Attention: Mr. H.K.Chan and Mr. So Chi Ho

Dear Sirs,

Re: Agreement No. DP 01/2010 Services as Independent Environmental Checker for the Drainage Improvement Works in Sha Tin and Tai Po under Contract No. DC/2010/02 Monthly Environmental Monitoring and Audit Report for May 2014

Reference is made to Environment Team's submission of the Monthly Environmental Monitoring and Audit Report for May 2014 by Email on 19 June 2014 (entitled "DC/2010/22 - Monthly Impact EM&A Report (Contract 2) No.35 - May 2014").

Please be informed that we have no comment on the captioned revised report. We write to verify the captioned submission in accordance with Condition 5.4 of EP-303/2008.

Thank you very much for your kind attention and please do not hesitate to contact Mr. Max Lee (5181 - 5165) or the undersigned should you have any queries.

Yours sincerely,

Tony Cheng Independent Environmental Checker

EXECUTIVE SUMMARY

ES.01. This is the **35th** Monthly Environmental Monitoring and Audit (EM&A) Report for designated works of *DSD Contract No. DC/2010/02 - Drainage Improvement in Shuen Wan and Shek Wu Wai* (hereafter "Contract 2") under Environmental Permit No.EP-303/2008, covering a period from **1 to 31 May 2014** (hereinafter 'the Reporting Period').

ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

ES.02. Environmental monitoring activities under the EM&A programme in this Reporting Period are summarized in the following table.

Issues	Environmental Monitoring Parameters / Inspection	Occasions
Construction	$L_{eq (30min)}$ Daytime – M2, M3 & M4	12
Noise	$L_{eq (30 min)}$ Daytime – M1 & AL1	8
	Local Stream Water Sampling – W1, W3 and W4	13
Water Quality	Local Stream Water Sampling – W2	13
Water Quality	Hydrological characteristics measurement – H1 and H2	5
	Hydrological characteristics measurement – H3 and H4	5
Inspection /	Monthly Environmental Site Inspection and audit by IEC	1
Audit	Regular weekly Environmental inspection by the Contractor, ET and Site Representative Engineer	4
Ecological Bi- monthly Ecological Monitoring		1
Landscape & Visual	Bi-weekly Inspection by a registered Landscape Architect	2

- ES.03. In this Reporting Period, ecological monitoring in Area under Contract 2 was performed on 13 May 2014.
- ES.04. Landscape and visual inspection was carried on 12 and 30 May 2014 and the monthly Landscape & Visual Report (May 2014) has been signed by the registered Landscape Architect.

BREACH OF ACTION AND LIMIT (A/L) LEVELS

ES.05. No exceedance in construction noise monitoring is recorded in this Reporting Period. For water quality monitoring, a total of 82 Action/ Limit Level exceedances, namely 39 exceedances in dissolved oxygen, 35 exceedances in turbidity and 18 exceedances in SS were recorded in this Reporting Period. NOEs were issued to notify EPD, IEC, the Contractor and RE upon confirmation of the results. The statistics of environmental exceedance, NOE issued and investigation result are summarized in the following table.

Environmental	Monitoring	Action	Limit	Event & Action		
Issues	Parameters	Level	Linnt Level	NOE Issued	Investigation	Corrective Actions
Construction Noise	L _{eq(30min)} Daytime	0	0	0	N.A.	N.A.
	DO	39	0	39		
Water Quality	Turbidity	3	32	35	Not project related	N.A.
	SS	0	18	18		
Hydrological	Water Flow	0	0	0	N.A.	N.A.
Characteristics	Water Depth	0	0	0	N.A.	N.A.

Note: NOE – Notification of Exceedance

SITE INSPECTION

ES.06. Weekly environmental site inspections had been carried out by the Contractor, ET and the RE on 9, 16, 23 and 26 May 2014 Furthermore, joint site inspection with the IEC was carried out on 26 May 2014. In this Reporting Period, 2 observations were recorded but no non-compliance was noted during the site inspection.

ENVIRONMENTAL COMPLAINT

ES.07. No written or verbal complaint was recorded in this Reporting Period.

NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES.08. No environmental summons or successful prosecutions were recorded in this Reporting Period.

REPORTING CHANGE

ES.09. No report changes were made in this Reporting Period.

FUTURE KEY ISSUES

- ES.10. During wet season special attention should be paid on the muddy water and other water quality pollutants via site surface water runoff into the local stream Wah Ha River. As an effective water quality mitigation measure, the rock bund in the de-silting channel should be repaired regularly and ensure the de-silting performance.
- ES.11. Dust mitigation measures to avoid fugitive dust emissions from loose soil surface or haul road would also be a key issue in coming months.
- ES.12. On the other hand, construction noise should be other key environmental issue during sheet-piling process. The noise mitigation measures should be necessary to implement in accordance with EM&A Manual stipulation. Dust mitigation measures to avoid fugitive dust emissions from loose soil surface or haul road is also reminded.

1.0 INTRODUCTION

PROJECT BACKGROUND

- 1.01 *Kwan Lee-Kuly Joint Venture* (hereinafter 'KLKJV') has been awarded by Drainage Services Department (hereinafter 'DSD') of the Contract No. DC/2010/02 - Drainage Improvement in Shuen Wan and Shek Wu Wai (hereinafter 'the Project'). The Project is scheduled to commence in May 2011 and complete in March 2014 for about 35 months.
- 1.02 The works to be executed under the Project are located in Shuen Wan and Shek Wu Wai. The works mainly comprise construction of about 735 metres long single-cell box culvert along Tung Tsz Road in Shuen Wan, Tai Po and construction of about 15 m long three-cell box culvert in Shek Wu Wai, San Tin .
- 1.03 For the Project, the construction work at Tung Tsz Road Shuen Wan (hereinafter 'the Contract 2') is part of the Drainage Improvement works amongst Shatin and Tai Po and it is defined as a "Designated Project" which controlled under Environmental Permit EP-303/2008. Currently, DSD has another Contract DC/2009/22 (hereinafter 'the Contract 1') ongoing for construction at Shuen Wan working area which under the same Environmental Permit and the updated Environmental Monitoring and Audit Manual (hereinafter 'the Updated EM&A Manual'). Both DSD contract's site boundary at Shuen Wan are shown in *Appendix A*. On the other hand, Shek Wu Wai San Tin is a non-designated project work and no environmental monitoring and audit is request to carry out.
- 1.04 In order to effectively implement the environmental protection measures stipulated in the Project Profile (hereinafter 'the PP'), Environmental Impact Assessment Report (hereinafter "the EIAR'), Environmental Permit EP303/2008, a corresponding EM&A Manual have been prepared to outline the environmental monitoring and auditing (hereinafter 'the EM&A') programme undertake for the Contracts 1 and 2.
- 1.05 KLKJV has commissioned Action-United Environmental Services and Consulting (AUES) as an independent environmental team (hereinafter 'the ET') to implement the EM&A program for the environmental protection of the Project. Due to the construction of Contracts 1 and 2 carry out is just about the time, a Proposal Environmental Monitoring Programme and Methodology (hereinafter the "PEMPM") was prepared and submitted to describe EM&A programme would be undertaken during construction period of the Contract 2.
- 1.06 The baseline monitoring of EM&A program has been performed by the Contract 1 ET. Although Action and Limit levels of environmental performance criteria have established by the Contract 1 ET, the Action/Limit levels re-establishment to use the Contract 2 was conducted by the Contract 2 ET. The re-established environment performance criteria has accepted by the IEC and also submitted to the EPD seek for endorsement.
- 1.07 This is the **35th** Monthly EM&A Report for Contract 2 presenting the monitoring results and inspection findings for the reporting period from **1 to 31 May 2014**.

REPORT STRUCTURE

1.08 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-.

SECTION 1	INTRODUCTION
SECTION 2	PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS AND SUBMISSION
SECTION 3	EM&A PROGRAM REQUIREMENT FOR THE PROJECT
SECTION 4	IMPACT MONITORING RESULTS
SECTION 5	WASTE MANAGEMENT
SECTION 6	SITE INSPECTIONS
SECTION 7	ENVIRONMENTAL COMPLAINTS AND NON-COMPLIANCE
SECTION 8	IMPLEMENTATION STATUES OF MITIGATION MEASURES
SECTION 9	IMPACT FORECAST
SECTION 10	CONCLUSIONS AND RECOMMENDATION

2.0 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS AND SUBMISSION

PROJECT ORGANIZATION AND MANAGEMENT STRUCTURE

2.01 Organization structure and contact details of relevant parties with respect to on-site environmental management are shown in *Appendix B*.

CONSTRUCTION PROGRESS

- 2.02 The master construction programs are enclosed in *Appendix C* and the major construction activities undertaken at Tung Tsz Road, Shuen Wan in this Report Period are listed below:-
 - Backfilling of trench for Box Culvert Bay (1-7) near Tung Tsz Road.
 - Backfilling of trench for Box Culvert Bay (12-15) near Tung Tsz Road
 - Backfilling of trench for Box Culvert Bay (28-34) near Tung Tsz Road

SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.03 Summary of the relevant permits, licences, and/or notifications on environmental protection for this Project in this Reporting Period is presented in *Table 2-1*.

Item	Description	License/Permit Status
1	Air Pollution Control (Construction Dust)	Notified EPD on 17 October 2011
2	Chemical Waste Producer Registration (WPN5213-727-K2972-02)	Approved on 28 October 2011
3	Water Pollution Control Ordinance (Discharge License) WT00009528-2011	Valid to 31 July 2016
4	Billing Account for Disposal of Construction Waste (Account No.: 7012838)	Effective

Table 2-1Status of Environmental Licenses and Permits

- 2.04 The "Proposal Environmental Monitoring Programme and Methodology (R0006 Version 2)" was set out in accordance with the Updated Environmental Monitoring and Audit Manual. It was approved by the ER and agreed with the Independent Environmental Checker (IEC) and submitted to the EPD for endorsement.
- 2.05 For Contract 2 of the Project, no Baseline Monitoring Report was issued by the ETL. However, a new set of the Action/ Limit levels as used to Contract 2 were proposed by ET. It had been accepted by the IEC and also submitted to the EPD seek for endorsement.

3.0 EM&A PROGRAM REQUIREMENT FOR THE CONTRACT 2

3.01 The EM&A requirements set out in the PP, EIAR, Environmental Permit EP303/2008 (hereinafter 'the EP'), and the associated updated EM&A Manual, are presented below sub-section.

MONITORING PARAMETERS

3.02 According to the EIAR and the updated EM&A Manual, The monitoring parameters of each environmental aspect summarized in *Table 3-1* will be performed as under the Project.

Table 3-1	Summary of Monitoring Parameters
-----------	----------------------------------

Parameters		
• A-weighted equival	ent continuous sound pressure level (30min) (hereinafter	
'Leq(30min)' durin	g the normal working hours; and	
• A-weighted equival	lent continuous sound pressure level (5min) (hereinafter	
'Leq(5min)' for cor	nstruction work during the restricted hours.	
• In Situ	Temperature, Dissolved Oxygen, Dissolved Oxygen	
Measurement	Saturation, pH and Turbidity	
Laboratory	Suspended Solids (hereinafter 'SS')	
Analysis		
The water flow and depth measurement onsite		
Monitor and audit the proper implementation of mitigation measures stipulated		
in EIA report and the updated EM&A Manual		
Inspect and audit the implementation and maintenance of landscape and visual		
mitigation measures		
	 'Leq(30min)' durin A-weighted equivaling (Leq(5min)' for contract of the con	

Remarks: * the monitoring is carried out by IEC

MONITORING LOCATIONS

3.03 Monitoring locations have been proposed in the updated EM&A Manual. Graphic plot to show in *Appendix D* and summarized in *Table 3-2*.

