Attention : Mr. H.K. Chan & Mr. Ronald Siu

Dear Sir,

**Re: Agreement No. DP 01/2010
Services as Independent Environmental Checker for the Drainage Improvement
Works in Sha Tin and Tai Po under Contract No. DC/2010/02
Quarterly Environmental Monitoring and Audit Report for Jul to Sep 2011**

Reference is made to Environment Team's submission of the Quarterly Environmental Monitoring and Audit Report for Jul to Sep 2011 by Email on 19th Oct 2011 (entitled "DC/2010/22 - Quarterly EM&A Summary Report (No.1) - July to September 2011") and the subsequent revision of the report by Email on 9th Dec 2011.

Please be informed that we have no further comment on the captioned revised report. We write to verify the captioned submission in accordance with Section 9.9 of EM&A Manual under EP-303/2008.

Thank you very much for your kind attention and please do not hesitate to contact the undersigned should you have any queries.

Yours sincerely,

Tony Cheng
Independent Environmental Checker

EXECUTIVE SUMMARY

ES.01. This is the 1st Quarterly EM&A Summary Report under Environmental Permit No.EP-303/2008 (hereinafter “the EP”) for the Contract No. DC/2010/02 - Drainage Improvement in Shuen Wan and Shek Wu Wai (hereinafter “the Project”), covering the period from **20 July to 30 September 2011** (hereinafter “Reporting Quarter”).

ES.02. Environmental monitoring activities under the EM&A programme in the Reporting Quarter are summarized in the following table.

Aspects	Environmental Monitoring Parameters / Inspection	Occasions
Construction Noise	Leq (30min) Daytime	55
Water Quality	Local Stream Water Sampling - W1 and W2	32
	Local Stream Water Sampling - W3 and W4	32
	Hydrological characteristics measurement – H1 and H2	11
	Hydrological characteristics measurement – H3 and H4	11
Inspection / Audit	Monthly Environmental Site Inspection and audit by Environmental Team and IEC	3
	Regular weekly Environmental inspection by the Contractor and Site Representative Engineer	10
Landscape & Visual	Bi-weekly Inspection by a registered Landscape	3

ES.03. Monitoring results demonstrated that no exceedance of environmental quality criteria of construction noise and hydrological characteristics. However, 129 Action/Limit Levels exceedances, namely 88 dissolved oxygen, 34 turbidity and 7 suspended solids were recorded in water quality monitoring in this Reporting Quarter. Investigation reports concluded that all registered exceedances were not related to the work under the Project. The statistics of environmental exceedance, NOE issued and investigation of exceedance are summarized in the following table.

Environmental Issues	Monitoring Parameters	Action Level	Limit Level	Event & Action		
				NOE Issued	Investigation	Corrective Actions
Construction Noise	Leq _{30min} Daytime	0	0	0	0	0
Water Quality	Dissolved Oxygen	7	81	88	Not related Contract 2	Not required
	Turbidity	12	22	34		
	Suspended Solids	3	4	7		
Hydrological Characteristics	Water Flow	0	0	0	0	0
	Water Depth	0	0	0	0	0

ES.04. No documented complaint, notification of summons and successful prosecution was received during the Reporting Quarter. No major environmental impacts were observed during the weekly site inspection which indicated that the implemented mitigation measures for construction noise and water quality were effective. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

ES.05. No site visit was undertaken by any external party in this Reporting Quarter.

ES.06. No reporting changes were made during the Reporting Quarter.

ES.07. During wet season (April to November), muddy water and other water quality pollutants via site surface water runoff into the local stream Wah Ha River would be the key issue in the forth-coming month. Mitigation measures for water quality should therefore be fully implemented.

ES.08. On the other hand, construction noise should be other key environmental issue during sheet-piling process. The noise mitigation measures accordingly should be necessary to implement.

1.0 INTRODUCTION

PROJECT BACKGROUND

- 1.01 Kwan Lee-Kuly Joint Venture (hereinafter ‘KLKJV’) has been awarded by Drainage Services Department (hereinafter ‘DSD’) of the Contract No. DC/2010/02 - Drainage Improvement in Shuen Wan and Shek Wu Wai. The Project is scheduled to commence in May 2011 and complete in March 2014 for about 35 months.
- 1.02 The works to be executed under the Project are located in Shuen Wan and Shek Wu Wai. The works mainly comprise construction of about 735 metres long single-cell box culvert along Tung Tsz Road in Shuen Wan, Tai Po and construction of about 15 m long three-cell box culvert in Shek Wu Wai, Shatin.
- 1.03 This Project (hereinafter ‘the Contract 2’) is part of the Drainage Improvement works amongst Shatin and Tai Po and it is defined as a “Designated Project” which controlled under Environmental Permit EP-303/2008. Currently, DSD has another Contract DC/2009/22 (hereinafter ‘the Contract 1’) ongoing for construction at Shuen Wan working area which under the same Environmental Permit and the updated Environmental Monitoring and Audit Manual (hereinafter ‘the Updated EM&A Manual’). Both DSD contract’s site boundary at Shuen Wan are shown in *Appendix A*. On the other hand, Shek Wu Wai San Tin is a non-designated project work and no environmental monitoring and audit is requested to carry out.
- 1.04 In order to effectively implement the environmental protection measures stipulated in the Project Profile (hereinafter ‘the PP’), Environmental Impact Assessment Report (hereinafter “the EIAR”), Environmental Permit EP303/2008, a corresponding EM&A Manual have been prepared to outline the environmental monitoring and auditing (hereinafter ‘the EM&A’) programme undertake for the Contracts 1 and 2.
- 1.05 KLKJV has commissioned Action-United Environmental Services and Consulting (AUES) as an independent environmental team (hereinafter ‘the ET’) to implement the EM&A programme for the environmental protection of the Project. Due to the construction of Contracts 1 and 2 carry out is just about the time, a Proposal Environmental Monitoring Programme and Methodology (hereinafter the “PEMPM”) was prepared and submitted to describe EM&A programme would be undertaken during construction period of the Contract 2.
- 1.06 The baseline monitoring of EM&A programme has been performed by the Contract 1 ET. The Action and Limit Levels environmental performance criteria have also been established by the Contract 1. Therefore, no baseline monitoring was performed for the Contract 2 of Project. However, a new set of the Action/ Limit levels as used to Contract 2 were proposed by ET, it had been accepted by the IEC and also submitted to the EPD seek for endorsement.
- 1.07 This is the 1st Quarterly EM&A Summary Report under Environmental Permit No.EP-303/2008 for the Contract No. DC/2010/02 - Drainage Improvement in Shuen Wan and Shek Wu Wai, covering the period from **20 July to 30 September 2011**.

REPORT STRUCTURE

- 1.08 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-
- | | |
|------------------|--|
| SECTION 1 | INTRODUCTION |
| SECTION 2 | PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS AND SUBMISSION |
| SECTION 3 | EM&A PROGRAMME REQUIREMENT FOR THE PROJECT |
| SECTION 4 | IMPACT MONITORING RESULTS |
| SECTION 5 | WASTE MANAGEMENT |
| SECTION 6 | SITE INSPECTIONS |
| SECTION 7 | ENVIRONMENTAL COMPLAINTS AND NON-COMPLIANCE |
| SECTION 8 | IMPLEMENTATION STATUES OF MITIGATION MEASURES |
| SECTION 9 | CONCLUSIONS AND RECOMMENDATION |

2.0 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS AND SUBMISSION

PROJECT ORGANIZATION AND MANAGEMENT STRUCTURE

2.01 Organization structure and contact details of relevant parties with respect to on-site environmental management are shown in *Appendix B*.

