 AUES (Mr. TW Tam / Ms. Nicola Hon) (Fax: 2959 6079)

#### Executive Summary

ES01 This is the **36**<sup>th</sup> monthly EM&A report for the Channel KT13, covering the construction period from **26 August to 25 September 2011** (the Reporting Period).

#### **Breaches of Action and Limit Levels**

- ES02 Monitoring results of the Reporting Period demonstrated no exceedances of environmental quality criteria for air quality, construction noise and ecology monitoring.
- ES03 For stream water quality monitoring, 15 Limit Level exceedances were recorded which namely 5 exceedance at upstream Location W2 and 10 exceedances downstream Location W6 which included parameters of turbidity, suspended solids,  $NH_4^+$ -N and zinc. Investigation concluded that the exceedances were not related to the works under the Project.
- ES04 During the Reporting Period, there was no construction work conducted within 100m of the cultural heritage site at KT13. Therefore, no cultural heritage monitoring was required in accordance with the approved methodology.
- ES05 Landscape inspections were conducted on **9 and 23 September 2011**. No significant changes were observed for the identified landscape resources and visual sensitive receivers, except for minor changes due to channel excavation, site clearance and preparation work at the identified landscape resources including LR1, LR2.1, LR2.2, LCA1, LCA3 and LCA4.

#### Environmental Complaint, Notification of Summons and Prosecution

ES06 No documented complaint, notification of summons or successful prosecution was received during the Reporting Period. Environmental audit of the Reporting Period indicated that the implemented mitigation measures for air quality, construction noise and ecology were effective. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

#### **Reporting Changes**

ES07 There is no reporting change in this reporting month.

#### **Future Key Issues**

- ES08 In viewing that the major construction activities of the Project are substantially completed, the Contractor is reminded to maintain the housekeeping of the site in good standard.
- ES09 The Contractor is reminded that all environmental issues identified in the EM&A Manual as recommended in the EIA and summarized in Mitigation Measure Implementation Schedule shall be implemented properly until the monitoring programme end.

#### 1 ENVIRONMENTAL STATUS

This is the **36**<sup>th</sup> monthly EM&A report for KT13, covering the construction period from **26 August to 25 September 2011** (the Reporting Period).

1.1 PROJECT AREA AND CONSTRUCTION PROGRAMME

Drawings showing the project area, any environmental sensitive receivers and the locations of the monitoring and control stations are presented in *Appendix A*, and the construction program in *Appendix B*.

1.2 WORKS UNDERTAKEN DURING THE REPORTING PERIOD

Apart from general works of tree survey, structural survey and environmental monitoring & audit, works undertaken during the Reporting Period with fine tuning of construction activities showing the inter-relationship with environmental protection/mitigation measures for the month are summarized as follows:

- Compensatory planting;
- Remedial works
- 1.3 Environmental Management Organization

Management structure and key personnel contact names and telephone numbers of the environmental management organization are presented in Appendix C, where DSD is the Project Proponent; CRBC is the main Contractor; EPD and AFCD are the supervisory departments for environmental protection of the Project; BVHKL is the Engineer's Representative of DSD (the ER); ARUP is the Independent Environmental Checker (the IEC) and Action-United Environmental Services and Consulting (AUES) is the environmental team (the ET).

- 1.4 LICENSING STATUS
- 1.4.1 Air Pollution Control (Construction Dust) Regulation

Pursuant to the *Air Pollution Control (Construction Dust) Regulation,* CRBC has notified EPD, via submission of Form NA dated 14 February 2008, of the scope and nature of the works to be carried out under the Project, including construction activities such as stockpiling, loading and unloading, transfer of dusty material, use of vehicles and debris handling, etc. CRBC will continuously review the status of the environmental licenses and apply the required licenses/permits prior to the commencement of construction work.

1.4.2 Noise Control Ordinance

No *Construction Noise Permit* (CNP) is required for the Project pursuant to the Noise Control Ordinance (NCO) and the associated applicable subsidiary regulations of *Noise Control (General) Regulation, Noise Control (Hand-held Percussive Breaker) Regulation and Noise Control (Air Compressor) Regulation, as the use of powered mechanical equipment, or conducting construction work in during restricted hours, i.e. 1900 to 0700 hours on normal weekdays and any time on general holidays including Sundays is not anticipated during the whole construction period. CRBC will continuously review the status of the environmental licenses under the NCO and apply the required licenses/permits prior to the commencement of construction work.* 

- 1.4.3 Waste Disposal (Charges for Disposal of Construction Waste) Regulation
   CRBC has applied for a Billing Account (Construction Work Contract with Value of \$1million or above), under the Waste Disposal (Charges for Disposal of Construction Waste) Regulation. The account number 7006524 has been assigned on 9 Jan 2008.
- 1.4.4 Water Pollution Control Ordinance CRBC has applied for a discharge license under Section 20 of the *Water Pollution Control Ordinance,* and the license No. 1U461/1 has been issued.
- 1.4.5 Waste Disposal (Chemical Waste) (General) Regulation CRBC has registered as a Chemical Waste Producer with EPD under the Waste Disposal (Chemical Waste) (General) Regulation and the Waste Producer Number assigned is WPN: 5611-531-C3124-28 dated 2 May 08.
- 1.4.6 Dumping at Sea Permit

CRBC has been granted by the Environmental Protection Department a Permit Issued under the *Dumping at Sea Ordinance* (Permit no. EP/I4D/08-095, dated 18 September 2008, permit validity period of six months from 18 September 2008 to 17 March 2009) for disposal of 18,469 m<sup>3</sup> sediment, requiring Type 1 – open sea disposal at East Sha Chau Contaminated Mud Disposal Site – Pit IV b, to be capped as directed by the Management Team of the Civil Engineering and Development Department. Note that this permit has expired. As there is no need for further sea disposal, no further permits will be required in the future.