MONITORING FREQUENCY

3.04 The monitoring frequency and duration as specified in the updated EM&A Manual are summarized below.

Construction Noise

Once a week during 0700-1900 on normal weekdays for Leq(30min) Frequency:

> If the construction work is undertake at restricted hour, the monitoring frequency of construction noise will be conducted in accordance with the related Construction Noise Permit requirement issued by EPD as follow

- 3 consecutive $L_{eq(5min)}$ at restrict hour from 1700 2300;
- 3 consecutive $L_{eq(5min)}$ for restrict hour from 2300 0700 next day;
- 3 consecutive $L_{eq(5min)}$ for Sunday or public holiday from 0700 1900;
- Throughout the construction period when the major construction activities are Duration: undertaken

Water Quality

- Frequency: Three times a week. The interval between 2 sets monitoring are not less than 36 hours
- Duration: During the construction phase of Contract 2 to undertake (in accordance with the Updated EM&A Manual Section 4.27).

Hydrological Characteristics

Frequency: Once per week at mid-flood and mid-ebb tides

Duration: During the construction phase of Contract 2 to undertake; and one year after the construction is complete as operation phase monitoring (in accordance with the Updated EM&A Manual Section 4.32).

Ecology

3.05 In according with Section 6.17 of the Updated EM&A Manual, ecological monitoring should be conducted by the Independent Environmental Checker (hereinafter 'IEC'). Monitoring programme details should be agreed with the Agriculture, Fisheries and Conservation Department (AFCD). Moreover, the IEC should submit reports on the findings of each monitoring trip, and a final report summarizing the monitoring results over the entire monitoring period to AFCD and Environmental Protection Department (EPD). Hence, no monitoring or surveying should be carried out by ET of the Project.

Landscape & Visual

3.06 According to Section 7.4 of the Updated EM&A Manual, site inspection bi-weekly should be performed to check the implementation and maintenance of landscape and visual mitigation measures whether to full realize.

MONITORING EQUIPMENT

<u>Noise Monitoring</u>

3.07 Sound level meter in compliance with the *International Electrotechnical Commission Publications* 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for noise monitoring. The sound level meter shall be checked with an acoustic calibrator. The wind speed shall be check with a portable wind speed meter, which capable to measure wind speed in m/s.

Water Quality Monitoring

- 3.08 **Dissolved Oxygen and Temperature Measuring Equipment** The instrument should be a portable and weatherproof dissolved oxygen (DO) measuring instrument complete with cable and sensor, and use a DC power source. The equipment should be capable of measuring DO level in the range of 0 20mg L-1 and 0 200% saturation; and temperature of 0 45 degree Celsius.
- 3.09 **pH Meter** The instrument shall consist of a potentiometer, a glass electrode, a reference electrode and a temperature-compensating device. It shall be readable to 0.1 pH in arrange of 0 to 14.
- 3.10 **Turbidity (NTU) Measuring Equipment** The instrument should be a portable and weatherproof turbidity measuring instrument using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0 1000 NTU.
- 3.11 **Water Sampling Equipment** A water sampler should comprise a transparent PVC cylinder, with a capacity of not less than 2 litres, which can be effectively sealed with latex cups at both ends. The sampler should have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth.
- 3.12 **Water Depth Detector** A portable, battery-operated echo sounder should be used for the determination of water depth at each designated monitoring station. The unit can either be hand held or affixed to the bottom of the work boat.
- 3.13 **Sample Containers and Storage** Water samples for SS should be stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4°C without being frozen).
- 3.14 **Suspended Solids Analysis** Analysis of suspended solids shall be carried out in a HOKLAS or other international accredited laboratory.

Hydrological Characteristics

- 3.15 **Water Depth Detector** A portable, battery-operated echo sounder shall be used for the determination of water depth at each designated monitoring station.
- 3.16 **Stream water flow Equipment** –A portable, battery-operated flow meter should be used for the determination of water flow rate at each designated monitoring location and record in m^3/s .
- 3.17 The monitoring equipment using for the Project's EM&A program were proposed by the ET and verified by the IEC prior commencement of the monitoring. Details of the equipment used for impact monitoring are listed in *Table 3-3*.

Table 3-3Monitoring Equipment Used in EM&A Program

Equipment	Model
Construction Noise	
Integrating Sound Level Meter	B&K Type 2238
Calibrator	B&K Type 4231
Portable Wind Speed Indicator	Testo Anemometer
Water quality	
Water Depth Detector	Eagle Sonar
Water Sampler	A transparent PVC cylinder / bucket

Equipment	Model
Thermometer & DO meter	YSI DO Meter 550A or YSI Professional Plus or YSI Sonde6820 / 650MDS
pH meter	YSI pH10N or YSI Professional Plus or YSI Sonde 6820 / 650MDS
Turbidimeter	Hach 2100Q or YSI Sonde 6820 / 650MDS
Sample Container	High density polythene bottles (provided by laboratory)
Storage Container	'Willow' 33-litre plastic cool box
Suspended Solids	HOKLAS-accredited laboratory (ALS Technichem (HK) Pty Ltd)
Hydrological Characteristics	
Water flow meter	GLOBAL WATER model FP211
Water Depth Detector	Eagle Sonar or an appropriate steel ruler or rope with appropriate weight

MONITORING METHODOLOGY

Noise Monitoring

- 3.18 Noise measurements were taken in terms of the A-weighted equivalent sound pressure level (L_{eq}) measured in decibels (dB). Supplementary statistical results (L_{10} and L_{90}) were also obtained for reference.
- 3.19 Sound level meter as listed in *Table 3-3* are complied with the *International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1)* specifications, as recommended in Technical Memorandum (TM) issued under the *Noise Control Ordinance (NCO)*.
- 3.20 During the monitoring, all noise measurements were performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (L_{eq}). Leq_(30min) in six consecutive Leq_(5min) measurements were used as the monitoring parameter for the time period between 0700-1900 hours on weekdays; and also Leq_(15min) in three consecutive Leq_(5min) measurements is used as monitoring parameter for other time periods (e.g. during restricted hours), if necessary.
- 3.21 During the course of measurement, the sound level meter is mounted on a tripod with a height of 1.2m above ground and placed at the assessment point and oriented such that the microphone is pointed to the site with the microphone facing perpendicular to the line of sight. The windshield is fitted for all measurements. The assessment point is normally set as free-field situation for the measurement.
- 3.22 Prior to noise measurement, the accuracy of the sound level meter is checked by an acoustic calibrator which generated a known sound pressure level at a known frequency. The checking was performed before and after the noise measurement.

Water Quality

- 3.23 Water quality monitoring are conducted at the depth below:-
 - Three depths: 1m below water surface, 1m above river bed and at mid-depth when the water depth exceeds 6m, or
 - If the water depth is between 3m and 6m, two depths: 1m below water surface and 1m above river bed, and or
 - If the water depth is less than 3m, 1 sample at mid-depth is taken
- 3.24 Water depths are determined prior to measurement and sampling, using a portable battery operated depth detector, brand named 'Eagle Sonar', if the depths exceed 1.5 meter. If the depth between 1.5 meter and 1 meter, plastic tape measurement tied with appropriate weight are used the depth estimation. For the depth well below 1 meter, an appropriate steel ruler or rope with appropriate weight are used for the depth measurement.

- 3.25 A transparent PVC cylinder, with a capacity of not less than 2 litres, is used for water sampling. The water sampler is lowered into the water body at a predetermined depth. The trigger system of the sampler is activated with a messenger and opening ends of the sampler are closed accordingly then the sample of water is collected. If the water depth is less than 500mm, a water bucket is be used as a water sampler to minimize the possibility of the latching system disturbing sediment during water sampling
- 3.26 A portable YSI DO Meter 550A or YSI Professional Plus is used for in-situ DO measurement. The DO meter is capable of measuring DO in the range of 0 20 mg/L and 0 200 % saturation and checked against water saturated ambient air on each monitoring day prior to monitoring. Although the DO Meter automatically compensates ambient water temperature to a standard temperature of 20° C for ease of comparison of the data under the changing reality, the temperature readings of the DO Meter are be recorded in the field data sheets. The equipment calibration is performed on quarterly basis.
- 3.27 A portable YSI pH10N Meter or or YSI Professional Plus is used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 14 and readable to 0.1. Standard buffer solutions of pH 7 and pH 10 are used for calibration of the instrument before and after measurement. The equipment calibration is performed on quarterly basis.
- 3.28 A portable Hach 2100Q Turbidity Meter is be used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 1000 NTU. The equipment calibration is performed on quarterly basis.
- 3.29 Water samples are contained in screw-cap PE (Poly-Ethylene) bottles, which are provided and pretreated and 'PE' (Poly-Ethylene) sampling bottles provided and pre-treated according to corresponding analytical requirements. Where appropriate, the sampling bottles are rinsed with the water to be contained. Water sample is then transferred from the sampler to the sample bottles.
- 3.30 One liter or 500 mL water sample are collected from each depth for SS determination. The collected samples are stored in a cool box maintained at 4° C and delivered to laboratory upon completion of the sampling by end of each sampling day.
- 3.31 All water samples are analyzed with Suspended Solids (SS) as specified in the updated *EM&A Manual* by a local HOKLAS-accredited testing laboratory (ALS Technichem (HK) Pty Ltd HOKLAS registration no. 66). SS are determined by the laboratory upon receipt of the water samples using HOKLAS accredited analytical method. The detection limits and testing method are shown below in *Table 3-4*. The certificate of ALS Technichem (HK) Pty Ltd is provided in *Appendix E*.

Table 3-4	Testing Method and Detection limit of Suspended Solids

Determinant	Testing Method	Detection Limit
Suspended solid	Determination use HOKLAS accredited analytical methods namely ALS Method EA-025 (based on APHA 2540 D)	2mg/L

Hydrological Characteristics

_

- 3.32 A portable, water flow meter, brand named "*GLOBAL WATER model FP211*" are used to determine the water current flow at the designated monitoring stations. A water flow velocity is measured at mid depth of current water body or 0.5m below water level.
- 3.33 Water depths are determined prior to measurement, using a portable battery operated depth detector, brand named 'Eagle Sonar', if the depths exceed 1.5 meter. If the depth between 1.5 meter and 1 meter, plastic tape measurement tied with appropriate weight are used the depth estimation. For the depths well below 1 meter, an appropriate steel ruler or rope with appropriate weight are used for the depth measurement.

DATA MANAGEMENT AND DATA QA/QC CONTROL

- 3.34 The impact monitoring data are handled by the ET's systematic data recording and management, which complies with in-house Quality Management System. Standard Field Data Sheets (FDS) are used in the impact monitoring program.
- 3.35 The monitoring data recorded in the equipment e.g. noise meter and Multi-parameter Water Quality Monitoring System are downloaded directly from the equipment at the end of each monitoring day. The downloaded monitoring data are input into a computerized database properly maintained by the ET. The laboratory results are input directly into the computerized database and QA/QC checked by personnel other than those who input the data. For monitoring activities require laboratory analysis, the local laboratory follows the QA/QC requirements as set out under the HOKLAS scheme for all laboratory testing.

OTHERS MONITORING IMPLEMENTATION FOR THE CONTRACT

<u>Ecology</u>

3.36 Ecological monitoring and reporting should be performed by IEC. No equipment and procedure are presented in the EM&A Monthly Report.

Landscape and Visual

3.37 A registered Landscape Architect as member of the ET is employed by the Contractor to undertake site inspection. Site inspection will undertake at least once every two weeks throughout the construction period to ensure compliance with the intended aims of the mitigation measures are proposed in the EIA and the updated EM&A Manual, implemented by the Contractor.