CONSTRUCTION PROGRESS

2.02 The master and three month rolling construction programmes are enclosed in *Appendix C* and the major construction activities undertaken in this report period are listed below:.

Reporting Month	Construction activities
July 2011	<ul style="list-style-type: none"> • Underground utilities detection; • Setting out point surveying; • Initial Condition Survey of existing structures at A2; • Construction of haul road at box culvert bays 20 to 23; and • Driving sheet-piles at the bays 20 to 23
August 2011	<ul style="list-style-type: none"> • Carried out initial surveying; • Carried out Tree Survey; • Driving sheet-pile for Bays 20 to 23, and • Excavation and installation of lateral shoring system for Bays 20 to 23
September 2011	<ul style="list-style-type: none"> • Driving sheetpiles for Bays 20 to 23; • Excavation and installation of lateral shoring system for Bays 20 to 23; • Laying of rockfill and blinding for Bays 20 to 23; • Fixing of reinforcement for base slab of Bay 20; • Erection of formwork for base slab of Bay 20; and • Concrete casting of base slab of Bay 20

SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.03 Summary of the relevant permits, licences, and/or notifications on environmental protection for this Project in this Reporting Quarter is presented in *Table 2-1*.

Table 2-1 Status of Environmental Licenses and Permits

Item	Description	License/Permit Status
1	Air pollution Control (Construction Dust)	In Progress
2	Chemical waste Producer Registration	In Progress
3	Water Pollution Control Ordinance (Discharge License) WT00009528-2011	Valid to 31 July 2016
4	Billing Account for Disposal of Construction Waste (Account No.: 7012838)	Effective
5	Construction Noise permit	In Progress

2.04 The “Proposal Environmental Monitoring Programme and Methodology (R0006 Version 2)” was set out in accordance with the Updated Environmental Monitoring and Audit Manual. It was approved by the ER and agreed with the Independent Environmental Checker (IEC) and submitted to the EPD for endorsement.

2.05 For Contract 2 of the Project, no Baseline Monitoring Report was issued by the ETL. However, a new set of the Action/ Limit levels as used to Contract 2 were proposed by ET, it had been accepted by the IEC and also submitted to the EPD seek for endorsement.

3.0 EM&A PROGRAMME REQUIREMENT FOR THE PROJECT

3.01 The EM&A requirements set out in the PP, EIAR, Environmental Permit EP303/2008 (hereinafter ‘the EP’), and the associated updated EM&A Manual, are presented below sub-section.

MONITORING PARAMETERS

3.02 According to the EIAR and the updated EM&A Manual, the monitoring parameters of each environmental aspect summarized in **Table 3-1** will be performed as under the Project.

Table 3-1 Summary of Monitoring Parameters

Environmental Aspect	Parameters	
Construction Noise	<ul style="list-style-type: none"> A-weighted equivalent continuous sound pressure level (30min) (hereinafter ‘Leq(30min)’ during the normal working hours; and A-weighted equivalent continuous sound pressure level (5min) (hereinafter ‘Leq(5min)’ for construction work during the restricted hours. 	
Water Quality	In Situ Measurement	Temperature, Dissolved Oxygen, Dissolved Oxygen Saturation, pH and Turbidity
	Laboratory Analysis	Suspended Solids (hereinafter ‘SS’)
Hydrological	The water flow and depth measurement onsite	
*Ecology	Monitor and audit the proper implementation of mitigation measures stipulated in EIA report and the updated EM&A Manual	
Landscape & Visual	Inspect and audit the implementation and maintenance of landscape and visual mitigation measures	

Remarks: * the monitoring is carried out by IEC

MONITORING LOCATIONS

3.03 Monitoring locations have been proposed in the updated EM&A Manual and the location map is shown show in **Appendix D** and summarized in **Table 3-2**.

Table 3-2 Designated Monitoring Locations of the EM&A Programme

Aspect	Location ID	Address
Construction Noise	M1	14, Shuen Wan Chim Uk
	AL1	Joint Village Office for Villages in Shuen Wan, Tai PO
	M2	150, San Tau Kok
	M3	31, Wai Ha
	M4	Block 15, Treasure Spot Garden
Water Quality	(#) W1	Between the Shuen Wan Marsh and ECA (Co-ordinates: E 839301, N 836386; and Existing River Bed Level: +1.75mPD).
	W2	Between Tolo Harbour and Proposed Penstock (Co-ordinates: E839542, N 836184; and Existing River Bed Level: +1.48mPD)
	(*) W3	Upstream of Tung Tze Shan Road (Co-ordinates: E 838760, N 836714; and Existing River Bed Level: +5.08mPD)
	W4	Wai Ha Village 29D (Co-ordinates: E 838865, N 836621; and Existing River Bed Level: +4.05mPD)
Hydrological	H1	Between the Shuen Wan Marsh and ECA (Coordinates: E 839306, N 836379)
	H2	Route 10 Sam Kung Temple (Coordinates: E 839163, N 836433)
	H3	Upstream of Tung Tze Shan Road (Coordinates: E 838760, N 836714)
	H4	Wai Ha Village 29D (Coordinates: E 838865, N 836621)
Ecology	Areas within 100m of the works boundary under Contract 2	
Landscape & Visual	As within and adjacent to the construction sites and works areas under the Contract 2,	

Remarks:

(#) Control Station of Contract 1, however impact station of Contract 2

(*) Control Station of Contract 2

MONITORING FREQUENCY

- 3.04 The monitoring frequency and duration as specified in the updated EM&A Manual are summarized below.

Construction Noise

Frequency: Once a week during 0700-1900 on normal weekdays for Leq30min

If the construction work is undertaken at restricted hour, the monitoring frequency of construction noise will be conducted in accordance with the related Construction Noise Permit requirement issued by EPD as follow

- 3 consecutive Leq5min at restricted hour from 1700 – 2300;
- 3 consecutive Leq5min for restricted hour from 2300 – 0700 next day;
- 3 consecutive Leq5min for Sunday or public holiday from 0700 – 1900;

Duration: Throughout the construction period when the major construction activities are undertaken

Water Quality

Frequency: Three times a week. The interval between 2 sets monitoring are not less than 36 hours

Duration: During the construction phase of Contract 2 to undertake (in accordance with the Updated EM&A Manual Section 4.27).

Hydrological Characteristics

Frequency: Once per week at mid-flood and mid-ebb tides

Duration: During the construction phase of Contract 2 to undertake; and one year after the construction is complete as operation phase monitoring (in accordance with the Updated EM&A Manual Section 4.32).

Ecology

- 3.05 In accordance with Section 6.17 of the Updated EM&A Manual, ecological monitoring should be conducted by the Independent Environmental Checker (hereinafter 'IEC'). Monitoring programme details should be agreed with the Agriculture, Fisheries and Conservation Department (AFCD). Moreover, the IEC should submit reports on the findings of each monitoring trip, and a final report summarizing the monitoring results over the entire monitoring period to AFCD and Environmental Protection Department (EPD). Hence, no monitoring or surveying should be carried out by ET of the Project.