#### 1.5 Environmental Protection and Pollution Control Mitigation Measures

CRBC has committed to implement environmental protection and pollution control and mitigation measures, as recommended in the EIA, EP, EM&A Manuals, and summarized in the Mitigation Measures Implementation Schedules. The implemented mitigation measures include

- (a) Watering of stockpiles of rip-rap at KT13;
- (b) Covering of the loose soil at KT13 to minimize water quality impacts;
- (c) Hard pavement of haul road leading to public roads at KT13;
- (d) Classification and disposal of illegally dumped construction and demolishment materials at KT13;
- (e) Construction of noise barriers; and
- (f) Erection of dams with sand bags downstream the excavation site within the water course of KT13 to enhance sedimentation of turbidity and suspended solids (SS).

#### 2 MONITORING METHODOLOGY

#### 2.1 MONITORING PARAMETERS

According to the EM&A requirements set out in the EIA, Environmental Permit No. EP-263/2007/A (the EP) and the associated EM&A Manual, the required monitoring parameters are summarized as follows.

#### Table 2-1 Summary of Monitoring Parameters

Environmental Issue	Monitoring Parameters			
Air Quality	<ul> <li>(a) 1-hour Total Suspended Particulate (1-hour TSP); and</li> <li>(b) 24-hour Total Suspended Particulate (24-hour TSP).</li> </ul>			
Construction Noise	<ul> <li>(a) A-weighted equivalent continuous sound pressure level (30min) (Leq(30min) during the normal working hours; and</li> <li>(b) A-weighted equivalent continuous sound pressure level (5min) (Leq(5min) for construction work during the Restricted Hours.</li> </ul>			
Water Quality	(a) In Situ Measurement	temperature, dissolved oxygen (DO), pH & turbidity		
	(b) Laboratory Analysis	suspended solids (SS), Ammonia Nitrogen (NH <sub>3</sub> -N) and Zinc (Zn)		
Ecology	Vegetation, all bird species of wetland, Ho Pui Egret, Ma On Hong Egret and Flight Line Survey			
Waste Inspection and the document audit Management		cument audit		
Cultural Heritage	Condition survey for a historical grave			
Landscape & To audit the implementation of the proposed construction phase mitigat Visual stipulated in EIA.		ntation of the proposed construction phase mitigation measure		

#### 2.2 MONITORING LOCATIONS

Details of the monitoring locations are summarized in *Table 2-2* and shown in *Appendix A*. For ease of reference, monitoring locations denoted with "(a)" are relocated locations to differentiate them from the original 'EM&A Manual' locations.

Environmental Issues	Monitoring Location	Identified Address / Co-ordinates	Status of Monitoring Locations / Rationale for Recommended Replacement
Air A1(a) No.68 Ho Pui Village		No.68 Ho Pui Village	The original location of EM&A Manuals A1 has permanently been abandoned. No access can be acquired in the vicinity of A1. Taken into consideration that Ho Pui Village is one of the most important sensitive receivers near KT-13 without monitoring, the most fronting house, No. 68 Ho Pui Village, is therefore recommended as the replacement location A1(a).
	A2	No.1 Ma On Kong Village	Original location of the EM&A Manual; access granted.
Noise	N1(a)	168-169 Kam Ho Road, Ma On Kong Village,Original location of N1 identified in the EM& Manual was relocated to proposed area a recommended by IEC.	
	N2(a)	No. 68 Ho Pui Village,	The original location of EM&A Manuals N2 has permanently been abandoned. No access can be acquired in the vicinity of N2. Taken into consideration that Ho Pui Village is one of the most important sensitive receivers near KT-13 without monitoring, the most fronting house, No. 68 Ho Pui Village, is therefore recommended as the replacement location N2(a).
	N3	No.1 Ma On Kong Village	Original locations of the EM&A Manual; access granted.
Water	W1	E824539 / N830283	Original locations of the EM&A Manual; access resolved.

#### **Table 2-2Summary of Monitoring Locations**

Z:\Jobs\2008\TCS00408 (DC-2007-17)\600\EM&A\Impact\KT13\Monthly\36th Monthly Report - September 2011\R1666v2.doc Action-United Environmental Services and Consulting

Environmental	Monitoring	Identified Address /	Status of Monitoring Locations / Rationale
Issues	Location	Co-ordinates	for Recommended Replacement
	W2	E824693 / N830258	Original locations of the EM&A Manual;
			access resolved.
	W3(a)	E824833 / N830374	The W3 is proposed to be relocated about 55
			m down stream to W3(a) for safety reason as
			there is no any discharge point observed
			between W3 and the proposed W3(a).
	W4	E824936 / N830618	Original locations of the EM&A Manual; access resolved.
	W5	E825008 / N830812	Original locations of the EM&A Manual;
		2020000711000012	access resolved.
	W6	E825100 / N830987	Original locations of the EM&A Manual;
			access resolved.
Ecology	Monthly monitoring along the boundary of the works area to confirm that there are no		
	adverse impacts on habitats outside the site in particular the Conservation Area (CA)		
	zone and Ho Pui Egretry.		
	Photographic records at six-month intervals;		
	Monthly monitoring of all bird numbers including wetland species and species identified as being of conservation importance;		
			ch to August. The Ma On Kong egretry is also
	surveyed to provide reference information on the breeding egrets nearby; and Flight line surveys twice per month during April to June.		
Waste	Whole construction site and document		
Management

#### 2.3 MONITORING FREQUENCY, DURATION AND SCHEDULE

#### 2.3.1 Monitoring Frequency and Duration

Environmental monitoring is conducted upon commencement of the construction activities and throughout the whole construction period to detect and minimize any adverse environmental impacts generated from the construction activities of the Project. The monitoring frequency and duration for air quality, construction noise, water quality, ecology and other parameters are summarized below.

#### Air Quality

<u>Frequency</u>: Once every 6 days for 24-hour TSP and three times every 6 days for 1-hour TSP, when the highest construction dust impacts are anticipated.