DETERMINATION OF ACTION/LIMIT (A/L) LEVELS

3.38 The re-established performance criteria for construction noise, water quality and hydrological, namely Action and Limit levels is used for Contract 2 are listed in *Tables 3-5, 3-6,* and *3-7*.

Table 3-5	Action and Limit Levels for	Construction Noise
Table 3-5	Action and Linne Devels for	

Location	Time Period	Action Level in dB(A)	Limit Level in dB(A)
	Daytime 0700 – 1900 hrs on normal weekdays	When one	75* dB(A)
M1, AL1, M2, M3, M4	1900 – 2300 on all days and 0700 – 2300 on general holidays (including Sundays	documented complaint is	60/65/70 dB(A)**
	2300 – 0700 on all days	received	45/50/55 dB(A)**

Note: * *Reduces to 70dB(A) for schools and 65dB(A) during the school examination periods.*

** To be selected based on the Area Sensitivity Rating of A/B/C, and the conditions of the applicable CNP(s) must be followed

Table 3-6Action and Limit Levels for Water Quality

Parameter	Performance	Ι	mpact Statio	n
rarameter	Criteria	W1	W2	W4
DO Concentration (mg/L)	Action Level	7.27	7.26	9.27
DO Concentration (mg/L)	Limit Level	4.00	4.00	4.00
all	Action Level	NA	NA	NA
рН	Limit Level	6 - 9	6 - 9	6 - 9
Track ditta (NITU)	Action Level	4.77	2.46	3.32
Turbidity (NTU)	Limit Level	5.26	3.42	4.52
Sugnanded Solids (mg/L)	Action Level	9.73	8.89	6.98
Suspended Solids (mg/L)	Limit Level	10.77	9.75	7.66

Notes:

- The proposed Action/Limit Levels of DO are established to be used 5%-ile/1%-ile of all the baseline data;
- The proposed Action/Limit Levels of Turbidity and SS are established to be used 95%-ile/99%-ile of all the baseline data;
- For DO, non-compliance of the water quality limits occur is when monitoring result lower than the action/limit levels;
- For turbidity and SS, non-compliance of the water quality limits occurs is when monitoring result higher than the limits; and
- For pH, non-compliance of the quality limit occur is when monitoring result lower than 6 and higher than 9; and
- All the figures given in the table are used for reference only and the EPD may amend the figures whenever it is considered necessary

 Table 3-7
 Action and Limit Levels for Hydrological Characteristics

Parameter	Acceptance	Monitorin	g Station		
Parameter	Criteria	H1	H2		
Water Depth	Action Level	0.08 (80% of baseline water depth)	0.40 (80% of baseline water depth)		
(m)	Limit Level	0.06 (60% of baseline water depth)	0.30 (60% of baseline water depth)		
Volumetric	Action Level	120% of control station's water flow rate on the same day of measurement			
Flow Rate (Q), m ³ /s	Limit Level	140% of control station's water flow rate on the same day of measurement	140% of control station's water flow rate on the same day of measurement		

- 3.39 The locations H3 and H4 are a reference measurement point in order to monitor any changes in the hydrological characteristics of Wai Ha River arising from the work Contract 2 to affect the Shuen Wan Marsh.
- 3.40 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan enclosed in *Appendix F*.

EQUIPMENT CALIBRATION

- 3.41 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme in yearly basis.
- 3.42 All the water quality monitoring equipment such as the DO, pH and Turbidity meters are calibrated by HOKLAS accredited laboratory of three month intervals.
- 3.43 A portable, water flow meter, brand named "GLOBAL WATER model FP211" is calibrated in yearly basis.
- 3.44 All updated calibration certificates of the monitoring equipment used for the impact monitoring program in this Reporting Period are attached in *Appendix E*.

METEOROLOGICAL INFORMATION

3.45 The meteorological information during the construction phase is obtained from Tai Po and Shatin Stations of the Hong Kong Observatory (HKO). The meteorological data during the impact monitoring days are summarized in *Appendix H*

4.0 IMPACT MONITORING RESULTS

4.01 The monitoring schedule had been issued to relevant parties before each Reporting Period which presented in *Appendix G*. The works undertaken during the Reporting Period are illustrated in *Appendix C*. The monitoring results are presented in the following sub-sections.

MONITORING RESULTS SHARING

4.02 Environmental Permit EP-203/2008 was issued on 25 February 2008 by EPD which adopted for both Contracts 1 and 2 of DSD construction at Shuen Wan. Also, the EM&A programme of both contracts are undertaken in accordance with the same updated EM&A Manual which has to be carried out during construction period. According to the updated EM&A manual, designated monitoring Locations M1 and AL1 for noise monitoring stations, Locations W1 and W2 for water quality monitoring stations, and Locations H1 and H2 for hydrological measurement are requested to perform at both Contracts 1 and 2. Since Contract 1 has already commenced in January 2011, those results measured by Contract 1 would be shared for the Contract 2. This recommendation has been accepted by IEC and submitted to EPD.

RESULTS OF CONSTRUCTION NOISE MONITORING

4.03 In this Reporting Period, the noise monitoring results at the designated locations M1, AL1, M2, M3 and M4 are summarized in *Table 4-1*. The detail monitoring data are presented in *Appendix I*. The graphical plot is shown in *Appendix J*.

Date	L _{eq(30min)} (dB(A)		Date	$L_{eq(30min)}(dB(A))$					
	M1 ^(#)	AL1 ^(#)	Date	M2 ^(*)	M3 ^(*)	M4 ^(*)			
7-May-14	63.8	68.8	9-May-14	62.6	61.6	58.6			
14-May-14	64.5	67.4	16-May-14	63.1	60.3	52.7			
21-May-14	61.2	65.8	23-May-14	59.9	57.6	53.2			
28-May-14	61.5	65.4	30-May-14	63.0	58.7	52.2			
Limit Level		75 dB(A)							

Table 4-1Summary of Construction Noise Monitoring Results, dB(A)

Remarks:

(#) The monitoring is undertaken under façade situation. No façade correction is added according to acoustical principles and EPD guidelines.

(*) The monitoring is undertaken under free field situation. A façade correction of +3 dB(A) has been added according to acoustical principles and EPD guidelines

- 4.04 The sound meter was set in a free field situation at the designated monitoring locations M2, M3 and M4, therefore, a façade correction of +3 dB(A) has been added according to acoustical principles and EPD guidelines. For Location A1 and AN1, the monitoring is undertaken under façade situation. No façade correction is added according to acoustical principles and EPD guidelines.
- 4.05 No noise complaint (which is an Action Level exceedance) was received in this Reporting Period. As shown in *Table 4-1*, all the noise monitoring result are well below 75dB(A) and no Action or Limit Level exceedance was triggered during this Reporting Period. The graphical plot is shown in *Appendix J*.

RESULTS OF LOCAL STREAM WATER QUALITY MONITORING

- 4.06 In this Reporting Period, **13** sampling days at W1, W2, W3 and W4 were performed at designated measurement Points for local stream water quality monitoring. The monitoring results including in-situ measurements and laboratory testing results are provided in *Appendix I*. The graphical plots are shown in *Appendix J*.
- 4.07 Monitoring results of 3 key parameters: dissolved oxygen (DO), turbidity and suspended solids in this Reporting Period, are summarized in *Tables 4-2 and 4-3*.

Sompling]	DO (mg/L)		Turb	oidity (NTU	U)		SS (mg/L)

- 4.08 During the Reporting Period, field measurements showed that stream water temperatures were within 20.1° C to 31.50° C and pH values within 7.00 to 8.35.
- 4.09 A statistics of exceedances for the three parameters: dissolved oxygen (DO), turbidity and suspended solids are shown in *Table 4-4*.

Table 4-4Statistics Water Quality Exceedance

Station	DO		Turbidity		SS		Total Exceedance	
	Action	Limit	Action	Limit	Action	Limit	Action	Limit
W1	21	0	2	13	0	10	23	23
W2	5	0	0	13	0	3	5	16
W4	13	0	1	6	0	5	13	2
No. of Exceedance	39	0	3	32	0	18	41	41

4.10 As shown in *Table 4-4*, a total of 82 Action/ Limit Level exceedances, namely 39 exceedances in dissolved oxygen, 35 exceedances in turbidity and 18 exceedances in SS were recorded in this Reporting Period. NOEs were issued to notify EPD, IEC, the Contractor and RE upon confirmation of the results.

Z:\Jobs\2011\TCS00553(DC-2010-02)\600\EM&A Monthly Report\35th - May 2014\R0351v1.docx Action-United Environmental Services and Consulting

- 4.11 According to site information provided by the Contractor, the site activities undertaken on site included installing sheetpile in Box Culvert and excavation.
- 4.12 The active construction activities may increase the turbidity and suspended solids levels of the stream by washed out from stockpiles of dusty materials, excavated surface or dusty haul roads. To minimize the impact to the existing stream, precautionary measures such as sedimentation pit and temporary artificial precipitation stream to remove the suspended solids from wastewater have been implemented on-site. During regular site inspection with RE and Contractor, the implemented water quality mitigation measures are considered as moderate with the needed of regular maintenance. The investigation results for the exceedances are summarized as follows:
 - For the DO exceedances, the construction activities comprised none of DO depleting characteristics. Therefore, it is considered that all the DO exceedances were due to natural variation of the stream and not related to the works under the Project.
 - For the turbidity and SS exceedances at W2, since no construction activities under Contract 2 was carried out close to W2, it is concluded that the exceedances were not project related.
 - For the turbidity and SS exceedances recorded at W4, it is noted that the turbidity and SS levels recorded in the control station (W3) at the same days were similar to W4, therefore it is concluded that the exceedances at W4 were likely due to natural variation and not related to the project.
 - For monitoring points W1, it is noted that the water quality at W1 was affected by marine water that comes from the Tolo Harbour during flood tide. Therefore, it is considered that the exceedances in W1 were not related to the works under the Project.
- 4.13 KLKJV is reminded to fully implement the required water quality mitigation measures in accordance with the updated EM&A Manual stipulation during construction under the Project. In particular when excavation and the associated box culvert construction works are undertaken near Wai Ha River, all construction wastewater or runoff generated from work area should be treated and drained to the designated discharge point. Moreover, as an effective water quality mitigation measure, the rock bund in the de-silting channel should be repaired regularly and ensure the de-silting performance.

RESULTS OF HYDROLOGICAL CHARACTERISTICS MONITORING

4.14 In this Reporting Period, hydrological characteristics measurements were carried out on 2, 9, 16, 23 and 30 May 2014. The monitoring data of H1 and H2 provided by DC/2009/22 is showed Appendix I. The detailed H3 and H4 measurement results in this Reporting Period are presented in Tables 4-5.

Date	Measurement Time	Tide Condition	River Width (m)	Water Depth (m)	Cut Section (m ²)	Velocity Flow Rate (m/s)	Average Volumetric Flow Rate (Q), m ³ /s
Measureme	ent Point: H3

30-May-14	0.3	1.507	0.603	0.066	0.3	1.507	0.142	0.047

No data was provided by Contract 1.

4.16 To compare the monitoring data between the Reporting Period (rainy season) and baseline monitoring period, the currently water depth and volumetric flow rate has insignificant changed. Furthermore, water depth and water flow rate were found no exceedance in this Reporting Period.

RESULTS OF ECOLOGICAL MONITORING

- 4.17 According to updated EM&A Manual Section 6.17, bi-monthly ecological monitoring is conducted by the IEC – ENVIRON Hong Kong Limited. In brief, the monitoring tasks include regular check on the retained and transplanted trees and shrubs, monitoring on fauna groups and aquatic fauna within the works area and any ecologically sensitive area within 100 m of the works boundary.
- 4.18 In this Reporting Period, ecological monitoring in Area under Contract 2 was performed 13 May 2014. The details monitoring report is presented in *Appendix M*.

