**Dear Claudine,**

**Re: Contract No. EP/SP/77/15**  
**Northeast New Territories Landfill Extension**  
**Submission of 11<sup>th</sup> Post-Translocation Monitoring Report (June 2023)**

---

In accordance with the requirement specified in Conditions 2.8 and 2.10 of Environmental Permit No. EP-292/2007 and Conditions 2.6 and 2.8 of Further Environmental Permit No. FEP-01/292/2007, we are pleased to submit the certified "11<sup>th</sup> Post-Translocation Monitoring Report (June 2023)" dated on 8 June 2023 for your verification.

Should you require any further information or clarification, please do not hesitate to contact the undersigned or our Mr. Keith Chau on 3664 6788.

Yours faithfully,  
For and on behalf of  
Aurecon Hong Kong Limited

Dear Sir

Re: Contract No. EP/SP/77/15  
North-East New Territories Landfill Extension (NENTX)  
11<sup>th</sup> Post-Translocation Monitoring Report (June 2023)

I refer to Conditions 2.8 and 2.10 under Environmental Permit No. EP-292/2007 and Conditions 2.6 and 2.8 under Further Environmental Permit No. FEP-01/292/2007, regarding the submission of Post-Translocation Monitoring Report. I hereby verify the captioned "11<sup>th</sup> Post-Translocation Monitoring Report (June 2023)" dated 8 June 2023.

Should you have any queries, please do not hesitate to contact the undersigned at 2859 5409.

Yours faithfully  
MEINHARDT INFRASTRUCTURE AND ENVIRONMENT LTD

Claudine Lee  
Independent Environmental Checker

# 1. Introduction

- 1.1.1 The North East New Territories Landfill Extension (the NENTX Project) is a designated project. The Environmental Impact Assessment (EIA) Report was approved with conditions on 20 September 2007 (AEIAR-111/2007) and the Environmental Permit (EP) EP-292/2007 (the "EP") was issued on 26 November 2007. Additionally, a Further Environmental Permit FEP-01/292/2007 (the "FEP") was also issued under the EIA Ordinance on 28 April 2022.
- 1.1.2 In order to fulfil FEP conditions 2.6 and 2.8 on the post-translocation monitoring of the endemic freshwater crab *Somanniathelphusa zanklon*, a survey shall be carried out to monitor the establishment and effectiveness of the measures for the endemic *S. zanklon* community in the translocated site.
- 1.1.3 The post-translocation monitoring methodology shall be in accordance with the approved Revised Translocation Proposal for the Endemic Freshwater Crab *Somanniathelphusa zanklon* (NENTX-FUG-RP-E-EM-I01 Revised Translocation Proposal) (the "approved Proposal"). The approved Proposal was agreed upon with the Environmental Protection Department (EPD) and Agriculture, Fisheries and Conservation Department (AFCD).
- 1.1.4 The NENTX Design-Build-Operate (DBO) Contractor, on behalf of EPD/LDG, is responsible for carrying out the post-translocation monitoring works in accordance with the approved Proposal.
- 1.1.5 The NENTX DBO contract was awarded to Veolia Environmental Services Hong Kong Ltd. (Veolia) and Fugro Technical Services Limited (Fugro) was appointed by Veolia to implement the post-translocation monitoring works in accordance with the approved Proposal.

## 1.2 Purpose of this Document

- 1.2.1 This Post-Translocation Monitoring Report for the Endemic Freshwater Crab *Somanniathelphusa zanklon* (the "Report") was prepared to detail the findings of the mark-recapture post-translocation activities in fulfilment of Section 4 of the approved Proposal, FEP conditions 2.6 and 2.8, and Conditions of EIAR Approval No. 4 for the NENTX Project.

## 1.3 Structure of the Report

- 1.3.1 Succeeding this Section 1 Introduction, the remainder of this Report is presented as follows:
- Section 2 details the methodology of the mark-recapture activity;
  - Section 3 presents the survey results of mark-recapture activity;
  - Section 4 details the post-translocation monitoring schedule; and
  - Section 5 presents the summary and conclusion.