Duration: Throughout the construction period

#### **Construction Noise**

- <u>Frequency</u>: Measurement of Leq(30min): Once a week during 0700-1900 hours on normal weekdays. If the construction work is undertake at restricted hours, the frequency of noise monitoring will be conducted in accordance with the requirements under the related Construction Noise Permit issued by EPD as follows:
  - 3 consecutive Leq(5min) at restrict hour from 1700 2300 hours;
  - 3 consecutive Leq(5min) for restrict hour from 2300 0700 hours next day;
  - 3 consecutive Leq(5min) for Sunday or public holiday from 0700 1900 hours;

<u>Duration</u>: Throughout the construction period

#### Water Quality

- <u>Frequency</u>: Three times a week with at least 36 hour intervals between any two consecutive monitoring events
- <u>Depths</u>: As the water columns in the stream water within KT13 is generally less than 3m, measurement is performed at the mid-depths of the monitoring locations. In case the water columns are deeper than 6m, measurement shall be carried out at three water depths, namely, 1m below water surface, mid-depth, and 1m above river bed. If the water depths are between 3 to 6m, the mid-depth measurement is omitted.
- <u>Duration</u>: Throughout the construction period.

#### <u>Ecology</u>

The Ecology Monitoring is required in accordance with the EM&A Manual.

- Parameters: Vegetation, All bird species including wetland birds, Ho Pui and Ma On Hong Egretries and Flight line survey
- Frequency:Vegetation Impact monitoring monthly;<br/>Photographic records/checks against baseline records– six monthly<br/>Wetland Bird survey Monthly of half-day survey;<br/>Ma On Kong egretry Monthly between March to August; and<br/>Ho Pui egretry Bi-weekly between March and August;<br/>Flight line Survey twice per Month during the period from April to June<br/>Throughout the whole construction pariod
- Duration: Throughout the whole construction period

#### Waste Management Audit

Frequency: Once per month

<u>Duration</u>: Throughout the construction period.

#### Cultural Heritage

- Scope: Condition survey and settlement monitoring of a Qing Dynasty Grave.
- Frequency: Condition survey Bi-monthly
  - Settlement monitoring Bi-weekly
- <u>Duration</u>: Throughout the construction phase period. (When construction work entered the 100m of the cultural heritage site)

#### Landscape & Visual

Frequency: Bi-weekly

<u>Duration</u>: Throughout the construction phase period.

2.3.2 Environmental Monitoring Schedule

The monitoring schedules for the Reporting Period and next month are presented in *Appendix D.* 

#### 2.4 MONITORING EQUIPMENT AND PROCEDURE

The monitoring equipment and procedures are summarized below. Calibration certificates of the equipment and the related laboratories are presented in *Appendix E.* 

2.4.1 Weather Conditions during the Reporting Period

All meteorological information is extracted from the Hong Kong Observatory (Lau Fau Shan Station). The meteorological data include wind direction, wind speed, humidity, rainfall, air pressure and temperature etc., that are generally required for evaluating the environmental impact arising from the construction activities. The meteorological data are presented in *Appendix D*.

#### 2.4.2 Air Quality

#### Monitoring Equipment

A list of air quality monitoring equipment is shown below.

Table 2-4-2Air Quality Monitoring Equipment

Equipment	Model	Serial Number
24-hour TSP		
High Volume Air Sampler	Grasby Anderson GMWS 2310 HVS	-
Calibration Kit	TISCH Model TE-5025A	1941
1-hour TSP		
Portable Dust Meter	TSI DustTrak Model 8520	21060

#### Monitoring Procedure

#### <u>1-hour TSP</u>

The 1-hour TSP measurement follows manufacturer's Operation and Service Manual, using a 1-hour TSP monitor brand named TSI Dust Track Aerosol Monitor Model 8520 or Sibata LD-3 Laser Dust Meter, which is a portable, battery-operated laser photometer to record the real time 1-hour TSP based on 90<sup>0</sup> light scattering. The 1-hour TSP monitor consists of the following:

- (a) A pump to draw sample aerosol through the optic chamber where TSP is measured;
- (b) A sheath air system to isolate the aerosol in the chamber to keep the optics clean for maximum reliability; and
- (c) A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.

The 1-hour TSP meter to be used will be within the valid period, calibrated by the manufacturer prior to purchasing. Zero response of the instrument will be checked before and after each monitoring event.

#### 24-hour TSP

The equipment used for 24-hour TSP measurement is the high volume air sampling system (hereinafter 'HVS') brand named Thermo Andersen, Model GS2310 TSP. The HVS complies with US EPA Code of Federal Regulation, Appendix B to Part 50. The HVS consists of the following:

- (a) An anodized aluminum shelter;
- (b) A 8"x10" stainless steel filter holder;
- (c) A blower motor assembly;
- (d) A continuous flow/pressure recorder;
- (e) A motor speed-voltage control/elapsed time indicator;
- (f) A 6-day mechanical timer, and
- (g) A power supply of 220v/50 Hz

The HVS is operated and calibrated on a regular basis following the manufacturer's instruction using the NIST-certified standard calibrator brand named TISCH Calibration Kit Model TE-5025A. Regular HVS operation and maintenance as well as filter paper

installation and collection is performed by the ET's competent technicians, whereas laboratory analyses are conducted in a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (herein after 'ALS'). The 24-hour TSP filters of the 24-hour TSP will be kept in ALS for six months prior to disposal.

All relevant data including temperature, pressure, weather conditions, elapsed-time meter reading for the start and stop of the sampler, identification and weight of the filter paper are recorded in details.

#### 2.4.3 Construction Noise

#### Monitoring Equipment

A list of construction noise monitoring equipment is shown below.

#### Table 2-4-3 Construction Noise Monitoring Equipment

Equipment	Model	Serial Number
Integrating Sound Level Meter	Bruel & Kjaer 2238	2285721
Calibrator	Bruel & Kjaer 4231	2713428
Portable Wind Speed Indicator	Testo Anemometer	-

#### Monitoring Procedure

Sound level meters listed above comply with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications, as recommended in Technical Memorandum (TM) issued under the Noise Control Ordinance (NCO).

