Dear Mr. Tam.

Contract No.: DC/2009/08

Construction of Yuen Long South Branch Sewers and Expansion of Ha Tsuen Sewage

**Pumping Station** 

Monthly EM&A Report for Designated Project, March 2012 - IEC Verification

With reference to ET's captioned report (ET's ref.: TCS00491/09/600/R0361v2 dated 17 April 2012) received on 17 April 2012, we have no comment and hereby verify the captioned report <u>excluding</u> the Landscape and Visual Impact section of the report.

We request the ET to submit the separate submission of Landscape and Visual Impact section of the report as soon as possible, for the completion of the captioned report.

Should there be any queries, please feel free to contact the undersigned on 2911 2744.

Yours sincerely

F.C. TSANG

## **EXECUTIVE SUMMARY**

ES.01 This is the 6th Quarterly Environmental Monitoring and Audit (EM&A) Summary Report for Yung Shue Wan Portion Area under the Project, covering the construction period from 1 December 2011 to 29 February 2012 (the Reporting Period).

#### ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

ES.02 Environmental monitoring activities under the EM&A programme in this Reporting Period are summarized in the following table.

Issues	Environmental Monitoring Parameters / Inspection	Occasions
Air Quality	1-hour TSP	96
Air Quality	24-hour TSP	28
Construction Noise	Leq (30min) Daytime	13
Water Quality	Marine Water Sampling	25
Ecology	Coral Monitoring	4
Inspection / Audit	ET Regular Environmental Site Inspection	12

- ES.03 There were 2 events of power failure of high volume sampler occurred during 24-hour TSP monitoring on 8 February 2012. The incident has been reported to relevant parties on the next day and the provision of power supply was rectified by the Contractor on 13 February 2012 and the monitoring work was resumed as scheduling on 14 February 2012.
- ES.04 As informed by the Contractor, the marine works in Yung Shue Wan has been ceased since 19 January 2012. As agreed by the IEC and RE, the marine water quality and ecology monitoring was suspended from 6 February 2012 until further notice of the commencement of dredging works which tentatively scheduled on 10 April 2012. The relevant letter ref.: TCS00512/10/300/L0425 has been submitted to EPD on 3 February 2012.

## BREACH OF ACTION AND LIMIT (A/L) LEVELS

ES.05 No exceedance in construction noise, water quality and ecology monitoring were recorded in this Reporting Period. For air quality monitoring, 2 Active Level exceedance of 24-hour TSP were recorded on 13 December 2011. The statistics of environmental exceedance, NOE issued and investigation of exceedance are summarized in the following table.

Environmental	Monitoring	Action	Limit Level	Event & Action		
Issues	Parameters Parameters	Level		NOE Issued	Investigation	Corrective Actions
	1-hour TSP	0	0	0		
Air Quality	24-hour TSP	2	0	2	which did not	related and no corrective
Construction Noise	Leq <sub>30min</sub> Daytime	0	0	0		
	DO	0	0	0		
Water Quality	Turbidity	0	0	0		
	SS	0	0	0		
Ecology (Coral)	Sediment Cover (%)	0	0	0		
	Bleaching (%)	0	0	0		
	Mortality (%)	0	0	0		

*Note: NOE – Notification of Exceedance* 

# **ENVIRONMENTAL COMPLAINT**

ES.06 No environmental complaint was recorded or received in this Reporting Period. The statistics of environmental complaint are summarized in the following table.

Donauting Davied	Environmental Complaint Statistics			
Reporting Period	Frequency	Cumulative	Complaint Nature	
1 – 31 December 2011	0	0	NA	
1 - 31 January 2012	0	0	NA	
1 – 29 February 2012	0	0	NA	

#### NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES.07 No environmental summons or successful prosecutions were recorded in this Reporting Period. The statistics of environmental complaint are summarized in the following tables.

Donauting Davied	Environmental Summons Statistics			
Reporting Period	Frequency	Cumulative	Complaint Nature	
1 – 31 December 2011	0	0	NA	
1 - 31 January 2012	0	0	NA	
1 – 29 February 2012	0	0	NA	

Donouting Donied	Environmental Prosecution Statistics			
Reporting Period	Frequency	Cumulative	Complaint Nature	
1 – 31 December 2011	0	0	NA	
1 - 31 January 2012	0	0	NA	
1 – 29 February 2012	0	0	NA	

# REPORTING CHANGE

ES.08 As agreed by the IEC and RE, the marine water quality and ecology monitoring was suspended from 6 February 2012 until further notice of the commencement of dredging works which tentatively scheduled on 10 April 2012.

# SITE INSPECTION BY EXTERNAL PARTIES

ES.09 No site inspection was undertaken by external parties i.e. Environmental Protection Department (EPD) or Agriculture, Fisheries and Conservation Department (AFCD) within the Reporting Period.

#### **FUTURE KEY ISSUES**

- ES.10 During dry and windy season, construction dust would be the key environmental issue to concern. The construction dust mitigation measures identified at the EM&A Manual such as watering at haul road and covering of dusty material should be implemented and properly maintained.
- ES.11 Nevertheless, the Contractor shall keep paying attention on the potential water impact as the construction site is adjacent to the coastline. Muddy water and other water quality pollutants via site surface water runoff into the sea body within Fish culture zone at Picnic Bay and the Secondary recreation contact subzone at Mo Tat Wan should be avoided. Therefore, mitigation measures for water quality should be fully implemented also.

#### 1 INTRODUCTION

#### 1.1 PROJECT BACKGROUND

- 1.01 The Leader Civil Engineering Corporation Limited (Leader) has been awarded the *Contract DC/2009/13 Construction of Sewage Treatment Works at Yung Shue Wan and Sok Kwu Wan* (the Project) by the Drainage Services Department (DSD) on 4 May 2010. The Project is part of an overall plan approved under a statutory EIA for Outlying Islands Sewerage Stage 1 Phase 2 Package J Sok Kwu Wan Sewage Collection and Treatment (Register No. AEIAR-075/2003) and Disposal Facilities and Outlying Islands Sewerage Stage 1 Phase 1 Package C Yung Shue Wan Sewage Treatment Works and Outfall (Register No. EIA-124/BC). The Environmental Permit No. EP-281/2007 and EP-282/2007 for the Project have been obtained by the DSD on 29 June 2007 for the relevant works. After July 2009, EP-281/2007/A stead EP-281/2007 is EP for Sok Kwu Wan relevant Works.
- 1.02 The Project involves construction of sewage treatment works at Sok Kwu Wan and Yung She Wan with a capacity of 1,430m³/day and 2,850m³/day to provide secondary treatment. The majority of works include construction of pumping stations, construction of submarine outfall from the coastline and lying of underground sewerage pipeline. The site layout plan for the captioned work under the Project is showing in *Appendix A*.
- 1.03 According to the Particular Specification (PS) and *Appendix 25* of the Project, Leader should establish an Environmental Team to implement the environmental monitoring and auditing works to fulfill the requirements as stipulated in the Environmental Monitoring and Audit (EM&A) Manuals.
- 1.04 Action-United Environmental Services and Consulting (AUES) has been commissioned by Leader as the ET to implement the relevant EM&A program. Organization chart of the Environmental Team for the Project is shown in *Appendix B*. For ease of reporting, the proposed EM&A programme for baseline and impact monitoring is spilt to two copies:
  - (a) Proposed EM&A Programme for Baseline and Impact Monitoring Sok Kwu Wan (under EP No. 281/2007/A, varied on 23 September 2009)
  - (b) Proposed EM&A Programme for Baseline and Impact Monitoring Yung Shue Wan (under EP No. 282/2007)
- 1.05 According to the EM&A Manuals of Sok Kwu Wan and Yung Shue Wan, baseline water quality monitoring should be carried out for consecutive six months before commencement of the marine work. Therefore, the baseline reports of Sok Kwu Wan and Yung Shue Wan are divided to two volumes, i.e. the Volume 1 for air quality and noise monitoring; and the Volume II for water quality monitoring for separate submission.
- 1.06 This is the 6<sup>th</sup> Quarterly EM&A Summary report for Yung Shue Wan Portion Area presenting the monitoring results and inspection findings for the Reporting Period from 1 December 2011 to 29 February 2012.

