Attention: Mr. H.K.Chan and Mr. So Chi Ho

Dear Sirs,

Re: Agreement No. DP 01/2010
Services as Independent Environmental Checker for the Drainage Improvement
Works in Sha Tin and Tai Po under Contract No. DC/2010/02
Monthly Environmental Monitoring and Audit Report for August 2013

Reference is made to Environment Team's submission of the Monthly Environmental Monitoring and Audit Report for August 2013 by Email on 25 September 2013 (entitled "DC/2010/22 - Monthly Impact EM&A Report (Contract 2) No.26 - August 2013").

Please be informed that we have no comment on the captioned revised report. We write to verify the captioned submission in accordance with Condition 5.4 of EP-303/2008.

Thank you very much for your kind attention and please do not hesitate to contact Mr. Max Lee (3465 - 2809) or the undersigned should you have any queries.

Yours sincerely,

Tony Cheng
Independent Environmental Checker

EXECUTIVE SUMMARY

ES.01. This is the 26th Monthly Environmental Monitoring and Audit (EM&A) Report for designated works of *DSD Contract No. DC/2010/02 - Drainage Improvement in Shuen Wan and Shek Wu Wai* (hereafter “Contract 2”) under Environmental Permit No.EP-303/2008, covering a period from **1 to 31 August 2013** (hereinafter ‘the Reporting Period’).

ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

ES.02. Environmental monitoring activities under the EM&A programme in this Reporting Period are summarized in the following table.

Issues	Environmental Monitoring Parameters / Inspection	Occasions
Construction Noise	L _{eq} (30min) Daytime – M2, M3 & M4	12
	L _{eq} (30min) Daytime – M1 & AL1	8
Water Quality	Local Stream Water Sampling – W1, W3 and W4	13
	Local Stream Water Sampling – W2	13
	Hydrological characteristics measurement – H1 and H2	5
	Hydrological characteristics measurement – H3 and H4	5
Inspection / Audit	Monthly Environmental Site Inspection and audit by IEC	1
	Regular weekly Environmental inspection by the Contractor, ET and Site Representative Engineer	5
Ecological	Bi- monthly Ecological Monitoring	0
Landscape & Visual	Bi-weekly Inspection by a registered Landscape Architect	2

ES.03. In this Reporting Period, no bi-monthly ecological monitoring in Area under Contract 2 was performed.

ES.04. Landscape and visual inspection was carried on **9 and 22 August 2013** and the monthly Landscape & Visual Report (**August 2013**) has been signed by the registered Landscape Architect.

BREACH OF ACTION AND LIMIT (A/L) LEVELS

ES.05. No exceedance in construction noise monitoring is recorded in this Reporting Period. For water quality monitoring, a total of 75 Action/ Limit Level exceedances, namely 35 exceedances in dissolved oxygen, 24 exceedances in turbidity and 16 exceedances in suspended solids were recorded in this Reporting Period. NOEs were issued to notify EPD, IEC, the Contractor and RE upon confirmation of the results. The statistics of environmental exceedance, NOE issued and investigation result are summarized in the following table.

Environmental Issues	Monitoring Parameters	Action Level	Limit Level	Event & Action		
				NOE Issued	Investigation	Corrective Actions
Construction Noise	L _{eq} (30min) Daytime	0	0	0	N.A.	N.A.
Water Quality	DO	34	1	35	Not project related	N.A.
	Turbidity	5	19	24		
	SS	1	15	16		
Hydrological Characteristics	Water Flow	0	0	0	N.A.	N.A.
	Water Depth	0	0	0	N.A.	N.A.

Note: NOE – Notification of Exceedance

SITE INSPECTION

ES.06. Weekly environmental site inspections had been carried out by the Contractor, ET and the RE on **1, 8, 15, 22 and 28 August 2013**. Furthermore, joint site inspection with the IEC was carried out on **28 August 2013**. In this Reporting Period, **4** observations were recorded but no

non-compliance was noted during the site inspection.

ENVIRONMENTAL COMPLAINT

ES.07. No written or verbal complaint was recorded in this Reporting Period.

NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES.08. No environmental summons or successful prosecutions were recorded in this Reporting Period.

REPORTING CHANGE

ES.09. No report changes were made in this Reporting Period.

FUTURE KEY ISSUES

- ES.10. During wet season, muddy water and other water quality pollutants via site surface water runoff into the local stream Wah Ha River would be the key issue in the forth-coming month. Mitigation measures for water quality should be fully implemented.
- ES.11. On the other hand, construction noise should be other key environmental issue during sheet-piling process. The noise mitigation measures should be necessary to implement in accordance with EM&A Manual stipulation. Dust mitigation measures to avoid fugitive dust emissions from loose soil surface or haul road is also reminded.

APPENDIX M	ECOLOGICAL MONITORING REPORT IN AREA UNDER CONTRACT 2 (NOT USED)

1.0 INTRODUCTION

PROJECT BACKGROUND

- 1.01 *Kwan Lee-Kuly Joint Venture* (hereinafter ‘KLKJV’) has been awarded by Drainage Services Department (hereinafter ‘DSD’) of the Contract No. DC/2010/02 - Drainage Improvement in Shuen Wan and Shek Wu Wai (hereinafter ‘the Project’). The Project is scheduled to commence in May 2011 and complete in March 2014 for about 35 months.
- 1.02 The works to be executed under the Project are located in Shuen Wan and Shek Wu Wai. The works mainly comprise construction of about 735 metres long single-cell box culvert along Tung Tsz Road in Shuen Wan, Tai Po and construction of about 15 m long three-cell box culvert in Shek Wu Wai, San Tin .
- 1.03 For the Project, the construction work at Tung Tsz Road Shuen Wan (hereinafter ‘the Contract 2’) is part of the Drainage Improvement works amongst Shatin and Tai Po and it is defined as a “Designated Project” which controlled under Environmental Permit EP-303/2008. Currently, DSD has another Contract DC/2009/22 (hereinafter ‘the Contract 1’) ongoing for construction at Shuen Wan working area which under the same Environmental Permit and the updated Environmental Monitoring and Audit Manual (hereinafter ‘the Updated EM&A Manual’). Both DSD contract’s site boundary at Shuen Wan are shown in *Appendix A*. On the other hand, Shek Wu Wai San Tin is a non-designated project work and no environmental monitoring and audit is request to carry out.
- 1.04 In order to effectively implement the environmental protection measures stipulated in the Project Profile (hereinafter ‘the PP’), Environmental Impact Assessment Report (hereinafter “the EIAR”), Environmental Permit EP303/2008, a corresponding EM&A Manual have been prepared to outline the environmental monitoring and auditing (hereinafter ‘the EM&A’) programme undertake for the Contracts 1 and 2.
- 1.05 KLKJV has commissioned Action-United Environmental Services and Consulting (AUES) as an independent environmental team (hereinafter ‘the ET’) to implement the EM&A program for the environmental protection of the Project. Due to the construction of Contracts 1 and 2 carry out is just about the time, a Proposal Environmental Monitoring Programme and Methodology (hereinafter the “PEMPM”) was prepared and submitted to describe EM&A programme would be undertaken during construction period of the Contract 2.
- 1.06 The baseline monitoring of EM&A program has been performed by the Contract 1 ET. Although Action and Limit levels of environmental performance criteria have established by the Contract 1 ET, the Action/Limit levels re-establishment to use the Contract 2 was conducted by the Contract 2 ET. The re-established environment performance criteria has accepted by the IEC and also submitted to the EPD seek for endorsement.
- 1.07 This is the 26th Monthly EM&A Report for Contract 2 presenting the monitoring results and inspection findings for the reporting period from **1 to 31 August 2013**.

REPORT STRUCTURE

- 1.08 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-

SECTION 1	INTRODUCTION
SECTION 2	PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS AND SUBMISSION
SECTION 3	EM&A PROGRAM REQUIREMENT FOR THE PROJECT
SECTION 4	IMPACT MONITORING RESULTS
SECTION 5	WASTE MANAGEMENT
SECTION 6	SITE INSPECTIONS
SECTION 7	ENVIRONMENTAL COMPLAINTS AND NON-COMPLIANCE
SECTION 8	IMPLEMENTATION STATUES OF MITIGATION MEASURES
SECTION 9	IMPACT FORECAST
SECTION 10	CONCLUSIONS AND RECOMMENDATION

2.0 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS AND SUBMISSION

PROJECT ORGANIZATION AND MANAGEMENT STRUCTURE

2.01 Organization structure and contact details of relevant parties with respect to on-site environmental management are shown in *Appendix B*.

CONSTRUCTION PROGRESS

2.02 The master construction programs are enclosed in *Appendix C* and the major construction activities undertaken at Tung Tsz Road, Shuen Wan in this Report Period are listed below:-

- Construction of Box Culvert Bays 8 - 11
- Excavation at Bays 17 – 19 & 28 - 32

SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.03 Summary of the relevant permits, licences, and/or notifications on environmental protection for this Project in this Reporting Period is presented in *Table 2-1*.

Table 2-1 Status of Environmental Licenses and Permits

Item	Description	License/Permit Status
1	Air Pollution Control (Construction Dust)	Notified EPD on 17 October 2011
2	Chemical Waste Producer Registration (WPN5213-727-K2972-02)	Approved on 28 October 2011
3	Water Pollution Control Ordinance (Discharge License) WT00009528-2011	Valid to 31 July 2016
4	Billing Account for Disposal of Construction Waste (Account No.: 7012838)	Effective

2.04 The “Proposal Environmental Monitoring Programme and Methodology (R0006 Version 2)” was set out in accordance with the Updated Environmental Monitoring and Audit Manual. It was approved by the ER and agreed with the Independent Environmental Checker (IEC) and submitted to the EPD for endorsement.

2.05 For Contract 2 of the Project, no Baseline Monitoring Report was issued by the ETL. However, a new set of the Action/ Limit levels as used to Contract 2 were proposed by ET. It had been accepted by the IEC and also submitted to the EPD seek for endorsement.

3.0 EM&A PROGRAM REQUIREMENT FOR THE CONTRACT 2

3.01 The EM&A requirements set out in the PP, EIAR, Environmental Permit EP303/2008 (hereinafter ‘the EP’), and the associated updated EM&A Manual, are presented below sub-section.

MONITORING PARAMETERS

3.02 According to the EIAR and the updated EM&A Manual, The monitoring parameters of each environmental aspect summarized in **Table 3-1** will be performed as under the Project.

Table 3-1 Summary of Monitoring Parameters

Environmental Aspect	Parameters	
Construction Noise	<ul style="list-style-type: none"> A-weighted equivalent continuous sound pressure level (30min) (hereinafter ‘Leq(30min)’ during the normal working hours; and A-weighted equivalent continuous sound pressure level (5min) (hereinafter ‘Leq(5min)’ for construction work during the restricted hours. 	
Water Quality	In Situ Measurement	Temperature, Dissolved Oxygen, Dissolved Oxygen Saturation, pH and Turbidity
	Laboratory Analysis	Suspended Solids (hereinafter ‘SS’)
Hydrological Characteristics	The water flow and depth measurement onsite	
*Ecology	Monitor and audit the proper implementation of mitigation measures stipulated in EIA report and the updated EM&A Manual	
Landscape & Visual	Inspect and audit the implementation and maintenance of landscape and visual mitigation measures	

Remarks: * the monitoring is carried out by IEC

MONITORING LOCATIONS

3.03 Monitoring locations have been proposed in the updated EM&A Manual. Graphic plot to show in **Appendix D** and summarized in **Table 3-2**.

Table 3-2 Designated Monitoring Locations of the EM&A Programme

Aspect	Location ID	Address
Construction Noise	M1	14, Shuen Wan Chim Uk
	AL1	Joint Village Office for Villages in Shuen Wan, Tai PO
	M2	150, San Tau Kok
	M3	31, Wai Ha
	M4	Block 15, Treasure Spot Garden
Water Quality	(#) W1	Between the Shuen Wan Marsh and ECA <ul style="list-style-type: none"> Co-ordinates: E839301, N836386 Existing River Bed Level: +1.75mPD).
	W2	Between Tolo Harbour and Proposed Penstock <ul style="list-style-type: none"> Co-ordinates: E839542, N836184 Existing River Bed Level: +1.48mPD)
	(*) W3	Upstream of Tung Tze Shan Road <ul style="list-style-type: none"> Co-ordinates: E838760, N836714 Existing River Bed Level: +5.08mPD)
	W4	Wai Ha Village 29D <ul style="list-style-type: none"> Co-ordinates: E838865, N836621 Existing River Bed Level: +4.05mPD)
Hydrological	H1	Between the Shuen Wan Marsh and ECA <ul style="list-style-type: none"> Coordinates: E839306, N836379)
	H2	Route 10 Sam Kung Temple <ul style="list-style-type: none"> Coordinates: E839163, N836433

Aspect	Location ID	Address
	H3	Upstream of Tung Tze Shan Road • Coordinates: E838760, N836714
	H4	Wai Ha Village 29D • Coordinates: E838865, N836621
Ecology	Areas within 100m of the works boundary under Contract 2	
Landscape & Visual	As within and adjacent to the construction sites and works areas under the Contract 2,	

Remarks:

(#) Control Station of Contract 1, however impact station of Contract 2

(*) Control Station of Contract 2

MONITORING FREQUENCY

- 3.04 The monitoring frequency and duration as specified in the updated EM&A Manual are summarized below.