All noise measurements will be performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (Leq). Leq(30 min) in six consecutive Leq(5 min) measurements will be used as the monitoring parameter for the time period between 0700-1900 hours on weekdays throughout the construction period. Leq(15min) in three consecutive Leq(5 min) measurements for other time periods (e.g. during restricted hours) will only be conducted for monitoring the construction noise during restricted hours as necessary.

The sound level meter is mounted on a tripod at a height of 1.2 m and placed at the assessment point and oriented such that the microphone is pointed to the site with the microphone facing perpendicular to the line of sight. The windshield is fitted for all measurements. Where a measurement is to be carried out at a building, the assessment point is normally at a position 1 m from the exterior of the building façade. Where a measurement is to be made for noise being received at a place other than a building, the assessment point is at a position 1.2 m above the ground in a free-field situation, i.e. at least 3.5 m away from reflective surfaces such as adjacent buildings or walls.

Immediately prior to and following each noise measurement the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements will be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0dB. No noise measurement will be made in the present of significant fog, rain, wind with a steady speed exceeding 5m/s or wind with gusts exceeding 10m/s. The wind speed is checked with a portable wind speed meter capable of measuring the wind speed in m/s.

#### 2.4.4 Water Quality

#### Monitoring Equipment

Monitoring Equipment for water quality is listed below.

#### Table 2-4-4

#### -4 Water Quality Monitoring Equipment

Equipment	Model	Serial Number
Water Depth Detector	Eagle Sonar	-
Water Sampler	Teflon bailer / bucket	-
Thermometer & DO meter	YSI 550A	05F2063AZ
pH meter Extech pH Meter EC500		Work Order: HK1109433
Turbidimeter	Hach 2100p	950900008735
Hand Refractometer	ATAGO	289468
Sample Container	High density polythene bottles (provided by laboratory)	-
Storage Container	'Willow' 33-litter plastic cool box	-

#### Monitoring Procedure

#### Water Depth

As the water columns in the stream water within KT13 is generally less than 3 m, measurement is performed at the mid-depths of the monitoring locations. In case the water columns are deeper than 6 m, measurement shall be carried out at three water depths, namely, 1 m below water surface, mid-depth, and 1 m above river bed. If the water depths are between 3 to 6 m, the mid-depth measurement is omitted.

Water depths are determined prior to measurement and sampling, using a portable battery operated depth detector, brand named 'Eagle Sonar', if the depths exceed 1.5 meter. For the depths well below 1 meter, the depths of water columns are measured with a steel ruler with appropriate weight.

#### Dissolved Oxygen (DO)

A portable YSI 550A DO Meter will be used for in-situ DO measurement. The DO meter is capable of measuring DO in the range of 0 - 20 mg/L and 0 - 200 % saturation and checked against water saturated ambient air on each monitoring day prior to monitoring. Although the DO Meter automatically compensates ambient water temperature to a standard temperature of 20<sup>o</sup>C for ease of comparison of the data under the changing reality, the temperature readings of the DO Meter will be recorded in the field data sheets. Calibration of the equipment will be performed by ALS on quarterly basis.

#### <u>рН</u>

A portable Extech pH Meter will be used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 - 14 and readable to 0.1. Standard buffer solutions of pH 7 and pH 10 are used for calibration of the instrument before and after measurement. Quarterly calibration of the equipment will be performed by ALS.

#### **Turbidity**

A portable Hach 2100p turbidity Meter will be used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 - 1000 NTU. Calibration of the equipment will be performed by ALS on quarterly basis.

#### <u>Salinity</u>

A portable hand Refractometer AGATO will be used for in-situ salinity measurement. The refractometer is capable of measuring salinity in the range of 0-70ppt with accuracy  $\pm 1\%$  reading. Calibration of the equipment will be performed by ALS on quarterly basis.

#### Suspended Solids (SS)

SS will be determined by ALS upon receipt of the water samples using the HOKLAS accredited analytical method - ALS Method EA-025.

#### Ammonia Nitrogen(NH<sub>3</sub>-N)

<u>*NH*</u><sub>3</sub>-*N* will be examined by ALS upon receipt of the water samples using the HOKLAS accredited analytical methods - ALS Method EK-055A.

#### <u>Zinc(Zn)</u>

Zn will be analyzed by ALS upon receipt of the water samples using the HOKLAS accredited analytical methods - ALS Method EG-020.

#### Water Sampler

Water samples will be collected using a plastic sampler to prevent metal contamination. As the water depths in the stream water within KT13 are generally less than 0.5 m, a plastic bucket with a rope of appropriate length is used for water sampling. The sampler is rinsed before collection with the sample to be taken. For water depths deeper than 0.5 meter, a cleaned plastic bailer bucket will be used for sample collection.

1000 mL water sample is collected from each depth for SS determination. The samples collected are stored in a cool box maintained at 4<sup>o</sup>C and delivered to ALS upon completion of the sampling by end of each sampling day.

#### Sample Container

Water samples are contained in screw-cap PE (Poly-Ethylene) bottles, which are provided and pretreated according to corresponding HOKLAS and ALS analytical requirements. Where appropriate, the sampling bottles are rinsed with the water to be contained. Water samples are then transferred from the water sampler to the sampling bottles to 95% bottle capacity to allow possible volume expansion during delivery and storage.

#### Sample Storage

A 'Willow' 33-litter plastic cool box packed with ice will be used to preserve the collected water samples prior to arrival at ALS. The water temperature of the cool box will be maintained at a temperature as close to 4<sup>o</sup>C as possible without being frozen. Samples collected will be delivered to the laboratory upon collection within the maximum storage time required under the HOKLAS and ALS analytical requirements

#### 2.4.5 Ecology

Monthly walk through survey will be conducted along the boundary of work area for KT13. Bird monitoring will be conducted in the study areas monthly for KT13. Monitoring on the Ho Pui egretry and Ma On Kong egretry will be conducted between March to August. Flight line surveys to record the feeding areas and the habitat use of breeding egrets will be conducted between April to June. Photographic record should be made at six month intervals.

