

EIA Ordinance Register Office Environmental Protection Department 27<sup>th</sup> Floor, Southorn Centre 130 Hennessy Road Hong Kong Our ref: TNS-COR-ENVM-ENV-031032

Attn: Mr. Keith Lam

11 November 2013

Dear Mr. Lam,

Tsim Sha Tsui Northern Subway (TNS) Environmental Permit No.: EP-317/2009

Monthly EM&A Report

Attached please find the Monthly EM&A Report of Tsim Sha Tsui Northern Subway (TNS) for your review.

Should there be any queries, please feel free to contact the undersigned at 26881950.

Yours sincerely,

Raymond Wong

**Environment Engineer**

### **EXECUTIVE SUMMARY**

The Tsim Sha Tsui Northern Subway Project (TNS) was awarded to the respective contractor in late Dec 2012. The EM&A programme for (TNS) Project commenced on 8 Feb 2013, the commencement date of construction of the Project. This is the ninth monthly Environmental Monitoring and Audit (EM&A) Report for TNS Project. The Report presents the results of EM&A works for the project works undertaken during the period of October 2013.

The impact monitoring for air quality and noise were conducted for the weeks of October 2013. Both noise and dust monitoring results were below action limits. No environmental notification of summon, prosecution and valid complaint were received in the reporting period.

Regular joint site inspections, led by the ER with the presence with representatives from the Contractor and Environmental Team, were conducted on weekly basis to monitor Contractors' performance on environmental management and implementation of environmental pollution control and mitigation measures for the Project.

The Environmental Permit (EP-317/2009) dated on 8 January 2009 is being used for the TNS Project.

In the reporting period, no non-conformance was identified and no reporting change of circumstances which may affect the compliance with the recommendations of the EIA Report.

In next reporting period, the key issues are excavation for temporary exit and installation of sheet piles.

### 1 INTRODUCTION

### 1.1 Project Background

MTR Corporation Limited (MTRCL) proposes to construct Tsim Sha Tsui Station Northern Subway, otherwise referred 'TNS'. This EM&A report is for the phase 1 of the TNS, which is the modification of existing Tsim Sha Tsui Station Entrance A1. The scope of this phase 1 work is to upgrade the Entrance A1 to replace the existing concrete structure with a new transparent box reconstructed on the same site with improved access to the station with new disable lift serving Tsim Sha Tsui concourse level, street and Kowloon Park; and escalators serving street and the existing Entrance A1 Adit. The remaining subway running from the north end of Tsim Sha Tsui Station to the new satellite concourse at The One shopping (previous Tung Ying Building) and then to Miramar Shopping Centre will be grouped at the phase 2 of the TNS project. The phase 2 is still under planning stage and the status will be updated later.

### 1.2 Project Programme

The TNS Project Phase 1 contract with contract number C6564-11C was awarded to the Goldfield N&W Construction Company Limited (GNW) in late Dec 2012. The commencement of construction was on 8 Feb 2013. The commencement of operation of the Project is scheduled to be in 2015. Contractors' tentative programme for the construction is presented below.

Activities	2012	Г				20	13					T				- 2	201	4									2	2015	;

### 1.3 Coverage of the EM&A Report

The EM&A programme for the TNS Project commenced on 8 Feb 2013. This is the third Monthly Environmental Monitoring and Audit (EM&A) Report for the Project. The Report presents the results of EM&A works and the impact monitoring for the construction works undertaken by the Contractor during the period of October 2013.

### 2 PROJECT INFORMATION

### 2.1 Project Management Organization and Contact Details

The TNS Project organization chart is presented in Figure 1. Contacts of key environmental personnel of the Project are shown in Tables 1a and 1b respectively.

Figure 1. Project Organization

**Table 1a** Contact List of Key Personnel for Project Management

### 2.2 Project Works Sites and Areas and Environmental Monitoring Locations

- The TNS Project work site and areas are summarized in Table 2 below and shown in Appendix A Figures 1.
- The locations of environmental monitoring stations are indicated in Appendix A Figures 2.
- Table 3 shows the details of the active monitoring stations as reported in Sections 3.1 and 3.2.

