EXECUTIVE SUMMARY

- i. This is the 30th Consolidated Monthly EM&A Report which summaries the EM&A works undertaken by respective contract under EP-337/2009 within the period between 1 April and 30 April 2019.
- ii. The EP-337/2009 relevant major construction activities undertaken in the reporting month are summarized as follow:

Contract No. KL/2012/03:

- Daily Cleaning:
- E&M Work, Landscape Work in PS2;
- Maintenance platform in DCS;
- E&M Works, Scaffold Platform Installation in NPS.

: +852 2450 8233

: +852 2450 6138

Contract No. KL/2014/01:

- TTA implementation, junction improvement works at Shing Fung Road and Wang Chiu Road / Kai Cheung Road;
- Construction of box culvert and underpass:
- Construction of utilities trough at Kai Tak Bridge;
- Construction of pile caps, noise barrier footings and steel structures, outfalls, deck structure and columns;
- Laying of sewer, drainage and pavement;
- Erection of noise barrier steel structure and panels

Contract No. KL/2014/03:

- Excavation and laying of drainage pipe and manhole;
- Excavation and ELS construction.
- Construction of SUS structure: and
- Construction of District Cooling System.

Contract No. KL/2015/02:

- Structural works and backfilling works for subway construction at PERE
- Backfilling works for extracting sheet piles along subway SW6 from CH0 to CH4
- Erection of underpinning frame and jacked up the exiting Bridge K72
- Grouting works at SKLR playground (Stage 4)
- Construction of chain-link fence for land sale sites
- Filling work for slip road S15
- DCS works in Portion 6
- DCS works at Road D1, L7 in Portion 1
- Water works at Road L7 in Portion 1 & Portion 4

Breaches of the Action and Limit Levels

- iii. No Action / Limit Level exceedance was recorded for 24-hr TSP monitoring in the reporting month.
- iv. No Action / Limit Level exceedance was recorded for 1-hr TSP monitoring in the reporting month.
- v. No Action / Limit Level exceedance was recorded for noise monitoring in the reporting month.

Complaint, Notification of Summons and Successful Prosecution

vi. No complaint, notification of summons or prosecution was received in this reporting month.

Reporting Changes

vii. There was no reporting change in the reporting month.

Future Key Issues

viii. The potential environmental impacts for the coming month and the control measures are shown in **Table I**:

| | ey Issues for the Coming Month and Control Measures | | | | |
|---|---|--|--|--|--|
| Major Impact Prediction | Control Measures | | | | |
| Contract No. KL/2012/03: | | | | | |
| Air quality impact (dust) | Frequent watering or covering stockpiles with impervious sheeting. | | | | |
| Water quality impact (surface run-off) | Provision of measures to prevent discharge into the stream. | | | | |
| Noise Impact | Scheduling of noisy construction activities if necessary to avoid persistent noisy operation; Controlling the number of plants use on site; and Regular maintenance of machines. | | | | |
| Contract No. KL/2 | 014/01· | | | | |
| Air quality impact (dust) | Frequent watering of haul road and unpaved/exposed areas; Frequent watering or covering stockpiles with tarpaulin or similar means; and Watering of any earth moving activities. | | | | |
| Water quality impact (surface run-off) | Diversion of the collected effluent to de-silting facilities for treatment prior to discharge to public storm water drains; Provision of adequate de-silting facilities for treating surface run-off and other collected effluents prior to discharge; Provision of perimeter protection such as sealing of hoarding footings to avoid run-off from entering the existing storm water drainage system via public road; and Provision of measures to prevent discharge into the stream. | | | | |
| Noise Impact | Scheduling of noisy construction activities if necessary to avoid persistent noisy operation; Controlling the number of plants use on site; Regular maintenance of machines; and Use of acoustic barriers if necessary. | | | | |
| Contract No. KL/2 | <u>014/03:</u> | | | | |
| Construction dust, construction noise, water quality, waste management and landscape and visual impact. | Sufficient watering of the works site with the active dust emitting activities; Limitation of the speed for vehicles on unpaved site roads; Properly cover or enclosure of the stockpiles and dusty materials; Good site practices on loading dusty materials; Providing sufficient vehicles washing facilities at every vehicle exit point; Good maintenance to the plant and equipment; Use of quieter plant and Quality Powered Mechanical Equipment (QPME); Use of acoustic fabric and noise barrier; Using the approved Non-road Mobile Machineries (NRMMs); Proper storage and handling of chemical; Appropriate desilting, oil interceptors or sedimentation devices provided on site for treatment before discharge; Onsite waste sorting and implementation of trip ticket system; Training of the site personnel in proper waste management and chemical waste handling procedures; Proper storage of the construction materials; Erection of decorative screen hoarding; | | | | |

1. INTRODUCTION

1.1 Background

- 1.1.1 The Kai Tak Development is located in the south-eastern part of Kowloon Peninsula of the HKSAR, comprising the apron and runway areas of the former Kai Tak Airport and existing waterfront areas at To Kwa Wan, Ma Tau Kok, Kowloon Bay, Kwun Tong and Cha Kwo Ling.
- 1.1.2 A study of environmental impact assessment (EIA) was undertaken to consider the key issues of air quality, noise, water quality, waste, land contamination, cultural heritage and landscape and visual impact, and identify possible mitigation measures associated with the works. EIA Report (Register No. AEIAR-130/2009) was approved by the Environmental Protection Department (EPD) on 4 March 2009.
- 1.1.3 The EP-337/2009 was issued on 23 April 2009 for the new distributor roads serving the planned Kai Tak Development to the following scale and slope:
 - a) Road D1 a dual 2-lane carriageway of approximately 1.3 km long.
 - b) Road D2 a dual 3-lane carriageway of approximately 1.1 km long.
 - c) Road D3 a dual 2-lane carriageway of approximately 2.3 km long.
 - d) Road D4 a dual 2-lane carriageway of approximately 0.9 km long.
- 1.1.4 The Civil Engineering and Development Department HKSAR has appointed Fugro Technical Services Limited (FTS) to undertake the role of Independent Environmental Checker (IEC) for the Contract No. KL/2015/02.
- 1.1.5 This is the 30th Consolidated Monthly EM&A Report which summaries the EM&A works undertaken by respective contract under EP-337/2009 within the period between 1 April and 30 April 2019.

1.2 Summary of relevant Contract Information of Key Personnel

| Main Contractor (PWHJV) | Site Agent | Mr. W. M. Wong | 6386 3535 | 2398 8301 |

1.3 Summary of Construction Programme and Activities

- 1.3.1 The construction programme of each Contract is summarized in the appendices of the corresponding Monthly EM&A.
- 1.3.2 The major construction activities undertaken in the reporting month are summarized as follow:

Contract No. KL/2012/03:

- Daily Cleaning;
- E&M Work, Landscape Work in PS2;
- Maintenance platform in DCS;
- E&M Works, Scaffold Platform Installation in NPS.

Contract No. KL/2014/01:

- TTA implementation, junction improvement works at Shing Fung Road and Wang Chiu Road / Kai Cheung Road;
- Construction of box culvert and underpass;
- Construction of utilities trough at Kai Tak Bridge;
- Construction of pile caps, noise barrier footings and steel structures, outfalls, deck structure and columns;
- Laying of sewer, drainage and pavement;
- Erection of noise barrier steel structure and panels

Contract No. KL/2014/03:

- Excavation and laying of drainage pipe and manhole;
- Excavation and ELS construction.
- · Construction of SUS structure; and
- Construction of District Cooling System.

Contract No. KL/2015/02:

- Structural works and backfilling works for subway construction at PERE
- Backfilling works for extracting sheet piles along subway SW6 from CH0 to CH4
- Erection of underpinning frame and jacked up the exiting Bridge K72
- Grouting works at SKLR playground (Stage 4)
- Construction of chain-link fence for land sale sites
- Filling work for slip road S15
- DCS works in Portion 6
- DCS works at Road D1, L7 in Portion 1
- Water works at Road L7 in Portion 1 & Portion 4

1.4 Summary of Inter-relationship with the environmental protection/ mitigation measures with the construction programme

1.4.1 The summary of inter-relationship with environmental protection/mitigation measures are presented as follow:

| Major Environmental Impact | Control Measures |
|---|--|
| Contract No. KL/2012/03: | 333 |
| Dust, Water Quality, Waste Management (Construction of superstructure of Pumping Station PS2 and NPS) | Sufficient watering of the works site with active dust emitting activities; Properly cover the stockpiles; Appropriate desilting/sedimentation devices provided on site for treatment before discharge; Well maintain the drainage system to prevent the spillage of wastewater during heavy rainfall; and On-site waste sorting and implementation of trip ticket system. |
| Dust, Noise (Backfilling between sewerage manholes 1K1_1 and FMH10_340 and construction of manhole FMH10_370a at L6) | Use of quiet plant and well-maintained construction plant; and Properly cover the stockpiles; |
| Noise, Waste Management (Installation of precast unit and construction of in-situ portions of Box Culvert B6; Construction of jacking pits nos. 1 and 2; Installation of gas pipe at pit no. 10; Construction of washout chamber at pit no. 11) | Use of quiet plant and well-maintained construction plant; and Provide hoarding. Good management and control on construction waste reduction |
| Noise (Construction of sewerage manhole FMH 10 at Bailey Street; Widening works of Sung Wong Toi Road.) | Use of quiet plant and well-maintained construction plant; and Provide hoarding. |
| Noise, Water Quality (Pipe laying from manhole SMH2204 to Box Culvert B6; Laying of rising mains from PS2 to chainage CHA-18; Pipe laying from stormwater manholes SMH1962 to SMH1963 and construction of manholes SMH1953 and SMH1963 at L6; Installation of DCS;) | Use of quiet plant and well-maintained construction plant; and Well maintain the drainage system to prevent the spillage of wastewater during heavy rainfall. |
| Contract No. KL/2014/01: | |
| Noise, dust impact, water quality and waste generation | Sufficient watering of the works site with active dust emitting activities; Properly cover the stockpiles; On-site waste sorting and implementation of trip ticket system Appropriate desilting/sedimentation devices provided on site for treatment before discharge; Use of quiet plant and well-maintained construction plant; Well maintain the drainage system to prevent the spillage of wastewater during heavy rainfall; Provide mitigation measure to temporary use of chemicals; |

2. ENVIRONMENTAL MONITORING AND AUDIT

2.1 Results and Observations

Air Quality

- 2.1.1 The schedule of air quality monitoring in reporting month is provided in the appendices of the corresponding Monthly EM&A.
- 2.1.2 The weather conditions during the monitoring are provided in the appendices of the corresponding Monthly EM&A.
- 2.1.3 The monitoring data of 24-hr TSP and 1 hour TSP are summarized in **Table 2.1**. Detailed monitoring data are presented in the appendices of the corresponding Monthly EM&A.

Table 2.1 Summary of 24-hr and 1 hour TSP Monitoring Results

| Parameter | Monitoring Station | Average (µg/m³) | Range (µg/ m³) | Action Level (µg/ m³) | Limit Level (µg/ m³) |
|--------------------------|-------------------------|----------------------|--|-----------------------|-------------------------|
| Contract No. | KL/2012/03: | | | | |

| Contract No. KL/2015/02: | | | | | |
| 1-hr TSP | AM2 | 128 | 112 – 144 | 346 | 500 |
| 24-hr TSP | AM2(A) | 49 | 37 – 67 | 157 | 260 |

- 2.1.4 No Action / Limit Level exceedance was recorded for 24-hr TSP monitoring in the reporting month.
- 2.1.5 No Action / Limit Level exceedance was recorded for 1-hr TSP monitoring in the reporting month.
- 2.1.6 The monitoring data of 24-hr TSP was compared with the EIA predictions are presented in the appendices of the corresponding Monthly EM&A.
- 2.1.7 The Event and Action Plan for air quality is given in the appendices of the corresponding Monthly EM&A.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

Noise

- 2.1.8 The schedule of noise monitoring in reporting month is provided in in the appendices of the corresponding Monthly EM&A.
- 2.1.9 The noise monitoring data are summarized in **Table 2.2**. Detailed monitoring data are presented in the appendices of the corresponding Monthly EM&A.

Table 2.2 Summary of Noise Impact Monitoring Results

| Monitoring Stations | Construction Noise Level Leq _(30min) dB(A) (Range) | Action Level | Limit Level dB (A) |
|--------------------------|---|--------------|-----------------------|
| Contract No. KL/2012/03: | | | |
| M6(A) | 56.3 – 63.0 | | 70* |
| M7 | 65.2 – 65.2 | | 70* |
| M8(A) | 63.6 – 66.0 | | 70* |
| M9 | 59.2 – 64.9 | | 75 |
| Contract No. KL/2014/01: | | | |
| (No Construction noise m | When one documented | NA | |
| Contract No. KL/2014/03: | | complaint is | |
| KTD1a | 70-74 | received | 75 |
| KTD2a | 71-74 | | 75 |
| KER1b | 68-73 | | 75 |
| Contract No. KL/2015/02: | | | |
| M3 | 61 – 80# | | 70* |
| M4 | 56 – 76 | | 70* |
| M5(C) | 62 – 79# | | 75 |

^(*) Noise Limit Level is 65 dB(A) during school examination periods.

- 2.1.10 The noise monitoring data was compared with the EIA predictions are presented in the appendices of the corresponding Monthly EM&A.
- 2.1.11 No Action / Limit Level exceedance was recorded for noise monitoring in the reporting month.
- 2.1.12 The Event and Action Plan for noise is given in in the appendices of the corresponding Monthly EM&A.

Landscape and Visual

2.1.13 Site audits were carried out on a weekly basis to monitor and audit the landscape and visual mitigation measures within the site boundaries of this Project. Detailed of observations are presented in the appendices of the corresponding Monthly EM&A.

^(**) Measured noise level ≤ background / baseline noise level, detailed data refer to the corresponding Monthly EM&A report.

3. SITE INSPECTION

3.1 Site Inspection

3.1.1 Site inspections were carried out weekly to monitor the implementation of proper environmental pollution control and mitigation measures for the Project. The site inspection of each Contract are summarized as follow:

Contract No. KL/2012/03:

Site audits were conducted on 4th, 12th, 17th and 26th April 2019 in the reporting month. IEC site inspection was conducted on 17th April 2019.

Contract No. KL/2014/01:

Site audits were conducted by representatives of the Contractor, Supervising Officer and ET on 3, 10, 17, 24 and 30 April 2019 in the reporting month. IEC joint site inspection was conducted on 24 April 2019. No non-compliance was observed during the site audits.

Contract No. KL/2014/03:

In the reporting month, four site inspections were carried out on 3, 10, 17 and 24 April 2019. Two of them, held on 3 and 17 April 2019 was the joint inspections with the IEC, ER, the Contractor and the ET.

Contract No. KL/2015/02:

Site audits were conducted on 1, 10, 15, 23 and 29 April 2019 in the reporting month. A joint site audit with the representative of IEC, ER, the Contractor and the ET was conducted on 15 April 2019.

3.1.2 Detailed of observation, recommendation of site inspections and summary of the mitigation measures implementation schedule is provided in the appendices of the corresponding Monthly EM&A.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233
Fax : +852 2450 6138
E-mail : matlab@fugro.com
Website : www.fugro.com

4. ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

4.1 Complaints, Notification of Summons and Prosecution

4.1.1 The summary of complaints, notification of summons and prosecution in the reporting month is shown as **Table 4.1**.

Table 4.1 Summary of Complaints, Notification of Summons and Prosecution

| Event | No. of Event This Month | Remark | |
|--|-------------------------|--------|--|
| Contract No. KL/2012/03: | | | |
| Complaint received | 0 | NA | |
| Notifications of any summons & prosecutions received | 0 | NA | |
| Contract No. KL/2014/01: | | | |
| Complaint received | 0 | NA | |
| Notifications of any summons & prosecutions received | 0 | NA | |
| Contract No. KL/2014/03: | | | |
| Complaint received | 0 | NA | |
| Notifications of any summons & prosecutions received | 0 | NA | |
| Contract No. KL/2015/02: | | | |
| Complaint received | 0 | NA | |
| Notifications of any summons & prosecutions received | 0 | NA | |

4.1.2 Detailed records are presented in the appendices of the corresponding Monthly EM&A.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233
Fax : +852 2450 6138

Website : www.fugro.com

5. IMPLEMENTATION STATUS OF ENVIRONMENTAL MITIGATION MEASURES

5.1 Implementation Status

5.1.1 The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Reports, the EP and the EM&A Manuals. The implementation status of the mitigation measures during the reporting month are presented in the appendices of the corresponding Monthly EM&A.

5.2 Waste Management

5.2.1 The amount of wastes generated of this Project during the reporting month is shown in the appendices of the corresponding Monthly EM&A.

6. FUTURE KEY ISSUES

6.1 Construction Programme for the Next Two Months

6.1.1 The major site activities undertaken for the coming two months are summarized in follow:

Contract No. KL/2012/03:

- · Daily Cleaning;
- E&M Work, GRC coping, Landscape Work in PS2;
- · Maintenance platform in DCS; and
- E&M Works, Scaffold Platform Installation in NPS.

Contract No. KL/2014/01:

- TTA implementation, junction improvement works at Shing Fung Road and Wang Chiu Road / Kai Cheung Road;
- Construction of box culvert and underpass;
- · Construction of utilities trough at Kai Tak Bridge;
- Construction of pile caps, noise barrier footings and steel structure, outfalls, deck structure and columns;
- · Laying of sewer, drainage and pavement;
- · Erection of noise barrier steel structure and panels

Contract No. KL/2014/03:

- · Installation of sheet pile for drainage works;
- Excavation and laying of drainage pipe and manhole;
- · Removal of temporary decking and temporary road pavement
- Construction of SUS structure
- Excavation and ELS construction
- Construction of District Cooling System

Contract No. KL/2015/02:

- Road reinstatement works at PERE W/B and implement stage 2 TTA at PERE E/B
- Extracting sheet piles along subway SW6 from CH0 to CH45 and Staircase ST3
- Jacking up the existing bridge K72 and demolish the exiting wall
- Excavation works with ELS installation at SKLR playground
- Footing works for traffic deck at SKLR playground (stage 4-1)
- Drainage work and road pavement construction at slip road S15
- Refurbishment of bridge K72
- Demolition of existing structure of K72
- · Drainage work at Road D1
- Construction of chain-link fence for land sale sites
- DCS works in Portion 1
- Water works in Portion 1 & 6

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website: www.fugro.com

Key Issues for the Coming Month 6.2

The potential environmental impacts arising from the above construction activities and the 6.2.1 control measures are shown in Table 6.1:

| Table 6.1 Summary of Key Issues for the Coming Month and Control Measures | | | | | |
|---|---|--|--|--|--|
| Major Impact Prediction | Control Measures | | | | |
| Contract No. KL/2012/03: | | | | | |
| Air quality impact (dust) | Frequent watering or covering stockpiles with impervious sheeting. | | | | |
| Water quality impact (surface run-off) | Provision of measures to prevent discharge into the stream. | | | | |
| Noise Impact | Scheduling of noisy construction activities if necessary to avoid persistent noisy operation; Controlling the number of plants use on site; and Regular maintenance of machines. | | | | |
| Contract No. KL/20 | 014/01: | | | | |
| Air quality impact (dust) | Frequent watering of haul road and unpaved/exposed areas; Frequent watering or covering stockpiles with tarpaulin or similar means; and Watering of any earth moving activities. | | | | |
| Water quality impact (surface run-off) | Diversion of the collected effluent to de-silting facilities for treatment prior to discharge to public storm water drains; Provision of adequate de-silting facilities for treating surface run-off and other collected effluents prior to discharge; Provision of perimeter protection such as sealing of hoarding footings to avoid run-off from entering the existing storm water drainage system via public road; and Provision of measures to prevent discharge into the stream. | | | | |
| Noise Impact | Scheduling of noisy construction activities if necessary to avoid persistent noisy operation; Controlling the number of plants use on site; Regular maintenance of machines; and Use of acoustic barriers if necessary. | | | | |
| Contract No. KL/20 | 014/03 <u>:</u> | | | | |
| Construction dust, construction noise, water quality, waste management and landscape and visual impact. | Sufficient watering of the works site with the active dust emitting activities; Limitation of the speed for vehicles on unpaved site roads; Properly cover or enclosure of the stockpiles and dusty materials; Good site practices on loading dusty materials; Providing sufficient vehicles washing facilities at every vehicle exit point; Good maintenance to the plant and equipment; Use of quieter plant and Quality Powered Mechanical Equipment (QPME); Use of acoustic fabric and noise barrier; Using the approved Non-road Mobile Machineries (NRMMs); Proper storage and handling of chemical; Appropriate desilting, oil interceptors or sedimentation devices provided on site for treatment before discharge; Onsite waste sorting and implementation of trip ticket system; Training of the site personnel in proper waste management and chemical waste handling procedures; Proper storage of the construction materials; Erection of decorative screen hoarding; Strictly following the Environmental Permits and Licenses; | | | | |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

| Major Impact Prediction | Control Measures | | | |
|---|---|--|--|--|
| | Provide sufficient mitigation measures as recommended in Approved EIA Reports | | | |
| Contract No. KL/2 | 015/02 <u>:</u> | | | |
| Air quality impact (dust) Frequent watering of haul road and unpaved/exposed areas; Frequent watering or covering stockpiles with tarpaulin or similar means; a Watering of any earth moving activities. | | | | |
| Water quality impact (surface run-off) | Diversion of the collected effluent to de-silting facilities for treatment prior to discharge to public storm water drains; Provision of adequate de-silting facilities for treating surface run-off and other collected effluents prior to discharge; Provision of perimeter protection such as sealing of hoarding footings to avoid run-off from entering the existing storm water drainage system via public road; and Provision of measures to prevent discharge into the stream. | | | |
| Noise Impact | Scheduling of noisy construction activities if necessary to avoid persistent noisy operation; Controlling the number of plants use on site; Regular maintenance of machines; and Use of acoustic barriers if necessary. | | | |

6.3 Monitoring Schedules for the Next Three Months

6.3.1 The tentative schedules for environmental monitoring in the coming three months are provided in in the appendices of the corresponding Monthly EM&A.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233
Fax : +852 2450 6138

Website : www.fugro.com

7. CONCLUSIONS

- 7.1.1 No Action / Limit Level exceedance was recorded for 24-hr TSP monitoring in the reporting month.
- 7.1.2 No Action / Limit Level exceedance was recorded for 1-hr TSP monitoring in the reporting month.
- 7.1.3 No Action / Limit Level exceedance was recorded for noise monitoring in the reporting month.
- 7.1.4 No complaint, notification of summons or prosecution was received in this reporting month.
- 7.1.5 The potential environmental impacts arising from the coming two months of major construction activities and the control measures are shown in **Table 6.1.**

Dear Sirs

Agreement No. EDO 08/2018
Independent Environmental Checker (IEC) for CEDD Contract No. KL/2012/03
Kai Tak Development – Stage 4 Infrastructure at Former North Apron Area
Verification of Monthly EM&A Report for April 2019

We refer to emails of 7 and 10 May 2019 attaching a Monthly EM&A Report for April 2019 prepared by the ET.

We have no further comment and hereby verify the captioned report in accordance with Clause 3.3 of the Environmental Permit nos. EP-337/2009 and EP-344/2009.

Please do not hesitate to contact the undersigned or our Ms Katherine Chu on 2618 2831 should you have any queries.