#### Monitoring Equipment

The following equipment will be used for monitoring:-

Standard portable field survey equipment was used for ecological monitoring, including

- (a) Binoculars of 10 x 40 magnifications;
- (b) Digital camera; and
- (c) Notebook.

#### Study Area

The areas for the ecological monitoring programme would cover 60 m on either side of the existing channel as well as the proposed bypass culvert, as shown in Figure 6.1 of the EM&A Manual. Within these, emphasis will be given to the area around the Ho Pui and Ma On Kong egretries and habitats of at least moderate ecological value. In addition, monitoring would also be undertaken at the Ho Pui egretry and Ma On Kong egretry is outside the demarcated monitoring area but is also monitored to identify any adverse effects on the breeding egrets).

#### Survey Method

Monthly monitoring will be conducted by means of walk through survey, along the boundary of work area for KT13. Any adverse impacts to the habitats outside the site,

in particular the Conservation Area (CA) zone and Ho Pui Egretry, will be checked and reported.

Photographic records will be made every six months on the fixed photo record points selected during the baseline survey. The photos from the construction phase ecological monitoring will be compared with those taken during the baseline, which are used as the baseline conditions.

Bird monitoring will be conducted in the study areas monthly for KT13. Attention should be paid on wetland species and species identified as being of conservation importance, and the habitats utilized should also be recorded. Bird surveys should commence no later than 2 hours after dawn.

Monitoring on the Ho Pui egretry and Ma On Kong egretry will be conducted between March to August. The frequency would be twice per month during March to May. Depending upon the nesting conditions at Ho Pui egretry, the frequency could be reduced to monthly between June and August if no egret nest found by the end of May, or maintained at twice per month till the end of August if there are egret nests. Number of active nests, species and number of birds present and breeding stage should be recorded.

Flight line surveys to record the feeding areas and the habitat use of breeding egrets will be conducted twice per month between April to June. The number and species of flying egrets, and their landing habitats and locations should be recorded.

#### 2.4.6 Waste Management, Cultural Heritage and Landscape & Visual

Waste Management, Cultural Heritage and Landscape & Visual monitoring is required for KT13 as stipulated in the EM&A manual [382047/E/EMA/Issue 5] **Section 5**, **Section 7** and **Section 8** accordingly.

#### Waste Management

During the monthly audit, ETL will pay attention to the issues relating to waste management, and check whether the Contractor has followed the relevant contract Specifications and the procedures specified under the law of HKSAR.

#### Cultural Heritage

Condition survey by a qualified archaeologist is required for the historical grave near Ma On Kong before and during the construction phase. The method statement of condition survey of Ma On Kong Historic Grave (KT13-02-02) was issued to EPD and endorsed on 27 July 2008, the frequency of the condition survey during the construction phase and given the open cut method would be adopted for the construction of the proposed bypass box culvert under KT13 project, subject to the result of the condition survey carried out before the construction stage, it is recommended that bi-monthly condition survey be undertaken during the construction work within 100m area from the grave.

#### Landscape and Visual

In accordance with the EM&A manual [382047/E/EMA/Issue5] **Section 8** landscape and visual mitigation measures are required during construction and operation phase. Site inspection will be undertaken at least once every two weeks throughout the construction period to ensure compliance with the intended aims of the proposed mitigation measures.

#### 2.5 QUALITY ASSURANCE PROCEDURES AND DATA MANAGEMENT

#### 2.5.1 Documentation of the Environmental Monitoring

Field data including in-situ monitoring results, weather conditions and water sampling information and observation will be recorded in corresponding Field Data Sheets, which will be signed and dated by the respective environmental technician prior to submission to the ETL for validation and endorsement at the end of the monitoring day.

2.5.2 Data Management and Analysis

All impact monitoring data will be processed by the AUES data recording and management system, which complies with in-house Quality (*ISO 9001:2000*) Management System. Monitoring results recorded in the monitoring equipment e.g. 1-hour TSP Meters and Noise Meters will be downloaded directly from the equipment at the end of the monitoring period and input into a computerized database maintained by the ET. Laboratory results will be input directly into the computerized database and checked by personnel other than those who input the data.

#### 2.5.3 Quality Assurance Procedures

Appropriate and standard QA/QC measures will be adopted for the environmental monitoring to ensure the scientific integrity of the data produced. Sources of error in the impact monitoring will be properly controlled with the following QA/QC procedures:

- (a) Appropriate field monitoring and sampling techniques, including monitoring equipment, storage and delivery of samples;
- (b) Well organized systematic field-data system e.g. all baseline monitoring information, field observation, results, weather conditions and water sampling information, etc. will be recorded in the field monitoring record sheets. The laboratory analysis records will be maintained by the HOKLAS following HOKLAS requirements;
- (c) HOKLAS requirements for QA/QC of all laboratory testing to ensure acceptable accuracy and reproducibility of the laboratory analysis indicated by consistent agreement between duplicate samples, validity of the analytical results by compliance with the required blanks and recovery of standard addition.

#### 2.5.4 Records

All impact monitoring data will be clearly and systematically documented in both hardware and software format and the software copy will be available for inspection upon request. All the document and data will be kept for at lest one year after completion of the Project. Field Data Sheets used to record the impact monitoring information, field observation, results, weather conditions and water sampling information, etc., will be properly maintained and kept by the ET. The copies of laboratory analysis records from ALS will be keep by the ET throughout the at least one year after completion of the EM&A program of the Project.

#### 2.6 REPORTING

#### 2.6.1 General Requirements for Report Submission

General requirements for Monthly EM&A report submission as stipulated in the EIA, EP and EM&A Manual are summarized below.

