&A Schedule in coming two months

Type of Monitoring	December 2007	January 2008
Noise Monitoring (Day-time)	04, 11, 18, 27	03, 08, 15, 22, 29
1-hour TSP	01, 04, 06, 08, 11, 13, 15, 18, 20, 22, 24, 27, 29	03, 04, 05, 08, 10, 12, 15, 17, 19, 22, 24, 26, 29, 31
24-hour TSP	03, 08, 14, 20, 24, 29	04, 10, 16, 22, 28
Site Inspection	01, 08, 15, 22, 29	05, 12, 19, 26

12.2 Upcoming construction works scheduled in the coming two months

The major construction works planned to be carried out in next two months and their possible impact is tabulated (Table 12.2) for reference.

Table 12.2 Construction activities planned in the coming two months

Item	Construction Activities planned to be carried out in the coming two months
1	Laying of bituminous materials at road SL3 and road D1
2	Paving works of footpath adjacent to Subway
3	Construction of loading and unloading area would be commenced after the traffic diversion works at Ma Liu Shui
4	CCTV inspection for Section 2 and 3
5	Removal of debris and surplus material on site
6	MJ installation at of MLS Bridge (Alternative Design)
7	Roadworks at the existing MLS Bridge
8	Floor finishing works and defects rectification works for the proposed MLS Subway (Alternative Design)
9	Outstanding works and defect modification works for Toilet No.2, Section 7 and 8
10	Construction of the bicycle packing area and crossing under Section 5
11	Soft landscaping works at Section 11 and 12

Calibration Certificates for Noise Monitoring Equipments

Calibration Certificate

Certificate No. 65870

Page 1 of 2 Pages

Customer : ETS-Testconsult Limited

Address : 8/F., Block B, Veristrong Industrial Centre, 34-36 Au Pui Wan St., Fotan, Hong Kong.

Order No. : Q62237

Date of receipt : 16-Dec-06

Item Tested

Description : Sound Level Calibrator

Manufacturer : Rion

Model : NC-73

Serial No. : 10727835

Test Conditions

Date of Test : 27-Dec-06

Supply Voltage : -

Ambient Temperature : (23 ± 3)°C

Relative Humidity : (50 ± 25) %

Test Specifications

Calibration check.

Calibration procedure : F21, Z02.

Test Results

All results were within the manufacturer's specification.

The results are shown in the attached page(s).

Test equipment used:

<u>Equipment No.</u>	<u>Description</u>	<u>Cert. No.</u>	<u>Due Date</u>	<u>Traceable to</u>
S014	Spectrum Analyzer	62914	7-Jul-07	NIM-PRC & SCL-HKSAR
S024	Sound Level Calibrator	62691	22-Apr-07	NIM-PRC & SCL-HKSAR
S041	Universal Counter	63839	22-Aug-07	SCL-HKSAR

The values given in this Calibration Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Hong Kong Calibration Ltd. shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to International System of Units (SI).

The test results apply to the above Unit-Under-Test only

Calibration Certificate

Certificate No. 65870

Page 2 of 2 Pages

Results :

1. Level Accuracy (at 1 kHz)

UUT Nominal Value	Measured Value	Mfr's Spec.
94 dB	93.73 dB	± 1 dB

Uncertainty : ± 0.1 dB

2. Frequency Accuracy

UUT Nominal Value	Measured Value	Mfr's Spec.
1 kHz	0.998 kHz	± 2 %

Uncertainty : ± 0.1 %

3. Level Stability : 0.0 dB

Uncertainty : ± 0.01 dB

4. Total Harmonic Distortion : < 0.2 %

Mfr's Spec. : < 3 %

Uncertainty : ± 2.3 % of reading

Remark : 1. UUT : Unit-Under-Test

2. The uncertainty claimed is for a confidence probability of not less than 95%.

3. The above measured values are the mean of 3 measurement.

4. Atmospheric Pressure : 1 009 hPa

Event-Action Plans

Event / Action Plan for Air Quality

EVENT	ET Leader	ACTION		CNOTRATOR
		IC(E)	ER	
Action Level				
1. Exceedance of one sample	1. Identify source 2. Inform IC(E) and ER 3. Repeat measurement to confirm finding 4. Increase monitoring frequency to daily Identify source	1. Check monitoring data submitted by ET 2. Check Contractor's working method.	1. Notify Contractor	1. Rectify any unacceptable practice 2. Amend working methods if possible
2. Exceedance for two more consecutive samples	1. Inform IC(E) and ER 2. Repeat measurement to confirm findings 3. Increase monitoring frequency to daily Discuss with IC(E) and Contractor on remedial actions required 5. If exceedance continuous, arrange meeting with IC(E) and ER 7. If exceedance stops, cease additional monitoring	1. Checking monitoring data submitted by ET 2. Check Contractor's working method 3. Discuss with ET and Contractor on possible remedial measures 4. Advise the ER on the effectiveness of the proposed remedial measures 5. Supervisor implementation of remedial measures	1. Confirm receipt of notification of failure in writing 2. Notify Contractor 3. Ensure remedial measures properly implemented	1. Submit proposals for remedial action to IC(E) within 3 working days of notification 2. Implement the agreed proposals 3. Amend proposal if possible
Limit Level				
1. Exceedance of one sample	1. Identify source 2. Inform ER and EPD 3. Repeat measurement to confirm finding 4. Increase monitoring frequency to daily 5. Assess effectiveness of Contractor's remedial actions and keep IC(E), EPD and ER informed of the results	1. Check monitoring data submitted by ET 2. Check Contractor's working method. 3. Discuss with ET and Contractor on possible remedial measures 4. Advise the ER on the effectiveness of the proposal remedial measures 5. Supervisor implementation of remedial measures	1. Confirm receipt of notification of failure in writing 2. Notify Contractor 3. Ensure remedial measures properly implemented	1. Take immediate action to avoid further exceedance 2. Submit proposal for remedial actions to IC(E) within 3 working days of notification 3. Implement the agreed proposals 4. Amend proposal if appropriate
2. Exceedance for two or more consecutive samples	1. Notify IC(E), ER, Contractor and EPD 2. Identify source 3. Repeat measurement to confirm findings 4. Increase monitoring frequency to daily 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented 6. Arrange a meeting with IC(E) and ER to discuss the remedial actions to be taken 7. Assess effectiveness of Contractor's remedial actions and keep IC(E), EPD and ER to discuss the remedial action to be taken 8. If exceedance stops, cease additional monitoring	1. Discuss amongst ER, ET, and Contractor on potential remedial actions Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly 3. Supervise the implementation of remedial measures	1. Confirm receipt of notification of failure in writing 2. Notify Contractor 3. In consultation with the IC(E), agree with the Contractor on the remedial measures to be implemented 4. Ensure remedial measures properly implemented 5. If exceedance continues, consider what portion of this work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	1. Take immediate action to avoid further exceedance 2. Submit proposals for remedial actions to IC(E) within 3 working days of notification 3. Implement the agreed proposals 4. Resubmit proposals if possible still not under control 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated.