## 2. Mark-Recapture Methodology

2.1.1 This section presents the methodology and approach of the post-translocation mark-recapture monitoring in accordance with Section 4 of the approved Proposal; and in fulfilment of FEP conditions 2.6 and 2.8 and Conditions of EIA Approval No. 4 for the NENTX Project.

### 2.2 The Monitoring Area

2.2.1 The Recipient Site (the "Monitoring Area") (**Appendix A**) is the site where the eight individuals of *S. zanklon* were translocated during capture-translocation surveys conducted from 21 to 24 July 2022.

2.2.2 The Monitoring Area is located at the middle section of Ping Yuen River tributary, and adjacent to Ping Yuen Road, to the north of Ping Yeung Village. In this tributary, *S. zanklon* was previously recorded during the approved EIA studies (i.e., EIA-133/2007 and EIA-190/2010) (ERM, 2022) suggesting that this watercourse is suitable for *S. zanklon*.

2.2.3 Although channelisation features (e.g., concrete bank and gabions) and an inflatable water dam are present about 100m to the east, the monitoring area is still considered largely natural with a low gradient and low water flow (see **Photo 2.1**). The streambed is mainly covered by soil and stream banks are vegetated with grass. This area meets the habitat requirements of the species. The soft soil stream substrate and the availability of riparian vegetation are ideal for *S. zanklon* to create microhabitat to inhabit. In addition, the natural meander would also reduce the water flow, which is preferred by the *S. zanklon*. It is anticipated that pollution or disturbance would be in a low level in this section, considering there is limited roads and houses (and therefore limited human activities) until the stream reaches Kan Tau Wai and Tong Fong along Ping Che Road.

Photo 2.1: Section of the monitoring area with low gradient and low water flow

## 2.3 Personnel

2.3.1 The post-translocation monitoring survey team was led by a qualified ecologist with minimum of five years of experience in aquatic ecology or other related experience as accepted by AFCD and EPD. In particular, the survey team leader has the experience in surveys of *S. zanklon*.

## 2.4 Mark-Recapture Activity

2.4.1.1 The eleventh mark-recapture activity was conducted on 7th June 2023 during night-time period. Hand netting and kick sampling in the monitoring area were conducted. In addition, direct observation was also conducted along the stream riparian zone to search for *S. zanklon* in their potential hiding spaces (e.g. under rocks and fallen tree branches). Permit under Cap. 170 was obtained from AFCD before the use of nets to collect freshwater fauna in the streams (Appendix B).

### 2.4.2 Hand Netting

2.4.2.1 Hand netting (see Photo 2.2) was used to search the potential habitats along the watercourse. The sweeping motion of the hand netting scraped the layer of the stream bottom substrate into the net, e.g., soil and leaf litter where possible, as *S. zanklon* is likely to be among these substrates. After taking the hand net out of the water, it was allowed to drain, and the net content was emptied on to a large sorting tray. All caught *S. zanklon*, if any, would be carefully moved to a plastic container for marking.

Photo 2.2: Hand netting at a potential habitat (vegetation) along the watercourse

### 2.4.3 Kick-netting

2.4.3.1 Kick-netting (see **Photo 2.3**) was done along the watercourse by moving upstream with the net facing the water current. The surveyor disturbed the substrate by kicking the streambed substrate by kicking, such that the *S. zanklon* dislodged from the streambed would be trapped in the net. In order to maximise the survey effort within the stream, the surveyor moved up the stream in a zigzag direction to increase the kick sampling coverage. The net was checked after a maximum of one minute of kick sampling. Additionally, the net was checked more frequently if large amount of substrate was kicked into the net.

Photo 2.3: Surveyor kick-netting the substrate and checking the net's contents

2.4.3.2 Similar to hand netting, the net content was emptied on to a large sorting tray. All caught *S. zanklon*, if any, were carefully moved to a plastic container for post-translocation marking.

### 2.4.4 Direct Observation

Direct observation (see **Photo 2.4**) to search for *S. zanklon* in their potential hiding spaces was also conducted.