Report	Submission
Monthly EM&A Report	• Within 10 working days of the end of each reporting month.
Quarterly EM&A Summary	<ul> <li>No specific requirement, proposed three weeks after endorsement of</li></ul>
Report	the 3 <sup>rd</sup> monthly EM&A report within a particular quarter.
Final EM&A Summary	<ul> <li>No specific requirement, proposed one month upon completion of</li></ul>
Report	entire EM&A program

#### Table 2-6 Requirements for Report Submission

#### 2.6.2 Cut-Off Day of the Reporting Month

It was agreed among the ER, IEC, CRBC, ET and EPD that, in order to streamline the EM&A report submission and to cater for the occasional delay in obtaining laboratory analysis results, the cutoff day for each month is the 25<sup>th</sup> i.e. the first day of each report is the 26<sup>th</sup> of the last month and the end day, the 25<sup>th</sup> of that month.

Z:\Jobs\2008\TCS00408 (DC-2007-17)\600\EM&A\Impact\KT13\Monthly\36th Monthly Report - September 2011\R1666v2.doc Action-United Environmental Services and Consulting

#### 3 MONITORING RESULTS

The environmental monitoring results will be compared against the Action and Limit Levels established based on the baseline monitoring results and statutory criteria. In case the measured data exceed the environmental quality criteria, remedial actions will be triggered according to the Event and Action Plan enclosed in *Appendix F*. The environmental monitoring results are tabulated below and the details of 24-hour TSP data and graphical plots of trends of monitored parameters at key stations over the past four Reporting Periods are presented in *Appendices G* and *H*.

- 3.1 AIR QUALITY
- 3.1.1 Action and Limit Levels

According to the Baseline Monitoring Report for KT13, the Action and Limit Levels for 24-hour and 1-hour TSP are established as follows:

Table 3-1-1	Air Quality Action and Limit Levels
-------------	-------------------------------------

Monitoring Station	Action Lev	/el (µg /m³)	Limit Level (μg/m³)			
Worntoning Station	1-hour TSP	24-hour TSP	1-hour TSP	24-hour TSP		
KT13(A1(a))	309	144	500	260		
KT13(A2)	307	141	500	260		

#### 3.1.2 Results

Results of air quality monitoring at the identified locations during the Reporting Period are summarized in *Tables 3-1-2-1* and *3-1-2-2* below.

Table 3-1-2-1	Summary of Air	<b>Quality Monitoring</b>	g Results at KT13-A1(a)
---------------	----------------	---------------------------	-------------------------

	1-		24-hour TSP (μg/m³)

20-Sep-11	13:54	71	65	66	67	23-Sep-11	28
	Average (range)		-	2 - 79)		Average (range)	26 (24-28)

#### 3.1.3 Discussion

As shown in **Tables 3-1-2-1** and **3-1-2-2**, 1-hour TSP and 24-hour TSP results fluctuated well below the Action Level. No exceedance of Action or Limit Levels was recorded during the Reporting Period. Neither Notification of Exceedance (hereinafter 'NOE') of air quality criteria or corrective action was required. Two (2) events of power failure incident of HVS were occurred at Location A2 in this Reporting Period and the monitoring work was resumed on 12 September 2011.

#### 3.2 CONSTRUCTION NOISE

3.2.1 Action and Limit Levels

The Action and Limit Levels for construction noise are illustrated in Table 3-2-1.

#### Table 3-2-1 Construction Noise Action and Limit Levels

Time Period	Action Level in dB(A)	Limit Level in dB(A)
0700-1900 hours on normal weekdays	When one documented complaint is received	> 75* dB(A)

Note: \*Reduces to 70dB(A) for schools and 65dB(A) during the school examination periods.

#### 3.2.2 Results

Results of construction noise monitoring at the identified locations N1(a), N2(a) and N3 during the Reporting Period are summarized in *Tables 3-2-2-1* to *3-2-2-3*.

The baseline monitoring for N1(a) and N2(a) was performed on the 1st floor of the bedroom of 168-169 Kam Ho Road, Ma On Kong Village and No. 68 Ho Pui Village respectively. The impact noise monitoring, however, was performed on the ground floor of the same house due to denial of access to the 1<sup>st</sup> floor. The change of noise monitoring from 1st floor to ground floor will negate the need for a 3dB(A) façade correction but will not introduce any significant difference in detection and minimization of the of construction noise impacts, or alteration of the established A/L Levels. The ET has obtained the approval from EPD with consultation with the ER and IEC.

Z:\Jobs\2008\TCS00408 (DC-2007-17)\600\EM&A\Impact\KT13\Monthly\36th Monthly Report - September 2011\R1666v2.doc Action-United Environmental Services and Consulting

3.2.3 Discussion

It is confirmed that no raining during the course of noise monitoring as fulfill EM&A manual requirements. As shown in *Tables 3-2-2-1*, *Table 3-2-2-2* and *Table 3-2-2-3*, all the construction noise results fluctuated well below the Limit Level. No exceedance of Limit Level or documented construction complaint was recorded during the Reporting Period. No NOE or corrective action was therefore required.

- 3.3 WATER QUALITY
- 3.3.1 Action and Limit Levels

The Action and Limit Levels for water quality are illustrated in Table 3-3-1.

Monitoring	DO (mg/L)		Turbidity (NTU)		рН		SS (mg/L)		Ammonia (μg/L)		Zinc (μg/L)	
Location	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level
W1 (Upstream) Control Station	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
W2 (Downstream) Impact Station	1.04	1.00	36.81	37.16	8.65	8.69	79.0	86.2	16.85	16.89	234.95	266.19
W3(a) (Upstream) Control Station	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
W4 (Upstream) Control Station	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
W5 (Upstream) Control Station	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
W6 (Downstream) Impact Station	0.93	0.91	27.88	30.02	8.7	8.7	73.40	78.68	51.62	54.56	191.90	201.58

 Table 3-3-1
 Action and Limit Levels for Water Quality Monitoring

#### 3.3.2 Results

Water quality monitoring results measured at W1, W2, W3(a), W4, W5 and W6 during the Reporting Period are presented in tabulation and graphical plots in *Appendix G*.