Event / Action Plan for Construction Noise

EVENT	ET Leader	IC(E)	ACTION	
			ER	CNOTRATOR
Action Level	<ol style="list-style-type: none"> Notify IC(E) and Contractor Carry out investigation Report the results of investigation to the IC(E) and Contractor Discuss with the Contractor and formulate remedial measures Increase monitoring frequency to check mitigation effectiveness 	<ol style="list-style-type: none"> Review the analyzed results submitted by the ET Review the proposed remedial measures by the Contractor and advise the ER accordingly Supervise the implementation of remedial measures 	<ol style="list-style-type: none"> Confirm receipt of notification of failure in writing Notify Contractor Require Contractor to propose remedial measures for the analyzed noise problem Ensure remedial measures are properly implemented 	<ol style="list-style-type: none"> Submit noise mitigation proposal to IC(E) Implement noise mitigation proposals
Limit Level	<ol style="list-style-type: none"> Notify IC(E), ER, and Contractor Identify source Repeat measurement to confirm findings Increase monitoring frequency Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented Inform IC(E), ER and EPD the causes & action taken for the exceedances Assess effectiveness of Contractor's remedial action and keep IC(E), EPD and ER informed to the results If exceedance stops, cease additional monitoring 	<ol style="list-style-type: none"> Discuss amongst ER, ET and Contractor on the potential remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly Supervise the implementation of remedial measures 	<ol style="list-style-type: none"> Confirm receipt of notification of failure in writing Notify Contractor Require Contractor to propose remedial measures for the analysed noise problem Ensure remedial measures are properly implemented If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated 	<ol style="list-style-type: none"> Take immediate action to avoid further exceedance Submit proposals for remedial actions to IC(E) within 3 working days of notification Implement the agreed proposals Resubmit proposals if problem still not under control Stop the relevant portion of works as determined by the ER until the exceedance is abated

of
Mitigation Measures and Follow-up Actions during Weekly
Site Inspections**

SITE INSPECTION CHECKLIST ON THE IMPLEMENTATION OF ENVIRONMENTAL MITIGATION MEASURES

Inspection Date : 10 November 2007 Inspected by Name : (FSS) Brian Cheng (WKM) Winton Wong (ET) H.T. Chow
 Time : 10:30 Signature : 
 Weather Condition : Sunny / ~~Fine~~ / Overcast / Drizzle / Rain / Storm / Hazy
 Wind : ~~Gentle~~ / Light / Breeze / Strong

Mitigation Measures on Waste Management			Implementation Stages*			Remark
	Yes	No	N/A	Yes	No	
Air Quality						
- The heights from which fill materials are dropped should be controlled to a practical height to minimize the fugitive dust arising from unloading.				✓		
- During transportation by truck, material should be loaded to a level lower than the side and tail boards, and should be dampened or covered before transport.				✓		
- All stockpile of aggregate or spoil should be enclosed or covered and water applied in dry or windy condition.				✓		
- The haul road should be either paved or regular watering.				✓		
- Unpaved areas should be watered regularly to avoid dust generation.				✓		
- The public road around the site entrance should be kept clean and free from dust.				✓		
- Vehicle speed should be limited to 20 km/hr.				✓		
- Wheel washing facilities should be provided at all main entrance of work site.				✓		
- The enclosures should be around the main dust-generating activities.				✓		
- Dusty materials should be sprayed prior to loading.				✓		
- All plant and equipment should be well maintained e.g. without black smoke emission.				✓		
- Vehicle and equipment should be switched off while not in use.				✓		
- Open burning should be prohibited.				✓		
Noise						
- The constructions works should be scheduled to minimize noise nuisance.				✓		
- Only well maintained plant should be operated on-site and plant should be serviced regularly during the construction works.				✓		
- Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.				✓		
- Plant known to emit noise strongly in on direction, should, where possible, should be orientated so that the noise is directed away from nearby NSRs.				✓		
- Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials.				✓		
- Noise enclosures, noise barriers, or portable noise barriers used where necessary.				✓		
- Air compressors and hand held breakers should have noise labels.				✓		
- Compressors and generators should operate with door closed.				✓		
- Construction Noise Permits should be available for inspection.				✓		

SITE INSPECTION CHECKLIST ON THE IMPLEMENTATION OF ENVIRONMENTAL MITIGATION MEASURES

Mitigation Measures on Waste Management			Implementation Stages*			Remark
	Yes	No	N/A			
Water Quality						
General Construction Activities						
<ul style="list-style-type: none"> ▪ Temporary ditches shall be provided to facilitate runoff discharge into appropriate watercourses, via a sediment trap / sedimentation tanks, prior to discharge. ▪ Permanent drainage channels shall incorporate sediment basins / traps, and baffles. ▪ All traps shall incorporate oil and grease removal facilities. ▪ Sediment traps / sedimentation tanks shall be regular cleaned and maintained regularly. ▪ All drainage facilities should be adequate for controlled release of storm flows. ▪ Minimizing of exposed soil areas to reduce the potential for increased siltation and contamination of runoff. ▪ Open stockpiles of more than 50m³ should be covered. ▪ Temporary stockpiles of excavated materials should be covered during rainstorms. ▪ Manholes should be covered and sealed. ▪ All chemical stores shall be contained (bunded) such that spills are not allowed to gain access to water bodies. ▪ Vehicles and plant should be cleaned of earth, mud and debris before leaving the site. ▪ Vehicle washing facilities should be provided at every site exit. ▪ Vehicle washing facilities should be adequate to settle out the sand and silt. ▪ Washing area and road exiting from washing facility should be paved. ▪ Access road should have sufficient back fall toward washing facility. 	/	/	/			
Dredging Activities						
<ul style="list-style-type: none"> ▪ Dredging of designated contaminated marine mud shall only be undertaken by a suitable grab dredger using a close grab. ▪ Mechanical grabs shall be designed and maintained to avoid spillage and shall be seal tightly while being lifted. ▪ All vessels shall be sized such that adequate clearance is maintained between vessel and the sea bed and under water pipelines at all states of the tide to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller on the water within the site. ▪ The works shall cause no visible foam, oil, grease, scum litter or other objectionable matter to be present on the water within the site. ▪ All barges shall be fitted with tight fitting seals to their bottom openings to prevent leakage of materials. ▪ Excess material shall be cleaned from the decks and exposed fittings of the barges before the vessels are moved. ▪ Loading of barges shall be controlled to prevent splashing of dredging material to the surrounding water and the barges shall not be filled to a level which will cause overflowing of material or polluted water during loading or transportation. ▪ Adequate freeboard shall be maintained on barges to ensure that decks are not washed by wave action. 	/	/	/			