Construction Noise

Frequency: Once a week during 0700-1900 on normal weekdays for $L_{eq(30min)}$

If the construction work is undertaken at restricted hour, the monitoring frequency of construction noise will be conducted in accordance with the related Construction Noise Permit requirement issued by EPD as follows

- 3 consecutive $L_{eq(5min)}$ at restricted hour from 1700 – 2300;
- 3 consecutive $L_{eq(5min)}$ for restricted hour from 2300 – 0700 next day;
- 3 consecutive $L_{eq(5min)}$ for Sunday or public holiday from 0700 – 1900;

Duration: Throughout the construction period when the major construction activities are undertaken

Water Quality

Frequency: Three times a week. The interval between 2 sets of monitoring are not less than 36 hours

Duration: During the construction phase of Contract 2 to undertake (in accordance with the Updated EM&A Manual Section 4.27).

Hydrological Characteristics

Frequency: Once per week at mid-flood and mid-ebb tides

Duration: During the construction phase of Contract 2 to undertake; and one year after the construction is complete as operation phase monitoring (in accordance with the Updated EM&A Manual Section 4.32).

Ecology

- 3.05 In accordance with Section 6.17 of the Updated EM&A Manual, ecological monitoring should be conducted by the Independent Environmental Checker (hereinafter 'IEC'). Monitoring programme details should be agreed with the Agriculture, Fisheries and Conservation Department (AFCD). Moreover, the IEC should submit reports on the findings of each monitoring trip, and a final report summarizing the monitoring results over the entire monitoring period to AFCD and Environmental Protection Department (EPD). Hence, no monitoring or surveying should be carried out by ET of the Project.

Landscape & Visual

- 3.06 According to Section 7.4 of the Updated EM&A Manual, site inspection bi-weekly should be performed to check the implementation and maintenance of landscape and visual mitigation measures whether to fully realize.

MONITORING EQUIPMENT

Noise Monitoring

- 3.07 Sound level meter in compliance with the *International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1)* specifications shall be used for noise monitoring. The sound level meter shall be checked with an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter, which capable to measure wind speed in m/s.

Water Quality Monitoring

- 3.08 **Dissolved Oxygen and Temperature Measuring Equipment** – The instrument should be a portable and weatherproof dissolved oxygen (DO) measuring instrument complete with cable and sensor, and use a DC power source. The equipment should be capable of measuring DO level in the range of 0 – 20mg L-1 and 0 – 200% saturation; and temperature of 0 – 45 degree Celsius.
- 3.09 **pH Meter** – The instrument shall consist of a potentiometer, a glass electrode, a reference electrode and a temperature-compensating device. It shall be readable to 0.1 pH in arrange of 0 to 14.
- 3.10 **Turbidity (NTU) Measuring Equipment** – The instrument should be a portable and weatherproof turbidity measuring instrument using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0 - 1000 NTU.
- 3.11 **Water Sampling Equipment** – A water sampler should comprise a transparent PVC cylinder, with a capacity of not less than 2 litres, which can be effectively sealed with latex cups at both ends. The sampler should have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth.
- 3.12 **Water Depth Detector** – A portable, battery-operated echo sounder should be used for the determination of water depth at each designated monitoring station. The unit can either be hand held or affixed to the bottom of the work boat.
- 3.13 **Sample Containers and Storage** – Water samples for SS should be stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4°C without being frozen).
- 3.14 **Suspended Solids Analysis** – Analysis of suspended solids shall be carried out in a HOKLAS or other international accredited laboratory.

Hydrological Characteristics

- 3.15 **Water Depth Detector** - A portable, battery-operated echo sounder shall be used for the determination of water depth at each designated monitoring station.
- 3.16 **Stream water flow Equipment** –A portable, battery-operated flow meter should be used for the determination of water flow rate at each designated monitoring location and record in m³/s.
- 3.17 The monitoring equipment using for the Project’s EM&A program were proposed by the ET and verified by the IEC prior commencement of the monitoring. Details of the equipment used for impact monitoring are listed in *Table 3-3*.

Table 3-3 Monitoring Equipment Used in EM&A Program

Equipment	Model
<i>Construction Noise</i>	
Integrating Sound Level Meter	B&K Type 2238
Calibrator	B&K Type 4231
Portable Wind Speed Indicator	Testo Anemometer
<i>Water quality</i>	
Water Depth Detector	Eagle Sonar
Water Sampler	A transparent PVC cylinder / bucket

Equipment	Model
Thermometer & DO meter	YSI DO Meter 550A or YSI Professional Plus or YSI Sonde6820 / 650MDS
pH meter	YSI pH10N or YSI Professional Plus or YSI Sonde 6820 / 650MDS
Turbidimeter	Hach 2100Q or YSI Sonde 6820 / 650MDS
Sample Container	High density polythene bottles (provided by laboratory)
Storage Container	'Willow' 33-litre plastic cool box
Suspended Solids	HOKLAS-accredited laboratory (ALS Technichem (HK) Pty Ltd)
Hydrological Characteristics	
Water flow meter	GLOBAL WATER model FP211
Water Depth Detector	Eagle Sonar or an appropriate steel ruler or rope with appropriate weight

MONITORING METHODOLOGY

Noise Monitoring

- 3.18 Noise measurements were taken in terms of the A-weighted equivalent sound pressure level (L_{eq}) measured in decibels (dB). Supplementary statistical results (L_{10} and L_{90}) were also obtained for reference.
- 3.19 Sound level meter as listed in **Table 3-3** are complied with the *International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1)* specifications, as recommended in Technical Memorandum (TM) issued under the *Noise Control Ordinance (NCO)*.
- 3.20 During the monitoring, all noise measurements were performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (L_{eq}). $Leq_{(30min)}$ in six consecutive $Leq_{(5min)}$ measurements were used as the monitoring parameter for the time period between 0700-1900 hours on weekdays; and also $Leq_{(15min)}$ in three consecutive $Leq_{(5min)}$ measurements is used as monitoring parameter for other time periods (e.g. during restricted hours), if necessary.
- 3.21 During the course of measurement, the sound level meter is mounted on a tripod with a height of 1.2m above ground and placed at the assessment point and oriented such that the microphone is pointed to the site with the microphone facing perpendicular to the line of sight. The windshield is fitted for all measurements. The assessment point is normally set as free-field situation for the measurement.
- 3.22 Prior to noise measurement, the accuracy of the sound level meter is checked by an acoustic calibrator which generated a known sound pressure level at a known frequency. The checking was performed before and after the noise measurement.

Water Quality

- 3.23 Water quality monitoring are conducted at the depth below:-
- Three depths: 1m below water surface, 1m above river bed and at mid-depth when the water depth exceeds 6m, or
 - If the water depth is between 3m and 6m, two depths: 1m below water surface and 1m above river bed, and or
 - If the water depth is less than 3m, 1 sample at mid-depth is taken
- 3.24 Water depths are determined prior to measurement and sampling, using a portable battery operated depth detector, brand named 'Eagle Sonar', if the depths exceed 1.5 meter. If the depth between 1.5 meter and 1 meter, plastic tape measurement tied with appropriate weight are used the depth estimation. For the depth well below 1 meter, an appropriate steel ruler or rope with appropriate weight are used for the depth measurement.

- 3.25 A transparent PVC cylinder, with a capacity of not less than 2 litres, is used for water sampling. The water sampler is lowered into the water body at a predetermined depth. The trigger system of the sampler is activated with a messenger and opening ends of the sampler are closed accordingly then the sample of water is collected. If the water depth is less than 500mm, a water bucket is be used as a water sampler to minimize the possibility of the latching system disturbing sediment during water sampling
- 3.26 A portable YSI DO Meter 550A or YSI Professional Plus is used for in-situ DO measurement. The DO meter is capable of measuring DO in the range of 0 - 20 mg/L and 0 - 200 % saturation and checked against water saturated ambient air on each monitoring day prior to monitoring. Although the DO Meter automatically compensates ambient water temperature to a standard temperature of 20^oC for ease of comparison of the data under the changing reality, the temperature readings of the DO Meter are be recorded in the field data sheets. The equipment calibration is performed on quarterly basis.
- 3.27 A portable YSI pH10N Meter or or YSI Professional Plus is used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 – 14 and readable to 0.1. Standard buffer solutions of pH 7 and pH 10 are used for calibration of the instrument before and after measurement. The equipment calibration is performed on quarterly basis.
- 3.28 A portable Hach 2100Q Turbidity Meter is be used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 – 1000 NTU. The equipment calibration is performed on quarterly basis.
- 3.29 Water samples are contained in screw-cap PE (Poly-Ethylene) bottles, which are provided and pretreated and ‘PE’ (Poly-Ethylene) sampling bottles provided and pre-treated according to corresponding analytical requirements. Where appropriate, the sampling bottles are rinsed with the water to be contained. Water sample is then transferred from the sampler to the sample bottles.
- 3.30 One liter or 500 mL water sample are collected from each depth for SS determination. The collected samples are stored in a cool box maintained at 4^oC and delivered to laboratory upon completion of the sampling by end of each sampling day.
- 3.31 All water samples are analyzed with Suspended Solids (SS) as specified in the updated *EM&A Manual* by a local HOKLAS-accredited testing laboratory (ALS Technichem (HK) Pty Ltd HOKLAS registration no. 66). SS are determined by the laboratory upon receipt of the water samples using HOKLAS accredited analytical method. The detection limits and testing method are shown below in **Table 3-4**. The certificate of ALS Technichem (HK) Pty Ltd is provided in **Appendix E**.

Table 3-4 Testing Method and Detection limit of Suspended Solids

Determinant	Testing Method	Detection Limit
Suspended solid	Determination use HOKLAS accredited analytical methods namely ALS Method EA-025 (based on APHA 2540 D)	2mg/L

Hydrological Characteristics

- 3.32 A portable, water flow meter, brand named “*GLOBAL WATER model FP211*” are used to determine the water current flow at the designated monitoring stations. A water flow velocity is measured at mid depth of current water body or 0.5m below water level.
- 3.33 Water depths are determined prior to measurement, using a portable battery operated depth detector, brand named ‘Eagle Sonar’, if the depths exceed 1.5 meter. If the depth between 1.5 meter and 1 meter, plastic tape measurement tied with appropriate weight are used the depth estimation. For the depths well below 1 meter, an appropriate steel ruler or rope with appropriate weight are used for the depth measurement.

DATA MANAGEMENT AND DATA QA/QC CONTROL

- 3.34 The impact monitoring data are handled by the ET's systematic data recording and management, which complies with in-house Quality Management System. Standard Field Data Sheets (FDS) are used in the impact monitoring program.
- 3.35 The monitoring data recorded in the equipment e.g. noise meter and Multi-parameter Water Quality Monitoring System are downloaded directly from the equipment at the end of each monitoring day. The downloaded monitoring data are input into a computerized database properly maintained by the ET. The laboratory results are input directly into the computerized database and QA/QC checked by personnel other than those who input the data. For monitoring activities require laboratory analysis, the local laboratory follows the QA/QC requirements as set out under the HOKLAS scheme for all laboratory testing.

OTHERS MONITORING IMPLEMENTATION FOR THE CONTRACT

Ecology

- 3.36 Ecological monitoring and reporting should be performed by IEC. No equipment and procedure are presented in the EM&A Monthly Report.

Landscape and Visual

- 3.37 A registered Landscape Architect as member of the ET is employed by the Contractor to undertake site inspection. Site inspection will undertake at least once every two weeks throughout the construction period to ensure compliance with the intended aims of the mitigation measures are proposed in the EIA and the updated EM&A Manual, implemented by the Contractor.

DETERMINATION OF ACTION/LIMIT (A/L) LEVELS

- 3.38 The re-established performance criteria for construction noise, water quality and hydrological, namely Action and Limit levels is used for Contract 2 are listed in **Tables 3-5, 3-6, and 3-7.**

Table 3-5 Action and Limit Levels for Construction Noise

Location	Time Period	Action Level in dB(A)	Limit Level in dB(A)
M1, AL1, M2, M3, M4	Daytime 0700 – 1900 hrs on normal weekdays	When one documented complaint is received	75* dB(A)
	1900 – 2300 on all days and 0700 – 2300 on general holidays (including Sundays)		60/65/70 dB(A)**
	2300 – 0700 on all days		45/50/55 dB(A)**

Note: * Reduces to 70dB(A) for schools and 65dB(A) during the school examination periods.

** To be selected based on the Area Sensitivity Rating of A/B/C, and the conditions of the applicable CNP(s) must be followed

Table 3-6 Action and Limit Levels for Water Quality

Parameter	Performance Criteria	Impact Station		
		W1	W2	W4
DO Concentration (mg/L)	Action Level	7.27	7.26	9.27
	Limit Level	4.00	4.00	4.00
pH	Action Level	NA	NA	NA
	Limit Level	6 - 9	6 - 9	6 - 9
Turbidity (NTU)	Action Level	4.77	2.46	3.32
	Limit Level	5.26	3.42	4.52
Suspended Solids (mg/L)	Action Level	9.73	8.89	6.98
	Limit Level	10.77	9.75	7.66

Notes:

- The proposed Action/Limit Levels of DO are established to be used 5%-ile/1%-ile of all the baseline data;
- The proposed Action/Limit Levels of Turbidity and SS are established to be used 95%-ile/99%-ile of all the baseline data;
- For DO, non-compliance of the water quality limits occur is when monitoring result lower than the action/limit levels;
- For turbidity and SS, non-compliance of the water quality limits occurs is when monitoring result higher than the limits; and
- For pH, non-compliance of the quality limit occur is when monitoring result lower than 6 and higher than 9; and
- All the figures given in the table are used for reference only and the EPD may amend the figures whenever it is considered necessary

Table 3-7 Action and Limit Levels for Hydrological Characteristics

Parameter	Acceptance Criteria	Monitoring Station	
		H1	H2
Water Depth (m)	Action Level	0.08 (80% of baseline water depth)	0.40 (80% of baseline water depth)
	Limit Level	0.06 (60% of baseline water depth)	0.30 (60% of baseline water depth)
Volumetric Flow Rate (Q), m ³ /s	Action Level	120% of control station's water flow rate on the same day of measurement	120% of control station's water flow rate on the same day of measurement
	Limit Level	140% of control station's water flow rate on the same day of measurement	140% of control station's water flow rate on the same day of measurement

- 3.39 The locations H3 and H4 are a reference measurement point in order to monitor any changes in the hydrological characteristics of Wai Ha River arising from the work Contract 2 to affect the Shuen Wan Marsh.
- 3.40 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan enclosed in **Appendix F**.