**Table 2** Summary of TNS Project Works Sites and Areas

Air	
D1	Hai Phong Road
Noise	
M1	Hai Phong Mansion
M2	Comfort Building
M3	Burlington Arcade

### 2.3 Summary of EM&A Requirements

The EM&A programme mainly requires environmental monitoring for air quality, noise, landscape & visual, water quality, built heritage and waste management as specified in the EM&A Manual.

A summary of impact EM&A requirements as applicable to this EM&A Report is presented in Table 4 below.

**Table 4** Summary of impact EM&A Requirements

Parameters	Descriptions	Locations	Monitoring	Duration
			Frequencies	
Air Quality	24-hr TSP	Shown in Table 3	Once a week	Construction stage
Noise	L <sub>eq(30min)</sub>	Shown in Table 3	Once a week	Construction stage
Landscape and visual	On-Site Audit	Active Works Sites	Bi-weekly	Construction stage
Built Heritage	On-Site Audit	Active Works Sites	Bi-weekly	Construction stage
Waste	On-Site Audit	Active Works Sites	Weekly	Construction stage
General Site Conditions	Environmental Site Inspection	Active Works Sites	Weekly	Construction stage

Environmental Quality Performance Limits for air quality and noise are shown in **Appendix B**.

The Event Action Plans for air quality and noise are shown in **Appendix C**.

### 2.4 Implementation of Environmental Mitigation Measures

The TNS Civil Works Contractors are required to implement the mitigation measures as

specified in the EP, EIA Report and EM&A Manual. During the regular environmental site inspections, the Contractors' implementation of mitigation measures were inspected and reviewed. A schedule of the implementation of mitigation measures identified in the TNS EM&A Manual is given in **Appendix D**.

### 2.5 Construction Activities in the Reporting Month

Major construction activities carried out by the respective TNS Civil Works Contractors during the reporting period include:

### Works Sites and Areas

### Works Site (Tsim Sha Tsui Entrance A)

- Excavation for Temporary Exit
- Installation of Sheet Piles

### 2.6 Construction Activities in the Coming Month

- Excavation for Temporary Exit
- Installation of Sheet Piles

### 3 IMPACT MONITORING

### 3.1 Air Quality

### 24-Hour TSP Levels Monitoring

The TSP was measured by Andersen High Volume Sampler, model G25A. The sampling procedure follows that described in the App. B of Pt 50 in 40CFR Ch.1 (U.S. Environmental Protection Agency). TSP is sampled by drawing air through a conditioned, pre-weighed filter paper inside the high volume sampler at a controlled rate. After 24-hour sampling the filter paper with retained particles is collected and returned to the laboratory for drying in a desiccator followed by weighing. TSP levels are calculated from the ratio of the mass of particulate retained on the filter paper to the total volume of air sampled.

The samplers should be properly maintained. Prior to dust monitoring commencing, appropriate checks should be made to ensure that all equipment and necessary power supply are in good working condition.

### Calibration Requirements

The flow rate of the high volume sampler with mass flow controller will be calibrated using an orifice calibrator. Initial calibration (five points) will be conducted upon installation and prior to commissioning. Calibration will be carried out every six months. Calibration certificates are attached in **Appendix E**.

To examine the construction dust levels, 24-hour TSP monitoring was undertaken according to the EM&A Manual. The dust monitoring location is shown in the Section 2.2 above. The monitoring location is subjected to construction dust impact from Works Site, is available to check the environmental performance of the work site and assess the effectiveness of the mitigation measures.

Monitoring results are presented in the following table and **Appendix F** for graphical plot. The 24-hour TSP monitoring results in the range from 149 to 185  $\mu$ g/m<sup>3</sup> recorded in the monitoring period shows that the dust levels generated by the active construction activities were within the Action Levels.