SITE INSPECTION CHECKLIST ON THE IMPLEMENTATION OF ENVIRONMENTAL MITIGATION MEASURES

Mitigation Measures on Waste Management			Implementation Stages*			Remark
	Yes	No	N/A			
Filling Activities						
• Use of silt screen around the filling face to reduce the losses to the surrounding.						
• All vessels shall be sized such that adequate clearance is maintained between vessel and the sea bed and under water pipeline at all states of the tide to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash or pipelines damaged.	/					
• The works shall cause no visible foam, oil, grease, scum, litter or other objectionable matter to be present on the water within the site.	/					
• All barges shall be fitted with tight fitting seals to their bottom openings to prevent leakage of material.	/					
• Loading of barges shall be controlled to prevent splashing of dredged material to the surrounding water and barges shall not be filled to a level which will cause overflowing of material or polluted water during loading transportation.	/					
Waste Management						
Marine Dredged Sediment						
• Relevant licence / permits for disposal of marine dredged sediment are available for inspection.	/					
• Bottom opening of barges is fitted with tight fitting seals to prevent leakage of material. Excess material is cleaned from the decks and exposed fittings of barges and hopper dredgers before the vessel is moved.	/					
• Monitoring of the barging loading is conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels are equipped with automatic self-monitoring devices as specified by the EPD.	/					
• Transport of dredged marine sediments to the disposal site is by split barge of not less than 750m ³ capacity, well maintained and capable of rapid opening and discharge at the disposal site.	/					
• Inspection of the barge loading to ensure that loss of material does not take place during transportation.	/					
Construction and Demolition (C&D) Waste						
• Most of the C&D materials generated from the construction are sorted immediately in-situ to find out if they can be re-used for this job site or for other job sites.	/					
• Sufficient spaces are identified and provided during the construction stage for the collection, temporary storage and on-site sorting of C&D materials.	/					
• Proper protective measures, such as fences and tarpaulin, are provided, in order to protective the temporary stockpiled materials for later reuse / recycle.	/					
• Avoiding cross contamination to reusable and / or recyclable materials collected (e.g. covering the reusable materials)	/					
• In order to reduce the impacts to the public, except for those sorted inert C&D materials to be reused on site, all other sorted non-inert materials (e.g. general refuse and waste frameworks) shall be removed off site as soon as practicable in order to optimise the use of the on-site storage space. If the non-inert materials need to be stored on site for a short period, the materials shall be centralized and stored at specific areas far away the sensitive receivers.	/					7 fm (2)
• All Public Fill arising from the demolition works shall be limited to a size not more than 250mm and free of reinforcement bars, timber, etc. before re-using it.	/					
• Recyclable materials sorted from the site should be collected by potential recycling contractors under the Contractor's arrangement.	/					
• Trip ticket system will be implemented to ensure proper waste disposal at public filling and landfills	/					
• Appropriate measures should be employed to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers.	/					
• Proper resource planning and calculations before ordering the construction materials to be used will ensure that the wastage of the materials can be minimized	/					

