Dear Mr. Cheng,

Contract No. DC/2007/17 Drainage Improvement Works in Cheung Po, Ma On Kong, Yuen King San and Tin Sam Tsuen of Yuen Long District and Sewerage at Tseng Tau Chung Tsuen, Tuen Mun <u>Monthly EM&A Report for KT13 (August 2009) – Version 2</u>

We refer to the captioned report (ref.: TCS00408/08/600/R1209v2) and advise that we have no further comment on the captioned submission.

We hereby endorse the captioned report for your onward submission.

If you require any further information, please do not hesitate to contact the undersigned.

Yours sincerely,

Coleman Ng Independent Environmental Checker

#### Executive Summary

ES01 This is the **11th** monthly EM&A report for the Channel KT13, covering the construction period from **26 July 2009 to 25 August 2009** (the Reporting Period).

#### **Breaches of Action and Limit Levels**

- ES02 Monitoring results of the Reporting Period demonstrated no exceedance of environmental quality criteria for air quality, construction noise and ecology.
- ES03 A total of twenty six (26) Action/Limit Level exceedances of water quality criteria, all due to turbidity, suspended solids (SS) and zinc were recorded at a designated Location W6 during the Reporting Period. Investigations for the causes of the exceedances are still in progress. Based on observation during the weekly site inspection, water mitigation measures such as sedimentation tanks, temporary earth bunds and sand bags to isolate the construction areas and the existing stream have been implemented. CRBE was also reminded to enhance the water mitigation measures at the downstream of KT13 to minimize the potential of causing water quality exceedances. All measured parameters of those 26 samples are summarized below:

Location	Exceedance	DO	Turbidity	рΗ	SS	NH4 <sup>+-</sup> N	Zn	Total
We	Action Level	0	0	0	0	0	0	0
000	Limit Level	0	11	0	11	0	4	26
Total	Action Level	0	0	0	0	0	0	0
Total	Limit Level	0	11	0	11	0	4	26

- ES04 It is noted that part of the bamboo trees within the Ho Pui Egretry boundary as shown in the EM&A manual was found to be cleared by others on 11 July 2009. This incident has been reported to EPD on the same day. During the walk through survey on 17 August 2009, there was no sign of further clearance of the bamboo trees or other trees within the Ho Pui Egretry boundary. It was noted that the clearance affected only a small portion of vegetations within the boundary of the Ho Pui Egretry, which had been previously used by egrets as nesting site but not in recent years and no exceedance of the ecological monitoring criteria was recorded after this incident.
- ES05 During the Reporting Period, there was no construction work conducted within 100m of the cultural heritage site at KT13. Therefore, no cultural heritage monitoring was required in accordance with the approved methodology. Landscape inspection was conducted on **8 and 22 August 2009**. No significant changes were observed for the identified landscape resources and visual sensitive receivers, except for minor changes due to channel excavation, site clearance and preparation work at the identified landscape resources including LR1, LR2.1, LR2.2, LCA1, LCA3 and LCA4.

#### Environmental Complaint, Notification of Summons and Prosecution

ES06 No documented complaint, notification of summons and successful prosecution was received during the Reporting Period. No major environmental impacts were observed during the weekly site inspection. Environmental audit of the Reporting Period, indicated that the implemented mitigation measures for air quality, construction noise and ecology were effective. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

# **Reporting Changes**

ES07 No reporting changes were made during the Reporting Period.

#### Future Key Issues

- ES08 During wet season, water quality mitigation measures to avoid ingress of runoff into Channel KT13 should be properly installed and maintained, as appropriate. In addition, the implemented mitigation measures such as sand bags downstream of the excavation site may also be improved to cater for additional water flows during wet season.
- ES09 Special attention should be paid to construction noise and other environmental issues identified in the EM&A Manual as recommended in the EIA and summarized in Mitigation Measure Implementation Schedule.
- ES10 Proposal for adopting the pH range of 6 to 9 pH value in place of the existing pH Action and Limit Level has been approved by ER and IEC's. The submission has been proceeding to EPD for formal approval.

#### 1 ENVIRONMENTAL STATUS

This is the **11<sup>th</sup>** monthly EM&A report for KT13, covering the construction period from **26 July 2009 to 25 August 2009** (the Reporting Period).

1.1 PROJECT AREA AND CONSTRUCTION PROGRAMME

Drawings showing the project area, any environmental sensitive receivers and the locations of the monitoring and control stations are presented in *Appendix A*, and the construction program in *Appendix B*.

1.2 WORKS UNDERTAKEN DURING THE REPORTING PERIOD

Apart from general works of tree survey, structural survey and environmental monitoring & audit, works undertaken during the Reporting Period with fine tuning of construction activities showing the inter-relationship with environmental protection/mitigation measures for the month are summarized as follows:

- (a) Reinstatement works at upstream meander at approx BCH125- BCH155;
- (b) Excavation of channel formation;
- (c) Construction of channel structure;
- (d) Backfilling;
- (e) Installation of type 2 railing; and
- (f) Laying underground drain pipe

### 1.3 Environmental Management Organization

Management structure and key personnel contact names and telephone numbers of the environmental management organization are presented in *Appendix C*, where DSD is the Project Proponent; CRBC is the main Contractor; EPD and AFCD are the supervisory departments for environmental protection of the Project; BVHKL is the Engineer's Representative of DSD (the ER); ARUP is the Independent Environmental Checker (the IEC) and Action-United Environmental Services and Consulting (AUES) is the environmental team (the ET).

- 1.4 LICENSING STATUS
- 1.4.1 Air Pollution Control (Construction Dust) Regulation

Pursuant to the *Air Pollution Control (Construction Dust) Regulation,* CRBC has notified EPD, via submission of Form NA dated 14 February 2008, of the scope and nature of the works to be carried out under the Project, including construction activities such as stockpiling, loading and unloading, transfer of dusty material, use of vehicles and debris handling, etc. CRBC will continuously review the status of the environmental licenses and apply the required licenses/permits prior to the commencement of construction work.

1.4.2 Noise Control Ordinance

No *Construction Noise Permit* (CNP) is required for the Project pursuant to the Noise Control Ordinance (NCO) and the associated applicable subsidiary regulations of *Noise Control (General) Regulation, Noise Control (Hand-held Percussive Breaker) Regulation and Noise Control (Air Compressor) Regulation,* as the use of powered mechanical equipment, or conducting construction work in during restricted hours, i.e. 1900 to 0700 hours on normal weekdays and any time on general holidays including Sundays is not anticipated during the whole construction period. CRBC will continuously review the status of the environmental licenses under the NCO and apply the required licenses/permits prior to the commencement of construction work.

- 1.4.3 Waste Disposal (Charges for Disposal of Construction Waste) Regulation
   CRBC has applied for a Billing Account (Construction Work Contract with Value of \$1million or above), under the Waste Disposal (Charges for Disposal of Construction Waste)
   Regulation. The account number 7006524 has been assigned on 9 Jan 2008.
- 1.4.4 Water Pollution Control Ordinance
   CRBC has applied for a discharge license under Section 20 of the Water Pollution Control Ordinance, and the license No. 1U461/1 has been issued.
- 1.4.5 Waste Disposal (Chemical Waste) (General) Regulation CRBC has registered as a Chemical Waste Producer with EPD under the Waste Disposal (Chemical Waste) (General) Regulation and the Waste Producer Number assigned is WPN: 5611-531-C3124-28 dated 2 May 08.
- 1.4.6 Dumping at Sea Permit

CRBC has been granted by the Environmental Protection Department a Permit Issued under the *Dumping at Sea Ordinance* (Permit no. EP/I4D/08-095, dated 18 September 2008, permit validity period of six months from 18 September 2008 to 17 March 2009) for disposal of 18,469 m<sup>3</sup> sediment, requiring Type 1 – open sea disposal at East Sha Chau Contaminated Mud Disposal Site – Pit IV b, to be capped as directed by the Management Team of the Civil Engineering and Development Department. Note that this permit has expired. As there is no need for further sea disposal, no further permits will be required in the future.

1.5 Environmental Protection and Pollution Control Mitigation Measures

CRBC has committed to implement environmental protection and pollution control and mitigation measures, as recommended in the EIA, EP, EM&A Manuals, and summarized in the Mitigation Measures Implementation Schedules. The implemented mitigation measures include

- (a) Watering of stockpiles of rip-rap at KT13;
- (b) Covering of the loose soil at KT13 to minimize water quality impacts;
- (c) Hard pavement of haul road leading to public roads at KT13;
- (d) Classification and disposal of illegally dumped construction and demolishment materials at KT13;
- (e) Construction of noise barriers; and
- (f) Erection of dams with sand bags downstream the excavation site within the water course of KT13 to enhance sedimentation of turbidity and suspended solids (SS).