D1 Hai Phong Road	DΙ	Hai	Phong	Road
-------------------	----	-----	-------	------

Date	TSP (µg/m3)	Action Level (µg/m3)	Limit Level (µg/m3)	Compliance to limit level	Weather Condition
02-Oct-13	183	226	260	Yes	Sunny
08-Oct-13	156	226	260	Yes	Overcast
15-Oct-13	149	226	260	Yes	Sunny
22-Oct-13	185	226	260	Yes	Sunny
29-Oct-13	173	226	260	Yes	Sunny

### 4 Noise

B&K 2238/2250 sound level meters which complied with the International Electrotechnical Commission Publication 651:1979 (Type 1) and 804:1985 (Type 1), specification as referred to in the Technical Memoranda to the NCO were used for the construction noise impact monitoring. The B&K sound level meters and B&K 4231 calibrator are verified by the certified laboratory or manufacturer once every two years to ensure they perform to the same level of accuracy as stated in the manufacturer's specifications. In this reporting period, all relevant calibration certificates are attached in **Appendix E**.

Immediately prior to and following each set of measurements at any NSR, the accuracy of the sound level meter was checked using an acoustic calibrator generating a known sound pressure level at a known frequency. If the calibration levels before and after the measurement differs by more than 1.0dB the measurement shall be repeated to obtain a reliable result. Periods of prolonged or repeated overloading of the sound level meter detector were avoided by setting the meter with adequate headroom prior to commencing measurements. Measurements were recorded to the nearest whole dB, with values of 0.5 or more being rounded up.

Impact noise monitoring of  $L_{Aeq(30min)}$  was undertaken to measure construction noise levels in accordance with the EM&A Manual. The noise monitoring locations are shown in Section 2.2 above.

The monitoring results in the range from 62.5 to 67.0 dBA are presented in the following table and **Appendix F** for graphical plot.

M1- Hai Phong Mansion

Date	Time	Measured	Baseline	Limit Level	Exceedance of	Weather	Wind Speed
		Leq(dBA)	Leq (dBA)	(dBA)	Limit Level	Condition	(m/s)

22-Oct-13	10:15	63.8	68	75	No	Sunny	<2
29-Oct-13	09:50	63.7	68	75	No	Sunny	<2

### 3.3 Action taken in Event of Exceedance

There was no exceedance in air quality and noise monitoring for the monitoring locations in the reporting period.

### 4 LANDSCAPE AND VISUAL

### 4.1 Monitoring Requirements

Monitoring of the implementation of the landscape and visual mitigation measures during construction phase was conducted in accordance with the requirements as stipulated in the EM&A Manual.

The landscape and visual monitoring and audit will be conducted once every two weeks throughout the construction stage.

### 4.2 Audit Results

Monitoring and audit was undertaken in accordance with the EM&A Manual.

OVT T30 and T31 had fallen due to non-project related causes since the EIA Report, other OVTs were in good health.

The transplantation of the two *Elaeocarpus balansae* in front of Entrance A1 was carried out in May 2013, to sites within Kowloon Park as pre-agreed with LCSD.

T69, T70 and T71 (all Delonix Regia) at Hai Phong Road were removed on 14 September 2013 as approved under the Tree Removal Applications.

### Bi-weekly inspection

The Registered Landscape Architect of Environmental Team or his representatives conducted inspections and audits and the tree protection works were implemented by the respective contractor. No non-conformance was identified in the reporting period.

### 4.3 Action Taken in Event of Non-Conformance

No actions on landscape and visual were required to be taken in this reporting period.

### 5 WASTE MANAGEMENT

The quantities disposed in the reporting period are summarized in the following table:

Amount of Constructi	on Wastes Disp	oosed		
Reporting Period	Inert C&D	Inert C&D	Non-inert	Chemical Waste
	Materials to	Materials	Waste to	to designated
	Public Fill	Reused (m <sup>3</sup> )	Landfill (m <sup>3</sup> )	treatment facility
	$(m^3)$			(trips)
Feb 2013	0	0	0	0
Mar 2013	5	0	10	0
Apr 2013	0	0	10	0
May 2013	25	0	0	0
Jun 2013	85	0	0	0
Jul 2013	138	0	18	0
Aug 2013	18	0	6	0
Sep 2013	276	0	6	0
Oct 2013	102	0	0	0
Total	649	0	50	0

### 6 WATER QUALITY

An effluent discharge license was granted on 11 June 2013. Discharge mainly arose from vehicle washing and dewatering process in the reporting month. Weekly site inspection was conducted to ensure the recommended mitigation measures are properly implemented and license conditions are observed.