SITE INSPECTION CHECKLIST ON THE IMPLEMENTATION OF ENVIRONMENTAL MITIGATION MEASURES

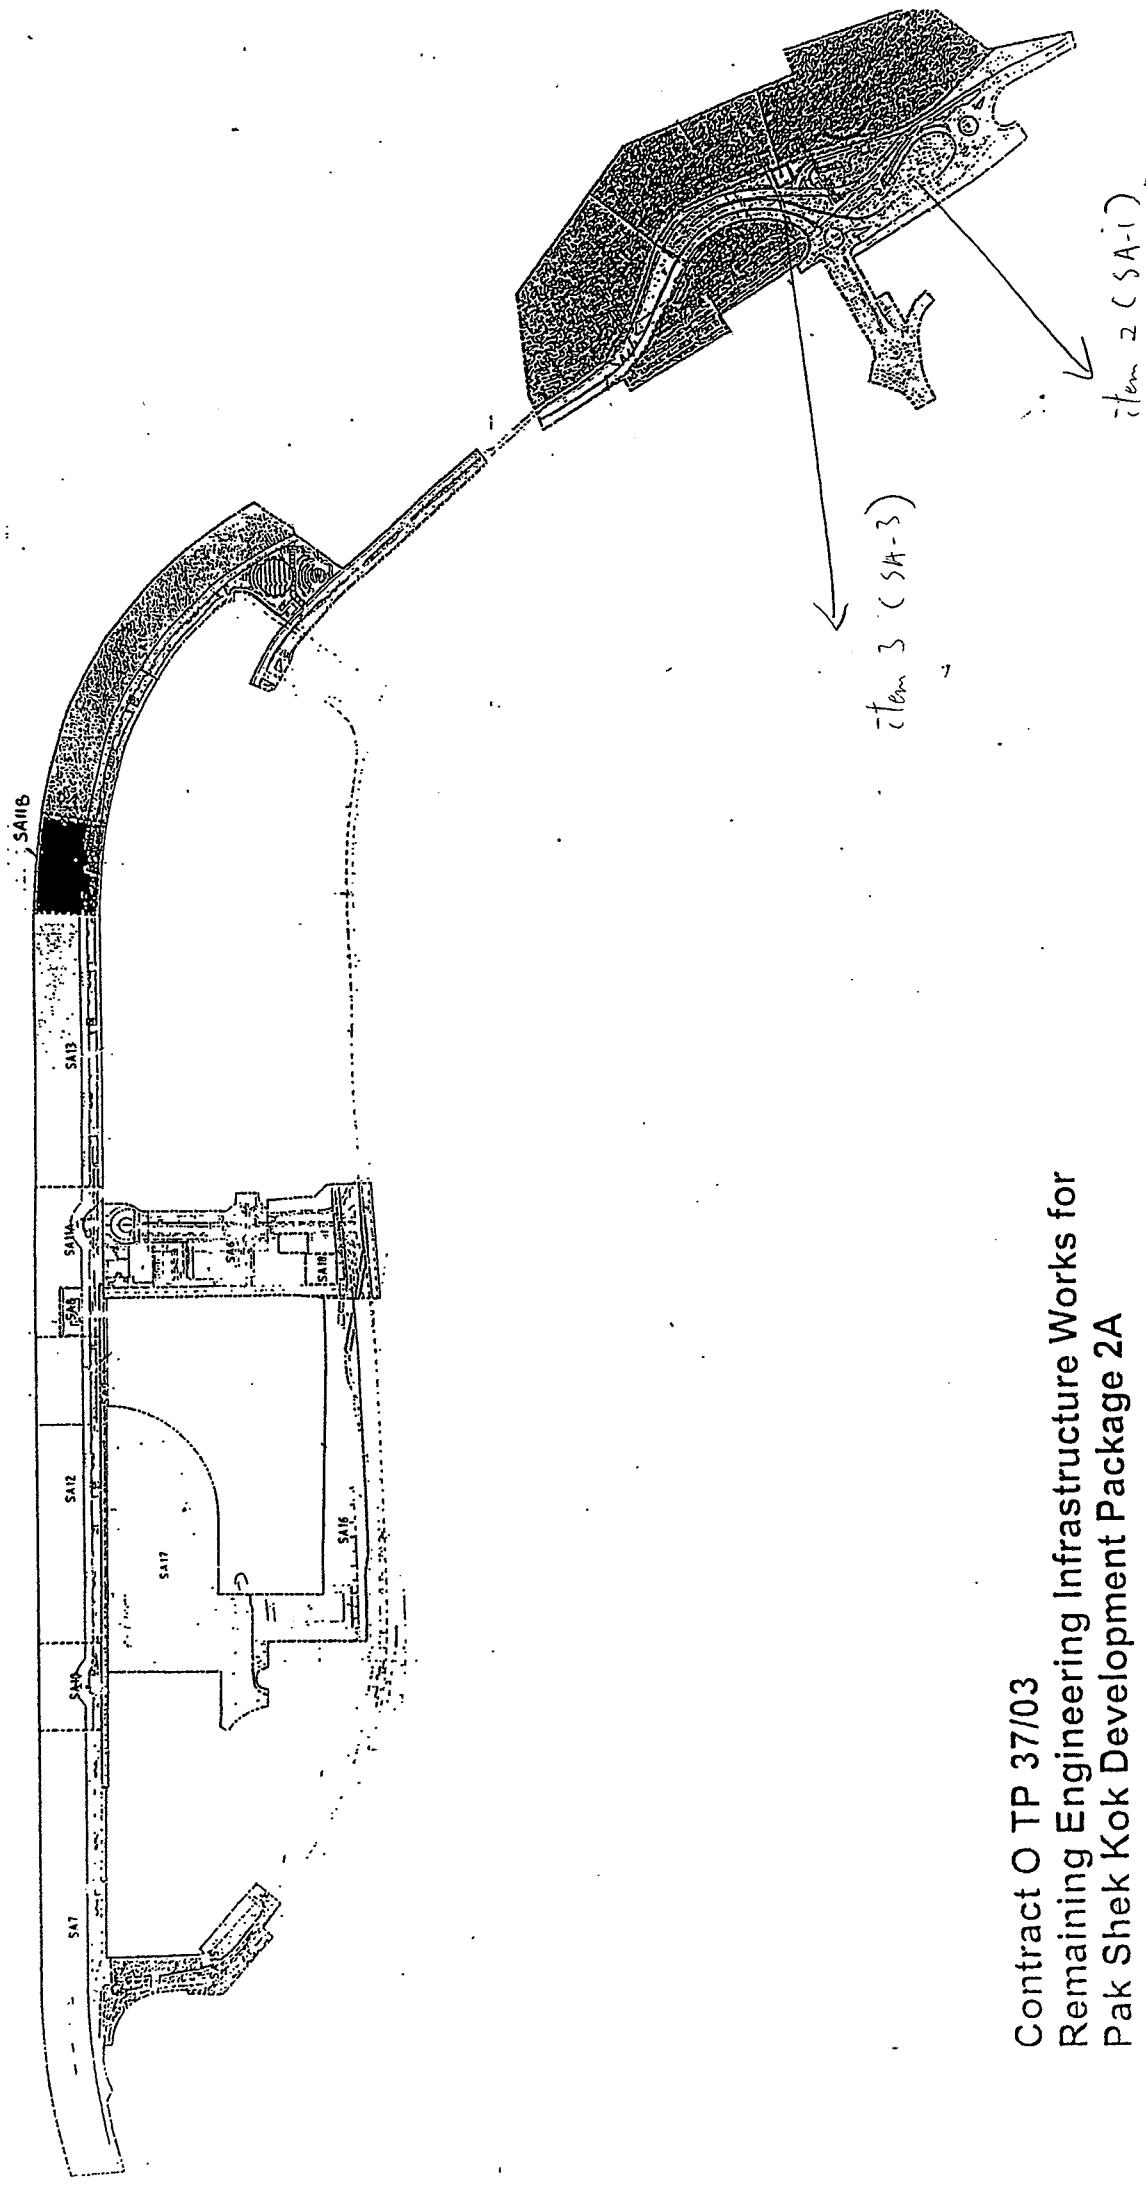

Mitigation Measures on Waste Management	Implementation Stages*			Remark
	Yes	No	N/A	
Proper storage will minimize the damage and thus the wastage of the materials	/			
Training of site personnel in proper waste management procedures. The workers shall be constantly educated for the awareness of the proper handling of waste and to reduce the amount of waste while Site Agent shall be constantly met to discuss the effectiveness of the implementation of the waste management plan. Information to promote the waste management and the reduction concept shall be posted at the site to raise alertness of the personnel concerned.	/			
Chemical Waste				
It is required to register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes.	/			
After use, chemical wastes (e.g. cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes.	/			
Chemical wastes should be stored and collected by an approved operator for disposal at the Chemical Waste Treatment Facility or other licensed facility in accordance with the Chemical Waste (General) Regulation.	/			
Containers used for the storage of chemical wastes				
Be suitable for the substance they are holding, resistant to corrosion, maintained in a good condition, and securely closed	/			
Have a capacity of less than 450L unless the specification have been approved by the EPD	/			
Display a label in English and Chinese in accordance with instructions prescribed in Schedule 2 of the Chemical Waste (General) Regulations and Codes of Practice	/			
Labelling				
Every container of chemical waste would bear an appropriate label, which would contain the particulars details.	/			
The waste produced would ensure that the information contained on the label is accurate and sufficient so as to enable proper and safe handling, storage and transport of the chemical waste	/			
Storage Area				
Be clearly labeled and used solely for the storage of chemical waste	/			
Be enclosed on at least 3 sides	/			
Have an impermeable floor and bunding of sufficient capacity to accommodate 110% of the volume of the largest container or 20% of the total volume of waste stored in that area, whichever is the greatest	/			
Have adequate ventilation	/			
Be covered to prevent rainfall entering	/			
Be arranged so that incompatible materials are adequately separated	/			
Be clean and maintain regularly	/			
Disposal				
Be via a licensed waste collector	/			
To a licensed disposal facility, such as Chemical Waste Treatment Centre	/			
Be a reuser of the waste, under approval from the EPD	/			

ON-SITE INSPECTION CHECKLIST ON THE IMPLEMENTATION OF ENVIRONMENTAL MITIGATION MEASURES

Mitigation Measures on Waste Management	Implementation Stages*			Remark
	Yes	No	N/A	
• Spillage	/	/		
• Establish source of spill or discharge and determine nature of material, where possible halt discharge	/	/		
• Commencing at the source of the spill, establish all current and potential impacted areas	/	/		
• Commence containment of spill using bunds made from available materials and ground water cut-off trenches where necessary	/	/		
• After spill is contained remove material (including contaminated soil where necessary) using pumps and/or absorbent materials	/	/		
• Dispose of materials as chemical wastes	/	/		
• General Refuse				
• General refuse generated on-site is in enclosed bins or compaction units separate from construction and chemical waste	/	/		
• A reputable waste collector is employed by the Contractor to remove general refuse from the site, separately from the construction and chemical waste.	/	/		
• General refuse generated is removed on daily or every second day basis to minimise odour, pest and litter impacts	/	/		
• Aluminium cans are recovered from the waste stream by individual collectors if they are segregated or easily accessible, so separate, labelled bins for their deposit should be provided if feasible.	/	/		
• Office wastes are reduced through recycling of paper if volumes are large enough to warrant collection.	/	/		
• Site Practice				
• Good site practices should be adopted to clean the rubbish and litter on the construction sites so as to prevent the rubbish and litter from dropping into the nearby environment.	/	/		