2 MONITORING METHODOLOGY

#### 2.1 **MONITORING PARAMETERS**

According to the EM&A requirements set out in the EIA, Environmental Permit No. EP263/2007 (the EP) and the associated EM&A Manual, the required monitoring parameters are summarized as follows.

#### **Summary of Monitoring Parameters** Table 2-1

Environmental Issue	Monitoring Parameters		
Air Quality	<ul> <li>(a) 1-hour Total Suspended Particulate (1-hour TSP); and</li> <li>(b) 24-hour Total Suspended Particulate (24-hour TSP).</li> </ul>		
Construction Noise	<ul> <li>(a) A-weighted equivalent continuous sound pressure level (30min) (Leq(30min) during the normal working hours; and</li> <li>(b) A-weighted equivalent continuous sound pressure level (5min) (Leq(5min) for construction work during the Restricted Hours.</li> </ul>		
Water Quality	(a) In Situ Measurement	temperature, dissolved oxygen (DO), pH & turbidity	
water Quality	(b) Laboratory Analysis	suspended solids (SS), Ammonia Nitrogen $(NH_3-N)$ and Zinc $(Zn)$	
Ecology	Vegetation, all bird species of wetland, Ho Pui Egret, Ma On Hong Egret and Flight Line Survey		
Waste Management	Inspection and the document audit		
Cultural Heritage Condition survey for a historical grave		a historical grave	
Landscape & Visual	To audit the implementation of the proposed construction phase mitigation measure stipulated in EIA.		

#### 2.2 **MONITORING LOCATIONS**

Details of the monitoring locations are summarized in Table 2-2 and shown in Appendix A. For ease of reference, monitoring locations denoted with "(a)" are relocated locations to differentiate them from the original 'EM&A Manual' locations.

Table 2-2Summary of Monitoring Locations				
-				

Environmental Issues	Monitoring Location	Identified Address / Status of Monitoring Locations / Rationa Co-ordinates for Recommended Replacement		
Air	A1(a)	No.68 Ho Pui Village	The original location of EM&A Manuals A1 has permanently been abandoned. No access can be acquired in the vicinity of A1. Taken into consideration that Ho Pui Village is one of the most important sensitive receivers near KT-13 without monitoring, the most fronting house, No. 68 Ho Pui Village, is therefore recommended as the replacement location A1(a).	
	A2	No.1 Ma On Kong Village	Original location of the EM&A Manual; access granted.	
Noise	N1(a)	168-169 Kam Ho Road, Ma On Kong Village,	Original location of N1 identified in the EM&A Manual was relocated to proposed area as recommended by IEC.	
	N2(a)	No. 68 Ho Pui Village,	The original location of EM&A Manuals N2 has permanently been abandoned. No access can be acquired in the vicinity of N2. Taken into consideration that Ho Pui Village is one of the most important sensitive receivers near KT-13 without monitoring, the most fronting house, No. 68 Ho Pui Village, is therefore recommended as the replacement location N2(a).	
	N3	No.1 Ma On Kong Village	Original locations of the EM&A Manual; access granted.	
Water	W1	E824539 / N830283	Original locations of the EM&A Manual; access resolved.	

Z:\Jobs\2008\TC\$00408 (DC-2007-17)\600\EM&A\Impact\KT13\Monthly\11th Monthly Report - August 09\R1209v1.doc Action-United Environmental Services and Consulting

Environmental	Monitoring	Identified Address /	Status of Monitoring Locations / Rationale	
Issues	Location	Co-ordinates	for Recommended Replacement	
	W2	E824693 / N830258	Original locations of the EM&A Manual;	
			access resolved.	
	W3(a)	E824833 / N830374	The W3 is proposed to be relocated about 55	
			m down stream to W3(a) for safety reason as	
			there is no any discharge point observed	
			between W3 and the proposed W3(a).	
	W4	E824936 / N830618	Original locations of the EM&A Manual;	
			access resolved.	
	W5	E825008 / N830812	Original locations of the EM&A Manual;	
	14/0		access resolved.	
	W6	E825100 / N830987	Original locations of the EM&A Manual;	
			access resolved.	
Ecology	Monthly monitoring along the boundary of the works area to confirm that there are			
	adverse impacts on habitats outside the site in particular the Conservation Area (CA) zor			
	and Ho Pul Egretry.			
	Photographic records at six-month intervals;			
	wonthis monitoring of all bird numbers including wetland species and species identified as			
	Monitoring of	Ho Pui egretry during Mar	ch to August. The Ma On Kong egretry is also

#### 2.3 MONITORING FREQUENCY, DURATION AND SCHEDULE

#### 2.3.1 Monitoring Frequency and Duration

Environmental monitoring is conducted upon commencement of the construction activities and throughout the whole construction period to detect and minimize any adverse environmental impacts generated from the construction activities of the Project. The monitoring frequency and duration for air quality, construction noise, water quality, ecology and other parameters are summarized below.

#### Air Quality

<u>Frequency</u>: Once every 6 days for 24-hour TSP and three times every 6 days for 1-hour TSP, when the highest construction dust impacts are anticipated.

Duration: Throughout the construction period

#### **Construction Noise**

- <u>Frequency</u>: Measurement of Leq(30min): Once a week during 0700-1900 hours on normal weekdays. If the construction work is undertake at restricted hours, the frequency of noise monitoring will be conducted in accordance with the requirements under the related Construction Noise Permit issued by EPD as follows:
  - 3 consecutive Leq(5min) at restrict hour from 1700 2300 hours;
  - 3 consecutive Leq(5min) for restrict hour from 2300 0700 hours next day;
  - 3 consecutive Leq(5min) for Sunday or public holiday from 0700 1900 hours;

<u>Duration</u>: Throughout the construction period

# Water Quality

<u>Frequency</u>: Three times a week with at least 36 hour intervals between any two consecutive monitoring events

As the water columns in the stream water within KT13 is generally less than 3m, measurement is performed at the mid-depths of the monitoring locations. In case the water columns are deeper than 6m, measurement shall be carried out at three water depths, namely, 1m below water surface, mid-depth, and 1m above river bed. If the water depths are between 3 to 6m, the mid-depth measurement is omitted.

<u>Depths</u>: As the water columns in the stream water within KT13 is generally less than 3m, measurement is performed at the mid-depths of the monitoring locations. In case the water columns are deeper than 6m, measurement shall be carried out at three water depths, namely, 1m below water surface, mid-depth, and 1m above river bed. If the water depths are between 3 to 6m, the mid-depth measurement is omitted.

<u>Duration</u>: Throughout the construction period.

# <u>Ecology</u>

The Ecology Monitoring is required in accordance with the EM&A Manual.

- Parameters: Vegetation, All bird species including wetland birds, Ho Pui and Ma On Hong Egretries and Flight line survey
- Frequency:Vegetation Impact monitoring monthly;<br/>Photographic records/checks against baseline records– six monthly<br/>Wetland Bird survey Monthly of half-day survey;<br/>Ma On Kong egretry Monthly between March to August; and<br/>Ho Pui egretry Bi-weekly between March and August;<br/>Flight line Survey Month during the period from April to JuneDuration:Throughout the whole construction period

# Waste Management Audit

<u>Frequency</u>: Once per month <u>Duration</u>: Throughout the construction period.

# Cultural Heritage

Scope:Condition survey of a Qing Dynasty Grave.Frequency:Bi-monthlyDuration:Throughout the construction phase period.

# Landscape & Visual

Frequency:Bi-weeklyDuration:Throughout the construction phase period.

2.3.2 Environmental Monitoring Schedule

The monitoring schedules for the Reporting Period and next month are presented in *Appendix D.* 

2.4 MONITORING EQUIPMENT AND PROCEDURE

The monitoring equipment and procedures are summarized below. Calibration certificates of the equipment and the related laboratories are presented in *Appendix E.* 

#### 2.4.1 Weather Conditions during the Reporting Period

All meteorological information is extracted from the Hong Kong Observatory (Lau Fau Shan Station). The meteorological data include wind direction, wind speed, humidity, rainfall, air pressure and temperature etc., that in general are required for evaluating the environmental impact arising from the construction activities. The meteorological data are presented in *Appendix D*.

#### 2.4.2 Air Quality

#### Monitoring Equipment

A list of air quality monitoring equipment is shown below.

#### Table 2-4-2Air Quality Monitoring Equipment

Equipment	Model	Serial Number
24-hour TSP		
High Volume Air Sampler	Grasby Anderson GMWS 2310 HVS	-
Calibration Kit	TISCH Model TE-5025A	1612
1-hour TSP		
Portable Dust Meter	TSI DustTrak Model 8520	21060 / 23080 / 23079

#### Monitoring Procedure

#### <u>1-hour TSP</u>

The 1-hour TSP measurement follows manufacturer's Operation and Service Manual, using a 1-hour TSP monitor brand named TSI Dust Track Aerosol Monitor Model 8520 or Sibata LD-3 Laser Dust Meter, which is a portable, battery-operated laser photometer to record the real time 1-hour TSP based on 90<sup>o</sup> light scattering. The 1-hour TSP monitor consists of the following:

- (a) A pump to draw sample aerosol through the optic chamber where TSP is measured;
- (b) A sheath air system to isolate the aerosol in the chamber to keep the optics clean for maximum reliability; and
- (c) A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.

