Black & Veatch Hong Kong Limited 25/F, Millennium City 6 392 Kwun Tong Road Kowloon Hong Kong

Attention: Ms. Jenny Lui

Dear Ms. Lui,

Contract No. DC/2007/17 Drainage Improvement Works in Cheung Po, Ma On Kong, Yuen King San and Tin Sam Tsuen of Yuen Long District and Sewerage at Tseng Tau Chung Tsuen, Tuen Mun Monthly EM&A Report for KT13 (April 2010) – Version 2

We refer to the captioned report (ref.: TCS00408/08/600/R1438v2) and advise that we have no further comment on the captioned submission.

We hereby endorse the captioned report for your onward submission.

If you require any further information, please do not hesitate to contact the undersigned.

Yours sincerely.

Coleman Ng

Independent Environmental Checker

### **Executive Summary**

This is the 19<sup>th</sup> monthly EM&A report for the Channel KT13, covering the construction period from 26 March to 25 April 2010 (the Reporting Period).

### **Breaches of Action and Limit Levels**

- ES02 Monitoring results of the Reporting Period demonstrated no exceedances of environmental quality criteria for air quality, construction noise and water quality monitoring.
- ES03 In this reporting period, no construction works were carried out within 100m of the ecological buffer area. For the ecology monitoring, by-weekly Ho Pui egretry ere conducted on 10 and 24 April 2010 and monthly Man On Kong egretry monitoring and flight line survey were conducted on 10 April 2010. It is reported that no nest and no flight line were found at the both surveys. In comparing the monitoring result in 2009, no exceedance was recorded in this reporting month.
- ES04 Four (4) events of weekly settlement monitoring were undertaken in this reporting month and no exceedances were recorded.
- ES05 Landscape inspections were conducted on **9 and 23 April 2010**. No significant changes were observed for the identified landscape resources and visual sensitive receivers, except for minor changes due to channel excavation, site clearance and preparation work at the identified landscape resources including LR1, LR2.1, LR2.2, LCA1, LCA3 and LCA4.

### **Environmental Complaint, Notification of Summons and Prosecution**

ES06 No documented complaint, notification of summons or successful prosecution was received during the Reporting Period. No major environmental impacts were observed during the weekly site inspection. Environmental audit of the Reporting Period indicated that the implemented mitigation measures for air quality, construction noise and ecology were effective. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

### **Reporting Changes**

ES07 No reporting changes were made during the Reporting Period.

### **Future Key Issues**

- ES08 During wet season, water quality mitigation measures to avoid ingress of runoff into Channel KT13 should be properly installed and maintained, as appropriate. It is reminded that the implemented mitigation measures such as sand bags downstream of the excavation site may also be improved to cater for additional water flows.
- ES09 CRBC was reminded to implement the required air quality mitigation measures during construction under the Project, in particular when excavation are undertaken or any soil stockpile located within the working site and dust emissions is generated and impacted surrounding environmental nearby Channel KT13.
- ES10 Special attention should be paid to construction noise and other environmental issues identified in the EM&A Manual as recommended in the EIA and summarized in Mitigation Measure Implementation Schedule.

DSD Contract No. DC/2007/17 - Drainage Improvement Works in Cheung Po, Ma On Kong, Yuen Kong San Tsuen and Tin Sam Tsuen of Yuen Long District and Sewerage at Tseng Tau Chung Tsuen, Tuen Mun.

Monthly EM&A Report for KT13 (April 2010)

### 1 ENVIRONMENTAL STATUS

This is the 19<sup>th</sup> monthly EM&A report for KT13, covering the construction period from 26 March to 25 April 2010 (the Reporting Period).

### 1.1 PROJECT AREA AND CONSTRUCTION PROGRAMME

Drawings showing the project area, any environmental sensitive receivers and the locations of the monitoring and control stations are presented in *Appendix A*, and the construction program in *Appendix B*.

### 1.2 Works Undertaken During the Reporting Period

Apart from general works of tree survey, structural survey and environmental monitoring & audit, works undertaken during the Reporting Period with fine tuning of construction activities showing the inter-relationship with environmental protection/mitigation measures for the month are summarized as follows:

- Excavation of channel formation
- Construction of channel structure
- Backfilling
- Installation of type 2 railing
- Laying of underground drain pipe
- Laying of Gabion Block/Granite Block

### 1.3 ENVIRONMENTAL MANAGEMENT ORGANIZATION

Management structure and key personnel contact names and telephone numbers of the environmental management organization are presented in Appendix C, where DSD is the Project Proponent; CRBC is the main Contractor; EPD and AFCD are the supervisory departments for environmental protection of the Project; BVHKL is the Engineer's Representative of DSD (the ER); ARUP is the Independent Environmental Checker (the IEC) and Action-United Environmental Services and Consulting (AUES) is the environmental team (the ET).

### 1.4 LICENSING STATUS

### 1.4.1 Air Pollution Control (Construction Dust) Regulation

Pursuant to the *Air Pollution Control (Construction Dust) Regulation*, CRBC has notified EPD, via submission of Form NA dated 14 February 2008, of the scope and nature of the works to be carried out under the Project, including construction activities such as stockpiling, loading and unloading, transfer of dusty material, use of vehicles and debris handling, etc. CRBC will continuously review the status of the environmental licenses and apply the required licenses/permits prior to the commencement of construction work.

### 1.4.2 Noise Control Ordinance

No *Construction Noise Permit* (CNP) is required for the Project pursuant to the Noise Control Ordinance (NCO) and the associated applicable subsidiary regulations of *Noise Control (General) Regulation, Noise Control (Hand-held Percussive Breaker) Regulation and Noise Control (Air Compressor) Regulation, as the use of powered mechanical equipment, or conducting construction work in during restricted hours, i.e. 1900 to 0700 hours on normal weekdays and any time on general holidays including Sundays is not anticipated during the whole construction period. CRBC will continuously review the status of the environmental licenses under the NCO and apply the required licenses/permits prior to the commencement of construction work.* 

### 1.4.3 Waste Disposal (Charges for Disposal of Construction Waste) Regulation

CRBC has applied for a Billing Account (Construction Work Contract with Value of \$1million or above), under the *Waste Disposal (Charges for Disposal of Construction Waste)*Regulation. The account number 7006524 has been assigned on 9 Jan 2008.

### 1.4.4 Water Pollution Control Ordinance

CRBC has applied for a discharge license under Section 20 of the *Water Pollution Control Ordinance*, and the license No. 1U461/1 has been issued.

### 1.4.5 Waste Disposal (Chemical Waste) (General) Regulation

CRBC has registered as a Chemical Waste Producer with EPD under the Waste Disposal (Chemical Waste) (General) Regulation and the Waste Producer Number assigned is WPN: 5611-531-C3124-28 dated 2 May 08.

### 1.4.6 Dumping at Sea Permit

CRBC has been granted by the Environmental Protection Department a Permit Issued under the *Dumping at Sea Ordinance* (Permit no. EP/I4D/08-095, dated 18 September 2008, permit validity period of six months from 18 September 2008 to 17 March 2009) for disposal of 18,469 m³ sediment, requiring Type 1 – open sea disposal at East Sha Chau Contaminated Mud Disposal Site – Pit IV b, to be capped as directed by the Management Team of the Civil Engineering and Development Department. Note that this permit has expired. As there is no need for further sea disposal, no further permits will be required in the future.

### 1.5 ENVIRONMENTAL PROTECTION AND POLLUTION CONTROL MITIGATION MEASURES

CRBC has committed to implement environmental protection and pollution control and mitigation measures, as recommended in the EIA, EP, EM&A Manuals, and summarized in the Mitigation Measures Implementation Schedules. The implemented mitigation measures include

- (a) Watering of stockpiles of rip-rap at KT13;
- (b) Covering of the loose soil at KT13 to minimize water quality impacts;
- (c) Hard pavement of haul road leading to public roads at KT13;
- (d) Classification and disposal of illegally dumped construction and demolishment materials at KT13:
- (e) Construction of noise barriers; and
- (f) Erection of dams with sand bags downstream the excavation site within the water course of KT13 to enhance sedimentation of turbidity and suspended solids (SS).

### 2 MONITORING METHODOLOGY

### 2.1 Monitoring Parameters

According to the EM&A requirements set out in the EIA, Environmental Permit No. EP263/2007 (the EP) and the associated EM&A Manual, the required monitoring parameters are summarized as follows.

**Table 2-1 Summary of Monitoring Parameters** 

| Environmental Issue   | Monitoring Parameters  |  |  |
|-----------------------|--|--|--|
| Air Quality           |  | pended Particulate (1-hour TSP); and spended Particulate (24-hour TSP).    |  |
| Construction<br>Noise | <ul> <li>(a) A-weighted equivalent continuous sound pressure level (30min) (Leq(30min) during the normal working hours; and</li> <li>(b) A-weighted equivalent continuous sound pressure level (5min) (Leq(5min) for construction work during the Restricted Hours.</li> </ul> |  |  |
| Water Quality         | (a) In Situ<br>Measurement   | temperature, dissolved oxygen (DO), pH & turbidity                         |  |
| Water Quality         | (b) Laboratory<br>Analysis   | suspended solids (SS), Ammonia Nitrogen (NH <sub>3</sub> -N) and Zinc (Zn) |  |
| Ecology               | Vegetation, all bird species of wetland, Ho Pui Egret, Ma On Hong Egret and Flight Line Survey   |  |  |
| Waste<br>Management   | Inspection and the document audit  |  |  |
| Cultural Heritage     | Condition survey for a historical grave  |  |  |
| Landscape &<br>Visual | To audit the implementation of the proposed construction phase mitigation measure stipulated in EIA.   |  |  |

### 2.2 MONITORING LOCATIONS

Details of the monitoring locations are summarized in *Table 2-2* and shown in *Appendix A*. For ease of reference, monitoring locations denoted with "(a)" are relocated locations to differentiate them from the original 'EM&A Manual' locations.