Yours faithfully
ANEWR CONSULTING LIMITED

EXECUTIVE SUMMARY

Introduction

- 1. This is the 65th Monthly Environmental Monitoring and Audit (EM&A) Report prepared by Wellab Ltd. for "Contract No. KL/2012/03 Kai Tak Development –Stage 4 Infrastructure at Former North Apron Area" (Hereafter referred to as "the Project"). This contract comprises the construction of Schedule 2 Designated Projects (DP) Road D2 & Sewage Pumping Station PS2 and PS NPS which forms a part of the works under two Environmental Permits (EP), EP-337/2009 and EP-344/2009. The title of the designated projects under Environmental Permit No.: EP-344/2009 is "New sewage pumping stations serving Kai Tak Development" and under Environmental Permit No.: EP-337/2009 is "New distributor roads serving the planned Kai Tak Development". This report documents the findings of EM&A Works conducted from 1 to 30 April 2019.
- 2. All major construction works were completed, the site activities undertaken in the reporting month included:
 - Daily Cleaning;
 - E&M Work, Landscape Work in PS2;
 - Maintenance platform in DCS;
 - E&M Works, Scaffold Platform Installation in NPS.

Environmental Monitoring Works

- 3. Environmental monitoring for the Project was performed in accordance with the EM&A Manual and the monitoring results were checked and reviewed. Site Inspections/Audits were conducted once per week. The implementation of the environmental mitigation measures, Event Action Plans and environmental complaint handling procedures were also checked.
- 4. Summary of the breaches of action and limit levels in the reporting month for the Project is tabulated in **Table I**.

Table I Breaches of Action and Limit Levels for the Project in the Reporting Month

| Parameter | No. of Project-rela | Action Taken | |
|-----------|---------------------|--------------|--------------|
| Farameter | Action Level | Limit Level | Action Taken |
| 1-hr TSP | 0 | 0 | N/A |
| 24-hr TSP | 0 | 0 | N/A |
| Noise | 0 | 0 | N/A |

5. The Cessation of Impact Environmental Monitoring Works (Construction Phase) was approved by the EPD. Impact Environmental Monitoring works were ceased since 15 April 2019.

1-hour & 24-hour TSP Monitoring

- 6. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 7. All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Construction Noise Monitoring

8. Construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Environmental Licenses and Permits

- 9. Licenses/Permits granted to the Project include the Environmental Permit (EP) for the Project, Environmental Permits No. EP-344/2009 and EP-337/2009 were issued on 23 April 2009.
- 10. Registration of Chemical Waste Producer (Waste Producer Number: 5213-286-K2958-05).
- 11. Water Discharge License (WT00020971-2015).

Key Information in the Reporting Month

12. Summary of complaint received, reporting changes and notifications of any summons and successful prosecutions in the reporting month is tabulated in **Table II**.

Table II Summary Table for Key Information in the Reporting Month

| Event | Event Details | | Action Taken | Status | Remark |
|--|----------------------|--------|--------------|--------|--------|
| | Number | Nature | | | |
| Complaint received | 0 | | N/A | N/A | |
| Reporting Changes | 0 | | N/A | N/A | |
| Notifications of any summons & prosecutions received | 0 | | N/A | N/A | |

Future Key Issues

- 13. The future key environmental issues in the coming month include:
 - Dust generation from stockpiles of dusty materials;
 - Proper storage of construction materials on site;
 - Storage of chemicals/fuel and chemical waste/waste oil on site;
 - Accumulation of general and construction waste on site;
 - Noise from operation of the equipment, especially for machinery on-site; and
 - Mitigation measures for site surface runoff.

1. INTRODUCTION

Background

- 1.1 The Kai Tak Development (KTD) is located in the south-eastern part of Kowloon Peninsula, comprising the apron and runway areas of the former Kai Tak Airport and existing waterfront areas at To Kwa Wan, Ma Tau Kuk, Kowloon Bay, Kwun Tong and Cha Kwo Ling. It covers a land area of about 328 hectares. Stage 4 Infrastructure at Former North Apron Area is one of the construction stages of KTD. Schedule 2 DPs in this Project include new distributor roads serving the planned KTD and new sewage pumping stations serving the planned KTD. The general layout of the Project is shown in **Figure 1.**
- 1.2 Two Environmental Permits (EPs) No. EP-344/2009 and EP-337/2009 were also issued to the Permit Holder Civil Engineering and Development Department on 23 April 2009 for new sewage pumping stations serving the planned KTD and new distributor roads serving the planned KTD respectively.
- 1.3 A study of environmental impact assessment (EIA) was undertaken to identify the key issues of air quality, noise, water quality, waste, land contamination, cultural heritage and landscape and visual impact, and recommend possible mitigation measures associated with the works. The EIA Report (Register No. AEIAR-130/2009) was approved by the Environmental Protection Department (EPD) on 4 April 2009.
- 1.4 Wellab Limited (Wellab) is commissioned by Kwan On Construction Co., Ltd. (the Contractor) on 1st January 2019 to undertake the role of the Environmental Team (ET) for the Contract No. KL/2012/03 Stage 4 Infrastructure at Former North Apron Area. The construction work under KL/2012/03 comprises the construction of Road D2 & Sewage Pumping Station PS2 and PS NPS which forms a part of the works under two EPs (EP-337/2009 and EP-344/2009).
- 1.5 The construction commencement of this Contract was on 1st December 2013 for Road D2, Sewage Pumping Station PS2 and PS NPS. This is the 65th Monthly EM&A report summarizing the EM&A works for the Project from 1 to 30 April 2019.

Project Organizations

- 1.6 Different parties with different levels of involvement in the project organization include:
 - Project Proponent Civil Engineering and Development Department (CEDD).
 - The Engineer and the Engineer's Representative (ER) AECOM.
 - Environmental Team (ET) Wellab Limited (WL).
 - Independent Environmental Checker (IEC) ANewR Consulting Limited. (ANewR).
 - Contractor Kwan On Construction Co., Ltd. (Kwan On).

1.7 The key contacts of the Project are shown in **Table 1.1** and **Figure 5**.

Table 1.1 Key Project Contacts

| Party | Role | Contact Person | Position | Phone No. | Fax No. |
|---------------------------------|---|--------------------------------|---|--------------|-----------|
| CEDD | Project Proponent | Mr. C. K. Choi | Senior Engineer | 3106 2583 | 3579 4512 |

Construction Activities undertaken during the Reporting Month

- 1.8 All major construction works were completed, the site activities undertaken in the reporting month included:
 - Daily Cleaning;
 - E&M Work, Landscape Work in PS2;
 - Maintenance platform in DCS;
 - E&M Works, Scaffold Platform Installation in NPS.
- 1.9 The construction programme showing the inter-relationship with environmental protection/mitigation measures is presented in **Table 1.2**.

Table 1.2 Construction Programme Showing the Inter-Relationship with Environmental Protection/Mitigation Measures

| 1 Totection/witigation weasures | | | | | |
|--|--|--|--|--|--|
| Construction Works | Generated Major Environmental Impact | Control Measures | | | |
| Construction of superstructure of Pumping Station PS2 and NPS; | Dust, Water Quality, Waste Management | Sufficient watering of the works site with active dust emitting activities; Properly cover the stockpiles; Appropriate desilting/sedimentation devices provided on site for treatment before discharge; Well maintain the drainage system to prevent the spillage of wastewater during heavy rainfall; and On-site waste sorting and implementation of trip ticket system. | | | |
| Backfilling between sewerage manholes 1K1_1 and FMH10_340 and construction of manhole FMH10_370a at L6; | Dust, Noise | Use of quiet plant and well-maintained construction plant; and Properly cover the stockpiles; | | | |
| Installation of precast unit and construction of in-situ portions of Box Culvert B6; Construction of jacking pits nos. 1 and 2; Installation of gas pipe at pit no. 10; Construction of washout chamber at pit no. 11; | Noise, Waste Management | Use of quiet plant and well-maintained construction plant; and Provide hoarding. Good management and control on construction waste reduction | | | |
| Construction of sewerage manhole FMH 10 at Bailey Street; Widening works of Sung Wong Toi Road. | Noise | Use of quiet plant and well-maintained construction plant; and Provide hoarding. | | | |
| Pipe laying from manhole SMH2204 to Box Culvert B6; Laying of rising mains from PS2 to chainage CHA-18; Pipe laying from stormwater manholes SMH1962 to SMH1963 and construction of manholes SMH1953 and SMH1963 at L6; Installation of DCS; | Noise, Water Quality | Use of quiet plant and well-maintained construction plant; and Well maintain the drainage system to prevent the spillage of wastewater during heavy rainfall. | | | |

Summary of EM&A Requirements

- 1.10 The EM&A programme requires construction noise monitoring, air quality monitoring, landscape and visual monitoring and environmental site audit. The EM&A requirements for each parameter are described in the following sections, including:
 - All monitoring parameters;
 - Action and Limit levels for all environmental parameters;
 - Event Action Plans;
 - Environmental requirements and mitigation measures, as recommended in the EM&A Manual under the EP.
- 1.11 The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 6 of this report.
- 1.12 This report presents the implementation of the EM&A programme for the Project from 1 to 30 April 2019.

1.13 Air quality monitoring stations within 500m and noise monitoring stations within 300m from the boundary of this Project are considered as relevant monitoring locations. In such regard, the relevant air quality and noise monitoring locations are tabulated in **Table 1.3** (see Figure 2 and 3 for their locations).

Table 1.3 Air Quality and Noise Monitoring Stations for this Project

| Locations | Monitoring Stations In accordance with EM&A Manual | Alternative Monitoring Stations |
|---|--|---|
| Air Quality Monitoring Stations | | |
| AM2 - Lee Kau Yan Memorial School | Yes | AM2(A) – Ng Wah Catholic Secondary School |
| AM3 – Sky Tower | No | AM3(A) – Holy Trinity Bradbury Centre AM3(B) – Family Planning Association of Hong Kong** |
| AM4 – Grand Waterfront | No | AM4(A) – EMSD Workshop* |
| AM5 – CCC Kei To Secondary School | No | N/A^ |
| AM6 – Site 1B4 (Planned) | N/A | |
| Noise Monitoring Stations | | |
| M6 – Holy Carpenter Primary School | No | M6(A) – Oblate Primary School |
| M7 – CCC Kei To Secondary School | Yes | N/A |
| M8 – Po Leung Kuk Ngan Po Ling College | No M8(A) – Po Leung Kuk Ngan College (Site Boundary | |
| M9 – Tak Long Estate | Yes | N/A |
| M10 – Site 1B4 (Planned) | | N/A |

Remarks:

- "Yes" Monitoring station is the same as that stated in EM&A Manual
- No Monitoring station is not the same as that stated in EM&A Manual. Request for carrying monitoring works at the monitoring stations stated in EM&A Manual was rejected by owner of premise. Alternative monitoring stations were proposed by the ET of Schedule 3 EIA and approved by the EPD.
- N/A No alternative monitoring station is required.
- **AM3(B) The permission of air quality monitoring works (24-hour TSP) at station AM3(A) was denied in November 2017, the monitoring works were resumed at the alternative station – AM3(B) in December 2017.
- *AM4(A) EMSD Workshop was cancelled due to unsuccessful accessibility of the facility. 1-hr TSP monitoring was conducted at AM4(B) - Ma Tau Kuk Road (next to EMSD workshop) temporarily and 24-hr TSP monitoring was conducted at AM4(C) – New Pumping Station under Contract No. KL/2012/03.
- ^AM5(A) Po Leung Kuk Ngan Po Ling College was cancelled because no permission was granted from the premise. Air quality monitoring was carried out at AM5 – CCC Kei To Secondary School.
- #M8(A) The permission of noise monitoring works at station M8 was denied in November 2018, the alternative position of M8 (remark as M8(A)) was agreed with IEC on 20th March 2019.
- 1.14 According to the Environmental Monitoring and Audit Manual (EM&A Manual) of the Kai Tak Development (KTD) Schedule 3 Environmental Impact Assessment (EIA) Report, the impact monitoring at the designated monitoring stations as required in KTD EM&A Manual under the EP, has been conducted in Environmental Monitoring Works for Kai Tak Development under Schedule 3 of KTD, which is on-going starting from December 2010, when the impact monitoring data under Schedule 3 of KTD were adopted for the Project.
- 1.15 Although Contract no. KLN/2013/16 under Schedule 3 of KTD has been superseded by KLN/2016/09 since early March 2017, the ET continued to adopt the impact monitoring

data under Schedule 3 of KTD until appropriate new arrangement is agreed. The KLN/2016/09 impact environmental monitoring schedule is shown in **Appendix D**.

Status of Compliance with Environmental Permits Conditions

1.16 The status of required submission related to this Project under the Environmental Permits No. EP-337/2009 and EP-344/2009 is summarized in the **Table 1.4** and **Table 1.5** respectively:

Table 1.4 Summary Table for Required Submission under EP No. EP-337/2009

| EP Conditions | Submission | Submission Date | Remark |
|----------------------|---|--|---|
| | | | |
| 1.11 | Notification of Commencement Date of Construction of Project | 31 October 2013 | For Road D2 |
| 2.3 | Management Organization of Main Construction Companies | 31 October 2013 | For Contract No. KL/2012/03 |
| 2.4 | Design Drawing(s) of the Project | 28 October 2013 | For Road D2 |
| 2.11 | Landscape Mitigation Plan(s) for distributors road(s) | 7 January 2014 | For Road D2 |
| 2.12 | As-built drawing(s) for the distributor road(s) | To be submitted at least one week before the commencement of operation of distributor road(s | |
| 3.2 | Baseline Monitoring Report | 26 November 2010 (Part I) 24 December 2010 (Part II) | / |
| 3.3 | Four hard copies and one electronic copy of the Monthly EM&A Report No. 63 (March 2019) | 11 April 2019 | Monthly EM&A Report for Contract No. KL/2012/03 |

| 2.11 | Landscape Mitigation Plan(s) for sewage pumping station(s) | 7 January 2014 | For Pumping Station PS2 and PS NPS |
| 2.12 | As-built drawing(s) for the sewage pumping station (s) | To be submitted at least one week before the commencement of operation of distributor road(s) | |
| 3.2 | Baseline Monitoring Report | 26 November 2010 (Part I) 24 December 2010 (Part II) | / |
| 3.3 | Four hard copies and one electronic copy of the Monthly EM&A Report No. 63 (March 2019) | 11 April 2019 | Monthly EM&A Report for Contract No. KL/2012/03 |

2. AIR QUALITY

Monitoring Requirements

2.1 According to EM&A Manual under the EPs, 1-hour and 24-hour Total Suspended Particulates (TSP) monitoring were conducted to monitor the air quality for this Project. For regular impact monitoring, a sampling frequency of at least once in every six days at all of the monitoring stations for 24-hour TSP monitoring. For 1-hour TSP monitoring, the sampling frequency of at least three times in every six days shall be undertaken when the highest dust impact occurs. **Appendix A** shows the established Action/Limit Levels for the environmental monitoring works.

Monitoring Locations

2.2 Seven designated monitoring stations were selected for air quality monitoring programme. Impact dust monitoring was conducted at six of the air quality monitoring stations (AM2, AM2(A), AM3(A), AM3(B), AM4(C) and AM5. **Table 2.1** describes the air quality monitoring locations, which are also depicted in **Figure 2**.

Table 2.1 Locations for Air Quality Monitoring

| Monitoring Stations | Locations | Location of Measurement |
|----------------------------|--|---------------------------|
| AM2 | Lee Kau Yan Memorial School | Rooftop (about 8/F) Area |
| AM2(A) | Ng Wah Catholic Secondary School | Rooftop (about 8/F) Area |
| AM3(A) | Holy Trinity Bradbury Centre | Rooftop (about 8/F) Area |
| AM3(B) | Hong Kong Family Planning Association | Rooftop (about 4/F) Area |
| AM4(C) | New Pumping Station | Rooftop (about 6/F) Area |
| AM5 | CCC Kei To Secondary School | Rooftop (about 10/F) Area |
| #AM6 | PA 15 | Site 1B4 (Planned) |

Remarks: # The impact monitoring at these locations will only be carried out until the sensitive receivers at the building are resided.

Monitoring Equipment

2.3 **Table 2.2** summarizes the equipment used in the impact air monitoring programme. Copies of calibration certificates and laboratory accreditation are attached in **Appendix B**.

Table 2.2 Air Quality Monitoring Equipment

| Equipment | Model and Make | Quantity |
|-----------------------|-------------------------------------|----------|
| Calibrator | TE-5025A | 1 |
| 1-hour TSP Dust Meter | Met One Instruments – AEROCET-831 | 4 |
| HVS Sampler | TE-5170 | 5 |
| Wind Anemometer | Davis Weather Monitor, Vantage Pro2 | 1 |

Monitoring Parameters, Frequency and Duration

2.4 Table 2.3 summarizes the monitoring parameters and frequencies of impact dust monitoring for the whole construction period. The air quality monitoring schedule for the reporting month is shown in **Appendix D**.

 Table 2.3
 Impact Dust Monitoring Parameters, Frequency and Duration

| Parameters | Frequency |
|------------|-----------------------------------|
| 1-hr TSP | At least three times every 6 days |
| 24-hr TSP | At least once every 6 days |

Monitoring Methodology and Quality Assurance and Quality Control (QA/QC) Procedure

1-hour TSP Monitoring

Measuring Procedures

- 2.5 The measuring procedures of the 1-hour dust meters were in accordance with the Manufacturer's Instruction Manual as follows:
 - The 1-hour dust meter is placed at least 1.3 meters above ground.
 - Set POWER to "ON" and make sure that the battery level was not flash or in low level.
 - Allow the instrument to stand for about 3 minutes and then the cap of the air sampling inlet has been released.
 - Push the knob at MEASURE position.
 - Set time/mode setting to [BG] by pushing the time setting switch. Then, start the background measurement by pushing the start/stop switch once. It will take 6 sec. to complete the background measurement.
 - Push the time setting switch to change the time setting display to [MANUAL] at the bottom left of the liquid crystal display. Finally, push the start/stop switch to stop the measuring after 1 hour sampling.
 - Information such as sampling date, time, count value and site condition were recorded during the monitoring period.

Maintenance/Calibration

- 2.6 The following maintenance/calibration was required for the direct dust meters:
 - Check and calibrate the meter by High-Volume Sampler (HVS) to check the validity and accuracy of the results measured by direct reading method at 2-month intervals throughout all stages of the air quality monitoring.

24-hour TSP Monitoring

<u>Instrumentation</u>

2.7 High volume samplers (HVS) (Model GMWS-2310 Accu-Vol) completed with appropriate sampling inlets were employed for 24-hour TSP monitoring. The sampler was composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complied with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50). Moreover, the HVS also met all the requirements in section 2.5 of the updated EM&A Manual.

Operating/Analytical Procedures

- 2.8 Operating/analytical procedures for the operation of HVS were as follows:
 - A horizontal platform was provided with appropriate support to secure the samplers against gusty wind.
 - No two samplers were placed less than 2 meters apart.
 - The distance between the sampler and an obstacle, such as buildings, was at least twice the height that the obstacle protrudes above the sampler.
 - A minimum of 2 meters of separation from walls, parapets and penthouses was required for rooftop samples.
 - A minimum of 2 meters separation from any supporting structure, measured horizontally was required.
 - No furnaces or incineration flues were nearby.
 - Airflow around the sampler was unrestricted.
 - The sampler was more than 20 meters from the drip line.
 - Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring.
- 2.9 Prior to the commencement of the 24-hour TSP sampling, the flow rate of the high volume sampler was properly set (between 1.1 m³/min. and 1.4 m³/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50.
- 2.10 For 24-hour TSP sampling, fiberglass filters having a collection efficiency of $\geq 99\%$ for particles of 0.3µm (DOP) diameter were used.
- 2.11 The power supply was checked to ensure the sampler worked properly. On sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air monitoring station.
- 2.12 The filter holding frame was then removed by loosening the four nuts and a weighted and conditioned filter was carefully centered with the stamped number upwards, on a supporting

screen.

- 2.13 The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- 2.14 The shelter lid was closed and secured with the aluminum strip.
- 2.15 The timer was then programmed so that the TSP will be sampled for 24 hours. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
- 2.16 After completion of sampling, the filter was removed and sent to Wellab Ltd., which is accredited under HOKLAS for laboratory analysis. The elapsed time was also recorded.
- 2.17 Before weighing, all filters were equilibrated in a conditioning environment for 24 hours. The conditioning temperature should be between 25°C and 30°C and not vary by more than ±3°C; the relative humidity (RH) should be < 50% and not vary by more than ±5%. A convenient working RH is 40%.

Maintenance/Calibration

- 2.18 The following maintenance/calibration was required for the HVS:
 - The high volume motors and their accessories were properly maintained. Appropriate maintenance such as routine motor brushes replacement and electrical wiring checking were made to ensure that the equipment and necessary power supply are in good working condition.
 - High volume samplers were calibrated at bi-monthly intervals using G25A Calibration Kit throughout all stages of the air quality monitoring.
 - Orifice Transfer Standards were calibrated at yearly intervals throughout all stages of the air quality monitoring.

Results, Observations and Action/Limit Level Exceedance

- 2.19 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 2.20 All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 2.21 The Cessation of Impact Environmental Monitoring Works (Construction Phase) was approved by the EPD. 1-hour and 24-hour TSP Monitoring were ceased since 15 April 2019.
- 2.22 This weather information for the reporting month is summarized in **Appendix C.**
- 2.23 The monitoring data and graphical presentations of 1-hour and 24-hour TSP monitoring results are shown in **Appendices E and F** respectively.

- 2.24 The summary of exceedance record in the reporting month is shown in Appendix H. No exceedance in Action/Limit Levels of 1-hour and 24-hour TSP was recorded for the air quality monitoring.
- 2.25 According to our field observations, the major dust source identified at the designated air quality monitoring stations is as follows:

Major dust source identified at the designated air quality monitoring **Table 2.4** stations

| Station | Major Dust Source |
|--------------------------------------|---------------------------------------|
| AM2 – Lee Kau Yan Memorial School | Road Traffic Dust |
| | Exposed site area and open stockpiles |
| | Site vehicle movement |
| AM2(A) – Ng Wah Catholic Secondary | Road Traffic Dust |
| School | Exposed site area and open stockpiles |
| | Excavation works |
| | Site vehicle movement |
| AM3(A) – Holy Trinity Bradbury | Road Traffic Dust |
| Centre | Exposed site area |
| | Excavation works |
| | Site vehicle movement |
| AM3(B) – Family Planning Association | Road Traffic Dust |
| of Hong Kong | Exposed site area |
| | Excavation works |
| | Site vehicle movement |
| AM4(C) – New Pumping Station under | Site vehicle movement |
| Contract No. KL/2012/03 | |
| AM5 – CCC Kei To Secondary School | Road Traffic Dust |

3. NOISE

Monitoring Requirements

3.1 According to EM&A Manuals under the EP, construction noise monitoring was conducted to monitor the construction noise arising from the construction activities within KTD. The regular monitoring frequency for each monitoring station shall be on a weekly basis to conduct one set of measurements between 0700 and 1900 hours on normal weekdays.

Appendix A shows the established Action and Limit Levels for the environmental monitoring works.

Monitoring Locations

- 3.2 Five designated monitoring stations were selected for noise monitoring programme. Noise monitoring was conducted at four designated monitoring stations (M6, M7, M8 and M9). **Figure 3** shows the locations of these stations.
- 3.3 Construction noise monitoring at Station M6 Holy Carpenter Primary School was rejected by the premise owner on 6th October 2014. The monitoring station has been relocated at a proposed alternative noise monitoring station M6(A) Oblate Primary School since 10th October 2014 to carry out the monitoring works.
- 3.4 Construction noise monitoring at Station M8 Po Leung Kuk Ngan Po Ling College was rejected by the premise owner on 5th November 2018. The monitoring position has been relocated outside the boundary of the Station M8 (Remarked as station M8(A)) since 21st November 2018 to carry out the monitoring works temporarily. The alternative position and measurement correction were agreed with IEC on 20th March 2019.