The 1-hour TSP meter to be used will be within the valid period, calibrated by the manufacturer prior to purchasing. Zero response of the instrument will be checked before and after each monitoring event.

#### 24-hour TSP

The equipment used for 24-hour TSP measurement is the high volume air sampling system (hereinafter 'HVS') brand named Thermo Andersen, Model GS2310 TSP. The HVS complies with US EPA Code of Federal Regulation, Appendix B to Part 50. The HVS consists of the following:

- (a) An anodized aluminum shelter;
- (b) A 8"x10" stainless steel filter holder;
- (c) A blower motor assembly;
- (d) A continuous flow/pressure recorder;
- (e) A motor speed-voltage control/elapsed time indicator;
- (f) A 6-day mechanical timer, and
- (g) A power supply of 220v/50 Hz

The HVS is operated and calibrated on a regular basis following the manufacturer's instruction using the NIST-certified standard calibrator brand named TISCH Calibration Kit Model TE-5025A. Regular HVS operation and maintenance as well as filter paper installation and collection is performed by the ET's competent technicians, whereas laboratory analyses are conducted in a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (herein after 'ALS'). The 24-hour TSP filters of the 24-hour TSP will be kept in ALS for six months prior to disposal.

All relevant data including temperature, pressure, weather conditions, elapsed-time meter reading for the start and stop of the sampler, identification and weight of the filter paper are recorded in details.

#### 2.4.3 Construction Noise

#### Monitoring Equipment

A list of construction noise monitoring equipment is shown below.

#### Table 2-4-3 Construction Noise Monitoring Equipment

Equipment	Model	Serial Number
Integrating Sound Loval Mater	Cesva SC-20c/	T212509
Integrating Sound Level Meter	Bruel & Kjaer 2238	2285762 / 2285690
Calibrator	Cesva CB-5 /	030934
Calibrator	Bruel & Kjaer 4231	2292168 / 2326408
Portable Wind Speed Indicator	Testo Anemometer	-

#### Monitoring Procedure

Sound level meters listed above comply with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications, as recommended in Technical Memorandum (TM) issued under the Noise Control Ordinance (NCO).

All noise measurements will be performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (Leq). Leq(30 min) in six consecutive Leq(5 min) measurements will be used as the monitoring parameter for the time period between 0700-1900 hours on weekdays throughout the construction period. Leq(15min) in three consecutive Leq(5 min) measurements for other time periods (e.g. during restricted hours) will only be conducted for monitoring the construction noise during restricted hours as necessary.

The sound level meter is mounted on a tripod at a height of 1.2 m and placed at the assessment point and oriented such that the microphone is pointed to the site with the microphone facing perpendicular to the line of sight. The windshield is fitted for all measurements. Where a measurement is to be carried out at a building, the assessment point is normally at a position 1 m from the exterior of the building façade. Where a measurement is to be made for noise being received at a place other than a building, the assessment point is at a position 1.2 m above the ground in a free-field situation, i.e. at least 3.5 m away from reflective surfaces such as adjacent buildings or walls.

Immediately prior to and following each noise measurement the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements will be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0dB. No noise measurement will be made in the present of significant fog, rain, wind with a steady speed exceeding 5m/s or wind with gusts exceeding 10m/s. The wind speed is checked with a portable wind speed meter capable of measuring the wind speed in m/s.

#### 2.4.4 Water Quality

#### Monitoring Equipment

Monitoring Equipment for water quality is listed below.

Table 2-4-4	Water Quality Monitoring Equipment
-------------	------------------------------------

Equipment	Model / Description	Serial Number
Water Depth Detector	Eagle Sonar	-
Water Sampler	Teflon bailer / bucket	-
Thermometer & DO meter	YSI 550A	05F2063AZ
pH meter	Extech pH EC500	133298

Z:\Jobs\2008\TCS00408 (DC-2007-17)\600\EM&A\Impact\KT13\Monthly\11th Monthly Report - August 09\R1209v1.doc Action-United Environmental Services and Consulting

Equipment	Model / Description	Serial Number
Turbidimeter	Hach 2100p	950900008735
Hand Refractometer	ATAGO	289468
Sample Container	High density polythene bottles (provided by laboratory)	-
Storage Container	'Willow' 33-litter plastic cool box	-

# Monitoring Procedure

#### Water Depth

As the water columns in the stream water within KT13 is generally less than 3 m, measurement is performed at the mid-depths of the monitoring locations. In case the water columns are deeper than 6 m, measurement shall be carried out at three water depths, namely, 1 m below water surface, mid-depth, and 1 m above river bed. If the water depths are between 3 to 6 m, the mid-depth measurement is omitted.

Water depths are determined prior to measurement and sampling, using a portable battery operated depth detector, brand named 'Eagle Sonar', if the depths exceed 1.5 meter. For the depths well below 1 meter, the depths of water columns are measured with a steel ruler with appropriate weight.

### Dissolved Oxygen (DO)

A portable YSI 550A DO Meter will be used for in-situ DO measurement. The DO meter is capable of measuring DO in the range of 0 - 20 mg/L and 0 - 200 % saturation and checked against water saturated ambient air on each monitoring day prior to monitoring. Although the DO Meter automatically compensates ambient water temperature to a standard temperature of 20<sup>o</sup>C for ease of comparison of the data under the changing reality, the temperature readings of the DO Meter will be recorded in the field data sheets. Calibration of the equipment will be performed by ALS on quarterly basis.

# <u>рН</u>

A portable Extech pH Meter will be used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 - 14 and readable to 0.1. Standard buffer solutions of pH 7 and pH 10 are used for calibration of the instrument before and after measurement. Quarterly calibration of the equipment will be performed by ALS.

#### **Turbidity**

A portable Hach 2100p turbidity Meter will be used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 - 1000 NTU. Calibration of the equipment will be performed by ALS on quarterly basis.

#### <u>Salinity</u>

A portable hand Refractometer AGATO will be used for in-situ salinity measurement. The refractometer is capable of measuring salinity in the range of 0-70ppt with accuracy  $\pm$ 1% reading. Calibration of the equipment will be performed by ALS on quarterly basis.

#### Suspended Solids (SS)

SS will be determined by ALS upon receipt of the water samples using the HOKLAS accredited analytical method - ALS Method EA-025.

#### Ammonia Nitrogen(NH<sub>3</sub>-N)

<u> $NH_3-N$ </u> will be examined by ALS upon receipt of the water samples using the HOKLAS accredited analytical methods - ALS Method EK-055A.

# <u>Zinc(Zn)</u>

Zn will be analyzed by ALS upon receipt of the water samples using the HOKLAS accredited analytical methods - ALS Method EG-020.

#### Water Sampler

Water samples will be collected using a plastic sampler to prevent metal contamination. As the water depths in the stream water within KT13 are generally less than 0.5 m, a plastic bucket with a rope of appropriate length is used for water sampling. The sampler is rinsed before collection with the sample to be taken. For water depths deeper than 0.5 meter, a cleaned plastic bailer bucket will be used for sample collection.

1000 mL water sample is collected from each depth for SS determination. The samples collected are stored in a cool box maintained at 4<sup>o</sup>C and delivered to ALS upon completion of the sampling by end of each sampling day.

#### Sample Container

Water samples are contained in screw-cap PE (Poly-Ethylene) bottles, which are provided and pretreated according to corresponding HOKLAS and ALS analytical requirements. Where appropriate, the sampling bottles are rinsed with the water to be contained. Water samples are then transferred from the water sampler to the sampling bottles to 95% bottle capacity to allow possible volume expansion during delivery and storage.

#### Sample Storage

A 'Willow' 33-litter plastic cool box packed with ice will be used to preserve the collected water samples prior to arrival at ALS. The water temperature of the cool box will be maintained at a temperature as close to 4<sup>o</sup>C as possible without being frozen. Samples collected will be delivered to the laboratory upon collection within the maximum storage time required under the HOKLAS and ALS analytical requirements

#### 2.4.5 Ecology

Monthly walk through survey will be conducted along the boundary of work area for KT13. Bird monitoring will be conducted in the study areas monthly for KT13. Monitoring on the Ho Pui egretry and Ma On Kong egretry will be conducted between March to August. Flight line surveys to record the feeding areas and the habitat use of breeding egrets will be conducted between April to June. Photographic record should be made at six month intervals.

#### Monitoring Equipment

The following equipment will be used for monitoring:-

Standard portable field survey equipment was used for ecological monitoring, including

- (a) Binoculars of 10 x 40 magnifications;
- (b) Digital camera; and
- (c) Notebook.