**Table 2-2Summary of Monitoring Locations** 

| Environmental Issues | Monitoring<br>Location | Identified Address /<br>Co-ordinates        | Status of Monitoring Locations / Rationale for Recommended Replacement   |  |
|----------------------|------------------------|---|--|--|
| Air                  | A1(a)                  | No.68 Ho Pui Village                        | The original location of EM&A Manuals A1 has permanently been abandoned. No access can be acquired in the vicinity of A1. Taken into consideration that Ho Pui Village is one of the most important sensitive receivers near KT-13 without monitoring, the most fronting house, No. 68 Ho Pui Village, is therefore recommended as the replacement location A1(a). |  |
|                      | A2                     | No.1 Ma On Kong Village                     | Original location of the EM&A Manual; access granted.  |  |
| Noise                | N1(a)                  | 168-169 Kam Ho Road,<br>Ma On Kong Village, | Original location of N1 identified in the EM&A Manual was relocated to proposed area as recommended by IEC.  |  |
|                      | N2(a)                  | No. 68 Ho Pui Village,                      | The original location of EM&A Manuals N2 has permanently been abandoned. No access can be acquired in the vicinity of N2. Taken into consideration that Ho Pui Village is one of the most important sensitive receivers near KT-13 without monitoring, the most fronting house, No. 68 Ho Pui Village, is therefore recommended as the replacement location N2(a). |  |
|                      | N3                     | No.1 Ma On Kong Village                     | Original locations of the EM&A Manual; access granted.   |  |
| Water                | W1                     | E824539 / N830283                           | Original locations of the EM&A Manual; access resolved.  |  |

| Environmental Issues | Monitoring<br>Location  | Identified Address / Status of Monitoring Locations / Rationale for Recommended Replacement |   |
|----------------------|---|---|---|
|                      | W2  | E824693 / N830258   | Original locations of the EM&A Manual; access resolved.                                 |
|                      | W3(a)   | E824833 / N830374   | The W3 is proposed to be relocated about 55 m down stream to W3(a) for safety reason as |
|                      |   |   | there is no any discharge point observed between W3 and the proposed W3(a).             |
|                      | W4  | E824936 / N830618   | Original locations of the EM&A Manual; access resolved.                                 |
|                      | W5  | E825008 / N830812   | Original locations of the EM&A Manual; access resolved.                                 |
|                      | W6  | E825100 / N830987   | Original locations of the EM&A Manual; access resolved.                                 |
| Ecology              | Monthly monitoring along the boundary of the works area to confirm that there are no adverse impacts on habitats outside the site in particular the Conservation Area (CA) zone and Ho Pui Egretry.  Photographic records at six-month intervals;  Monthly monitoring of all bird numbers including wetland species and species identified as being of conservation importance;  Monitoring of Ho Pui egretry during March to August. The Ma On Kong egretry is also surveyed to provide reference information on the breeding egrets nearby; and Flight line surveys twice per month during April to June. |   |   |
| Waste<br>Management  | Whole constriction site and document  |   |   |
| Cultural<br>Heritage | Ma On<br>Kong   | Refer to EM&A Manual (KT  | 13) Figure 7.1.   |
| Landscape & Visual   | Refer to EIA  | Section 10  |   |

### 2.3 MONITORING FREQUENCY, DURATION AND SCHEDULE

### 2.3.1 **Monitoring Frequency and Duration**

Environmental monitoring is conducted upon commencement of the construction activities and throughout the whole construction period to detect and minimize any adverse environmental impacts generated from the construction activities of the Project. The monitoring frequency and duration for air quality, construction noise, water quality, ecology and other parameters are summarized below.

### Air Quality

Frequency: Once every 6 days for 24-hour TSP and three times every 6 days for 1-hour

TSP, when the highest construction dust impacts are anticipated.

Throughout the construction period Duration:

### **Construction Noise**

Frequency: Measurement of Leq(30min): Once a week during 0700-1900 hours on normal weekdays. If the construction work is undertake at restricted hours, the frequency of noise monitoring will be conducted in accordance with the requirements under the related Construction Noise Permit issued by EPD as follows:

- 3 consecutive Leg(5min) at restrict hour from 1700 2300 hours:
- 3 consecutive Leg(5min) for restrict hour from 2300 0700 hours next day;
- 3 consecutive Leq(5min) for Sunday or public holiday from 0700 1900 hours;

Duration: Throughout the construction period

### **Water Quality**

Frequency: Three times a week with at least 36 hour intervals between any two

consecutive monitoring events

As the water columns in the stream water within KT13 is generally less than 3m, measurement is performed at the mid-depths of the monitoring locations. In case the water columns are deeper than 6m, measurement shall be carried out at three water depths, namely, 1m below water surface, mid-depth, and 1m above river bed. If the water depths are between 3 to 6m, the

mid-depth measurement is omitted.

<u>Depths</u>: As the water columns in the stream water within KT13 is generally less than

3m, measurement is performed at the mid-depths of the monitoring locations. In case the water columns are deeper than 6m, measurement shall be carried out at three water depths, namely, 1m below water surface, mid-depth, and 1m above river bed. If the water depths are between 3 to 6m, the

mid-depth measurement is omitted.

<u>Duration</u>: Throughout the construction period.

### **Ecology**

The Ecology Monitoring is required in accordance with the EM&A Manual.

Parameters: Vegetation, All bird species including wetland birds, Ho Pui and Ma On Hong

Egretries and Flight line survey

Frequency: Vegetation - Impact monitoring - monthly;

Photographic records/checks against baseline records- six monthly

Wetland Bird survey - Monthly of half-day survey;

Ma On Kong egretry – Monthly between March to August; and

Ho Pui egretry – Bi-weekly between March and August;

Flight line Survey – twice per Month during the period from April to June

<u>Duration</u>: Throughout the whole construction period

### Waste Management Audit

Frequency: Once per month

<u>Duration</u>: Throughout the construction period.

### Cultural Heritage

Scope: Condition survey and settlement monitoring of a Qing Dynasty Grave.

Frequency: Condition survey - Bi-monthly

Settlement monitoring - Bi-weekly

Duration: Throughout the construction phase period. (When construction work entered

the 100m of the cultural heritage site)

### Landscape & Visual

Frequency: Bi-weekly

<u>Duration</u>: Throughout the construction phase period.

### 2.3.2 Environmental Monitoring Schedule

The monitoring schedules for the Reporting Period and next month are presented in *Appendix D.* 

### 2.4 MONITORING EQUIPMENT AND PROCEDURE

The monitoring equipment and procedures are summarized below. Calibration certificates of the equipment and the related laboratories are presented in *Appendix E*.

### 2.4.1 Weather Conditions during the Reporting Period

All meteorological information is extracted from the Hong Kong Observatory (Lau Fau Shan Station). The meteorological data include wind direction, wind speed, humidity, rainfall, air pressure and temperature etc., that are generally required for evaluating the environmental impact arising from the construction activities. The meteorological data are presented in *Appendix D*.

### 2.4.2 Air Quality

### **Monitoring Equipment**

A list of air quality monitoring equipment is shown below.

Table 2-4-2 Air Quality Monitoring Equipment

| Equipment               | Model                         | Serial Number         |
|-------------------------|-------------------------------|-----------------------|
| 24-hour TSP             |                               |                       |
| High Volume Air Sampler | Grasby Anderson GMWS 2310 HVS | -                     |
| Calibration Kit         | TISCH Model TE-5025A          | 1612                  |
| 1-hour TSP              |                               |                       |
| Portable Dust Meter     | TSI DustTrak Model 8520       | 21060 / 23080 / 23079 |

### **Monitoring Procedure**

### 1-hour TSP

The 1-hour TSP measurement follows manufacturer's Operation and Service Manual, using a 1-hour TSP monitor brand named TSI Dust Track Aerosol Monitor Model 8520 or Sibata LD-3 Laser Dust Meter, which is a portable, battery-operated laser photometer to record the real time 1-hour TSP based on 90° light scattering. The 1-hour TSP monitor consists of the following:

- (a) A pump to draw sample aerosol through the optic chamber where TSP is measured;
- (b) A sheath air system to isolate the aerosol in the chamber to keep the optics clean for maximum reliability; and
- (c) A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.

The 1-hour TSP meter to be used will be within the valid period, calibrated by the manufacturer prior to purchasing. Zero response of the instrument will be checked before and after each monitoring event.

### 24-hour TSP

The equipment used for 24-hour TSP measurement is the high volume air sampling system (hereinafter 'HVS') brand named Thermo Andersen, Model GS2310 TSP. The HVS complies with US EPA Code of Federal Regulation, Appendix B to Part 50. The HVS consists of the following:

- (a) An anodized aluminum shelter;
- (b) A 8"x10" stainless steel filter holder;
- (c) A blower motor assembly;
- (d) A continuous flow/pressure recorder;
- (e) A motor speed-voltage control/elapsed time indicator;
- (f) A 6-day mechanical timer, and
- (g) A power supply of 220v/50 Hz

The HVS is operated and calibrated on a regular basis following the manufacturer's instruction using the NIST-certified standard calibrator brand named TISCH Calibration Kit Model TE-5025A. Regular HVS operation and maintenance as well as filter paper installation and collection is performed by the ET's competent technicians, whereas

laboratory analyses are conducted in a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (herein after 'ALS'). The 24-hour TSP filters of the 24-hour TSP will be kept in ALS for six months prior to disposal.

All relevant data including temperature, pressure, weather conditions, elapsed-time meter reading for the start and stop of the sampler, identification and weight of the filter paper are recorded in details.

### 2.4.3 Construction Noise

### Monitoring Equipment

A list of construction noise monitoring equipment is shown below.