EQUIPMENT CALIBRATION

- 3.41 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme in yearly basis.
- 3.42 All the water quality monitoring equipment such as the DO, pH and Turbidity meters are calibrated by HOKLAS accredited laboratory of three month intervals.
- 3.43 A portable, water flow meter, brand named “GLOBAL WATER model FP211” is calibrated in yearly basis.
- 3.44 All updated calibration certificates of the monitoring equipment used for the impact monitoring program in this Reporting Period are attached in **Appendix E**.

METEOROLOGICAL INFORMATION

- 3.45 The meteorological information during the construction phase is obtained from Tai Po and Shatin Stations of the Hong Kong Observatory (HKO). The meteorological data during the impact monitoring days are summarized in **Appendix H**

4.0 IMPACT MONITORING RESULTS

4.01 The monitoring schedule had been issued to relevant parties before each Reporting Period which presented in *Appendix G*. The works undertaken during the Reporting Period are illustrated in *Appendix C*. The monitoring results are presented in the following sub-sections.

MONITORING RESULTS SHARING

4.02 Environmental Permit EP-203/2008 was issued on 25 February 2008 by EPD which adopted for both Contracts 1 and 2 of DSD construction at Shuen Wan. Also, the EM&A programme of both contracts are undertaken in accordance with the same updated EM&A Manual which has to be carried out during construction period. According to the updated EM&A manual, designated monitoring Locations M1 and AL1 for noise monitoring stations, Locations W1 and W2 for water quality monitoring stations, and Locations H1 and H2 for hydrological measurement are requested to perform at both Contracts 1 and 2. Since Contract 1 has already commenced in January 2011, those results measured by Contract 1 would be shared for the Contract 2. This recommendation has been accepted by IEC and submitted to EPD.

RESULTS OF CONSTRUCTION NOISE MONITORING

4.03 In this Reporting Period, the noise monitoring results at the designated locations M1, AL1, M2, M3 and M4 are summarized in *Table 4-1*. The detail monitoring data are presented in *Appendix I*. The graphical plot is shown in *Appendix J*.

Table 4-1 Summary of Construction Noise Monitoring Results, dB(A)

Date	L _{eq(30min)} (dB(A))		Date	L _{eq(30min)} (dB(A))		
	M1 ^(#)	AL1 ^(#)		M2 ^(*)	M3 ^(*)	M4 ^(*)
7-Aug-13	65.3	66.5	9-Aug-13	67.7	56.6	55.5
16-Aug-13	66.8	69.1	16-Aug-13	66.3	53.2	51.0
21-Aug-13	65.7	68.1	21-Aug-13	68.2	74.9	54.3
28-Aug-13	64.3	66.1	26-Aug-13	71.9	74.6	56.1
Limit Level	75 dB(A)					

Remarks:

(#) *The monitoring is undertaken under façade situation. No façade correction is added according to acoustical principles and EPD guidelines.*

(*) *The monitoring is undertaken under free field situation. A façade correction of +3 dB(A) has been added according to acoustical principles and EPD guidelines*

4.04 The sound meter was set in a free field situation at the designated monitoring locations M2, M3 and M4, therefore, a façade correction of +3 dB(A) has been added according to acoustical principles and EPD guidelines. For Location A1 and AN1, the monitoring is undertaken under façade situation. No façade correction is added according to acoustical principles and EPD guidelines.

4.05 No noise complaint (which is an Action Level exceedance) was received in this Reporting Period. As shown in *Table 4-1*, all the noise monitoring result are well below 75dB(A) and no Action or Limit Level exceedance was triggered during this Reporting Period. The graphical plot is shown in *Appendix J*.

RESULTS OF LOCAL STREAM WATER QUALITY MONITORING

4.06 In this Reporting Period, 13 sampling days were performed at designated measurement Points for local stream water quality monitoring. The monitoring results including in-situ measurements and laboratory testing results are provided in *Appendix I*. The graphical plots are shown in *Appendix J*.

4.07 Monitoring results of 3 key parameters: dissolved oxygen (DO), turbidity and suspended solids in this Reporting Period, are summarized in *Tables 4-2 and 4-3*.

Table 4-2 Water Quality Results Summary for W1 & W2

Sampling date	DO (mg/L)			Turbidity (NTU)			SS (mg/L)		
	W1 (ebb)	W1 (flood)	W2	W1 (ebb)	W1 (flood)	W2	W1 (ebb)	W1 (flood)	W2
2-Aug-13	5.80	5.70	7.45	92.8	55.0	3.5	81.00	85.00	41.00
5-Aug-13	5.48	5.21	7.56	1.0	3.7	3.2	3.00	9.00	6.20
7-Aug-13	6.21	7.11	6.81	2.3	1.2	5	8.00	2.00	8.80
9-Aug-13	7.35	7.66	7.56	1.1	1.7	3.1	2.00	2.00	20.00
12-Aug-13	4.76	5.73	7.06	4.3	4.1	4.5	6.00	7.00	25.00
14-Aug-13	#	5.57	#	#	70.2	#	#	47.00	#
16-Aug-13	5.46	6.69	8.01	43.0	48.1	2.8	16.00	28.00	7.00
19-Aug-13	6.23	6.45	7.67	22.0	22.6	6.9	10.00	27.00	6.80
21-Aug-13	6.65	6.33	7.58	4.4	4.7	3.2	2.00	2.00	10.00
23-Aug-13	7.09	7.22	8.21	1.5	2.8	4	6.00	2.00	7.00
26-Aug-13	7.09	7.47	7.59	3.3	1.7	3.7	5.00	4.00	7.20
28-Aug-13	6.22	6.02	7.45	3.7	2.9	3	6.00	3.00	8.00
30-Aug-13	8.72	9.06	7.87	4.4	3.7	3.5	3.00	2.00	21.00

• *Bold and Italic is indicated exceeded Action Level; Bold with underline is indicated exceeded Limit Level # monitoring was cancelled due to typhoon.*

Table 4-3 Water Quality Results Summary for W3 & W4

Sampling date	DO (mg/L)		Turbidity (NTU)		SS (mg/L)	
	W3	W4	W3	W4	W3	W4
2-Aug-13	6.14	5.29	43.70	85.55	89.00	87.00
5-Aug-13	6.13	6.37	1.53	1.21	2.00	2.00
7-Aug-13	7.68	8.46	1.16	1.14	2.00	2.00
9-Aug-13	7.80	8.11	1.55	1.66	2.00	2.00
12-Aug-13	5.56	6.43	1.25	1.46	2.00	2.00
14-Aug-13	6.33	6.20	62.25	54.95	47.00	45.00
16-Aug-13	5.83	5.56	14.70	6.43	15.00	4.00
19-Aug-13	5.83	6.07	9.33	8.14	7.00	17.00

30-Aug-13	8.58	8.67	2.27	2.51	2.00	2.00

• *Bold and Italic is indicated exceeded Action Level; Bold with underline is indicated exceeded Limit Level*

4.08 During the Reporting Period, field measurements showed that stream water temperatures were within 22.65°C to 33.10°C and pH values within 7.22 to 8.77.

4.09 A statistics of exceedances for the three parameters: dissolved oxygen (DO), turbidity and suspended solids are shown in **Table 4-4**.

Table 4-4 Statistics Water Quality Exceedance

Station	DO		Turbidity		SS		Total Exceedance	
	Action	Limit	Action	Limit	Action	Limit	Action	Limit
W1	20	0	0	7	1	6	21	13
W2	2	0	5	7	0	5	7	12
W4	12	1	0	5	0	4	12	10
No. of Exceedance	34	1	5	19	1	15	40	35

4.10 As shown in **Table 4-4**, a total of 75 Action/ Limit Level exceedances, namely 35 exceedances in dissolved oxygen, 24 exceedances in turbidity and 16 exceedances in suspended solids were recorded in this Reporting Period. NOEs were issued to notify EPD, IEC, the Contractor and RE upon confirmation of the results.

- 4.11 According to site information provided by the Contractor, the site activities undertaken on site included construction of Box Culvert Bays 8 – 11 and excavation at Bays 28 – 32.
- 4.12 In the Reporting Period, no excavation work was carried out at the channel, however, heavy rainstorm was continually occurred on 1 - 3, 14, 19, 22 - 25 and 30 August 2013 which increased the turbidity and suspended solids levels of the stream course by washed out from exposed slope and surface. To minimize the impact to the existing stream, precautionary measures such as earth bund to isolate the working area has been implemented on-site. The investigation results for the exceedances are summarized as follows:
- For the DO exceedances, the construction activities comprised none of DO depleting characteristics. Therefore, it is considered that all the DO exceedances were due to natural variation of the stream and not related to the works under the Project.
 - During the water quality monitoring on 1 - 3, 14, 19, 22 - 25 and 30 August 2013, cloudy water was observed at throughout the river course during rainstorm. For the turbidity and SS exceedances recorded at W4 on 8, 17 and 26 July, it is noted that high levels of turbidity and SS were already obtained in control station W3. Moreover, the Contractor had implemented water quality mitigation measures such as covering all exposed slopes with geotextile to prevent surface runoff during inclement weather. It is considered that the exceedances were not related to the works under the Project.
 - For monitoring points W1, it is noted that the water quality at W1 was affected by marine water that comes from the Tolo Harbour during flood tide. Therefore, it is considered that the exceedances in W1 were not related to the works under the Project.
- 4.13 During wet season, KLKJV is reminded to fully implement the required water quality mitigation measures in accordance with the updated EM&A Manual stipulation during construction under the Project. In particular when excavation and the associated box culvert construction works are undertaken near Wai Ha River, all construction wastewater or runoff generated from work area should be treated and drained to the designated discharge point. Moreover, as an effective water quality mitigation measure, the rock bund in the de-silting channel should be repaired regularly and ensure the de-silting performance.

RESULTS OF HYDROLOGICAL CHARACTERISTICS MONITORING

- 4.14 In this Reporting Period, hydrological characteristics measurement at were carried out on **2, 9, 16, 23 and 30 August 2013**. The monitoring data of H1 and H2 provided by DC/2009/22 is showed *Appendix I*. The detailed H3 and H4 measurement results in this Reporting Period are presented in *Tables 4-5*.

Table 4-5 Detailed monitoring results of hydrological characteristics at H3 and H4

Date	Measurement Time	Tide Condition	River Width (m)	Water Depth (m)	Cut Section (m ²)	Velocity Flow Rate (m/s)	Average Volumetric Flow Rate (Q), m ³ /s
Measurement Point: H3							
2-Aug-13	16:24	Flood	7.45	0.25	1.8625	0.3	0.559
	13:12	Ebb	7.45	0.3	2.2350	0.4	0.894

30-Aug-13	#	#	0.17	0.20	0.36	0.36	0.20	0.10

No data was provided by Contract 1.

Table 4-7 Summarized Hydrological Characteristics of Average Volumetric flow rate (Q), m³/s

Date	Mid-Flood				Mid-Ebb			
	H1	H2	H3	H4	H1	H2	H3	H4
2-Aug-13	0.225	1.13	0.56	0.16	0.15	0.754	0.89	0.31
9-Aug-13	#	#	0.15	0.10	0.075	0.754	0.37	0.11
16-Aug-13	0.15	1.13	0.60	0.16	#	#	0.45	0.16
23-Aug-13	#	#	0.37	0.25	0.15	1.13	0.60	0.33
30-Aug-13	#	#	0.38	0.14	0.225	1.13	0.30	0.05

No data was provided by Contract 1.

4.16 To compare the monitoring data between the Reporting Period (rainy season) and baseline monitoring period, the currently water depth and volumetric flow rate has insignificant changed. Furthermore, water depth and water flow rate were found no exceedance in this Reporting Period.

RESULTS OF ECOLOGICAL MONITORING

4.17 According to updated EM&A Manual Section 6.17, bi-monthly ecological monitoring is conducted by the IEC – ENVIRON Hong Kong Limited. In brief, the monitoring tasks include regular check on the retained and transplanted trees and shrubs, monitoring on fauna groups and aquatic fauna within the works area and any ecologically sensitive area within 100 m of the works boundary.

4.18 In this Reporting Period, no ecological monitoring in Area under Contract 2 is performed.

5.0 WASTE MANAGEMENT

5.01 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

RECORDS OF WASTE QUANTITIES

5.02 All types of waste arising from the construction work are classified into the following:

- Construction & Demolition (C&D) Material;
- Chemical Waste;
- General Refuse; and
- Excavated Soil.