### 7 Built Heritage

There are two built heritage resources have been identified in the close proximity to the work site. The two built heritage resources, the retaining wall and the Block S4 of former Whitfield Barracks were inspected visually. They were well kept and no observable impact due to the project was identified. The two granite columns previously relocated to Kowloon Park is in good condition.

### 8 RECORD OF ENVIRONMENTAL COMPLAINTS

There was no complaint received during the reporting month.

### 9 RECORD OF NON-COMPLIANCES

There was no non-compliance identified in the reporting period.

### 10. NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

No summon or prosecution related to environmental issue was recorded in the reporting period. A summary of environmental prosecution since commencement of construction is shown below:-

Reporting Period	Frequency	Cumulative	Nature	Status
October 2013	0	0	N/A	N/A
Cumulative	0	0	N/A	N/A

### 11. STATUS OF STATUTORY SUBMISSIONS

### 11.1 Submissions required under Environmental Permit

A summary of the status of the clauses required under the TNS Environmental Permit as of October 2013 is shown below:

EP-317/2009		Description	Status
Clause No.	1	Notification of commencement of construction	Construction commenced on 8 Feb 2013
2.1	2	Establishment of ET with ET Leader	ET set up since Oct 2012
2.2	4	Employment of IEC	IEC set up since Oct 2012
2.3	5	Notification of the management organization of main construction companies and/or any form of JV	Set up in Dec 2012
2.4	6	Submission of Waste Management Plan	Comments received and RTC is being prepared. The WMP is being revised accordingly
5.4	7	Submission of Baseline Monitoring Report	Submitted
5.7	8	Notification of setting up A community liaison procedure and channel	Established since Jan 2013
6.2	9	Notification of Internet address to place EM&A data	Established on 7 March 2013
5.5	10	Monitoring Report for September 2013	Submitted

### 11.2 Statutory Permits and Licenses

A summary of the status of all relevant environmental permits and licenses as of 31 October 2013 is shown below:

Description	License/ Permit Reference	Issue Date	Expired Date
Environmental Permit for Tsim	EP-317/2009	8 January 2008	NA
Sha Tsui Station Northern			
Subway Project			
Wastewater Discharge License	WT00016228-2013	11 Jun 2013	30 Jun 2018
Registration as a Chemical	Waste Producer Number:	12 March 2013	NA
Waste Producer	5213-214-G2417-05		
Disposal of Construction Waste	Billing Account no.	27 Dec 2012	NA
_	7016610 activated		
Construction Noise Permit	GW-RE0870-13	16 Aug 2013	3 Sep 2013 –
			3 Oct 2013

### 12 SITE INSPECTIONS

### 12.1 Observations

Regular site inspections led by the Engineer's Representative and anticipated by ET and respective Contractors were undertaken in accordance with the EM&A Manual in the reporting period. The contractors' performance on environmental matters were assessed and found in an acceptable manner. The inspection findings and the associated recommendations on improvement to the environmental protection and pollution control works were raised to the contractors for reference and/ or action.

Observations against the implementation of the mitigation measures recommended in the EP/EIA are summarized as follows:

Item	Description	Follow-up Status
	Contract C6564-11C	Status
1	The contractor was reminded that the noise and dust mitigation requirements stated in the EP shall be strictly followed.	On going
2	The contractor was reminded to pay special attention to the Heritage Built and the OVT protection.	On going
3	The contractor is to monitor closely on observing effluent discharge standards.	On going

The respective contractors have followed most of concerned items raised during the inspections for rectification in a responsible manner.