Landscape & Visual

- 3.06 According to Section 7.4 of the Updated EM&A Manual, site inspection bi-weekly should be performed to check the implementation and maintenance of landscape and visual mitigation measures whether to fully realize.

MONITORING EQUIPMENT

Noise Monitoring

- 3.07 Sound level meter in compliance with the *International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1)* specifications shall be used for noise monitoring. The sound level meter shall be checked with an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter which capable to measure wind speed in m/s.

Water Quality Monitoring

- 3.08 **Dissolved Oxygen and Temperature Measuring Equipment** – The instrument should be a portable and weatherproof dissolved oxygen (DO) measuring instrument complete with cable and sensor, and use a DC power source. The equipment should be capable of measuring DO level in the range of 0 – 20mg L⁻¹ and 0 – 200% saturation; and temperature of 0 – 45 degree Celsius.
- 3.09 **pH Meter** – The instrument shall consist of a potentiometer, a glass electrode, a reference electrode and a temperature-compensating device. It shall be readable to 0.1 pH in arrange of 0

to 14.

- 3.10 **Turbidity (NTU) Measuring Equipment** – The instrument should be a portable and weatherproof turbidity measuring instrument using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0 - 1000 NTU.
- 3.11 **Water Sampling Equipment** – A water sampler should comprise a transparent PVC cylinder, with a capacity of not less than 2 litres, which can be effectively sealed with latex cups at both ends. The sampler should have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth.
- 3.12 **Water Depth Detector** – A portable, battery-operated echo sounder should be used for the determination of water depth at each designated monitoring station. The unit can either be hand held or affixed to the bottom of the work boat.
- 3.13 **Sample Containers and Storage** – Water samples for SS should be stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4°C without being frozen).
- 3.14 **Suspended Solids Analysis** – Analysis of suspended solids shall be carried out in a HOKLAS or other international accredited laboratory.

Hydrological Characteristics

- 3.15 **Water Depth Detector** - A portable, battery-operated echo sounder shall be used for the determination of water depth at each designated monitoring station.
- 3.16 **Stream water flow Equipment** –A portable, battery-operated flow meter should be used for the determination of water flow rate at each designated monitoring location and record in m³/s.
- 3.17 The monitoring equipment using for the Project’s EM&A programme were proposed by the ET and verified by the IEC prior commencement of the monitoring. Details of the equipment used for impact monitoring are listed in **Table 3-3**.

Table 3-3 Monitoring Equipment Used in EM&A Programme

Equipment	Model
Construction Noise	
Integrating Sound Level Meter	B&K Type 2238
Calibrator	B&K Type 4231
Portable Wind Speed Indicator	Testo Anemometer
Water quality	
Water Depth Detector	Eagle Sonar
Water Sampler	A transparent PVC cylinder / bucket
Thermometer & DO meter	DO Meter YSI 55
pH meter	Extech EC500
Turbidimeter	Hach 2100Q
Sample Container	High density polythene bottles (provided by laboratory)
Storage Container	‘Willow’ 33-litre plastic cool box
Suspended Solids	HOKLAS-accredited laboratory (ALS Technichem (HK) Pty Ltd)
Hydrological Characteristics	
Water flow meter	GLOBAL WATER model FP211
Water Depth Detector	Eagle Sonar or an appropriate steel ruler or rope with appropriate weight

MONITORING METHODOLOGY

Noise Monitoring

- 3.18 Noise measurements were taken in terms of the A-weighted equivalent sound pressure level (L_{eq}) measured in decibels (dB). Supplementary statistical results (L₁₀ and L₉₀) were also obtained for reference.
- 3.19 Sound level meter as listed in **Table 3-3** are complied with the *International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1)* specifications, as

- recommended in Technical Memorandum (TM) issued under the *Noise Control Ordinance (NCO)*.
- 3.20 During the monitoring, all noise measurements were performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (L_{eq}). $L_{eq(30min)}$ in six consecutive $L_{eq(5min)}$ measurements were used as the monitoring parameter for the time period between 0700-1900 hours on weekdays; and also $L_{eq(15min)}$ in three consecutive $L_{eq(5min)}$ measurements is used as monitoring parameter for other time periods (e.g. during restricted hours), if necessary.
- 3.21 During the course of measurement, the sound level meter is mounted on a tripod with a height of 1.2m above ground and placed at the assessment point and oriented such that the microphone is pointed to the site with the microphone facing perpendicular to the line of sight. The windshield is fitted for all measurements. The assessment point is normally set as free-field situation for the measurement.
- 3.22 Prior to noise measurement, the accuracy of the sound level meter is checked by an acoustic calibrator which generated a known sound pressure level at a known frequency. The checking was performed before and after the noise measurement.

Water Quality

- 3.23 Water quality monitoring are conducted at the depth below:-
- Three depths: 1m below water surface, 1m above river bed and at mid-depth when the water depth exceeds 6m, or
 - If the water depth is between 3m and 6m, two depths: 1m below water surface and 1m above river bed, and or
 - If the water depth is less than 3m, 1 sample at mid-depth is taken
- 3.24 Water depths are determined prior to measurement and sampling, using a portable battery operated depth detector, brand named 'Eagle Sonar', if the depths exceed 1.5 meter. If the depth between 1.5 meter and 1 meter, plastic tape measurement tied with appropriate weight are used the depth estimation. For the depth well below 1 meter, an appropriate steel ruler or rope with appropriate weight are used for the depth measurement.
- 3.25 A transparent PVC cylinder, with a capacity of not less than 2 litres, is used for water sampling. The water sampler is lowered into the water body at a predetermined depth. The trigger system of the sampler is activated with a messenger and opening ends of the sampler are closed accordingly then the sample of water is collected. If the water depth is less than 500mm, a water bucket is be used as a water sampler to minimize the possibility of the latching system disturbing sediment during water sampling
- 3.26 A portable YSI 55 DO Meter is used for in-situ DO measurement. The DO meter is capable of measuring DO in the range of 0 - 20 mg/L and 0 - 200 % saturation and checked against water saturated ambient air on each monitoring day prior to monitoring. Although the DO Meter automatically compensates ambient water temperature to a standard temperature of 20⁰C for ease of comparison of the data under the changing reality, the temperature readings of the DO Meter are be recorded in the field data sheets. The equipment calibration is performed on quarterly basis.
- 3.27 A portable Extech EC500 pH Meter is used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 – 14 and readable to 0.1. Standard buffer solutions of pH 7 and pH 10 are used for calibration of the instrument before and after measurement. The equipment calibration is performed on quarterly basis.
- 3.28 A portable Hach 2100Q Turbidity Meter is be used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 – 1000 NTU. The equipment calibration is performed on quarterly basis.

- 3.29 Water samples are contained in screw-cap PE (Poly-Ethylene) bottles, which are provided and pretreated and ‘PE’ (Poly-Ethylene) sampling bottles provided and pre-treated according to corresponding analytical requirements. Where appropriate, the sampling bottles are rinsed with the water to be contained. Water sample is then transferred from the sampler to the sample bottles.
- 3.30 One liter or 500 mL water sample are collected from each depth for SS determination. The collected samples are stored in a cool box maintained at 4⁰C and delivered to laboratory upon completion of the sampling by end of each sampling day.
- 3.31 All water samples are analyzed with Suspended Solids (SS) as specified in the updated *EM&A Manual* by a local HOKLAS-accredited testing laboratory (ALS Technichem (HK) Pty Ltd HOKLAS registration no. 66). SS are determined by the laboratory upon receipt of the water samples using HOKLAS accredited analytical method. The detection limits and testing method are shown below in **Table 3-4**. The certificate of ALS Technichem (HK) Pty Ltd is provided in the relevant Monthly EM&A Reports .