5.03 The quantities of waste for disposal in this Reporting Period are summarized in *Table 5-1* and *5-2* and the Monthly Summary Waste Flow Table is shown in *Appendix K*. Whenever possible, materials were reused on-site as far as practicable.

Table 5-1 Summary of Quantities of Inert C&D Materials

Type of Waste	Quantity	Disposal Location
C&D Materials (Inert) (m ³)	0	-
Reused in this Contract (Inert) (m ³)	0	-
Reused in other Projects (Inert) (m ³)	0	-
Disposal as Public Fill (Inert) (m ³)	0	Tuen Mun Area 38

Table 5-2 Summary of Quantities of C&D Wastes

Type of Waste	Quantity	Disposal Location
Recycled Metal (kg)	0	-
Recycled Paper / Cardboard Packing (kg)	0	-
Recycled Plastic (kg)	0	-
Chemical Wastes (kg)	0	-
General Refuses (m ³)	0	Local refuse station

5.04 To control over the site performance on waste management, the Contractor shall ensure that all solid and liquid waste management works are in full compliance with the relevant license/permit requirements, such as the effluent discharge license and the chemical waste producer registration. The Contractor is also reminded to implement the recommended environmental mitigation measures according to the EM&A Manual based on actual site conditions.

6.0 SITE INSPECTION

REGULAR SITE INSPECTION AND MONTHLY AUDIT

- 6.01 According to the Updated Environmental Monitoring and Audit Manual, regular site inspection to evaluate the project environmental performance should be carried out during construction phase. Weekly environmental site inspections had been carried out by the Contractor, ET and RE on **1, 8, 15, 22 and 28 August 2013**. Also, joint site inspection with the IEC was carried out on **28 August 2013**. In this Reporting period, **4** observations were recorded but no non-compliance was noted.
- 6.02 Observations for the site inspection and monthly audit within this Reporting Period are summarized in **Table 6-1**.

Table 6-1 Site Inspection of Observations – Findings and Deficiencies

Date	Findings / Deficiencies	Follow-Up Status
1 August 2013	No adverse environmental issue was observed during site inspection.	N.A.
8 August 2013	<ul style="list-style-type: none">Free standing chemical container was observed, the Contractor should provide drip tray underneath or remove immediately after used.	Rectified on 15 August 2013.
15 August 2013	<ul style="list-style-type: none">Stagnant water was observed after heavy rainfall, the Contractor was reminded to clean all stagnant water to prevent mosquito breeding.	Rectified on 28 August 2013.
22 August 2013	<ul style="list-style-type: none">Stagnant water was observed after heavy rainfall, the Contractor was reminded to clean all stagnant water to prevent mosquito breeding.	Rectified on 28 August 2013.
28 August 2013	<ul style="list-style-type: none">Free standing chemical container was observed, the Contractor should provide drip tray underneath or remove immediately after used.	Rectified on 5 September 2013.

LANDSCAPE AND VISUAL INSPECTION

- 6.03 In this Reporting Period, landscape and visual inspection was carried on **9 and 22 August 2013**.
- 6.04 The stand-alone of monthly Landscape & Visual Report signed by the registered Landscape Architect. Mitigation measures implemented in this Reporting Period are presented in the monthly Landscape & Visual Report (**Jul August y 2013**) which enclosed in **Appendix L**.
- 6.05 The next bi-weekly Landscape & Visual Monitoring in **September 2013** is scheduled to be conducted in the week of **2 and 16 September 2013**.

7.0 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTION

7.01 No environmental complaint, summons and prosecution was received in this Reporting Period. The statistical summary table of environmental complaint is presented in *Tables 7-1, 7-2 and 7-3*.

Table 7-1 Statistical Summary of Environmental Complaints

Reporting Period	Environmental Complaint Statistics		
	Frequency	Cumulative	Complaint Nature
July 2011 –July 2013	0	0	NA
August 2013	0	0	NA

Table 7-2 Statistical Summary of Environmental Summons

Reporting Period	Environmental Summons Statistics		
	Frequency	Cumulative	Complaint Nature
July 2011 –July 2013	0	0	NA
August 2013	0	0	NA

Table 7-3 Statistical Summary of Environmental Prosecution

Reporting Period	Environmental Prosecution Statistics		
	Frequency	Cumulative	Complaint Nature
July 2011 –July 2013	0	0	NA
August 2013	0	0	NA

8.0 IMPLEMENTATION STATUS OF MITIGATION MEASURES

8.01 The environmental mitigation measures that recommended in the Updated Environmental Monitoring and Audit Manual covered the issues of dust, noise and waste and they are summarized as follows:

Noise Mitigation Measure

- (a) Only well-maintained plant should be operated on-site and plant shall be serviced regularly during the construction program;
- (b) Silencers or mufflers on construction equipment should be utilized and shall be properly maintained during the construction program;
- (c) Mobile plant, if any, should be sited as far from NSRs as possible;
- (d) Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum;
- (e) Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs;
- (f) Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction activities;
- (g) Use of quieter plants to carry out the construction tasks proposed for the Project;
- (h) Use about 3.5m high of temporary noise barriers as screened the noisy PMEs to carry out construction of box culvert and site clearance.
- (i) Low Impact Method, such as using PMEs smaller in size and to be enclosed by noise enclosure, should be adopted for the construction of box culvert and pipe laying in Wai Ha; and
- (j) Use of noise enclosure during the works area for pipe laying in Wai Ha.

Dust Mitigation Measure

8.02 Implementation of mitigation measures stipulated in the Air Pollution Control (Construction Dust) Regulation and good site practices including but not limited to the following:

- (a) Use of regular watering to reduce dust emissions from exposed site surfaces and unpaved road, with complete coverage, particularly during dry weather;
- (b) Use of frequent watering for particularly dusty static construction areas and areas close to ASRs;
- (c) Tarpaulin covering of all dusty vehicle loads transported to, from and between site location;
- (d) Establishment and use of vehicle wheel and body washing facilities at the exit points of the site;
- (e) Routing of vehicles and positioning of construction plant should be at the maximum possible distance from ASRs;
- (f) Stockpiled excavated materials should be covered with tarpaulin and should be removed offsite within 24 hours to avoid any odour nuisance arising.

Local Stream Water Quality Mitigation Measure

- (a) Before commencing any site formation work, all sewer and drainage connections shall be sealed to prevent debris, soil, sand etc. from entering public sewers/drains;
- (b) Temporary ditches shall be provided to facilitate run-off discharge into appropriate watercourses, via a silt retention pond. No site run-off shall enter the fishponds at Shuen Wan;
- (c) Sand/silt removal facilities such as sand traps, silt traps and sediment basins shall be provided to remove sand/silt particles from runoff to meet the requirements of the Technical Memorandum standard under the Water Pollution Control Ordinance. The design of silt removal facilities shall be based on the guidelines provided in ProPECC PN 1/94. All drainage facilities and erosion and sediment control structures shall be inspected monthly and maintained to ensure proper and efficient operation at all times and particularly during rainstorms
- (d) Water pumped out from excavated pits shall be discharged into silt removal facilities;

- (e) During rainstorms, exposed slope/soil surfaces shall be covered by a tarpaulin or other means. Other measures that need to be implemented before, during, and after rainstorms as summarized in ProPECC PN 1/94 shall be followed
- (f) Exposed soil areas shall be minimized to reduce potential for increased siltation and contamination of runoff
- (g) Earthwork final surfaces shall be well compacted and subsequent permanent work or surface protection shall be immediately performed to reduce the potential of soil erosion;
- (h) Open stockpiles of construction materials or construction wastes on-site shall be covered with tarpaulin or similar fabric during rainstorms;
- (i) For the construction of the box culvert next to the existing channel of the Wai Ha River, sand bags should be deployed around the boundary of the works trench to prevent muddy water ingress into the adjacent CA or Wai Ha River. Sand bags should also be used to surround the excavated trench. Generally, the sand bags will be placed up to a height of 300mm to provide adequate allowance for the built-up water level during rainstorm event. With sand bags in place surface runoff will be intercepted and flow to Wai Ha River or collected by the existing drainage system as usual;
- (j) For the construction of the box culvert in the extreme northeast corner of Shuen Wan Marsh Conservation Area sand bags should be deployed along the limit of the works area to prevent muddy water ingress into the CA. Sand bags should be placed to a height of 0.1m at least 300mm from ground level and +2.5 mPD (whichever is greater) to provide adequate allowance for the built-up water level during rainstorm events. Unpolluted surface runoff within the works area should then be collected and directed into the existing drainage system;
- (k) Sheet-piles, which would be installed around the works trench near the Conservation Area, would be extended above ground level for about 2m to serve as hoardings to isolate the works site;
- (l) Tarpaulin sheets would be used to cover the excavation areas during heavy rainstorms. This would prevent the ingress of rainwater into the trench minimizing the risk of muddy water getting into Wai Ha River and the adjacent Conservation Area;
- (m) Any concrete washing water would be contained inside the works site surrounded by the extended sheet piles. A pump sump at the bottom of the trench would be provided to pump any excess water during concrete washing;
- (n) Stockpiling the excavated materials adjacent to the Conservation Area would not be allowed. The excavated materials would be either removed off site immediately after excavation, or stockpiled at location(s) away from the Conservation Area. The stockpile locations shall be approved by the site engineer;
- (o) Debris and refuse generated on-site should be collected, handled and disposed of properly to avoid entering the Wai Ha River and fish ponds at Shuen Wan. Stockpiles of cement and other construction materials should be kept covered when not being used.
- (p) Oils and fuels should only be used and stored in designated areas which have pollution prevention facilities to prevent spillage of fuels and solvents to nearby water bodies, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. The bund should be drained of rainwater after a rain event
- (q) Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site. A licensed contractor would be responsible for appropriate disposal and maintenance of these facilities;
- (r) The excavation works within the upstream end of the existing river channel of the Wai Ha River for the construction of the proposed box culvert should be carried out in dry condition. Containment measures such as bunds and barriers shall be used within the affected length of the river channel and the excavation works restricted to within an enclosed dry section of the channel. The excavation works within Wai Ha River shall be restricted to the period from October to April.

Waste Mitigation Measures

- (a) The Contractor shall observe and comply with the Waste Disposal Ordinance (WDO) and its subsidiary regulations.
- (b) The Contractor shall submit to the Engineer for approval a Waste Management Plan with appropriate mitigation measures including the allocation of an area for waste segregation and shall ensure that the day-to-day site operations comply with the approved waste management plan.
- (c) The Contractor shall minimize the generation of waste from his work. Avoidance and minimization of waste generation can be achieved through changing or improving design and practices, careful planning and good site management.
- (d) The reuse and recycling of waste shall be practised as far as possible. The recycling materials shall include paper/cardboard, timber and metal etc.
- (e) The Contractor shall ensure that Construction and Demolition (C&D) materials are sorted into public fill (inert portion) and C&D waste (non-inert portion). The public fill which comprises soil, rock, concrete, brick, cement plaster/mortar, inert building debris, aggregates and asphalt shall be reused in earth filling, reclamation or site formation works. The C&D waste which comprises metal, timber, paper, glass, junk and general garbage shall be reused or recycled where possible and, as the last resort, disposal of at landfills.
- (f) The Contractor shall record the amount of wastes generated, recycled and disposed of (including the disposal sites). The Contractor shall use a trip ticket system for the disposal of C&D materials to any designated public filling facility and/or landfill.
- (g) In order to avoid dust or odour impacts, any vehicles leaving a works area carrying construction waste or public fill shall have their load covered.
- (h) To avoid the excessive use of wood, reusable steel shutters shall be used as a preferred alternative to formwork and falsework where possible.
- (i) The Contractor shall observe and comply with the Waste Disposal (Chemical Waste) (General) Regulation. The Contractor shall apply for registration as chemical waste producer under the Waste Disposal (Chemical Waste) (General) Regulation when chemical waste is produced. All chemical waste shall be properly stored, labeled, packaged and collected in accordance with the Regulation.

8.03 KLKJV had been implementing the required environmental mitigation measures according to the Updated Environmental Monitoring and Audit Manual subject to the site condition. Environmental mitigation measures generally implemented by KLKJV in this Reporting Period are summarized in *Table 8-1*.

Table 8-1 Environmental Mitigation Measures

Issues	Environmental Mitigation Measures
Water Quality	<ul style="list-style-type: none"> • Wastewater were appropriately treated by treatment facilities; • Drainage channels were provided to convey run-off into the treatment facilities; and • Drainage systems were regularly and adequately maintained.
Air Quality	<ul style="list-style-type: none"> • Regular watering to reduce dust emissions from all exposed site surface, particularly during dry weather; • Frequent watering for particularly dusty construction areas and areas close to air sensitive receivers; • Cover all excavated or stockpile of dusty material by impervious sheeting or sprayed with water to maintain the entire surface wet; • Public roads around the site entrance/exit had been kept clean and free from dust; and • Tarpaulin covering of any dusty materials on a vehicle leaving the site.
Noise	<ul style="list-style-type: none"> • Good site practices to limit noise emissions at the sources; • Use of quiet plant and working methods; • Use of site hoarding or other mass materials as noise barrier to screen noise at ground level of NSRs; • Use of shrouds/temporary noise barriers to screen noise from relatively static PMEs; • Scheduling of construction works nearly Tung Tsz Road; and • Alternative use of plant items within one worksite, where practicable.