#### 3.3.2 Discussion

In this Reporting Period, the exceedances registered at impact station W2 and W6 as shown in *Table 3-3-2.* 

Table 3-3-2Summary of Water Quality Exceedances

Location	Exceedance	DO	Turbidity	рН	SS	NH₄⁺⁻N	Zn	Total
W2	Action Level	0	0	0	0	0	0	0
	Limit Level	0	0	0	2	1	2	5
MC	Action Level	0	0	0	0	0	0	0
W6	Limit Level	0	3	0	3	0	4	10
Total	Action Level	0	0	0	0	0	0	0
Total	Limit Level	0	3	0	5	1	6	15

No exceedances of Action and Limit Levels were recorded during the Reporting Period. No Notifications of Environmental Quality Limit Exceedances (NOE) or corrective actions were therefore required for all parameters.

#### DO and pH

No exceedances of Action and Limit Levels were recorded during the Reporting Period. No Notifications of Environmental Quality Limit Exceedances (NOE) or corrective actions

were therefore required for these parameters.

#### Turbidity, Suspended Solids, NH4+-N and Zinc

In stream water quality monitoring, 15 Limit Level exceedances were recorded which namely 5 exceedance at upstream Location W2 and 10 exceedances downstream Location W6. According to the observation during site inspections by ET and information provided by the Contractor, only tree planting work is remaining and no direct disturbance was made to the stream but pigsty discharge was observed near monitoring location W2. Since high levels of Turbidity, Suspended Solids,  $NH_4^+$ -N and Zinc were also recorded at upstream and control station, it is believed that the exceedances were likely due to the discharge from the agriculture farm and livestock at the vicinity as water quality throughout the channel was affected. Therefore, it is concluded that the exceedances were not related to the works under the Project.

#### 3.4 ECOLOGY

#### 3.4.1 Action and Limit Levels

The Action and Limit Levels for Construction Ecology Monitoring are shown in *Table 3-4-1* to according with the EM&A manual.

#### Table 3-4-1Ecological Action and Limit Levels

Parameters	Action Level	Limit Level
Decrease in number of breeding egrets since previous year	>20%	> 40%

#### 3.4.2 Results

**Sixty-five (65)** individuals of birds from **twenty-one (21)** species were recorded during the survey on **25 September 2011**. Among the birds recorded, **five (5)** individuals of wetland dependent birds (from **3 species**) were recorded. The summary of KT13 ecology bird survey can be referred to **Table 3-4-2**.

It is stated in the EP for Channel KT13 that the monitoring of the Ho Pui egretry shall be carried out during the period from 1<sup>st</sup> March to 31<sup>st</sup> August as specified in the EM&A Manual. If no egret nest is found at the egretry during the period from 1<sup>st</sup> March to 31<sup>st</sup> May, the Permit Holder can start the construction works within 100m of the ecological buffer area upon obtaining the Director's approval until February in the next year. If egret nests are found during the period from 1<sup>st</sup> March to 31<sup>st</sup> August, no construction shall take place within 100m of the ecological buffer area before 1<sup>st</sup> October.

Previously the monitoring during March to May 2011 did not record any nest in Ho Pui Egretry, and thus the construction works could be conducted within 100m of the ecological buffer area until February 2012. And the egretry monitoring frequency from June to August this year can be downgraded to monthly. No nest was found at the Ho Pui egretry during these surveys. Even though, as there had been no nest recorded at Ho Pui egretry in 2009, 2010 and 2011, the action/limit level for ecology is complied.

Egretry survey and flight line survey are not required in the September monitoring survey.

During the walk through survey on 25 September 2011, other than the bamboo trees which are within Ho Pui Egretry boundary as shown in the EM&A manual and had been found to be cleared by villagers during site inspection on 11 July 2009, no further adverse impacts on habitats outside the boundary of the works area including the Conservation Area and the remaining Ho Pui Egretry was found. Ecological impact monitoring results are presented in the **Table 3-4-2**.

#### Table 3-4-2Summary of KT13 Ecology Impact Monitoring Bird Survey

Scientific Name	Common Name	Reported in the project profile	Abundance recorded in the present survey (25 September 2011)	Habitat utilized	
Birds					
Little Egret	Egretta garzetta	✓	2	Stream	
Cattle Egret	Bubulcus ibis	✓			
Chinese Pond Heron	Ardeola bacchus	✓	2	Stream

#### 3.5 WASTE MANAGEMENT, CULTURAL HERITAGE AND LANDSCAPE & VISUAL

#### 3.5.1 Waste Management

In order to comply with the waste management requirements, CRBC has been:

- (a) Assigned, since 9 Jan 2008, a Billing Account (account number 7006524) under the *Waste Disposal (Charges for Disposal of Construction Waste) Regulation;*
- (b) Issued a Discharge License No. 1U461/1 under Section 20 of the *Water Pollution Control Ordinance*;
- (c) Registered as a Chemical Waste Producer under the Waste Disposal (Chemical Waste)

*(General) Regulation* (the Waste Producer Number assigned is WPN: 5611-531-C3124-28 dated 2 May 08); and

- (d) Granted by the Environmental Protection Department a Permit Issued under the *Dumping at Sea Ordinance* (Permit no. EP/I4D/08-095, dated 18 September 2008, permit validity period of six months from 18 September 2008 to 17 march 2009) for 18, 469 m<sup>3</sup> sediment requiring Type 1 open sea disposal at East Sha Chau Contaminated Mud Disposal Site Pit IV b to be capped as directed by the management Team of the CEDD.
- 3.5.2 Cultural Heritage

The Action and Limit Levels for Cultural Heritage are shown in *Table 3-5-2* according to the EM&A Manual.

#### Table 3-5-2 Cultural Heritage Resources Action and Limit Levels

Action Level	Limit Level
When damage or structural instability is	Signs of deterioration and structural instability continues on
first detected	subsequent visits after Action Level is triggered

During the Reporting Period, there was no construction work conducted within 100m area from the cultural heritage site within KT13, and therefore no cultural heritage monitoring was required in accordance with the approved methodology.