Table 3-4 Testing Method and Detection limit of SS to be provided by the Laboratory

Determinant	Testing Method	Detection Limit
Suspended solid	Determination use HOKLAS accredited analytical methods namely ALS Method EA-025 (based on APHA 2540 D)	2mg/L

Hydrological Characteristics

- 3.32 A portable, water flow meter, brand named “*GLOBAL WATER model FP211*” are used to determine the water current flow at the designated monitoring stations. A water flow velocity is measured at mid depth of current water body or 0.5m below water level.
- 3.33 Water depths are determined prior to measurement, using a portable battery operated depth detector, brand named ‘Eagle Sonar’, if the depths exceed 1.5 meter. If the depth between 1.5 meter and 1 meter, plastic tape measurement tied with appropriate weight are used the depth estimation. For the depths well below 1 meter, an appropriate steel ruler or rope with appropriate weight are used for the depth measurement.

DATA MANAGEMENT AND DATA QA/QC CONTROL

- 3.34 The impact monitoring data are handled by the ET’s systematic data recording and management, which complies with in-house Quality Management System. Standard Field Data Sheets (FDS) are used in the impact monitoring programme.
- 3.35 The monitoring data recorded in the equipment e.g. noise meter and Multi-parameter Water Quality Monitoring System are downloaded directly from the equipment at the end of each monitoring day. The downloaded monitoring data are input into a computerized database properly maintained by the ET. The laboratory results are input directly into the computerized database and QA/QC checked by personnel other than those who input the data. For monitoring activities require laboratory analysis, the local laboratory follows the QA/QC requirements as set out under the HOKLAS scheme for all laboratory testing.

OTHERS MONITORING IMPLEMENTATION FOR THE CONTRACT

Ecology

- 3.36 Ecological monitoring and reporting should be performed by IEC. No equipment and procedure are presented in the EM&A Monthly Report.

Landscape and Visual

- 3.37 A registered Landscape Architect as member of the ET is employed by the Contractor to undertake site inspection. Site inspection will undertake at least once every two weeks throughout the construction period to ensure compliance with the intended aims of the mitigation measures are proposed in the EIA and the updated EM&A Manual, implemented by the Contractor.

DETERMINATION OF ACTION/LIMIT (A/L) LEVELS

3.38 According to the Updated Environmental Monitoring and Audit Manual, the performance criteria for construction noise, water quality and hydrological, namely Action and Limit levels were established by Contract DC/2009/22. The Action/Limit Levels proposed by DC/2009/22 are listed in *Tables 3-5, 3-6, and 3-7*.

Table 3-5 Action and Limit Levels for Construction Noise

Location	Time Period	Action Level in dB(A)	Limit Level in dB(A)
M1, AL1, M2, M3, M4	Daytime 0700 – 1900 hrs on normal weekdays	When one documented complaint is received	> 75* dB(A)
	1900 – 2300 on all days and 0700 – 2300 on general holidays (including Sundays)		60/65/70 dB(A)**
	2300 – 0700 on all days		45/50/55 dB(A)**

Note: * Reduces to 70dB(A) for schools and 65dB(A) during the school examination periods.

** To be selected based on the Area Sensitivity Rating of A/B/C, and the conditions of the applicable CNP(s) must be followed

Table 3-6 Action and Limit Levels for Water Quality

Parameter	Performance Criteria	Impact Station		
		W1	W2	W4
DO Concentration (mg/L)	Action Level	7.27	7.26	9.27
	Limit Level	7.05	6.44	7.98
pH	Action Level	NA	NA	NA
	Limit Level	6 - 9	6 - 9	6 - 9
Turbidity (NTU)	Action Level	4.77	2.46	3.32
	Limit Level	5.26	3.42	4.52
Suspended Solids (mg/L)	Action Level	9.73	8.89	6.98
	Limit Level	10.77	9.75	7.66

Notes:

- The proposed Action/Limit Levels of DO are established to be used 5%-ile/1%-ile of all the baseline data;
- The proposed Action/Limit Levels of Turbidity and SS are established to be used 95%-ile/99%-ile of all the baseline data;
- For DO, non-compliance of the water quality limits occur is when monitoring result lower than the action/limit levels;
- For turbidity and SS, non-compliance of the water quality limits occurs is when monitoring result higher than the limits; and
- For pH, non-compliance of the quality limit occur is when monitoring result lower than 6 and higher than 9; and
- All the figures given in the table are used for reference only and the EPD may amend the figures whenever it is considered necessary

Table 3-7 Action and Limit Levels for Hydrological Characteristics

Parameter	Acceptance Criteria	Monitoring Station			
		H1	H2	H3	H4
Water Depth (m)	Action Level	0.08 (80% of baseline water depth)	0.40 (80% of baseline water depth)	0.40 (80% of baseline water depth)	0.24 (80% of baseline water depth)
	Limit Level	0.06 (60% of baseline water depth)	0.30 (60% of baseline water depth)	0.30 (60% of baseline water depth)	0.18 (60% of baseline water depth)
Water Flow Rate (m3/s)	Action Level	120% of control station's water flow rate on the same day of measurement	120% of control station's water flow rate on the same day of measurement	120% of control station's water flow rate on the same day of measurement	120% of control station's water flow rate on the same day of measurement

	Limit Level	140% of control station's water flow rate on the same day of measurement	140% of control station's water flow rate on the same day of measurement	140% of control station's water flow rate on the same day of measurement	140% of control station's water flow rate on the same day of measurement
--	-------------	--	--	--	--

- 3.39 The locations H3 and H4 are a reference measurement point in order to monitor any changes in the hydrological characteristics of Wai Ha River arising from the work Contract 2 to affect the Shuen Wan Marsh.
- 3.40 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan enclosed in **Appendix F**.

EQUIPMENT CALIBRATION

- 3.41 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme in yearly basis.
- 3.42 All the water quality monitoring equipment such as the DO, pH and Turbidity meters are calibrated by HOKLAS accredited laboratory of three month intervals.
- 3.43 A portable, water flow meter, brand named “GLOBAL WATER model FP211” is calibrated in yearly basis.
- 3.44 All updated calibration certificates of the monitoring equipment used for the impact monitoring programme in this Reporting Quarter are attached in the relevant Monthly EM&A Reports.

METEOROLOGICAL INFORMATION

- 3.45 The meteorological information during the construction phase is obtained from Tai Po and Shatin Stations of the Hong Kong Observatory (HKO). The meteorological data during the impact monitoring days are summarized in the relevant Monthly EM&A Reports.

4.0 IMPACT MONITORING RESULTS

RESULTS OF CONSTRUCTION NOISE MONITORING

4.01 Summary of construction noise monitoring at the identified locations during the Reporting Quarter are summarized in **Table 4-1** and the summary of breaches of A/L Level are presented in **Table 4-2**. In this Reporting Quarter, a total of **55** events of construction noise measurement were conducted and the graphic plots in are presented in **Appendix E**.