Issues	Environmental Mitigation Measures
Waste and Chemical Management	<ul style="list-style-type: none">• Excavated material should be reused on site as far as possible to minimize off-site disposal. Scrap metals or abandoned equipment should be recycled if possible;• Waste arising should be kept to a minimum and be handled, transported and disposed of in a suitable manner;• The Contractor should adopt a trip ticket system for the disposal of C&D materials to any designed public filling facility and/or landfill; and• Chemical waste shall be handled in accordance with the Code of Practice on the Packaging, Handling and Storage of Chemical Wastes.
General	<ul style="list-style-type: none">• The site was generally kept tidy and clean.

9.0 IMPACT FORCAST

CONSTRUCTION ACTIVITIES FOR THE FORTH-COMING MONTH

9.01 Construction activities planned to be carried out next month at Shuen Wan is listed as below:-

- Construction of Box Culvert at Tung Tsz Road (Bay 8-11) & (Bays 28-32)

9.02 Three months Rolling Construction Program is attached in *Appendix C*

KEY ISSUES FOR THE COMING MONTH

9.03 According to construction activities carry out in coming months, key issues to be considered include:

- Implementation of dust suppression measures at all times;
- Ensure dust suppression measures are implemented properly;
- Disposal of empty engine oil containers within site area;
- Sediment catch-pits and silt removal facilities should be regularly maintained;
- Management of chemical wastes;
- Discharge of site effluent to the nearby local stream or storm drainage, stockpiling or disposal of materials, and any dredging or construction area at this area are prohibited;
- Follow-up of improvement on general waste management issues; and
- Implementation of construction noise preventative control measures.

10.0 CONCLUSIONS AND RECOMMENTATIONS

CONCLUSIONS

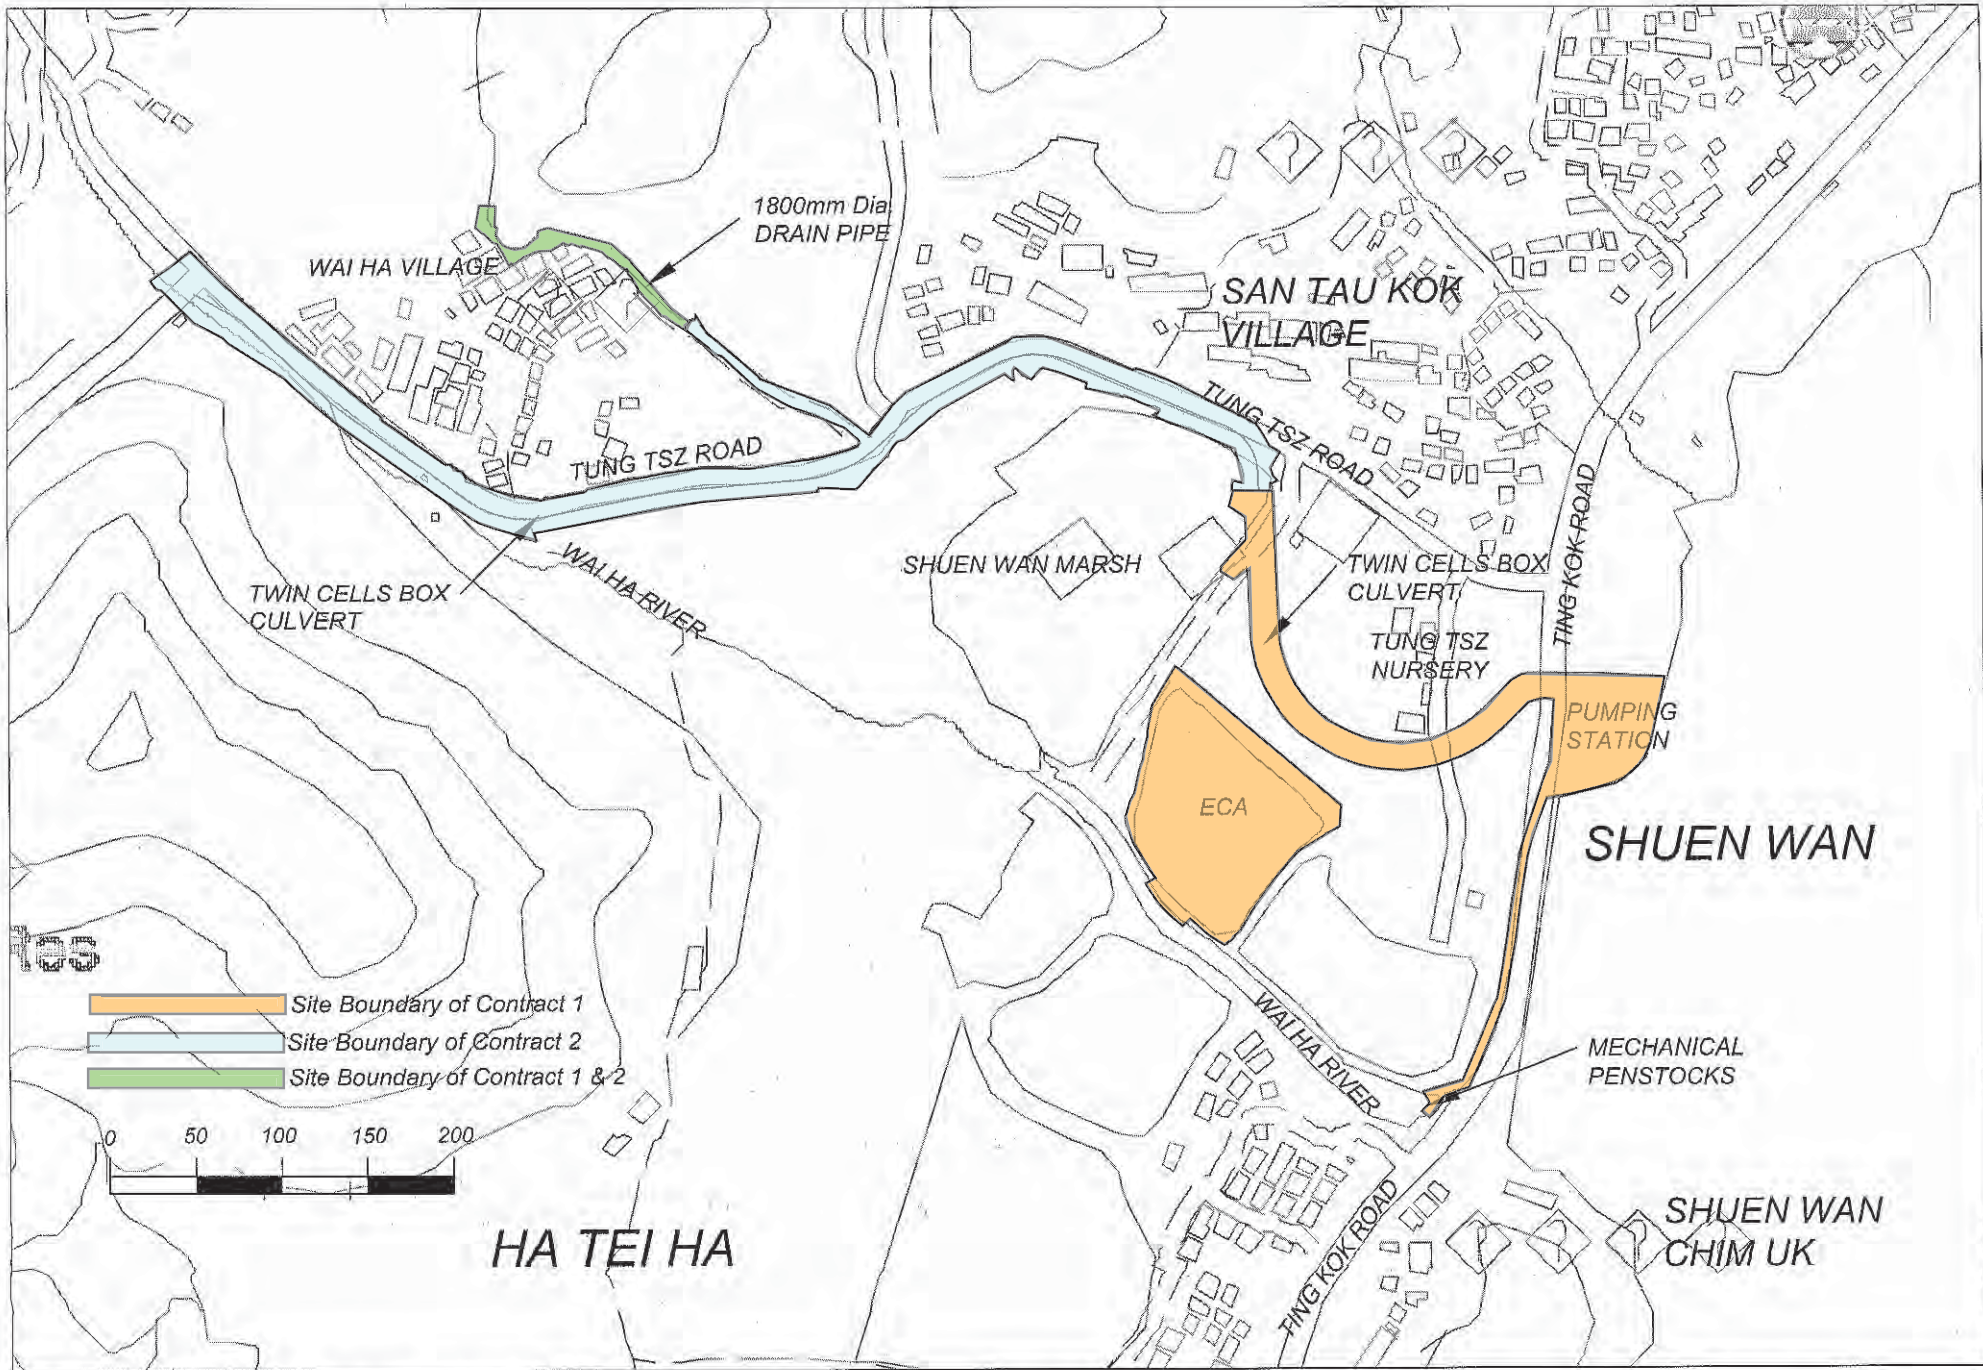

- 10.01 This is the 26th monthly EM&A report for Contract 2 presenting the monitoring results and inspection findings for the Reporting Period from **1 to 31 August 2013**.
- 10.02 No noise complaint (which is an Action Level exceedance) was received and no construction noise measurement results that exceeded the Limit Level were recorded in this Reporting Period. No NOE or the associated corrective actions were therefore issued.
- 10.03 For water quality monitoring, a total of 75 Action/ Limit Level exceedances, namely 35 exceedances in dissolved oxygen, 24 exceedances in turbidity and 16 exceedances in suspended solids were recorded in this Reporting Period. NOEs were issued to notify EPD, IEC, the Contractor and RE upon confirmation of the results. It is concluded that all the exceedances were not related to the works under the Project.
- 10.04 The hydrological characteristics of water depth and water flow rate were found no exceedance in this Reporting Period.
- 10.05 In this Reporting Period, no ecological monitoring in Area under Contract 2 was performed..
- 10.06 No documented complaint, notification of summons or successful prosecution was received.
- 10.07 Weekly environmental site inspections had been carried out by the Contractor, ET and the RE on **1, 8, 15, 22 and 28 August 2013**. Furthermore, joint site inspection with the IEC was carried out on **28 August 2013**. In this Reporting Period, **4** observations were recorded but no non-compliance was noted during the site inspection.
- 10.08 In this Reporting Period, landscape and visual inspection was carried on **9 and 22 August 2013** and the monthly Landscape & Visual Report (**August 2013**) has been signed by the registered Landscape Architect.

RECOMMENDATIONS

- 10.09 As river works is in progress, surface runoff or water discharge to local stream course should be key environment aspect issue. The Contractor is reminded that mitigation measures for water quality and ecology should be fully implemented. As an effective water quality mitigation measure, the rock bund in the de-silting channel should be repaired regularly and ensure the de-silting performance.
- 10.10 During wet season, muddy water and other water quality pollutants via site surface water runoff into the local stream Wah Ha River would be the key issue in the forth-coming month. On the other hand, construction noise should be other key environmental issue during sheet-piling process. The noise mitigation measures should be necessary to implement in accordance with EM&A Manual stipulation. Dust mitigation measures to avoid fugitive dust emissions from loose soil surface or haul road is also reminded.
- 10.11 To control the site performance on waste management, the KLKJV shall ensure that all solid and liquid waste management works are fully in compliance with the relevant license/permit requirements, such as the effluent discharge licence and the chemical waste producer registration. KLKJV is also reminded to implement the recommended environmental mitigation measures according to the Updated Environmental Monitoring and Audit Manual.