• Construction sites should be cleaned on a regular basis.				
• The Contractor assigned worker is responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site.	/	/		
• Proper storage and site practices to minimise the potential for damage or contamination of construction materials.	/	/		
• The Environmental Permit should be displayed conspicuously on site	/	/		
• Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste.	/	/		
• Any unused chemicals or those with remaining functional capacity should be recycled.	/	/		
• A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be used, e.g. trip ticket system for chemical waste disposal. Quantities could be determined by weighing each load or other suitable methods.	/	/		
• Suitable collection sites around site offices will be required. For environmental hygiene reasons and to minimize odor, refuse should not be stored for a period exceeding 48 hours, however, removal every 24 hours is preferable.	/	/		
• Minimize windblown litter and dust during transportation by either covering trucks or transporting wastes in enclosed container.	/	/		
• All generators, fuel and oil storage are within bundle areas.	/	/		
• Oil leakage from machinery, vehicle and plant is prevented.	/	/		
• Chemical storage area, drainage systems, silt traps, sumps and oil interceptors are cleaned and maintained regularly.	/	/		

Table for follow-up Action:

Item	Details of defective works or observations	Location	Further action to be taken (Included persons / party to take action)	Expected Date for Action taken
1.	Follow up action to the previous site inspection item 1 on 31-10-2007, the environmental permit was provided at Ma Lai Shui site entrance.	SA-1 (MLS)	Follow up action was complete tech, no further action to be taken.	N/A
2.	Follow up action to the previous site inspection item 2 on 31-10-2007, rubbish was still piled on the ground nearby subway and container at visual apartment.	Subway and Visual Apartment	The Contractor should collect and dispose of the rubbish regularly.	17-11-07
3.	Oil spillage from air compressor was observed at SA-3.	SA-3	The Contractor should repair the air compressor and remove of materials as chemical wastes.	17-11-07

 Humidity : High / Moderate / Low

Mitigation Measures on Waste Management			Implementation Stages*			Remark
	Yes	No	N/A			
Air Quality						
- The heights from which fill materials are dropped should be controlled to a practical height to minimize the fugitive dust arising from unloading.	/					
- During transportation by truck, material should be loaded to a level lower than the side and tail boards, and should be dampened or covered before transport.	/					
- All stockpile of aggregate or spoil should be enclosed or covered and water applied in dry or windy condition.	/					
- The haul road should be either paved or regular watering.	/					
- Unpaved areas should be watered regularly to avoid dust generation.	/					
- The public road around the site entrance should be kept clean and free from dust.	/					
- Vehicle speed should be limited to 20 km/hr.	/					
- Wheel washing facilities should be provided at all main entrance of work site.	/					
- The enclosures should be around the main dust-generating activities.	/					
- Dusty materials should be sprayed prior to loading.	/					
- All plant and equipment should be well maintained e.g. without black smoke emission.	/					
- Vehicle and equipment should be switched off while not in use.	/					
- Open burning should be prohibited.	/					
Noise						
- The constructions works should be scheduled to minimize noise nuisance.	/					
- Only well maintained plant should be operated on-site and plant should be serviced regularly during the construction works.	/					
- Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.	/					
- Plant known to emit noise strongly in on direction, should, where possible, should be orientated so that the noise is directed away from nearby NSRs.	/					
- Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials.	/					
- Noise enclosures, noise barriers, or portable noise barriers used where necessary.	/					
- Air compressors and hand held breakers should have noise labels.	/					
- Compressors and generators should operate with door closed.	/					
- Construction Noise Permits should be available for inspection.	/					