Table 4-1 Summary of Construction Noise Monitoring Results, dB(A)

Station	Leq30min (dB(A))				
	M1 ^(#)	AL1 ^(#)	M2 ^(*)	M3 ^(*)	M4 ^(*)
Minimum	58.1	57.0	58.6	56.6	52.1
Min. recorded date	21-Jul-11	28-Jul-11	30-Sep-11	26-Jul-11	26-Jul-11
Maximum	70.2	69.2	68.7	70.8	71.2
Max. recorded date	22-Sep-11	18-Aug-11	24-Sep-11	9-Sep-11	3-Sep-11

Remarks:

(#) The monitoring is undertaken under façade situation. No façade correction is added according to acoustical principles and EPD guidelines.

(*) The monitoring is undertaken under free field situation. A façade correction of +3 dB(A) has been added according to acoustical principles and EPD guidelines

Table 4-2 Summaries of Breaches of Construction Noise A/L Levels

Station	Exceedance of Environmental Quality Criteria	
	Action Level	Limit Level
M1	0	0
AL1	0	0
M2	0	0
M3	0	0
M4	0	0

4.02 No noise complaint (which is an Action Level exceedance) was received in this Reporting Quarter. All the noise monitoring result are well below 75dB(A) and no Action or Limit Level exceedance was triggered.

RESULTS OF LOCAL STREAM WATER QUALITY MONITORING

4.03 In this Reporting Quarter, **32** sampling days have been carried out at four designated locations W1 to W4 for local steam water quality monitoring. Breaches of water quality A/L Levels and statistics of the compliance status during the Reporting Quarter are summarized in **Tables 4-3** and **4-4** and graphical plots are shown in **Appendix E**.

4.04 During the Reporting Quarter, field measurements showed that stream water temperatures were within 25.7°C to 32.9°C and pH values within 6.24 to 8.48. Furthermore, salinity measured at Locations W1 and W2 were detected between 0.6 to 25.7ppt.

Table 4-3 Summaries of Breaches of the Existing Water Quality A/L Levels

Location	Dissolve Oxygen		Turbidity		Suspended Solids		Total Exceedance	
	Action	Limit	Action	Limit	Action	Limit	Action	Limit
July 2011								
W1	0	2	0	3	0	0	0	5

Total	7	81	12	22	3	4	22	107

Table 4-4 Statistics Water Quality Exceedance in the Reporting Quarter

Parameter	Statistics		
	Number of Monitoring Event (W1, W2 & W3)	No. of Exceedances	Compliance %
Dissolve Oxygen	96	88	8.3%
Turbidity	96	34	65.6%
Suspended Solids	96	7	92.7%

Exceedances in July 2011

4.05 In July 2011, 11 and 8 Action/Limit levels exceedances are recorded for DO and Turbidity respectively. According to information provided by KLKVJ, construction temporary haul road and driving sheet-piles at the proposed box culvert Bays 20 to 21 were carried out on the exceedance days. Precautionary measures such as laying geotextile filter below the temporary haul road to prevent particularly washouts of soil going into the nearby stream were maintained by KLKVJ during the exceedance days. No direct wastewater discharged or site runoff from the construction site to the Wai Ha River is occurred during the course of monitoring. Since higher levels of turbidity and lower levels of DO in W4 were also recorded at in control station W3 and tidal effect were affecting the result in Stations W1(+1.75mPD) and W2 (+1.48mPD). It is concluded that all the exceedances were not due to the Project.

Exceedances in August 2011

4.06 In August 2011, 36, 10 and 4 Action/Limit Levels exceedances were respectively recorded for DO, Turbidity and Suspended Solids. For the exceedance Turbidity, excavation of box culvert foundation from Bay 20 to Bay 21 was in progress during the captioned exceedance days. Such activity may lead to increase of turbidity or suspended solids levels for the nearby stream by washed out from stockpiles of dusty materials, excavated surface or dusty haul roads, etc. To prevent the impact to the existing stream, precautionary measures such as construction of temporary artificial precipitation stream to remove the suspended solids from wastewater to maintain the water quality of downstream by laying geotextile filter and stone below stream was implemented on site. Moreover, no direct wastewater discharged or site runoff from the construction site to the Wai Ha River is occurred during the course of monitoring. For Dissolved Oxygen exceedances, since lower levels in W4 were also recorded at in control station W3 and tidal effect were affecting the result in Stations W1 and W2. It is concluded that all the exceedances were not due to the Project.

Exceedances in September 2011

4.07 In September 2011, a total of 60 Action/Limit Level exceedances, namely 41 Limit level exceedances in dissolved oxygen, 16 Action/Limit Level exceedances in turbidity and 3 Action/Limit Level exceedances in suspended solids were recorded. For the exceedances of turbidity and suspended solids, Contractor reported that excavation of box culvert foundation from Bay 20 to Bay 23 was in progress during the captioned exceedance days. Such activities may lead to increase of turbidity or suspended solids levels for the nearby stream by washed out from stockpiles of dusty materials, excavated surface or dusty haul roads, etc. To prevent the impact to the existing stream, precautionary measures such as construction of temporary artificial precipitation stream to remove the suspended solids from wastewater to maintain the water quality of downstream by laying geotextile filter and stone below stream was implemented on site. Moreover, no direct wastewater discharged or site runoff from the construction site to the Wai Ha River is occurred during the course of monitoring. It is noted the construction work area is located at downstream of Locations W3 and W4, therefore, the water quality at Locations W3 and W4 affected by the Project is unlikely. Furthermore, tidal effect were affecting the monitoring results of Stations W1(+1.75mPD) and W2(+1.48mPD). It is concluded that the

exceedances were not due to the Project. In the regard of the dissolved oxygen exceedances, the construction activities during the DO exceedances as reported by the Contractor comprised none of DO depleting characteristics. It is concluded that all the exceedances were not due to the Project.

RESULTS OF HYDROLOGICAL CHARACTERISTICS MONITORING

4.08 In this Reporting Quarter, 11 sampling days of hydrological characteristics monitoring were carried out at designated measurement points H1 to H4. Hydrological characteristics results of the all measurement points are summarized in *Tables 4-5* and *4-6*.

Table 4-5 Summarized Hydrological Characteristics of Water Depth, m

30-Sep-11	0.075	0.375	0.754	1.319	0.417	0.522	0.069	0.142

4.09 To compare the monitoring data between the Reporting Quarter (rainy season) and baseline monitoring period, the currently water depth and volumetric flow rate has insignificant changed. Furthermore, water depth and water flow rate were found no exceedance in this Reporting Quarter.

5.0 WASTE MANAGEMENT

5.01 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

RECORDS OF WASTE QUANTITIES

5.02 All types of waste arising from the construction work are classified into the following:

- Construction & Demolition (C&D) Material;
- Chemical Waste;
- General Refuse; and
- Excavated Soil

5.03 The quantities of waste for disposal in this Reporting Quarter are summarized in *Table 5-1* and *5-2* and the Monthly Summary Waste Flow Table is shown in *Appendix G*. Whenever possible, materials were reused on-site as far as practicable.