Contract Title: Drainage Improvement Works in Shuen Wan and Shek Wu Wai
Updated Programme (No. 6)

ID	Task Name	Duration	Start	Finish	Predecessors
131	Design & submission of TTA (San Tin Tsuen Road) for construction RW1	45 days	Sun 12 Apr 20	Tue 12 Jun 12	
132	Reduction of free surface	75 days	Wed 12 Jun 13	Sun 12 Aug 26	131
133	Construction with RKO & TD to finalize the implementation date of TTA at San Tin	45 days	Wed 12 Jun 13	Fri 12 Jul 21	
134	Site Road	30 days	Mon 12 Aug 27	Tue 13 Sep 25	132, 133
135	Implementation of TTA at San Tin Tsuen Road	180 days	Tue 12 Nov 6	Mon 13 May 6	134
136	Construction of access ramp	102 days	Wed 13 Feb 6	Sun 13 May 19	135
137	Construction of concrete parapet	60 days	Thu 13 Jul 18	Wed 13 Jul 17	136
138	Installation of railing and vehicular gate	60 days	Sun 13 Sep 15	Sun 13 Sep 15	137
139	Rehabilitate Wadi RW3 & RW4	264 days	Fri 13 Feb 15	Mon 13 Apr 15	137
140	Removal of steel road bridge at upstream	60 days	Fri 13 Feb 15	Mon 13 Apr 15	139
141	Construction of RW4	75 days	Tue 13 Apr 16	Sun 13 Jun 29	140
142	Construction of RW3	75 days	Thu 13 Sep 10	Thu 13 Sep 12	141
143	UU detector permanent works	74 days	Fri 13 Sep 13	Mon 13 Nov 11	142
144	Installation of Type 2 falling and construction of flood wall	60 days	Fri 13 Sep 13	Mon 13 Nov 11	143
145	Rehabilitation of footpath and planter areas	74 days	Fri 13 Sep 13	Mon 13 Nov 11	144
146	Completion of Section II	0 days	Fri 14 Feb 14	Fri 14 Feb 14	145, 138, 144, 142
147					
148	Section III (Construction Works in Wai Ha Village)	748 days	Wed 11 Oct 12	Mon 13 Oct 28	
149	Commence of Works	0 days	Wed 11 Oct 12	Wed 11 Oct 12	
150	Design of 2.4m x 0.9m Box Culvert	65 days	Thu 11 Oct 13	Wed 11 Dec 14	
151	Submission of design & works proposal for Approval	60 days	Thu 11 Oct 13	Sun 12 Feb 12	150
152	Site Clearance & trial pits	30 days	Mon 12 Feb 13	Tue 12 Mar 13	151
153	Construction of Box Culvert (approx. 200m) Bay 1 to Bay 16	515 days	Fri 12 Jan 1	Mon 13 Oct 28	152
154	Bay 1	45 days	Sun 13 Mar 7	Thu 13 May 21	153
155	Bay 2	45 days	Sun 13 Apr 7	Mon 13 May 21	154
156	Bay 3	45 days	Fri 12 Oct 26	Mon 12 Dec 24	155
157	Bay 4	45 days	Fri 12 Oct 26	Mon 12 Dec 24	156
158	Bay 5	45 days	Fri 12 Oct 26	Mon 12 Dec 24	157
159	Bay 6	45 days	Sun 12 Nov 25	Wed 13 Jan 23	158
160	Bay 7	45 days	Tue 12 Dec 25	Fri 13 Feb 22	159
161	Bay 8	45 days	Wed 13 Mar 22	Sat 13 Jul 20	160
162	Bay 9	45 days	Wed 13 Mar 22	Sat 13 Jul 20	161
163	Bay 10	45 days	Wed 13 Mar 22	Sat 13 Jul 20	162
164	Bay 11	75 days	Sun 12 Aug 12	Thu 12 Oct 25	163
165	Bay 12	75 days	Sun 12 Aug 12	Thu 12 Oct 25	164
166	Bay 13	72 days	Fri 12 Aug 11	Wed 13 Sep 18	165
167	Bay 14	60 days	Sat 13 Jul 21	Wed 13 Sep 18	166
168	Bay 15	60 days	Sat 13 Jul 21	Wed 13 Sep 18	167
169	Bay 16	60 days	Sat 13 Jul 21	Wed 13 Sep 18	168
170	Bay 17	40 days	Thu 13 Sep 19	Mon 13 Oct 28	169
171	Bay 18 and Outfall	40 days	Thu 13 Sep 19	Mon 13 Oct 28	170
172					
173	Construction of box culvert (1m x 1m) Bay 1 to Bay 8 (approx. 50m)	485 days	Sun 12 Jul 1	Mon 13 Oct 28	
174	Notification to villagers regarding traffic arrangement for construction of 1 m x 1 m box culvert	90 days	Sun 12 Jul 1	Fri 12 Sep 28	
175	Intake headwall	23 days	Sun 13 Oct 6	Mon 13 Oct 28	174
176	Bay 1	23 days	Sun 13 Oct 6	Mon 13 Oct 28	175
177	Bay 2	47 days	Sun 12 Nov 18	Thu 13 Jan 3	176
178	Bay 3	75 days	Mon 12 Oct 22	Fri 13 Jan 4	177
179	Bay 4	30 days	Thu 13 Mar 23	Fri 13 Jun 21	178
180	Bay 5	30 days	Sun 13 Jun 22	Sun 13 Jul 21	179
181	Bay 6	30 days	Mon 13 Jul 22	Thu 13 Aug 20	180
182	Bay 7	23 days	Wed 13 Aug 21	Thu 13 Sep 12	181
183	Bay 8	23 days	Fri 13 Sep 13	Sat 13 Oct 5	182
184	Bay 9	60 days	Tue 13 Apr 23	Wed 13 Mar 22	183
185	Bay 10	60 days	Sat 13 Apr 24	Wed 13 Mar 22	184
186	CCTV inspection of box culvert	23 days	Sun 13 Oct 6	Mon 13 Oct 28	185
187	Grouting of existing 900mm storm drain	23 days	Sun 13 Oct 6	Mon 13 Oct 28	186
188	Completion of Section III	0 days	Mon 13 Oct 28	Mon 13 Oct 28	187, 188, 189
189					
190	Section IV (Gradient A1 and A2, Shuen Wan)	1345 days	Fri 11 Apr 29	Wed 14 Dec 31	
191	Landscape Establishment Works and preservation & protection of trees	1345 days	Fri 11 Apr 29	Wed 14 Dec 31	
192					
193	Section V (Gradient B, Shek Wu Wai)	1388 days	Fri 11 Apr 29	Sat 15 Feb 14	
194	Landscape Establishment Works and preservation & protection of trees	1388 days	Fri 11 Apr 29	Sat 15 Feb 14

Calibration certificates of the monitoring equipment and Certificate of ALS Technichem (HK) Pty Ltd

Equipment Calibration List

Items	Aspect	Description of Equipment	Date of Calibration	Date of Next Calibration
1	Noise	Bruel & Kjaer Integrating Sound Level Meter (Serial No. 2285762)	27 April 13	27 April 14
2		Bruel & Kjaer Acoustical Calibrator (Serial No. 2326408)	15 April 13	15 April 14
3	Water	SONDA YSI 6820 (Serial No. 02J0912)	12 Jul 13	12 Oct 13

Note: *Calibration certificates will only be provided when monitoring equipment is re-calibrated or new.

Appendix F

Event and Action Plan

Event Action Plan for Construction Noise

EVENT	ACTION			
	ET Leader	IEC	ER	Contractor
Action Level	<ol style="list-style-type: none"> 1. Notify IEC and Contractor 2. Carry out investigation. 3. Report the results of investigation to the IEC, ER and Contractor. 4. Discuss with the Contractor and formulate remedial measures 5. Increase monitoring frequency to check mitigation effectiveness. 	<ol style="list-style-type: none"> 1. Review the analyzed results submitted by the ET. 2. Review the proposed remedial measures by the Contractor and advise the ER accordingly 3. Supervise the implementation of remedial measures 	<ol style="list-style-type: none"> 1. Confirm receipt of notification of failure in writing 2. Notify Contractor 3. Require Contractor to propose remedial measures for the analyzed noise problem 4. Check remedial measures are properly implemented. 	<ol style="list-style-type: none"> 1. Submit noise mitigation proposals to IEC 2. Implement noise mitigation proposals
Limit Level	<ol style="list-style-type: none"> 1. Notify IEC, ER, EPD and Contractor 2. Identify source. 3. Repeat measurements to confirm findings 4. Increase monitoring frequency. 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented 6. Inform IEC, ER and EPD the causes and actions taken for the exceedances 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results 8. If exceedance stops, cease additional monitoring. 	<ol style="list-style-type: none"> 1. Discuss amongst ER, ET, and Contractor on the potential remedial actions 2. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly 3. Supervise the implementation of remedial measures 	<ol style="list-style-type: none"> 1. Confirm receipt of notification of failure in writing 2. Notify Contractor 3. Require Contractor to propose remedial measures for the analyzed noise problem 4. Check remedial measures properly implemented. 5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated 	<ol style="list-style-type: none"> 1. Take immediate action to avoid further exceedance 2. Submit proposals for remedial actions to IEC within 3 working days of notification 3. Implement the agreed proposals 4. Resubmit proposals if problem still not under control 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated

Event and action Plan for Water Quality

Event	ET Leader	IEC	ER	Contractor
ACTION LEVEL				
Action level being exceeded by one sampling day	<ol style="list-style-type: none"> Repeat in-situ measurements to confirm findings; Identify reasons for non-compliance and source(s) of impact; Inform IEC, Contractor and Engineer; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC, Engineer and Contractor; Ensure mitigation measures are implemented. Repeat measurement on next day of exceedance. 	<ol style="list-style-type: none"> Discuss mitigation measures with ET, Engineer and Contractor; Review proposals on mitigation measures submitted by Contractor and advise the Engineer accordingly; Assess effectiveness of implemented mitigation measures. 	<ol style="list-style-type: none"> Discuss proposed mitigation measures with IEC, ET and Contractor; Make agreement on mitigation measures to be implemented; Assess effectiveness of implemented mitigation measures. 	<ol style="list-style-type: none"> Inform Engineer and confirm in writing notification of the non-compliance; Rectify unacceptable practice; Check all plant and equipment; Consider changes in working methods; Discuss with ET, IEC and Engineer and propose mitigation measures to IEC and Engineer within three working days; Implement agreed mitigation measures.
Action level being exceeded by more than two consecutive sampling days	<ol style="list-style-type: none"> Repeat in-situ measurements to confirm findings; Identify reasons for non-compliance and source(s) of impact; Inform IEC, Contractor and Engineer; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC, Engineer and Contractor; Ensure mitigation measures are implemented. Prepare to increase the monitoring frequency to daily; Repeat measurement on next day of exceedance. 	<ol style="list-style-type: none"> Discuss mitigation measures with ET, Engineer and Contractor; Review proposals on mitigation measures submitted by Contractor and advise the Engineer accordingly; Assess effectiveness of implemented mitigation measures. 	<ol style="list-style-type: none"> Discuss proposed mitigation measures with IEC, ET and Contractor; Make agreement on mitigation measures to be implemented; Assess effectiveness of implemented mitigation measures. 	<ol style="list-style-type: none"> Inform Engineer and confirm in writing notification of the non-compliance; Rectify unacceptable practice; Check all plant and equipment; Consider changes in working methods; Discuss with ET, IEC and Engineer and propose mitigation measures to IEC and Engineer within three working days; Implement agreed mitigation measures
LIMIT LEVEL				
Limit level being exceeded by one sampling day	<ol style="list-style-type: none"> Repeat in-situ measurements to confirm findings; Identify reasons for non-compliance and source(s) of impact; Inform EPD, IEC, Contractor and Engineer; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC, Engineer and Contractor; Ensure mitigation measures are implemented; Increase the monitoring frequency to daily until no exceedance of Limit Level. 	<ol style="list-style-type: none"> Discuss mitigation measures with ET, Engineer and Contractor; Review proposals on mitigation measures submitted by Contractor and advise the Engineer accordingly; Assess effectiveness of implemented mitigation measures. 	<ol style="list-style-type: none"> Discuss proposed mitigation measures with IEC, ET and Contractor; Request Contractor to critically review the working methods; Make agreement on mitigation measures to be implemented; Assess effectiveness of implemented mitigation measures. 	<ol style="list-style-type: none"> Inform Engineer and confirm in writing notification of the non-compliance; Rectify unacceptable practice; Check all plant and equipment; Consider changes in working methods; Discuss with ET, IEC and Engineer and propose mitigation measures to IEC and Engineer within three working days; Implement agreed mitigation measures.
Limit level being exceeded by more than two consecutive sampling days	<ol style="list-style-type: none"> Repeat in-situ measurements to confirm findings; Identify reasons for non-compliance and source(s) of impact; Inform EPD, IEC, Contractor and Engineer; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC, Engineer and Contractor; Ensure mitigation measures are implemented. Meteorological Data of Reporting Period