Table 3.1 Noise Monitoring Stations

| Monitoring Stations | Locations | Location of Measurement |
|---------------------|-----------------------------------|-------------------------------|
| *M6(A) | Oblate Primary School | Rooftop (about 7/F) Area |
| M7 | CCC Kei To Secondary School | Rooftop (about 8/F) Area |
| ^M8(A) | Po Leung Kuk Ngan Po Ling College | Ground Level (at a position |
| (A) | (Site Boundary) | 3m above the ground) |
| M9 Tak Long Estate | | Car Park Building (about 2/F) |
| #M10 | Site 1B4 (Planned) | - |

Remarks:

- * Alternative noise monitoring station for M6 Holy Carpenter Primary School from 10th October 2014 onwards
- ^ Alternative position of M8 (remark as M8(A)) was agreed with IEC on 20th March 2019.
- # The impact monitoring at these locations will only be carried out until existence of the sensitive receiver at the building.

Monitoring Equipment

3.5 **Table 3.2** summarizes the noise monitoring equipment. Copies of calibration certificates are provided in **Appendix B**.

Table 3.2 Noise Monitoring Equipment

| Equipment | Model and Make | Qty. |
|-------------------------------|--------------------------------------|------|
| Integrating Sound Level Meter | SVANTEK SVAN 977 & BSWA 801 | 3 |
| Calibrator | SVANTEK SV30A & Brüel & Kjær 4231 | 2 |

Monitoring Parameters, Frequency and Duration

3.6 Table 3.3 summarizes the monitoring parameters, frequency and total duration of monitoring. The noise monitoring schedule is shown in **Appendix D**.

Table 3.3 Noise Monitoring Parameters, Frequency and Duration

| Monitoring Stations | Parameter | Period | Frequency | Type of Measurement |
|------------------------|---|---|------------------|------------------------|
| M7 M9 | L ₁₀ (30 min.) dB(A) L ₉₀ (30 min.) dB(A) L _{eq} (30 min.) dB(A) | 0700-1900 hrs on normal weekdays | Once per week | Façade (*) |
| M6(A) M8(A) | L ₁₀ (30 min.) dB(A) L ₉₀ (30 min.) dB(A) L _{eq} (30 min.) dB(A) | 0700-1900 hrs on normal weekdays | Once per week | Free Field (*) |

^(*) Refer to bullet point 1 and 2 in the following section.

Monitoring Methodology and QA/QC Procedures

- The Sound Level Meter was set on a tripod at a point 1m from the exterior of the sensitive receivers building façade and be at a position 1.2m above the ground (3m above the ground for Station M8(A)).
- For free field measurement, the meter was positioned away from any nearby reflective surfaces. All records for free field noise levels was adjusted with a correction of +3 dB(A).
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:

frequency weighting
time weighting
time measurement
: A
: Fast
: 30 minutes

- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with the portable wind meter.
- At the end of the monitoring period, the L_{eq}, L₉₀ and L₁₀ were recorded. In addition, site

- conditions and noise sources were recorded on a standard record sheet.
- Noise measurement was paused temporarily during periods of high intrusive noise if possible and observation was recorded when intrusive noise was not avoided.
- Noise monitoring was cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s.

Maintenance and Calibration

- 3.7 The microphone head of the sound level meter and calibrator was cleaned with a soft cloth at quarterly intervals.
- 3.8 The sound level meter and calibrator were checked and calibrated at yearly intervals.
- 3.9 Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

Results, Observations and Action/Limit Level Exceedance

- 3.10 Construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 3.11 The Cessation of Impact Environmental Monitoring Works (Construction Phase) was approved by the EPD. Construction Noise Monitoring was ceased since 15 April 2019.
- 3.12 The baseline noise level and the Noise Limit Level at each designated noise monitoring station are presented in **Table 3.4**.
- 3.13 Noise monitoring results and graphical presentations are shown in **Appendix G**.
- 3.14 The major noise source identified at the designated noise monitoring stations is as follows:

Table 3.4 Major noise source identified at the designated noise monitoring stations

| Monitoring Stations | Locations | Major Noise Source |
|------------------------|--|---|
| M6(A) | Oblate Primary School | Road and marine traffic Noise |
| M7 | CCC Kei To Secondary School | Road and marine traffic Noise |
| M8(A) | Po Leung Kuk Ngan Po Ling College (Site Boundary) | Excavation works at the site (Contract No.: 1/WSD/14(K)) facing Po Leung Kuk Ngan Po Ling College |
| M9 | Tak Long Estate | Road paving and asphalt paving works |

Table 3.5 Baseline noise level and noise limit level for monitoring stations

| Monitoring Stations | Baseline Noise Level, dB (A) | Noise Limit Level, dB (A) | | |
|------------------------|--|-----------------------------------|--|--|
| M6(A) | 63.9 (at 0700 – 1900 hrs on normal weekdays) | 70* (at 0700 – 1900 hrs on normal | | |
| M7 | 68.7 (at 0700 – 1900 hrs on normal weekdays) | weekdays) | | |

| M8(A) | 64.9 (at 0700 – 1900 hrs on normal weekdays) | |
|-------|--|--|
| M9 | 59.9 (at 0700 – 1900 hrs on normal weekdays) | 75 (at 0700 – 1900 hrs on normal weekdays) |

^(*) Noise Limit Level is 65 dB(A) during school examination periods.

4. COMPARISON OF EM&A RESULTS WITH EIA PREDICTIONS

4.1 According to Section 16.1.6 (vi) of the EM&A Manual, the EM&A data were compared with the EIA predictions as summarized in **Table 4.1** to **4.3** below.

4.2

Table 4.1 Comparison of 1-hr TSP data with EIA predictions

| Station | Predicted 1-hr TSP conc. | | | |
|--|------------------------------|---------------------------|-----------------------------------|--------------|
| | Scenario1 (Mid 2009 to | Scenario2 (Mid 2013 to | Reporting Month (Apr 2019), μg/m3 | |
| | Mid 2013), Late 2016), μg/m3 | Average | Range | |
| AM2 – Lee Kau Yan Memorial School | 290 | 312 | 95.7 | 78.6 – 111.6 |
| AM3(A) - Holy Trinity Bradbury Centre (Alternative station for Sky Tower) | 217 | 247 | 75.0 | 66.7 – 82.1 |
| AM4(C) – New Pumping Station | N/A | N/A | 92.8 | 48.7 – 131.1 |
| AM5– CCC Kei To Secondary School | 159 | 221 | 79.3 | 44.9 – 104.4 |

Table 4.2 Comparison of 24-hr TSP data with EIA predictions

| Station | Predicted 24-hr TSP conc. | | | |
|---|---------------------------|---------------------------|-----------------------------------|-------------|
| | Scenario1 (Mid 2009 to | Scenario2 (Mid 2013 to | Reporting Month (Apr 2019), µg/m3 | |
| | Mid 2013), μg/m3 | Late 2016), μg/m3 | Average | Range |
| AM2(A) – Ng Wah Catholic Secondary School (Alternative station for Lee Kau Yan Memorial School) | 145 | 169 | 40.1 | 29.1 – 51.1 |
| AM3(B) – Family Planning Association of Hong Kong | N/A | N/A | 43.7 | 11.2 – 81.0 |
| AM4(C) – New Pumping Station | N/A | N/A | 33.3 | 33.3 – 33.3 |
| AM5 – CCC Kei To Secondary School | 103 | 128 | 19.9 | 9.2 – 30.0 |

Table 4.3 Comparison of Noise Monitoring Data with EIA predictions

| Stations | Predicted Mitigated Construction Noise Levels during Normal Working Hour (Leq (30min) dB(A)) | Reporting Month (Apr 2019), $L_{eq~(30min)}~dB(A)$ |
|---|--|--|
| M6(A) - Oblate Primary School | N/A | 56.3 – 63.0 |
| M7 - CCC Kei To Secondary School | 45 – 68 | 65.2 – 65.2 |
| M8(A) - Po Leung Kuk Ngan Po Ling College (Site Boundary) | 44 - 70 | 63.6 – 66.0 |
| M9 – Tak Long Estate | Not predicted in EIA Report | 59.2 – 64.9 |

- 4.3 The averages of 1-hour TSP concentrations in all stations in the reporting month were below the prediction in the approved Environmental Impact Assessment (EIA) Report.
- 4.4 The averages of 24-hour TSP concentrations in all stations in the reporting month were below the prediction in the approved Environmental Impact Assessment (EIA) Report.
- 4.5 The range of noise level monitoring at station M7 in the reporting month was recorded within the prediction in the approved Environmental Impact Assessment (EIA) Report. The range of noise level monitoring at stations M8(A) in the reporting month was recorded within the prediction of M8 in the approved Environmental Impact Assessment (EIA) Report.

5. LANDSCAPE AND VISUAL

Monitoring Requirements

5.1 According to EM&A Manual of the Kai Tak Development EIA Study, ET shall monitor and audit the contractor's activities during the construction period on a weekly basis, and to report on the contractor's performance.

Results and Observations

- 5.2 Site audits were carried out on a weekly basis to monitor and audit the timely implementation of landscape and visual mitigation measures within the site boundaries of this Project. The summaries of site audits are attached in **Appendix I**.
- 5.3 No non-compliance of the landscape and visual impact was recorded in the reporting month.
- 5.4 In accordance with the Action Plan presented in **Appendix J**, no corrective actions were required in the reporting month.

6. ENVIRONMENTAL AUDIT

Site Audits

- 6.1 Site audits were carried out on a weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures in the Project site. The summaries of site audits are attached in **Appendix I**.
- 6.2 Site audits were conducted on 4th, 12th, 17th and 26th April 2019 in the reporting month. IEC site inspection was conducted on 17th April 2019. No non-compliance was observed during the site audits.

Status of Environmental Licensing and Permitting

6.3 All permits/licenses obtained for the Project are summarized in Table 6.1.

Table 6.1 Summary of Environmental Licensing and Permit Status

| Permit No. | Valid Period | | Details Statu | |
|---|--------------|----------|---|--------|
| refilit No. | From | To | Details | Status |
| Environmental Perm | it (EP) | | | |
| EP-337/2009 | 23/04/09 | N/A | Construction of new distributor roads serving the planned Kai Tak development. | Valid |
| EP-344/2009 | 23/04/09 | N/A | Construction of a new sewage pumping station serving the planned Kai Tak development with installed capacity of more than 2,000 m³ per day and a boundary of which is less than 150m from an existing or planned residential area or educational institution. | Valid |
| Effluent Discharge Li | icense | | | |
| WT00020971-2015 | 22/04/15 | 21/04/20 | Discharge License for the discharge of wastewater from the construction site including contaminated surface run-off to the communal storm water drain | Valid |
| Registration of Chemical Waste Producer | | | | |
| 5213-286-K2958-05 | | | Registration of chemical waste producer for chemical waste produced during construction of Stage 4 at former North Apron Area Infrastructure. | Valid |

Status of Waste Management

- 6.4 The amount of wastes generated by the major site activities of this Project during the reporting month is shown in **Appendix M**.
- 6.5 In respect of the dump truck cover, the Contractor is advised to take record photos and inspection to ensure that the skips of all dump trucks have been fully covered before leaving the site.

Implementation Status of Environmental Mitigation Measures

6.6 During site inspections in the reporting month, no non-conformance was identified. ET weekly site inspections were carried out during the reporting month and the observations and recommendations are summarized in Table 6.2.

Table 6.2 Observations and Recommendations of Site Inspections for EP-337/2009

| Parameters | Date | Observations and Recommendations | Follow-up |
|------------------------------|------|----------------------------------|-----------|
| Water Quality | | | |
| Air Quality | | | - |
| Noise | | | - |
| Waste/Chemical Management | | | |
| Landscape and Visual | | | . |
| Permits /Licences | | | 1 |

Table 6.3 Observations and Recommendations of Site Inspections for EP-344/2009

| Parameters | Date | Observations and Recommendations | Follow-up |
|------------------------------|------|---|-----------|
| Water Quality | | | |
| Air Quality | | | |
| Noise | | | |
| Waste/Chemical Management | | | |
| Landscape and Visual | | | |
| Permits /Licences | | | |

Summary of Mitigation Measures Implemented

The monthly IEC audit was carried out on 17th April 2019, the summary were recorded as 6.7 follows:

Follow up of last monthly audit:

No major environmental deficiency was observed during the previous site audit.

Observation(s) in the reporting month:

- Reminder: The Contractor was requested to provide labels for the chemical containers to indicate the material inside.
- 6.8 An updated summary of the EMIS is provided in **Appendix K**.

Implementation Status of Event Action Plans

6.9 The Event Action Plans for air quality, noise and landscape and visual are presented in Appendix J.

1-hr TSP Monitoring

No Action/Limit Level exceedance was recorded in the reporting month. 6.10

24-hr TSP Monitoring

6.11 No Action/Limit Level exceedance was recorded in the reporting month.

Construction Noise

6.12 No Action/Limit Level exceedance was recorded in the reporting month.

Landscape and visual

6.13 No non-compliance was recorded in the reporting month.

Summary of Complaint, Warning, Notification of any Summons and Successful **Prosecution**

No environmental complaint and environmental prosecution was received in the reporting 6.14 month. The summaries of environmental complaint, warning, summon and notification of successful prosecution for the Project are presented in **Appendix L**.

7. FUTURE KEY ISSUES

- 7.1 All major construction works were completed, site activities undertaken for the coming two months include:
 - Daily Cleaning;
 - E&M Work, GRC coping, Landscape Work in PS2;
 - Maintenance platform in DCS; and
 - E&M Works, Scaffold Platform Installation in NPS.
- 7.2 The tentative construction program for the Project is provided in **Appendix N.**

Key Issues for the Coming Month

- 7.3 Key environmental issues in the coming month include:
 - Dust generation from stockpiles of dusty materials;
 - Proper storage of construction materials on site;
 - Storage of chemicals/fuel and chemical waste/waste oil on site;
 - Accumulation of general and construction waste on site;
 - Noise from operation of the equipment, especially for machinery on-site; and
 - Mitigation measures for site surface runoff.
- 7.4 The tentative program of major site activities and the impact prediction and environmental mitigation measures for the coming two months, i.e. May 2019 and June 2019 are summarized as follows:

Table 7.1 Summary of the tentative program of major site activities, the impact prediction and control measures for May and June 2019

| Construction Works | Major Impact | Control Measures |
|---------------------------|--|---|
| | Prediction | |
| | Air quality impact (dust) | a) Frequent watering or covering stockpiles with impervious sheeting. |
| As mentioned in | Water quality impact (surface run-off) | b) Provision of measures to prevent discharge into the stream. |
| Section 7.1 | Noise Impact | c) Scheduling of noisy construction activities if necessary to avoid persistent noisy operation;d) Controlling the number of plants use on site; ande) Regular maintenance of machines. |

8. CONCLUSIONS AND RECOMMENDATIONS

Conclusions

- 8.1 Environmental monitoring works required under the EM&A Manual were performed in the reporting month and all monitoring results were checked and reviewed.
- 8.2 The Cessation of Impact Environmental Monitoring Works (Construction Phase) was approved by the EPD. Impact Environmental Monitoring Works were ceased since 15 April 2019.

1-hr TSP Monitoring

- 8.3 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- The average of 1-hour TSP concentrations in all stations in the reporting month were 8.4 below the prediction in the approved Environmental Impact Assessment (EIA) Report.

24-hr TSP Monitoring

- 8.5 All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 8.6 24-hour TSP concentrations in all stations in the reporting month were below the prediction in the approved Environmental Impact Assessment (EIA) Report.

Construction Noise Monitoring

8.7 Construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Complaints, Notification of any Summons and Prosecution Received

8.8 No environmental complaint and environmental prosecution was received in the reporting month. The summaries of environmental complaint, warning, summon and notification of successful prosecution for the Project are presented in **Appendix L**.

Recommendations

8.9 According to the environmental audit performed in the reporting month, the following recommendations were made:

Air Quality Impact

To implement dust suppression measures on stockpiles.

Noise Impact

- To inspect the noise sources inside the site.
- To disperse the locations of noisy equipments and position the equipments as far away as possible from sensitive receivers.

Water Impact

• To prevent any surface runoff discharge into any stream course.

Waste/Chemical Management

- To check for any accumulation of waste materials or rubbish on site.
- To ensure the performance of sorting of C&D materials at source (during generation);
- To avoid any discharge or accidental spillage of chemical waste or oil directly from the site.
- To provide proper storage area or drip trays for oil containers/ equipment on site.
- To avoid improper handling or storage of oil drum on site.

Landscape and Visual

- To protect the existing trees to be retained.
- To transplant the trees unavoidably affected by the works.
- To control of night-time lighting.
- To provide decorative screen hoarding.
- To complete landscape works at site area as early as possible.

Effectiveness of Environmental Management

- 8.10 The above recommendations and the recommended mitigation measures in the EM&A Manual were carried out by the Contractor during construction. No non-compliance was recorded during the environmental site inspections as shown in **Appendix I**.
- 8.11 The effectiveness of environmental management is satisfactory as the above recommendations are met. Some of the examples of mitigation measures for the following recommendations are given in **Table 8.1** below.
 - Surface runoff discharge into any stream course is prevented;
 - Provision of sedimentation facilities after identification of wastewater discharges from site:
 - Discharge or accidental spillage of chemical waste or oil directly from the site is avoided;
 - Improper handling or storage of oil drum on site is avoided;
 - The existing trees to be retained are protected; and
 - Night-time lighting is controlled.

Table 8.1 Examples of Mitigation Measures for Environmental Recommendations

To prevent any surface runoff discharge into any stream course.

Follow-up measure(s) after identification of wastewater discharges from site.

To avoid any discharge or accidental spillage of chemical waste or oil directly from the site