SITE INSPECTION CHECKLIST ON THE IMPLEMENTATION OF ENVIRONMENTAL MITIGATION MEASURES

Mitigation Measures on Waste Management				Implementation Stages*			Remark
		Yes	No	N/A			
Water Quality							
General Construction Activities							
▪ Temporary ditches shall be provided to facilitate runoff discharge into appropriate watercourses, via a sediment trap / sedimentation tanks, prior to discharge.	/	/	/				
▪ Permanent drainage channels shall incorporate sediment basins / traps, and baffles.	/	/	/				
▪ All traps shall incorporate oil and grease removal facilities.	/	/	/				
▪ Sediment traps / sedimentation tanks shall be regular cleaned and maintained regularly.	/	/	/				
▪ All drainage facilities should be adequate for controlled release of storm flows.	/	/	/				
▪ Minimizing of exposed soil areas to reduce the potential for increased siltation and contamination of runoff.	/	/	/				
▪ Open stockpiles of more than 50m ³ should be covered.	/	/	/				
▪ Temporary stockpiles of excavated materials should be covered during rainstorms.	/	/	/				
▪ Manholes should be covered and sealed.	/	/	/				
▪ All chemical stores shall be contained (bunded) such that spills are not allowed to gain access to water bodies.	/	/	/				
▪ Vehicles and plant should be cleaned of earth, mud and debris before leaving the site.	/	/	/				
▪ Vehicle washing facilities should be provided at every site exit.	/	/	/				
▪ Vehicle washing facilities should be adequate to settle out the sand and silt.	/	/	/				
▪ Washing area and road exiting from washing facility should be paved.	/	/	/				
▪ Access road should have sufficient back fall toward washing facility.	/	/	/				
Dredging Activities							
▪ Dredging of designated contaminated marine mud shall only be undertaken by a suitable grab dredger using a close grab.	/	/	/				
▪ Mechanical grabs shall be designed and maintained to avoid spillage and shall be seal tightly while being lifted.	/	/	/				
▪ All vessels shall be sized such that adequate clearance is maintained between vessel and the sea bed and under water pipelines at all states of the tide to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller on the water within the site.	/	/	/				
▪ The works shall cause no visible foam, oil, grease, scum litter or other objectionable matter to be present on the water within the site.	/	/	/				
▪ All barges shall be fitted with tight fitting seals to their bottom openings to prevent leakage of materials.	/	/	/				
▪ Excess material shall be cleaned from the decks and exposed fittings of the barges before the vessels are moved.	/	/	/				
▪ Loading of barges shall be controlled to prevent splashing of dredging material to the surrounding water and the barges shall not be filled to a level which will cause overflowing of material or polluted water during loading or transportation.	/	/	/				
▪ Adequate freeboard shall be maintained on barges to ensure that decks are not washed by wave action.	/	/	/				

SITE INSPECTION CHECKLIST ON THE IMPLEMENTATION OF ENVIRONMENTAL MITIGATION MEASURES

Mitigation Measures on Waste Management			Implementation Stages*			Remark
	Yes	No	N/A			
Filling Activities						
<ul style="list-style-type: none"> Use of silt screen around the filling face to reduce the losses to the surrounding. All vessels shall be sized such that adequate clearance is maintained between vessel and the sea bed and under water pipeline at all states of the tide to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash or pipelines damaged. The works shall cause no visible foam, oil, grease, scum, litter or other objectionable matter to be present on the water within the site. All barges shall be fitted with tight fitting seals to their bottom openings to prevent leakage of material. Loading of barges shall be controlled to prevent splashing of dredged material to the surrounding water and barges shall not be filled to a level which will cause overflowing of material or polluted water during loading transportation. 	/	/	/			
Waste Management						
Marine Dredged Sediment						
<ul style="list-style-type: none"> Relevant licence / permits for disposal of marine dredged sediment are available for inspection. Bottom opening of barges is fitted with tight fitting seals to prevent leakage of material. Excess material is cleaned from the decks and exposed fittings of barges and hopper dredgers before the vessel is moved. Monitoring of the barging loading is conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels are equipped with automatic self-monitoring devices as specified by the EPD. Transport of dredged marine sediments to the disposal site is by split barge of not less than 750m³ capacity, well maintained and capable of rapid opening and discharge at the disposal site. Inspection of the barge loading to ensure that loss of material does not take place during transportation. 	/	/	/			
Construction and Demolition (C&D) Waste						
<ul style="list-style-type: none"> Most of the C&D materials generated from the construction are sorted immediately in-situ to find out if they can be re-used for this job site or for other job sites. Sufficient spaces are identified and provided during the construction stage for the collection, temporary storage and on-site sorting of C&D materials. Proper protective measures, such as fences and tarpaulin, are provided, in order to protective the temporary stockpiled materials for later reuse / recycle. Avoiding cross contamination to reusable and / or recyclable materials collected (e.g. covering the reusable materials) In order to reduce the impacts to the public, except for those sorted inert C&D materials to be reused on site, all other sorted non-inert materials (e.g. general refuse and waste frameworks) shall be removed off site as soon as practicable in order to optimise the use of the on-site storage space. If the non-inert materials need to be stored on site for a short period, the materials shall be centralized and stored at specific areas far away the sensitive receivers. All Public Fill arising from the demolition works shall be limited to a size not more than 250mm and free of reinforcement bars, timber, etc. before re-using it. Recyclable materials sorted from the site should be collected by potential recycling contractors under the Contractor's arrangement. Trip ticket system will be implemented to ensure proper waste disposal at public filing and landfills Appropriate measures should be employed to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers. Proper resource planning and calculations before ordering the construction materials to be used will ensure that the wastage of the materials can be minimized 	/	/	/	Item ①		