# 1.2 REPORT STRUCTURE

**SECTION 9** 

The Quarterly Environmental Monitoring and Audit (EM&A) Summary Report is structured by following sections:-

Tonowing seem	ons.
SECTION 1	INTRODUCTION
SECTION 2	PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS
SECTION 3	SUMMARY OF MONITORING REQUIREMENTS
<b>SECTION 4</b>	IMPACT MONITORING RESULTS
SECTION 5	WASTE MANAGEMENT
SECTION 6	SITE INSPECTION
SECTION 7	ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE
SECTION 8	IMPLEMENTATION STATUS OF MITIGATION MEASURES

CONCLUSIONS AND RECOMMENTATIONS

# 2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

## 2.1 PROJECT ORGANIZATION AND MANAGEMENT STRUCTURE

2.01 Organization structure and contact details of relevant parties with respect to on-site environmental management are shown in *Appendix B*.

#### 2.2 CONSTRUCTION PROGRESS

2.02 The master and three month rolling construction programs are enclosed in *Appendix C* and the major construction activities undertaken in this quarter are listed below:-

Reporting Period	<b>Major Construction Activities</b>
December 2011	<ul> <li>Construction of Sewage Treatment Works</li> <li>Horizontal directional drilling (HDD) works</li> </ul>
January 2012	<ul><li>Construction of Sewage Treatment Works</li><li>Construction of Submarine Outfall</li></ul>
February 2012	Construction of Sewage Treatment Works

## 2.3 SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.03 Summary of the relevant permits, licences, and/or notifications on environmental protection for this Project in this Reporting Period is presented in *Table 2-1*.

**Table 2-1** Status of Environmental Licenses and Permits

Item	Description	License/Permit Status
1	Air Pollution Control (Construction Dust) Regulation	Notified 19/5/2010
		Case No: 317486
2	Chemical Waste Producer Registration	Issued on 8/6/2010
		WPN 5213-912-L2720-01
3	Water Pollution Control Ordinance	Issued on 22/9/2010
		WT00007566-2010
4	Billing Account for Disposal of Construction Waste	Issued on 26 May 2010
		A/C No: 7010815
5	Construction Noise Permit (no. GW-RS0624-11)	Issued on 8 July 2011
		Valid from 8 July 2011 until 24
		December 2011
6	Construction Noise Permit (no. GW-RS0045-12)	Issued on 20 January 2012
		Valid from 20 January 2012
		until 19 July 2012

# 3 SUMMARY OF MONITORING REQUIREMENTS

#### 3.1 ENVIRONMENTAL ASPECT

- 3.01 The EM&A baseline monitoring programme cover the following environmental issues:
  - Air quality;
  - Construction noise:
  - Marine water quality; and
  - Ecology
- 3.02 The ET implements the EM&A programme in accordance with the aforementioned requirements. Detailed air quality, construction noise, water quality and ecology monitoring of the EM&A program are presented in the following sub-sections.
- 3.03 A summary of the air, noise, marine water and ecology monitoring parameters is presented in *Table 3-1*:

Table 3-1 Summary of EM&A Requirements

<b>Environmental Issue</b>	Parameters		
<ul> <li>Air Quality</li> <li>1-hour TSP Monitoring by Real-Time Portable Dust Meter; a</li> <li>24-hour TSP Monitoring by High Volume Air Sampler.</li> </ul>			
Noise	L <sub>eq(30min)</sub> during normal working hours; and     L <sub>eq(15min)</sub> during Restricted Hours.		
Marine Water Quality	<ul> <li>In-situ Measurements</li> <li>Dissolved Oxygen Concentration (mg/L);</li> <li>Dissolved Oxygen Saturation (%);</li> <li>Turbidity (NTU);</li> <li>pH unit;</li> <li>Salinity (ppt);</li> <li>Water depth (m); and</li> <li>Temperature (°C).</li> <li>Laboratory Analysis</li> <li>Suspended Solids (mg/L)</li> </ul>		
Ecology	Coral Monitoring		

#### 3.2 MONITORING LOCATIONS

# **Air Quality**

- 3.04 Two designated monitoring stations, AC02a located at Yung Shue Wan Refuse Transfer Station and AC04 located at residential area nearby Yung Shue Wan football pitch, were recommended in the *EM&A Manual Section 2.5*. In order to identify and seek for the access of the air monitoring locations designated in the EM&A Manual, site visit was conducted by the Contractor and ET.
- 3.05 At the site visit, all designated monitoring locations were identified, however the premises for high volume sampler installation were objected by the owner or the residents of nearby. Therefore, an alternative air monitoring locations were proposed in accordance with the criteria set out in *EM&A manual Section 2.5.2 and 2.5.3*. The proposed alternative air monitoring stations was accepted by the ER and IEC, and EPD endorsed. Details of renewal air monitoring stations are described in *Table 3-2*. The graphical of air monitoring stations is shown in *Appendix D*.

Table 3-2 Locations of Air Quality Monitoring Station

Sensitive Receiver	itive Receiver Location		
AC02b	The entrance of RE's site office		
AC04c	Next to a power transformer station TP208 Yung Shue Wan and adjacent to the road direct to the construction site		

## **Construction Noise**

3.06 According to *EM&A Manual Section 3.4*, one noise sensitive receivers (NC05) designated for the construction noise monitoring was recommended at Yung Shue Wan Portion Area of the Project. The designated monitoring station is identified and successfully granted the premises. The detailed construction noise monitoring station is described in *Table 3-3* and graphical is shown in *Appendix D*.

Table 3-3 Location of Construction Noise Monitoring Station

Sensitive Receiver	Location	
NC05	Roof of North Lamma Clinic	

# **Marine Water Quality**

3.07 Two control stations (CY1 and CY2) and three impact stations (WY1-WY3) were recommended in the *EM&A Manual Section 4.5*. Impact stations WY1-WY3 were identified close to the sensitive receivers (the coral colonies in the vicinity of Yung Shue Wan, and secondary contact recreation subzone). It is proposed to monitor the impacts from the construction of the submarine outfall as well as the effluent discharge from the proposed STW on water quality. Two control stations: CY1 and CY2 were recommended at locations representative of the project site in its undisturbed condition and located at upstream and downstream of the works area. The marine water quality monitoring stations to be performed under the Project is described in *Table 3-4* and shown in *Appendix D*.

Table 3-4 Locations of Marine Water Quality Monitoring Station

Station	Description	Coordinates		
Station	Description	Easting	Northing	
WY1	Coral colonies on seawall at STW site	829 170	809 550	
WY2	Coral colonies at Shek kok Tsui	829 000	810 400	
WY3	Coral colonies at O Tsai (headland N at SW ferry pier)	829 200	809 850	
CY1 (flood)	Control Station	828 400	810 800	
CY2 (ebb)	Control Station	828 000	808 800	

## **Coral Monitoring**

- 3.08 One control station at North Beaufort Island and one impact stations at boulder seawall at YSW STW site were recommended in the *EM&A Manual Section 7.2*. These sites represent the coral site where uncommon coral species were recorded from the coral surveys carried out as part of the Review Report on the EIA Study. However, change of Monitoring Location was recommended by the Ecologist based on the experience. The rationale for the re-location is summarised as below:-
  - ♦ Sham Wan is located at the southeast part of Lamma Island which is less exposed and more transition water than that in Beaufort Island in which it is quite similar to Yung Shue Wan:
  - Recent EIA surveys showed that the coral diversity is higher in Sham Wan;
  - ♦ Same coral monitoring had been carried out at both Yung Shue Wan and Sham Wan in 2007 for the project of "Construction of Helipads at Peng Chau and Yung Shu Wan, Lamma Island, Agreement No. CE 18/2002).
- 3.09 It is concluded that Sham Wan is more suitable as a control site than Beaufort Island. The proposal for relocation of control station was submitted to IEC and AFCD and both parties have no comment on the proposal. The coral monitoring stations to be performed under the Project is described in *Table 3-5* and shown in *Appendix D*.