#### Study Area

The areas for the ecological monitoring programme would cover 60 m on either side of the existing channel as well as the proposed bypass culvert, as shown in Figure 6.1 of the EM&A Manual. Within these, emphasis will be given to the area around the Ho Pui and Ma On Kong egretries and habitats of at least moderate ecological value. In addition, monitoring would also be undertaken at the Ho Pui egretry and Ma On Kong egretry is outside the demarcated monitoring area but is also monitored to identify any adverse effects on the breeding egrets).

#### Survey Method

Monthly monitoring will be conducted by means of walk through survey, along the boundary of work area for KT13. Any adverse impacts to the habitats outside the site, in particular the Conservation Area (CA) zone and Ho Pui Egretry, will be checked and reported.

Photographic records will be made every six months on the fixed photo record points selected during the baseline survey. The photos from the construction phase ecological

monitoring will be compared with those taken during the baseline, which are used as the baseline conditions.

Bird monitoring will be conducted in the study areas monthly for KT13. Attention should be paid on wetland species and species identified as being of conservation importance, and the habitats utilized should also be recorded. Bird surveys should commence no later than 2 hours after dawn.

Monitoring on the Ho Pui egretry and Ma On Kong egretry will be conducted between March to August. The frequency would be twice per month during March to May. Depending upon the nesting conditions at Ho Pui egretry, the frequency could be reduced to monthly between June and August if no egret nest found by the end of May, or maintained at twice per month till the end of August if there are egret nests. Number of active nests, species and number of birds present and breeding stage should be recorded.

Flight line surveys to record the feeding areas and the habitat use of breeding egrets will be conducted twice per month between April to June. The number and species of flying egrets, and their landing habitats and locations should be recorded.

#### 2.4.6 Waste Management, Cultural Heritage and Landscape & Visual

Waste Management, Cultural Heritage and Landscape & Visual monitoring is required for KT13 as stipulated in the EM&A manual [382047/E/EMA/Issue 5] *Section 5*, *Section 7* and *Section 8* accordingly.

#### Waste Management

During the monthly audit, ETL will pay attention to the issues relating to waste management, and check whether the Contractor has followed the relevant contract Specifications and the procedures specified under the law of HKSAR.

### Cultural Heritage

Condition survey by a qualified archaeologist is required for the historical grave near Ma On Kong before and during the construction phase. The method statement of condition survey of Ma On Kong Historic Grave (KT13-02-02) was issued to EPD and endorsed on 27 July 2008, the frequency of the condition survey during the construction phase and given the open cut method would be adopted for the construction of the proposed bypass box culvert under KT13 project, subject to the result of the condition survey carried out before the construction stage, it is recommended that bi-monthly condition survey be undertaken during the construction work within 100m area from the grave.

#### Landscape and Visual

In accordance with the EM&A manual [382047/E/EMA/Issue5] **Section 8** landscape and visual mitigation measures are required during construction and operation phase. Site inspection will be undertaken at least once every two weeks throughout the construction period to ensure compliance with the intended aims of the proposed mitigation measures.

- 2.5 QUALITY ASSURANCE PROCEDURES AND DATA MANAGEMENT
- 2.5.1 Documentation of the Environmental Monitoring

Field data including in-situ monitoring results, weather conditions and water sampling information and observation will be recorded in corresponding Field Data Sheets, which will be signed and dated by the respective environmental technician prior to submission to the ETL for validation and endorsement at the end of the monitoring day.

2.5.2 Data Management and Analysis

All impact monitoring data will be processed by the AUES data recording and management system, which complies with in-house Quality (*ISO 9001:2000*) Management System. Monitoring results recorded in the monitoring equipment e.g. 1-hour TSP Meters and Noise Meters will be downloaded directly from the equipment at the end of the monitoring period and input into a computerized database maintained by the ET. Laboratory results will be input directly into the computerized database and checked by personnel other than those who input the data.

2.5.3 Quality Assurance Procedures

Appropriate and standard QA/QC measures will be adopted for the environmental monitoring to ensure the scientific integrity of the data produced. Sources of error in the impact monitoring will be properly controlled with the following QA/QC procedures:

- (a) Appropriate field monitoring and sampling techniques, including monitoring equipment, storage and delivery of samples;
- (b) Well organized systematic field-data system e.g. all baseline monitoring information, field observation, results, weather conditions and water sampling information, etc. will be recorded in the field monitoring record sheets. The laboratory analysis records will be maintained by the HOKLAS following HOKLAS requirements;
- (c) HOKLAS requirements for QA/QC of all laboratory testing to ensure acceptable accuracy and reproducibility of the laboratory analysis indicated by consistent agreement between duplicate samples, validity of the analytical results by compliance with the required blanks and recovery of standard addition.

#### 2.5.4 Records

All impact monitoring data will be clearly and systematically documented in both hardware and software format and the software copy will be available for inspection upon request. All the document and data will be kept for at lest one year after completion of the Project. Field Data Sheets used to record the impact monitoring information, field observation, results, weather conditions and water sampling information, etc., will be properly maintained and kept by the ET. The copies of laboratory analysis records from ALS will be keep by the ET throughout the at least one year after completion of the EM&A program of the Project.

#### 2.6 REPORTING

2.6.1 General Requirements for Report Submission

General requirements for Monthly EM&A report submission as stipulated in the EIA, EP and EM&A Manual are summarized below.

Report	Submission
Monthly EM&A Report	• Within 10 working days of the end of each reporting month.
Quarterly EM&A Summary Report	<ul> <li>No specific requirement, proposed three weeks after endorsement of the 3<sup>rd</sup> monthly EM&amp;A report within a particular quarter.</li> </ul>
Final EM&A Summary Report	<ul> <li>No specific requirement, proposed one month upon completion of entire EM&amp;A program</li> </ul>

 Table 2-6
 Requirements for Report Submission

#### 2.6.2 Cut-Off Day of the Reporting Month

It was agreed among the ER, IEC, CRBC, ET and EPD that, in order to streamline the EM&A report submission and to cater for the occasional delay in obtaining laboratory analysis results, the cutoff day for each month is the 25<sup>th</sup> i.e. the first day of each report is the 26<sup>th</sup> of the last month and the end day, the 25<sup>th</sup> of that month.

#### 3 MONITORING RESULTS

The environmental monitoring results will be compared against the Action and Limit Levels established based on the baseline monitoring results and statutory criteria. In case the measured data exceed the environmental quality criteria, remedial actions will be triggered according to the Event and Action Plan enclosed in *Appendix F*. The environmental monitoring results are tabulated below and displayed as graphical plots in *Appendix G*.

- 3.1 AIR QUALITY
- 3.1.1 Action and Limit Levels

According to the Baseline Monitoring Report for KT13, the Action and Limit Levels for 24-hour and 1-hour TSP are established as follows:

Table 3-1-1	Air Quality	Action and	Limit Levels
-------------	-------------	------------	--------------

Monitoring Station	Action Lev	/el (μg /m³)	Limit Level (µg/m³)		
Monitoring Station	1-hour TSP 24-hour TSP		1-hour TSP	24-hour TSP	
KT13(A1(a))	309	144	500	260	
KT13(A2)	307	141	500	260	

#### 3.1.2 Results

Results of air quality monitoring at the identified locations during the Reporting Period are summarized in *Tables 3-1-3-1* and *3-1-3-2* below. Details of 24-hour TSP data and graphical plots of trends of monitored parameters at key stations over the past four reporting periods are presented in *Appendices G* and *H*.

	1	24-hour TSP (μg/m³)								
Date	Start Time	1 <sup>st</sup> hour	2 <sup>nd</sup> hour	3 <sup>rd</sup> hour	Average	Date	Results			
29-Jul-09	09:20	68	76	72	72	28-Jul-09	33

15-Aug-09	09:10	78	83	83	81	14-Aug-09	19
21-Aug-09	09:35	78	84	80	81	20-Aug-09	15
Average			63			63 Average 21	
(rar	nge)	(33-84)			(range)	(15-39)	

#### 3.1.3 Discussion

As shown in *Tables 3-1-2-1* and *3-1-2-2*, 1-hour TSP and 24-hour TSP results fluctuated well below the Action Level. No exceedance of Action or Limit Levels was recorded during the Reporting Period. Neither Notification of Exceedance (hereinafter 'NOE') of air quality criteria or corrective action was required.

#### 3.2 CONSTRUCTION NOISE

3.2.1 Action and Limit Levels

The Action and Limit Levels for construction noise are illustrated in Table 3-2-1.

Table 3-2-1	Construction	<b>Noise Action</b>	and Limit Levels
1 abie 3-2-1	CONSULCTION	NUISE ACLIUIT	and Linne Levels

Time Period	Action Level in dB(A)	Limit Level in dB(A)	
0700-1900 hours on normal	When one documented	> 75* dB(A)	
weekdays	complaint is received		

Note: \*Reduces to 70dB(A) for schools and 65dB(A) during the school examination periods.