Table 5-1 Summary of Quantities of Inert C&D Materials

Type of Waste	Quantity			Disposal Location
	Jul 11	Aug 11	Sep 11	
C&D Materials (Inert) (m ³)	0	0	0	-
Reused in this Contract (Inert) (m ³)	0	0	0	-
Reused in other Projects (Inert) (m ³)	0	785.5	0	DSD Contract No. DC/2009/22
Disposal as Public Fill (Inert) (m ³)	0	0	0	-

Table 5-2 Summary of Quantities of C&D Wastes

Type of Waste	Quantity			Disposal Location
	Jul 11	Aug 11	Sep 11	
Recycled Metal (kg)	0	0	0	-
Recycled Paper / Cardboard Packing (kg)	0	0	0	-
Recycled Plastic (kg)	0	0	0	-
Chemical Wastes (kg)	0	0	0	-
General Refuses (m ³)	0	0	0	-

5.04 To control over the site performance on waste management, the Contractor shall ensure that all solid and liquid waste management works are in full compliance with the relevant license/permit requirements, such as the effluent discharge licence and the chemical waste producer registration. The Contractor is also reminded to implement the recommended environmental mitigation measures according to the EM&A Manual based on actual site conditions.

6.0 SITE INSPECTION

- 6.01 According to the Updated Environmental Monitoring and Audit Manual, regular site inspection to evaluate the project environmental performance should be carried out during construction phase. Weekly environmental site inspections had been carried out by the Contractor and the RE on **19 July, 3, 10, 17, 23, 30 August, 7, 16, 21 and 28 September 2011**. Furthermore, the RE, IEC, the Contractor and ET of joint site inspection was carried out on **19 July, 17 August and 16 September 2011**. In this Reporting Quarter, 6 reminders and no non-compliance were noted.
- 6.02 Observations for the site inspection and monthly audit within this Reporting Quarter are summarized in *Table 6-1*.

Table 6-1 Site Observations during this Reporting Quarter

Date	Findings / Deficiencies	Follow-Up Status
19 July 2011	N/A	• N/A
3 Aug 11	The Contractor and RE	• NA
10 Aug 11	The Contractor and RE	• NA
17 Aug 11	The Contractor, ER, IEC and ET	• A power generator without a drip tray was found at site. The Contractor is reminded that the power generator shall provide a drip tray to prevent land contamination.
23 Aug 11	The Contractor and RE	• NA
30 Aug 11	The Contractor and RE	• The Contractor was reminded that chemical waste disposal should be compliance with Chapter 354C – Waste Disposal (Chemical WASTE) (General) Regulation.
7 Sep 11	The Contractor and RE	• NA
16 Sep 11	The Contractor, ER, IEC and ET	• A chemical oil bucket located at site is stored without a drip tray. • The Contractor was reminded that Environmental Permit should be posted at the easy observed area.
21 Sep 11	The Contractor and RE	• As a reminder, Stagnant water should be removed after raining. • The weed should be cleared
28 Sep 11	The Contractor and RE	• NA

LANDSCAPE AND VISUAL INSPECTION

- 6.03 In this Reporting Quarter, **3** events of landscape and visual inspection were carried out by the landscape sub-contractor since 24 August 2011. According to monthly Landscape & Visual Report (**August 2011** and **September 2011**), mitigation measures implemented in Reporting Quarter list as below:

Table 6-2 Landscape & Visual Inspection of Observations

Parameter	Observation	Recommendation
Visual Screen	<ul style="list-style-type: none"> • A section of temporary hoardings have been erected from west to east parts of Tung Tsz Road opposite to San Tau Kwok. • No hoardings have been erected along the rest of the proposed works area since neither construction works nor any associated preparation works have been commenced. 	No specific recommendation is required
Contaminant / Sediment Control	<ul style="list-style-type: none"> • No direct discharge of contaminants or any polluted fluid was observed within the active works area. All used water and underground 	Regular monitoring should be conducted to ensure no direct discharge or leakage of

Parameter	Observation	Recommendation
	water was collected and drained into filtration beds and a sedimentation tanks before the discharge. • As observed, a sheet of PVC liner was overlaid along the filtration beds within the active works area. This practice could lower the chance of contaminating the vegetation in the adjacent Shuen Wan marsh.	contaminants or any polluted fluid into the adjacent Wai Ha River
Pollution Control	• Drained water from underground was observed to be filtered in a sedimentation tank and filtration beds before the discharge. No direct discharge of water into the adjacent Wai Ha River was observed. • As observed, a sheet of PVC liner was overlaid along the filtration beds within the active works area. This practice could lower the chance of contaminating the vegetation in the adjacent Shuen Wan marsh. No direct discharge of water into the adjacent Wai Ha River was observed.	No specific recommendation is required
Existing Trees within Works Area	• Tree felling has not yet been conducted within the working area. • All trees within the Project area were recorded generally in fair health conditions. Four uprooted trees, including T011, T011A, T011B and T011C were observed. As informed by the Contractor, these trees were found uprooted when the Project Team commenced the works in July 2011.	• Within the active works area, proper Tree Protection Zones (TPZs) should be demarcated for retained trees and trees to be transplanted which would be directly affected by the construction work. In addition, if necessary, these retained trees or trees to be transplanted shall be watered regularly to maintain their health. • Disturbance is prohibited in all TPZs. In any practical circumstances, the contractor should follow Section 8 of Annex 4 of the approved Landscape Plan for protecting the existing trees from any potential damages resulting from construction works.
Construction Light	No construction light impact to the surrounding villages and to Plover Cove as all construction activities and construction sites are halted at 1800. No construction light at night is provided by the Main Contractor.	No specific recommendation is required

7.0 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTION

7.01 No environmental complaint, summons and prosecution was received in this Reporting Quarter. The statistical summary table of environmental complaint is presented in *Tables 7-1, 7-2 and 7-3.*

Table 7-1 Statistical Summary of Environmental Complaints

Reporting Period	Environmental Complaint Statistics		
	Frequency	Cumulative	Complaint Nature

1 – 31 August 2011	0	0	NA
1 – 30 September 2011	0	0	NA

8.0 IMPLEMENTATION STATUS OF MITIGATION MEASURES

8.01 The environmental mitigation measures that recommended in the Updated Environmental Monitoring and Audit Manual covered the issues of dust, noise and waste and they are summarized as follows:

Noise Mitigation Measure

- (a) Only well-maintained plant should be operated on-site and plant shall be serviced regularly during the construction programme;
- (b) Silencers or mufflers on construction equipment should be utilized and shall be properly maintained during the construction programme;
- (c) Mobile plant, if any, should be sited as far from NSRs as possible;
- (d) Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum;
- (e) Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs;
- (f) Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction activities;
- (g) Use of quieter plants to carry out the construction tasks proposed for the Project;
- (h) Use about 3.5m high of temporary noise barriers as screened the noisy PMEs to carry out construction of box culvert and site clearance.
- (i) Low Impact Method, such as using PMEs smaller in size and to be enclosed by noise enclosure, should be adopted for the construction of box culvert and pipe laying in Wai Ha; and
- (j) Use of noise enclosure during the works area for pipe laying in Wai Ha.