Table 3-5 **Location of Coral Monitoring** 

Dive Site	Number	Coordinates		
Dive site	Number	Easting	Northing	
Yung Shu Wan, Lamma Island	1	829180.06E	809555.76N	
Sham Wan, Lamma Island	2	832160.86E	805738.31N	

# 3.3 MONITORING FREQUENCY AND PERIOD

3.10 The Impact monitoring carried out in the EM&A programme is basically in accordance with the requirements in EM&A Manual Sections 2.7, 3.6, 4.7, 4.8, 7.3 and 7.4. The monitoring requirements are listed as follows:

# Air Quality Monitoring

1-hour TSP and 24-hour TSP. Parameters:

Frequency: Once in every six days for 24-hour TSP and three times in every six days for

1-hour TSP.

Throughout the construction period. Duration:

# Noise Monitoring

 $L_{eq(30min)}$  &  $L_{eq(5min)}$ , L10 and L90. Parameters:

> L<sub>eq(15min)</sub> & L<sub>eq(5min)</sub>, L10 and L90 during the construction undertaken during Restricted Hours (19:00 to 07:00 hours next of normal working day and full

day of public holiday and Sunday).

Once per week during 0700-1900 hours on normal weekdays. Restricted Frequency:

Hour monitoring should depend on conditions stipulated in Construction Noise

Permit.

Duration: Throughout the construction period.

## Marine Water Quality Monitoring

Parameters: Duplicate in-situ measurements: water depth, temperature, Dissolved Oxygen,

pH, turbidity and salinity;

HOKLAS-accredited laboratory analysis: Suspended Solids

Three days a week, at mid ebb and mid flood tides. The interval between 2 Frequency:

sets of monitoring will be more than 36 hours.

Sampling (i.) Three depths: 1m below water surface, 1m above sea bottom and at Depth

mid-depth when the water depth exceeds 6m.

(ii.) If the water depth is between 3m and 6m, two depths: 1m below water

surface and 1m above sea bottom.

(iii.) If the water depth is less than 3m, 1 sample at mid-depth is taken

**Duration:** During the course of marine works

## Coral Monitoring

Parameters: Presence and coverage of hard and soft corals such as diversity, abundance and

> health status of the corals in the general area, plus other physical and biological condition at the underwater environment. The monitoring parameters are categorized in (1) percentage sediment cover; (2) percentage

bleached tissue; and (3) percentage dead of each tagged coral

Frequency: One per week for the first three months of the marine works;

If no exceedances are reported during the first three months, the frequency

may be reduced to twice every month. Monitoring frequency shall be increase if there is indication/trend of increase in the monitoring parameters, upon the decision of Inspecting Officer

<u>Duration</u>: During the course of marine works

# <u>Post-Construction Monitoring – Marine Water</u>

3.11 Upon the marine works (dredging and HDD pipe installation) completion, 4 weeks of post-construction monitoring would be undertaken in accordance with the *Section 4.8 of EM&A Manual*. The requirements of post-construction monitoring such as the parameter, frequency, location and sampling depth is same as the impact monitoring.

# 3.4 MONITORING EQUIPMENT

# Air Quality Monitoring

3.12 The 24-hour and 1-hour TSP levels shall be measured by following the standard high volume sampling method as set out in the *Title 40 of the Code of Federal Regulations, Chapter 1 (Part 50), Appendix B*. If the ET proposes to use a direct reading dust meter to measure 1-hour TSP levels, it shall submit sufficient information to the IEC to approve. The filter paper of 24-hour TSP measurement shall be determined by HOKLAS accredited laboratory.

### Noise Monitoring

3.13 Sound level meter in compliance with the *International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1)* specifications shall be used for carrying out the noise monitoring. The sound level meter shall be checked using an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m s-1.

## Water Quality Monitoring

- 3.14 **Dissolved Oxygen and Temperature Measuring Equipment** The instrument should be a portable and weatherproof dissolved oxygen (DO) measuring instrument complete with cable and sensor, and use a DC power source. The equipment should be capable of measuring as included a DO level in the range of 0 20 mg L-1 and 0 200 % saturation; and a temperature of 0 45 degree Celsius.
- 3.15 **pH Meter** The instrument shall consist of a potentiometer, a glass electrode, a reference electrode and a temperature-compensating device. It shall be readable to 0.1 pH in arrange of 0 to 14.
- 3.16 *Turbidity (NTU) Measuring Equipment* The instrument should be a portable and weatherproof turbidity measuring instrument using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0 1000 NTU.
- 3.17 **Water Sampling Equipment** A water sampler should comprise a transparent PVC cylinder, with a capacity of not less than 2 litres, which can be effectively sealed with latex cups at both ends. The sampler should have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth.
- 3.18 **Water Depth Detector** A portable, battery-operated echo sounder should be used for the determination of water depth at each designated monitoring station. This unit can either be hand held or affixed to the bottom of the work boat.
- 3.19 *Salinity Measuring Equipment* A portable salinometer capable of measuring salinity in the range of 0 40 parts per thousand (ppt) should be provided for measuring salinity of the water at each monitoring location.

- 3.20 **Sample Containers and Storage** Water samples for SS should be stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4°C without being frozen).
- 3.21 *Monitoring Position Equipment* A hand-held or boat-fixed type digital Differential Global Positioning System (DGPS) with way point bearing indication and Radio Technical Commission for maritime (RTCM) Type 16 error message 'screen pop-up' facilities (for real-time auto-display of error messages and DGPS corrections from the Hong Kong Hydrographic Office), or other equipment instrument of similar accuracy, should be provided and used during marine water monitoring to ensure the monitoring vessel is at the correct location before taking measurements.
- 3.22 **Suspended Solids Analysis** Analysis of suspended solids shall be carried out in a HOKLAS or other international accredited laboratory.

#### Coral Monitoring

3.23 The monitoring equipment used for the coral monitoring are listed below:-

Equipment	Model
A4 size underwater slates	Handmade A4 size underwater slates
Coral Photos	Laminated Tagged Coral Photos
Quadrat	50 cm x 50 cm plastic quadrat (with 10 cm x 10 cm
Quadrat	grid)
Underwater Camera	Canon G10 digital camera
Scuba Diving Equipment	Scubapro regulator, BCD and fins
Diving Boot	33 feet long diving boat with two 200hp outboard
Diving Boat	engines, registration #128328

# 3.5 EQUIPMENT CALIBRATION

- 3.24 Calibration of the HVS is performed upon installation in accordance with the manufacturer's instruction using the NIST-certified standard calibrator (Tisch Calibration Kit Model TE-5025A). The calibration data are properly documented and the records are maintained by ET for future reference.
- 3.25 The 1-hour TSP meter was calibrated by the supplier prior to purchase. Zero response of the equipment was checked before and after each monitoring event. In-house calibration with the High Volume Sampler (HVS) in same condition was undertaken in yearly basis.
- 3.26 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at yearly basis.
- 3.27 The Water Quality Monitoring equipment such as Dissolved Oxygen meter, pH meter, Turbidity Measuring Instrument and Salinometer, are calibrated by HOKLAS accredited laboratory of three month intervals.
- 3.28 All updated calibration certificates of the monitoring equipment used for the impact monitoring program in the relevant Monthly EM&A Report.

#### 3.6 METEOROLOGICAL INFORMATION

3.29 The meteorological information during the construction phase is obtained from the Wong Chuk Hang Station of the Hong Kong Observatory (HKO) which near the Project site. The meteorological information in this Reporting Period is presented in *Appendix F*.

# 3.7 DATA MANAGEMENT AND DATA QA/QC CONTROL

- 3.30 The impact monitoring data are handled by the ET's systematic data recording and management, which complies with in-house Quality Management System. Standard Field Data Sheets (FDS) are used in the impact monitoring program.
- 3.31 The monitoring data recorded in the equipment e.g. 1-hour TSP meter, noise meter and Multi-parameter Water Quality Monitoring System, are downloaded directly from the equipments at the end of each monitoring day. The downloaded monitoring data are input into a computerized database properly maintained by the ET. The laboratory results are input directly into the computerized database and QA/QC checked by personnel other than those who input the data. For monitoring activities require laboratory analysis, the local laboratory follows the QA/QC requirements as set out under the HOKLAS scheme for all laboratory testing.