To avoid improper handling or storage of oil drum on site

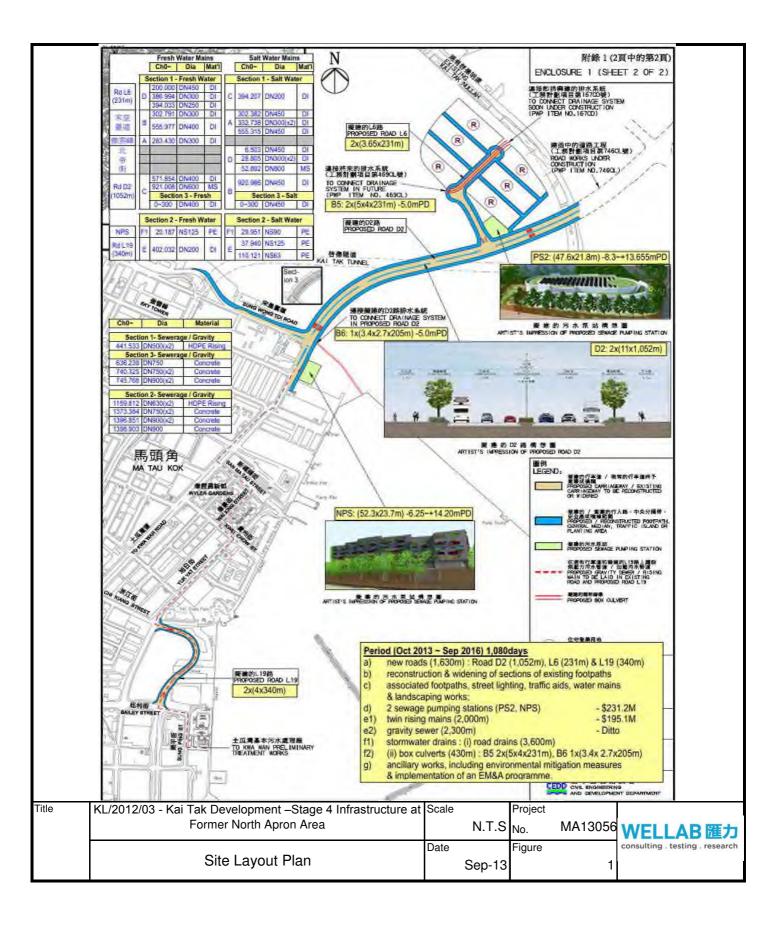

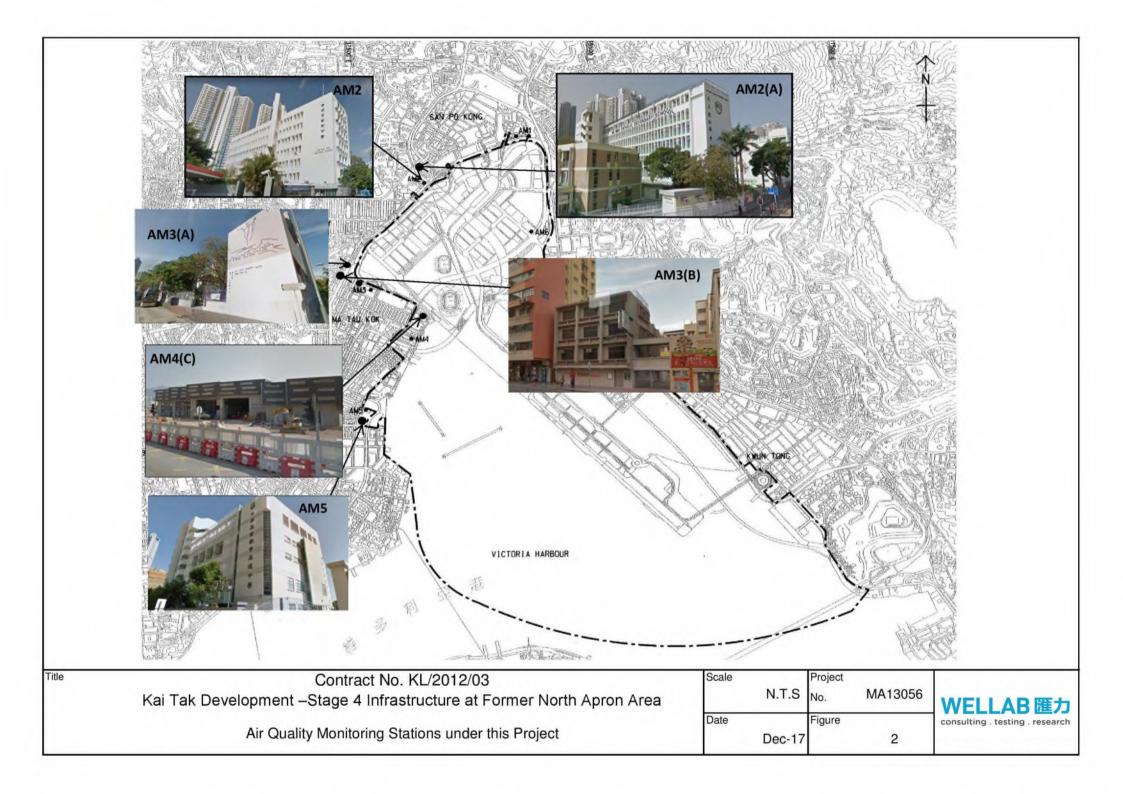

To protect the existing trees to be retained

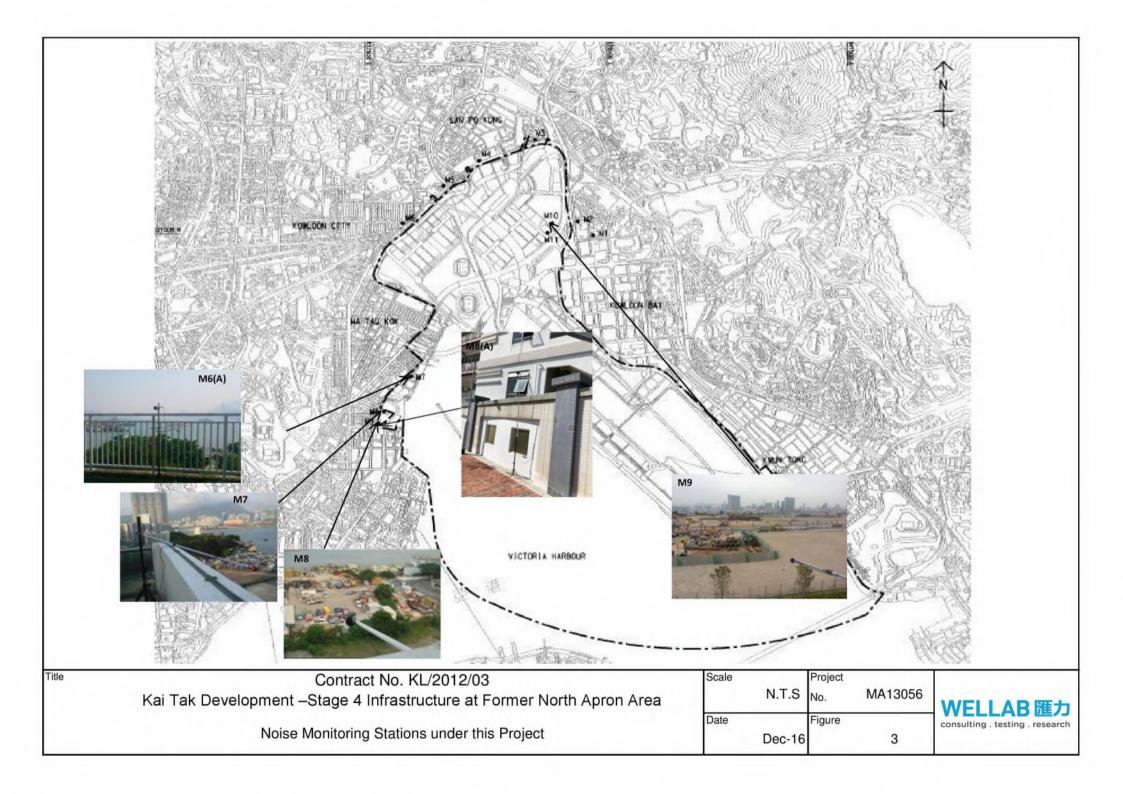

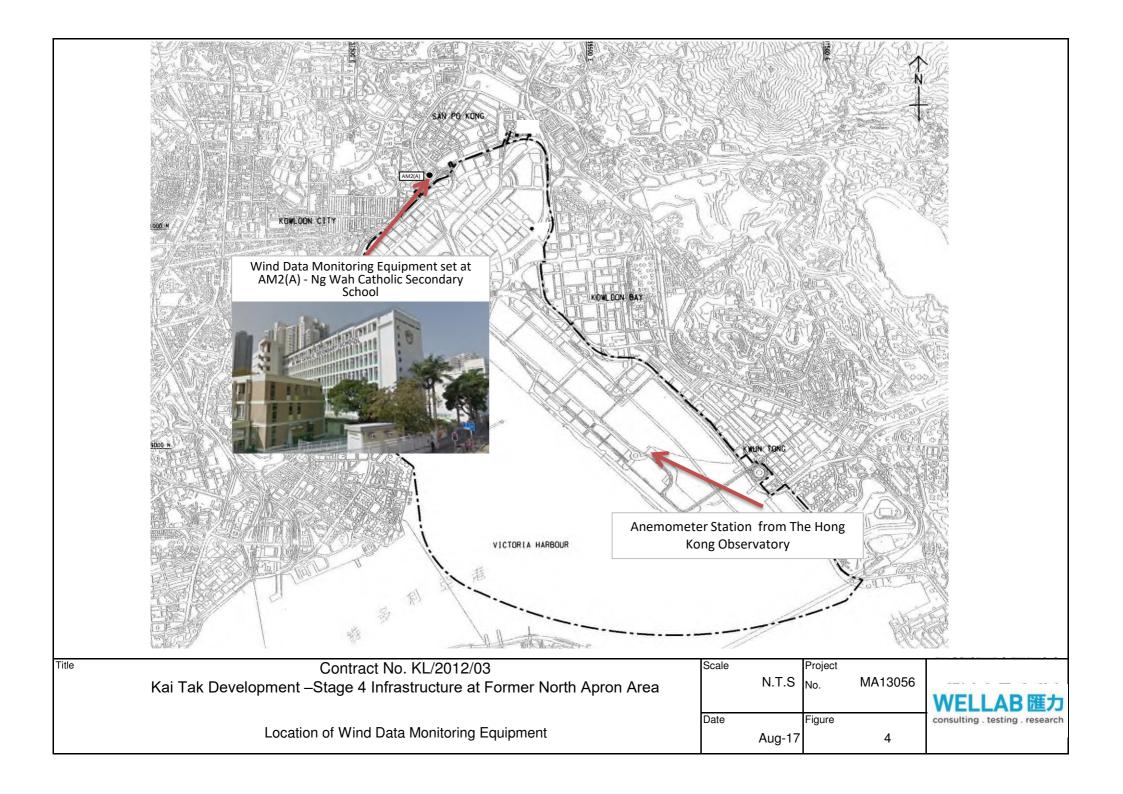

To control of night-time lighting

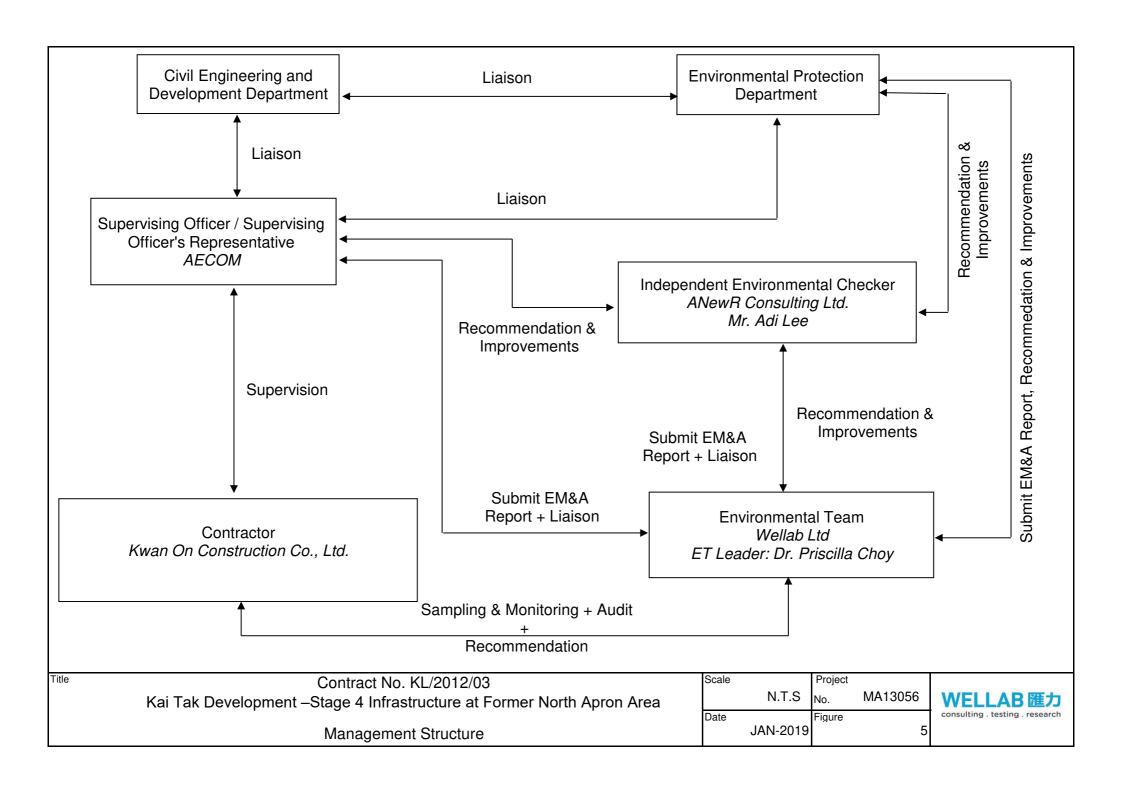

FIGURES

APPENDIX A ACTION AND LIMIT LEVELS

Appendix A - Action and Limit Levels

Table A-1 Action and Limit Levels for 1-Hour TSP

| Location | Action Level, μg/m ³ | Limit Level, μg/m³ |
|----------|---------------------------------|--------------------|
| AM2 | 346 | |
| AM3(A) | 351 | 500 |
| AM4(C) | 371 | 500 |
| AM5 | 345 | |

Table A-2 Action and Limit Levels for 24-Hour TSP

| Location | Action Level, μg/m³ | Limit Level, μg/m³ |
|----------|---------------------|--------------------|
| AM2(A) | 157 | |
| AM3(B) | 167 | 260 |
| AM4(C) | 187 | 260 |
| AM5 | 156 | |

Table A-3 Action and Limit Levels for Construction Noise

| Time Period | Action Level | Limit Level |
|----------------------------------|---|------------------------------|
| 0700-1900 hrs on normal weekdays | When one documented complaint is received | 75 dB(A) 70dB(A)/65dB(A)* |

Remarks: If works are to be carried out during restricted hours, the conditions stipulated in the Construction Noise Permit (CNP) issued by the Noise Control Authority have to be followed. *70dB(A) and 65dB(A) for schools during normal teaching periods and school examination periods, respectively.

Certificate of Calibration

Item for calibration:

Description

: Weather Stations, Vantage Pro2

Manufacturer

: Davis Instruments

Model No.

: 6152

Serial No.

: BC180522050

Test conditions:

Room Temperature

: 17-22 degree Celsius

Relative Humidity

: 40-70 %

Test Specifications:

- 1. Performance check of anemometer
- 2. Performance check of wind direction sensor

Methodology:

In-house method with reference anemometer (RS232 Integral Vane Digital Anemometer)

PREPARED AND CHECKED BY:

For and On Behalf of WELLAB Ltd.

PATRICK TSE
Laboratory Manager

APPENDIX C WEATHER INFORMATION

I. General Information

| Date | Mean Air Temperature (°C) | Mean Relative Humidity (%) | Precipitation (mm) |
|-----------|------------------------------|-------------------------------|--------------------|
| 01-Apr-19 | 20.3 | 81 | Trace |
| 02-Apr-19 | 20.7 | 76 | Trace |
| 03-Apr-19 | 22.8 | 80 | Trace |
| 04-Apr-19 | 21.7 | 83 | Trace |
| 05-Apr-19 | 24.0 | 76 | - |
| 06-Apr-19 | 25.1 | 79 | - |
| 07-Apr-19 | 25.7 | 80 | - |
| 08-Apr-19 | 26.7 | 80 | - |
| 09-Apr-19 | 26.6 | 81 | - |
| 10-Apr-19 | 27.1 | 80 | - |
| 11-Apr-19 | 27.3 | 81 | 0.7 |
| 12-Apr-19 | 22.3 | 89 | 6.1 |
| 13-Apr-19 | 21.2 | 92 | 3.8 |
| 14-Apr-19 | 22.7 | 90 | 10.4 |
| 15-Apr-19 | 22.1 | 85 | 1.1 |
| 16-Apr-19 | 21.2 | 91 | 9.2 |
| 17-Apr-19 | 23.5 | 85 | - |
| 18-Apr-19 | 24.0 | 90 | 6.7 |
| 19-Apr-19 | 23.7 | 93 | 75.8 |

I. General Information

| Date | Mean Air Temperature (°C) | Mean Relative Humidity (%) | Precipitation (mm) |
|-----------|------------------------------|-------------------------------|--------------------|
| 20-Apr-19 | 23.3 | 95 | 43.6 |
| 21-Apr-19 | 26.2 | 88 | 0.3 |
| 22-Apr-19 | 27.5 | 84 | - |
| 23-Apr-19 | 28.0 | 81 | - |
| 24-Apr-19 | 28.0 | 78 | - |
| 25-Apr-19 | 28.5 | 77 | - |
| 26-Apr-19 | 28.4 | 81 | 0.9 |
| 27-Apr-19 | 24.9 | 86 | 16.6 |
| 28-Apr-19 | 24.3 | 89 | 3.1 |
| 29-Apr-19 | 26.4 | 86 | - |
| 30-Apr-19 | 26.7 | 82 | 7.5 |

^{*} The above information was extracted from the daily weather summary by Hong Kong Observatory.

^{**} Trace = rainfall less than 0.05 mm.

^{***} The level of precipitation indicate the total amount of rainfall for each date (24 hours).

APPENDIX D ENVIRONMENTAL MONITORING SCHEDULES

Contract No. KL/2012/03

Kai Tak Development –Stage 4 Infrastructure at Former North Apron Area Tentative Impact Air and Noise Monitoring Schedule for April 2019

| Sunday | Monday | Tuesday | Wednesday | Thursday | Friday | Saturday |
|--------|--|--|---|----------|---|----------|
| | 1-Apr | 2-Apr | 3-Apr | 4-Apr | 5-Apr | 6-Apr |
| | | 1 hr TSP X3 AM4(C), AM5 Noise M6(A) M7, M8(A), M9 24-hr TSP AM3(B), AM5 | 1 hr TSP X3 AM2, AM3(A) 24-hr TSP AM2(A) | | | |
| 7-Apr | 8-Apr | 9-Apr | 10-Apr | 11-Apr | 12-Apr | 13-Apr |
| | 1 hr TSP X3 AM4(C), AM5 24-hr TSP AM3(B), AM5 | 1 hr TSP X3 AM2, AM3(A) 24-hr TSP AM2(A) | | | 1 hr TSP X3 AM4(C), AM5 Noise M6(A) M7, M8(A), M9 24-hr TSP AM3(B),AM4(C), AM5 | |
| 14-Apr | 15-Apr | 16-Apr | 17-Apr | 18-Apr | 19-Apr | 20-Apr |
| | | | | | | |
| 21-Apr | 22-Apr | 23-Apr | 24-Apr | 25-Apr | 26-Apr | 27-Apr |
| | | | | | | |
| 28-Apr | 29-Apr | 30-Apr | | | | |
| | | | | | | |

The schedule may be changed due to unforeseen circumstances (adverse weather, etc)

The Cessation of Impact Environmental Monitoring Works (Construction Phase) was approved by the EPD. Impact Environmental Monitoring Works were ceased since 15 April 2019.

Air Quality Monitoring Station

AM2 - Lee Kau Yan Memorial School

AM2(A) - Ng Wah Catholic Secondary School

AM3(A) - Holy Trinity Bradbury Centre

AM3(B) - Hong Kong Family Planning Association

AM4(C) - New Pumping Station under Contract KL/2012/03

AM5 - CCC Kei To Secondary School

Noise Monitoring Station

M6(A) - Oblate Primary School M7 - CCC Kei To Secondary School

M8(A) - Po Leung Kuk Ngan Po Ling College (Site Boundary)

M9 - Tak Long Estate

APPENDIX K ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE (EMIS)

Appendix K - Summary of Implementation Schedule of Mitigation Measures for Construction Phase

| Types of Impacts | Mitigation Measures | Status |
|----------------------|--|--------|
| | 8 times daily watering of the work site with active dust emitting activities. Implementation of dust suppression measures stipulated in Air Pollution Control (Construction Dust) Regulation. The following mitigation measures, good site practices and a comprehensive dust monitoring and audit programme are recommended to minimize cumulative dust impacts. | ۸ |
| | Stockpiling site(s) should be lined with impermeable sheeting and bunded. Stockpiles should be fully covered by impermeable sheeting to reduce dust emission. Misting for the dusty material should be carried out. | ^ |
| | before being loaded into the vehicle. Any vehicle with an open load carrying area should | ^ |
| | have properly fitted side and tail boards. Material having the potential to create dust should not be loaded from a level higher than the side and tail boards and should be dampened and covered by a clean tarpaulin. | ۸ |
| | The tarpaulin should be properly secured and should extent at least 300 mm over the edges of the sides and tailboards. The material should also be dampened if necessary before transportation. | ^ |
| Construction Dust | The vehicles should be restricted to maximum speed of 10 km per hour and confined haulage and delivery vehicle to designated roadways insider the site. On- site unpaved roads should be compacted and kept free of lose materials. | ۸ |
| | Vehicle washing facilities should be provided at every vehicle exit point. The area where vehicle washing takes place and the section of the road between the washing facilities and | ^ |
| | the exit point should be paved with concrete, bituminous materials or hardcores. • Every main haul road should be scaled with concrete and kept clear of dusty materials or sprayed with water so as to maintain the entire road surface wet. | ٨ |
| | Every stock of more than 20 bags of cement should be covered entirely by impervious sheeting placed in an area sheltered on the top and the three sides. | ۸ |
| | Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving the construction sites. | ^ |
| | | |
| | | |
| | | |

| | Use of quiet PME, movable barriers barrier for Asphalt Paver, Breaker, Excavator and Hand-held breaker and full enclosure for Air Compressor, Bar Bender, Concrete Pump, Generator and Water Pump | ^ |
|-----------------------|--|--------|
| | Good Site Practice: Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program. Silencers or muttlers on construction equipment should | ۸ |
| | be utilized and should be properly maintained during the construction program. | N/A(1) |
| | Mobile plant, if any, should be sited as far away from NSRs as possible. | ^ |
| | Machines and plant (such as trucks) that may be in intermittent use should be shut down between works periods or should be throttled down to a minimum. | ۸ |
| | Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs. | ۸ |
| | Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction activities. | ۸ |
| | Scheduling of Construction Works during School Examination Period | ^ |
| Construction Noise | (i) Provision of low noise surfacing in a section of Road L2; and | N/A |
| | | |
| | (ii) Provision of structural fins | N/A |
| | (i) Avoid the sensitive façade of class room facing Road L2 and L4; and | N/A |
| | (ii) Provision of low noise surfacing in a section of Road L2 & L4 | N/A |
| | (i) Provision of low noise surfacing in a section of Road L4 before occupation of Site 1I1; and | N/A |
| | (ii) Setback of building about 5m from site boundary. | N/A |
| | Setback of building about 35m to the northwest direction at 1L3 and 5m at Site 1L2. | N/A |
| | avoid any sensitive façades with openable window facing the existing Kowloon City Road network; and | N/A |
| | (ii) for the sensitive facades facing the To Kwa Wan direction, either setback the facades by about 5m to the northeast direction or do not provide the facades with openable window. | N/A |

| | (i) avoid any sensitive facades with openable window facing the existing To Kwa Wan Road or provision of 17.5m high noise tolerant building fronting To Kwa Wan Road and restrict the height of the residential block(s) located at less than 55m away from To Kwa Wan Road to no more than 25m above ground. (i) avoid any sensitive facades with openable window facing the slip road connecting Prince Edward Road East and San Po Kong or other alternative mitigation measures and at-source mitigation measures for the surrounding new local roads to minimise the potential traffic noise impacts from the slip road | N/A N/A N/A |
|----------------------------------|--|--------------------------|
| | All the ventilation fans installed in the below will be provided with silencers or acoustics treatment. (i) SPS (ii) ESS (iii) Tunnel Ventilation Shaft (iv) EFTS depot Installation of retractable roof or other equivalent measures | N/A N/A N/A N/A |
| Construction Water Quality | The following mitigation measures are proposed to be incorporated in the design of the SPS at KTD, including: • Dual power supply or emergency generator should be provided at all the SPSs to secure electrical power supply; • Standby pumps should be provided at all SPSs to ensure smooth operation of the SPS during maintenance of the duty pumps; • An alarm should be installed to signal emergency high water level in the wet well at all SPSs; and • For all unmanned SPSs, a remote monitor system connecting SPSs with the control station through telemetry system should be provided so that swift actions could be taken in case of malfunction of unmanned facilities. Land-based Construction Construction Runoff Exposed soil areas should be minimised to reduce the potential for increased siltation, contamination of runoff, and erosion. Construction runoff related impacts associated with the above ground construction activities can be readily controlled through the use of appropriate mitigation measures which include: • use of sediment traps • adequate maintenance of drainage systems to prevent flooding and overflow | N/A N/A N/A A |

Construction site should be provided with adequately designed perimeter channel and pre-treatment facilities and proper maintenance. The boundaries of critical areas of earthworks should be marked and surrounded by dykes or embankments for flood protection. Temporary ditches should be provided to facilitate runoff discharge into the appropriate watercourses, via a silt retention pond. Permanent drainage channels should incorporate sediment basins or traps and baffles to enhance deposition rates. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC PN 1/94.

Ideally, construction works should be programmed to minimise surface excavation works during the rainy season (April to September). All exposed earth areas should be completed as soon as possible after earthworks have been completed, or alternatively, within 14 days of the cessation of earthworks where practicable. If excavation of soil cannot be avoided during the rainy season, or at any time of year when rainstorms are likely, exposed slope surfaces should be covered by tarpaulin or other means.

Sediment tanks of sufficient capacity, constructed from pre-formed individual cells of approximately 6 to 8 m³ capacity, are recommended as a general mitigation measure which can be used for settling surface runoff prior to disposal. The system capacity is flexible and able to handle multiple inputs from a variety of sources and particularly suited to applications where the influent is pumped.

Open stockpiles of construction materials (for examples, aggregates, sand and fill material) of more than 50 m³ should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.

Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and storm runoff being directed into foul sewers.

Precautions to be taken at any time of year when rainstorms are likely, actions to be taken when a rainstorm is imminent or forecast, and actions to be taken during or after rainstorms are summarised in Appendix A2 of ProPECC PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events.

Oil interceptors should be provided in the drainage system and regularly cleaned to prevent the release of oils and grease into the storm water drainage system after accidental spillages. The interceptor should have a bypass to prevent flushing during periods of heavy rain.

All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and located wheel washing bay should be provided at every site exit, and wash-water should have sand and silt settled out and removed at least on a weekly basis to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains.

Drainage

It is recommended that on-site drainage system should be installed prior to the commencement of other construction activities. Sediment traps should be installed in order to minimise the sediment loading of the effluent prior to discharge into foul sewers. There should be no direct discharge of effluent from the site into the sea.

All temporary and permanent drainage pipes and culverts provided to facilitate runoff discharge should be adequately designed for the controlled release of storm flows. All sediment control measures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly following rain storms. The temporarily diverted drainage should be reinstated to its original condition when the construction work has finished or the temporary diversion is no longer required.

All fuel tanks and storage areas should be provided with locks and be located on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank, to prevent spilled fuel oils from reaching the coastal waters of the Victoria Harbour WCZ.

Sewage Effluent

Construction work force sewage discharges on site are expected to be connected to the existing trunk sewer or sewage treatment facilities. The construction sewage may need to be handled by portable chemical toilets prior to the commission of the on-site sewer system. Appropriate numbers of portable toilets should be provided by a licensed contractor to serve the large number of construction workers over the construction site. The Contractor should also be responsible for waste disposal and maintenance practices.