5.0 WASTE MANAGEMENT

5.01 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

RECORDS OF WASTE QUANTITIES

- 5.02 All types of waste arising from the construction work are classified into the following:
 - Construction & Demolition (C&D) Material;
 - Chemical Waste;
 - General Refuse; and
 - Excavated Soil.
- 5.03 The quantities of waste for disposal in this Reporting Period are summarized in *Table 5-1* and *5-2* and the Monthly Summary Waste Flow Table is shown in *Appendix K*. Whenever possible, materials were reused on-site as far as practicable.

Table 5-1Summary of Quantities of Inert C&D Materials

Type of Waste	Quantity	Disposal Location
C&D Materials (Inert) (m ³)	0	-
Reused in this Contract (Inert) (m ³)	0	-
Reused in other Projects (Inert) (m ³)	0	-
Disposal as Public Fill (Inert) (m ³)	333	Tuen Mun Area 38

Table 5-2Summary of Quantities of C&D Wastes

Type of Waste	Quantity	Disposal Location
Recycled Metal (kg)	0	-
Recycled Paper / Cardboard Packing (kg)	0	-
Recycled Plastic (kg)	0	-
Chemical Wastes (kg)	0	-
General Refuses (m ³)	0	Local refuse station

5.04 To control over the site performance on waste management, the Contractor shall ensure that all solid and liquid waste management works are in full compliance with the relevant license/permit requirements, such as the effluent discharge license and the chemical waste producer registration. The Contractor is also reminded to implement the recommended environmental mitigation measures according to the EM&A Manual based on actual site conditions.

6.0 SITE INSPECTION

REGULAR SITE INSPECTION AND MONTHLY AUDIT

- 6.01 According to the Updated Environmental Monitoring and Audit Manual, regular site inspection to evaluate the project environmental performance should be carried out during construction phase. Weekly environmental site inspections had been carried out by the Contractor, ET and RE on 9, 16, 23 and 26 May 2014. Also, joint site inspection with the IEC was carried out on 26 May 2014. In this Reporting period, 2 observations were recorded but no non-compliance was noted.
- 6.02 Observations for the site inspection and monthly audit within this Reporting Period are summarized in *Table 6-1*.

Date	Findings / Deficiencies	Follow-Up Status
9 May 2014	• Housekeeping of the site should be maintained.	Rectified on 16 May 2014
16 May 2014	No adverse environmental issue was observed during site inspection.	-
23 May 2014	• Haul road should be regularly wetted as dust suppression.	Rectified on 26 May 2014
26 May 2014	No adverse environmental issue was observed during site inspection.	-

 Table 6-1
 Site Inspection of Observations – Findings and Deficiencies

LANDSCAPE AND VISUAL INSPECTION

- 6.03 In this Reporting Period, landscape and visual inspection was carried on **12 and 30 May 2014**.
- 6.04 The stand-alone of monthly Landscape & Visual Report signed by the registered Landscape Architect. Mitigation measures implemented in this Reporting Period are presented in the monthly Landscape & Visual Report (May 2014) which is enclosed in *Appendix L*.
- 6.05 The next bi-weekly Landscape & Visual Monitoring in June 2014 is scheduled to be conducted in the week of 9 and 23 June 2014.

7.0 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTION

7.01 No environmental complaint, summons and prosecution was received in this Reporting Period. The statistical summary table of environmental complaint is presented in *Tables 7-1, 7-2* and *7-3*.

Table 7-1Statistical Summary of Environmental Complaints

	Environmental Complaint Statistics				
Reporting Period	Frequency	Cumulative	Complaint Nature		
July 2011 – April 2014	1	1	Air Quality (1)		
May 2014	0	1	Air Quality (1)		

Table 7-2 Statistical Summary of Environmental Summons

Doporting Dovied	Environmental Summons Statistics

8.0 IMPLEMENTATION STATUS OF MITIGATION MEASURES

8.01 The environmental mitigation measures that recommended in the Updated Environmental Monitoring and Audit Manual covered the issues of dust, noise and waste and they are summarized as follows:

Noise Mitigation Measure

- (a) Only well-maintained plant should be operated on-site and plant shall be serviced regularly during the construction program;
- (b) Silencers or mufflers on construction equipment should be utilized and shall be properly maintained during the construction program;
- (c) Mobile plant, if any, should be sited as far from NSRs as possible;
- (d) Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum;
- (e) Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs;
- (f) Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction activities;
- (g) Use of quieter plants to carry out the construction tasks proposed for the Project;
- (h) Use about 3.5m high of temporary noise barriers as screened the noisy PMEs to carry out construction of box culvert and site clearance.
- (i) Low Impact Method, such as using PMEs smaller in size and to be enclosed by noise enclosure, should be adopted for the construction of box culvert and pipe laying in Wai Ha; and
- (j) Use of noise enclosure during the works area for pipe laying in Wai Ha.

Dust Mitigation Measure

- 8.02 Implementation of mitigation measures stipulated in the Air Pollution Control (Construction Dust) Regulation and good site practices including but not limited to the following:
 - (a) Use of regular watering to reduce dust emissions from exposed site surfaces and unpaved road, with complete coverage, particularly during dry weather;
 - (b) Use of frequent watering for particularly dusty static construction areas and areas close to ASRs;
 - (c) Tarpaulin covering of all dusty vehicle loads transported to, from and between site location;
 - (d) Establishment and use of vehicle wheel and body washing facilities at the exit points of the site;
 - (e) Routing of vehicles and positioning of construction plant should be at the maximum possible distance from ASRs;
 - (f) Stockpiled excavated materials should be covered with tarpaulin and should be removed offsite within 24 hours to avoid any odour nuisance arising.

Local Stream Water Quality Mitigation Measure

- (a) Before commencing any site formation work, all sewer and drainage connections shall be sealed to prevent debris, soil, sand etc. from entering public sewers/drains;
- (b) Temporary ditches shall be provided to facilitate run-off discharge into appropriate watercourses, via a silt retention pond. No site run-off shall enter the fishponds at Shuen Wan;
- (c) Sand/silt removal facilities such as sand traps, silt traps and sediment basins shall be provided to remove sand/silt particles from runoff to meet the requirements of the Technical Memorandum standard under the Water Pollution Control Ordinance. The design of silt removal facilities shall be based on the guidelines provided in ProPECC PN 1/94. All drainage facilities and erosion and sediment control structures shall be inspected monthly and maintained to ensure proper and efficient operation al all times and particularly during rainstorms
- (d) Water pumped out from excavated pits shall be discharged into sill removal facilities;

- (e) During rainstorms, exposed slope/soil surfaces shall be covered by a tarpaulin or other means. Other measures that need to be implemented before, during, and after rainstorms as summarized in ProPECC PN 1/94 shall be followed
- (f) Exposed soil areas shall be minimized to reduce potential for increased siltation and contamination of runoff
- (g) Earthwork final surfaces shall be well compacted and subsequent permanent work or surface protection shall be immediately performed to reduce the potential of soil erosion;
- (h) Open stockpiles of construction materials or construction wastes on-site shall be covered with tarpaulin or similar fabric during rainstorms;
- (i) For the construction of the box culvert next to the existing channel of the Wai Ha River, sand bags should be deployed around the boundary of the works trench to prevent muddy water ingress into the adjacent CA or Wai Ha River. Sand bags should also be used to surround the excavated trench. Generally, the sand bags will be placed up to a height 01 300mm to provide adequate allowance for the built-up water level during rainstorm event. With sand bags in place surface runoff will be intercepted and flow to Wai Ha River or collected by the existing drainage system as usual;
- (j) For the construction of the box culvert in the extreme northeast corner of Shuen Wan Marsh Conservation Area sand bags should be deployed along the limit of the works area to prevent muddy water ingress into the CA. Sand bags should be placed to a height 0.1 at least 300mm from ground level and +2.5 mPD (whichever is greater) to provide adequate allowance for the built-up water level during rainstorm events Unpolluted surface runoff within the works area should then be collected and directed into the existing drainage system;
- (k) Sheet-piles, which would be installed around the works trench near the Conservation Area, would be extended above ground level for about 2m to serve as hoardings to isolate the works site;
- Tarpaulin sheets would be used to cover the excavation areas during heavy rainstorms. This would prevent the ingress of rainwater into the trench minimizing the risk of muddy water getting into Wai Ha River and the adjacent Conservation Area;
- (m) Any concrete washing water would be contained inside the works site surrounded by the extended sheet piles. A pump sump at the bottom 0f the trench would be provided to pump any excess water during concrete washing;
- (n) Stockpiling the excavated materials adjacent to the Conservation Area would not be allowed. The excavated materials would be either removed off site immediately after excavation, or stockpile at location(s) away from the Conservation Area. The stockpile locations shall be approved by the site engineer;
- (o) Debris and refuse generated on-site should be collected, handled and disposed of properly to avoid entering the Wai Ha River and fish ponds at Shuen Wan. Stockpiles of cement and other construction materials should be kept covered when not being used.
- (p) Oils and fuels should only be used and stored in designated areas which have pollution prevention facilities to prevent spillage of fuels and solvents to nearby water bodies, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity 01 the largest tank The bund should be drained of rainwater after a rain event
- (q) Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site. A licensed contractor would be responsible for appropriate disposal and maintenance of these facilities;
- (r) The excavation works within the upstream end of the existing river channel of the Wai Ha River for the construction of the proposed box culvert should be carried out in dry condition. Containment measures such as bunds and barriers shall be used within the affected length of the river channel and the excavation works restricted to within an enclosed dry section of the channel. The excavation works within Wai Ha River shall be restricted to the period from October to April.

Waste Mitigation Measures

- (a) The Contractor shall observe and comply with the Waste Disposal Ordinance (WDO) and its subsidiary regulations.
- (b) The Contractor shall submit to the Engineer for approval a Waste Management Plan with appropriate mitigation measures including the allocation of an area for waste segregation and shall ensure that the day-to-day site operations comply with the approved waste management plan.
- (c) The Contractor shall minimize the generation of waste from his work. Avoidance and minimization of waste generation can be achieved through changing or improving design and practices, careful planning and good site management.
- (d) The reuse and recycling of waste shall be practised as far as possible. The recycling materials shall include paper/cardboard, timber and metal etc.
- (e) The Contractor shall ensure that Construction and Demolition (C&D) materials are sorted into public fill (inert portion) and C&D waste (non-inert portion). The public fill which comprises soil, rock, concrete, brick, cement plaster/mortar, inert building debris, aggregates and asphalt shall be reused in earth filling, reclamation or site formation works. The C&D waste which comprises metal, timber, paper, glass, junk and general garbage shall be reused or recycled where possible and, as the last resort, disposal of at landfills.
- (f) The Contractor shall record the amount of wastes generated, recycled and disposed of (including the disposal sites). The Contractor shall use a trip ticket system for the disposal of C&D materials to any designated public filling facility and/or landfill.
- (g) In order to avoid dust or odour impacts, any vehicles leaving a works area carrying construction waste or public fill shall have their load covered.
- (h) To avoid the excessive use of wood, reusable steel shutters shall be used as a preferred alternative to formwork and falsework where possible.
- (i) The Contractor shall observe and comply with the Waste Disposal (Chemical Waste) (General) Regulation. The Contractor shall apply for registration as chemical waste producer under the Waste Disposal (Chemical Waste) (General) Regulation when chemical waste is produced. All chemical waste shall be properly stored, labeled, packaged and collected in accordance with the Regulation.
- 8.03 KLKJV had been implementing the required environmental mitigation measures according to the Updated Environmental Monitoring and Audit Manual subject to the site condition. Environmental mitigation measures generally implemented by KLKJV in this Reporting Period are summarized in *Table 8-1*.