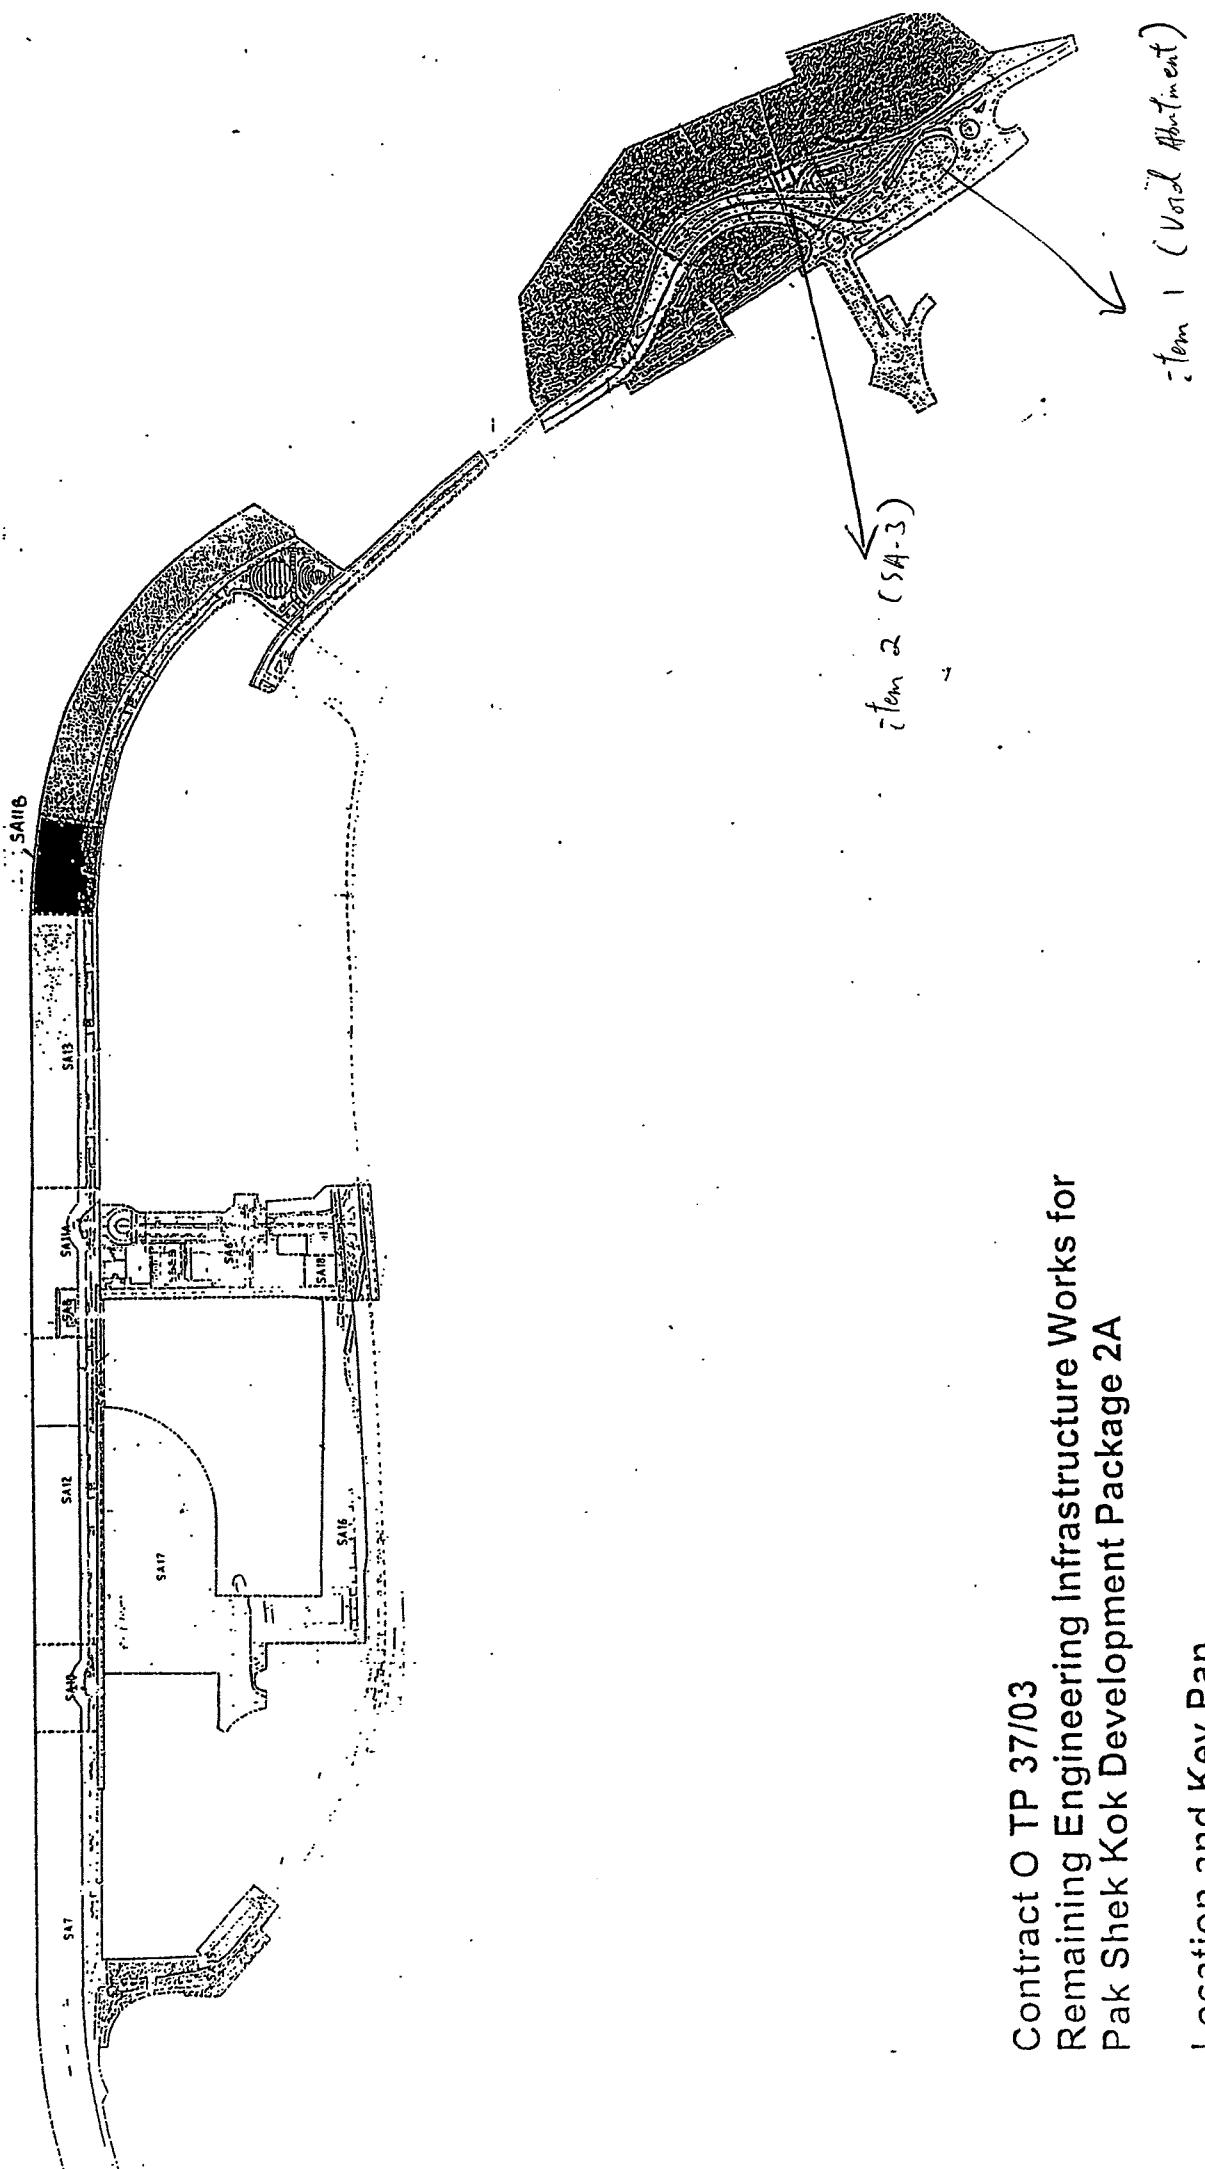

SITE INSPECTION CHECKLIST ON THE IMPLEMENTATION OF ENVIRONMENTAL MITIGATION MEASURES

Mitigation Measures on Waste Management	Implementation Stages*			Remark
	Yes	No	N/A	
• Proper storage will minimize the damage and thus the wastage of the materials	/			
• Training of site personnel in proper waste management procedures. The workers shall be constantly educated for the awareness of the proper handling of waste and to reduce the amount of waste while Site Agent shall be constantly met to discuss the effectiveness of the implementation of the waste management plan. Information to promote the waste management and the reduction concept shall be posted at the site to raise alertness of the personnel concerned.	/			
• Chemical Waste				
• It is required to register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes.	/			
• After use, chemical wastes (e.g. cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes.	/			
• Chemical wastes should be stored and collected by an approved operator for disposal at the Chemical Waste Treatment Facility or other licensed facility in accordance with the Chemical Waste (General) Regulation.	/			
• Containers used for the storage of chemical wastes				
• Be suitable for the substance they are holding, resistant to corrosion, maintained in a good condition, and securely closed	/			
• Have a capacity of less than 450L unless the specification have been approved by the EPD	/			
• Display a label in English and Chinese in accordance with instructions prescribed in Schedule 2 of the Chemical Waste (General) Regulations and Codes of Practice	/			
• Labelling				
• Every container of chemical waste would bear an appropriate label, which would contain the particulars details.	/			
• The waste produced would ensure that the information contained on the label is accurate and sufficient so as to enable proper and safe handling, storage and transport of the chemical waste	/			
• Storage Area				
• Be clearly labeled and used solely for the storage of chemical waste	/			
• Be enclosed on at least 3 sides	/			
• Have an impermeable floor and bunding of sufficient capacity to accommodate 110% of the volume of the largest container or 20% of the total volume of waste stored in that area, whichever is the greatest	/			
• Have adequate ventilation	/			
• Be covered to prevent rainfall entering	/			
• Be arranged so that incompatible materials are adequately separated	/			
• Disposal				
• Be via a licensed waste collector	/			
• To a licensed disposal facility, such as Chemical Waste Treatment Centre	/			
• Be a reuser of the waste, under approval from the EPD	/			

SITE INSPECTION CHECKLIST ON THE IMPLEMENTATION OF ENVIRONMENTAL MITIGATION MEASURES

	Mitigation Measures on Waste Management	Implementation Stages*			Remark	
		Implementation Stages*				
		Yes	No	N/A		
• Spillage						