**Table 2-4-3 Construction Noise Monitoring Equipment** 

| Equipment                     | Model              | Serial Number     |
|-------------------------------|--------------------|-------------------|
| Integrating Sound Level Meter | Cesva SC-20c/      | T212509           |
| Integrating Sound Level Meter | Bruel & Kjaer 2238 | 2285762 / 2285690 |
| Calibrator                    | Cesva CB-5 /       | 030934            |
| Calibrator                    | Bruel & Kjaer 4231 | 2292168 / 2326408 |
| Portable Wind Speed Indicator | Testo Anemometer   | -                 |

### **Monitoring Procedure**

Sound level meters listed above comply with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications, as recommended in Technical Memorandum (TM) issued under the Noise Control Ordinance (NCO).

All noise measurements will be performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (Leq). Leq(30 min) in six consecutive Leq(5 min) measurements will be used as the monitoring parameter for the time period between 0700-1900 hours on weekdays throughout the construction period. Leq(15min) in three consecutive Leq(5 min) measurements for other time periods (e.g. during restricted hours) will only be conducted for monitoring the construction noise during restricted hours as necessary.

The sound level meter is mounted on a tripod at a height of 1.2 m and placed at the assessment point and oriented such that the microphone is pointed to the site with the microphone facing perpendicular to the line of sight. The windshield is fitted for all measurements. Where a measurement is to be carried out at a building, the assessment point is normally at a position 1 m from the exterior of the building façade. Where a measurement is to be made for noise being received at a place other than a building, the assessment point is at a position 1.2 m above the ground in a free-field situation, i.e. at least 3.5 m away from reflective surfaces such as adjacent buildings or walls.

Immediately prior to and following each noise measurement the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements will be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0dB. No noise measurement will be made in the present of significant fog, rain, wind with a steady speed exceeding 5m/s or wind with gusts exceeding 10m/s. The wind speed is checked with a portable wind speed meter capable of measuring the wind speed in m/s.

### 2.4.4 Water Quality

### Monitoring Equipment

Monitoring Equipment for water quality is listed below.

Table 2-4-4 Water Quality Monitoring Equipment

| Equipment              | Model   | Serial Number |
|------------------------|---|---------------|
| Water Depth Detector   | Eagle Sonar   | -             |
| Water Sampler          | Teflon bailer / bucket                                  | -             |
| Thermometer & DO meter | YSI 550A  | 97F0837AM     |
| pH meter               | Extech EC500 (ALS Lab ID: HK1007843)                    | -             |
| Turbidimeter           | Hach 2100p  | 9509010008735 |
| Hand Refractometer     | ATAGO   | 289468        |
| Sample Container       | High density polythene bottles (provided by laboratory) | -             |
| Storage Container      | 'Willow' 33-litter plastic cool box                     | -             |

### **Monitoring Procedure**

### Water Depth

As the water columns in the stream water within KT13 is generally less than 3 m, measurement is performed at the mid-depths of the monitoring locations. In case the water columns are deeper than 6 m, measurement shall be carried out at three water depths, namely, 1 m below water surface, mid-depth, and 1 m above river bed. If the water depths are between 3 to 6 m, the mid-depth measurement is omitted.

Water depths are determined prior to measurement and sampling, using a portable battery operated depth detector, brand named 'Eagle Sonar', if the depths exceed 1.5 meter. For the depths well below 1 meter, the depths of water columns are measured with a steel ruler with appropriate weight.

### Dissolved Oxygen (DO)

A portable YSI 550A DO Meter will be used for in-situ DO measurement. The DO meter is capable of measuring DO in the range of 0 - 20 mg/L and 0 - 200 % saturation and checked against water saturated ambient air on each monitoring day prior to monitoring. Although the DO Meter automatically compensates ambient water temperature to a standard temperature of 20°C for ease of comparison of the data under the changing reality, the temperature readings of the DO Meter will be recorded in the field data sheets. Calibration of the equipment will be performed by ALS on quarterly basis.

### Нα

A portable Extech pH Meter will be used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0-14 and readable to 0.1. Standard buffer solutions of pH 7 and pH 10 are used for calibration of the instrument before and after measurement. Quarterly calibration of the equipment will be performed by ALS.

### **Turbidity**

A portable Hach 2100p turbidity Meter will be used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 - 1000 NTU. Calibration of the equipment will be performed by ALS on quarterly basis.

### **Salinity**

A portable hand Refractometer AGATO will be used for in-situ salinity measurement. The refractometer is capable of measuring salinity in the range of 0-70ppt with accuracy  $\pm 1\%$  reading. Calibration of the equipment will be performed by ALS on quarterly basis.

### Suspended Solids (SS)

SS will be determined by ALS upon receipt of the water samples using the HOKLAS accredited analytical method - ALS Method EA-025.

### Ammonia Nitrogen(NH<sub>3</sub>-N)

<u>NH<sub>3</sub>-N</u> will be examined by ALS upon receipt of the water samples using the HOKLAS accredited analytical methods - ALS Method EK-055A.

Zinc(Zn)

Zn will be analyzed by ALS upon receipt of the water samples using the HOKLAS accredited analytical methods - ALS Method EG-020.

### Water Sampler

Monthly EM&A Report for KT13 (April 2010)

Water samples will be collected using a plastic sampler to prevent metal contamination. As the water depths in the stream water within KT13 are generally less than 0.5 m, a plastic bucket with a rope of appropriate length is used for water sampling. The sampler is rinsed before collection with the sample to be taken. For water depths deeper than 0.5 meter, a cleaned plastic bailer bucket will be used for sample collection.

1000 mL water sample is collected from each depth for SS determination. The samples collected are stored in a cool box maintained at 4°C and delivered to ALS upon completion of the sampling by end of each sampling day.

### Sample Container

Water samples are contained in screw-cap PE (Poly-Ethylene) bottles, which are provided and pretreated according to corresponding HOKLAS and ALS analytical requirements. Where appropriate, the sampling bottles are rinsed with the water to be contained. Water samples are then transferred from the water sampler to the sampling bottles to 95% bottle capacity to allow possible volume expansion during delivery and storage.

### Sample Storage

A 'Willow' 33-litter plastic cool box packed with ice will be used to preserve the collected water samples prior to arrival at ALS. The water temperature of the cool box will be maintained at a temperature as close to 4°C as possible without being frozen. Samples collected will be delivered to the laboratory upon collection within the maximum storage time required under the HOKLAS and ALS analytical requirements

### 2.4.5 Ecology

Monthly walk through survey will be conducted along the boundary of work area for KT13. Bird monitoring will be conducted in the study areas monthly for KT13. Monitoring on the Ho Pui egretry and Ma On Kong egretry will be conducted between March to August. Flight line surveys to record the feeding areas and the habitat use of breeding egrets will be conducted between April to June. Photographic record should be made at six month intervals.

### **Monitoring Equipment**

The following equipment will be used for monitoring:-

Standard portable field survey equipment was used for ecological monitoring, including

- (a) Binoculars of 10 x 40 magnifications;
- (b) Digital camera; and
- (c) Notebook.

### Study Area

The areas for the ecological monitoring programme would cover 60 m on either side of the existing channel as well as the proposed bypass culvert, as shown in Figure 6.1 of the EM&A Manual. Within these, emphasis will be given to the area around the Ho Pui and Ma On Kong egretries and habitats of at least moderate ecological value. In addition, monitoring would also be undertaken at the Ho Pui egretry and Ma On Kong egretry (The Ma On Kong egretry is outside the demarcated monitoring area but is also monitored to identify any adverse effects on the breeding egrets).

### Survey Method

Monthly monitoring will be conducted by means of walk through survey, along the boundary of work area for KT13. Any adverse impacts to the habitats outside the site, in

particular the Conservation Area (CA) zone and Ho Pui Egretry, will be checked and reported.

Photographic records will be made every six months on the fixed photo record points selected during the baseline survey. The photos from the construction phase ecological monitoring will be compared with those taken during the baseline, which are used as the baseline conditions.

Bird monitoring will be conducted in the study areas monthly for KT13. Attention should be paid on wetland species and species identified as being of conservation importance, and the habitats utilized should also be recorded. Bird surveys should commence no later than 2 hours after dawn.

Monitoring on the Ho Pui egretry and Ma On Kong egretry will be conducted between March to August. The frequency would be twice per month during March to May. Depending upon the nesting conditions at Ho Pui egretry, the frequency could be reduced to monthly between June and August if no egret nest found by the end of May, or maintained at twice per month till the end of August if there are egret nests. Number of active nests, species and number of birds present and breeding stage should be recorded. Flight line surveys to record the feeding areas and the habitat use of breeding egrets will be conducted twice per month between April to June. The number and species of flying egrets, and their landing habitats and locations should be recorded.

### 2.4.6 Waste Management, Cultural Heritage and Landscape & Visual

Waste Management, Cultural Heritage and Landscape & Visual monitoring is required for KT13 as stipulated in the EM&A manual [382047/E/EMA/Issue 5] **Section 5**, **Section 7** and **Section 8** accordingly.

### **Waste Management**

During the monthly audit, ETL will pay attention to the issues relating to waste management, and check whether the Contractor has followed the relevant contract Specifications and the procedures specified under the law of HKSAR.

### **Cultural Heritage**

Condition survey by a qualified archaeologist is required for the historical grave near Ma On Kong before and during the construction phase. The method statement of condition survey of Ma On Kong Historic Grave (KT13-02-02) was issued to EPD and endorsed on 27 July 2008, the frequency of the condition survey during the construction phase and given the open cut method would be adopted for the construction of the proposed bypass box culvert under KT13 project, subject to the result of the condition survey carried out before the construction stage, it is recommended that bi-monthly condition survey be undertaken during the construction work within 100m area from the grave.

### **Landscape and Visual**

In accordance with the EM&A manual [382047/E/EMA/Issue5] **Section 8** landscape and visual mitigation measures are required during construction and operation phase. Site inspection will be undertaken at least once every two weeks throughout the construction period to ensure compliance with the intended aims of the proposed mitigation measures.

### 2.5 QUALITY ASSURANCE PROCEDURES AND DATA MANAGEMENT

### 2.5.1 Documentation of the Environmental Monitoring

Field data including in-situ monitoring results, weather conditions and water sampling information and observation will be recorded in corresponding Field Data Sheets, which will be signed and dated by the respective environmental technician prior to submission to the ETL for validation and endorsement at the end of the monitoring day.