Dust Mitigation Measure

8.02 Implementation of mitigation measures stipulated in the Air Pollution Control (Construction Dust) Regulation and good site practices including but not limited to the following:

- (a) Use of regular watering to reduce dust emissions from exposed site surfaces and unpaved road, with complete coverage, particularly during dry weather;
- (b) Use of frequent watering for particularly dusty static construction areas and areas close to ASRs;
- (c) Tarpaulin covering of all dusty vehicle loads transported to, from and between site location;
- (d) Establishment and use of vehicle wheel and body washing facilities at the exit points of the site;
- (e) Routing of vehicles and positioning of construction plant should be at the maximum possible distance from ASRs;
- (f) Stockpiled excavated materials should be covered with tarpaulin and should be removed offsite within 24 hours to avoid any odour nuisance arising.

Local Stream Water Quality Mitigation Measure

- (a) Before commencing any site formation work, all sewer and drainage connections shall be sealed to prevent debris, soil, sand etc. from entering public sewers/drains;
- (b) Temporary ditches shall be provided to facilitate run-off discharge into appropriate watercourses, via a silt retention pond. No site run-off shall enter the fishponds at Shuen Wan;
- (c) Sand/silt removal facilities such as sand traps, silt traps and sediment basins shall be provided to remove sand/silt particles from runoff to meet the requirements of the Technical Memorandum standard under the Water Pollution Control Ordinance. The design of silt removal facilities shall be based on the guidelines provided in ProPECC PN 1/94. All drainage facilities and erosion and sediment control structures shall be inspected monthly and maintained to ensure proper and efficient operation at all times and particularly during rainstorms
- (d) Water pumped out from excavated pits shall be discharged into silt removal facilities;

- (e) During rainstorms, exposed slope/soil surfaces shall be covered by a tarpaulin or other means. Other measures that need to be implemented before, during, and after rainstorms as summarized in ProPECC PN 1/94 shall be followed
- (f) Exposed soil areas shall be minimized to reduce potential for increased siltation and contamination of runoff
- (g) Earthwork final surfaces shall be well compacted and subsequent permanent work or surface protection shall be immediately performed to reduce the potential of soil erosion;
- (h) Open stockpiles of construction materials or construction wastes on-site shall be covered with tarpaulin or similar fabric during rainstorms;
- (i) For the construction of the box culvert next to the existing channel of the Wai Ha River, sand bags should be deployed around the boundary of the works trench to prevent muddy water ingress into the adjacent CA or Wai Ha River. Sand bags should also be used to surround the excavated trench. Generally, the sand bags will be placed up to a height 01 300mm to provide adequate allowance for the built-up water level during rainstorm event. With sand bags in place surface runoff will be intercepted and flow to Wai Ha River or collected by the existing drainage system as usual;
- (j) For the construction of the box culvert in the extreme northeast corner of Shuen Wan Marsh Conservation Area sand bags should be deployed along the limit of the works area to prevent muddy water ingress into the CA. Sand bags should be placed to a height 0.1 at least 300mm from ground level and +2.5 mPD (whichever is greater) to provide adequate allowance for the built-up water level during rainstorm events Unpolluted surface runoff within the works area should then be collected and directed into the existing drainage system;
- (k) Sheet-piles, which would be installed around the works trench near the Conservation Area, would be extended above ground level for about 2m to serve as hoardings to isolate the works site;
- (l) Tarpaulin sheets would be used to cover the excavation areas during heavy rainstorms. This would prevent the ingress of rainwater into the trench minimizing the risk of muddy water getting into Wai Ha River and the adjacent Conservation Area;
- (m) Any concrete washing water would be contained inside the works site surrounded by the extended sheet piles. A pump sump at the bottom of the trench would be provided to pump any excess water during concrete washing;
- (n) Stockpiling the excavated materials adjacent to the Conservation Area would not be allowed. The excavated materials would be either removed off site immediately after excavation, or stockpile at location(s) away from the Conservation Area. The stockpile locations shall be approved by the site engineer;
- (o) Debris and refuse generated on-site should be collected, handled and disposed of properly to avoid entering the Wai Ha River and fish ponds at Shuen Wan. Stockpiles of cement and other construction materials should be kept covered when not being used.
- (p) Oils and fuels should only be used and stored in designated areas which have pollution prevention facilities to prevent spillage of fuels and solvents to nearby water bodies, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank The bund should be drained of rainwater after a rain event
- (q) Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site. A licensed contractor would be responsible for appropriate disposal and maintenance of these facilities;
- (r) The excavation works within the upstream end of the existing river channel of the Wai Ha River for the construction of the proposed box culvert should be carried out in dry condition. Containment measures such as bunds and barriers shall be used within the affected length of the river channel and the excavation works restricted to within an enclosed dry section of the channel. The excavation works within Wai Ha River shall be restricted to the period from October to April

Waste Mitigation Measures

- (a) The Contractor shall observe and comply with the Waste Disposal Ordinance (WDO) and its subsidiary regulations.
- (b) The Contractor shall submit to the Engineer for approval a Waste Management Plan with appropriate mitigation measures including the allocation of an area for waste segregation and shall ensure that the day-to-day site operations comply with the approved waste management plan.
- (c) The Contractor shall minimise the generation of waste from his work. Avoidance and minimisation of waste generation can be achieved through changing or improving design and practices, careful planning and good site management.
- (d) The reuse and recycling of waste shall be practised as far as possible. The recycled materials shall include paper/cardboard, timber and metal etc.
- (e) The Contractor shall ensure that Construction and Demolition (C&D) materials are sorted into public fill (inert portion) and C&D waste (non-inert portion). The public fill which comprises soil, rock, concrete, brick, cement plaster/mortar, inert building debris, aggregates and asphalt shall be reused in earth filling, reclamation or site formation works. The C&D waste which comprises metal, timber, paper, glass, junk and general garbage shall be reused or recycled where possible and, as the last resort, disposal of at landfills.
- (f) The Contractor shall record the amount of wastes generated, recycled and disposed of (including the disposal sites). The Contractor shall use a trip ticket system for the disposal of C&D materials to any designated public filling facility and/or landfill.
- (g) In order to avoid dust or odour impacts, any vehicles leaving a works area carrying construction waste or public fill shall have their load covered.
- (h) To avoid the excessive use of wood, reusable steel shutters shall be used as a preferred alternative to formwork and falsework where possible.
- (i) The Contractor shall observe and comply with the Waste Disposal (Chemical Waste) (General) Regulation. The Contractor shall apply for registration as chemical waste producer under the Waste Disposal (Chemical Waste) (General) Regulation when chemical waste is produced. All chemical waste shall be properly stored, labeled, packaged and collected in accordance with the Regulation.

8.03 KLKJV had been implementing the required environmental mitigation measures according to the Updated Environmental Monitoring and Audit Manual subject to the site condition. Environmental mitigation measures generally implemented by KLKJV in this Reporting Quarter are summarized in **Table 8-1**.

Table 8-1 Environmental Mitigation Measures

Issues	Environmental Mitigation Measures
Water Quality	<ul style="list-style-type: none"> • Wastewater were appropriately treated by treatment facilities; • Drainage channels were provided to convey run-off into the treatment facilities; and • Drainage systems were regularly and adequately maintained.
Air Quality	<ul style="list-style-type: none"> • Regular watering to reduce dust emissions from all exposed site surface, particularly during dry weather; • Frequent watering for particularly dusty construction areas and areas close to air sensitive receivers; • Cover all excavated or stockpile of dusty material by impervious sheeting or sprayed with water to maintain the entire surface wet; • Public roads around the site entrance/exit had been kept clean and free from dust; and • Tarpaulin covering of any dusty materials on a vehicle leaving the site.
Noise	<ul style="list-style-type: none"> • Good site practices to limit noise emissions at the sources; • Use of quiet plant and working methods; • Use of site hoarding or other mass materials as noise barrier to screen noise at ground level of NSRs; • Use of shrouds/temporary noise barriers to screen noise from relatively static PMEs; • Scheduling of construction works nearby Tung Tsz Road; and • Alternative use of plant items within one worksite, where practicable.