Table 8-1Environmental Mitigation Measures

Issues	Environmental Mitigation Measures
Water Quality	 Wastewater were appropriately treated by treatment facilities; Drainage channels were provided to convey run-off into the treatment facilities; and Drainage systems were regularly and adequately maintained.
Air Quality	 Regular watering to reduce dust emissions from all exposed site surface, particularly during dry weather; Frequent watering for particularly dusty construction areas and areas close to air sensitive receivers; Cover all excavated or stockpile of dusty material by impervious sheeting or sprayed with water to maintain the entire surface wet; Public roads around the site entrance/exit had been kept clean and free from dust; and Tarpaulin covering of any dusty materials on a vehicle leaving the site.
Noise	 Good site practices to limit noise emissions at the sources; Use of quite plant and working methods; Use of site hoarding or other mass materials as noise barrier to screen noise at ground level of NSRs; Use of shrouds/temporary noise barriers to screen noise from relatively static PMEs; Scheduling of construction works nearly Tung Tsz Road; and Alternative use of plant items within one worksite, where practicable.

Issues	Environmental Mitigation Measures
	 Excavated material should be reused on site as far as possible to minimize off-site disposal. Scrap metals or abandoned equipment should be recycled if possible; Waste arising should be kept to a minimum and be handled, transported and disposed of in a suitable manner; The Contractor should adopt a trip ticket system for the disposal of C&D materials to any designed public filling facility and/or landfill; and Chemical waste shall be handled in accordance with the Code of Practice on the Packaging, Handling and Storage of Chemical Wastes.
General	The site was generally kept tidy and clean.

9.0 IMPACT FORCAST

CONSTRUCTION ACTIVITIES FOR THE FORTH-COMING MONTH

- 9.01 Construction activities planned to be carried out next month at Shuen Wan is listed as below:-
 - Landscaping work
- 9.02 Three months Rolling Construction Program is attached in *Appendix C*

KEY ISSUES FOR THE COMING MONTH

- 9.03 According to construction activities carry out in coming months, key issues to be considered include:
 - Implementation of dust suppression measures at all times;
 - Ensure dust suppression measures are implemented properly;
 - Disposal of empty engine oil containers within site area;
 - Sediment catch-pits and silt removal facilities should be regularly maintained;
 - Management of chemical wastes;
 - Discharge of site effluent to the nearby local stream or storm drainage, stockpiling or disposal of materials, and any dredging or construction area at this area are prohibited;
 - Follow-up of improvement on general waste management issues; and
 - Implementation of construction noise preventative control measures.

10.0 CONCLUSIONS AND RECOMMENTATIONS

CONCLUSIONS

- 10.01 This is the **35th** monthly EM&A report for Contract 2 presenting the monitoring results and inspection findings for the Reporting Period from **1 to 31 May 2014**.
- 10.02 No noise complaint (which is an Action Level exceedance) was received and no construction noise measurement results that exceeded the Limit Level were recorded in this Reporting Period. No NOE or the associated corrective actions were therefore issued.
- 10.03 For water quality monitoring, a total of 82 Action/ Limit Level exceedances, namely 39 exceedances in dissolved oxygen, 35 exceedances in turbidity and 18 exceedances in SS were recorded in this Reporting Period. NOEs were issued to notify EPD, IEC, the Contractor and RE upon confirmation of the results. It is concluded that exceedances were not related to the Project.
- 10.04 The hydrological characteristics of water depth and water flow rate were found no exceedance in this Reporting Period.
- 10.05 In this Reporting Period, ecological monitoring in Area under Contract 2 was performed 13 May 2014.
- 10.06 No documented complaint, notification of summons or successful prosecution was received.
- 10.07 Weekly environmental site inspections had been carried out by the Contractor, ET and the RE on 9,
 16, 23 and 26 May 2014. Furthermore, joint site inspection with the IEC was carried out on 26 May 2014. In this Reporting Period, 2 observations were recorded but no non-compliance was noted during the site inspection.
- 10.08 In this Reporting Period, landscape and visual inspection was carried on 12 and 30 May 2014 and the monthly Landscape & Visual Report (May 2014) has been signed by the registered Landscape Architect.

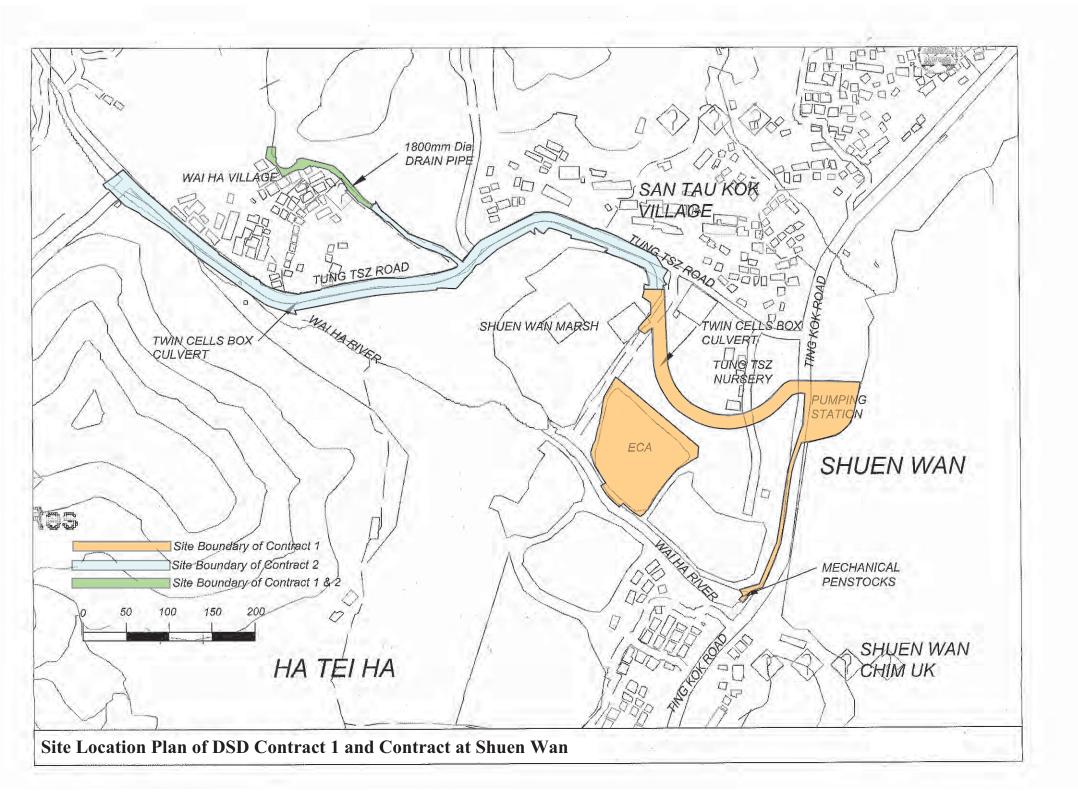

RECOMMENDATIONS

- 10.09 During wet season and river works is in progress, surface runoff or water discharge to local stream course should be key environment aspect issue. The Contractor is reminded that mitigation measures for water quality and ecology should be fully implemented. As an effective water quality mitigation measure, the rock bund in the de-silting channel should be repaired regularly and ensure the de-silting performance.
- 10.10 Dust mitigation measures to avoid fugitive dust emissions from loose soil surface or haul road would also be a key issue in coming months.
- 10.11 Special attention should be also paid on the muddy water and other water quality pollutants via site surface water runoff into the local stream Wah Ha River. As an effective water quality mitigation measure, the rock bund in the de-silting channel should be repaired regularly and ensure the de-silting performance.
- 10.12 To control the site performance on waste management, the KLKJV shall ensure that all solid and liquid waste management works are fully in compliance with the relevant license/permit requirements, such as the effluent discharge licence and the chemical waste producer registration. KLKJV is also reminded to implement the recommended environmental mitigation measures according to the Updated Environmental Monitoring and Audit Manual.

Temperature / 溫度 : (23 ± 2)°C Line Voltage / 電壓 : --- Relative Humidity / 相對濕度 : (55 ± 20)%

TEST SPECIFICATIONS / 測試規範

Calibration check

DATE OF TEST / 測試日期 : 26 April 2014

TEST RESULTS / 測試結果

The results apply to the particular unit-under-test only. All results are within manufacturer's specification. The results are detailed in the subsequent page(s).

The test equipment used for calibration are traceable to National Standards via :

- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory
- Rohde & Schwarz Laboratory, Germany
- Fluke Everett Service Center, USA
- Agilent Technologies, USA

Tested By 測試	:Pr	K/G Lee roject Engineer			
Certified By 核證	:	K M Wu Engineer	Date of Issue 簽發日期	:	29 April 2014

The test equipment used for calibration are traceable to the Nation Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.

Certificate of Calibration 校正證書

Certificate No. : C142548 證書編號

- 1. The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 12 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- 2. Self-calibration was performed before the test.
- 3. The results presented are the mean of 3 measurements at each calibration point.
- 4. Test equipment :

- 5. Test procedure : MA101N.
- 6. Results :
- 6.1 Sound Pressure Level
- 6.1.1 Reference Sound Pressure Level

	UUT	Setting		Applied	Value	UUT	IEC 60651 Type 1
Range	Mode	de Frequency Time Level Freq.				Reading	Spec.
(dB)		Weighting	Weighting	(dB)	(kHz)	(dB)	(dB)
30 - 120	L _A	А	Fast	94.00	1	93.9	± 0.7

6.1.2 Linearity

	UU	T Setting		Applie	d Value	UUT
Range	Mode	Frequency	Time	Level	Freq.	Reading
(dB)		Weighting	Weighting	(dB)	(kHz)	(dB)
30 - 120	L _A	А	Fast	94.00	1	93.9 (Ref.)
				104.00		103.9
				114.00		113.9

IEC 60651 Type 1 Spec. : \pm 0.4 dB per 10 dB step and \pm 0.7 dB for overall different.

6.2 Time Weighting

6.2.1 Continuous Signal

	Γ Setting		Applied	Value	UUT	IEC 60651 Type 1

Event and Action Plan

 $\label{eq:loss2011} \hline Z: Jobs \ 2011 \ CS00553 \ (DC-2010-02) \ 600 \ EM\&A\ Monthly\ Report \ 35th - May\ 2014 \ R0351v1. docx\ Action-United\ Environmental\ Services\ and\ Consulting$

Event Action Plan for Construction Noise

EVENT		AC	TION	
EVENI	ET Leader	IEC	ER	Contractor
Action Level	 Notify IEC and Contractor Carry out investigation. Report the results of investigation to the IEC, ER and Contractor. Discuss with the Contractor and formulate remedial measures Increase monitoring frequency to check mitigation effectiveness. 	 Review the analyzed results submitted by the ET. Review the proposed remedial measures by the Contractor and advise the ER accordingly Supervise the implementation of remedial measures 	 Confirm receipt of notification of failure in writing Notify Contractor Require Contractor to propose 'remedial measures for the analyzed noise problem Check remedial measures are properly implemented. 	 Submit noise mitigation proposals to IEC Implement noise mitigation proposals
Limit Level	 Notify IEC, ER, EPD and Contractor Identify source. Repeat measurements to confirm findings Increase monitoring frequency. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented Inform IEC, ER and EPD the causes and actions taken for the exceedances Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results If exceedance stops, cease additional monitoring. 	 Discuss amongst ER, ET, and Contractor on the potential remedial actions Review Contractor's' remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly Supervise the implementation of remedial measures 	 Confirm receipt of notification of failure in writing Notify Contractor Require Contractor to propose remedial measures for the analyzed noise problem Check remedial measures properly implemented. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated 	 Take immediate action to avoid further exceedance Submit proposals for remedial actions to IEC within 3 working days of notification Implement the agreed proposals Resubmit proposals if problem still not under control Stop the relevant portion of works as determined by the ER until the exceedance is abated

Appendix J

Graphical Plots of Impact Monitoring – Noise, Water Quality and Hydrological Characteristics

Graphic Plot – Construction Noise

Remark: The monitoring is undertaken under façade situation. No façade correction is added according to acoustical principles and EPD guidelines.