### 2.5.2 Data Management and Analysis

All impact monitoring data will be processed by the AUES data recording and management system, which complies with in-house Quality (*ISO 9001:2000*) Management System. Monitoring results recorded in the monitoring equipment e.g. 1-hour TSP Meters

and Noise Meters will be downloaded directly from the equipment at the end of the monitoring period and input into a computerized database maintained by the ET. Laboratory results will be input directly into the computerized database and checked by personnel other than those who input the data.

### 2.5.3 Quality Assurance Procedures

Appropriate and standard QA/QC measures will be adopted for the environmental monitoring to ensure the scientific integrity of the data produced. Sources of error in the impact monitoring will be properly controlled with the following QA/QC procedures:

- (a) Appropriate field monitoring and sampling techniques, including monitoring equipment, storage and delivery of samples;
- (b) Well organized systematic field-data system e.g. all baseline monitoring information, field observation, results, weather conditions and water sampling information, etc. will be recorded in the field monitoring record sheets. The laboratory analysis records will be maintained by the HOKLAS following HOKLAS requirements;
- (c) HOKLAS requirements for QA/QC of all laboratory testing to ensure acceptable accuracy and reproducibility of the laboratory analysis indicated by consistent agreement between duplicate samples, validity of the analytical results by compliance with the required blanks and recovery of standard addition.

### 2.5.4 Records

All impact monitoring data will be clearly and systematically documented in both hardware and software format and the software copy will be available for inspection upon request. All the document and data will be kept for at lest one year after completion of the Project. Field Data Sheets used to record the impact monitoring information, field observation, results, weather conditions and water sampling information, etc., will be properly maintained and kept by the ET. The copies of laboratory analysis records from ALS will be keep by the ET throughout the at least one year after completion of the EM&A program of the Project.

### 2.6 REPORTING

### 2.6.1 General Requirements for Report Submission

General requirements for Monthly EM&A report submission as stipulated in the EIA, EP and EM&A Manual are summarized below.

Table 2-6 Requirements for Report Submission

| Report                        | Submission   |
|-------------------------------|--|
| Monthly EM&A Report           | Within 10 working days of the end of each reporting month.   |
| Quarterly EM&A Summary Report | <ul> <li>No specific requirement, proposed three weeks after endorsement of<br/>the 3<sup>rd</sup> monthly EM&amp;A report within a particular quarter.</li> </ul> |
| Final EM&A Summary Report     | <ul> <li>No specific requirement, proposed one month upon completion of<br/>entire EM&amp;A program</li> </ul>   |

### 2.6.2 Cut-Off Day of the Reporting Month

It was agreed among the ER, IEC, CRBC, ET and EPD that, in order to streamline the EM&A report submission and to cater for the occasional delay in obtaining laboratory analysis results, the cutoff day for each month is the 25<sup>th</sup> i.e. the first day of each report is the 26<sup>th</sup> of the last month and the end day, the 25<sup>th</sup> of that month.

### 3 MONITORING RESULTS

The environmental monitoring results will be compared against the Action and Limit Levels established based on the baseline monitoring results and statutory criteria. In case the measured data exceed the environmental quality criteria, remedial actions will be triggered according to the Event and Action Plan enclosed in *Appendix F*. The environmental monitoring results are tabulated below and the details of 24-hour TSP data and graphical plots of trends of monitored parameters at key stations over the past four Reporting Periods are presented in *Appendices G* and *H*.

### 3.1 AIR QUALITY

### 3.1.1 Action and Limit Levels

According to the Baseline Monitoring Report for KT13, the Action and Limit Levels for 24-hour and 1-hour TSP are established as follows:

Table 3-1-1 Air Quality Action and Limit Levels

| Monitoring Station | Action Lev | /el (μg /m³) | Limit Lev  | el (μg/m³)  |
|--------------------|------------|--------------|------------|-------------|
| Monitoring Station | 1-hour TSP | 24-hour TSP  | 1-hour TSP | 24-hour TSP |
| KT13(A1(a))        | 309        | 144          | 500        | 260         |
| KT13(A2)           | 307        | 141          | 500        | 260         |

### 3.1.2 Results

Results of air quality monitoring at the identified locations during the Reporting Period are summarized in *Tables 3-1-3-1* and *3-1-3-2* below.

Table 3-1-2-1 Summary of Air Quality Monitoring Results at KT13-A1(a)

|           | 1-hour TSP (μg/m³) |                      |                      |                      |         |           | P (μg/m³) |
|-----------|--------------------|----------------------|----------------------|----------------------|---------|-----------|-----------|
| Date      | Start Time         | 1 <sup>st</sup> hour | 2 <sup>nd</sup> hour | 3 <sup>rd</sup> hour | Average | Date      | Results   |

| (raı      | nge)               |                      | (80-88)              |                      |         | (range)    | (17-50)    |

### 3.1.3 Discussion

As shown in *Tables 3-1-2-1* and *3-1-2-2*, 1-hour TSP and 24-hour TSP results fluctuated well below the Action Level. No exceedance of Action or Limit Levels was recorded during the Reporting Period. Neither Notification of Exceedance (hereinafter 'NOE') of air quality criteria or corrective action was required.

### 3.2 Construction Noise

### 3.2.1 Action and Limit Levels

The Action and Limit Levels for construction noise are illustrated in Table 3-2-1.

Table 3-2-1 Construction Noise Action and Limit Levels

| Time Period               | Action Level in dB(A) | Limit Level in dB(A) |
|---------------------------|-----------------------|----------------------|
| 0700-1900 hours on normal | When one documented   | > 75* dB(A)          |
| weekdays                  | complaint is received | > 15 UB(A)           |

Note: \*Reduces to 70dB(A) for schools and 65dB(A) during the school examination periods.

### 3.2.2 Results

Results of construction noise monitoring at the identified locations N1(a), N2(a) and N3 during the Reporting Period are summarized in *Tables 3-2-2-1* to *3-2-2-3*.

The baseline monitoring for N1(a) and N2(a) was performed on the 1st floor of the bedroom of 168-169 Kam Ho Road, Ma On Kong Village and No. 68 Ho Pui Village respectively. The impact noise monitoring, however, was performed on the ground floor of the same house due to denial of access to the 1st floor. The change of noise monitoring from 1st floor to ground floor will negate the need for a 3dB(A) façade correction but will not introduce any significant difference in detection and minimization of the of construction noise impacts, or alteration of the established A/L Levels. The ET has obtained the approval from EPD with consultation with the ER and IEC.

Table 3-2-2-1 Summary of Construction Noise Monitoring Results – N1(a)

| Limit Le  | Limit Level - |                             |                             |                             |                             |                             | 75 dB(A)                    |       |

### 3.2.3 Discussion

As shown in *Tables 3-2-2-1*, *Table 3-2-2-2* and *Table 3-2-2-3*, all the construction noise results fluctuated well below the Limit Level. No exceedance of Limit Level or documented construction complaint was recorded during the Reporting Period. No NOE or corrective action was therefore required.

### 3.3 WATER QUALITY

### 3.3.1 Action and Limit Levels

The Action and Limit Levels for water quality are illustrated in *Table 3-3-1*.

Table 3-3-1 Action and Limit Levels for Water Quality Monitoring

| Monitoring                             | D<br>(mg        | -              |                 | idity<br>ΓU)   | р               | Н              | _               | S<br>g/L)      | Amn<br>(μο      | nonia<br><sub>I</sub> /L) |                 | nc<br><sub>3</sub> /L) |

| W6<br>(Downstream)<br>Impact Station   | 0.93            | 0.91           | 27.88           | 30.02          | 8.7             | 8.7            | 73.40           | 78.68          | 51.62           | 54.56                     | 191.90          | 201.58                 |

### 3.3.2 Results

Water quality monitoring results measured at W1, W2, W3(a), W4, W5 and W6 during the Reporting Period are presented in tabulation and graphical plots in *Appendix G*.

### 3.3.2 Discussion

In this Reporting Period, no exceedance was recorded at both impact stations.

### DO, Turbidity, SS, Zinc and NH<sub>4</sub><sup>+</sup>-N

No exceedances of Action and Limit Levels of DO, turbidity, suspended solid, Zinc and  $NH_4^+$ -N were recorded during the Reporting Period. No Notifications of Environmental Quality Limit Exceedances (NOE) or corrective actions were therefore required for these parameters.

### <u>рН</u>

During this reporting month, pH value recorded at all sampling points within 6.6 to 8.3 were below the Action and Limit Levels set out 8.65 and 8.69 at W2, and 8.7 at W6.

### 3.4 ECOLOGY

### 3.4.1 Action and Limit Levels

The Action and Limit Levels for Construction Ecology Monitoring are shown in *Table 3-4-1* to according with the EM&A manual.

Table 3-4-1 Ecological Action and Limit Levels

| Parameters  | Action Level | Limit Level |
|---|--------------|-------------|
| Decrease in number of breeding egrets since previous year | >20%         | > 40%       |

### 3.4.2 Results

**Fifty-one (51)** individuals of birds from **nineteen (19)** species were recorded during the survey on **10 April 2010**. Among the birds recorded, **four (4)** individuals of wetland dependent birds (from **3 species**) were recorded. The summary of KT13 ecology bird survey can be referred to *Table 3-4-2*.

It is stated in the EP for KT13 that the monitoring of the Ho Pui egretry shall be carried out during the period from 1st March to 31st August as specified in the EM&A Manual. If no egret nest is found at the egretry during the period from 1st March to 31st May, the Permit Holder can start the construction works within 100m of the ecological buffer area upon obtaining the Director's approval until February in the next year. If egret nests are found during the period from 1st March to 31st August, no construction shall take place within 100m of the ecological buffer area before 1st October.

In addition, it is required in the EM&A manual that biweekly monitoring of the Ho Pui egretry for the period from 1st March to end of May is required. Should no egret nest be found at the Ho Pui egretry by the end of May, monitoring frequency from June to August can be downgraded to Monthly.