#### 3.2.2 Results

Results of construction noise monitoring at the identified locations N1(a), N2(a) and N3 during the Reporting Period are summarized in *Tables 3-2-2-1* to *3-2-2-3*.

The baseline monitoring for N1(a) and N2(a) was performed on the 1st floor of the bedroom of 168-169 Kam Ho Road, Ma On Kong Village and No. 68 Ho Pui Village respectively. The impact noise monitoring, however, was performed on the ground floor of the same house due to denial of access to the 1st floor. The change of noise monitoring from 1st floor to ground floor will negate the need for a 3dB(A) façade correction but will not introduce any significant difference in detection and minimization of the of construction noise impacts, or alteration of the established A/L Levels. The ET has obtained the approval from EPD with consultation with the ER and IEC.

Date	Start Time	1 <sup>st</sup> set Leq5	2 <sup>nd</sup> set Leq5	3 <sup>rd</sup> set Leq5	4 <sup>th</sup> set Leq5	5 <sup>th</sup> set Leq5	6 <sup>th</sup> set Leq5	Leq30

Z:\Jobs\2008\TCS00408 (DC-2007-17)\600\EM&A\Impact\KT13\Monthly\11th Monthly Report - August 09\R1209v1.doc Action-United Environmental Services and Consulting

#### 3.2.3 Discussion

As shown in *Tables 3-2-2-1*, *Table 3-2-2-2* and *Table 3-2-2-3*, all the construction noise results fluctuated well below the Limit Level. No exceedance of Limit Level or documented construction complaint was recorded during the Reporting Period. No NOE or corrective action was therefore required.

3.3 WATER QUALITY

### 3.3.1 Action and Limit Levels

The Action and Limit Levels for water quality are illustrated in Table 3-3-1.

Table 3-3-1	Action and Limit I	Levels for Water	<b>Quality Monitoring</b>
-------------	--------------------	------------------	---------------------------

Monitoring	D (mg	0 g/L)	Turbidity (NTU)		рН		SS (mg/L)		Ammonia (µq/L)		Zinc (μg/L)	
Location	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level
W1 (Upstream) Control Station	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
W2 (Downstream) Impact Station	1.04	1.00	36.81	37.16	8.65	8.69	79.0	86.2	16.85	16.89	234.95	266.19
W3(a) (Upstream) Control Station	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
W4 (Upstream) Control Station	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
W5 (Upstream) Control Station	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
W6 (Downstream) Impact Station	0.93	0.91	27.88	30.02	8.7	8.7	73.40	78.68	51.62	54.56	191.90	201.58

#### 3.3.2 Results

Water quality monitoring results measured at W1, W2, W3(a), W4, W5 and W6 during the Reporting Period are presented in tabulation and graphical plots in *Appendix G*.

#### 3.3.2 Discussion

In this reporting period, a total of twenty six (26) Action/ Limit Level exceedances were registered at impact station W6 as shown in *Table 3-3-2.* 

Table 3-3-2	Summary	y of Water	Quality	/ Exceedances
-------------	---------	------------	---------	---------------

Location	Exceedance	DO	Turbidity	рΗ	SS	NH4 <sup>+-</sup> N	Zn	Total
W/6	Action Level	0	0	0	0	0	0	0
000	Limit Level	0	11	0	11	0	4	26
Total	Action Level	0	0	0	0	0	0	0
Total	Limit Level	0	11	0	11	0	4	26

# DO and NH<sub>4</sub>+-N

No exceedances of Action and Limit Levels of DO and  $NH_4^+$ -N were recorded during the Reporting Period. No Notifications of Environmental Quality Limit Exceedances (NOE) or corrective actions were therefore required for these parameters.

# <u>рН</u>

pH fluctuated within a range from 6.4 to 8.2, which were all below the Action and Limit Levels of 8.65 and 8.69 for W2 and 8.7 for W6. Proposal for adopting the pH range of 6 to 9 in place of the existing Action and Limit Level has been approved by the ER and IEC. It is at the stage of submitting to EPD for formal approval.

#### Turbidity and SS

According to the existing Action/Limit Levels, eleven (11) Limit Level exceedances of water quality criteria of turbidity and suspended solids were recorded at a designated Location W6 during the Reporting Period as shown in **Table 3-3-2**. NOEs were issued upon confirmation of the monitoring results, and investigation was conducted upon receipt of the information of construction activities and implementation status of mitigation measures provided by CRBC. The cause of the exceedances was being investigated by ET.

During weekly site inspection, channel excavation at downstream near Location W6 were undertaken during the reporting period. Those activities may have potential water quality impacts particularly in turbidity and SS of the stream water. Water mitigation measures such as sedimentation tanks, temporary earth bunds and sand bags to isolate the construction areas and the existing stream have been implemented. CRBE was also reminded to enhance the water mitigation measures at the downstream of KT13 to minimize the potential of causing water quality exceedances. Nevertheless, CRBC was reminded to fully implement the required water quality mitigation measures during construction under the Project, in particular when excavation and the associated channel works are undertaken and construction wastewater is generated and discharged to the Channel KT13.

#### <u>Zinc</u>

A total of four (4) Limit Level exceedances of zinc were registered during the Reporting Period respectively. NOE were issued upon confirmation of the monitoring results, and investigations of the NOE were conducted upon receipt of the information of construction activities and the implemented mitigation measures provided by CRBC. Preliminary investigations concluded that the exceedances were unlikely to be due to the Project.

- 3.4 ECOLOGY
- 3.4.1 Action and Limit Levels

The Action and Limit Levels for Construction Ecology Monitoring are shown in *Table 3-4-1* to according with the EM&A manual.

Table 3-4-1Ecological Action and Limit Levels

Parameters	Action Level	Limit Level
Decrease in number of breeding egrets since previous year	>20%	> 40%

#### 3.4.2 Results

Fifty-nine (59) individuals of birds from nineteen (19) species were recorded during the survey for the present monthly monitoring on 17 August 2009. Among the birds recorded, 3 individuals of wetland dependent birds (from 3 species) were recorded.

It is stated in the EP for KT13 that the monitoring of the Ho Pui egretry shall be carried out during the period from 1st March to 31st August as specified in the EM&A Manual. If no egret nest is found at the egretry during the period from 1st March to 31st May, the Permit Holder can start the construction works within 100m of the ecological buffer area upon obtaining the Director's approval until February in the next year. If egret nests are found during the period from 1st March to 31st August, no construction shall take place within 100m of the ecological buffer area before 1st October. In addition, it is required in the EM&A manual that biweekly monitoring of the Ho Pui egretry for the period from 1st March to end of May. Should no egret nest be found at the Ho Pui egretry by the end of May, monitoring frequency from June to August can be downgraded to Monthly. The monitoring during March 2009 to May 2009 did not record any nest in Ho Pui Egretry.

As no egret nest was found at the Ho Pui egretry by the end of May 09, egretry survey on Ho Pui Egretry was monthly in the Reporting Period, and conducted on 17 August 2009. No nest was found at the Ho Pui egretry during the present survey. Despite the fact that there had been no nest recorded at Ho Pui egretry in 2008, the Action/Limit Levels for ecology is complied. Ma On Kong egretry was also surveyed on 17 August 2009 to provide reference information on the breeding. No nest was found at Ma On Kong egretry either. Flight line surveys are required between April to June and thus not needed during the Reporting Period.

During the walk through survey on 17 August 2009, other than the bamboo trees which were found to be cleared by others during the site inspection on 11 July 2009, no adverse impacts on habitats outside the boundary of the works area including the Conservation Area and the location of Ho Pui Egretry was found.

There was also no sign of further clearance of the bamboo trees or other trees within the Ho Pui Egretry boundary. The clearance affected only a small portion of vegetations within the boundary of the Ho Pui Egretry, which had been previously used by egrets as nesting site but not in recent years (before the present monitoring programme commenced in 2008). No exceedance of ecological monitoring criteria was recorded after the incident.