Meteorological Data in Reporting Period

Date	Weather	Total Rainfall (mm)	Tai Po Station		Shatin Station		
			Mean Air Temp. (°C)	Mean Relative Humidity (%)	Wind Speed (km/h)	Wind Direction	
1-Aug-13	Thu	Cloudy, a few showers, squally thunderstorms, Fresh easterly winds, occasionally strong offshore and on high ground	4.5	27.9	83.7	12.2	E/NE
2-Aug-13	Fri	Cloudy, gale, squally showers, strong east to southeasterly winds.	72.4	26.6	88.2	10	E/NE
3-Aug-13	Sat	Cloudy, rain, squally showers, strong east to southeasterly winds.	13.3	27.5	87.5	10.5	S/SE
4-Aug-13	Sun	Fine and very hot. Light winds.	Trace	28.3	79	4.8	S/SE
5-Aug-13	Mon	Fine and very hot. Light winds.	0	28.5	80.5	6.4	E/NE
6-Aug-13	Tue	Very hot, squally thunderstorms, moderate southeasterly winds.	0	28.4	78.5	8.2	E/SE
7-Aug-13	Wed	Sunny intervals, moderate southeasterly winds.	0.5	28.9	78.7	9.2	E/SE
8-Aug-13	Thu	Fine, very hot, light to moderate southerly winds.	1.3	29.4	76	7	S/SW
9-Aug-13	Fri	Fine and very hot. Light to moderate westerly winds.	0	30.2	66.5	7.5	SW
10-Aug-13	Sat	Very hot, fine, isolated showers, Light to moderate westerly winds.	0	29.7	77.2	6.8	S/SW
11-Aug-13	Sun	Fine, very hot, isolated showers. Light to moderate westerly winds.	0	29.2	74	8.7	E/SE
12-Aug-13	Mon	Fine, very hot, isolated showers. Moderate easterly winds.	Trace	30	70	6.8	N
13-Aug-13	Tue	Cloudy to overcast with heavy squally showers and a few thunderstorms.	48.4	27.8	82.5	11.9	N/NE
14-Aug-13	Wed	Cloudy, moderate, squally showers, Strong south to southeasterly winds.	59.4	26.4	89	18.9	SE
15-Aug-13	Thu	Cloudy to overcast, rain, Fresh gusty southerly winds.	0.7	27.3	85.5	17.7	S/SW
16-Aug-13	Fri	Cloudy to overcast, rain, Fresh gusty southerly winds.	5.3	27.1	97	13.3	S/SW
17-Aug-13	Sat	Cloudy, a few showers, thunderstorms, Moderate southerly winds.	35.6	27.1	87.5	12.7	SW
18-Aug-13	Sun	Sunny periods, isolated showers, hot, Light winds.	3.7	28.2	86.7	9.5	S/SW
19-Aug-13	Mon	Cloudy, a few showers, thunderstorms, Moderate southerly winds.	30.6	27.1	92.2	5.4	N/NE
20-Aug-13	Tue	Sunny periods, isolated showers, hot, Light winds.	Trace	29	80	6.9	E/NE
21-Aug-13	Wed	Hot, sunny periods, thunderstorms, Light to moderate westerly winds.	0.2	28.9	82.2	4.8	N
22-Aug-13	Thu	Cloudy, squally thunderstorms, Moderate to fresh westerly winds.	20.1	29.4	76.5	8.2	SW
23-Aug-13	Fri	Cloudy, showers, squally thunderstorms, Moderate to fresh south to southwesterly winds.	26	26.8	88.2	13.9	SW
24-Aug-13	Sat	Cloudy, thunderstorms. Moderate to fresh south to southwesterly winds.	51.6	27.4	88.7	14.5	SW
25-Aug-13	Sun	Very hot, isolated showers, Moderate to fresh south to southwesterly winds.	7.3	27.7	84.5	6.5	E/SE
26-Aug-13	Mon	Very hot, isolated showers, Light to moderate east to southeasterly winds.	0	28.8	80.5	7.5	N/NE
27-Aug-13	Tue	Fine, very hot, isolated showers. Light to moderate southerly winds.	0	29	77.5	9.1	N/NE
28-Aug-13	Wed	Fine, very hot, isolated showers. Light to moderate southerly winds.	0	29.3	75.5	7.7	S/SW
29-Aug-13	Thu	Fine, very hot, isolated showers. Light to moderate southerly winds.	0	29.6	77	8.2	E/NE
30-Aug-13	Fri	Cloudy, showers, thunderstorms. Moderate west to southwesterly winds.	29.5	26.4	88.2	9.2	E/NE
31-Aug-13	Sat	Cloudy, showers, thunderstorms. Moderate west to southwesterly winds.	35	25.5	89.5	11	E/NE

* The record was downloaded from The Hong Kong Observatory Weather Stations

Appendix I

Data Base of Monitoring Results

Construction Noise Measurement Data

Designated Monitoring Station – M1 (14, Shuen Wan Chim Uk)

Date	Start Time	1 st Leq _{5min}	2 nd Leq _{5min}	3 rd Leq _{5min}	4 th Leq _{5min}	5 th Leq _{5min}	6 th Leq _{5min}	Leq _{30min} *
7-Aug-13	14:20	-	-	-	-	-	-	65.3
16-Aug-13	13:00	-	-	-	-	-	-	66.8
21-Aug-13	14:00	-	-	-	-	-	-	65.7
28-Aug-13	13:00	-	-	-	-	-	-	64.3
Limit Level								> 75 dB(A)

(*)The monitoring is undertaken under façade situation. No façade correction is added according to acoustical principles and EPD guidelines.

Designated Monitoring Station – AL1 (Joint Village Office for Villages in Shuen Wan, Tai Po)

Date	Start Time	1st Leq _{5m} in	2nd Leq _{5m} in	3rd Leq _{5m} in	4th Leq _{5m} in	5th Leq _{5m} in	6th Leq _{5m} in	Leq _{30min} *
7-Aug-13	15:00	-	-	-	-	-	-	66.5

Notes:

- (1) The performance targets are given in ETWB Technical Circular PS Clause 6(14).
- (2) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.
- (3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material
- (4) The Contractor shall also submit the latest forecast of the total amount of C&D materials expected to be generated from the Works, together with a breakdown of the nature where the total amount of C&D materials expected to be generated from the Works is equal to or exceeding 50,000 m³. (ETWB Technical Circular PS Clause 5(4)(b) refers).
 [Delete Note (4) and the table above on the forecast, where inapplicable].

Summary Table for Work Processes or Activities Requiring Timber for Temporary Works

Contract No. : DC/2010/02

Contract Title : Drainage Improvement Works in Shuen Wan and Shek Wu Wai

Item No.	Description of Works Process or Activity [see note (a) below]	Justifications for Using Timber in Temporary Construction Works	Est. Quantities of Timber Used (m3)	Actual Quantities used (m3)	Remarks
1.	Formwork for concreting	Easy handle by manpower	2.71	2.7	
2.					
3.					
4.					
5.					
6.					
7.					
8.					
Total Estimated Quantity of Timber Used			2.71		

Notes:

- a. The Contractor shall list out all the work items requiring timber for use in temporary construction works. Several minor work items may be grouped into one for ease of updating.
- b. The summary table shall be submitted to the *Architect/Engineer's Representative monthly together with the Waste Flow Table for review and monitoring in accordance with the ETWB Technical Circular 19/2005 PS sub-clause 5(5) in Appendix C.

1 INTRODUCTION

- 1.1.1 The Landscape and Visual Monitoring of the Project is conducted to fulfill Clauses 5.2 and 5.4 of EP-303/2008 and the monitoring requirements in accordance with Section 7 of the approved updated EM&A Manual (approved by EPD on 31st May 2012) of the Project. A Baseline Review on updating the landscape and visual condition, and the mitigation measures of the Project (including Contracts 1 and 2 of the Project) was undertaken before the commencement of the Project. The review findings were updated in the Baseline Environmental Monitoring Report submitted to the EPD on 14th February 2011.
- 1.1.2 This monthly monitoring report will detail the scope of landscape and visual monitoring work, monitoring findings and observations, and any recommendation and advice on proper implementation of the landscape mitigation measures in the works areas under Contract 2 of the Project.

2 SCOPE OF MONITORING

2.1 Monitoring objectives

- 2.1.1 Landscape and Visual Monitoring of the Project should be conducted on a bi-weekly basis for checking the design, implementation and maintenance of the landscape and visual mitigation measures throughout the construction phase and in a quarterly basis during operational phase of the Project. Observations of any potential conflicts between the proposed mitigation measures and the project works carried out by the Contractors should be recorded. Recommendation and advice on proper implementation of the landscape mitigation measures should be provided to the Contractor for minimizing any potential impacts on the landscape and visual elements.

2.2 Monitoring during Construction Phase

- 2.2.1 The following landscape and visual mitigation measures should be implemented during the construction phase of the project to minimize the potential impacts:
- *Visual Screen* – Use of hoardings as visual screens for the construction in the works areas;
 - *Contaminant/ Sediment Control* – Use of temporary barriers, covers and drainage provision around the construction works as contaminant/ sediment control to prevent the contaminants and sediments from entering the sensitive water-based habitats;
 - *Pollution Control* – Implementation of pollution control measures to minimize any adverse environmental impacts to the surrounding habitats;
 - *Liaison with Nursery* (Not relevant to Contract 2 of the Project) – Liaison with the nursery operator as necessary to minimize any adverse impact to the daily operation and plant holding capacity of the nursery;
 - Existing Trees within Works Area – Maintenance and protection of the existing trees, especially their crowns, trunks and roots, within work sites; and
 - Construction Light – Provision of construction light should be controlled at night to avoid excessive glare to the surrounding villages and to Plover Cove.

2.3 Monitoring during Operational Phase

2.3.1 The following landscape and visual mitigation measures should be implemented during the operational phase of the project to minimize the potential impacts:

- Viewing area formation by planting with shrubs, grasses and benches along the area;
- Architectural design of the pump house will help it fit into the existing suburban, natural to semi-natural surroundings (Not relevant to Contract 2 of the Project);
- Landscape design of pump house by providing sufficient planting around its boundary fence (Not relevant to Contract 2 of the Project);
- Enhancement planting along Tung Tsz Road with shrubs/ trees of suitable species to help protect the stream and marshes;
- Construction of box culvert should be with at least 1.0m soil depth for enhancement planting;
- Transplanting of existing affected trees to adjacent locations should be carried out;
- Preparation for transplanting is needed to allow sufficient time for root pruning and rootball preparation prior to transplanting; and
- Reinstatement of affected area should be carried out to check that the works areas are properly reinstated.

3 LANDSCAPE & VISUAL MONITORING RESULTS

3.1 Monitoring Date(s)

3.1.1 This monthly Landscape and Visual Monitoring (August 2013) was conducted to cover only areas of Contract 2 of the Project (i.e. the construction of a twin-cell box culvert close to Shuen Wan Conservation Area and Wai Ha River along Tung Tsz Road, and a drainage pipe near Wai Ha Village). The bi-weekly monitoring was conducted on 9th and 22nd August 2013.

3.1.2 All photos stated in this section are recorded in **Appendix A**.

3.2 Visual Screen

3.2.1 No follow-up action by the Contractor is required as from the *Monthly EM&A Report for July 2013*.

Observation

3.2.2 Temporary hoardings, in the form of construction barriers, have been erected from west to east parts along Tung Tsz Road from the opposite side of Wai Ha to the opposite side of San Tau Kwok. The construction works along the access road from Tung Tsz Road towards Treasure Spot Garden II have also been demarcated with temporary construction barriers. Another section of temporary hoardings has been erected next to the path outside Treasure Spot Garden II. **Photos 1-2** show the views of the erected hoardings along the active works area under Contract 2.

3.2.3 Sheet piling work continues in the works area along Tung Tsz Road opposite to Wai Ha outside the public toilet (**Photo 3**) and near the retained tree T190 (**Photo 4**). During the monitoring on 9th August 2013, sheet piling work was seen close to the retained tree T196 (**Photo 5**).

- 3.2.4 No hoardings have been erected along the rest of the proposed works area since neither construction works nor any associated preparation works have been commenced.
- 3.2.5 To the southeast of Jade View Villa and adjacent to the current active works area, a demarcated wetland rehabilitation area has been maintained by parties other than the Project Proponent, the Project's Contractor and Sub-contractors since January 2012. Temporary construction barriers were seen surrounding the eastern side of the area (**Photo 6**).
- 3.2.6 Outside the established hoardings of the Project Area, temporary storage of construction materials was still found next to the retained tree T179 in August 2013 (**Photo 7**).
- 3.2.7 The temporary parking area was still observed at the end of the access path to Treasure Spot Garden Phase II (**Photo 8**). The untagged leaning tree was still guyed at the edge of the area within a Tree Protection Zone (TPZ), which was demarcated by orange construction nets (**Photo 9**). However, the vehicle was still parked close to the TPZ.
- 3.2.8 As reported in the previous *Monthly EM&A Reports*, dumping on the Taro field located along the path towards the Treasure Spot Garden was observed and a paved area created for parking next to the retained tree groups (T088 – T091) has been found since November 2012. However, no extension of the dumping area has been noted since April 2013.

Recommendations

- 3.2.9 No specific recommendation is required. However, with regard to the previous dumping incident by other parties on the Taro field near the Treasure Spot Garden, the Contractor is recommended to check the site condition regularly to avoid any extent of dumping or paving of area within the project boundary.
- 3.2.10 The Contractor should also make sure there are no piled rocks, construction materials or programmed construction works influencing the existing trees within the Project Area or the wetland rehabilitation area.
- 3.2.11 The Contractor could establish a warning sign to remind the driver to beware of the presence of the tree(s) close to the temporary parking area.

3.3 Contaminant/ Sediment Control

- 3.3.1 A series of sedimentation beds with gravels have been built along the boundary of the active works area to the south of Wai Ha and close to Tung Tsz Road in accordance with the recommendation stated in the *Monthly EM&A Report for July 2013*.

Observation

- 3.3.2 Provision of dust control measure (such as wheel washing facilities) has been maintained at two major vehicular exit points of the works area of Contract 2 (**Photo 10**).
- 3.3.3 The sections of granules of the sedimentation beds located from north to south near the retained tree T196 (*Macaranga tanarius* var. *tomentosa*) have been restored in August 2013 (**Photo 11**).
- 3.3.4 Another sedimentation beds aligned from the area opposite to the Jade View Villa towards the marsh area at southeast have been maintained since October 2012. No muddy water was observed to be discharged into the drainage points but the beds were overgrown by dense grassy vegetation (**Photo 12**).

3.3.5 There has been another section of sedimentation beds aligned from the area opposite to the eastern part of Jade View Villa towards the marsh area since December 2012. The used water was released into the sedimentation beds and no discharge of muddy water was observed (**Photo 13**).