Photo 2.4: Surveyor searching for *S. zanklon* on potential hiding space (under vegetation and rocks) along the watercourse

## 2.4.5 Marking

All captured *S. zanklon* individuals would be marked prior to releasing them back to the monitoring area. The marker would be an epoxy-resin based paint (Jotamastic Wintergrade) which contains a metallic component and cures in contact with water. Earlier laboratory and field trials had established that crab survival and behaviour was unaffected by paint marking on the carapace and that the marks persisted in field conditions (Eaton et. al., 2001). Recaptures, if any, would be re-marked with black numerals to indicate the month of capture.

## 3. Survey Results

3.1.1 There was no *S. zanklon* individual that was recaptured nor marked during the monitoring period (**Appendix C**). Moreover, the vegetation of the survey area has regrown since the last survey. The lack of recaptured individuals could be attributed to the thick vegetation providing cover for the individuals. The individuals could have hid within the thick vegetation, making them very hard to discover. Moreover, the individuals could have relocated to different areas in search for food and habitats. The survey area had been extended even further downstream in effort to capture the individuals. However, still no individuals were recaptured.

Photo 3.1: Site photos the monitoring area (vegetation)

Photo 3.2: Site photos the monitoring area further down stream

## 4. Post-translocation Monitoring Schedule and Area

- 4.1.1 Continued post-translocation monitoring will be conducted to further monitor the establishment and effectiveness of the measures for *S. zanklon* community in the translocated site.
- 4.1.2 As the monthly monitoring for the first three months after the post-translocation activities have been concluded in the October monitoring period, the succeeding post-translocation monitoring should be, then, carried out quarterly on January, April and July. However, as no individuals were found in the August, September and October monitoring, Fugro has decided to continue the conduction of monthly monitoring until June 2023. Meaning that extra monthly monitoring will be conducted on February, March, May and June. Therefore, June 2023 will be the last extra monthly monitoring conducted before the final monitoring on July 2023. Hence, the next monitoring period, July 2023 will be the last monitoring period of the project.
- 4.1.3 As no individuals have been recaptured in the previous surveys, the revised survey area had been extended even further downstream in search for the individuals that could have possibly relocated (**Appendix A**). This initiative was also suggested by Fugro.

## 5. Summary and Conclusion

- 5.1.1 No *S. zanklon* individual was recaptured nor marked during the current monitoring period. The results could be due to the thick vegetation in the monitoring area. Moreover, the individuals may have previously relocated to a different area in search for food and habitats. Therefore, the survey area had been extended further downstream in effort to search for possibly resettled *S. zanklon* individuals. Despite the increased effort, still no *S. zanklon* individuals were identified. The next monitoring period in July will be the final monitoring period.

Dear Fenelyn Nabuab,

**Permission to Possess Hand Nets for the Surveys of Aquatic Fauna**

Thank you for your emails of 19 and 22 September 2022.

I enclose a permit for your retention. You are requested to observe the conditions of the permit. Please contact the undersigned should you have any queries.

Yours sincerely,

(K. T. CHAN)

### **Conditions of Permission to Possess Hand Nets for the Surveys of Aquatic Fauna**

1. This permission is limited to the possession of hand nets by LI, Kwok Shing Ray; BOREGON, Calvin Jay; TAM, Chun Yiu Jacky; TILLO, Jhomar Tillo; YUEN, Lok Hang Andy; RABI, Sheila Marie and NABUAB, Fenelyn of Fugro Technical Services Limited to capture freshwater macro-invertebrates for surveys at Ta Kwu Ling under the project “*North East New Territories Landfill Extension*” (Contract No. EP/SP/77/15) as proposed to this department on 19 and 22 September 2022.
2. This permission does not exempt the permit holders from having to acquire any other necessary permission under the Laws of Hong Kong.
3. This permission does not authorise the entry to any leased land or licensed area or the collection or disturbance of the flora or fauna therein, in which case the prior approval of the lessees or the licence holders would be necessary.
4. The permit holders shall release the captured target species at the capture localities immediately after marking and identification.
5. The permit holders shall handle the animals humanely and in a manner that will avoid their suffering.
6. The permit holders shall produce a copy of this permit for inspection on demand by any officer of this Department or police officer.
7. The permit holders shall provide a report on the location, quantity and species of specimens surveyed to this Department upon request.
8. The Director of Agriculture, Fisheries and Conservation reserves the right to recall or cancel this permission at any time.

\* End of Conditions \*

September 2022