Photo records of trees are scheduled in every six months and not required in this month. Ecological impact monitoring results are presented in the Table 5-5

Scientific Name	Common Name Reported project p		Abundance recorded in the present survey (17 August 09)	Habitat utilized
Birds				
Little Egret	Egretta garzetta	✓		
Cattle Egret	Bubulcus ibis	✓		
Chinese Pond Heron	Ardeola bacchus	✓	1	Stream
Crested Serpent Eagle	Spilornis cheela	✓

#### 3.5 WASTE MANAGEMENT, CULTURAL HERITAGE AND LANDSCAPE & VISUAL

#### 3.5.1 Waste Management

In order to comply with the waste management requirements, CRBC has been:

- (a) Assigned, since 9 Jan 2008, a Billing Account (account number 7006524) under the *Waste Disposal (Charges for Disposal of Construction Waste) Regulation;*
- (b) Issued a Discharge License No. 1U461/1 under Section 20 of the *Water Pollution Control Ordinance*;
- (c) Registered as a Chemical Waste Producer under the Waste Disposal (Chemical Waste) (General) Regulation (the Waste Producer Number assigned is WPN: 5611-531-C3124-28 dated 2 May 08); and
- (d) Granted by the Environmental Protection Department a Permit Issued under the *Dumping at Sea Ordinance* (Permit no. EP/I4D/08-095, dated 18 September 2008, permit validity period of six months from 18 September 2008 to 17 march 2009) for 18, 469 m<sup>3</sup> sediment requiring Type 1 open sea disposal at East Sha Chau Contaminated Mud Disposal Site Pit IV b to be capped as directed by the management Team of the CEDD.
- 3.5.2 Cultural Heritage

The Action and Limit Levels for Cultural Heritage are shown in *Table 3-5-2* according to the EM&A Manual.

 Table 3-5-2
 Cultural Heritage Resources Action and Limit Levels

Action Level	Limit Level
When damage or structural instability is first detected	Signs of deterioration and structural instability continues on subsequent visits after Action Level is triggered

During the Reporting Period, there was no construction work conducted within 100m area from the cultural heritage site within KT13, and therefore no cultural heritage monitoring was required in accordance with the approved methodology.

3.5.3 Landscape and Visual

Landscape and visual inspection was conducted on **8 and 22 August 2009**. Current situation of the identified landscape resources remained the same as those of the baseline, except minor changes of river/stream/fish pond landscape character area at LR1, LR2.1, LR2.2, LCA1, LCA3 and LCA4 due to site clearance, soil stockpiling and preparation work within KT13. Updated landscape and visual status is presented in *Appendix I*.

- 4 NON-COMPLIANCE, COMPLAINT, NOTIFICATION OF SUMMONS, SUCCESSFUL PROSECUTION AND OTHERS
- 4.1 NON-COMPLIANCE

Exceedance of environmental quality criteria has been discussed in *Section 3.1* to *3.5.* No other non-compliance or deficiency was identified during regular site inspection and environmental audit. No associated remedial action was necessary.

4.2 ENVIRONMENTAL COMPLAINT

No written or verbal complaint was received for each environmental issue during the Reporting Period. No associated remedial action was necessary.

- 4.3 NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTION No notifications of summons and successful prosecutions were recorded during the Reporting Period. No associated remedial action was necessary.
- 4.4 OTHERS
- 4.4.1 Waste Management Status

All types of waste arising from the construction work are classified into the following:

- Construction & Demolition (C&D) Material;
- Chemical Waste;
- General Refuse; and
- Excavated Soil and sediment

Waste generated, re-used, recycled and disposed of during the Reporting Period is shown in *Appendix J: Monthly Summary Waste Flow Table.* No Type I or Type II excavated soil were recorded in this reporting period.

4.4.2 Site Inspection and Environmental Audit

In this reporting period, **five** occasions of weekly environmental site inspection and audit were conducted during the Reporting Period jointly by the ER, EO and ET. No adverse environmental impacts were registered, indicating that the mitigation measures implemented were effective and sufficient for the construction activities undertaken. Minor deficiencies found in the site inspection and audit were in general rectified within the specified deadlines. Findings of the site inspection and environmental audit are summarized below.

Date	Findings / Deficiencies	Follow-Up Status
28 July 2009	No adverse environmental impacts were observed during the site inspection	N/A
4 August 2009	The Contractor was reminded to regularly maintain the impermeable soil cover to prevent water pollution due to soil erosion at KT-13. Regularly maintenance of water quality mitigation measures such as earth bunds is reminded.	Recommendations based on the observation on 11 August 2009 were followed.
11 August 2009	The Contractor is reminded to replace the worn permit displayed on the notice board.	Recommendations based on the observation on 21 August 2009 were followed.
21 August 2009	At Channel KT13, the Contractor is advised to stack up the formworks at a designated area in order to maintain the site tidiness.	Recommendations based on the observation on 25 August 2009 were followed.
25 August 2009	No adverse environmental impacts were observed during the site inspection	N/A

Table 4-4-1 Summa	ry of Findings of	Site Inspection ar	nd Environmental Audit
-------------------	-------------------	--------------------	------------------------

#### 4.4.3 Works to be Undertaken Next Month

Works to be undertaken next month are shown in the construction program enclosed in **Appendix B**. The construction activities undertaken in the Reporting Period including tree survey, environmental impact monitoring, structural conditional survey, excavation of channel formation, construction of channel structure, backfilling, construction of box culvert, installation of type 2 railing and reinstatement works at upstream meander at approx BCH125- BCH155 will also be continued in the forth-coming month. Newly activity of laying underground drain pipe would be conducted in the forthcoming month.

4.4.4 Future Key Issues and Mitigation Measures for the Forth-Coming Month

It is noted that part of the bamboo trees within the Ho Pui Egretry boundary as shown in the EM&A manual was found to be cleared by others on 11 July 2009. This incident has been reported to EPD on the same day. During the walk through survey on 17 August 2009, there was no sign of further clearance of the bamboo trees or other trees within the Ho Pui Egretry boundary. It was noted that the clearance affected only a small portion of vegetations within the boundary of the Ho Pui Egretry, which had been previously used by egrets as nesting site but not in recent years and no exceedance of the ecological monitoring criteria was recorded after this incident.

During wet season, water quality mitigation measures to avoid ingress of surface runoff into Channel KT13 should be properly maintained or improved, as appropriate.

In addition, special attention should also be paid to construction noise, water quality, ecology and other environmental issues identified in the EM&A Manual. Mitigation measures recommended in the EIA and summarized in Mitigation Measure Implementation Schedule (EMIS) should be fully implemented.

#### 5 CONCLUSIONS AND RECOMMENDATIONS

- i) This is the **11<sup>th</sup>** monthly EM&A report for Channel KT13, covering the construction period from **26 July 2009 to 25 August 2009** (the Reporting Period).
- ii) Monitoring results of the Reporting Period demonstrated no exceedance of environmental quality criteria for air quality, construction noise and ecology.
- iii) However, a total of **twenty six (26)** Limit Level exceedances of water quality monitoring due to turbidity, SS and zinc were recorded at impact station W6 during the Reporting Period. Preliminary investigation concluded that the exceedances were not works related under the Project.
- iv) During the walk through survey on 17 August 2009, there was also no sign of further clearance of the bamboo trees or other trees within the Ho Pui Egretry boundary. The clearance affected only a small portion of vegetations within the boundary of the Ho Pui Egretry, which had been previously used by egrets as nesting site but not in recent years. This incident thus did not affect any egret nests or egret individuals. No exceedance of ecological monitoring criteria was recorded after this incident.
- v) Landscape inspection was conducted on **8 and 22 August 2009**. No significant changes were observed for identified landscape resources and visual sensitive receivers, except for minor changes due to channel excavation, site clearance and preparation work at the identified landscape resources including LR1, LR2.1, LR2.2, LCA1, LCA3 and LCA4.
- vi) No documented complaints, notifications of summons and successful prosecutions were received during the Reporting Period. No adverse environmental impacts were observed during the weekly site inspection and environmental audit of the Reporting Period, which suggested that the implemented mitigation measures for air quality, construction noise and ecology were effective. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.
- vii) It is recommended that water quality mitigation measures stipulated in the EIA and summarized in mitigation measures implementation schedule in the EM&A Manual, including containment structure such as temporary earth bunds, sand bags, sheet pile barriers or other similar techniques, be fully implemented.
- viii) As wet season has come, it is reminded that water quality mitigation measures to avoid ingress of surface runoff into Channel KT13 should be properly maintained or improved, as appropriate.
- ix) Special attention should also be paid to construction noise and other environmental issues identified in the EM&A Manual. Mitigation measures recommended in the EIA and summarized in Mitigation Measure Implementation Schedule should be fully implemented.
- x) Proposal for adopting the pH range of 6 to 9 pH value in place of the existing pH Action and Limit Level has been approved by ER and IEC. Submission to EPD for formal approval is in process.