#### 3.8 DETERMINATION OF ACTION/LIMIT (A/L) LEVELS

3.32 According to the Yung Shue Wan Environmental Monitoring and Audit Manual, the air quality, construction noise, marine water quality and coral monitoring were established, namely Action and Limit levels are listed in *Tables 3-5*, *3-6*, *3-7 and 3-8* as below.

Table 3-5 Action and Limit Levels for Air Quality Monitoring

Monitoring Station	Action Level (μg /m³)		Limit Level (μg/m³)	
Withintoning Station	1-hour TSP	24-hour TSP	1-hour TSP	24-hour TSP
AC02b	288	161	500	260
AC04c	290	176	500	260

Table 3-6 Action and Limit Levels for Construction Noise Monitoring

Recommended Action & Limit Levels of Construction Noise				
Monitoring	Action Level	Limit Level		
Location	0700-1900 hours on normal weekdays			
NC05	When one or more documented complaints are received	75 dB(A)*		

*Note:* \* Reduces to 70dB(A) for schools and 65dB(A) during the school examination periods.

Table 3-7 Action and Limit Levels for Marine Water Quality Monitoring

Domonoston	Performance	Impact Station		
Parameter	Criteria	WY1	WY2	WY3
DO Concentration (Surface and Middle)	Action Level	3.63	3.53	3.61
(mg/L)	Limit Level	3.32	3.47	3.42
DO Concentration (Bottom)	Action Level	3.33	2.92	3.36
(mg/L)	Limit Level	3.23	2.63	3.14
Turbidity (Depth-Average)	Action Level	10.94	14.16	14.99
(NTU)	Limit Level	17.35	15.20	16.21
Suspended Solids (Depth-Average)	Action Level	17.52	14.04	14.52
(mg/L)	Limit Level	25.62	16.51	16.88

Table 3-8 Action and Limit Levels for Coral Monitoring

Step	Action
1	Commence tagged coral monitoring at the impact site. If no increase in
	sedimentation cover/bleaching/partial mortality is observed on the hard corals or
	partial mortality no the soft/black corals, no action is required. The coral survey
	specialist should present this information to the IC(E) at the end of each survey day

Ctor	Action
Step	for verification. If an increase in sedimentation cover/bleaching/partial mortality is observed on the hard corals or partial mortality on the soft/black corals at one or more impact monitoring stations Step 3 should be enacted, if not, Step 2.
2	If non actions are triggered a formal report should be issued along with evidentiary photographs following completion of the survey. Meanwhile monitoring work and construction works should continue uninterrupted.
3	If during the impact monitoring a 15% increase in the percentage of sedimentation on the hard corals occurs at more than 20% of the tagged coral colonies at the Impact Monitoring Station that is not reported at the Control Monitoring Station, then the Action Level is exceeded (Step 4).
4	If the Action Level is exceeded the IC(E) should inform all parties. The data from the water quality monitoring should also be reviewed. If the water quality monitoring shows no attributable effects of the installation works, then the Action Level is not triggered. If the water quality data indicate exceedances (for SS and/or turbidity) the IC(E) should discus with the Contractor the most appropriate method of reducing suspended solids during construction (e.g. reduce rate of dredging). The water quality data reviewed should then be enacted on the next working day.
5	Monitoring should proceed the following day as per Step 1. If during the Impact Monitoring a 25% increase in the percentage of sedimentation on the hard corals at more than 20% of the tagged coral colonies at the Impact Monitoring Station that is not reported at the Control Monitoring Station, then the Limit Level is exceeded (Step 6). If the Limit Level is not exceeded Step 2 is enacted and work continues according to the mitigated method.
6	If the Limit Level is exceeded the Inspector Officer should inform all parties immediately. Should the Limit Level be exceeded, the Contractor should stop works immediately and work out a solution to the satisfaction of the IC(E), EPD and AFCD. The IC(E) should inform the Contractor to suspend marine construction works until an effective solution is identified. Once the solution has identified and agreed with all parties, backfilling works may re-commence.

## 4 IMPACT MONITORING RESULTS

4.01 The environmental monitoring results will be compared against the Action and Limit Levels established based on the baseline monitoring results and statutory criteria. In case the measured data exceed the environmental quality criteria, remedial actions will be triggered according to the Event and Action Plan. In the Reporting Period, the graphical plots of the trends of monitored parameter over the past four months are presented in *Appendix E*.

## 4.1 RESULTS OF AIR QUALITY MONITORING

- 4.02 The monitoring results of air quality monitoring at the identified locations during the Reporting Period are summarized in *Tables 4-1*. In this Reporting Period, a total of **96** events of 1-hour TSP and **28** events of 24-hour TSP measurements were performed.
- 4.03 Two (2) events of power failure of HVS were occurred during 24-hour TSP monitoring on 8 February 2012. The incident has been reported to relevant parties on the next day and the provision of power supply was rectified by the Contractor on 13 February 2012. Since the monitoring was resumed as scheduling on 14 February 2012, there were no making up of lost samples. To avoid re-occurrence of power failure, the Contractor has been reminded to pay more attention on the power issue and ensure stable power source for the HVS.

Table 4-1 Summary of 1-hour and 24-hour TSP Monitoring Results

Monitoring	1-hour TSP (μg/m³)			24-hour TSP (μg/m³)		
Location	Max	Min	Mean	Max	Min	Mean
AC02b	124	68	87	202*	38	111
Record Date	24-Feb-12	19-Jan-12	48 events	13-Dec-11	27-Jan-12	14 events
AC04c	118	72	89	249*	34	104
Record Date	24-Feb-12	3-Jan-12 27-Jan-12	48 events	13-Dec-11	27-Jan-12	14 events

<sup>\*</sup> Action Level exceedance

- 4.04 In this Reporting Period, the 1-hour TSP monitoring values fluctuated well below the Action Level. For 24-hour TSP monitoring, Action Level exceedance was triggered at Locations AC02b and AC04c on 13 December 2011. Notification of Exceedance (NOE) has been issued to relevant parties upon confirmation of the monitoring result. The investigation report for the cause of exceedance has been conducted.
- 4.05 According to the construction information provided by the Contractor, major construction activities undertaken during exceedance day included concrete repairing work; preparation works for concreting; formwork erection; rebar bending and fixing; removal of scaffolding; plastering work and general site tidying. With full implementation of the required environmental mitigation measures, in particular construction dust suppression measures including water sprays for haul roads as well as wheel washing facilities provided at the exit/entrance of the site, these construction activities are not anticipated to create adverse construction dust impacts as shown by the TSP monitoring results of the previous construction period.
- 4.06 Our investigation revealed that the sources of the exceedance was a pile of unmitigated dusty materials which did not belong to the Project. The dusty materials had been uncovered and stock piled since 12 December 2011 at the open area near the public pier which was about 30m from the High Volume Samplers under the Project. As a result, considerable fugitive dust and TSP caused the recorded exceedance during dry and windy conditions of the dry season.
- 4.07 Since the exceedance was confirmed after the monitoring due to the time required for the laboratory analysis of TSP, no increase of monitoring frequency was possible to be implemented by the ET, as the no exceedance was recorded in the subsequent monitoring event

- on 19 December 2011. In addition, no complaint was received during the exceedance, indicating the occasional exceedance bore only short term impacts. It is concluded that the exceedances were not related to the work under the Project and no remedial actions are required.
- 4.08 The detailed investigation report for the cause of exceedance and photo record are enclosed in the relevant Monthly EM&A Report December 2011.

### 4.2 RESULTS OF CONSTRUCTION NOISE MONITORING

4.09 Summary of construction noise monitoring at the identified locations during the Reporting Period are summarized in *Table 4-2*. In this reporting quarter, a total of **13** events of construction noise measurement were conducted while no documented construction complaint was received and all the construction noise results were below the Limit level. No NOE or corrective action was recommended for this parameter.