Issues	Environmental Mitigation Measures
Waste and Chemical Management	<ul style="list-style-type: none">• Excavated material should be reused on site as far as possible to minimize off-site disposal. Scrap metals or abandoned equipment should be recycled if possible;• Waste arising should be kept to a minimum and be handled, transported and disposed of in a suitable manner;• The Contractor should adopt a trip ticket system for the disposal of C&D materials to any designed public filling facility and/or landfill; and• Chemical waste shall be handled in accordance with the Code of Practice on the Packaging, Handling and Storage of Chemical Wastes.
General	<ul style="list-style-type: none">• The site was generally kept tidy and clean.

9.0 CONCLUSIONS AND RECOMMENTATIONS

CONCLUSIONS

- 10.01 This is the **1st** Quarterly EM&A Summary Report under Environmental Permit No.EP-303/2008 for the Contract No. DC/2010/02 - Drainage Improvement in Shuen Wan and Shek Wu Wai, covering the period from **20 July to 30 September 2011**.
- 10.02 No noise complaint (which is an Action Level exceedance) was received and no construction noise measurement results and hydrological characteristics results that exceeded the Limit Level were recorded in this Reporting Quarter. No NOE or the associated corrective actions were therefore issued.
- 10.03 129 Action/Limit Levels exceedances, namely 88 dissolved oxygen, 34 turbidity and 7 suspended solids were recorded in water quality monitoring in this Reporting Quarter. Investigation reports concluded that all registered exceedances were not related to the work under the Project.
- 10.04 No documented complaint, notification of summons or successful prosecution was received.
- 10.05 Weekly environmental site inspections had been carried out by the Contractor and the RE on **19 July, 3, 10, 17, 23, 30 August, 7, 16, 21 and 28 September 2011**. Furthermore, the RE, IEC, the Contractor and ET of joint site inspection was carried out on **19 July, 17 August and 16 September 2011**. In this Reporting Quarter, 6 general reminders and no non-compliance were noted. In general, it was reminded that good house-keeping practice should be maintained. The environmental performance of the Project was therefore considered satisfactory.
- 10.06 During this Reporting Quarter, **3** events of landscape and visual inspection were carried out by a landscape sub-contractor.
- 10.07 No site visit was undertaken by any external party in this Reporting Quarter.

RECOMMENDATIONS

- 10.08 The mitigation measures recommended in the EM&A Manual were implemented properly during the Reporting Quarter. Although breaches of water quality criteria were frequently recorded in this Reporting Quarter, all the exceedances were concluded that not related to works under the Project and a revision of A/L Limit is under reviewed by IEC. Therefore, the implemented mitigation measures recommended in the EM&A Manual effectively minimize the environmental impact arise from the works on the Project.
- 10.09 During wet season, excavation works of construction box culvert or trench, ingress of surface runoff into Wai Ha River to be the key issue in coming months. The contractor is reminded that mitigation measures for water quality and ecology should be fully implemented.
- 10.10 To control the site performance on waste management, the KLKJV shall ensure that all solid and liquid waste management works are fully in compliance with the relevant license/permit requirements, such as the effluent discharge licence and the chemical waste producer registration. KLKJV is also reminded to implement the recommended environmental mitigation measures according to the Updated Environmental Monitoring and Audit Manual.
- 10.11 Baseline monitoring of water quality was conducted during typical Hong Kong dry season (November to March of next year). It is important that influence of the seasonal changes is taken into account when interpreting monitoring data of water quality obtained in the coming wet season. Review of the baseline conditions may need to be conducted regularly in particular during times of seasonal changes. If the baseline changes are evident, the environmental performance criteria should be re-established under agreement of the ER and IEC and submitted to the EPD for endorsement.

Event and Action Plan

Event Action Plan for Construction Noise

EVENT	ACTION			
	ET Leader	IEC	ER	Contractor
Action Level	1. Notify IEC and Contractor 2. Carry out investigation. 3. Report the results of investigation to the IEC, ER and Contractor. 4. Discuss with the Contractor and formulate remedial measures 5. Increase monitoring frequency to check mitigation effectiveness.	1. Review the analyzed results submitted by the ET. 2. Review the proposed remedial measures by the Contractor and advise the ER accordingly 3. Supervise the implementation of remedial measures	1. Confirm receipt of notification of failure in writing 2. Notify Contractor 3. Require Contractor to propose remedial measures for the analyzed noise problem 4. Check remedial measures are properly implemented.	1. Submit noise mitigation proposals to IEC 2. Implement noise mitigation proposals
Limit Level	1. Notify IEC, ER, EPD and Contractor 2. Identify source. 3. Repeat measurements to confirm findings 4. Increase monitoring frequency. 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented 6. Inform IEC, ER and EPD the causes and actions taken for the exceedances 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results 8. If exceedance stops, cease additional monitoring.	1. Discuss amongst ER, ET, and Contractor on the potential remedial actions 2. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly 3. Supervise the implementation of remedial measures	1. Confirm receipt of notification of failure in writing 2. Notify Contractor 3. Require Contractor to propose remedial measures for the analyzed noise problem 4. Check remedial measures properly implemented. 5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated	1. Take immediate action to avoid further exceedance 2. Submit proposals for remedial actions to IEC within 3 working days of notification 3. Implement the agreed proposals 4. Resubmit proposals if problem still not under control 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated

Notes:

- (1) The performance targets are given in ETWB Technical Circular PS Clause 6(14).
- (2) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.
- (3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material
- (4) The Contractor shall also submit the latest forecast of the total amount of C&D materials expected to be generated from the Works, together with a breakdown of the nature where the total amount of C&D materials expected to be generated from the Works is equal to or exceeding 50,000 m³. (ETWB Technical Circular PS Clause 5(4)(b) refers). [Delete Note (4) and the table above on the forecast, where inapplicable].

Summary Table for Work Processes or Activities Requiring Timber for Temporary Works

Contract No. : DC/2010/02

Contract Title : Drainage Improvement Works in Shuen Wan and Shek Wu Wai

Item No.	Description of Works Process or Activity [see note (a) below]	Justifications for Using Timber in Temporary Construction Works	Est. Quantities of Timber Used (m3)	Actual Quantities used (m3)	Remarks
1.	Formwork for concreting	Easy handle by manpower	1.5	1.5	
2.					
3.					
4.					
5.					
6.					
7.					
8.					
Total Estimated Quantity of Timber Used			1.5		

Notes:

- a. The Contractor shall list out all the work items requiring timber for use in temporary construction works. Several minor work items may be grouped into one for ease of updating.
- b. The summary table shall be submitted to the *Architect/Engineer's Representative monthly together with the Waste Flow Table for review and monitoring in accordance with the ETWB Technical Circular 19/2005 PS sub-clause 5(5) in Appendix C.