Biweekly egretry surveys on Ho Pui Egretry were conducted on 10 and 24 April 2010. No nest was found at the Ho Pui egretry during these surveys. Even though, as there had been no nest recorded at Ho Pui egretry in 2009, the action/limit level for ecology is complied.

Ma On Kong egretry was also surveyed 10 April 2010 to provide reference information on the breeding. No nest was found at Ma On Kong egretry neither. Flight line surveys are required between April to June, but as no nest was found in either egretry, no flight line was recoreded in the present monitoring.

During the walk through survey on 10 April 2010, other than the bamboo trees which are within Ho Pui Egretry boundary as shown in the EM&A manual and had been found to be cleared by villagers during site inspection on 11 July 2009, no further adverse impacts on habitats outside the boundary of the works area including the Conservation Area and the remaining Ho Pui Egretry was found.

Photo records of trees are required in six-month interval and it is not required in this reporting month.

Table 3-4-2 Summary of KT13 Ecology Impact Monitoring Bird Survey

| Scientific Name       | Common Name            | Reported in the project profile | Abundance<br>recorded in the<br>present survey<br>(10 April 2010) | Habitat utilized |

### 3.5 WASTE MANAGEMENT, CULTURAL HERITAGE AND LANDSCAPE & VISUAL

### 3.5.1 Waste Management

In order to comply with the waste management requirements, CRBC has been:

- (a) Assigned, since 9 Jan 2008, a Billing Account (account number 7006524) under the Waste Disposal (Charges for Disposal of Construction Waste) Regulation;
- (b) Issued a Discharge License No. 1U461/1 under Section 20 of the *Water Pollution Control Ordinance*:
- (c) Registered as a Chemical Waste Producer under the *Waste Disposal (Chemical Waste)* (*General) Regulation* (the Waste Producer Number assigned is WPN: 5611-531-C3124-28 dated 2 May 08); and
- (d) Granted by the Environmental Protection Department a Permit Issued under the *Dumping at Sea Ordinance* (Permit no. EP/I4D/08-095, dated 18 September 2008, permit validity period of six months from 18 September 2008 to 17 march 2009) for 18, 469 m³ sediment requiring Type 1 open sea disposal at East Sha Chau Contaminated Mud Disposal Site Pit IV b to be capped as directed by the management Team of the CEDD.

### 3.5.2 Cultural Heritage

The Action and Limit Levels for Cultural Heritage are shown in *Table 3-5-2* according to the EM&A Manual.

Table 3-5-2 Cultural Heritage Resources Action and Limit Levels

| Action Level  | Limit Level  |
|---|--|
| When damage or structural instability is first detected | Signs of deterioration and structural instability continues on subsequent visits after Action Level is triggered |

The historical grave KT13-02-02 was identified during the EIA stage of the project. A pre-construction condition survey report was issued in **July 2008** and already agreed by AMO. The details of the grave could be referred to in a report entitled "*Pre-construction condition survey on July 2008*".

During the Reporting Period, construction work at Channel KT13 had entered the area within 100m of the cultural heritage site (the grave) since 21 October 2009. To update the condition of the grave, supplementary information of condition survey was undertaken on 31 August 2009 (when no construction activities were carried out within 100m areas from the grave). The monitoring result of the supplementary survey would be adopted as the updated initial reading of the settlement level as agreed by ET and IEC

Under the current EM&A programme and approved monitoring methodology, the condition survey would be conducted by ERM Limited on a bi-monthly basis and the settlement monitoring will be conducted by CRBC, again bi-weekly. Should any exceedance was recorded, the frequency of the settlement monitoring shall be increased to weekly and the condition survey shall be increased to bi-weekly. In the settlement monitoring, five settlement marker points (13GS01 to 13GS05) were established to record the coordinates and elevation of the grave in order to monitor any ground movement or settlement during the construction works.

In this reporting period, weekly settlement monitoring was taken on 3, 16 and 24 April 2010 to compare with the initial readings to determine if there is any significant tilting or settlement of the grave. No exceedances recorded on the settlement monitoring and the settlement monitoring results are shown in *Table 3-5-3*. The condition survey for the historical grave was not required in the reporting month as per EM&A requirement.

Table 3-5-3 Record of Five Settlement Marker Points of the Qing Dynasty Grave

| Monitoring<br>Point                |        | Diff.<br>(mm) | Level (mpd) | Diff.<br>(mm) | Level (mpd) | Diff.<br>(mm) | Level (mpd) | Diff. (mm)  | Level (mpd) | Diff.<br>(mm) |
|------------------------------------|--------|---------------|-------------|---------------|-------------|---------------|-------------|-------------|-------------|---------------|
| Date                               | 130    | <b>GS01</b>   | 130         | <b>GS02</b>   | 130         | <b>GS03</b>   | 130         | <b>GS04</b> | 130         | GS05          |
| 31/08/09<br>(Initial reading)      | 19.222 | 0             | 19.985      | 0             | 20.644      | 0             | 19.943      | 0           | 19.211      | 0             |
| 03/04/10                           | 19.223 | +1            | 19.986      | +1            | 20.644      | 0             | 19.943      | 0           | 19.211      | 0             |
| 16/04/10                           | 19.222 | 0             | 19.985      | 0             | 20.644      | 0             | 19.944      | +1          | 19.211      | 0             |
| 24/04/10                           | 19.223 | +1            | 19.986      | +1            | 20.644      | 0             | 19.944      | +1          | 19.211      | 0             |
| Breach of<br>Action/Limit<br>Level |        | -             |             | -             |             | -             |             | -           |             | -             |

Note: Action level exceedance would be triggered when the settlement difference is  $\pm 2$ mm. Limit level exceedance would be triggered when the settlement difference is  $\pm 5$ mm.

### 3.5.3 Landscape and Visual

Landscape and visual inspections were conducted on **9 and 23 April 2010**. Current situation of the identified landscape resources remained the same as those of the baseline, except minor changes of river/stream/fish pond landscape character area at LR1, LR2.1,

DSD Contract No. DC/2007/17 - Drainage Improvement Works in Cheung Po, Ma On Kong, Yuen Kong San Tsuen and Tin Sam Tsuen of Yuen Long District and Sewerage at Tseng Tau Chung Tsuen, Tuen Mun.

Monthly EM&A Report for KT13 (April 2010)

LR2.2, LCA1, LCA3 and LCA4 due to site clearance, soil stockpiling and preparation work within KT13. Updated landscape and visual status is presented in *Appendix J.* 

### 4 NON-COMPLIANCE, COMPLAINT, NOTIFICATION OF SUMMONS, SUCCESSFUL PROSECUTION AND OTHERS

### 4.1 Non-compliance

No exceedance of environmental quality criteria was recorded in this reporting month as discussed in **Section 3.1** to **3.5**. No other non-compliance or deficiency was identified during regular site inspection and environmental audit. No associated remedial action was necessary.

### 4.2 ENVIRONMENTAL COMPLAINT

No written or verbal complaint was received for each environmental issue during the Reporting Period. No associated remedial action was necessary.

### 4.3 NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTION

No notifications of summons and successful prosecutions were recorded during the Reporting Period. No associated remedial action was necessary.

### 4.4 OTHERS

### 4.4.1 Waste Management Status

All types of waste arising from the construction work are classified into the following:

- Construction & Demolition (C&D) Material;
- Chemical Waste:
- General Refuse; and
- Excavated Soil and sediment

Waste generated, re-used, recycled and disposed of during the Reporting Period is shown in *Appendix K: Monthly Summary Waste Flow Table.* No Type I or Type II excavated soil were recorded in this Reporting Period.

### 4.4.2 Site Inspection and Environmental Audit

In this Reporting Period, **four** occasions of weekly environmental site inspection and audit were conducted during the Reporting Period jointly by the ER, EO and ET. No adverse environmental impacts were registered, indicating that the mitigation measures implemented were effective and sufficient for the construction activities undertaken. Minor deficiencies found in the site inspection and audit were in general rectified within the specified deadlines. Findings of the site inspection and environmental audit are summarized below.

Table 4-4-1 Summary of Findings of Site Inspection and Environmental Audit

| Date          | Findings / Deficiencies   | Follow-Up Status   |
|---------------|---|--|
| 30 March 2010 | The Contractor is reminded to remove the  | Recommendations based on   |
|               | waste scattered around the site, especially near the surface channels on a regular basis.   | the observation on 7 April 2010 were followed.                           |
| 7 April 2010  | The Contractor is reminded to maintain the outlet of the channel free of construction waste and general garbage.                    | Recommendations based on the observation on 14 April 2010 were followed. |
| 14 April 2010 | The Contractor is reminded to regularly clear the weeds growing along the safety barriers   | Recommendations based on the observation on 22 April 2010 were followed. |
| 22 April 2010 | The Contractor is reminded to cover the exposed slope with tarpaulin sheets and remove the construction materials from the channel. | Will be reported in next reporting month.                                |

### 4.4.3 Works to be Undertaken Next Month

Works to be undertaken next month are shown in the construction program enclosed in **Appendix B**. The construction activities undertaken in the Reporting Period including:

- Excavation of channel formation
- · Construction of channel structure
- Backfilling
- Installation of type 2 railing
- Laying underground drain pipe
- Laying of Gabion Block/Granite Block

### 4.4.4 Future Key Issues and Mitigation Measures for the Forth-Coming Month

As wet season has been approached, water quality mitigation measures to avoid ingress of runoff into Channel KT13 should be properly installed and maintained, as appropriate.

In addition, special attention should also be paid to construction noise, water quality, ecology and other environmental issues identified in the EM&A Manual. Mitigation measures recommended in the EIA and summarized in Mitigation Measure Implementation Schedule (EMIS) should be fully implemented.