**Table 4-2** Summary of Construction Noise Monitoring Results

Station	<b>Leq, 30min</b> ( <b>dB</b> (( <b>A</b> ))				
Station	Max	Min			
NC05	63.4	47.7			
Record Date	20-Feb-12	3-Jan-12			

# 4.3 RESULTS OF MARINE WATER QUALITY MONITORING

- 4.10 The construction of marine outfall works was commenced on 9 May 2011 and marine water quality monitoring is required according the EM&A Manual requirement. As informed by the Contractor, the marine works in Yung Shue Wan has been ceased since 19 January 2012. Having agreed with the IEC and RE, the marine water quality monitoring was suspended from 6 February 2012 until further notice of the commencement of dredging works which tentatively scheduled on 10 April 2012. The relevant letter ref.: TCS00512/10/300/L0425 has been submitted to EPD on 3 February 2012.
- 4.11 In this reporting period, 25 monitoring events have been carried out at the designated locations.
- 4.12 The statistical analysis result for the parameters of DO, turbidity and suspended solids in this Reporting Period are shown in *Tables 4-3 to 4-6*.

Table 4-3 Statistic of Monitoring Result for DO concentration (mg/L) (Surface & Mid-layers)

Station	WY1	WY2	WY3	CY1(F)	CY2(E)
Average	7.22	7.19	7.18	7.21	7.20

WY3	0	0	0	0	0	0	0	0	0	0
No of Exceedance	0	0	0	0	0	0	0	0	0	0

4.14 For marine water monitoring, no exceedance of Action/Limit level was recorded in this Reporting Period. Therefore, no associated corrective actions were then required.

### 4.4 RESULTS OF ECOLOGY MONITORING

- 4.15 Impact coral monitoring is required to perform since commencement of construction of marine outfall works (HDD and dredging) on 9 May 2011.
- 4.16 According to the EM&A Manual [Appendix D of the Review Report on EIA Study Yung Shue Wan (Final) in January 2007] Section 7.3.1, if no exceedances are reported during first three month, then the frequency may be reduced to twice every month for the remainder of the marine works. In view of the monitoring results at the first three month and additional monitoring in September and October 2011, no adverse deterioration of the coral community was observed and identified by the marine ecologist. As agreed by the ER and IEC, the coral impact monitoring would be reduced to twice every month for the reminding marine works.
- 4.17 As informed by the Contractor, the marine works in Yung Shue Wan has been ceased since 19 January 2012. Having agreed with the IEC and RE, the ecology monitoring was suspended from 6 February 2012 until further notice of the commencement of dredging works which tentatively scheduled on 10 April 2012.
- 4.18 In this Reporting Period, 4 events of coral monitoring were performed on 15 and 30

Contract No. DC/2009/13 – Construction of Sewage Treatment Works at Yung Shue Wan and Sok Kwu Wan Yung Shue Wan Portion Area 6<sup>th</sup> Quarterly EM&A Summary Report (December 2011 to February 2012)

**December 2011 and 12 and 30 January 2012** at Yung Shue Wan and Sham Wan where 20 hard coral colonies were monitored at each sites. The detailed monitoring report has been presented in the relevant monthly EM&A report (December 2011 and January 2012).

4.19 Overall, no exceedance of Action/Limit level was recorded in coral monitoring in this Reporting Period.

## 5 WASTE MANAGEMENT

5.01 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

# 5.1 RECORDS OF WASTE QUANTITIES

- 5.02 All types of waste arising from the construction work are classified into the following:
  - Construction & Demolition (C&D) Material;
  - Chemical Waste;
  - General Refuse; and
  - Excavated Soil.
- 5.03 The quantities of waste for disposal in this Reporting Period are summarized in *Table 5-1* and 5-2 and the Monthly Summary Waste Flow Table is shown in *Appendix G*. Whenever possible, materials were reused on-site as far as practicable.

Table 5-1 Summary of Quantities of Inert C&D Materials

Type of Weste		Quantity	Disposal Location	
Type of Waste	Dec 11	Jan 12	Feb 12	Disposai Location
C&D Materials (Inert) ('000m <sup>3</sup> )	0	0	0	-
Reused in this Contract (Inert) ('000m³)	0	0	0	-
Reused in other Projects (Inert) ('000m <sup>3</sup> )	0	0	0	-
Disposal as Public Fill (Inert) ('000m³)	0	0	0.17	Tuen Mun Area 38

Table 5-2 Summary of Quantities of C&D Wastes

Type of Weste		Quantity	Disposal Location	
Type of Waste	Dec 11	Jan 12	Feb 12	Disposai Location
Metal (kg)	0	0	0	-
Paper / Cardboard Packing (kg)	0	0	0	-
Plastic (kg)	0	0	0	-
Chemical Wastes (kg)	0	0	0	
General Refuses (tonne)	57.14	22.530	14.86	Yung Shue Wan RTS

5.04 There was no site effluent discharged but the estimated volume of surface runoff was less than 50m<sup>3</sup> in this reporting quarter.

## **6** SITE INSPECTION

- 6.01 According to the Final Report Environmental Monitoring and Audit Manual, the environmental site inspection should been formulation by ET Leader. Regular environmental site inspections had been carried out by the ET to confirm the environmental performance. In this Reporting Period, site inspection was carried out on 6, 13, 20, and 28 December 2011, 6, 10, 17, 31 January and 7, 14, 21, 28 February 2012. Besides, routine joint-site visit by IEC, RE, the Contractor (Leader) and ET was carried out on 6 December 2011, 6 January 2012 and 7 February 2012.
- 6.02 Observations for the site inspections and monthly audit within this Reporting Period are summarized in *Table 6-1*.

Table 6-1 Site Observations

Date	Findings / Deficiencies	Follow-Up Status
6 December 2011	• No environmental issue was observed during the site inspection.	N.A.
13 December 2011	<ul> <li>No environmental issue was observed during the site inspection.</li> <li>Since dry season is coming, dust mitigation measures is reminded to maintain to prevent dust emission.</li> </ul>	No follow up for reminder.
20 December 2011	• No environmental issue was observed during the site inspection.	N.A.
28 December 2011	• No environmental issue was observed during the site inspection.	N.A
6 January 2012	<ul> <li>Preparation work for mixing pre-mixed mortar was observed within the site (the north of transformer substation). Construction dust suppression measures are required to avoid adverse construction dust impacts.</li> <li>Construction activities were observed within the site. Full implementation of the required environmental mitigation measures is reminded.</li> </ul>	<ul> <li>The situation was rectified on site by providing wind screen for enclosing the preparation work for mixing the mortar.</li> <li>Not required for reminders.</li> </ul>
10 January 2012	• No environmental issue was observed during the site inspection.	N.A.
17 January 2012	• Larvicial oil to be placed to stagnant water and notice to be displayed.	• It has been inspected and rectified on 31 January 2012.
31 January 2012	• Chemical waste inside desilting tank to be removed.	To be followed.
7 February 2012	Chemical waste inside desilting tank should be removed.	• The deficiency has been rectified on 14 February 2012.
14 February 2012	• No environmental issue was observed during the site inspection.	N.A.
21 February 2012	• No environmental issue was observed during the site inspection.	N.A.
28 February 2012	• The stagnant water in the sedimentation tank should be covered and larvicial oil should be applied.	• The deficiency has been rectified on 6 March 2012.

# 7 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

# 7.1 ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTION

7.01 No environmental complaint, summons and prosecution was received in this Reporting Period. The statistical summary table of environmental complaint is presented in *Tables 7-1*, 7-2 and 7-3.

**Table 7-1** Statistical Summary of Environmental Complaints

Domontino Dominal	<b>Environmental Complaint Statistics</b>					
Reporting Period	Frequency	Cumulative	Complaint Nature			
1 – 31 December 2011	0	0	NA			
1 - 31 January 2012	0	0	NA			
1 – 29 February2012	0	0	NA			

Table 7-2 Statistical Summary of Environmental Summons

Donouting Donied	Environmental Summons Statistics					
Reporting Period	Frequency	Cumulative	Complaint Nature			
1 – 31 December 2011	0	0	NA			
1 - 31 January 2012	0	0	NA			
1 – 29 February2012	0	0	NA			

**Table 7-3** Statistical Summary of Environmental Prosecution

Donauting Davied	Environmental Prosecution Statistics			
Reporting Period	Frequency	Cumulative	Complaint Nature	
1 – 31 December 2011	0	0	NA	
1 - 31 January 2012	0	0	NA	
1 – 29 February 2012	0	0	NA	

## 8 IMPLEMENTATION STATUS OF MITIGATION MEASURES

8.01 The environmental mitigation measures that recommended in the Yung Shue Wan Environmental Monitoring and Audit Manual covered the issues of dust, noise, water and waste and they are summarized as following:

# **Dust Mitigation Measure**

- 8.02 Installation of 2m high solid fences around the construction site of Pumping Station P2 is recommended. Implementation of the requirements stipulated in the Air Pollution Control (Construction Dust) Regulation and the following good site practices are recommended to control dust emission from the site:
  - (a) Stockpiles of imported material kept on site should be contained within hoardings, dampened and / or covered during dry and windy weather;
  - (b) Material stockpiled alongside trenches should be covered with tarpaulins whenever works are close to village houses;
  - (c) Water sprays should be used during the delivery and handling of cement, sands, aggregates and the like.
  - (d) Any vehicle used for moving sands, aggregates and construction waste shall have properly fitting side and tail boards. Materials should not be loaded to a level higher than the side and tail boards, and should be covered by a clean tarpaulin.