Stormwater Discharges

Minimum distances of 100 m should be maintained between the existing or planned stormwater discharges and the existing or planned seawater intakes

N/A

Λ

| Debris and Litter | |
|--|---|
| In order to maintain water quality in acceptable conditions with regard to aesthetic quality, contractors should be required, under conditions of contract, to ensure that site management is optimised and that disposal of any solid materials. litter or wastes to marine waters does not occur | ۸ |
| Construction Works at or in Close Proximity of Storm Culvert or Seafront | |
| The proposed works should preferably be carried out within the dry season where the flow in the drainage channel /storm culvert/ nullah is low. | ۸ |
| The use of less or smaller construction plants may be specified to reduce the disturbance to the bottom sediment at the drainage channel /storm culvert / nullah. | ٨ |
| Temporary storage of materials (e.g. equipment, filling materials, chemicals and fuel) and temporary stockpile of construction materials should be located well away from any water courses during carrying out of the construction works. | ۸ |
| Stockpiling of construction materials and dusty materials should be covered and located away from any water courses. | ۸ |
| Construction debris and spoil should be covered up and/or disposed of as soon as possible to avoid being washed into the nearby water receivers. | ٨ |
| Construction activities, which generate large amount of wastewater, should be carried out in a distance away from the waterfront, where practicable. | ۸ |
| Mitigation measures to control site runoff from entering the nearby water environment should be implemented to minimize water quality impacts. Surface channels should be provided along the edge of the waterfront within the work sites to intercept the runoff. | ۸ |
| Construction effluent, site run-off and sewage should be properly collected and/or treated. | ٨ |
| Any works site inside the storm water courses should be temporarily isolated, such as by placing of sandbags or silt curtains with lead edge at bottom and properly supported props to prevent adverse impact on the storm water quality. | ۸ |
| Silt curtain may be installed around the construction activities at the seafront to minimize the potential impacts due to accidental spillage of construction materials. | ۸ |
| Proper shoring may need to be erected in order to prevent soil/mud from slipping into the storm culvert/drainage channel/sea. | ۸ |

| | Supervisory staff should be assigned to station on site to | ^ |
|-------------------------------------|---|---|
| | closely supervise and monitor the works | |
| | Marine water quality monitoring and audit programme shall be implemented for the proposed sediment | ^ |
| | Good Site Practices | |
| | It is not anticipated that adverse waste management related impacts would arise, provided that good site practices are adhered to. Recommendations for good site practices during construction activities include: | |
| | Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at | ^ |
| | the site Training of site personnel in proper waste management and chemical waste handling procedures | ^ |
| | Provision of sufficient waste disposal points and regular collection for disposal | ^ |
| | Appropriate measures to minimise windblown litter and dust during transportation of waste by either | , |
| | covering trucks or by transporting wastes in enclosed containers A recording system for the amount of wastes | ^ |
| | generated, recycled and disposed of (including the disposal sites) | |
| Construction Waste Management | Waste Reduction Measures Good management and control can prevent the generation of a significant amount of waste. Waste reduction is best achieved at the planning and design | |
| | stage, as well as by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include: | ٨ |
| | Sort C&D waste from demolition of the remaining structures to recover recyclable portions such as metals | ٨ |
| | Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal | ٨ |
| | Encourage collection of aluminium cans, PET bottles and paper by providing separate labelled bins to enable these wastes to be segregated from | ^ |
| | other general refuse generated by the work force Any unused chemicals or those with remaining | ٨ |
| | functional capacity should be recycled Proper storage and site practices to minimise the potential for damage or contamination of construction materials | |
| | | |
| | | |

Construction and Demolition Material

Mitigation measures and good site practices should be incorporated into contract document to control potential environmental impact from handling and transportation of C&D material. The mitigation measures include:

- Where it is unavoidable to have transient stockpiles of C&D material within the Project work site pending collection for disposal, the transient stockpiles should be located away from waterfront or storm drains as far as possible
- Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric
- Skip hoist for material transport should be totally enclosed by impervious sheeting
- Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving a construction site
- The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete bituminous materials or hardcores
- The load of dusty materials carried by vehicle leaving a construction site should be covered entirely by clean impervious sheeting to ensure dust materials do not leak from the vehicle
- All dusty materials should be sprayed with water prior to any loading, unloading or transfer operation so as to maintain the dusty materials wet
- The height from which excavated materials are dropped should be controlled to a minimum practical height to limit fugitive dust generation from unloading.

When delivering inert C&D material to public fill reception facilities, the material should consist entirely of inert construction waste and of size less than 250mm or other sizes as agreed with the Secretary of the Public Fill Committee. In order to monitor the disposal of the surplus C&D material at the designed public fill reception facility and to control fly tipping, a trip-ticket system as stipulated in the ETWB TCW No. 31/2004 "Trip Ticket System for Disposal of Construction and Demolition Materials" should be included as one of the contractual requirements and implemented by an Environmental Team undertaking the Environmental Monitoring and Audit work. Checker Independent Environmental should be responsible for auditing the results of the system.

Chemical Waste

After use, chemical wastes (for example, cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Spent chemicals should be collected by a licensed collector for disposal at the CWTF or other licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation

| | General Refuse | |
|-------------------------|--|-----|
| | General refuse should be stored in enclosed bins or compaction units separate from C&D material. A licensed waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D material. Effective collection and storage methods (including enclosed and covered area) of site wastes would be required to prevent waste materials from being blown around by wind, wastewater discharge by flushing or leaching into the marine environment, or creating odour nuisance or pest and vermin problem | ۸ |
| | CM1 All existing trees should be carefully protected during construction. | ۸ |
| Landscape and Visual | CM2 Trees unavoidably affected by the works should be transplanted where practical. Detailed transplanting proposal will be submitted to relevant government departments for approval in accordance with ETWBC 2/2004 and 3/2006. Final locations of transplanted trees should be agreed prior to commencement of the work. | N/A |
| | CM3 Control of night-time lighting. | ٨ |
| | CM4 Erection of decorative screen hoarding. | ٨ |

| Remarks: | ^ Compliance of mitigation measure; | | | | | | | | |
|-----------------------------------|---|--|--|--|--|--|--|--|--|
| | X Non-compliance of mitigation measure; | | | | | | | | |
| N/A Not Applicable at this stage; | | | | | | | | | |
| | N/A(1) Not observed; | | | | | | | | |
| | Non-compliance but rectified by the contractor; | | | | | | | | |
| | * Recommendation was made during site audit but improved/rectified by the contractor. | | | | | | | | |
| | # Recommendation was made during site audit and to be improved / rectified by the contractor. | | | | | | | | |

EXECUTIVE SUMMARY

Introduction

- 1. This is the 37th Monthly Environmental Monitoring and Audit Report prepared by Cinotech Consultants Ltd. for "Contract No. KL/2014/01 Kai Tak Development Stage 2 Infrastructure Works for Developments at the Southern Part of the Former Runway" (Hereafter referred to as "the Project"). This contract work comprises two Schedule 2 designated projects (DP), namely the new distributor road D4 (part) and roads D3A & D4A serving the planned KTD. The DPs are part of the designated projects under Environmental Permits (EP) No.: EP-337/2009 ("New distributor roads serving the planned Kai Tak Development") and EP-445/2013/A ("Kai Tak Development Roads D3A & D4A") respectively. This report documents the findings of EM&A Works conducted from 1-30 April 2019.
- 2. With reference to the same principle of EIA report of the Project, no air quality monitoring station within 500m and noise monitoring station within 300m from the boundary of this Project are considered as relevant monitoring locations. In such regard, no relevant air quality and noise monitoring location are required for monitoring under the Project. The monitoring works for recommended monitoring stations in EM&A Manual of the DPs are conducted by Kai Tak Development (KTD) Schedule 3 Project.
- 3. The major site activities undertaken in the reporting month included:
 - TTA implementation, junction improvement works at Shing Fung Road and Wang Chiu Road / Kai Cheung Road;
 - Construction of box culvert and underpass;
 - Construction of utilities trough at Kai Tak Bridge;
 - Construction of pile caps, noise barrier footings and steel structures, outfalls, deck structure and columns:
 - Laying of sewer, drainage and pavement;
 - Erection of noise barrier steel structure and panels

Environmental Monitoring Works

- 4. Environmental monitoring for the Project was performed in accordance with the EM&A Manual and the monitoring results were checked and reviewed. Site Inspections/Audits were conducted once per week. The implementation of the environmental mitigation measures, Event Action Plans and environmental complaint handling procedures were also checked.
- 5. Summary of the non-compliance in the reporting month for the Project is tabulated in Table I.

Table I Non-compliance Recorded for the Project in the Reporting Month

| Parameter | No. of Project-rela | Action Taken | |
|---------------|---------------------|--------------|--------------|
| 1 at attictet | Action Level | Limit Level | Action Taken |
| Noise | 0 | 0 | N/A |

Environmental Monitoring for Air Quality and Construction Noise

6. No monitoring for air quality and construction noise is required. No Action/Limit Level exceedance was recorded.

Environmental Licenses and Permits

- 7. Licenses/Permits granted to the Project include the Environmental Permits (EP) for the Project, EP-337/2009 issued on 23 April 2009 and EP-445/2013 issued on 3 May 2013 (Amended Environmental Permit (No.: EP-445/2013/A) issued on 13 August 2014).
- 8. Billing Account for Disposal of Construction Waste (A/C No. 7024073)
- 9. Registration of Chemical Waste Producer (License: 5213-247-C4004-01).
- 10. Water Discharge License (License: WT00023634-2016).
- 11. Construction Noise Permits (Permit: GW-RE0186-19)

Key Information in the Reporting Month

12. Summary of key information in the reporting month is tabulated in Table II.

Table II Summary Table for Key Information in the Reporting Month

| Event | Event Details | | Action Taken | Status | Remark |
|---|---------------|--------|--------------|--------|--------|
| | Number | Nature | | | |
| Complaint received | 0 | | N/A | N/A | |
| Reporting Changes | 0 | | N/A | N/A | |
| Notifications of any summons & prosecutions received | 0 | | N/A | N/A | |

Future Key Issues

- 13. The future key environmental issues in the coming month include:
 - Dust generation from stockpiles of dusty materials, exposed site area, excavation works and rock breaking activities;
 - Water spraying for dust generating activity and on haul road;
 - Proper storage of construction materials on site;
 - Storage of chemicals/fuel and chemical waste/waste oil on site;
 - Accumulation of general and construction waste on site;
 - Noise from operation of the equipment, especially for excavation activities and machinery on-site;
 - Wastewater and runoff discharge from site;
 - Regular removal of silt, mud and sand along u-channels and sedimentation tanks; and
 - Review and implementation of temporary drainage system for the surface runoff.

1. INTRODUCTION

Background

- 1.1 The Kai Tak Development (KTD) is located in the south-eastern part of Kowloon Peninsula, comprising the apron and runway areas of the former Kai Tak Airport and existing waterfront areas at To Kwa Wan, Ma Tau Kok, Kowloon Bay, Kwun Tong and Cha Kwo Ling. It covers a land area of about 328 hectares. Stage 2 Infrastructure Works for Developments for Southern Part of the Former Runway is one of the construction stages of KTD. It contains two Schedule 2 DPs including new distributor roads serving the planned KTD and KTD Roads D3A & D4A. The general layout of the Project is shown in **Figure 1.**
- 1.2 One Environmental Permit (EP) No.: EP-337/2009 was issued on 23 April 2009 for new distributor roads serving the planned KTD and one Environmental Permit No.: EP-445/2013 was issued on 3 May 2013 for Kai Tak Development Roads D3A & D4A to Civil Engineering and Development Department (CEDD) as the Permit Holder. Pursuant to Section 13 of the EIAO, the Director of Environmental Protection Department amended the Environmental Permit No.: EP-445/2013 based on the Application No. VEP-449/2014 and the Environmental Permit (No.: EP-445/2013/A) was issued on 13 August 2014.
- 1.3 A study of environmental impact assessment (EIA) was undertaken to consider the key issues of air quality, noise, water quality, waste, land contamination, cultural heritage and landscape and visual impact, and identify possible mitigation measures associated with the works. EIA Reports (Register No. AEIAR-130/2009 and AEIAR-170/2013) were approved by the Environmental Protection Department (EPD) on 4 March 2009 and 3 May 2013 respectively.
- 1.4 Cinotech Consultants Limited (Cinotech) was commissioned by Civil Engineering and Development Department (CEDD) to undertake the role of the Environmental Team (ET) for the Contract No. KL/2014/01 Stage 2 Infrastructure Works for Developments at the Southern Part of the Former Runway. The construction work under KL/2014/01 comprises the construction of part of the Road D4 under the EP (EP-337/2009) and the construction of Roads D3A & D4A under the EP (EP-445/2013/A).
- 1.5 Cinotech Consultants Limited was commissioned by Civil Engineering and Development Department (CEDD) to undertake the Environmental Monitoring and Audit (EM&A) works for the Project. The construction commencement of this Contract is on 13 April 2016. This is the 37th Monthly EM&A report summarizing the EM&A works for the Project from 1 30 April 2019.
- 1.6 All project information since the commencement of work under EPs including Monthly EM&A Reports is made available to the public via internet access at the website: http://www.kl201401.com/

Project Organizations

- 1.7 Different parties with different levels of involvement in the project organization include:
 - Project Proponent Civil Engineering and Development Department (CEDD).
 - The Supervising Officer and the Supervising Officer's Representative (SO) AECOM Asia Co. Ltd. (AECOM).
 - Environmental Team (ET) Cinotech Consultants Limited (CCL).
 - Independent Environmental Checker (IEC) Ka Shing Management Consultant Ltd. (KSMC).
 - Contractor Continental Engineering Corp. and Chit Cheung Construction Co. Ltd. Joint Venture (CCJV).
- 1.8 The key contacts of the Project are shown in **Table 1.1**.

Table 1.1 Key Project Contacts

| Party | Role | Contact Person | Position | Phone No. | Fax No. |
|---------------------------|---|-----------------|------------------------------|-----------|--------------|
| CEDD | Project | Mr. Keith Chu | Senior Engineer | 3579 2450 | 3579 |
| | Proponent | Ms. Adonia Yung | Engineer | 3579 2124 | 4516 |
| AECOM Supervising Officer | | Mr. Clive Cheng | CRE | 3746 1801 | 2798 0783 |
| G: 1 | Environmental Team | Mr. K S Lee | Environmental Team Leader | 2151 2091 | 3107 1388 |
| Cinotech | | Ms. Betty Choi | Audit Team Leader | 2151 2072 | |
| KSMC | Independent Environmental Checker | Dr. C. F. Ng | IEC | 2618 2166 | 2120 7752 |
| CCJV | Contractor | Mr. Dennis Ho | Environmental Officer | 2960 1398 | 2960 1399 |

Construction Activities undertaken during the Reporting Month

- 1.9 The site activities undertaken in the reporting month included:
 - TTA implementation, junction improvement works at Shing Fung Road and Wang Chiu Road / Kai Cheung Road;
 - Construction of box culvert and underpass;
 - Construction of utilities trough at Kai Tak Bridge;
 - Construction of pile caps, noise barrier footings and steel structures, outfalls, deck structure and columns;
 - Laying of sewer, drainage and pavement;
 - Erection of noise barrier steel structure and panels

Monthly EM&A Report – April 2019

1.10 The construction programme showing the inter-relationship with environmental protection/mitigation measures is presented in Table 1.2.

Table 1.2 Construction Programme Showing the Inter-Relationship with Environmental Protection/Mitigation Measures

| Construction Works | Major Environmental Impact | Control Measures |
|-----------------------------|--|---|
| As mentioned in Section 1.8 | Noise, dust impact, water quality and waste generation | Sufficient watering of the works site with active dust emitting activities; Properly cover the stockpiles; On-site waste sorting and implementation of trip ticket system; Appropriate desilting/sedimentation devices provided on site for treatment before discharge; Use of quiet plant and well-maintained construction plant; Well maintain the drainage system to prevent the spillage of wastewater during heavy rainfall; Provide mitigation measure to temporary use of chemicals; Provide sufficient mitigation measures as recommended in Approved EIA Report/Lease requirement. |

Summary of EM&A Requirements

- 1.11 The EM&A programme requires construction noise monitoring, air quality monitoring, landscape and visual monitoring and environmental site audit. The EM&A requirements for each parameter are described in the following sections, including:
- All monitoring parameters;
- Action and Limit levels for all environmental parameters;
- Event Action Plans;
- Environmental requirements and mitigation measures, as recommended in the EM&A Manual under the EP.
- 1.12 The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 5 of this report.

Monthly EM&A Report – April 2019

2. AIR QUALITY

Monitoring Requirements

- 2.1 With reference to the same principle of EIA report of the Project, air quality monitoring station should be provided at the Air Sensitive Receivers (ASR) within 500 m from the boundary of this Project. Since the opening of the Centre of Excellence in Paediatrics (Children's Hospital) on 18 December 2019, the hospital is considered as the only relevant monitoring location and therefore the monitoring is required.
- 2.2 As the monitoring works for the hospital is covered by the Contract KL/2014/03 (Kai Tak Development Stage 3 Infrastructure Works for Developments at the Southern Part of the Former Runway) at the monitoring station (KTD1a), the corresponding monitoring results for April 2019 should be accessed in the EM&A report for the reporting month. **Appendix A** shows the established Action and Limit Levels for the environmental monitoring works.

Observations

- 2.3 No monitoring for air quality is required for this report.
- 2.4 Site audits were carried out on a weekly basis to monitor and audit the timely implementation of air quality mitigation measures within the site boundaries of this Project. The summaries of site audits are attached in **Appendix C.**

Developments at the Southern Part of the Former Runway Monthly EM&A Report – April 2019

3. NOISE

Monitoring Requirements

- 3.1 With reference to the same principle of EIA report of the Project, construction noise monitoring station should be provided at the Noise Sensitive Receivers (NSR) within 300 m from the boundary of this Project. Since the opening of the Centre of Excellence in Paediatrics (Children's Hospital) on 18 December 2019, the hospital is considered as the only relevant monitoring location and therefore the monitoring is required.
- 3.2 As the monitoring works for the hospital is covered by the Contract KL/2014/03 (Kai Tak Development Stage 3 Infrastructure Works for Developments at the Southern Part of the Former Runway) at the monitoring station (KTD1a), the corresponding monitoring results for April 2019 should be accessed in the EM&A report for the reporting month. **Appendix A** shows the established Action and Limit Levels for the environmental monitoring works.

Observations

- 3.3 No monitoring for construction noise is required for this report. No Action/Limit Level exceedance was recorded. The summary of exceedance record in reporting month is shown in **Appendix B**.
- 3.4 Site audits were carried out on a weekly basis to monitor and audit the timely implementation of construction noise mitigation measures within the site boundaries of this Project. The summaries of site audits are attached in **Appendix C**.

Monthly EM&A Report – April 2019

4. LANDSCAPE AND VISUAL

Monitoring Requirements

4.1 According to EM&A Manual of the Kai Tak Development EIA Study, ET shall monitor and audit the contractor's operation during the construction period on a weekly basis, and to report on the contractor's compliance.

Results and Observations

- 4.2 Site audits were carried out on a weekly basis to monitor and audit the timely implementation of landscape and visual mitigation measures within the site boundaries of this Project. The summaries of site audits are attached in **Appendix C**.
- 4.3 No non-compliance of the landscape and visual impact was recorded in the reporting month.
- 4.4 Should non-compliance of the landscape and visual impact occur, action in accordance with the action plan presented in **Appendix D** shall be performed.

5. ENVIRONMENTAL AUDIT

Site Audits

- 5.1 Site audits were carried out on a weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures in the Project site. The summaries of site audits are attached in **Appendix C**.
- 5.2 Site audits were conducted by representatives of the Contractor, Supervising Officer and ET on 3, 10, 17, 24 and 30 April 2019 in the reporting month. IEC joint site inspection was conducted on 24 April 2019. No non-compliance was observed during the site audits.

Status of Environmental Licensing and Permitting

5.3 All permits/licenses obtained for the Project are summarized in Table 5.1.

Table 5.1 Summary of Environmental Licensing and Permit Status

| Permit No. | Valid | Period | Details | Status | |
|---------------------------|--------------|----------|---|--------|--|
| refilit No. | From | To | Details | Status | |
| Environmental Permit (EP) | | | | | |
| EP-337/2009 | 23/04/09 | N/A | Construction of new distributor roads serving the planned Kai Tak development. | Valid | |
| EP-445/2013/A | 13/08/14 | N/A | Construction of Kai Tak Development roads D3A and D4A | Valid | |
| Effluent Discharge Li | cense | | | | |
| WT00023634-2016 | | 31/03/21 | Wastewater from the construction site including effluent treated by screen and sedimentation tank | Valid | |
| Registration of Chem | ical Waste P | roducer | | | |
| 5213-247-C4004-01 | | N/A | | | |
| Construction Noise P | ermit (CNP) | | , | | |
| GW-RE0186-19 | 16/03/19 | 15/06/19 | Construction Noise Permit for the use of powered mechanical equipment for carrying out construction work other than percussive pilling and performing prescribed construction work. | Valid | |

Status of Waste Management

- 5.4 The amount of wastes generated by the major site activities of this Project during the reporting month is shown in **Appendix G**.
- 5.5 In respect of the dump truck cover, the Contractor is reminded to take record photos and inspection to ensure that all dump trucks have fully covered the skip before leaving the site.

Implementation Status of Environmental Mitigation Measures

5.6 During site inspections in the reporting month, no non-conformance was identified. ET weekly site inspections were carried out during the reporting month and the observations and recommendations are summarized in Table 5.2.

Table 5.2 Observations and Recommendations of Site Inspections

| Parameters | Date | Observations and | Follow-up |
|----------------------------------|---------------|---|--|
| | | Recommendations | |
| Water | 3 April 2019 | Reminder: Ponding within deck level should be cleared regularly. | The condition was observed to be improved/rectified by the contractor during the audit session on 10 April 2019. |
| Quality | 17 April 2019 | Reminder: Ponding at Urban Room C should be cleared after heavy rainfall. | The condition was observed to be improved/rectified by the contractor during the audit session on 30 April 2019. |
| Air Quality | 3 April 2019 | Reminder: Proper labels should be displayed on NRMMs. | The condition was observed to be improved/rectified by the contractor during the audit session on 10 April 2019. |
| Noise | | | |
| Waste/ Chemical Management | | | |
| Landscape and Visual | | | |
| Permits/ Licences | | | |

Summary of Mitigation Measures Implemented

5.7 An updated summary of the EMIS is provided in **Appendix E**.

Implementation Status of Event Action Plans

5.8 The Event Action Plans for noise and landscape and visual are presented in **Appendix D**. No Event Action Plan for air quality is considered necessary.

Construction Noise

5.9 No Action/Limit Level exceedance was recorded in the reporting month.

Landscape and visual

5.10 No non-compliance was recorded in the reporting month.

Summary of Complaint, Warning, Notification of any Summons and Successful Prosecution

5.11 The summaries of environmental complaint, warning, summon and notification of successful prosecution for the Project is presented in **Appendix F**.

6. FUTURE KEY ISSUES

- 6.1 Major site activities undertaken for the coming two months include:
 - TTA implementation, junction improvement works at Shing Fung Road and Wang Chiu Road / Kai Cheung Road;
 - Construction of box culvert and underpass;
 - Construction of utilities trough at Kai Tak Bridge;
 - Construction of pile caps, noise barrier footings and steel structure, outfalls, deck structure and columns;
 - Laying of sewer, drainage and pavement;
 - Erection of noise barrier steel structure and panels
 - 6.2 Key environmental issues in the coming month include:
 - Wastewater and runoff discharge from site;
 - Regular removal of silt, mud and sand along u-channels and sedimentation tanks;
 - Review and implementation of temporary drainage system for the surface runoff;
 - Noise from operation of the equipment, especially for rock-breaking activities, piling works and machinery on-site;
 - Dust generation from stockpiles of dusty materials, exposed site area, excavation works and rock breaking activities;
 - Water spraying for dust generating activity and on haul road;
 - Proper storage of construction materials on site;
 - Storage of chemicals/fuel and chemical waste/waste oil on site;
 - Accumulation of general and construction waste on site
- 6.3 The tentative program of major site activities and the impact prediction and control measures for the coming two months, i.e. May and June 2019 are summarized as follows:

| Construction Works | Major Impact | Control Measures |
|---------------------------|--|--|
| | Prediction | |
| | Air quality impact (dust) | a) Frequent watering of haul road and unpaved/exposed areas;b) Frequent watering or covering stockpiles with |
| | | tarpaulin or similar means; and c) Watering of any earth moving activities. |
| | Water quality impact (surface run-off) | a) Diversion of the collected effluent to de-silting facilities for treatment prior to discharge to public storm water drains; |
| As mentioned in | | b) Provision of adequate de-silting facilities for treating surface run-off and other collected effluents prior to discharge; |
| Section 7.1 | | c) Provision of perimeter protection such as sealing of hoarding footings to avoid run-off from entering the existing storm water drainage system via public road; and |
| | | d) Provision of measures to prevent discharge into the stream. |

Kai Tak Development – Stage 2 Infrastructure Works for Developments at the Southern Part of the Former Runway Monthly EM&A Report – April 2019

| Construction Works | Major Impact | Control Measures |
|---------------------------|--------------|---|
| | Prediction | |
| | Noise Impact | a) Scheduling of noisy construction activities if |
| | | necessary to avoid persistent noisy operation; |
| | | b) Controlling the number of plants use on site; |
| | | c) Regular maintenance of machines; and |
| | | d) Use of acoustic barriers if necessary |

7. CONCLUSIONS AND RECOMMENDATIONS

Conclusions

7.1 The Environmental Monitoring and Audit (EM&A) Report presents the EM&A works undertaken during the period from 1 to 30 April 2019.