Remark: The monitoring is undertaken under façade situation. No façade correction is added according to acoustical principles and EPD guidelines.

Remark: The monitoring is undertaken under free field situation. A façade correction of $+3 \, dB(A)$ has been added according to acoustical principles and EPD guidelines.

Remark: The monitoring is undertaken under free field situation. A façade correction of $+3 \, dB(A)$ has been added according to acoustical principles and EPD guidelines

Remark: The monitoring is undertaken under free field situation. A façade correction of $+3 \, dB(A)$ has been added according to acoustical principles and EPD guidelines

LIST OF APPENDICES

Appendix A – Photographs

1 INTRODUCTION

- 1.1.1 The Landscape and Visual Monitoring of the Project is conducted to fulfill Clauses 5.2 and 5.4 of EP-303/2008 and the monitoring requirements in accordance with Section 7 of the approved updated EM&A Manual (approved by EPD on 31st May 2012) of the Project. A Baseline Review on updating the landscape and visual condition, and the mitigation measures of the Project (including Contracts 1 and 2 of the Project) was undertaken before the commencement of the Project. The review findings were updated in the Baseline Environmental Monitoring Report submitted to the EPD on 14th February 2011.
- 1.1.2 This monthly monitoring report will detail the scope of landscape and visual monitoring work, monitoring findings and observations, and any recommendation and advice on proper implementation of the landscape mitigation measures in the works areas under Contract 2 of the Project.

2 SCOPE OF MONITORING

2.1 Monitoring objectives

2.1.1 Landscape and Visual Monitoring of the Project should be conducted on a bi-weekly basis for checking the design, implementation and maintenance of the landscape and visual mitigation measures throughout the construction phase and in a quarterly basis during operational phase of the Project. Observations of any potential conflicts between the proposed mitigation measures and the project works carried out by the Contractors should be recorded. Recommendation and advice on proper implementation of the landscape mitigation measures should be provided to the Contractor for minimizing any potential impacts on the landscape and visual elements.

2.2 Monitoring during Construction Phase

- 2.2.1 The following landscape and visual mitigation measures should be implemented during the construction phase of the project to minimize the potential impacts:
 - Visual Screen Use of hoardings as visual screens for the construction in the works areas;
 - Contaminant/ Sediment Control Use of temporary barriers, covers and drainage provision around the construction works as contaminant/ sediment control to prevent the contaminants and sediments from entering the sensitive water-based habitats;
 - *Pollution Control* Implementation of pollution control measures to minimize any adverse environmental impacts to the surrounding habitats;
 - Liaison with Nursery (Not relevant to Contract 2 of the Project) Liaison with the nursery operator as necessary to minimize any adverse impact to the daily operation and plant holding capacity of the nursery;
 - Existing Trees within Works Area Maintenance and protection of the existing trees, especially their crowns, trunks and roots, within work sites; and
 - Construction Light Provision of construction light should be controlled at night to avoid excessive glare to the surrounding villages and to Plover Cove.

2.3 Monitoring during Operational Phase

- 2.3.1 The following landscape and visual mitigation measures should be implemented during the operational phase of the project to minimize the potential impacts:
 - Viewing area formation by planting with shrubs, grasses and benches along the area;
 - Architectural design of the pump house will help it fit into the existing suburban, natural to semi-natural surroundings (Not relevant to Contract 2 of the Project);
 - Landscape design of pump house by providing sufficient planting around its boundary fence (Not relevant to Contract 2 of the Project);
 - Enhancement planting along Tung Tsz Road with shrubs/ trees of suitable species to help protect the stream and marshes;
 - Construction of box culvert should be with at least 1.0m soil depth for enhancement planting;
 - Transplanting of existing affected trees to adjacent locations should be carried out;
 - Preparation for transplanting is needed to allow sufficient time for root pruning and rootball preparation prior to transplanting; and
 - Reinstatement of affected area should be carried out to check that the works areas are properly reinstated.

3 LANDSCAPE & VISUAL MONITORING RESULTS

3.1 Monitoring Date(s)

- 3.1.1 This monthly Landscape and Visual Monitoring (May 2014) was conducted to cover only areas of Contract 2 of the Project (i.e. the construction of a twin-cell box culvert close to Shuen Wan Conservation Area and Wai Ha River along Tung Tsz Road, and a drainage pipe near Wai Ha Village). The bi-weekly monitoring was conducted on 12th and 30th May 2014.
- 3.1.2 All photos stated in this section are recorded in **Appendix A**.

3.2 Visual Screen

3.2.1 No follow-up action by the Contractor is required as from the *Monthly EM&A Report for April* 2014.

Observation

- 3.2.2 Temporary hoardings, in the form of construction barriers, have been erected from west to east parts along Tung Tsz Road from the opposite side of Wai Ha to the opposite side of San Tau Kwok. The construction works along the access road from Tung Tsz Road towards Treasure Spot Garden II have also been demarcated with temporary construction barriers. Another section of temporary hoardings has been erected next to the path outside Treasure Spot Garden II. **Photos 1-2** show the views of the erected hoardings along the active works area under Contract 2.
- 3.2.3 Construction works for building the box culverts have continued in the works area along Tung Tsz Road opposite to Wai Ha (**Photo 3**).

- 3.2.4 Construction works continued next to Wai Ha River (**Photo 4**). The sand bags used to divide the river were removed (**Photo 5**).
- 3.2.5 To the southeast of Jade View Villa and adjacent to the current active works area, a demarcated wetland rehabilitation area has been maintained by parties other than the Project Proponent, the Project's Contractor and Sub-contractors since January 2012. Temporary construction barriers were surrounding the eastern side of the area (**Photo 6**).
- 3.2.6 The temporary parking area was still maintained at the end of the access path to Treasure Spot Garden Phase II (**Photo 7**). The untagged leaning tree was still guyed at the edge of the area within a Tree Protection Zone (TPZ), which was demarcated by orange construction nets and vehicles were still parked next to the TPZ (**Photo 8**).
- 3.2.7 As reported in the previous *Monthly EM&A Reports*, dumping on the Taro field located along the path towards the Treasure Spot Garden was observed and a paved area created for parking next to the retained tree groups (T088 T091) has been found since November 2012. In October 2013, the path to Treasure Spot Garden II was expanded towards the Taro field due to the reprovision of vehicular access road to the villagers during the works at the entrance of the Treasure Spot Garden. Cement mortar discharged to the Taro field was observed in March 2014 and such as was covered by ground vegetation (**Photo 9**).
- 3.2.8 Works were observed at the end of the Treasure Spot Garden II near the retained tree T103 and the works area was surrounded by temporary construction barriers and chain-link fence (**Photo 10**).
- 3.2.9 The works area near the previous collapsed tree T190 (*Ficus hispida*) was found to be expanded to the grassland on the south in January 2014. Most of the construction materials stored in this area were removed in April 2014 and this area has been covered by a mat in May 2014 (**Photo 11**).
- 3.2.10 A fenced area has been seen on the field next to the construction site along the access to Treasure Spot Garden since March 2014 (**Photo 12**). The area was surrounded by chain-link fence and a sign on the gate stated that it was a private land. As confirmed by the Contractor, this area was not fenced by the construction works related to the current project.
- 3.2.11 No hoardings have been erected along the rest of the proposed works area since neither construction works nor any associated preparation works have been commenced.

Recommendations

- 3.2.12 No specific recommendation is required. However, with regard to the previous dumping incident by other parties on the Taro field near the Treasure Spot Garden, the Contractor is recommended to check the site condition regularly to avoid any extent of dumping or paving of area within the project boundary.
- 3.2.13 The Contractor should also make sure there are no piled rocks, construction materials or programmed construction works influencing the existing trees within the Project Area or the wetland rehabilitation area. Otherwise, the Contractor should request the on-site workers to remove those piled rocks or construction materials. As a reminder, the Contractor should keep all construction works within the Project Boundary.
- 3.2.14 The Contractor could establish a warning sign to remind the driver to beware of the presence of the tree(s) close to the temporary parking area.

3.3 Contaminant/ Sediment Control

3.3.1 No follow-up action by the Contractor is required as from the *Monthly EM&A Report for April* 2014.

Observation

- 3.3.2 The exit points of Contract 2 works area opposite to the tree group T021-029 (*Leucaena leucocephala*) were still maintained in May 2014 (**Photo 13**). Workers were seen washing the wheels of the vehicles which were leaving the works area.
- 3.3.3 As observed in May 2014, construction works have been mainly concentrated next to Wai Ha River. No more muddy water has been released from the works area as the construction works at the upper stream was almost finished. The river water was generally clear (Photos 14-16). Down the stream near the public toilet, no more litter and broken branches from the adjacent trees were found blocking the stream (Photo 15).
- 3.3.4 In May 2014, no water from the nearby box culvert and from the works area opposite to Wai Ha was released to the area near the expanded works area near the previous collapsed tree T190 (*Ficus hispida*), which was removed in January 2014.

Recommendations

- 3.3.5 Regular monitoring should be conducted to ensure no direct discharge or leakage of contaminants or any polluted fluid into the adjacent Wai Ha River and the nearby Shuen Wan marsh. The Contractor should maintain regular check (e.g. daily) on the sedimentation and filtration facilities and appropriate sedimentation beds and/or tanks throughout the construction phase (e.g. check the function of the sedimentation beds and remove surplus sand and gravels deposited along the beds or within the tanks) to make sure all discharged water was filtered appropriately prior to any discharge.
- 3.3.6 The Contractor should have *ad hoc* inspection and emergency measures for any accidental spillage of polluted fluid, contaminants or grease from the construction sites. To prevent the impact of the unclear discharge on the nearby vegetated area, it is suggested to overlay PVC liners along the site edge and remove any surplus sand and gravels deposited in the beds and tank even some parts of the construction works may be completed at this stage. If needed (e.g. after heavy rainfall), the Contractor is suggested to remove the broken branches in the stream so as to prevent their blockage of the stream flow and trapping greasy substances in the stream.

3.4 Pollution Control

3.4.1 No follow-up action by the Contractor is required as from the *Monthly EM&A Report for April* 2014.

Observation

3.4.2 Construction works have been resumed along Wai Ha River. Since February 2014, no more muddy water has been released from the works area as the construction works at the upper stream was almost finished. The river water was generally clear (Photos 14-16). Down the stream near the public toilet, no more litter and broken branches from the adjacent trees were found blocking the stream (Photo 15).