# **Noise Mitigation Measure**

- 8.03 As detailed in the EIA report, concreting work of the Pumping Station P1a and sewer alignment construction activities would likely cause adverse noise impacts on some of the noise sensitive receivers. Appropriate mitigation measures have therefore been recommended. The mitigation measures recommended in the EIA report are summarised below:
  - (a) Use of quiet equipment for the construction activities of the Pumping Stations and sewer alignment;
  - (b) Use of temporary noise barrier around the site boundary of Pumping Station P1a;
  - (c) Use of kick ripper (saw and lift) method to replace the breaker for pavement removal during sewer alignment construction;
  - (d) Restriction on the number of plant during sewer alignment construction;
  - (e) Use of noise screening structures in the form of acoustic shed or movable barrier wherever practicable and feasible in areas with sufficient clearance and headroom during the construction of sewer alignment;
  - (f) Adoption of manual working method wherever practicable and feasible in areas where the worksites of the proposed sewer alignment are located less than 20m from the residential noise sensitive receivers and less than 30m from the temple and the public library; and
  - (g) Implementation of the following good site practices:
    - Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program.
    - Mobile plant, if any, should be sited as far away from NSRs as possible.
    - Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.
    - Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs.
    - Material stockpiles and other structures should be effectively utilised, wherever practicable, in screening noise from on-site construction activities.

# **Water Quality Mitigation Measure**

8.04 No-dig method using Horizontal Directional Drilling (HDD) would be used for the installation of outfall pipe of about 480 m from shore to minimize the potential water quality impacts arising from the dredging works required for the submarine outfall construction. For the

remaining outfall pipe of about 240m and the diffuser section, open trench dredging would still be required.

- 8.05 During the dredging works, the Contractor should be responsible for the design and implementation of the following mitigation measures.
  - Dredging should be undertaken using closed grab dredgers with a total production rate of 55m<sup>3</sup>/hr:
  - Deployment of 2-layer silt curtains with first layer enclosing the grab and the second layer at around 50, from the dredging area while dredging works are in progress;
  - all vessels should be sized such that adequate clearance (i.e. minimum clearance of 0.6m) is maintained between vessels and the sea bed at all states of the tide to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash;
  - all pipe leakages should be repaired promptly and plant shall not be operated with leaking pipes;
  - excess material should be cleaned from the decks and exposed fittings of barges before the vessel is moved;
  - adequate freeboard (i.e. minimum of 200m) should be maintained on barges to ensure that decks are not washed by wave action;
  - all barges should be fitted with tight fitting seals to their bottom openings to prevent leakage of material; and
  - loading of barges and hoppers should be controlled to prevent splashing of dredged
    material to the surrounding water, and barges and hoppers should not be filled to a level
    which would cause the overflow of materials or sediment laden water during loading or
    transportation; and
  - the decks of all vessels should be kept tidy and free of oil or other substances that might be accidentally or otherwise washed overboard.

# Construction Run-off and Drainage

- 8.06 The Contractor should observe and comply with the Water Pollution Control Ordinance and the subsidiary regulations. The Contractor should follow the practices, and be responsible for the design, construction, operation and maintenance of all the mitigation measures as specified in ProPECC PN 1/94 "Construction Site Drainage". The design of the mitigation measures should be submitted by the Contractor to the Engineer for approval. These mitigation measures should include the following practices to minimise site surface runoff and the chance of erosion, and also to retain and reduce any suspended solids prior to discharge:
  - Provision of perimeter channels to intercept storm-runoff from outside the site. These should be constructed in advance of site formation works and earthworks.
  - Works programmes should be designed to minimize works areas at any one time, thus minimising exposed soil areas and reducing the potential for increased siltation and runoff
  - Sand/silt removal facilities such as sand traps, silt traps and sediment basins should be provided to remove the sand/silt particles from run-off. These facilities should be properly and regularly maintained. These facilities shall be carefully planned to ensure that they would be installed at appropriate locations to capture all surface water generated on site
  - Careful programming of the works to minimise soil excavation works during rainy seasons
  - Exposed soil surface should be protected by paving or hydroseeding as soon as possible to reduce the potential of soil erosion.
  - Trench excavation should be avoided in the wet season, and if necessary, these should be excavated and backfilled in short sections.
  - Open stockpiles of construction materials on site should be covered with tarpaulin or similar fabric.

## General Construction Activities

8.07 Debris and rubbish generated on-site should be collected, handled and disposed of properly to avoid entering the nearby coastal waters and stormwater drains. All fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. Open drainage channels and culverts near the works areas should be covered to block the entrance of large debris and refuse.

## Wastewater Arising from Workforce

8.08 Portable toilets shall be provided by the Contractors, where necessary, to handle sewage from the workforce. The Contractor shall also be responsible for waste disposal and maintenance practices

# **Sediment Contamination Mitigation Measure**

- 8.09 The basic requirements and procedures for dredged mud disposal are specified under the WBTC No. 34/2002. The management of the dredging, use and disposal of marine mud is monitored by the MFC, while the licensing of marine dumping is the responsibility of the Director of Environmental Protection (DEP).
- 8.10 The uncontaminated dredged sediment will be loaded onto barges and transported to the designated marine disposal site. Appropriate dredging methods have been incorporated into the recommended water quality mitigation measures including the use of closed-grab dredgers and silt curtains. Category L sediment would be suitable for disposal at a gazetted open sea disposal ground.
- 8.11 During transportation and disposal of the dredged marine sediments, the following measures should be taken to minimize potential impacts on water quality:
  - Bottom opening of barges should be fitted with tight fitting seals to prevent leakage of material. Excess material should be cleaned from the decks and exposed fittings of barges and hopper dredgers before the vessel is moved.
  - Monitoring of the barge loading should be conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels should be equipped with automatic self-monitoring devices as specified by the DEP.

## **Construction Waste Mitigation Measure**

# **Good Site Practices and Waste Reduction Measures**

- 8.12 It is not anticipated that adverse waste management related impacts would arise, provided that good site practices are strictly followed. Recommendations for good site practices for the construction waste arising include:
  - Nomination of an approved person, such as a site manager, to be responsible for the implementation of good site practices, arranging for collection and effective disposal to an appropriate facility, of all wastes generated at the site.
  - Training of site personnel in proper waste management and chemical handling procedures.
  - Appropriate measures to minimize windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers.
  - Provision of sufficient waste disposal points and regular collection for disposal.
  - Separation of chemical wastes for special handling and appropriate treatment at the Chemical Waste Treatment Facility.
  - Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors.
  - Maintain records of the quantities of wastes generated, recycled and disposed.
- 8.13 In order to monitor the disposal of C&D waste at landfills and to control fly tipping, a

trip-ticket system should be included as one of the contractual requirements and implemented by an Environmental Team undertaking the Environmental Monitoring and Audit work. An Independent Environmental Checker should be responsible for auditing the results of the system.

- 8.14 Good management and control can prevent the generation of significant amount of waste. Waste reduction is best achieved at the planning and design stage, as well as by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include:
  - segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal;
  - to encourage collection of aluminium cans by individual collectors, separate labelled bins should be provided to segregate this waste from other general refuse generated by the work force:
  - any unused chemicals or those with remaining functional capacity should be recycled;
  - use of reusable non-timber formwork to reduce the amount of C&D material;
  - prior to disposal of C&D waste, it is recommended that wood, steel and other metals should be separated for re-use and / or recycling to minimise the quantity of waste to be disposed of to landfill;
  - proper storage and site practices to minimise the potential for damage or contamination of construction materials; and
  - plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste.