Air Quality and Construction Noise

7.2 No regular monitoring air quality and noise monitoring is required for the Project. No Action/Limit Level exceedance was recorded.

Landscape and visual

7.3 No non-compliance was recorded in the reporting month.

Complaint and Prosecution

- 7.4 No environmental complaints and environmental prosecution were received in the reporting month.
- 7.5 The ET will keep track on the EM&A programme to ensure compliance of environmental requirements and the proper implementation of all necessary mitigation measures.

Recommendations

7.6 According to the environmental audit performed in the reporting month, the following recommendations were made:

Air Quality

• To properly cover the dusty stockpile to prevent dust generation.

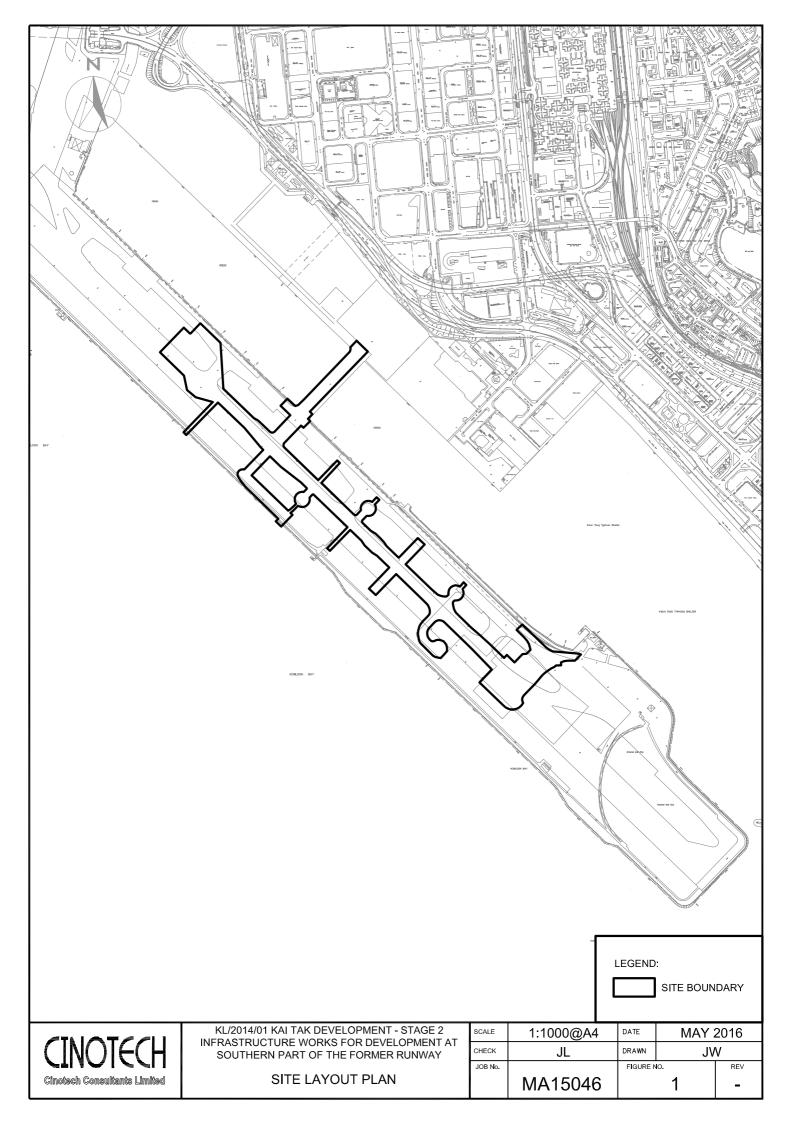

Water Quality

• To avoid ponding within landscape deck.

Waste/ chemical management

• To avoid the accumulation of general refuse.

FIGURES

APPENDIX A ACTION AND LIMIT LEVELS

Appendix A - Action and Limit Levels

Table A-1 Action and Limit Levels for Air Quality Monitoring

| Monitoring Station | Parameter | Action Level (μg/ m³) | Limit Level ⁽¹⁾⁽²⁾ (μg/ m³) |
|-----------------------|-----------|-----------------------|--|
| KTD1a | 24-hr TSP | 177 | 260 |
| KTD1a* | 1-hr TSP | 285 | 500 |

^{* 1-}hr TSP monitoring should be required in case of complaints.

Table A-2 Action and Limit Levels for Construction Noise Monitoring

| Time Period | Action Level | Limit Level ⁽¹⁾⁽²⁾ |
|----------------------------------|---|-------------------------------|
| 0700-1900 hrs on normal weekdays | When one documented complaint is received | 75 dB(A) 70dB(A)/65dB(A)* |

Remarks: (1) If works are to be carried out during restricted hours, the conditions stipulated in the Construction Noise Permit (CNP) issued by the Noise Control Authority have to be followed.

⁽²⁾ No regular noise impact monitoring station for this Contract. It is subject to the noise sensitive receiver(s) and additional monitoring work.

^{(*) 70}dB(A) and 65dB(A) for schools during normal teaching periods and school examination periods respectively.

APPENDIX B SUMMARY OF EXCEEDANCE

Contract No. KL/2014/01 Kai Tak Development –Stage 2 Infrastructure Works for Developments at the Southern Part of the Former Runway

APPENDIX D EVENT ACTION PLANS

Appendix D - Event Action Plans

Event/Action Plan for Construction Noise

| EVENT | ACTION | | | | | |
|-----------------------------------|---|--|---|--|--|--|
| | ET | IEC | ER | CONTRACTOR | | |
| Action Level being exceeded | 4. Notify ER, IEC and Contractor; 5. Carry out investigation; 6. Report the results of investigation to the IEC, ER and Contractor; 7. Discuss with the IEC and Contractor on remedial measures required; 8. Increase monitoring frequency to check mitigation effectiveness. (The above actions should be taken within 2 working days after the exceedance is identified) | Review the investigation results submitted by the ET; Review the proposed remedial measures by the Contractor and advise the ER accordingly; Advise the ER on the effectiveness of the proposed remedial measures. (The above actions should be taken within 2 working days after the exceedance is identified) | Confirm receipt of notification of failure in writing; Notify Contractor; In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; Supervise the implementation of remedial measures. (The above actions should be taken within 2 working days after the exceedance is identified) | Submit noise mitigation proposals to IEC and ER; Implement noise mitigation proposals. (The above actions should be taken within 2 working days after the exceedance is identified) | | |
| Limit Level being exceeded | Inform IEC, ER, Contractor and EPD; Repeat measurements to confirm findings; Increase monitoring frequency; Identify source and investigate the cause of exceedance; Carry out analysis of Contractor's working procedures; Discuss with the IEC, Contractor and ER on remedial measures required; Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; If exceedance stops, cease additional monitoring. (The above actions should be taken within 2 working days after the exceedance is identified) | Discuss amongst ER, ET, and Contractor on the potential remedial actions; Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly. (The above actions should be taken within 2 working days after the exceedance is identified) | Confirm receipt of notification of failure in writing; Notify Contractor; In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; Supervise the implementation of remedial measures; If exceedance continues, consider stopping the Contractor to continue working on that portion of work which causes the exceedance until the exceedance is abated. (The above actions should be taken within 2 working days after the exceedance is identified) | Take immediate action to avoid further exceedance; Submit proposals for remedial actions to IEC and ER within 3 working days of notification; Implement the agreed proposals; Submit further proposal if problem still not under control; Stop the relevant portion of works as instructed by the ER until the exceedance is abated. (The above actions should be taken within 2 working days after the exceedance is identified) | | |

Appendix D - Event Action Plans

Event/Action Plan for Landscape and Visual

| EVENT ACTION | ACTION | | | | |
|--|--|---|---|--|--|
| LEVEL | ET | IEC | ER | CONTRACTOR | |
| Design Check | Check final design conforms to the requirements of EP and prepare report. | Check report. Recommend remedial design if necessary | Undertake remedial design if necessary | | |
| Non- conformity on one occasion | Identify Source Inform IEC and ER Discuss remedial actions with IEC, ER and Contractor Monitor remedial actions until rectification has been completed | Check report Check Contractor's working method Discuss with ET and Contractor on possible remedial measures Advise ER on effectiveness of proposed remedial measures. Check implementatio n of remedial measures. | Notify Contractor Ensure remedial measures are properly implemented | Amend working methods Rectify damage and undertake any necessary replacement | |
| Repeated Non- conformity | Identify Source Inform IEC and ER Increase monitoring frequency Discuss remedial actions with IEC, ER and Contractor Monitor remedial actions until rectification has been completed If non- conformity stops, cease additional monitoring | Check monitoring report Check Contractor's working method Discuss with ET and Contractor on possible remedial measures Advise ER on effectiveness of proposed remedial measures Supervise implementatio n of remedial measures. | Notify Contractor Ensure remedial measures are properly implemented | Amend working methods Rectify damage and undertake any necessary replacement | |

APPENDIX E ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE (EMIS)

Appendix E - Summary of Implementation Schedule of Mitigation Measures for Construction Phase

| EIA Ref. | Mitigation Measures | Status | | | |
|---|---|--------|--|--|--|
| Construction Air Qu | Construction Air Quality | | | | |
| S3.2 (AEIAR-130/2009) | 8 times daily watering of the work site with active dust emitting activities. | ٨ | | | |
| S4.8 (AEIAR-170/2013) | Control measures stipulated in the approved KTD Schedule 3 EIA Report should be strictly followed. | ٨ | | | |
| S3.2 (AEIAR-130/2009) and S4.8 (AEIAR-170/2013) | Implementation of dust suppression measures stipulated in Air Pollution Control (Construction Dust) Regulation. The following mitigation measures, good site practices and a comprehensive dust monitoring and audit programme are recommended to minimize cumulative dust impacts. • Stockpiling site(s) should be lined with impermeable sheeting and bunded. Stockpiles | ^ | | | |
| (ALIMIC 170/2013) | stockpring site(s) should be fined with imperincable sheeting and builded. Stockpries should be fully covered by impermeable sheeting to reduce dust emission. Misting for the dusty material should be carried out before being loaded into the vehicle. Any vehicle with an open load carrying area should have properly fitted side and tail | ^ | | | |
| | Any vehicle with all open load earlying area should have properly fitted side and tail boards. Material having the potential to create dust should not be loaded from a level higher than the side and tail boards and should be dampened and covered by a clean tarpaulin. | | | | |
| | • The tarpaulin should be properly secured and should extent at least 300 mm over the edges of the sides and tailboards. The material should also be dampened if necessary before transportation. | ^ | | | |
| | • The vehicles should be restricted to maximum speed of 10 km per hour and confined haulage and delivery vehicle to designated roadways insider the site. Onsite unpaved roads should be compacted and kept free of lose materials. | ۸ | | | |
| | Vehicle washing facilities should be provided at every vehicle exit point. | ۸ | | | |

| EIA Ref. | Mitigation Measures | Status |
|---------------------------|--|--------|
| | The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores. Every main haul road should be scaled with concrete and kept clear of dusty materials or sprayed with water so as to maintain the entire road surface wet. Every stock of more than 20 bags of cement should be covered entirely by impervious sheeting placed in an area sheltered on the top and the three sides; and Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving the construction sites. | |
| Construction Noise | | |
| S3.3 (AEIAR-130/2009) | Use of quiet PME, movable barriers barrier for Asphalt Paver, Breaker, Excavator and Hand-held breaker and full enclosure for Air Compressor, Bar Bender, Concrete Pump, Generator and Water Pump. | ۸ |
| S3.3 (AEIAR-130/2009) | Good Site Practice: | |
| (ALIAK-130/2009) | • Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program. | ۸ |
| | • Silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction program. | ٨ |
| | Mobile plant, if any, should be sited as far away from NSRs as possible. | ٨ |
| | • Machines and plant (such as trucks) that may be in intermittent use should be shut down between works periods or should be throttled down to a minimum. | ٨ |
| | Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs. | ۸ |
| | Material stockpiles and other structures should be effectively utilized, wherever | ۸ |

| EIA Ref. | Mitigation Measures | Status |
|---|---|-------------------|
| | practicable, in screening noise from on-site construction activities. | |
| S3.3 (AEIAR-130/2009) | Scheduling of Construction Works during School Examination Period | N/A |
| S3.8 (AEIAR-170/2013) | Provision of a landscaped deck along Roads D3A & D4A. | N/A |
| S3.8 (AEIAR-170/2013) | Provision of about 1090 m length of vertical noise barrier (connected to the deck) at Roads D3A & D4A; Provision of about 60 m length of overhang vertical noise barrier (connected to the deck) at Road D4A; and Provision of staircases with noise barriers next to Sites 4A1 and 4B1 It should be noted that the exact length of the mitigation measures would be subject to minor refinement during the detailed design stage. | N/A N/A N/A |
| S3.8 (AEIAR-170/2013) | Non-noise sensitive use areas within Sites 4A1 and 4B1. | N/A |
| S3.8 (AEIAR-170/2013) | Avoid sensitive façade with openable window facing Road D3A. | N/A |
| Construction Water | Quality | |
| S3.4 (AEIAR-130/2009) and S5.8 (AEIAR-170/2013) | Construction Runoff Exposed soil areas should be minimised to reduce the potential for increased siltation, contamination of runoff, and erosion. Construction runoff related impacts associated with the above ground construction activities can be readily controlled through the use of appropriate mitigation measures which include: • use of sediment traps • adequate maintenance of drainage systems to prevent flooding and overflow | ^ ^ |

| EIA Ref. | Mitigation Measures | Status |
|--------------------------|--|--------|
| | Construction site should be provided with adequately designed perimeter channel and pretreatment facilities and proper maintenance. The boundaries of critical areas of earthworks should be marked and surrounded by dykes or embankments for flood protection. Temporary ditches should be provided to facilitate runoff discharge into the appropriate watercourses, via a silt retention pond. Permanent drainage channels should incorporate sediment basins or traps and baffles to enhance deposition rates. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC PN 1/94. | ^ |
| | Ideally, construction works should be programmed to minimise surface excavation works during the rainy season (April to September). All exposed earth areas should be completed as soon as possible after earthworks have been completed, or alternatively, within 14 days of the cessation of earthworks where practicable. If excavation of soil cannot be avoided during the rainy season, or at any time of year when rainstorms are likely, exposed slope surfaces should be covered by tarpaulin or other means. | ^ |
| S5.8 (AEIAR-170/2013) | Earthworks final surfaces should be well compacted and the subsequent permanent work or surface protection should be carried out immediately after the final surfaces are formed to prevent erosion caused by rainstorms. Appropriate drainage like intercepting channels should be provided where necessary. | ۸ |
| | Measures should be taken to minimize the ingress of rainwater into trenches. If excavation of trenches in wet seasons is necessary, they should be dug and backfilled in short sections. Rainwater pumped out from trenches or foundation excavations should be discharged into storm drains via silt removal facilities. | * |
| S3.4 (AEIAR-130/2009) | Sediment tanks of sufficient capacity, constructed from pre-formed individual cells of approximately 6 to 8 m ³ capacity, are recommended as a general mitigation measure | ۸ |

| EIA Ref. | Mitigation Measures | Status |
|---|---|--------|
| | which can be used for settling surface runoff prior to disposal. The system capacity is flexible and able to handle multiple inputs from a variety of sources and particularly suited to applications where the influent is pumped. | |
| S3.4 (AEIAR-130/2009) and S5.8 (AEIAR-170/2013) | Open stockpiles of construction materials (for examples, aggregates, sand and fill material) of more than 50 m ³ should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system. | ٨ |
| () | Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and storm runoff being directed into foul sewers. | ٨ |
| S3.4 (AEIAR-130/2009) | Precautions to be taken at any time of year when rainstorms are likely, actions to be taken when a rainstorm is imminent or forecast, and actions to be taken during or after rainstorms are summarised in Appendix A2 of ProPECC PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events. | ٨ |
| | Oil interceptors should be provided in the drainage system and regularly cleaned to prevent the release of oils and grease into the storm water drainage system after accidental spillages. The interceptor should have a bypass to prevent flushing during periods of heavy rain. | ٨ |
| S3.4 (AEIAR-130/2009) and S5.8 (AEIAR-170/2013) | All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and located wheel washing bay should be provided at every site exit, and wash-water should have sand and silt settled out and removed at least on a weekly basis to ensure the continued efficiency of the process. The section of access road leading to, and exiting | ٨ |

| EIA Ref. | Mitigation Measures | Status |
|--------------------------|--|--------|
| | from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains. | |
| S5.8 (AEIAR-170/2013) | Boring and Drilling Water Water used in ground boring and drilling for site investigation or rock / soil anchoring should as far as practicable be re-circulated after sedimentation. When there is a need for final disposal, the wastewater should be discharged into storm drains via silt removal facilities. | ^ |
| | Acid Cleaning, Etching and Pickling Wastewater Acidic wastewater generated from acid cleaning, etching, pickling and similar activities should be neutralized to within the pH range of 6 to 10 before discharging into foul sewers | ^ |
| S3.4 (AEIAR-130/2009) | Drainage It is recommended that on-site drainage system should be installed prior to the commencement of other construction activities. Sediment traps should be installed in order to minimise the sediment loading of the effluent prior to discharge into foul sewers. There should be no direct discharge of effluent from the site into the sea. | ^ |
| S3.4 (AEIAR-130/2009) | All temporary and permanent drainage pipes and culverts provided to facilitate runoff discharge should be adequately designed for the controlled release of storm flows. All sediment control measures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly following rain storms. The temporarily diverted drainage should be reinstated to its original condition when the construction work has finished or the temporary diversion is no longer required. | ۸ |

| EIA Ref. | Mitigation Measures | Status |
|---|--|--------|
| S3.4 (AEIAR-130/2009) | All fuel tanks and storage areas should be provided with locks and be located on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank, to prevent spilled fuel oils from reaching the coastal waters of the Victoria Harbour WCZ. | ^ |
| S5.8 (AEIAR-170/2013) | There is a need to apply to EPD for a discharge licence for discharge of effluent from the construction site under the WPCO. The discharge quality must meet the requirements specified in the discharge licence. All the runoff and wastewater generated from the works areas should be treated so that it satisfies all the standards listed in the TM-DSS. Minimum distance of 100 m should be maintained between the discharge points of construction site effluent and the existing seawater intakes and the planned WSR mentioned in S5.3.1 as appropriate. The beneficial uses of the treated effluent for other on-site activities such as dust suppression, wheel washing and general cleaning etc., can minimise water consumption and reduce the effluent discharge volume. If monitoring of the treated effluent quality from the works areas is required during the construction phase of the Project, the monitoring should be carried out in accordance with the relevant WPCO licence which is under the ambit of regional office (RO) of EPD. | ^ |
| S3.4 (AEIAR-130/2009) and S5.8 (AEIAR-170/2013) | Sewage Effluent Construction work force sewage discharges on site are expected to be connected to the existing trunk sewer or sewage treatment facilities. The construction sewage may need to be handled by portable chemical toilets prior to the commission of the on-site sewer system. Appropriate numbers of portable toilets should be provided by a licensed contractor to serve the large number of construction workers over the construction site. The Contractor should also be responsible for waste disposal and maintenance practices. | ٨ |
| S5.8 | Notices should be posted at conspicuous locations to remind the workers not to discharge | ٨ |

| EIA Ref. | Mitigation Measures | Status |
|---|---|--------|
| (AEIAR-170/2013) | any sewage or wastewater into the surrounding environment. Regular environmental audit of the construction site will provide an effective control of any malpractices and can encourage continual improvement of environmental performance on site. It is anticipated that sewage generation during the construction phase of the project would not cause water pollution problem after undertaking all required measures. | |
| S3.4 (AEIAR-130/2009) and S5.8 (AEIAR-170/2013) | Stormwater Discharges Minimum distances of 100 m should be maintained between the existing or planned stormwater discharges and the existing or planned seawater intakes. | ٨ |
| | Debris and Litter In order to maintain water quality in acceptable conditions with regard to aesthetic quality, contractors should be required, under conditions of contract, to ensure that site management is optimised and that disposal of any solid materials, litter or wastes to marine waters does not occur. | ٨ |
| S5.8 (AEIAR-170/2013) | Accidental Spillage Contractor must register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation, should be observed and complied with for control of chemical wastes. Any service shop and maintenance facilities should be located on hard standings within a bunded area, and sumps and oil interceptors should be provided. Maintenance of vehicles and equipment involving activities with potential for leakage and spillage should only be undertaken within the areas appropriately equipped to control these discharges. | ^ |

| EIA Ref. | Mitigation Measures | Status |
|---|---|--------|
| | Disposal of chemical wastes should be carried out in compliance with the Waste Disposal Ordinance. The Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes published under the Waste Disposal Ordinance details the requirements to deal with chemical wastes. General requirements are given as follows: Suitable containers should be used to hold the chemical wastes to avoid leakage or | ^ |
| | spillage during storage, handling and transport. Chemical waste containers should be suitably labelled, to notify and warn the personnel who are handling the wastes, to avoid accidents. | ٨ |
| | • Storage area should be selected at a safe location on site and adequate space should be allocated to the storage area. | ۸ |
| Construction Waste | Management | |
| S6.7 (AEIAR-170/2013) | Prepare a Waste Management Plan, which becomes a part of the Environmental Management Plan, in accordance with the requirements stipulated in ETWB TC(W) No. 19/2005, approved by the Engineer/Supervising Officer of the Project based on current practices on construction sites. | ٨ |
| S3.5 (AEIAR-130/2009) and S6.7 (AEIAR-170/2013) | Good Site Practices It is not anticipated that adverse waste management related impacts would arise, provided that good site practices are adhered to. Recommendations for good site practices during construction activities include: Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site Training of site personnel in proper waste management and chemical waste handling procedures | ٨ |
| | Provision of sufficient waste disposal points and regular collection for disposal | ^ |

| EIA Ref. | Mitigation Measures | | | | | |
|----------|--|---|--|--|--|--|
| | Appropriate measures to minimise windblown litter and dust during transportation of | ٨ | | | | |
| | waste by either covering trucks or by transporting wastes in enclosed containers | | | | | |
| | • A recording system for the amount of wastes generated, recycled and disposed of (including the disposal sites) | ^ | | | | |
| | Regular cleaning and maintenance systems, sumps and oil interceptors | ^ | | | | |
| | Separation of chemical wastes for special handling and appropriate treatment | ٨ | | | | |
| | Waste Reduction Measures | | | | | |
| | Good management and control can prevent the generation of a significant amount of | | | | | |
| | waste. Waste reduction is best achieved at the planning and design stage, as well as by | | | | | |
| | ensuring the implementation of good site practices. Recommendations to achieve waste reduction include: | | | | | |
| | Sort C&D waste from demolition of the remaining structures to recover recyclable portions such as metals | ^ | | | | |
| | Segregation and storage of different types of waste in different containers, skips or | ٨ | | | | |
| | stockpiles to enhance reuse or recycling of materials and their proper disposal | | | | | |
| | • Encourage collection of aluminium cans, PET bottles and paper by providing separate | ٨ | | | | |
| | labelled bins to enable these wastes to be segregated from other general refuse generated by the work force | | | | | |
| | Any unused chemicals or those with remaining functional capacity should be recycled | ٨ | | | | |
| | Proper storage and site practices to minimise the potential for damage or contamination of construction materials | ۸ | | | | |
| | Plan and stock construction materials carefully to minimize amount of waste generated and avoid unnecessary generation of waste | ۸ | | | | |
| | Training should be provided to workers about the concepts of site cleanliness and appropriate waste management procedures, including waste reduction, reuse and recycle. | ۸ | | | | |

| EIA Ref. | Mitigation Measures | Status |
|--------------------------|---|--------|
| S3.5 (AEIAR-130/2009) | Construction and Demolition Materials Mitigation measures and good site practices should be incorporated in the contract document to control potential environmental impact from handling and transportation of C&D material. The mitigation measures include: Where it is unavoidable to have transient stockpiles of C&D material within the Project work site pending collection for disposal, the transient stockpiles shall be located away from waterfront or storm drains as far as possible. Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric. Skip hoist for material transport should be totally enclosed by impervious sheeting. | ^ ^ |
| | Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving a construction site. The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores. | ^ |
| | The load of dusty materials carried by vehicle leaving a construction site should be covered entirely by clean impervious sheeting to ensure dust materials do not leak from the vehicle. All dusty materials should be sprayed with water prior to any loading, unloading or transfer operation so as to maintain the dusty materials wet. | ^ |
| | The height from which excavated materials are dropped should be controlled to a minimum practical height to limit fugitive dust generation from unloading. | ^ |
| | When delivering inert C&D material to public fill reception facilities, the material should consist entirely of inert construction waste and of size less than 250mm or other sizes as agreed with the Secretary of the Public Fill Committee. In order to monitor the disposal of the surplus C&D material at the designed public fill reception facility and to control fly tipping, a trip-ticket system as stipulated in the ETWB TCW No. 31/2004 "Trip Ticket | ^ |

| EIA Ref. | Mitigation Measures | Status |
|---------------------------|---|--------|
| | System for Disposal of Construction and Demolition Materials" should be included as one of the contractual requirement sand implemented by an Environmental Team undertaking the Environmental Monitoring and Audit work. An Independent Environmental Checker should be responsible for auditing the results of the system. | |
| S3.5 (AEIAR-130/2009) | General Refuse General refuse should be stored in enclosed bins or compaction units separate from C&D material. A licensed waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D material. Effective collection and storage methods (including enclosed and covered area) of site wastes would be required to prevent waste materials from being blown around by wind, wastewater discharge by flushing or leaching into the marine environment, or creating odour nuisance or pest and vermin problem | ٨ |
| Construction Lands | cape and Visual | |
| S3.8.12 | Minimized construction area and contractor's temporary works areas. | ٨ |
| (AEIAR-130/2009) | • All existing trees should be carefully protected during construction. | ٨ |
| and | • Trees unavoidably affected by the works should be transplanted where practical. | ٨ |
| S7.9 (AEIAR-170/2013) | Detailed transplanting proposal will be submitted to relevant government departments for approval in accordance with ETWBC 2/2004 and 3/2006. Final locations of transplanted trees should be agreed prior to commencement of the work. | |
| | • Control of night-time lighting. | ٨ |
| | Erection of decorative screen hoarding. | ٨ |
| | Reduction of construction period to practical minimum. | ٨ |
| | • Limitation of / Ensuring no run-off into surrounding landscape and adjacent seawater areas. | ٨ |
| | • Temporary or advance landscape should be provided along the temporary access roads to the Cruise Terminal until such time as road D3 is open. | ٨ |