### 12.2 Other Notable Events

### IEC Site Inspections

The IEC conducted site inspections for Works Areas on 8 October 2013. Some observations listed in section 12.1 were noted during the site inspections and the respective Contractors had followed up the issues as identified in the site inspections in a responsible manner.

### **EPD** Inspection

EPD inspection was not recorded in this reporting period.

### 13 FUTURE KEY ISSUES

### 13.1 Key Issues for the Coming Month

Future key issues envisaged in the coming month include the followings:

- Excavation for Temporary Exit
- Installation of Sheet Piles

### 13.2 Effectiveness and Efficiency of Mitigation Measures

Based on the environmental monitoring results of the reporting period, the effectiveness and efficiency of the mitigation measures implemented were found to be satisfactory. The respective contractors were reminded to carry out their future construction activities to comply with the requirements of the EP and the relevant contract requirements.

### 14 CONCLUSIONS

The Report presents the results of EM&A works and the impact monitoring for the construction works undertaken during October 2013. The major construction activities in the reporting period were:

- Excavation for Temporary Exit
- Erection of Temporary Access for Kowloon Park

No exceedance on noise and dust action level and no complaint received

No notification of summon and prosecution were received in the reporting period.

Regular site inspections led by the Engineer's Representative and anticipated by the representatives from ET and the respective Contractors' Team were conducted on a weekly basis to monitor the implementation of environmental pollution control and mitigation measures for the Project. No non-conformance to the environmental requirements was identified by the Environmental Team in the reporting period. The performances of the respective contractors on site environmental management were found in a responsible manner in this reporting period.

It is concluded from the environmental monitoring and audit works for the Tsim Sha Tsui Northern Subway Project were undertaken in a responsible manner. The environmental protection and pollution control measures provided by the contractor were generally acceptable.

4 7	5	1,123	40	39.642		
5 5	3.1	0.888	32	31.714		

Calculations

Qstd = 1/m [Sqrt (H2O (Pa/Pstd) (Tstd/Ta)) - b]

IC = I [Sqrt (Pa/Pstd) (Tstd/Ta)]

Qstd = standard flow rate

IC = corrected chart response

I = actual chart response

m = calibrator Qstd slope

b = calibrator Qstd intercept

Ta = actual temperature during calibration (deg K)

Pa = actual pressure during calibration (mm Hg)

Tstd = 298 deg K

Pstd = 760 mm Hg

For subsequent calculation of sampler flow:

1/m ((I) [Sqrt (298/Tav) (Pav/760)] - b)

m = sampler slope

b = sampler intercept

I = chart response

Tav = daily average temperature

Pav = daily average pressure

This is to certify that the above equipment has been calibrated in accordance with manufacturer's procedure.

### CALIBRATION CERTIFICATE

Certificate Information

14th December, 2012

Certificate Number

MLCN121428S

Customer Information

Company Name

Date of Issue

Address

MTR Corporation Limited 8/F, Fo Tan Railway House, No.9 Lok King Street,

Fo Tan, N.T. Hong Kong

Unit Under Test (UUT)

Description

Integrating Sound Level Meter

Manufacturer

Brüel & Kjær 2238

Model Number Serial Number

2456919

**Equipment Number** 

#### Calibration Result

- \* All calibration results were within IEC 60651 Type 1 specification.
- \* Calibration data are detailed on the attached sheet(s).

Approved By Laboratory Manager

- Calibration equipment used for this calibration are traceable to national / international standards.

  The results on this Calibration Certificate only relate to the values measured at the time of the calibration and the uncertainties quoted will not include allowance for the UUT long term drift, variation with environmental changes, vibration and shock during transportation, overloading, mishandling, misuse, and the capacity of any other laboratory to repeat the measurement.

  MaxLab Calibration Centre Limited shall not be liable for any loss or damage resulting from the use of the UUT.

  The copy of this Certificate is owned by MaxLab Calibration Centre Limited. No part of this Certificate may be reproduced without the prior written approval of MaxLab Calibration Centre Limited.