#### 3.5.3 Landscape and Visual

Landscape and visual inspections were conducted on **9 and 23 September 2011**. Current situation of the identified landscape resources remained the same as those of the baseline, except minor changes of river/stream/fish pond landscape character area at LR1, LR2.1, LR2.2, LCA1, LCA3 and LCA4 due to site clearance, soil stockpiling and preparation work within KT13. Updated landscape and visual status is presented in *Appendix I.* 

# 4 NON-COMPLIANCE, COMPLAINT, NOTIFICATION OF SUMMONS, SUCCESSFUL PROSECUTION AND OTHERS

4.1 NON-COMPLIANCE

Exceedances in water quality monitoring were recorded but it concluded that all the exceedances were not project related in this reporting month as discussed in *Section 3.1* to *3.5.* No other non-compliance or deficiency was identified during regular site inspection and environmental audit. No associated remedial action was necessary.

4.2 ENVIRONMENTAL COMPLAINT

No written or verbal complaint was received for each environmental issue during the Reporting Period. No associated remedial action was necessary.

#### 4.3 NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTION

No notifications of summons and successful prosecutions were recorded during the Reporting Period. No associated remedial action was necessary.

4.4 OTHERS

#### 4.4.1 Waste Management Status

All types of waste arising from the construction work are classified into the following:

- Construction & Demolition (C&D) Material;
- Chemical Waste;
- General Refuse; and
- Excavated Soil and sediment

Waste generated, re-used, recycled and disposed of during the Reporting Period is shown in *Appendix J: Monthly Summary Waste Flow Table.* No Type I or Type II excavated soil were recorded in this Reporting Period.

#### 4.4.2 Site Inspection and Environmental Audit

In this Reporting Period, **four** occasions of weekly environmental site inspection and audit were conducted during the Reporting Period jointly by the ER, EO and ET. No adverse environmental impacts were registered, indicating that the mitigation measures implemented were effective and sufficient for the construction activities undertaken. Minor deficiencies found in the site inspection and audit were in general rectified within the specified deadlines. Findings of the site inspection and environmental audit are summarized below.

Date	Findings / Deficiencies	Follow-Up Status
31 August 2011	No adverse environmental impact was observed during site inspection.	N.A.
8 September 2011	No adverse environmental impact was observed during site inspection.	N.A.
16 September 2011	No adverse environmental impact was observed during site inspection.	N.A.
23 September 2011	No adverse environmental impact was observed during site inspection.	N.A.

#### Table 4-4-1 Summary of Findings of Site Inspection and Environmental Audit

#### 4.4.3 Works to be Undertaken Next Month

Works to be undertaken next month are shown in the construction program enclosed in **Appendix B**. The construction activities undertaken in the Reporting Period including:

- Compensatory planting;
- Remedial works
- 4.4.4 Future Key Issues and Mitigation Measures for the Forth-Coming Month

In viewing that the major construction activities of the Project are substantially completed, the Contractor is reminded to maintain the housekeeping of the site in good standard.

The Contractor is reminded that all environmental issues identified in the EM&A Manual as recommended in the EIA and summarized in Mitigation Measure Implementation Schedule shall be implemented properly until the monitoring programme end.

#### 5 CONCLUSIONS AND RECOMMENDATIONS

- i) This is the **35<sup>th</sup>** monthly EM&A report for Channel KT13, covering the construction period from **26 July to 25 August 2011** (the Reporting Period).
- ii) Monitoring results of the Reporting Period demonstrated no exceedances of environmental quality criteria for air quality, construction noise and ecology monitoring.
- iii) For stream water quality monitoring, 15 Limit Level exceedances were recorded which namely 5 exceedance at upstream Location W2 and 10 exceedances downstream Location W6 which included parameters of turbidity, suspended solids, NH4<sup>+</sup>-N and zinc. Investigation report made conclusion that the exceedances were not related to the works under the Project.
- iv) During the Reporting Period, there was no construction work conducted within 100m of the cultural heritage site at KT13. Therefore, no cultural heritage monitoring was required in accordance with the approved methodology.
- v) Landscape inspections were conducted on **9 and 23 September 2011**. No significant changes were observed for identified landscape resources and visual sensitive receivers, except for minor changes due to channel excavation, site clearance and preparation work at the identified landscape resources including LR1, LR2.1, LR2.2, LCA1, LCA3 and LCA4.
- vi) To control the site performance on waste management, the Contractor shall ensure that all solid and liquid waste management works are fully in compliance with the relevant license/permit requirements, such as the effluent discharge licence and the chemical waste producer registration. CRBC is also reminded to implement the recommended environmental mitigation measures according to the Project Environmental Monitoring and Audit Manual.
- vii) No documented complaints, notifications of summons or successful prosecutions were received during the Reporting Period. No adverse environmental impacts were observed during the weekly site inspection and environmental audit of the Reporting Period, which suggested that the implemented mitigation measures for air quality, construction noise and ecology were effective. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.
- viii) In viewing that the major construction activities of the Project are substantially completed, the Contractor is reminded to maintain the housekeeping of the site in good standard.
- ix) The Contractor is reminded that all environmental issues identified in the EM&A Manual as recommended in the EIA and summarized in Mitigation Measure Implementation Schedule shall be implemented properly until the monitoring programme end.

# Visual Character 10.7.19

Interspersed landscape elements on general flat landform with minor undulation render numerous small enclosed views. No major vista and high The visual quality of the river valley of Ma On Kong Channel is semi-natural based on combination of rural landscape elements including agricultural land, village houses, woodland and pond and stream and industrial landscape elements including open storage and temporary structures. quality open view identified

# Visual Sensitive Receiver (VSR) 10.7.20

Within the ZVI, a number of key Visual Sensitive Receivers (VSRs) have been identified. These VSRs are mapped in Drawing V-001. They are listed, together with their sensitivity, in Table 10/5. Photo views illustrating the VSRs are illustrated in Drawing nos. PV-001 to 002 inclusive. For the ease of reference, each VSR is given an identity number, which is used in the text, tables and figures.