EXECUTIVE SUMMARY

- i. The Civil Engineering and Development Department HKSAR has appointed Fugro Technical Services Limited (FTS) to undertake the Environmental Team services for the Project and implement the EM&A works.
- ii. This Monthly EM&A report presents the environmental monitoring and audit works for the period between 1 April and 30 April 2019. As informed by the Contractor, major activities in the reporting month were:
 - Excavation and laying of drainage pipe and manhole;
 - · Excavation and ELS construction.
 - · Construction of SUS structure; and
 - · Construction of District Cooling System.

Breaches of the Action and Limit Levels

iii. No Action / Limit Level exceedance was recorded for 24-hr TSP and construction noise at KTD1a, KTD2b and KER1b in the reporting month.

Complaint, Notification of Summons and Successful Prosecution

iv. No environmental complaint, notification of summons and successful prosecution were received in the reporting month.

Reporting Changes

v. There was no reporting change in the reporting month.

Future Key Issues

vi. The key issues to be considered in the coming reporting month include:

Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality, waste management and landscape and visual impacts.

1. INTRODUCTION

1.1 Background

- 1.1.1 The Kai Tak Development is located in the south-eastern part of Kowloon Peninsula of the HKSAR, comprising the apron and runway areas of the former Kai Tak Airport and existing waterfront areas at To Kwa Wan, Ma Tau Kok, Kowloon Bay, Kwun Tong and Cha Kwo Ling.
- 1.1.2 Contract No. KL/2014/03 is the works package to construct an approximately 420m long supporting underground structure (SUS) underneath Shing Cheong Road and Cheung Yip Street. The EM&A programme under this Contract is governed by three EPs (EP-337/2009, EP-339/2009/A and EP-451/2013) and two EM&A Manuals (AEIAR-130/2009 and AEIAR-174/2013). The Works to be executed under this Contract and corresponding EPs include but not be limited to the following main items:

EP-451/2013 - Trunk Road T2

(i) Construction of approximately 420m long supporting underground structure (SUS) including diaphragm walls, barrettes, piled foundation, top and bottom slabs, end wall and adits underneath Shing Cheong Road and Cheung Yip Street;

EP-337/2009 – New Distributor Roads Serving the Planned Kai Tak Development

- (ii) Widening and re-alignment of Cheung Yip Street of approximately 330m long and associated footpaths;
- (iii) Demolition, reconstruction and widening of Shing Cheong Road of approximately 410m long and associated footpaths:
- (iv) Construction of drainage outfall and modification of existing seawall;
- (v) Construction of ancillary works including surface drainage, sewerage, water, fire fighting, street lighting, street furniture, road marking, road signage, utilities and services, irrigation and landscape works.

EP-339/2009/A – Decommissioning of the Remaining Parts (Ex-GFS Building, Radar Station and Hong Kong Aviation Club) of the former Kai Tak Airport

(vi) Demolition of RADAR Tower and guard house;

Other works not covered by any EP

- (vii) Construction of two subways between Phase II of New Acute Hospital (Site A) and Hong Kong Children's Hospital (Site C), and between Phase I of New Acute Hospital (Site B) and Site C;
- (viii) Construction of District Cooling System (DCS) along Cheung Yip Street and Shing Cheong Road
- 1.1.3 The location and boundary of the site is shown in **Figure 1**.
- 1.1.4 This Monthly EM&A report is required under EP-337/2009 Condition 3.3, EP-339/2009/A Condition 3.3 and EP-451/2013 Condition 3.4. It is to report the results and findings of the EM&A programme required in the EM&A Manuals.
- 1.1.5 This is the 38th monthly EM&A Report which summarize the impact monitoring results and audit findings for the Project within the period between 1 April and 30 April 2019.

1.2 Project Organization

- 1.2.1 The project proponent was the Civil Engineering and Development Department, HKSAR (CEDD). Hyder Meinhardt Joint Venture (HMJV) was commissioned by CEDD as the Engineer for the Project. Ramboll Hong Kong Limited was commissioned as the Independent Environmental Checker (IEC). China Road and Bridge Corporation (Hong Kong) (CRBC) was appointed as the main contractor for the construction works under the contract KL/2014/03. Fugro Technical Services Limited (FTS) was appointed as the Environmental Team (ET) by CEDD to implement the EM&A programme for the Project.
- 1.2.2 The organization structure is shown in **Appendix B**. The key personnel contact names and numbers for the Project are summarized in **Table 1.1**.

Table 1.1 Contact Information of Key Personnel

1.3 Construction Programme and Activities

- 1.3.1 The construction of the Project commenced in February 2016 and is expected to complete in 2020. The construction programme is shown in **Appendix A**.
- 1.3.2 A summary of the major construction activities undertaken in the reporting month were:
 - · Excavation and laying of drainage pipe and manhole;
 - · Excavation and ELS construction.
 - · Construction of SUS structure; and
 - Construction of District Cooling System.

1.4 Inter-relationship with the environmental protection/ mitigation measures with the construction programme

1.4.1 According to the construction activities in the construction programme mentioned in Section 1.3.2, the following environmental protection/ mitigation measures including Air Quality Impact, Construction Noise Impact, Water Quality Impact, Chemical and Waste Management, Landscape and Visual Impact shall be implemented:

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233
Fax : +852 2450 6138
E-mail : matlab@fugro.com
Website : www.fugro.com

- · Sufficient watering of the works site with the active dust emitting activities;
- · Limitation of the speed for vehicles on unpaved site roads;
- Properly cover or enclosure of the stockpiles and dusty materials;
- Good site practices on loading dusty materials;
- · Providing sufficient vehicles washing facilities at every vehicle exit point;
- · Good maintenance to the plant and equipment;
- · Use of quieter plant and Quality Powered Mechanical Equipment (QPME);
- Use of acoustic fabric and noise barrier:
- Using the approved Non-road Mobile Machineries (NRMMs);
- · Proper storage and handling of chemical;
- Appropriate desilting, oil interceptors or sedimentation devices provided on site for treatment before discharge;
- · Onsite waste sorting and implementation of trip ticket system;
- Training of the site personnel in proper waste management and chemical waste handling procedures;
- · Proper storage of the construction materials;
- · Erection of decorative screen hoarding;
- · Strictly following the Environmental Permits and Licenses;
- · Provide sufficient mitigation measures as recommended in Approved EIA Reports

1.5 Status of Environmental Licences, Notifications and Permits

1.5.1 A summary of the relevant environmental licenses, permits and/or notifications on environmental protection for this Contract is presented in **Table 1.2**.

Table 1.2 Relevant Environmental Licenses, Permits and/or Notifications

| Environmental License / Permit / | Reference Number | Valid From | Valid Till |
|--|-------------------|-------------------|-----------------|
| Notification | | | |
| Environmental Permit | EP-337/2009 | 23 April 2009 | Not Applicable |

2. AIR QUALITY

2.1 Monitoring Requirement

In accordance with the approved EM&A Manuals, 24-hour Total Suspended Particulates (TSP) level at the designated air quality monitoring station is required. Impact 24-hour TSP monitoring should be carried out at least once every 6 days. In case of complaints, 1-hour TSP monitoring should be carried out at least 3 times per 6 days when the highest dust impacts are likely to occur. The Action and Limit Levels of the air quality monitoring are given in **Appendix C**

2.2 Monitoring Equipment

The 24-hour TSP air quality monitoring was performed using High Volume Air Samplers (HVS) located at each of the designated monitoring station. Portable TSP Monitors would be used in case of complaints for 1-hour TSP monitoring.

Table 2.1 summarizes the equipment used in air quality monitoring.

Table 2.1 Air Quality Monitoring Equipment

| Item | Location | Brand | Model Equipment | | Serial Number |
|------|----------|----------|-----------------|------------------------------|------------------|
| | | | TE-5170 (TSP) | High Volume Sampler | |
| | | | TE-300-310X | - Mass Flow Controller | 2037 |
| 1 | KER1b | Tisch | TE-5005X | - Blower Motor Assembly | 3482 |
| | | | TE-5007X | - Mechanical Timer | 4488 |
| | | | TE-5009X | - Continuous Flow Recorder | 4371 |
| | | | TE-5170 (TSP) | High Volume Sampler | |
| | 2 KTD1a | 1a Tisch | TE-300-310X | - Mass Flow Controller | 2524 |
| 2 | | | TE-5005X | - Blower Motor Assembly | 4037 |
| | | | TE-5007X | - Mechanical Timer | 5160 |
| | | | TE-5009X | - Continuous Flow Recorder | 4377 |
| | | | TE-5170 (TSP) | High Volume Sampler | |
| | | | TE-300-310X | - Mass Flow Controller | 2618 |
| 3 | KTD2b | 2b Tisch | TE-5005X | - Blower Motor Assembly | 3838 |
| | | | G3031 | - Mechanical Timer | 2251 |
| | | | G1051 | - Continuous Flow Recorder | 2307 |
| 4 | | Tisch | TE-5025A | HVS Sampler Calibrator | 438320/2154 |
| 5 | | *Sibata | Model LD-3B | Sibata Portable TSP Monitors | NA |

Note:

No complaint of air quality was received. Therefore, no impact 1-hour TSP monitoring was conducted.

2.3 Monitoring Methodology

2.3.1 24-hour TSP air quality monitoring

HVS Installation

The following guidelines were adopted during the installation of HVS:

- Sufficient support is provided to secure the samplers against gusty wind.
- No two samplers are placed less than 2 meters apart.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233
Fax : +852 2450 6138
E-mail : matlab@fugro.com
Website : www.fugro.com

- The distance between the sampler and an obstacle, such as buildings, is at least twice the height that the obstacle protrudes above the sampler.
- A minimum of 2 meters of separation from walls, parapets and penthouses is required for rooftop samples.
- A minimum of 2 meters separation from any supporting structure, measured horizontally is required.
- No furnaces or incineration flues are nearby.
- Airflow around the samplers is unrestricted.
- The samplers are more than 20 meters from the drip line.
- Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring.

Filters Preparation

Fiberglass filters (provided by the HOKLAS accredited laboratory) shall be used (Note: these filters have a collection efficiency of larger than 99% for particles of 0.3 µm diameter). A HOKLAS accredited laboratory (ALS Technichem (HK) Pty Ltd.) is responsible for the preparation of 24-hr conditioned and pre-weighed filter papers for monitoring team.

All filters are equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature is around 25°C and not variable by more than ± 3 °C; the relative humidity (RH) is < 50% and not variable by more than ± 5 %. A convenient working RH is 40%.

Operating / Analytical Procedures

Operating / analytical procedures for the air quality monitoring are highlighted as follows:

- Prior to the commencement of the dust sampling, the flow rate of the HVS are properly set (between 0.6 m³/min and 1.7 m³/min) in accordance with the EM&A manual. The flow rate shall be indicated on the flow rate chart.
- The power supply shall be checked to ensure the samplers worked properly.
- On sampling, the samplers shall be operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air quality monitoring station.
- The filter holding frame is then removed by loosening the four nuts and carefully a weighted and conditioned filter is centered with the stamped number upwards, on a supporting screen.
- The filter shall be aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame is tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- The shelter lid shall be closed and secured with the aluminum strip.
- The timer is then programmed. Information shall be recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
- After sampling, the filter shall be removed and sent to laboratory for weighing. The elapsed time is also recorded.
- Before weighing, all filters are equilibrated in a conditioning environment for 24 hours. The conditioning environment temperature should be between 25°C and 30°C and not vary by more than ±3°C; the relative humidity (RH) should be < 50% and not vary by more than ±5%. A convenient working RH is 40%. Weighing results are returned to MCL for further analysis of TSP concentrations collected by each filter.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233
Fax : +852 2450 6138
E-mail : matlab@fugro.com
Website : www.fugro.com

2.3.2 1-hour TSP air quality monitoring

Operating / Analytical Procedures

The measuring procedures of the 1-hr dust meter are in accordance with the Manufacturer's instruction Manual as follows:

- Pull up the air sampling inlet cover
- Change the Mode 0 to BG once
- Push Start/Stop switch once
- Turn the knob to SENSI.ADJ and press it
- Push Start/Stop switch once
- Return the knob to the position MEASURE slowly
- Push the timer set switch to set measuring time
- Remove the cap and make a measurement

2.4 Maintenance / Calibration

2.4.1 24-hour TSP air quality monitoring

The following maintenance / calibration are required for the HVS:

- The high volume motors and their accessories are properly maintained. Appropriate maintenance such as routine motor brushes replacement and electrical wiring checking are made to ensure that the equipments and necessary power supply are in good working condition.
- All HVS shall be calibrated (five point calibration) using Calibration Kit upon installation and thereafter in every 3 months.
- A copy of the calibration certificates for the HVS and calibrator are provided in Appendix D.

2.4.2 1-hour TSP air quality monitoring

The portable TSP monitor should be calibrated at 1 year intervals

2.5 Monitoring Locations

- 2.5.1 According to the EM&A Manual, three air quality monitoring locations, namely KTD1, KTD2 and KER1, are covered by this Contract within the South Apron Area of Former Kai Tak Airport. The other two air quality monitoring locations, which are identified in Cha Kwo Ling area, are farther than 500m away from the site boundary and thus not covered by this Contract. The monitoring works in Cha Kwo Ling area are covered by other Contract(s) respectively.
- 2.5.2 According to the approved alternative baseline air quality and noise monitoring locations (EPD reference: () in EP2/K19/A/21 pt.5), the original monitoring locations (KTD1, KTD2 and KER1) are proposed to be replaced by alternative monitoring locations (KTD1a, KTD2a and KER1a) for air quality monitoring.
- 2.5.3 According to the approved relocation of monitoring location KER1a (EPD reference: () in EP2/K19/A/21 pt.5), the monitoring location KER1a are proposed to be relocated by alternative monitoring locations KER1b for air quality monitoring.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

- 2.5.4 According to the approved relocation of monitoring location KTD2a (EPD reference: () in EP2/K19/A/21 pt.6), the monitoring location KTD2a are proposed to be relocated by alternative monitoring locations KTD2b for air quality monitoring.
- 2.5.5 The most updated locations are summarized in **Table 2.2** and shown in **Figure 2**.

Table 2.2 Location of Air Quality Monitoring Station

| Monitoring Station | Location |
|--------------------|---|
| KTD1a | Centre of Excellence in Paediatrics (Children's Hospital) |
| KTD2b | G/IC Zone next to Kwun Tong Bypass (Next to the site of the New Acute Hospital) |
| KER1b | Site Boundary at Cheung Yip Street |

2.6 Results and Observations

- 2.6.1 The schedule of air quality monitoring in reporting month is provided in **Appendix E**.
- 2.6.2 No Action / Limit Level exceedance was recorded for 24-hr TSP at KTD1a, KTD2b and KER1b in the reporting month.
- 2.6.3 No complaint of air quality was received. Therefore, no impact 1-hour TSP monitoring was conducted in the reporting month.
- 2.6.4 During the reporting month, major dust sources including loading and unloading of C&D wastes, vehicles movement were observed in the site. Non-project related construction activities at the nearby construction site and road traffic along Shing Cheong Road, Cheung Yip Street and the Kwun Tong By-pass were observed. The above factors may affect the monitoring results.
- 2.6.5 The weather conditions during the monitoring are provided in **Appendix K**.
- 2.6.6 The monitoring data of 24-hr TSP are summarized in **Table 2.3**. Detailed monitoring data are presented in **Appendix F**.

Table 2.3 Summary of 24-hr TSP Monitoring Results

| Parameter | Monitoring Station | Average (µg/m³) | Range (µg/ m³) | Action Level (µg/ m³) | Limit Level (µg/ m³) |
|-----------------------|-----------------------|--------------------|-------------------|-----------------------|-------------------------|
| 24 br TCD | KTD1a | 61 | 42-79 | 177 | |
| 24-hr TSP in µg/m³ | KTD2b | 69 | 59-93 | 157 | 260 |
| πι μg/πι | KER1b | 52 | 28-79 | 172 | |

2.6.7 The Event and Action Plan for air quality is given in **Appendix H**.

2.7 Comparison of 24-hr TSP Monitoring Results with EIA Predictions

2.7.1 The monitoring data of 24-hr TSP was compared with the EIA predictions as summarized in **Table 2.4**.

Fax : +852 2450 6138
E-mail : matlab@fugro.com
Website : www.fugro.com

Table 2.4 Comparison of 24-hr TSP data with EIA predictions

| Monitoring Station | Receiver Reference | Predicted Maximum 24-hour TSP Concentration (µg/m³) | 24-hour TSP concentration in April 2019 (µg/m³) | Average 24-hour TSP concentration in April 2019 (µg/m³) |
|-----------------------|-----------------------|--|---|---|
| KTD1a | KTD3 | 126 | 42-79 | 61 |
| KTD2b | - | = | 59-93 | 69 |
| KER1b | KTD6 | 169 | 28-79 | 52 |

Note:

For KTD2b, there was no receiver reference in the EIA report, EIAR-174/2013.

Predicted Maximum TSP Concentration extracted from Table 4.14 of EIA Report, EIAR-174/2013.

2.7.2 The 24-hour TSP monitoring results at KTD1a and KER1b were below the Predicted Maximum 24-hr TSP concentration in the approved Environmental Impact Assessment (EIA) Report and no Action / Limit Level exceedance was recorded in the reporting period.

3. NOISE

3.1 Monitoring Requirement

3.1.1 In accordance with the approved EM&A Manuals, Leq (30min) monitoring is conducted for at least once a week during the construction phase between 0700 and 1900 on normal weekdays at the designated monitoring locations.

3.2 Monitoring Equipment

- 3.2.1 The sound level meter used in noise monitoring will comply with the International Electrotechnical Commission Publication (IEC) 651:1979 (Type 1) and 804:1985 (Type 1) specifications as referred to in the Technical Memorandum issued under the Noise Control Ordinance (NCO).
- 3.2.2 Sound level calibrator will be used for the on-site calibration of the meter. This calibrator complies with the IEC Publication 942 (1988) Class 1 and ANSI S1.40 1984. Noise measurements were only accepted to be valid if the calibration levels from before and after the measurement agree to within 1.0dB.
- 3.2.3 Measurements shall be recorded to the nearest 0.1dB. Sound level meters are programmed to measure A-weighted equivalent continuous sound pressure level at 30-minute intervals between 0700 and 1900 on normal weekdays at least once a week when construction activities are underway.
 - **Table 3.1** summarizes the noise monitoring equipment model being used for this project.

Table 3.1 Noise Monitoring Equipment

| | abie or: Roles montoring Louismont | | | | | |

3.3 Monitoring Parameters and Frequency

Table 3.2 presents the noise monitoring parameters and frequencies.

Table 3.2 Monitoring Parameters and Frequencies of Noise Monitoring

| Parameter | Frequency and Period |
|--|--|
| LAeq (30min) | At each station at 0700-1900 hours on normal weekdays at a frequency |
| L10 and L90 will be recorded for reference | of once a week |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

3.4 Monitoring Methodology

- 3.4.1 The monitoring procedures are as follows:
 - The monitoring station is set at a point 1m from the exterior of the sensitive receivers building façade and set at a position 1.2m above the ground.
 - The battery condition is checked to ensure good functioning of the meter.
 - Parameters such as frequency weighting, the time weighting and the measurement time are set as follows:

frequency weighting : Atime weighting : Fast

- measurement time: Weekly 30 minutes between 0700-1900 on normal weekdays
- Prior to and after noise measurement, the meter shall be calibrated using the calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement is more than 1.0 dB, the measurement will be considered invalid and repeat of noise measurement is required after re-calibration or repair of the equipment.
- Noise monitoring should be cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s.
- Noise measurement should be paused during periods of high intrusive noise if possible and observation shall be recorded when intrusive noise is not avoided.
- At the end of the monitoring period, the Leq, L10 and L90 are recorded. In addition, site conditions and noise sources are recorded on a standard record sheet.

3.5 Maintenance / Calibration

- 3.5.1 Maintenance and Calibration procedures are as follows:
 - The microphone head of the sound level meter and calibrator should be cleaned with a soft cloth at quarterly intervals.
 - The sound level meter and calibrator should be calibrated annually by a HOKLAS laboratory.
 - Relevant calibration certificates are provided in Appendix D.