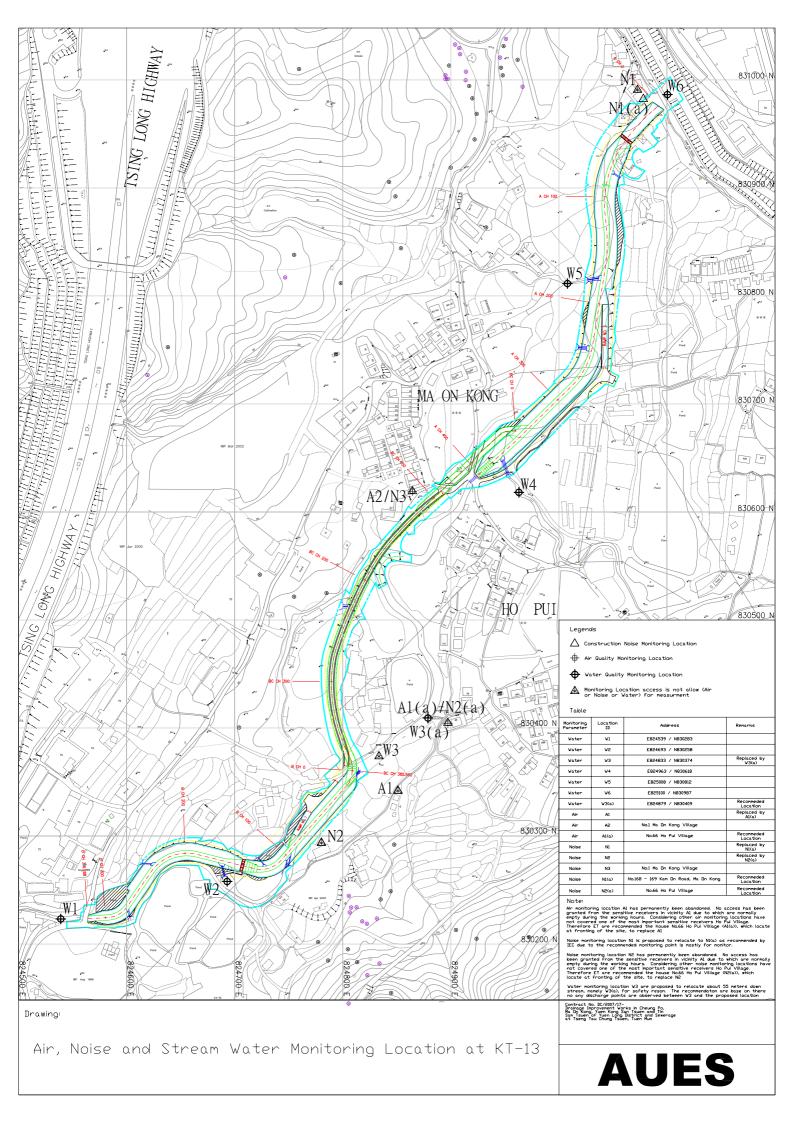

### 4 CONCLUSIONS AND RECOMMENDATIONS

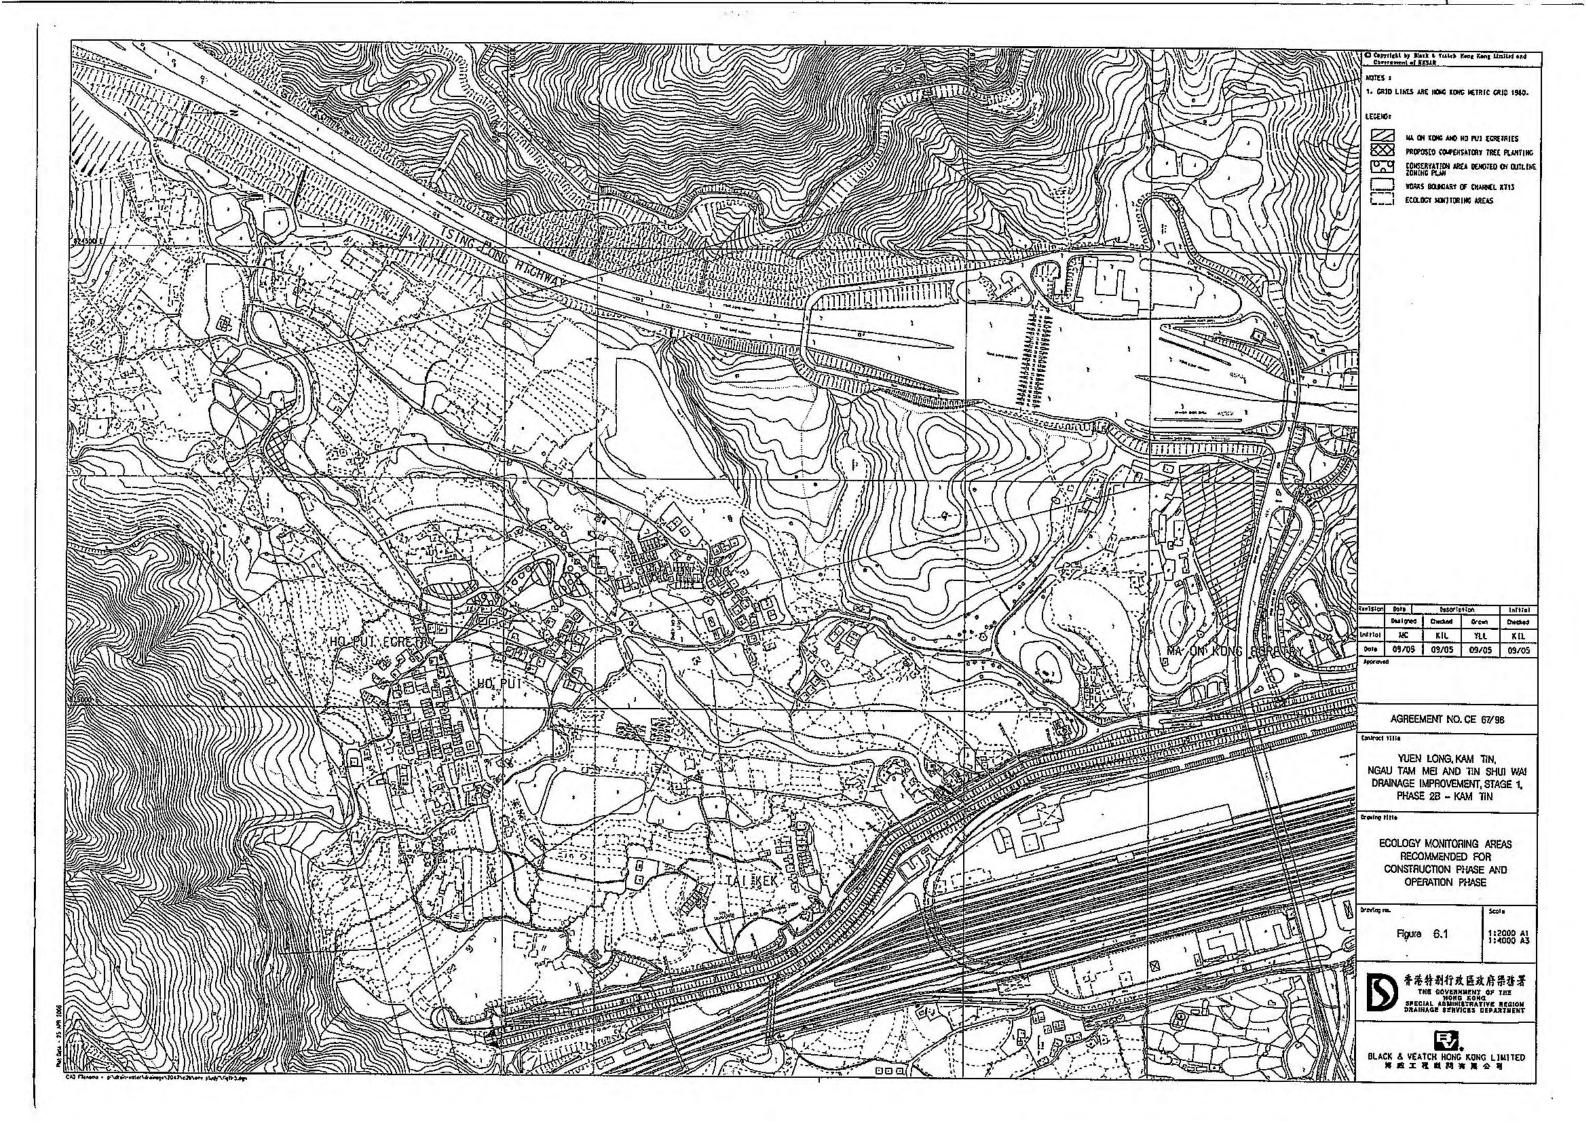

- i) This is the 19<sup>th</sup> monthly EM&A report for Channel KT13, covering the construction period from 26 March to 25 April 2010 (the Reporting Period).
- ii) Monitoring results of the Reporting Period demonstrated no exceedance of environmental quality criteria for air quality, construction noise and water quality.
- iii) In this reporting period, no construction works were carried out within 100m of the ecological buffer area. In this reporting period, no construction works were carried out within 100m of the ecological buffer area. For the ecology monitoring, by-weekly Ho Pui egretry, monthly Man On Kong egretry monitoring and flight line survey were conducted on 10 and 24 April 2010. It is reported that no nest and no flight line were found at the both surveys. In comparing the monitoring result in 2009, no exceedance was recorded in this reporting month.
- iv) Four (4) events of weekly settlement monitoring were undertaken in this reporting month and no exceedances were recorded.
- v) Landscape inspections were conducted on **9 and 23 April 2010**. No significant changes were observed for identified landscape resources and visual sensitive receivers, except for minor changes due to channel excavation, site clearance and preparation work at the identified landscape resources including LR1, LR2.1, LR2.2, LCA1, LCA3 and LCA4.
- vi) No documented complaints, notifications of summons or successful prosecutions were received during the Reporting Period. No adverse environmental impacts were observed during the weekly site inspection and environmental audit of the Reporting Period, which suggested that the implemented mitigation measures for air quality, construction noise and ecology were effective. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.
- vii) During wet season, it was reminded that water quality mitigation measures stipulated in the EIA and summarized in mitigation measures implementation schedule in the EM&A Manual, including containment structure such as temporary earth bunds, sand bags, sheet pile barriers or other similar techniques, be fully implemented.