#### **Event/Action Plan for Construction Noise Monitoring**

### **Event and Action Plan for Water Quality**

Event	ET Leader	IEC	ER	Contractor
Action level being exceeded by one sampling day	Repeat in-site measurement to confirm findings; Identify Source(s) of impact; Inform IEC an Contractor; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC and Contractor; Repeat measurement on next day of exceedance	Discuss with ET and Contractor on the mitigation measures Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly Assess the effectiveness of the implemented mitigation measures.	Discuss with IEC on the proposed mitigation measures; Make agreement on the mitigation measures to be implemented;	Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check al plant and equipment; Consider changes of working methods; Discuss with ET and IEC and propose mitigation measures to IEC and ER; Implement the agreed mitigation measures.
Action level being exceeded by more than one consecutive sampling days	Repeat in-situ measurement to confirm findings; Identify source(s) of impact; Inform IEC and Contractor; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC and Contractor; Ensure mitigation measures are implemented; Prepare to increase the monitoring frequency to daily; Repeat measurement on next day of exceedance.	Discuss with ET and Contractor on the mitigation measures Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly Assess the effectiveness of the implemented mitigation measures.	Discuss with IEC on the proposed mitigation measures; Made agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures.	Inform the Engineer and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Consider changes of working methods; Discuss with ET and IEC and propose mitigation measures to IEC and ER within 3 working days; Implement the agreed mitigation measures.
Limit level being exceeded by one sampling day	Repeat in-situ measurement to confirm findings; Identify source(s) of impact; Inform IEC, contractor and EPD; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC, ER and Contractor; Ensure mitigation measures are implemented; Increase the monitoring frequency to daily until no exceedance of Limit level.	Discuss with ET and Contractor on the mitigation measures Review proposals on mitigation measures submitted by Contractor and advise the R accordingly Assess the effectiveness of the implemented mitigation measures.	Discuss with IEC, ET and Contractor on the proposed mitigation measures; Request Contract to critically review the working methods; Made agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures.	Inform the Engineer and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; consider changes of working methods; Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; Implement the agreed mitigation measures/
Limit level being exceeded by more than one consecutive sampling days	Repeat in-situ measurement to confirm fundings; Identify source(s) of impact; Inform IEC, contractor and EPD; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC, ER and Contractor; Ensure mitigation measures are implemented; Increase the Monitoring frequency to daily until no exceedance of Limit level for two consecutive days.	Discuss with ET and Contractor on the mitigation measures Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly Assess the effectiveness of the implemented mitigation measures.	Discuss with IEC, ET and Contractor on the proposed mitigation measures; Request Contractor to critically review the working methods; Make agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures; Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the marine work until no exceedance of Limit level.	Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Consider changes of working methods; Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; Implement the agreed mitigation measures; As directed by the Engineer, to slow down or to stop all or part of the marine work or construction activities.

#### **Event/Action Plan for Ecology**

EVENIT		ACI	FION	
EVENI	ET Leader	IEC	ER	Contractor
Action Level	Notify IEC and Contractor to carry out investigation	Review report of structural damage or instability by the ET.	Confirm receipt of notification of failure in writing	Notify AMO concerning the damage or structural instability of the cultural heritage resources
	damage or instability to the IEC and Contractor Discuss with the Contractor and formulate remedial measures	Review proposed remedial measures by the Contractor and advise the ER and Antiquities and Monuments Office (AMO) accordingly	Notify Contractor Require Contractor to propose remedial measures and to notify and seek approval from AMO.	Submit proposals for repair of damage to cultural heritage resources to AMO for approval and to implement approved
	Increase monitoring frequency to once per week to check mitigation effectiveness	Supervise the implementation of remedial measures, with approval from AMO.	Ensure remedial measures are properly implemented.	measures.
Limit Level	Notify IEC and Contractor to carry out investigation and to stop construction work within 100m of cultural heritage resource to avoid further impact until AMO are satisfied that the relevant structure has been repaired or stabilized to an acceptable level. Report reasons of continued structural damage or instability to the IEC and Contractor Discuss with the Contractor and formulate remedial measures Increase monitoring frequency to daily to check mitigation effectiveness	Review report of structural damage or instability by the ET. Review proposed remedial measures by the Contractor and advise the ER and Antiquities and Monuments Office (AMO) accordingly. Supervise the implementation of remedial measures, with approval from AMO.	Confirm receipt of notification of failure in writing Notify Contractor Require Contractor to propose remedial measures and to notify and seek approval from AMO. Ensure remedial measures are properly implemented.	To carry out investigation and to stop construction work within 100m of cultural heritage resource to avoid further impact until AMO are satisfied that the relevant structure has been repaired or stabilized to an acceptable level. Propose remedial measures for the repair and stabilization of cultural heritage resources, up to liaison of moving and rebuilding the relevant structure with the approval of owner (usually the clan members) and AMO.

## **Event and Action Plan for Cultural Heritage**

Action Level	Environmental Team Leader (ETL)	Independent Evnironmental Checker (IEC)	Engineer's Representative (ER)	Contractor
Non-conformity on one occasion	<ol> <li>Identify source</li> <li>Inform the IEC and the ER</li> <li>Discuss remedial actions with the IEC, the ER and the Contractor</li> <li>Monitor remedial actions until rectification has been completed</li> </ol>	<ol> <li>Check report</li> <li>Check the Contractor's working method</li> <li>Discuss with the ER and the Contractor on possible remedial measures</li> <li>Advise the ER on effectiveness of proposed remedial measures</li> </ol>	<ol> <li>Notify the Contractor</li> <li>Ensure remedial measures are properly implemented</li> </ol>	<ol> <li>Amend working methods</li> <li>Rectify damage and undertake remedial measures or any necessary replacement</li> </ol>
Repeated Non-conformity	<ol> <li>Identify source</li> <li>Inform the IEC and the ER</li> <li>Increase monitoring (site audit) frequency</li> <li>Discuss remedial actions with the IEC, the ER and the Contractor</li> <li>Monitor remedial actions until rectification has been completed</li> <li>If exceedance stops, cease additional</li> </ol>	<ol> <li>Check report</li> <li>Check the Contractor's working method</li> <li>Discuss with the ER and the Contractor on possible remedial measures</li> <li>Advise the ER on effectiveness of proposed remedial measures</li> <li>Supervise implementation of remedial measures</li> </ol>	<ol> <li>Notify the Contractor</li> <li>Ensure remedial measures are properly implemented</li> </ol>	<ol> <li>Amend working methods</li> <li>Rectify damage and undertake remedial measures or any necessary replacement</li> </ol>

#### Event and Action Plan for Landscape and Visual Impact - Construction Phase

monitoring (site audit)

# Appendix G

- (a) Impact Environmental Monitoring Data
- (b) Graphic Plot of Monitoring
  - 1. Construction Noise
  - 2. Air Quality
  - 3. Water Quality

### DSD CONTRACT NO. DC/2007/17 Drainage Improvement Works in Cheung Po, Ma On Kong, Yuen Kong San Tsuen and Tin Sam Tsuen of Yuen Long District and Sewerage at Tseng Tau Chung Tsuen, Tuen Mun

Drainage Improvement Works in Cheung Po, Ma On Kong, Yuen Kong San Tsuen, Tin Sam Tsuen of Yuen Long District and Sewerage at Tseng Tau Chung Tsuen, Tuen Mun

# Current Situation of Physical, Human and Cultural Landscape Resources at KT13, inspected on 8 and 22 August 2009

The physical resources that will be affected during the Construction Phase and Operational Phase, together with their sensitivity to change, are described below. The locations of the baseline landscape resources are mapped in Drawing no. LR-001. The Landscape Resources in direct conflict with the Project are mapped together with their extent outside study boundary for integrity of information. Photo views illustrating the landscape resources of the study area are illustrated in Drawing Nos. PR-001 to 002 inclusive. For ease of reference and co-ordination between text, tables and figures each landscape resources is given an identity number.

#### **Current Situation** Identify number -Section Photo **Baseline Study, Environmental Impact Assessment Final Report** in EIA Landscape Resources No [382047/E/EIA/Issue 9] Report Drainage Minor change due to 10.7.3 There is a semi-natural drainage features (the Ma On Kong Channel) in the study area with LR1 - River/ Stream A1 untrained natural upstream and partial trained downstream with a total length of 800m. The construction work A5 within the site Channel originates from the South-West of the valley and discharge to the existing Primary boundary. Channel by Kam Ho Road running through and along the site area spanning across majority of the river valley, together with the existing vegetations forming the central part of riparian landscape network. They have medium landscape value and sensitive to change. **Fish Pond** Minor change due to 10.7.4 LR2.1 (Fish Pond) within **A6** There are 4 numbers of fallowed fish ponds at the upstream of the Ma On Kong Channel. A chain construction of of fish ponds near downstream but distant from the Channel is noted. The fish ponds cover area of site boundary structures within site in total 23,000 m2. Most of them are heavily colonized by aquatic plants, which attribute to their LR2.2 (Fish Pond) outside A7 boundary. low visual quality as a water landscape element. They have low landscape value and sensitive to site boundary A soil platform was change.