3.3.6 No more discharge was observed at the discharge point at which a filtration tank has been previously placed opposite to San Tau Kok since April 2013 (**Photo 14**).

Recommendations

3.3.7 Regular monitoring should be conducted to ensure no direct discharge or leakage of contaminants or any polluted fluid into the adjacent Wai Ha River and the nearby Shuen Wan marsh. The Contractor should maintain regular check (e.g. daily) on the sedimentation and filtration facilities and appropriate sedimentation beds and/or tanks throughout the construction phase (e.g. check the function of the sedimentation beds and remove surplus sand and gravels deposited along the beds or within the tanks) to make sure all discharged water was filtered appropriately prior to any discharge. The Contractor should have *ad hoc* inspection and emergency measures for any accidental spillage of polluted fluid, contaminants or grease from the construction sites. To prevent the impact of the unclear discharge on the nearby vegetated area, it is suggested to overlay PVC liners along the site edge and remove any surplus sand and gravels deposited in the beds and tank even some parts of the construction works may be completed at this stage.

3.4 Pollution Control

3.4.1 No follow-up action by the Contractor is required as from the *Monthly EM&A Report for July 2013*.

Observation

3.4.2 As mentioned in Section 3.3, the sections of granules of the sedimentation beds located from north to south near the retained tree T196 (*Macaranga tanarius* var. *tomentosa*) have been restored in August 2013 (**Photo 11**).

3.4.3 Another sedimentation beds aligned from the area opposite to the Jade View Villa towards the marsh area at southeast have been maintained since October 2012. No muddy water was observed to be discharged into the drainage points but the beds were overgrown by dense grassy vegetation (**Photo 12**).

3.4.4 There has been another section of sedimentation beds aligned from the area opposite to the eastern part of Jade View Villa towards the marsh area since December 2012. The used water was released into the sedimentation beds and no discharge of muddy water was observed (**Photo 13**).

3.4.1 No more discharge was observed at the discharge point at which a filtration tank has been previously placed opposite to San Tau Kok since April 2013 (**Photo 14**).

3.4.2 No direct water discharge into the upper stream of Wai Ha River was observed as the active construction works have been concentrated at the lower end of Wai Ha River to the southeast of Tung Tsz Shan Road (**Photo 15**).

Recommendations

3.4.3 The Contractor should prevent any contaminants and sediments from entering the sensitive water-based habitats (i.e. Shuen Wan marsh and Wai Ha River) and implement pollution control measures to minimize any adverse environmental impacts to the water body. The Contractor should maintain appropriate sedimentation beds and/or tanks throughout the construction phase. The Contractor should adopt a good site practice in maintaining appropriate sedimentation beds and filtration tanks as recommended in the above Section for Contaminant/ Sediment Control.

3.4.4 The Contractor should have *ad hoc* inspection and emergency measures for any accidental spillage of polluted fluid, contaminants or grease from the construction sites. It is also recommended to overlay PVC liners along the site edge and remove any surplus sand and gravels deposited in the beds and tank so as to prevent the impact of the unclear discharge on the nearby vegetated area.

3.5 Liaison with Nursery

3.5.1 The construction undertaken within Tung Tsz Nursery is restricted under Contract 1 of the Project. This monitoring item is not applicable to Contract 2 of the Project.

3.6 Existing Trees within Works Areas

3.6.1 Individual trees retained within the active works area have been protected within TPZs. The protection measures generally follow the recommendations stated in the *Monthly EM&A Report for July 2013*. Particular observations are highlighted in the following paragraphs.

Observation

3.6.2 No more vegetation clearance was found in the works area.

3.6.3 Most trees which are proposed to be retained within the Project Area were recorded generally in fair health condition and some of the retained trees were naturally covered by invasive climbers.

3.6.4 During the monitoring on 22nd August 2013, the tree tag of the retained tree T093 (*Litsea cubeba*) was seen on the ground (**Photo 16**). In addition, temporary storage of construction materials were placed close to the trunk flares and tree trunks of T093 and T094 (both *Litsea cubeba*) (**Photo 17**).

3.6.5 The leaning tree T190 (*Ficus hispida*) has been supported by a wooden prop since the installation on July 2013 (**Photo 18**). Plastic foam sheet was still wrapping around the tree trunk at the anchorage point of the stand in August 2013. It is aimed to reduce the friction between the leaning tree trunk and the wooden prop.

3.6.6 Construction works at the end of the Treasure Spot Garden have commenced since October 2012. The excavation works under the drip line of the retained tree T103 (*Litchi chinensis*) were finished in January 2013. Soil was refilled to the root zone area of the tree; however, tapes and ropes were still found tied on the trunk (**Photo 19**).

3.6.7 The retained tree T196 (*Macranga tanarius* var. *tomentosa*) was not found in the site during the monitoring on 22nd August 2013 (**Photo 20**). According to the Main Contractor, the tree was collapsed after the super typhoon Utor which was hoisted as No. 8 typhoon signal on 14th August 2013. The incident was reported to the Project Proponent by the Main Contractor and photo record was shown in **Photo 21**.

- 3.6.8 The soil level of the construction site opposite to San Tau Kok was lowered to the same soil level of the adjacent mangroves. Some mangrove trees were damaged and piled soil was noted at the trunk bases of these mangroves (**Photo 22**).
- 3.6.9 Sheet piling works were conducted within the tree root zone of a retained tree T025 (*Celtis sinensis*) in June 2013, in which the sheet piles were installed very close to the trunk base. Therefore, root damage by the sheet piling works is anticipated. In addition, the tree was over-pruned in June 2013. The tree was temporarily guyed by three strings so as to provide additional support to the tree. One major branch was topped and the whole tree form was changed due to the recent pruning and topping practice. The condition of the tree was still closely monitored in August 2013 (**Photo 23**).
- 3.6.10 As stated in Section 3.2, a TPZ was set up with orange construction nets to protect the untagged leaning tree from the newly formed temporary parking area at Treasure Spot Garden Phase II. However, the vehicle was parked close to the TPZ (**Photos 8-9**).
- 3.6.11 No significant signs of damage on other existing tree crowns, trunks and roots resulting from the construction works were observed in this monthly monitoring.
- 3.6.12 As Area C under Contract 1 of the Project has been formally handed over to AFCD for management and maintenance since October 2012, no access into the ECA is allowed. One transplanted shrub of *Pavetta hongkongensis* (PH-03) was inspected regularly through the fence of Tung Tsz Nursery and it has remained in satisfactory condition (**Photo 24**).

Recommendations

- 3.6.13 Within the active works area, maintenance of TPZs for the retained trees and the trees to be transplanted should be continued. Trunk bases of all retained trees should be kept clear, with no stockpiled soil, construction equipments and rubbish allowed around the trunk bases and within the TPZs. If necessary, these retained trees shall be watered regularly to maintain their health. All fallen trees or tree parts of the existing trees maintained within the works area of Contract No. DC/2010/02 should be removed if they pose imminent hazards to the people/property or cause obstruction to the traffic. Any broken tree parts still attached to the trees could be pruned appropriately to prevent their potential hazard to the public and property.
- 3.6.14 Disturbance is prohibited in all TPZs. In any practical circumstances, the contractor should follow Section 8 of Annex 4 of the approved Landscape Plan for protecting the existing trees from any potential damages resulting from the construction works. In addition, the Contractor and the Project Proponent should have routine inspection on any tree remedial works conducted by other party on the trees within the Project Area.
- 3.6.15 The wooden stand for supporting the leaning tree T190 (*Ficus hispida*) should be checked regularly to ensure its efficiency in supporting the leaning trunk. The Contractor should have close monitoring of the stability of the tree and the prop, as well as the leaning severity. The Contractor and the Project Proponent have to restrict any access within the tree falling zone of this tree with regard to its leaning trunk.
- 3.6.16 As there may be a risk of its overall tree stability of the retained tree T103 in the long run with regard to the potentially damaged roots and thin soil within the drip line of T103, as a reminder, the Contractor should be aware of its stability throughout the construction phase. The tape and ropes tied on the tree trunk should be removed. If necessary, it is

recommended to remove the overgrown climbers on the tree canopy so as to reduce the crown load supported by this tree.

- 3.6.17 With regard to the previous tree topping incident on the retained trees T088 and T089, and the concern on the long-term tree stability of the retained tree T103, as a reminder, the Contractor is suggested to monitor the trees protected within the project boundary regularly. The Contractor should be aware of any potential damage on the trees by other contractor(s) undertaking construction work concurrently.
- 3.6.18 Tree topping (like to case for T025) should be prohibited and the Contractor should appoint qualified landscape contractor to perform appropriate pruning practice. The pruning works should follow any local, national or international standards for pruning works and relevant tree remedial works. Given that the tree roots could be damaged by sheet piling works and the topped tree exists with unbalanced tree form, the long-term tree stability and health condition should be checked after the removal of the sheet piles. The Contractor should have close monitoring of tree stability with regard to its unbalanced tree form. Meanwhile, the Contractor and sub-contractor should carefully design the civil works. Common civil works, such as excavation and sheet piling works, should be programmed and designed carefully by taking tree buffer zone into consideration. The works should avoid affecting the tree canopy, trunk and underground root zone with regard to tree dripline as far as possible.
- 3.6.19 As the concrete paved temporary parking area at Treasure Spot Garden Phase II was close to the untagged tree, the roots may be damaged and hence the stability of the tree would be affected. The tree may also be damaged by the parking vehicles. Therefore, the Contractor is advised to provide better tree protection measures such as increasing the buffer zone between the parking area and the trees and establish a warning sign to remind the driver to beware of the presence of trees within the tree protection zone. The health and stability of the tree should also be monitored by the Contractor regularly.
- 3.6.20 Vegetation clearance close to T093 and T094 (both *Litsea cubeba*) was conducted in July 2013 (reported in *Monthly EM&A Report for July 2013*). As temporary storage of construction materials were noted close to the tree flares and within the tree driplines, the Contractor is advised to establish proper Tree Protection Zone (e.g. an area of at least 1m from tree trunks) and prohibit any construction works and storage of construction materials within and close to the zone.

3.7 Construction Light

- 3.7.1 No follow-up action on maintenance of construction light is required as from the *Monthly EM&A Report for July 2013*.

Observation

- 3.7.2 No construction light impact to the surrounding villages and to Plover Cove as all construction activities and construction sites are halted at 1800. No construction light at night is provided by the Contractor.

Recommendation

- 3.7.3 No specific recommendation is required.

4 AUDIT SCHEDULE

- 4.1.1 The next bi-weekly Landscape & Visual Monitoring in September 2013 is scheduled to be conducted in the weeks of 2nd and 16th September 2013.

Appendix A

Photographs

Photo 1 – Temporary hoardings have been erected along Tung Tsz Road opposite to Wai Ha.

Photo 2 – Temporary hoardings have been erected along the access road from Tung Tsz Road to Treasure Spot Garden II.

Photo 3 – Sheet piling work continued in the works area along Tung Tsz Road opposite to Wai Ha outside the public toilet.

Photo 4 – Sheet piling work continued in the works area near the retained tree T190.

Photo 5 – Sheet piling work was seen close to the retained tree T196 (indicated).

Photo 6 – Temporary construction barriers were seen surrounding the eastern side of the wetland rehabilitation area.

Photo 7 – Temporary storage of construction materials was still found next to the retained tree T179 in August 2013.

Photo 8 – Temporary parking area was still observed at the end of the access path to Treasure Spot Garden Phase II.

Photo 9 – The untagged leaning tree was guyed at the edge of the parking area within a Tree Protection Zone.

Photo 10 – Provision of wheel washing facilities noted at one major vehicular exit point of the works area of Contract 2.

Photo 11 – A section of granules of the sedimentation beds located from north to south near the retained tree T196 (*Macaranga tanarius* var. *tomentosa*) was restored in August 2013.

Photo 12 – A sedimentation beds aligned from the area opposite to the Jade View Villa towards the marsh area at southeast. No muddy water was observed but the beds were overgrown by dense grassy vegetation.

Photo 13 – A section of sedimentation beds aligned from the area opposite to the eastern part of Jade View Villa towards the marsh area. No muddy water was discharged.

Photo 14 – No more discharge was observed at the discharge point at which a filtration tank has been previously placed opposite to San Tau Kok since April 2013.

Photo 15 – No direct water discharge into the upper stream of Wai Ha River was observed as the construction works have been concentrated at the lower end of the river.

Photo 16 – Tree tag of T093 was found on the ground.

Photo 17 – Temporary storage of construction materials were noted close to the trunk flares and trunks of T093 and T094 (both indicated).

Photo 18 – The leaning tree T190 has been supported by a wooden prop since July 2013.

Photo 19 – Tapes and ropes were still found tied on the trunk of the retained tree T103.

Photo 20 – The retained tree T196 was not found in the site during the monitoring on 22nd August 2013.

Photo 21 – The retained tree T196 was collapsed under the influence of Typhoon Utor hoisted on 14th August 2013. This photo was provided by the Contractor.

Photo 22 – Stock pile of soil was noted at the trunk bases of some mangrove trees.

Photo 23 – The retained tree T025 was pruned before and it was temporarily guyed to provide additional support to this tree.

Photo 24 – The transplanted shrub of *Pavetta hongkongensis* (PH03) has remained in satisfactory condition in Area C under Contract 1.

Appendix M

**Ecological Monitoring Report in Area
under Contract 2
(Not Used)**