- 3.4.3 In May 2014, no water from the nearby box culvert and from the works area opposite to Wai Ha was released to the area near the expanded works area near the previous collapsed tree T190 (*Ficus hispida*).
- 3.4.4 No direct water discharge into the upper stream of Wai Ha River was observed as the active construction works have been concentrated at the lower end of Wai Ha River to the southeast of Tung Tsz Shan Road (**Photo 17**).
- 3.4.5 Cement mortar was found spraying along the southern boundary edge close to the wetland rehabilitation habitat in February 2014. The cement mortar at this area has been removed. A mat was found covering this area with cement mortar in mid-March 2014, and it was removed in May 2014 (**Photo 18**).
- 3.4.6 Cement mortar and construction materials were found next to the rehabilitation wetland nearby the exit point and opposite to the tree group T021-029 in April 2014. The cement mortar and construction materials were removed in May 2014 (Photo 19).
- 3.4.7 As observed in May 2014, excavation work was noted from the area opposite to Jade View Villa to the exit point near Shuen Wan Tung Tsz Children's Playground. As observed on 30th May 2014, this area was waterlogged and unclear water has overflowed to the nearby marsh area (**Photo 20**).

Recommendations

- 3.4.8 The Contractor should prevent any contaminants and sediments from entering the sensitive water-based habitats (i.e. Shuen Wan marsh and Wai Ha River) and implement pollution control measures to minimize any adverse environmental impacts to the water body. The Contractor should maintain appropriate sedimentation beds and/or tanks throughout the construction phase. The Contractor should adopt a good site practice in maintaining appropriate sedimentation beds and filtration tanks as recommended in the above Section for Contaminant/ Sediment Control. Muddy water pumped from the works area should be filtered appropriately through sedimentation beds or other filtration system prior to the discharge.
- 3.4.9 The Contractor should have *ad hoc* inspection and emergency measures for any accidental spillage of polluted fluid, contaminants or grease from the construction sites. It is also recommended to overlay PVC liners along the site edge and remove any surplus sand and gravels deposited in the beds and tank so as to prevent the impact of the unclear discharge on the nearby vegetated area. Moreover, the Contractor should restrict and control the works areas where cement mortar has to be applied, and avoid spraying the cement mortar and chemical fluids on vegetation and waterbody.

3.5 Liaison with Nursery

3.5.1 The construction undertaken within Tung Tsz Nursery is restricted under Contract 1 of the Project. This monitoring item is not applicable to Contract 2 of the Project.

3.6 Existing Trees within Works Areas

3.6.1 Individual trees retained within the active works area have been protected within TPZs. The protection measures generally follow the recommendations stated in the *Monthly EM&A Report for April 2014*. Particular observations are highlighted in the following paragraphs.

- **Observation**
- 3.6.2 Most trees which are proposed to be retained within the Project Area were recorded generally in fair health condition and some of the retained trees were naturally covered by invasive climbers.
- 3.6.3 As stated in Section 3.2, a TPZ was set up with orange construction nets to protect the untagged leaning tree from the newly formed temporary parking area at Treasure Spot Garden Phase II. However, the vehicle was parked close to the TPZ (**Photo 8**).
- 3.6.4 The retained trees T167 (*Litsea monopetala*) and T168 (*Celtis sinensis*) were topped after the vegetation clearance in the surrounding works area in November 2013 (**Photo 21**). Both of them have been monitored and both were in poor health condition with development of watersprouts along trunks or branches. Excavated soil was found piling around their trunk flares and the construction work was undertaken close to these trees.
- 3.6.5 Temporary storage of construction materials was still noted close to the trunk flares and tree trunks of T093 and T094 (both *Litsea cubeba*) in May 2014 (**Photos 22-23**). Sand piling was seen close to the trunk flare of T093, while spread of cement mortar on the soil was also noted to the southwest of T093 and T094.
- 3.6.6 Construction works at the end of the Treasure Spot Garden have commenced since October 2012. Works have been resumed in the area since October 2013. Excavation works were resumed near the trunk base of the tree in previous months and the minor excavated soil and rocks and construction materials were piled close to the root flare of the tree as observed in May 2014 (**Photo 24**).
- 3.6.7 Sheet piling works were conducted within the tree root zone of a retained tree T025 (*Celtis sinensis*) in June 2013. Due to the close proximity of the erected sheet piles to the tree, root damage by previous sheet piling works was anticipated. The tree was also over-pruned in June 2013. It has been temporarily guyed by strings so as to provide additional support to the tree. The nearby piled sheets were removed in the previous months. The condition of the tree has been closely monitored (**Photo 25**). Excessive soil was still piled close to the root flare of T025 (**Photo 26**).
- 3.6.8 Concrete pavement, which was assumed to be applied for additional parking area for the villagers, was still observed very close to the root flare of the tree group T089-091 (**Photo 27**).
- 3.6.9 Excavation work was noted between T153 and T155 and severe exposed roots were noted on these two trees (Photo 28). Both trees were proposed to be felled in the approved Tree Felling Application Report for the Project.
- 3.6.10 Excavation work was noted very close to the tree group T181-T183 in May 2014. Excavated soil was noted piling around their trunk flares and the orange construction nets covered on the three trees were removed. These trees have been surrounded by some stones as observed in May 2014 (Photo 29). Exposed and pruned roots were noted in T183 (Photo 30).
- 3.6.11 Another two untagged trees (*Cleistocalyx nervosum* and *Macaranga tanarius* var. *tomentosa*) near the tree group T181-T183 but outside the Project boundary were also affected by the excavation work conducted by a party other than the Contractor of this Project. Severe exposed roots were noted on these two trees in May 2014 (Photos 31-32).

- 3.6.12 The two scaffold of T089 were found broken and removed after the adverse weather in early May 2014 (Photo 33).
- 3.6.13 No significant signs of damage on other existing tree crowns, trunks and roots resulting from the construction works were observed in this monthly monitoring.
- 3.6.14 As Area C under Contract 1 of the Project has been formally handed over to AFCD for management and maintenance since October 2012, no access into the ECA is allowed. Two transplanted shrubs of *Pavetta hongkongensis* (PH-01 and PH-03) were inspected through the fence of Tung Tsz Nursery and they have remained in satisfactory condition (**Photos 34-35**).

<u>Recommendations</u>

- 3.6.15 Within the active works area, maintenance of TPZs for the retained trees and the trees to be transplanted should be continued. Trunk bases of all retained trees should be kept clear, with no stockpiled soil, construction equipments and rubbish allowed around the trunk bases and within the TPZs. If necessary, these retained trees shall be watered regularly to maintain their health. All fallen trees or tree parts of the existing trees maintained within the works area of Contract No. DC/2010/02 should be removed if they pose imminent hazards to the people/property or cause obstruction to the traffic. Any broken tree parts still attached to the trees could be pruned appropriately to prevent their potential hazard to the public and property.
- 3.6.16 Disturbance is prohibited in all TPZs. In any practical circumstances, the contractor should follow Section 8 of Annex 4 of the approved Landscape Plan for protecting the existing trees from any potential damages resulting from the construction works. In addition, the Contractor and the Project Proponent should have routine inspection on any tree remedial works conducted by other party on the trees within the Project Area.
- 3.6.17 The tape and ropes tied on the tree trunk of the retained tree T103 should be removed. If necessary, it is recommended to remove the overgrown climbers on the tree canopy so as to reduce the crown load supported by this tree. As the construction works around T103 was resumed in January 2014, the Contractor should have close monitoring of the stability and health condition of this tree.
- 3.6.18 With regard to the previous tree topping incident on the retained trees (such as T088 and T089), as well as T118 in which the civil work was undertaken close to the tree trunk and potentially damage the tree roots, the Contractor is suggested to monitor all trees protected within the project boundary regularly. The Contractor should also be aware of any potential damage on the trees by other contractor(s) undertaking construction work concurrently. In addition, the Contractor should design and programme the civil works by taking into consideration of providing adequate buffer zone between the tree dripline and the civil work. No spreading of cement mortar within the tree root zone is allowed, and any cement mortar spread immediately around the trunk flares should be removed immediately.
- 3.6.19 Tree topping (like the case for T025, T167 and T168) should be prohibited and the Contractor should appoint qualified landscape contractor to perform appropriate pruning practice. The pruning works should follow any local, national or international standards for pruning works and relevant tree remedial works. Given that the tree roots of T025 could be damaged by previous sheet piling works and the topped tree exists with unbalanced tree form, the long-term tree stability and health condition should be checked after the removal of the sheet piles. In addition, the excessive soil piled close to the trunk flare of T025 should be removed to prevent suffocation of trunk. The Contractor should have close monitoring of tree stability

09/317/161D KLKJV -SWEM&A (Landscape & Visual) Report (May 2014) (Issue 1)with regard to its unbalanced tree form and health condition. Meanwhile, the Contractor and
sub-contractor should carefully design the civil works. Common civil works, such as excavation
and sheet piling works should be programmed and designed carefully by taking tree buffer
zone into consideration. The works should avoid affecting the tree canopy, trunk and
underground root zone with regard to tree dripline as far as possible.

- 3.6.20 As the concrete paved temporary parking area at Treasure Spot Garden Phase II was close to the untagged tree, the roots may be damaged and hence the stability of the tree would be affected. The tree may also be damaged by the parking vehicles. Therefore, the Contractor is advised to provide better tree protection measures such as increasing the buffer zone between the parking area and the trees and establish a warning sign to remind the driver to beware of the presence of trees within the tree protection zone. The health and stability of the tree should also be monitored by the Contractor regularly.
- 3.6.21 As temporary storage of construction materials were once noted within the dripline areas of T093, T094, T103 and T119-122, the Contractor is advised to establish proper Tree Protection Zone (e.g. an area of at least 1m from tree trunks) and prohibit any construction works and storage of construction materials within and close to the zone.
- 3.6.22 As there were excavation works (either by the Project or by the third party) close to T118 in as observed in February 2014, between T153 and T155 as observed in April 2014, close to T181, T182, T183 and two untagged trees as observed in May 2014, the Contractor should have close monitoring of the stability and health condition of these trees. In addition, for the recent excavation work around tree group of T181-T183 conducted by the third party, the Contractor should regularly check the status of these trees and have close liaison with the third party for maintaining appropriate tree protection during the works.

3.7 Construction Light

3.7.1 No follow-up action on maintenance of construction light is required as from the *Monthly EM&A Report for April 2014*.

Observation

3.7.2 No construction light impact to the surrounding villages and to Plover Cove as all construction activities and construction sites are halted at 1800. No construction light at night is provided by the Contractor.

Recommendation

3.7.3 No specific recommendation is required.

4 AUDIT SCHEDULE

4.1.1 The next bi-weekly Landscape & Visual Monitoring in June 2014 is scheduled to be conducted in the weeks of 9th and 23rd June 2014.

- Figure 3: SEMP 2, the second sampling point along Wai Ha River under Contract 2.

1. Introduction

1.1 Project description

The Drainage Improvement Works in Shuen Wan was undertaken to minimize the potential flooding impacts in Sha Tin and Tai Po area. Although the Ecological Impact Assessment in the EIA Report identified that ecological impacts resulting from the proposed drainage improvement works at Shuen Wan were anticipated to be very minor in scale, ecological mitigation and ecological monitoring were recommended in the EM&A Manual (http://env-shuenwan.com/pdf/review_note_em&a_rev.3.pdf) as stipulated under Environment Permit No. EP-303/2008.

- 1.2 Scope of ecological impact monitoring was described in the Particular Specifications and EM & A Manual of the projects. In brief, the monitoring tasks include regular check on the retained and transplanted trees and shrubs, monitoring on fauna groups and aquatic fauna within the works area and any ecologically sensitive area within 100 m of the works boundary.
- 1.3 China-Hong Kong Ecology Consultants Co. was commissioned by ENVIRON Hong Kong Limited to perform the ecological impact monitoring survey for the projects under Contract 2 since July 2011.
- 1.4 The outline of this ecological monitoring report was as follow:
 - Highlights of this report
 - Summary of construction activities for the month
 - Monitoring methodology
 - Monitoring data
 - Remedial measures adopted to the adverse condition
 - Record of complains and remedial measures
 - Review of monitoring results
 - Forecast of works programme and monitoring requirements
 - Comments and brief summary
- 1.5 This is the report No. 19b ecological monitoring conducted on 13th May 2014 within the works boundary under Contract 2 and area within 100 m from the works boundary.