## General Site Wastes

8.15 A collection area should be provided where waste can be stored prior to removal from site. An enclosed and covered area is preferred for the collection of the waste to reduce 'wind blow' of light material.

## Chemical Wastes

- 8.16 After use, chemical waste (eg. cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Any unused chemicals or those with remaining functional capacity should be recycled. Spent chemicals should be properly stored on site within suitably designed containers, and should be collected by an approved operator for disposal at the Chemical Waste Treatment Facility or other licenced facility in accordance with the Waste Disposal (Chemical Waste) (General) Regulation under the Waste Disposal Ordinance.
- 8.17 Any service shop and minor maintenance facilities should be located on hard standings within a bunded area, and sumps and oil interceptors should be provided. Maintenance of vehicles and equipment involving activities with potential for leakages and spillage should only be undertaken with the areas appropriately equipped to control these discharges.

# Construction and Demolition Material

- 8.18 The C&D material should be separated on-site into three categories: (i) public fill, the inert portion of the C&D material (e.g. concrete and rubble), which should be re-used on-site or disposed of at a public filling area; (ii) C&D waste for re-use and/or recycling, the non-inert portion of the C&D material, (e.g. steel and other metals, wood, glass and plastic); (iii) C&D waste which cannot be re-used and/or recycled. The waste producers are responsible for its disposal at strategic landfills.
- 8.19 In order to minimise the impact resulting from collection and transportation of material for off-site disposal, it was recommended that inert material should be re-used on-site where possible. Prior to disposal of C&D material, it was also recommended that steel and other metals should be separated for re-use and/or recycling where practicable to minimise the

quantity of waste to be disposed of to landfill.

# **Ecology Mitigation Measure**

- 8.20 The following general good practice measures should be adopted to mitigate ecological impacts during marine works (including dredging and HOD);
  - Excess material from vessel loading should be cleaned from the decks and exposed fittings before vessels are moved to the backfilling location;
  - Dredging should cause no foam, oil, grease, scum, litter or other objectionable matter to be present on the water;
  - Adequate freeboard should be maintained to ensure that decks are not washed by wave action:
  - All pie leakages should be repaired promptly and plant Should not be operated with leaking pipes; and
  - All banges and other vessels should maintain adequate clearance between vessels and the seabed at all stats of the tide and reduce operational speeds to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash.
- 8.21 In the event of exceedances of ecological action or limit level, the Contractor will be required to revise his operations as a further mitigation measure. Revisions to the operation method may include (but not be limited to):
  - Reduction in dredging rate'
  - Restriction of dredging in particular areas to specific periods in the tidal cycle
- 8.22 Should repeated non-compliances with limit level(s) occur the Contractor shall modify his working method until he is able to achieve the required compliances with the limit levels to the satisfaction of the IC(E)

# **Fisheries Mitigation Measure**

8.23 Closed grab dredger, deployment of silt curtains around the immediate dredging area and low dredging rate have been recommended in Water Quality of the EIA report in order to minimise sediment release into the water column.

# **Landscape & Visual Mitigation Measure**

- 8.24 Mitigation measures recommended in the EIA Report for landscape and visual impacts during the construction stage are summarised below.
  - Screening of site construction works by use of hoarding that is appropriate to its site context;
  - Retaining existing trees and minimising damage to vegetation where possible by close co-ordination and on site alignment adjusted of rising main and gravity sewer pipelines. Tree protective measures should be implemented to ensure trees identified as to be retained are satisfactorily protected during the construction phase;
  - Careful and efficient transplanting of affected trees (1 no.) to temporary or final transplant location (the proposed tree to be transported is a semi-mature *Macaranga tanarius* and is located at the proposed Pumping Station P2 location);
  - Short excavation and immediate backfilling of sections upon completion of works to reduce active site area:
  - Conservation of top-soil for reuse.
  - Night-time light source from marine fleets should be directed away from the residential units
- 8.25 The implementation schedule of mitigation measures is presented in *Appendix H*.
- 8.26 Leader had been implementing the required environmental mitigation measures according to

the Yung Shue Wan Environmental Monitoring and Audit Manual subject to the site condition. Environmental mitigation measures generally implemented by Leader in this Reporting Month are summarized in *Table 8-1*.

**Table 8-1 Environmental Mitigation Measures** 

Issues	Environmental Mitigation Measures				
Water	• Drainage channels were provided to convey run-off into the treatment facilities;				
Quality	and				
•	Drainage systems were regularly and adequately maintained.				
Air Quality	<ul> <li>Cover all excavated or stockpile of dusty material by impervious sheeting or</li> </ul>				
	sprayed with water to maintain the entire surface wet;				
	• Public roads around the site entrance/exit had been kept clean and free from dust;				
	and				
	<ul> <li>Tarpaulin covering of any dusty materials on a vehicle leaving the site.</li> </ul>				
Noise	<ul> <li>Good site practices to limit noise emissions at the sources;</li> </ul>				
	<ul> <li>Use of quite plant and working methods;</li> </ul>				
	• Use of site hoarding or other mass materials as noise barrier to screen noise at				
	ground level of NSRs; and				
	To minimize plant number use at the worksite.				
Waste and	• Excavated material should be reused on site as far as possible to minimize off-site				
Chemical	disposal. Scrap metals or abandoned equipment should be recycled if possible;				
Management	• Waste arising should be kept to a minimum and be handled, transported and				
rranagement	disposed of in a suitable manner,				
	• The Contractor should adopt a trip ticket system for the disposal of C&D				
	materials to any designed public filling facility and/or landfill; and				
	• Chemical waste shall be handled in accordance with the Code of Practice on the				
	Packaging, Handling and Storage of Chemical Wastes.				
General	The site was generally kept tidy and clean.				

## 9 CONCLUSIONS AND RECOMMENTATIONS

## 9.1 CONCLUSIONS

- 9.01 This is the 6<sup>th</sup> Quarterly EM&A Summary Report for Yung Shue Wan Portion Area under the Project covering the construction period from 1 December 2011 to 29 February 2012.
- 9.02 No noise complaint (an Action Level exceedance) was received and no construction noise measurement results that exceeded the Limit Level were recorded in this reporting quarter. No NOE or the associated corrective actions were therefore issued.
- 9.03 In this Reporting Period, no 1-hour TSP result was found to be triggered the Action or Limit Level. However, 2 Active Level exceedance of 24-hour TSP were recorded on 13 December 2011. Investigation revealed that the source of the exceedance was a pile of unmitigated dusty materials which did not belong to the Project. It is concluded that the exceedances were not related to the work under the Project and no remedial actions are required.
- 9.04 No exceedance of Action/Limit level was recorded in marine water monitoring in this Reporting Period.
- 9.05 No exceedance of Action/Limit level was recorded in coral monitoring in this Reporting Period.
- 9.06 No documented complaint, notification of summons or successful prosecution was received.
- 9.07 **12** events of site inspection were carried out by ET in this Reporting Period and no non-compliance was observed during the inspection. In general, all the observation has been rectified during the next week site inspection. The environmental performance of the Project was therefore considered as satisfactory.
- 9.08 No site inspection was undertaken by external parties i.e. Environmental Protection Department (EPD) or Agriculture, Fisheries and Conservation Department (AFCD) within the Reporting Period.