|---|-------|---------|---------|------|----------|---------|-----------|-----------------------|
|   | Plate | H20 (L) | H2O (R) | H20  | Qstd     | I       | IC        | LINEAR                |
|   | No.   | (in)    | (in)    | (in) | (m3/min) | (chart) | corrected | REGRESSION            |
|   | 18    | 5.2     | 5.2     | 10.4 | 1.637    | 49      | 50.25     | Slope = 41.7871       |
|   | 13    | 4.2     | 4.2     | 8.4  | 1.473    | 41      | 42.05     | Intercept = -19.0093  |
|   | 10    | 3       | 3       | 6    | 1.247    | 32      | 32.82     | Corr. coeff. = 0.9979 |
|   | 7     | 2.3     | 2.3     | 4.6  | 1.093    | 25      | 25.64     |                       |
|   | 5     | 1.3     | 1.3     | 2.6  | 0.826    | 16      | 16.41     |                       |

### Calculations:

 $Qstd = 1/m[Sqrt(H20(Pa/Pstd)(Tstd/Ta))-b] \\ IC = I[Sqrt(Pa/Pstd)(Tstd/Ta)]$ 

Qstd = standard flow rate

IC = corrected chart respones

I = actual chart response

m = calibrator Qstd slope

b = calibrator Qstd intercept

Ta = actual temperature during calibration ( deg K )
Pstd = actual pressure during calibration ( mm Hg )

### For subsequent calculation of sampler flow:

1/m(( I )[Sqrt(298/Tav)(Pav/760)]-b)

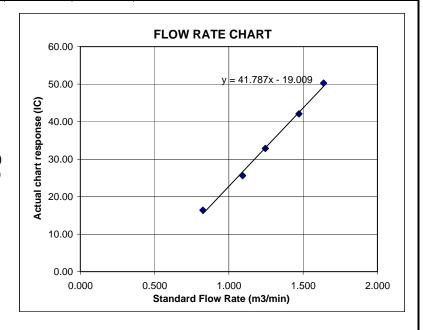

m = sampler slope

b = sampler intercept

I = chart response

Tav = daily average temperature

Pav = daily average pressure

### Calibration of pH meter

Item:

**EXTECH PH METER** 

001

Model No.: EC500

ALS Lab ID: HK1007843 Date of Calibration:

19 April, 2010

Equipment No.: N/A

Serial No.: N/A

Testing Results:

рΗ

|   | Expected Reading   | Recording Reading | N. College |
|---|--------------------|-------------------|------------|
|   | 4.00               | 3.86              |            |
| ١ | 7.00               | 7.04              |            |
|   | 10.00              | 10.05             |            |
|   | Allowing Deviation | ± 0.2 unit        |            |

**Testing Method:** 

APHA (20th edition), 4500-H<sup>+</sup>B

Mr Chan Kwok Fai, Godfrey Laboratory Manager - Hong Kong DSD Contract No. DC/2007/17 - Drainage Improvement Works in Cheung Po, Ma On Kong, Yuen Kong San Tsuen and Tin Sam Tsuen of Yuen Long District and Sewerage at Tseng Tau Chung Tsuen, Tuen Mun.

**Event and Action Plan** 

## **Event/Action Plan for Air Quality**

| EVENT                 |  | ACTION   |                                   |  |
|-----------------------|--|--|-----------------------------------|--|
| ACTION LEVEL          | Contractor's ET leader   | IEC  | ER                                | Contractor   |
|                       | Identify source     Inform IEC. ER and Contractor  | Check monitoring data submitted by     Contractor's ET leader      | Notify Contractor                 | Rectify any unacceptable     practice                  |
|                       |  | 2. Check Contractor's working method                               |                                   | <ol><li>Amend working methods if appropriate</li></ol> |
| 2. Exceedance for two |  | <ol> <li>Checking monitoring data submitted</li> </ol>             | notification                      | 1. Submit proposals for remedial                       |
| or more consecutive   | 2. Inform IEC, ER and Contractor   | by Contractor's ET leader.   | of failure in writing             | actions to IEC and ER within 3                         |
| samples               |  | 2. Check Contractor's working method                               |                                   |  |
|                       | 4. Increase monitoring frequency to daily  |  | Ensure remedial measures          | 2. Implement the agreed                                |
|                       | remedial actions required  | measures   | properly implemented              | <ol> <li>Amend proposal if appropriate</li> </ol>      |
|                       | 6. If exceedance continue, arrange meeting   | 4. Advise the ER on the effectiveness of                           |                                   |  |
|                       | 7. If exceedance stops, cease additional   | 5. Supervise implementation of remedial                            |                                   |  |
|                       | -  |  |                                   |  |
| LIMIT LEVEL           |  |  |                                   |  |
| 1. Exceedance for one |  | Check monitoring data submitted by                                 | Confirm receipt of notification   | Take immediate action to avoid                         |
| sampie                | <ol> <li>Reneat measurement to confirm findings</li> </ol>   | Check Contractor's working method                                  | Notify Contractor                 | 2 Submit proposals for remedial                        |
|                       |  | 3. Discuss with Contractor's ET leader                             | al measures                       |  |
|                       | <ol><li>Assess effectiveness of Contractor's remedial actions and kent IFC FPD and FR informed</li></ol> | and Contractor on possible remedial                                | properly implemented              | working days of notification 3 Implement the agreed    |
|                       | of the results   | 4. Advise the ER on the effectiveness of                           |                                   |  |
|                       |  | the proposed remedial measures 5. Audit implementation of remedial |                                   | 4. Amend proposal if appropriate                       |
|                       |  | measures   |                                   |  |
| 2. Exceedance for two |  | <ol> <li>Discuss amongst ER, Contractor's ET</li> </ol>            | notification                      | 1. Take immediate action to avoid                      |
| or more consecutive   | 2. Identify source   | leader and Contractor on the potential                             | of failure in writing             |  |
| samples               | Repeat fileasurefilerit to confirm findings     A Increase monitoring frequency to daily                 | 2 Review Contractor's remedial actions                             | 3. In consultation with IEC agree | actions to IEC and ER within 3                         |
|                       | 5. Carry out analysis of Contractor's working  |  |                                   | working days of notification                           |
|                       | procedures to determine possible mitigation  | effectiveness and advise the ER                                    | remedial measures to be           | 3. Implement the agreed                                |
|                       |  |  | implemented                       |  |
|                       | 6. Arrange meeting with IEC, Contractor and  | 3. Audit the implementation of remedial                            | ures                              | 4. Resubmit proposals if problem                       |
|                       | ER to discuss the remedial actions to be   | measures   | properly implemented              |  |
|                       |  |  |                                   | works as determined by the ED                          |
|                       | actions and keen IEC EDD and ED informed   |  | work is responsible and instruct  | until the exceedance is abate                          |
|                       | of the results   |  | the Contractor to stop that       | uilli lile exceedalice is abate.                       |
|                       | 8. If exceedance stops, cease additional   |  |                                   |  |
|                       | monitoring   |  | nce is abated.                    |  |

### **Event/Action Plan for Construction Noise Monitoring**

| EVENT           |  | ACTIO  | )N   |  |
|-----------------|--|--|--|--|
| EVENI           | CONTRACTOR'S ET LEADER   | IEC  | ER   | Contractor   |
| Action<br>Level | Notify IEC, Contractor and ER     Carry out investigation     Report the results of investigation to the IEC, Contractor and ER     Discuss with the Contractor and formulate remedial measures     Double monitoring frequency     Check compliance to Action/Limit Levels after application of mitigation measures   | 1. Review the analysed results submitted by the Contract's ET leader  2. Review the proposed remedial measures by the Contractor and advise the ER accordingly  3. Review the implementation of remedial measures  | Confirm receipt of notification of complaint in writing     Notify Contractor     Require Contractor to propose remedial measures for the analysed noise problem     Ensure remedial measures are properly implemented   | Submit noise     mitigation     proposals to ER     and IEC     Implement noise     mitigation     proposals   |
| Limit Level     | Notify IEC, ER, EPD and Contractor     Identify Source     Repeat measurement to confirm findings     Increase monitoring frequency     Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented     Inform IEC, ER and EPD the causes & actions taken for the exceedances     Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results     If exceedance stops, cease additional monitoring | 1. Discuss amongst ER, Contractor's ET leader and Contractor on the potential remedial actions  2. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly  3. Audit the implementation of remedial measures | Confirm receipt of notification of failure in writing     Notify Contractor     Require Contractor to propose remedial measures for the analysed noise problem     Ensure remedial measures are properly implemented     If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated | 1. Take immediate action to avoid further exceedance 2. Submit proposals for remedial actions to within 3 working days of notification 3. Implement the agreed proposals 4. Resubmit proposals if problem still not under control 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated |

# **Event and Action Plan for Water Quality**

| Event         | ET Leader  | IEC  | ER   | Contractor  |
|---------------|--|--|--|---|
| Action level  | Repeat in-site measurement to confirm findings;          | Discuss with ET and Contractor                         | Discuss with IEC on the proposed mitigation  | Inform the ER and confirm notification of the   |
| exceeded by   | Inform IEC an Contractor;                                | Review proposals on mitigation                         | Make agreement on the mitigation measures to   | Rectify unacceptable practice;  |
| one sampling  | Check monitoring data, all plant, equipment and          | measures submitted by                                  | be implemented;  | Check al plant and equipment;   |
| day           | Contractor's working methods;                            | Contractor and advise the ER                           |  | Consider changes of working methods;  |
|               | Discuss mitigation measures with IEC and Contractor;     | accordingly Assess the effectiveness of the            |  | Discuss with ET and IEC and propose mitigation measures to IEC and ER;                              |
|               | Repeat measurement on next day of exceedance             | implemented mitigation measures.                       |  | Implement the agreed mitigation measures.   |
| Action level  | Repeat in-situ measurement to confirm findings;          | Discuss with ET and Contractor                         | Discuss with IEC on the proposed mitigation  | Inform the Engineer and confirm notification of   |
| being         | Identify source(s) of impact;                            | on the mitigation measures                             |  | the non-compliance in writing;  |
| exceeded by   | Inform IEC and Contractor;                               | Review proposals on mitigation                         | Made agreement on the mitigation measures to   | Rectify unacceptable practice;  |
| more than     | Check monitoring data, all plant, equipment and          | measures submitted by                                  | be implemented;  | Check all plant and equipment;  |
| one           | Contractor's working methods;                            | Contractor and advise the ER                           | Assess the effectiveness of the implemented  | Consider changes of working methods;  |
| consecutive   | Discuss mitigation measures with IEC and                 | accordingly  | mitigation measures.   | Discuss with ET and IEC and propose mitigation  |
| sampling days | Contractor;  Ensure mitination measures are implemented: | Assess the effectiveness of the implemented mitigation |  | measures to IEC and ER within 3 working days;   |
|               | Prepare to increase the monitoring frequency to          | measures.  |  |   |
|               | daily;  Repeat measurement on next day of exceedance     |  |  |   |
| Limit level   | Repeat in-situ measurement to confirm findings;          | Discuss with ET and Contractor                         | Discuss with IEC, ET and Contractor on the   | Inform the Engineer and confirm notification of   |
| being         | Identify source(s) of impact;                            | on the mitigation measures                             | proposed mitigation measures;  | the non-compliance in writing;  |
| exceeded by   | Inform IEC, contractor and EPD;                          | Review proposals on mitigation                         | Request Contract to critically review the working  | Rectify unacceptable practice;  |
| day           | Coetractor's working methods:                            | Contractor and advise the D                            | Made agreement on the mitigation measures to   | check all plant and equipment;  |
| !             | Discuss mitigation measures with IEC, ER and             | accordingly  | be implemented;  | Discuss with ET, IEC and ER and propose   |
|               | Contractor;  | Assess the effectiveness of the                        | Assess the effectiveness of the implemented  | mitigation measures to IEC and ER within 3  |
|               | Ensure mitigation measures are implemented;              | implemented mitigation                                 | mitigation measures.   | working days;   |
|               | exceedance of Limit level.                               |  |  | Q   |
| Limit level   | Repeat in-situ measurement to confirm fundings;          | Discuss with ET and Contractor                         | Discuss with IEC, ET and Contractor on the   | Inform the ER and confirm notification of the   |
| being         | Identify source(s) of impact;                            | on the mitigation measures                             | proposed mitigation measures;  | non-compliance in writing;  |
| exceeded by   | Inform IEC, contractor and EPU;                          | Review proposals on mitigation                         | Request Contractor to critically review the  | Rectify unacceptable practice;  |
| ope man       | Contractor's working methods:                            | Contractor and advise the ED                           | Working methods;   | Consider changes of working methods:  |
| consecutive   | Discuss mitigation measures with IEC, ER and             | accordingly  | be implemented:  | Discuss with ET. IEC and ER and propose   |
| sampling days | Contractor;  | Assess the effectiveness of the                        | Assess the effectiveness of the implemented  | mitigation measures to IEC and ER within 3  |
|               | Ensure mitigation measures are implemented;              | implemented mitigation                                 | mitigation measures;   | working days;   |
|               | Increase the Monitoring frequency to daily until no      | measures.  | Consider and instruct, if necessary, the   | Implement the agreed mitigation measures;   |
|               | exceedance of Limit level for two consecutive days.      |  | Contractor to slow down or to stop all or part of the marine work until no exceedance of Limit | As directed by the Engineer, to slow down or to stop all or part of the marine work or construction |
|               |  |  | level.   | activities.   |
|               |  |  |  |   |

### **Event/Action Plan for Ecology**

| EVENT                | ACTION   |  |  |   |
|----------------------|--|--|--|---|
| EVENI                | ET Leader  | IEC  | Engineer   | Contractor  |
| ACTION LEVEL REACHED | 1. Carry out investigation  2. Review results and assess whether amendment to action level is appropriate  3. Report the results of investigation to the IEC  4. Notify Contractor and Engineer  5. Discuss with the Contractor and formulate remedial measures  6. Repeat survey to confirm results | 1. Review the analysed results submitted by ET 2. Review the proposed remedial measures by the Contractor and advice the Engineer accordingly 3. Supervise implementation of remedial measures | Confirm receipt of notification of failure in writing     Notify Contractor     Require Contractor to propose remedial measures for the analysed problem     Ensure remedial measures properly implemented   | 1. Take immediate action to avoid further problem 2. Submit proposals for remedial actions to IEC within 3 working days of notification 3. Implement the agreed proposals 4. Resubmit proposals if problem still not under control  |
| LIMIT LEVEL REACHED  | 1. Carry out investigation  2. Review results and assess whether amendment to limit level is appropriate  3. Report the results of investigation to the IEC  4. Notify Contractor and Engineer  5. Discuss with the Contractor and formulate remedial measures  6. Repeat survey to confirm results  | Review the analysed results submitted by ET     Review the proposed remedial measures by the Contractor and advice the Engineer accordingly     Supervise implementation of remedial measures  | Confirm receipt of notification of failure in writing     Notify Contractor     Require Contractor to propose remedial measures for the analysed problem     Ensure remedial measures properly implemented     Issue instruction to stop the relevant portion of the works until the problem is abated (construction period only). | 1. Take immediate action to avoid further problem 2. Submit proposals for remedial actions to IEC within 3 working days of notification 3. Implement the agreed proposals 4. Resubmit proposals if problem still not under control 5. Stop the relevant portion of works as determined by the Engineer until the problem is abated (construction period only) |

### **Event and Action Plan for Cultural Heritage**

| EVENT        |   | ACT  | TION  |   |
|--------------|---|--|---|---|
| EVENI        | ET Leader   | IEC  | ER  | Contractor  |
| Action Level | Notify IEC and Contractor to carry out investigation  Report reasons of structural  | Review report of structural damage or instability by the ET.   | Confirm receipt of notification of failure in writing   | Notify AMO concerning the damage or structural instability of the cultural heritage resources   |
|              | damage or instability to the IEC and Contractor Discuss with the Contractor and formulate remedial measures  Increase monitoring frequency to once per week to check mitigation   | Review proposed remedial<br>measures by the Contractor<br>and advise the ER and<br>Antiquities and Monuments<br>Office (AMO) accordingly<br>Supervise the<br>implementation of remedial<br>measures, with approval   | Notify Contractor  Require Contractor to propose remedial measures and to notify and seek approval from AMO.  Ensure remedial measures are properly implemented.  | Submit proposals for repair of damage to cultural heritage resources to AMO for approval and to implement approved measures.  |
| Limit Level  | effectiveness  Notify IEC and Contractor to carry out investigation and to stop construction work within 100m of cultural heritage resource to avoid further impact until AMO are satisfied that the relevant structure has been repaired or stabilized to an acceptable level.  Report reasons of continued structural damage or instability to the IEC and Contractor Discuss with the Contractor and formulate remedial measures  Increase monitoring frequency to daily to check mitigation effectiveness | from AMO.  Review report of structural damage or instability by the ET.  Review proposed remedial measures by the Contractor and advise the ER and Antiquities and Monuments Office (AMO) accordingly.  Supervise the implementation of remedial measures, with approval from AMO. | Confirm receipt of notification of failure in writing  Notify Contractor  Require Contractor to propose remedial measures and to notify and seek approval from AMO.  Ensure remedial measures are properly implemented. | To carry out investigation and to stop construction work within 100m of cultural heritage resource to avoid further impact until AMO are satisfied that the relevant structure has been repaired or stabilized to an acceptable level.  Propose remedial measures for the repair and stabilization of cultural heritage resources, up to liaison of moving and rebuilding the relevant structure with the approval of owner (usually the clan members) and AMO. |

### **Event and Action Plan for Landscape and Visual Impact - Construction Phase**

| Action Level                         | Environmental Team<br>Leader (ETL)  | Independent<br>Evnironmental Checker<br>(IEC)  | Engineer's<br>Representative (ER)   | Contractor  |

Physical, Human and Cultural Landscape Resources at KT13

Sewerage at Tseng Tau Chung Tsuen, Tuen Mun Drainage Improvement Works in Cheung Po, Ma On Kong, Yuen Kong San Tsuen, Tin Sam Tsuen of Yuen Long District and

# Current Situation of Physical, Human and Cultural Landscape Resources at KT13, inspected on 9 and 23 April 2010

conflict with the Project are mapped together with their extent outside study boundary for integrity of information. Photo views illustrating the landscape resources of the study area are illustrated in Drawing Nos. PR-001 to 002 inclusive. For ease of reference and co-ordination between The physical resources that will be affected during the Construction Phase and Operational Phase, together with their sensitivity to change, are described below. The locations of the baseline landscape resources are mapped in Drawing no. LR-001. The Landscape Resources in direct text, tables and figures each landscape resources is given an identity number.

Table compares the baseline study and the current situation for KT13: (Landscape Resources)

## 10.7.19 Visual Character

The visual quality of the river valley of Ma On Kong Channel is semi-natural based on combination of rural landscape elements including agricultural Interspersed landscape elements on general flat landform with minor undulation render numerous small enclosed views. No major vista and high land, village houses, woodland and pond and stream and industrial landscape elements including open storage and temporary structures. quality open view identified.

## 10.7.20 Visual Sensitive Receiver (VSR)

Within the ZVI, a number of key Visual Sensitive Receivers (VSRs) have been identified. These VSRs are mapped in Drawing V-001. They are listed, together with their sensitivity, in Table 10/5. Photo views illustrating the VSRs are illustrated in Drawing nos. PV-001 to 002 inclusive. For the ease of reference, each VSR is given an identity number, which is used in the text, tables and figures.