2. Highlights of this report

- Field survey was conducted on 13th May 2014
- Construction activities of Contract 2 was initiated since June 2011
- Lower number of species was observed within the works area under Contract 2, but habitats in the 100 m buffer area retain its natural condition.

3. Summary of construction activities for the month

Major construction activities carried out in Contract 2 at Wai Ha Village and Tung Tsz Road by the contractor during the present monitoring period (May 2014) includes:

- 1. Backfilling of trench for Box Culvert Bay (1-7) near Tung Tsz Road.
- 2. Backfilling of trench for Box Culvert Bay (12-15) near Tung Tsz Road
- 3. Backfilling of trench for Box Culvert Bay (28-34) near Tung Tsz Road

4. Monitoring Methodology

Ecological monitoring methods were generally followed those described in the baseline ecological surveys (DC/2009/22). However, sampling area maybe reduced because of habitat change, for instance, deforestation and channel modification due to drainage works, where sampling was not applicable. Survey data and evaluation are detailed in the following sections.

4.1 Vegetation survey

Vegetation survey was performed along the designated transects (Figure 1) for ecological monitoring as described in the project specifications to monitor the vegetation health which could be adversely influenced by any bad site practice. Qualitative data of plants within the works boundary and wetland vegetation in the 100 m buffer area of Contract 2 adjacent to construction site and wetland was recorded. Riparian vegetation including aquatic and emergent at 4 stream ecological monitoring points (hereinafter referred to as "SEMP") under Contract 2 (i.e. SEMP 3 & 4; Figure 2 & 3) along the affected stream channel and riparian habitat was recorded in terms of species, relative abundance and average heights. Any signs of damages and adverse health problems directly caused the works were recorded and reported. Nomenclature and protection status of the species followed those documented in the AFCD website (www.hkbiodiversity.net) and Hong Kong Herbarium (2004).

4.2 Avifauna

Bird survey was conducted by following the proposed transects which cover the major ecologically sensitive areas of the Project (**Figure 1**). All bird species were recorded with special attention paid on the species of conservation importance and wetland-dependent species. List of bird species recorded and the relative abundance was provided.

4.3 Herpetofauna

Hepetofauna survey was conducted via direct observation and active searching along the survey transects with a focus in the work areas (**Figure 1**). All reptiles and amphibians encountered or heard were recorded. Nomenclature and conservation status of herpetofauna species follows AFCD website (www.hkbiodiversity.net).

4.4 Butterflies and Odonata

Odonates and butterfly survey of different habitats within the Study Area was conducted along the proposed transect (**Figure 1**). All butterflies and odonata were identified and relative abundance was recorded. Nomenclauture and status of conservation of butterflies follows Lo & Hui (2005) while that of odonata follows AFCD websites (www.hkbiodiversity.net).

4.5 Mammals

As the monitoring site was situated near traffics, plant nursery and residential buildings, mammals were unlikely inhabited at the site except rodents, domestic dogs and cats. Detailed mammal monitoring was not conducted. However, any sighting, tracks and signs of mammals encountered during survey of other faunal groups was recorded. Bat was surveyed by search for potential colony habitat, such as palm trees, which are often used by fruit bats as nesting sites.

4.6 Aquatic fauna

Monitoring of aquatic fauna was carried out mainly by bank-side observation, sometimes with the aid of binoculars, at two stream ecological monitoring points under Contract 2 (i.e. SEMP 3 & 4). These points are selected for covering representative sections of Wai Ha River and are shown in **Figure 1**. Netting and fish traps were also deployed at these points to collect supplementary data. Aquatic fauna seen/collected

was identified *in situ* to the lowest possible taxon and relative abundance was presented.

5. Monitoring data

5.1 Vegetation survey

The habitats identified in area under Contract 2 are river course, wooded area, mangrove, marsh and developed area (including village). Vegetation were found in wooded area, mangrove, marsh, develop area and river bank. The riparian vegetation which were dominated by Leucaena leucocephala, Bidens alba, and Rhaphiolepis salicifolias with average coverage ranged from 15% to 30% (Table 1). A list of plant species recorded from different habitats within the assessment area under Contract 2 is presented on **Table 2**. A total of 180 species were recorded within the assessment boundary in which 175 species were recorded within the buffer area, while 120 species recorded within the work areas under Contract 2. About 20% of common vegetation species in the edge of marsh under Contract 2 were removed due to direct conflict with the construction activities. Most of the vegetation species were distributed in the Among them, species protected under Hong Kong secondary woodland area. ordinance were found in buffer area under Contract 2, namely Aquilaria sinensis (Cap. 586), Cibotium barometz (Cap. 586). Three individuals of protected species Pavetta hongkongensis located within works area of Contract 2 were transplanted to ECA on 20th Dec 2011.

5.2 Avifauna

A total of 18 bird species were recorded in the current survey (**Table 3**). In the work area under Contract 2, 4 bird species were recorded in which none are considered to be of conservation concern. A total of 14 bird species were recorded in the 100m buffer area in which one bird species *Ardeola bacchus* is recognized as being regional conservation concern.

5.3 Herpetofauna

No reptile was recorded within the assessment area Mating call of Gunter's Frog was recorded from the water of pools, ditches and river bank within work area, while calling of Gunter's Frog, Asiatic Painted Frog and Paddy Frog were heard within 100m buffer zone. Common Toad was found on both work area and buffer zone of the site. The species recorded belongs to common species in Hong Kong. (**Table 4**).

5.4 Butterflies

A total of 14 butterfly species were recorded during surveys (**Table 5**). However, none of the species are of the conservation concern.

5.5 Odonata

Only 1 odonata species were recorded during the surveys (**Table 6**). Only Wandering Glider (*Pantala flavescens*) was found within both the work boundaries and the 100m buffer zone under Contract 2. This odonata species was very common in Hong Kong.

5.6 Mammal

No other mammals or trace of mammals was observed within the assessment area.

5.7 Aquatic fauna

Under Contract 2 (i.e. SEMP 3 & 4), a total of 10 fish species, 1 crustacean, 1 gastropod and 1 arthropod were recorded and most of them were freshwater species (**Table 7**). *Carassius auratus* was commonly observed at SEMP 3 because of the traditional Buddhist practice from the nearby temple in which captured organisms were released back to nature. In addition, river section at SEMP 3 is relatively natural and the presence of *Parazacco spilurus* may imply that good water quality at this section is maintained. Overall, no protected or rare species were recorded.

6. Remedial measures adopted to the adverse condition

There was no non-compliance event recorded within this reporting month.

7. Record of complains and remedial measures

There was no complaint in relation to environmental issue recorded in this reporting month.

8. Review of the monitoring results

During the present survey period, construction activities were carried out at works area under Contract 2, while 100 m buffer area remains natural. Much of the construction activities are carried out along Tung Tsz Road under Contact 2. In general, lower numbers of species were recorded within the works area under Contract 2 than that of 100 m buffer area because of the associated constructions and urbanized in nature. Water quality in river section of Contract 2 (i.e. SEMP 3) was maintained at acceptable condition as indicated by the presence of *Parazacco spilurus*. The impact of excavation work on downstream of SEMP4 is anticipated to be minimized as proper mitigation measure was implemented. In addition, most of the construction activities are restricted in the developed area with low ecological significance. As mitigation measures recommended in the EM&A Manual were properly implemented during the current survey, and hence the residual environmental impacts would be minimized.

9. Forecast of works programme and monitoring requirements

The tentative construction activities undertaken by the contractor at Wai Ha Village and Tung Tsz Road in the coming month are as follows:

- 4. Backfilling of trench for Box Culvert Bay (1-7) near Tung Tsz Road.
- 5. Backfilling of trench for Box Culvert Bay (12-15) near Tung Tsz Road
- 6. Backfilling of trench for Box Culvert Bay (28-34) near Tung Tsz Road

The monitoring programme described in EM&A will strictly follow to verify compliance of environmental requirements and the proper implementation of all necessary mitigation measures.

10. Comments and summary

The bi-monthly ecological impact monitoring under Contracts 2 was conducted in May 2014 and relevant flora and fauna data were collected according to project specification and EM & A Manual. As indicated by the low abundance and diversity of

species within the work areas, habitats within the work boundary under Contracts 2 offer few ecological opportunities for colonization of fauna and flora. Given that the construction activities are restricted in the developed area with proper mitigation measures being implemented, disturbances associated with the current construction activities are largely affecting area with low ecological significance. On the other hand, the natural habitats in the 100 m buffer area are retained at acceptable condition, and hence the 100 m buffer area has not been significantly affected by the construction works.

Table 3. List of avifauna species and maximum counts recorded from the impact monitoring survey in Mar 2014 at work area underContracts 2 and 100 m buffer area.

Species	Common name	Habitat	Conservation status in	Work area:	100m buffer
			Hong Kong	Contract 2	area
Garrulax perspicillatus	Masked Laughing				3
	thrush				
Orthotomus sutorius	Common Tailorbird				1
Pycnonotus jocosus	Red-whiskered				6
	Bulbul				
Phoenicurus auroreus	Daurian redstart				1
Pycnonotus sinensis	Chinese Bulbul				5
Parus major(commixtus)	Great Tit				1
Stachyris ruficeps	Rufous-capped		LC		1
	Babbler				
Streptopelia chinensis	Spotted Dove			2	3
Prinia flaviventris	Yellow-bellied				1
	Prinia				
Eudynamys scolopacea	Common Koel				1
Egretta garzetta	Little Egret				1
Copsychus saularis	Oriental Magpie				1
	Robin				

Species	Common name	Habitat	Conservation status in	Work area:	100m buffer
			Hong Kong	Contract 2	area
Motacilla alba	White Wagtail				1
Amaurornis phoenicurus	White-breasted				1
	Water hen				
Hirundo rustica	Barn Swallow				2
Sturnus nigricollis	Black-collared				2
	Starling				
Passer montanus	Eurasian Tree				2
	Sparrow				
Urocissa erythrorhyncha	Blue Magpie				2
Total number of species:			1	1	18

W = Wetland dependent species ; RC = Regional Concern ; LC = Local Concern

Table 4. Relative abundance of aquatic species recorded in Wai Ha River within the 100 m buffer of works boundary under Contracts2 in the impact monitoring survey during Mar 2014.

Species	Common name	¹ Life-cycle characteristics	² Origin	SEMP 3	SEMP 4
Carassius auratus	Goldfish	F		++	+
Cirrhinus molitorella	Mud carp	F	1	++	+
Cyprinus carpio	Common Carp	F	I	+	+
Gambusia affinis	Mosquito Fish	F		++	+
Oreochromis niloticus	Nile Tilapa	F		+	
Parazacco spilurus	Predaceaous Chub	F	N	+	
Poecilia reticulata	Guppy	F		+	+
Puntius semifasciolatus	Chinese Barb	F	Ν	+	
Rhinogobius duospilus	Goby	F	Ν	+	+
Xiphophorus hellerii	Swordtail	F		+	+
Uca arcuata	Fiddler Crab	M	N	+	
Pomacea lineata	Apple snail	F		+	
Gerris sp.	Water Strider	F	/	+	
Total number of species:	13			13	7

Key:

Relative abundance:

+ : Species exists in the survey area

++ : Species common in the survey area

+++ : Species abundant in the survey area

¹Life-cycle characteristics:

M = Marine vagrant

F = Freshwater species

²Origin:

N = Native I = Introduced; / = not available