### 9.2 **RECOMMENDATIONS**

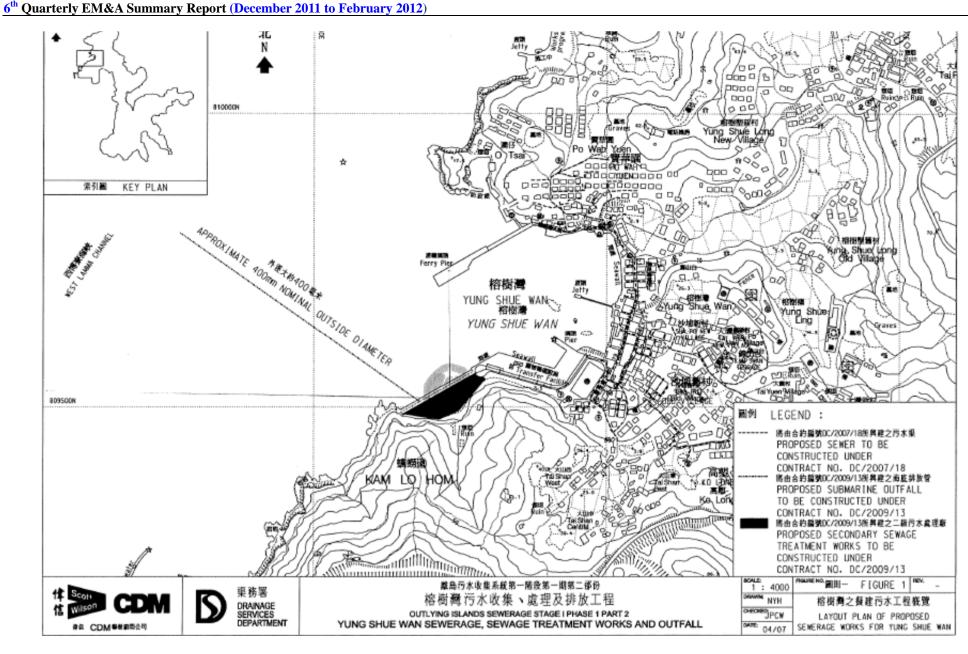

- 9.09 During dry and windy season, construction dust would be the key environmental issue to concern. The construction dust mitigation measures identified at the EM&A Manual such as watering at haul road and covering of dusty material should be implemented and properly maintained.
- 9.10 Nevertheless, the Contractor shall keep paying attention on the potential water impact as the construction site is adjacent to the coastline. Muddy water and other water quality pollutants via site surface water runoff into the sea body within Fish culture zone at Picnic Bay and the Secondary recreation contact subzone at Mo Tat Wan should be avoided. Therefore, mitigation measures for water quality should be fully implemented also.

# **Appendix F**

**Meteorological Information** 

#### <u>Meteorological condition – December 2011</u>

Attributed to the frequent replenishment of the winter monsoon, December 2011 was colder than usual with a monthly mean temperature of 16.9 degrees, 0.9 degrees below the normal figure of 17.8 degrees. There were six cold days (daily minimum temperature at 12.0 degrees or below) in the month, about two days more than normal. The prevalence of continental airstream also brought drier than usual weather to the territory in December 2011. The total rainfall recorded in the month was 2.8 millimetres, less than a tenth of the monthly normal. The annual rainfall for 2011 was 1476.7 millimetres, a deficit of about 38 percent compared to the annual normal of 2382.7 millimetres.

#### **Meteorological condition**– **January 2012**

Under the dominance of the winter monsoon, January 2012 was colder than usual. The mean temperature of the month was 15.1 degrees, 1.2 degrees below the normal figure of 16.3 degrees. The month was also wetter and gloomier than usual. The monthly rainfall of 42.1 millimetres was 17.4 millimetres above normal. The monthly total duration of bright sunshine was 86.0 hours, a deficit of 40 percent against to the normal figure of 143.0 hours.

#### **Meteorological condition**– February 2012

With frequent interchange of the northeast monsoon and the humid maritime airstream over the south China coast, February 2012 was marked by gloomy and humid weather with a few foggy episodes in Hong Kong. The total duration of bright sunshine in the month was 38.1 hours, only about 40 percent of the normal and the monthly mean relative humidity was 85 percent, 5 percent above normal.

The month was also cooler with less rainfall than usual. The mean temperature of the month was 15.8 degrees, 1.0 degree below the normal figure of 16.8 degrees. The total rainfall in the month was 29.5 millimetres, 24.9 millimetres below the normal figure of 54.4 millimetres.

Note: please refer to the monthly EM&A report (Dec 2011 -Feb 2012) for the weather details on each successive day.

### **Implementation Schedule of Water Quality Control Measures**

EIA	EM&A	Environmental Protection Measures*	Location (duration	Implementation		lement Stages*		Relevant Legislation
Ref	Ref	Environmental Protection Measures*	/completion of measures)	Agent	D	C	O	and Guidelines
2.5.23	4.12.1	No-dig method using Horizontal Directional Drilling (HDD) would be used for the installation of main portion of outfall pipes	Marine works site / During construction of submarine outfall	Contractor		<b>√</b>		
4.5.38	4.12.3	<ul> <li>Dredging Works</li> <li>Implementation of following measures during the dredging works:</li> <li>dredging should be undertaken using closed grab dredgers with a maximum total production rate of 55m³/hr;</li> <li>deployment of 2-layer silt curtains with the first layer enclosing the grab and the second layer at around 50m from the dredging area while dredging works are in progress;</li> <li>dredging operation should be undertaken during ebb tide only;</li> <li>all vessels should be sized such that adequate clearance (i.e. minimum clearance of 0.6m) is maintained between vessels and the sea bed at all states of the tide to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash;</li> <li>all pipe leakages should be repaired promptly and plant should not be operated with leaking pipes;</li> <li>excess material should be cleaned from the decks and exposed fittings of barges before the vessel is moved;</li> <li>adequate freeboard (i.e. minimum of 200mm) should be maintained on barges to ensure that decks are not washed by wave action;</li> <li>all barges should be fitted with tight fitting seals to their bottom openings to prevent leakage of material;</li> <li>loading of barges should be controlled to prevent splashing of dredged material to the surrounding water, and barges should not be filled to a level which will cause the overflow of materials or polluted water during loading or transportation; and</li> </ul>	Marine works site and at the identified water sensitive receivers/ During construction	Contractor		V		

EIA	EM&A	Environmental Protection Measures*	Location (duration /completion of	Implementation		lement Stages*		Relevant Legislation
Ref	Ref	Environmental Protection Weasures	measures)	Agent	D	C	O	and Guidelines
		• the decks of all vessels should be kept tidy and free of oil or other substances that might be accidentally or otherwise washed overboard.						
2.5.39	4.12.4	Construction Run-off and Drainage	Construction works	Contractor				ProPECC
		Implementation of the following site practices outlined in ProPECC PN 1/94 for "Construction Site Drainage"	sites					PN 1/94
		• Provision of perimeter channels to intercept storm-runoff from outside the site. These should be constructed in advance of site formation works and earthworks.						
		• Works programmes should be designed to minimize works areas at any one time, thus minimizing exposed soil areas and reducing the potential for increased siltation and runoff.						
		• Sand / silt removal facilities such as sand traps, silt traps and sediment basins should be provided to remove the sand / silt particles from run-off. These facilities should be properly and regularly maintained. These facilities should be carefully planned to ensure that they would be installed at appropriate locations to capture all surface water generated on site.						
		• Careful programming of the works to minimise soil excavation works during rainy seasons.						
		• Exposed soil surface should be protected by paving or hydroseeding as soon as possible to reduce the potential of soil erosion.						
		• Trench excavation should be avoided in the wet season, and if necessary, these should be excavated and backfilled in short sections.						
		Open stockpiles of construction materials on site should be covered with tarpaulin or similar fabric						
2.5.39	4.12.5	General Construction Activities	Construction works	Contractor		V		
		Debris and rubbish generated on-site should be collected, handled and disposed of properly to avoid entering the nearby coastal waters and stormwater drains.	sites					

EIA	EM&A	Environmental Protection Measures*	Location (duration /completion of	Implementation		ement tages*		Relevant Legislation
Ref	Ref	Environmentari rotection vicasures	measures)	Agent	D	C	О	and Guidelines
		• All fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank.						
		Open drainage channels and culverts near the works areas should be covered to block the entrance of large debris and refuse.						
2.5.39	4.12.6	Wastewater Arising from Workforce  Portable toilets should be provided by the Contractors, where necessary, to handle sewage from the workforce. The Contractor should also be responsible for waste disposal and maintenance practices.	Construction works sites	Contractor		<b>√</b>		
2.10.10	Section 4	Water quality monitoring	Designated water monitoring locations/ throughout construction period	Contractor		V		EM&A Manual

<sup>\*</sup> All recommendations and requirements resulted during the course of EIA Process, including ACE and/or accepted public comment to the proposed project.