• Establish source of spill or discharge and determine nature of material, where possible halt discharge	✓	✓				
• Commencing at the source of the spill, establish all current and potential impacted areas	✓	✓			(2)	
• Commence containment of spill using bunds made from available materials and ground water cut-off trenches where necessary	/	/			{item ②}	
• After spill is contained remove material (including contaminated soil where necessary) using pumps and/or absorbent materials	/	/			{item ③}	
• Dispose of materials as chemical wastes	/	/				
• General Refuse						
• General refuse generated on-site is in enclosed bins or compaction units separate from construction and chemical waste	✓	✓			{item ①}	
• A reputable waste collector is employed by the Contractor to remove general refuse from the site, separately from the construction and chemical waste.	✓	✓				
• General refuse generated is removed on daily or every second day basis to minimise odour, pest and litter impacts	✓	✓				
• Aluminium cans are recovered from the waste stream by individual collectors if they are segregated or easily accessible, so separate, labelled bins for their deposit should be provided if feasible.	✓	✓			{item ①}	
• Office wastes are reduced through recycling of paper if volumes are large enough to warrant collection.	/	/				
• Site Practice						
• Good site practices should be adopted to clean the rubbish and litter on the construction sites so as to prevent the rubbish and litter from dropping into the nearby environment.	✓	✓			{item ①}	
• Construction sites should be cleaned on a regular basis.	✓	✓				
• The Contractor assigned worker is responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site.	✓	✓				
• Proper storage and site practices to minimise the potential for damage or contamination of construction materials.	✓	✓				
• The Environmental Permit should be displayed conspicuously on site	✓	✓				
• Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste.	✓	✓				
• Any unused chemicals or those with remaining functional capacity should be recycled.	✓	✓				
• A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be used, e.g. trip ticket system for chemical waste disposal. Quantities could be determined by weighing each load or other suitable methods.	/	/				
• Suitable collection sites around site offices will be required. For environmental hygiene reasons and to minimize odor, refuse should not be stored for a period exceeding 48 hours, however, removal every 24 hours is preferable.	/	/				
• Minimize windblown litter and dust during transportation by either covering trucks or transporting wastes in enclosed container.	/	/				
• All generators, fuel and oil storage are within bundle areas.	/	/				
• Oil leakage from machinery, vehicle and plant is prevented.	/	/				
• Chemical storage area, drainage systems, silt traps, sumps and oil interceptors are cleaned and maintained regularly.	/	/