# Table compares the baseline study and the current situation for KT13: (Landscape Resources)

				created outside site
				boundary due to other
				project was noted.
Marsh		-		
10.7.5	LR3 (Marsh)	A8	It comprises 2 marshes at the upstream channel of the Channel. They are inundated lowland	Remain the same as
	0		heavily colonized with wetland aquatic plants. They have low landscape value and sensitive to	the baseline
			change.	
Vegetati	on			
10.7.7	LR4 (Woodland/ Wooded	A9	It comprises two major communities of woodland/ wooded area. One is dense natural woodland	Remain the same as
	Area)	A10	stretching across the Conservation Area and area behind Ma On Kong and consists approximate	the baseline
1 1			450 numbers of trees based on visual estimation. The trees are mainly native species and mature	
			in size. It is dominated by Schefflera octophylla, Pinus massoniana, Aporusa chinensis, Celtis	
			sinensis, Bridelia tomentosa, Cinnamomum cmaphora, Rhus chinensis and Phus succedanes.	
			Another one is a natural more sparse riparian wooded area at upstream of the Channel and	
			consists approximate 60 numbers of trees based on visual estimation. The trees are mainly	
			pioneer species and poorer in form and maturity. It is dominated by Ficus hispide and Macaranga	
			tanarius. They have high landscape value and sensitivity to change.	
10.7.8	LR5 (Orchard/ Horticultural	A11	It comprises two groups of trees at downstream below Ma On Kong and north of Ho Pui Amongst	Remain the same as
	Trees)		there are approximate 400 numbers of trees based on visual estimation. They are fruit trees and	the baseline
			landscape plants of horticultural practices. It is dominated by Dimocarpus longan, Delonix regian,	
			Roystonea regia and Pachira macrocarpa. For their anthropogenic and not permanent in nature,	
			they have medium landscape value and sensitivity to change.	
10.7.9	LR6 (Low-Lying Agricultural	A12	It comprises fallowed land and agricultural land in low rate of uses. The vegetation is mainly grass	Remain the same as
1	Land/ Fallowed Land)		and sedge with mosaics of shrubs approaching the Channel. It fills up the about half of the existing	the baseline.

			landscape within the study area. They have low landscape value and sensitivity to change.	
Sitting-C	)ut Area			ананананананананананананананананананан
10.7.10	LR7 (Sitting-Out Area at Ma On Kong)	A13	It is located at the Ma On Kong next to the access road. It is a small sitting-out area primarily hard-paved with only 3 amenity trees and on pavilion. It has low landscape value and sensitivity to change.	Remain the same as the baseline
Landsca	pe Character Areas			
10.7.12	LCA1 (Agricultural Landscape Character Area)	B1 & B2	This comprises fallowed land & agricultural land not in active uses. This character area is flat and gentle sloping in landform and vegetated with grass of various heights. It forms the majority of the landscape character of the entire river valley and the connecting landscape element between other landscape character areas. The sensitivity to change of this area is low.	Minor change due to invasion of cows. Some of the grass on the land were consumed.
10.7.13	LCA2 (Woodland Landscape Character Area)	ВЭ	This is natural woodland between southern Ma On Kong and the Channel extending up to the access road behind Ma On Kong. The trees are mature in size forming a close woodland landscape. It is the location of egretry of conservation importance. The sensitivity to change of this area is high.	Remain the same as the baseline
10.7.14	LCA3 (River/ Stream Landscape Character Area)	B4 – B7	This is the main stream of the Channel in associate with its riparian vegetation. It meanders through the river valley landscape. It is used as a receptor of agricultural effluent from poultry farm around upstream, which contribute to the polluted appearance of the character area around upstream. The sensitivity to change of this area is medium.	Minor change due to construction work within site boundary
10.7.15	LCA4 (Fish Pond Landscape Area)	B8	This comprises a number of fish ponds of various sizes distributed about the Channel. Most of them are abandoned or with limited uses and colonized with aquatic plants. The sensitivity to change of this area is medium.	Minor change due to construction of structures within site boundary.

Drainage Improvement Works in Cheung Po, Ma On Kong, Yuen Kong San Tsuen, Tin Sam Tsuen of Yuen Long District and Sewerage at Tseng Tau Chung Tsuen, Tuen Mun

10.7.16	LCA5 (Village Landscape	B9 &	This comprises the four major village types rural settlement encompassing tai Kek, Ma On Kong,	Remain the same as
	Character Area)	B10	Ho Pui and north of Ho Pui. Except Tai Kek which is less revitalized and actively resided, all other	the baseline
			three are actively resided. This area is lightly urbanized with low rise village house. The sensitivity	
			to change of this area is low.	· · · · · · · · · · · · · · · · · · ·
10.7.17	LCA6 (Industrial Landscape	B11 &	This comprise collection of slummy-built temporary structure and open storage uses land, which	Some site clearance
	Character Area)	B12	are characterized with metallic hoarding and used for poultry, recycling, vehicle repairing etc. The	work was carried by
			sensitivity to change of this area is low.	land lot owner
10.7.18	LCA7 (Nullah Landscape	B13	This is the trained nullah next to Kam Ho Road. It is the primary tributary connecting and receiving	Remain the same as
/	Character Area)		outflow from the Ma On Kong Channel. The area is man-made and with poor and monotonous	the baseline
			riverside vegetation. The sensitivity to change of this area is low.	

# 10.7.19 Visual Character

The visual quality of the river valley of Ma On Kong Channel is semi-natural based on combination of rural landscape elements including agricultural land, village houses, woodland and pond and stream and industrial landscape elements including open storage and temporary structures. Interspersed landscape elements on general flat landform with minor undulation render numerous small enclosed views. No major vista and high quality open view identified.

# 10.7.20 Visual Sensitive Receiver (VSR)

Within the ZVI, a number of key Visual Sensitive Receivers (VSRs) have been identified. These VSRs are mapped in Drawing V-001. They are listed, together with their sensitivity, in Table 10/5. Photo views illustrating the VSRs are illustrated in Drawing nos. PV-001 to 002 inclusive. For the ease of reference, each VSR is given an identity number, which is used in the text, tables and figures.

Table compares the baseline study and the current situation for KT13: (Visual Sensitive Receiver)								
Section in EIA Report	Identify number – Photo Baseline Study, Environmental Impact Assessment Final Report [382047/E/EIA/Issue 9]   VSR No.		Current Situation					
Industria	l VSRs							
10.7.21	11	C1	Open storage near junction between Kam Ho Road and Village access The VSRs is workers of the open storage. The number of individual is very few and their sensitivity to visual impacts is low.	Remain the same as the baseline				
10.7.22	12	C2	Plant Nursery at the east of Ma On Kong Channel The VSRs is workers of the plant nursery. The number of individual is very few and their sensitivity to visual impacts is low.	Remain the same as the baseline				
10.7.23	13	C3	Plant Nursery at the west of Ma On Kong Channel The VSRs is workers of the plant nursery. The number of individual is very few and their sensitivity to visual impacts is low.	Remain the same as the baseline				
10.7.24	14	C4	Temporary Structure for poultry east to Ho Pui The VSRs is workers of the temporary structure. The number of individual is very few and their sensitivity to visual impacts is low.	Remain the same as the baseline				
10.7.25	15	C5	Open Storage at the end of village access road The VSRs is workers of the open storage. The number of individual is very few and their sensitivity to visual impacts is low.	Remain the same as the baseline				
10.7.26	16	C6	Temporary Structure for poultry and Open Storage at upstream of Ma On Kong Channel The VSRs is workers of the temporary structure and open storage. The number of individual is very few and their sensitivity to visual impacts is low.	Remain the same as the baseline				

Open Sp	Open Space / Sitting – Out Area VSRs							
10.7.27 Resident	27 01 C7 Users of Sitting-out Area at Ma On Kong The VSRs is future users of the re-provided sitting-out area during operation phase. The number of individual is few and their sensitivity to visual impacts is medium.							
	-							
10.7.28	R1	C8	Tai Kek The VSRs is residents of the village. The number of individual is very few and their sensitivity to visual impacts in high.	Remain the same as the baseline				
10.7.29	R2	C9	North of Ma On Kong The VSRs is residents of the village. The number of individual is very few and their sensitivity to visual impacts is high.	Remain the same as the baseline				
10.7.30	R3	C10	Ma On Kong The VSRs is residents of the village. The number of individual is very few and their sensitivity to visual impacts is high.	Remain the same as the baseline				
10.7.31	R4	C11	North of Ho Pui The VSRs is residents of the village. The number of individual is few and their sensitivity to visual impacts is high.	Remain the same as the baseline				

Transpo	Transport-related VSRs							
10.7.32	Τ1	C12	Motorists and Pedestrians along village access road (lower section) The VSRs is the road users of the road section. The number of individual is few and their sensitivity to visual impacts is low.	Remain the same as the baseline				
10.7.33	T2	C13	Motorists and Pedestrians along village access road (high section) The VSRs is the road users of the road section. The number of individual is very few and their sensitivity to visual impacts is low.	Remain the same as the baseline				
10.7.34	ТЗ	C14	Motorists, Pedestrians and Tourists along access road toward Ho Pui ReservoirThe VSRs is the road users of the road section, part of which are tourist to Ho Pui Reservoir. The number ofindividual is very few and their sensitivity to change is low.	Remain the same as the baseline