3.6 Monitoring Locations

- 3.6.1 According to the EM&A Manual, three noise monitoring locations, namely KTD1, KTD2 and KER1, are covered by this Contract within the South Apron Area of Former Kai Tak Airport. The other two noise monitoring locations, which are identified in Cha Kwo Ling area, are farther than 300m away from the site boundary and thus not covered by this Contract. The monitoring works in Cha Kwo Ling area are covered by other Contract(s) respectively.
- 3.6.2 According to the approved alternative baseline air quality and noise monitoring locations (EPD reference: () in EP2/K19/A/21 pt.5), the original monitoring locations (KTD1, KTD2 and KER1) are proposed to be replaced by alternative monitoring locations (KTD1a, KTD2a and KER1a) for noise monitoring.
- 3.6.3 According to the approved relocation of monitoring location KER1a (EPD reference: () in EP2/K19/A/21 pt.5), the monitoring location KER1a are proposed to be relocated by alternative monitoring locations KER1b for noise monitoring.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

- 3.6.4 According to the approved relocation of monitoring location KTD2a (EPD reference: () in EP2/K19/A/21 pt.6), the monitoring location KTD2a are proposed to be relocated by alternative monitoring locations KTD2b for noise monitoring.
- 3.6.5 The most updated locations are summarized in **Table 3.3** and shown in **Figure 2**.

Table 3.3 Location of Noise Monitoring Station

| Monitoring Station | Location |
|--------------------|---|
| KTD1a | Centre of Excellence in Paediatrics (Children's Hospital) |
| KTD2b | G/IC Zone next to Kwun Tong Bypass (Next to the site of the New Acute Hospital) |
| KER1b | Site Boundary at Cheung Yip Street |

3.7 Results and Observations

- 3.7.1 The schedule of noise monitoring in reporting month is provided in **Appendix E**.
- 3.7.2 During the monitoring month, at KTD1a, project related construction activities and road traffic along Shing Cheong Road were observed in the surroundings. At KTD2b, road traffic along the Kwun Tong By-pass and non-project related construction activities at the nearby construction site was observed. At KER1b, road traffic along Cheung Yip Street was observed. Major noise sources including noise emission from plant & PME and some other construction activities, travel of vehicles, loading and unloading of C&D waste were observed in the site. The above factors may affect the monitoring results.
- 3.7.3 No raining and wind with speed over 5 m/s was observed during noise monitoring according to the onsite observation. The weather conditions during the monitoring month are provided in Appendix K.
- 3.7.4 The noise monitoring data are summarized in **Table 3.4**. Detailed monitoring data are presented in **Appendix G**.

Table 3.4 Summary of Noise Impact Monitoring Results

| Table 011 Califfra y 01 Holos Impact monitoring Hoodito | | | | | |
|---|---|-------|--------------|---|----------|
| Time Period | Leq _(30min) dB(A) (Range) | | Action Level | Limit Level | |

4. LANDSCAPE AND VISUAL

4.1 Audit Requirements

- 4.1.1 As per the Trunk Road T2 EM&A Manual, the landscape and visual mitigation measures during the construction phase shall be audited by a Registered Landscape Architect, as a member of the Environmental Team, at least once every two weeks to ensure compliance with the intended aims of the measures.
- 4.1.2 According to the Kai Tak Development EM&A Manual, measures to mitigate landscape and visual impacts during construction should be checked to ensure compliance with the intended aims of the measures. The progress of the engineering works shall be regularly reviewed onsite to identify the earliest practical opportunities for the landscape works to be undertaken. The ET shall report on the Contractor's compliance on a weekly basis.

4.2 Results and Observations

- 4.2.1 To monitor and audit the implementation of landscape and visual mitigation measures, four weekly Landscape and Visual Site audits were carried out on 3, 10, 17 and 24 April 2019 and two of them 10 and 24 April 2019 were carried out by a Registered Landscape Architect. The weekly Landscape and Visual Impact reports were counter-signed by IEC as according to the requirement of EM&A Manual (AEIAR-130/2009).
- 4.2.2 Should non-compliance of the landscape and visual impact occur, action in accordance to the event action plan presented in **Appendix H** shall be carried out.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

5. WASTE MANAGEMENT

5.1 Audit Requirements

- 5.1.1 The effective management of waste arising during the construction phase will be monitored through the site audit programme. Regular audits and site inspections should be carried out to ensure that the recommended good site practices and other mitigation measures are implemented by the Contractor.
- 5.1.2 The audit should look at all aspects of on-site waste management practices including the waste generation, storage, recycling, transport and disposal. The aims of waste audit are:
 - to ensure the waste arising from the works are handled, stored, collected, transferred and disposed of in an environmentally acceptable manner;
 - verify the implementation status and evaluate the effectiveness of the mitigation measures; and
 - to encourage the reuse and recycling of material.

5.2 Results and Observations

- 5.2.1 C&D materials and wastes sorting were carried out on site. Receptacles were available for C&D wastes and general refuse collection.
- 5.2.2 The amount of wastes generated by the site activities in the reporting month is shown in **Appendix I**.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

6. SITE INSPECTION

6.1 Site Inspection

- 6.1.1 Site inspections were carried out weekly to monitor the implementation of proper environmental pollution control and mitigation measures for the Project. A summary of the mitigation measures implementation schedule is provided in **Appendix J**.
- 6.1.2 In the reporting month, four site inspections were carried out on 3, 10, 17 and 24 April 2019. Two of them, held on 3 and 17 April 2019 was the joint inspections with the IEC, ER, the Contractor and the ET.
- 6.1.3 No outstanding issues were reported during the reporting month. Details of observations recorded during the site inspections are summarized in **Appendix M**.
- 6.1.4 All the follow-up actions requested by Contractor's ET and IEC during the site inspections were undertaken as reported by the Contractor and confirmed in the following weekly site inspection conducted during the reporting month.

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233
Fax : +852 2450 6138
E-mail : matlab@fugro.com
Website : www.fugro.com

7. ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

7.1 Environmental Exceedance

7.1.1 No Action / Limit Level exceedance was recorded for 24-hr TSP and construction noise at KTD1a, KTD2b and KER1b in the reporting month.

7.2 Complaints, Notification of Summons and Prosecution

- 7.2.1 No environmental complaint, notification of summons and successful prosecution were received in the reporting month.
- 7.2.2 Cumulative complaint log, summaries of complaints, notification of summons and successful prosecutions are presented in **Appendix L.**

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong. Tel : +852 2450 8233 Fax : +852 2450 6138 E-mail : matlab@fugro.com Website : www.fugro.com

8. IMPLEMENTATION STATUS OF ENVIRONMENTAL MITIGATION MEASURES

8.1 Implementation Status

8.1.1 The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Reports, the EP and the EM&A Manuals. The implementation status of the mitigation measures during the reporting month is summarized in **Appendix J**. Status of required submission under the EP during the reporting period is summarized in **Table 8.1**.

Table 8.1 Status of Required Submission under Environmental Permit

9. FUTURE KEY ISSUES

9.1 Construction Programme for the Next Two Months

- · Installation of sheet pile for drainage works;
- · Excavation and laying of drainage pipe and manhole;
- · Removal of temporary decking and temporary road pavement
- Construction of SUS structure
- · Excavation and ELS construction
- · Construction of District Cooling System

9.2 Key Issues for the Coming Month

9.2.1 Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality, waste management and landscape and visual impact.

9.3 Monitoring Schedules for the Next Three Months

9.3.1 The tentative schedules for environmental monitoring in the coming three months are provided in **Appendix E**.

10. CONCLUSIONS

- 10.1.1 24-hour TSP impact monitoring and construction noise monitoring were carried out in the reporting month, no Action / Limit Level exceedance was recorded during the period.
- 10.1.2 No complaint of air quality was received. Therefore, no impact 1-hour TSP monitoring was conducted in the reporting month.
- 10.1.3 Four environmental site inspections were carried out in the reporting month. Recommendations on mitigation measures on air quality, water quality and chemical and waste management were given to the Contractor for remediating the deficiencies identified during the site inspections.
- 10.1.4 Four weekly Landscape and Visual Site audits were carried out on 3, 10, 17 and 24 April 2019 and two of them 10 and 24 April 2019 were carried out by a Registered Landscape Architect in the reporting month. The weekly Landscape and Visual Impact reports were counter-signed by IEC as according to the requirement of EM&A Manual (AEIAR-130/2009).
- 10.1.5 Referring to the Contractor's information, no environmental complaint, notification of summons and successful prosecution was received in the reporting month.

10.2 Comment and Recommendations

- 10.2.1 The recommended environmental mitigation measures, as proposed in the EIA reports and EM&A Manuals shall be effectively implemented to minimize the potential environmental impacts from the Project. The EM&A programme would effectively monitor the environmental impacts generated from the construction activities and ensure the proper implementation of mitigation measures.
- 10.2.2 According to the environmental audit performed in the reporting month, the following recommendations were made:

Air Quality Impact

Main haul road should be cleaned up regularly.

Construction Noise Impact

No specific observation was identified in the reporting month.

Water Quality Impact

Broken water pipe should be repaired as soon as possible.

Chemical and Waste Management

All waste generated at the site should be cleaned up regularly.

Land Contamination

No specific observation was identified in the reporting month.

Landscape and Visual Impact

No specific observation was identified in the reporting month.

General Condition

No specific observation was identified in the reporting month.

This test certificate confirms that the instrument specified above has been successfully tested to comply with the manufacturer's published specifications. Tests are performed using equipment traceable to national standards in accordance with Casella's ISO 9001:2008 quality procedures. This product is certified as being compliant to the requirements of the CE Directive.

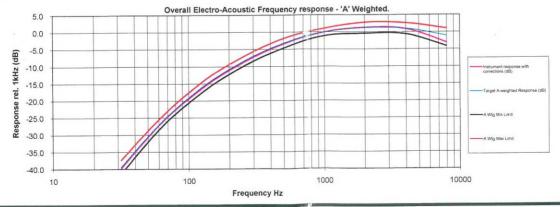

Test Summary:-

All Tests Pass Self Generated Noise Test All Tests Pass Electrical Signal Test Of Frequency Weightings **All Tests Pass** Frequency & Time Weightings At 1 kHz **All Tests Pass** Level Linearity On The Reference Level Range **All Tests Pass** Toneburst Response Test **All Tests Pass** C-peak Sound Levels **All Tests Pass** Overload Indication **All Tests Pass** Acoustic Tests

Combined Electro-Acoustic Frequency Response - A Weighted

Combined Electro-Acoustic Frequency Response - A Weighted (IEC 61672-3:2006)

The following A-Weighted frequency response graph shows this instruments overall frequency response based upon the application of multi-frequency pressure field calibrations. The microphones Pressure to Free field correction coefficients are applied to pressure response. Reference level taken at 1kHz.

CALIBRATION CERTIFICATE OF SOUND CALIBRATOR

Client Supplied Information

Details of Unit Under Test, UUT

Client: MateriaLab Consultants Ltd.

Project: Calibration Services

Description

Sound Calibrator

Manufacturer

Casella (Model CEL-120/1)

Serial No.

4358250

Equipment ID

N/A

Next Calibration Date :

02-Jul-2019

Specification Limit

EN 60942: 2003 Type 1

Laboratory Information

Description

Reference Sound level meter

Equipment ID. :

R-119-1

Date of Calibration:

03-Jul-2018

Ambient Temperature :

Calibration Location:

Calibration Laboratory of FTS

Method Used

By direct comparison

Calibration Results:

| Parameters (Setting of UUT) | Mean Value (error of measurement) | Specification Limit(dB) |
|-----------------------------|-----------------------------------|-------------------------|
| 94dB | 0.0 dB | |
| 114dB | 0.1 dB | ±0.4dB |

Remarks:

- 1. The equipment used in this calibration is traceable to recognized National Standards.
- 2. The mean value is the average of four measurements.
- 3. The equipment does comply with the specification limit.

Event and Action Plan for Noise Impact

| | n Plan for Noise Im _l | | ΓΙΟΝ | |
|--------------|--|--|--|--|
| EVENT | ET | IEC | ER | Contractor |
| Action Level | 1. Notify the IEC, ER and Contractor. 2. Carry out investigation. 3. Report the results of investigation to the IEC and Contractor. 4. Discuss jointly with the ER and Contractor and formulate remedial measures. 5. Increase the monitoring frequency to check the mitigation effectiveness | Review the monitoring data submitted by the ET. Review the construction methods and proposed redial measures by the Contractor, and advise the ET and ER if the proposed remedial measures would be sufficient | Notify the Contractor. Require the Contractor to propose remedial measures for implementation if required. | Submit noise mitigation proposals to the ER and copy to the IEC and ET. Implement noise mitigation proposals. |
| Limit Level | 1.Notify the IEC, ER and Contractor. 2.Identify sources. 3.Repeat measurements to confirm findings. 4.Carry out analysis of the Contractor's working procedures with the ER and Contractor to determine possible mitigations to be implemented. 5.Record the causes and action taken for the exceedances. 6.Increase the monitoring frequency. 7.Assess the effectiveness of the Contractor's remedial action with the ER and keep the IEC informed of the results. 8.If exceedance stops, cease additional monitoring | 1.Discuss amongst the ER, ET and Contractor on the potential remedial action. 2.Review the Contractor's remedial action whenever necessary to assure their effectiveness and advise the ER accordingly. 3.Supervise the implementation of remedial measures. | 1.Confirm receipt of notification of exceedance in writing. 2.Notify the Contractor. 3.Require the Contractor to propose remedial measures for the analysed noise problems. 4.Ensure remedial measures are properly implemented. 5.If exceedance continues, consider what portion of work is responsible and instruct the Contractor to stop that portion of works until the exceedance is abated. | 1.Take immediate action to avoid further exceedance. 2.Submit proposals for remedial action to the ER and copy to the ET and IEC within 3 working days of notification. 3.Implement the agreed proposals. 4.Resubmit proposals if problems still not under control. 5.Stop the relevant portion of works as determined by the ER until the exceedance is abated. |

Appendix J

Environmental Mitigation Implementation Schedule (EMIS)

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|----------------------------|---|---|------------------------------|---------------------------|--|
| Air Quality Measur | <u>res</u> | | | | |
| New Distributor Ro | oads Serving the Pla | anned KTD | | | |
| AEIAR-130/2009 \$3.2 | AEIAR 130/2009 EM&A Manual S2.2 | 8 times daily watering of the work site with active dust emitting activities. | Contractor | All relevant worksites | Implemented |
| Decommissioning | of the Radar Station | n of the former Kai Tak Airport | | | |
| AEIAR-130/2009 \$5.2.19 | AEIAR 130/2009 EM&A Manual S4.2.4 | The excavation area should be limited to as small in size as possible and backfilled with clean and/or treated soil shortly after excavation work. The exposed excavated area should be covered by the tarpaulin during night time. The top layer soils should be sprayed with fine misting of water immediately before the excavation. | Contractor | All relevant worksites | Not Applicable |
| Trunk Road T2 | l | | <u> </u> | | |
| AEIAR-174/2013 S4.9.2.1 | AEIAR-174/2013 EM&A Manual S2.3.1.1 | Watering of the construction areas 12 times per day to reduce dust emissions by 91.7%, with reference to the "Control of Open Fugitive Dust Sources" (USEPA AP-42). The amount of water to be applied would be 0.91L/m2 for the respective watering frequency. | Contractor | All relevant worksites | Implemented |
| | | Dust enclosures with watering would be provided along the loading ramps and conveyor belts for unloading the C&D materials to the barge for dust suppression. | Contractor | All relevant worksites | Not Applicable |
| | | 8 km per hour is the recommended limit of the speed for vehicles on unpaved site roads. | Contractor | All relevant worksites | Implemented |
| | | Good Site Practices | | | |
| AEIAR-130/2009 | AEIAR 130/2009 | Stockpiling site(s) should be lined with impermeable sheeting and bunded. Stockpiles should | Contractor | All relevant | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|----------------------------------|----------------------------------|--|------------------------------|---------------------------|--|
| S3.2, S5.2.19, AEIAR-174/2013 | EM&A Manual S2.2, S4.2, AEIAR | be fully covered by impermeable sheeting to reduce dust emission. | | worksites | |
| S4.9.2.2 | 174/2013 EM&A Manual S2.3.1.2 | Use of regular watering to reduce dust emissions from exposed site surfaces and unpaved roads, particularly during dry weather. Use of frequent watering for particularly dusty construction areas and areas close to ASRs. | Contractor | All relevant worksites | Implemented |
| | | Misting for the dusty material should be carried out before being loaded into the vehicle. Any vehicle with an open load carrying area should have properly fitted side and tail boards. | Contractor | All relevant worksites | Implemented |
| | | Material having the potential to create dust should not be loaded from a level higher than the side and tail boards and should be dampened and covered by a clean tarpaulin. | Contractor | All relevant worksites | Implemented |
| | | Tarpaulin covering of all dusty vehicle loads transported to, from and between site locations; The tarpaulin should be properly secured and should extent at least 300 mm over the edges of the sides and tailboards. The material should also be dampened if necessary before transportation. | Contractor | All relevant worksites | Implemented |
| | | The vehicles should be restricted to maximum speed of 10 km per hour. Confined haulage and delivery vehicle to designated roadways insider the site. Onsite unpaved roads should be compacted and kept free of lose materials. | Contractor | All relevant worksites | Implemented |
| | | Vehicle washing facilities should be provided at every vehicle exit point. Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving the construction sites. | Contractor | All relevant worksites | Implemented |
| | | The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores. | | | |
| | | Every main haul road should be scaled with concrete and kept clear of dusty materials or sprayed with water so as to maintain the entire road surface wet. | Contractor | All relevant worksites | Implemented |
| | | Every stock of more than 20 bags of cement or dry pulverised fuel ash (PFA) should be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides. | Contractor | All relevant worksites | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|-----------------------------|---|--|------------------------------|---------------------------|--|
| | | Cement or dry PFA delivered in bulk should be stored in a closed silo fitted with an audible high level alarm which is interlocked with the material filling line and no overfilling is allowed. | Contractor | All relevant worksites | Implemented |
| | | Loading, unloading, transfer, handling or storage of bulk cement or dry PFA should be carried out in a totally enclosed system or facility, and any vent or exhaust should be fitted with an effective fabric filter or equivalent air pollution control system. | Contractor | All relevant worksites | Implemented |
| | | Side enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering shall be applied to aggregate fines. | Contractor | All relevant worksites | Implemented |
| | | Open stockpiles shall be avoided or covered. Prevent placing dusty material storage piles near ASRs. | Contractor | All relevant worksites | Implemented |
| | | Routing of vehicles and position of construction plant should be at the maximum possible distance from ASRs. | Contractor | All relevant worksites | Implemented |
| | | <u>Dark smoke</u> | | | |
| | | Dark smoke emission shall be control in accordance with the Air Pollution Control (Smoke) Regulation and ETWB TCW 19/2005. | Contractor | All relevant worksites | Implemented |
| | | Plant and equipment should be well maintained to prevent dark smoke emission. | Contractor | All relevant worksites | Implemented |
| Noise Measures | | | | | |
| Trunk Road T2 | | | | | |
| AEIAR-174/2013 \$5.9.2.1 | AEIAR-174/2013 EM&A Manual S3.4.1.1 | The use of quieter plant, including Quality Powered Mechanical Equipment (QPME) is specified for the list of equipment: • Concrete lorry mixer • Dump Truck, 5.5 tonne < gross vehicle weight <= 38 tonne • Generator, Super Silenced, 70 dB(A) at 7m | Contractor | All relevant worksites | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|--|---|---|------------------------------|---------------------------|---|
| | | Poker, vibratory, Hand-held (electric) Water Pump, Submersible (Electric) Mobile Crane - KOBELCO CKS900 Excavator, wheeled/tracked - HYUNDAI R80CR-9 | | | |
| | | Use of temporary or fixed noise barriers with a surface density of at least 10kg/m² to screen noise from movable and stationary plant. | Contractor | All relevant worksites | Implemented |
| | | Use of enclosures with covers at top and three sides and a surface density of at least 10kg/m ² to screen noise from generally static noisy plant such as air compressors. | Contractor | All relevant worksites | Implemented |
| | | Use of acoustic fabric for the silent piling system, drill rigs, rock drills etc. | Contractor | All relevant worksites | Implemented |
| | | Good Site Practices | | | |
| AEIAR-130/2009 S3.3, S5.3.10, AEIAR-174/2013 | AEIAR 130/2009 EM&A Manual S2.3, S4.3.2, AEIAR-174/2013 EM&A Manual S3.4.1.1 | Only well-maintained plant should be operated on-site and plant shall be serviced regularly during the construction/ decommissioning program. | Contractor | All relevant worksites | Implemented |
| S5.9.2.1 | | Silencers or mufflers on construction equipment should be utilized and shall be properly maintained during the construction/ decommissioning program. | Contractor | All relevant worksites | Implemented |
| | | Mobile plant, if any, should be sited as far away from NSRs as possible. | Contractor | All relevant worksites | Implemented |
| | | Machines and plant (such as trucks) that may be in intermittent use shall be shut down between works periods or should be throttled down to a minimum. | Contractor | All relevant worksites | Implemented |
| | | Plant known to emit noise strongly in one direction shall, wherever possible, be orientated so that the noise is directed away from the nearby NSRs. | Contractor | All relevant worksites | Implemented |
| | | Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction/ decommissioning activities. | Contractor | All relevant worksites | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|----------------------------|---|--|------------------------------|---------------------------|--|
| | | Use of site hoarding as a noise barrier to screen noise at low level NSRs. | Contractor | All relevant worksites | Implemented |
| | | For the use of hand held percussive breakers (with mass of above 10kg) and portable air compressors (supply air at 500 kPa or above), the noise level of such PME shall comply with a stringent noise emission standard and a noise emission label shall be obtained from the DEP before use at any time in construction site. | Contractor | All relevant worksites | Implemented |
| | | Quiet powered mechanical equipment (PME) shall be used for the construction of the Project. | Contractor | All relevant worksites | Implemented |
| | | Full enclosures shall be used to screen noise from relatively static PMEs (including air compressor, bar bender, concrete pump, generator and water pump) from sensitive receiver(s). | Contractor | All relevant worksites | Implemented |
| | | Movable cantilevered noise barriers shall be used to screen noise from mobile PMEs (including asphalt paver, breaker, excavator and hand-held breaker) from sensitive receiver(s). These movable cantilevered noise barriers shall be located close to the mobile PMEs and shall be moved/adjusted iteratively in step with each movement of the corresponding mobile PMEs in order to maximize their noise reduction effects. | Contractor | All relevant worksites | Implemented |
| | | Only approved or exempted Non-road Mobile Machineries (NRMMs) including regulated machines and non-road vechicles with proper labels are allowed to be used in specified activities on-site. | Contractor | All relevant worksites | Implemented |
| Water Quality Mea | <u>isures</u> | | | | |

| | | Accidental Spillage | | | |
| AEIAR-174/2013 S6.4.8.5 | AEIAR-174/2013 EM&A Manual S4.2.1.1 | All bentonite slurry should be stored in a container that resistant to corrosion, maintained in good conditions and securely closed; The container should be labelled in English and Chinese and note that the container is for storage of bentonite slurry only. | Contractor | All relevant worksites | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|----------------------------|---|--|------------------------------|---------------------------|--|
| | | The storage container should be placed on an area of impermeable flooring and bunded with capacity to accommodate 110% of the volume of the container size or 20% by volume stored in the area and enclosed with at least 3 sides. | Contractor | All relevant worksites | Implemented |
| | | The storage container should be sufficiently covered to prevent rainfall entering the container or bunded area (water collected within the bund must be tested and disposed of as chemical waste, if necessary). An emergency clean up kit shall be readily available where bentonite fluid will be stored or used. | Contractor | All relevant worksites | Implemented |
| | | The handling and disposal of bentonite slurries should be undertaken in accordance within ProPECC PN 1/94. Surplus bentonite slurries used in construction works shall be reconditioned and reused wherever practicable. Residual bentonite slurry shall be disposed of from the site as soon as possible as stipulated in Clause 8.56 of the General Specification for Civil Engineering Works. The Contractor should explore alternative disposal outlets for the residual bentonite slurry (dewatered bentonite slurry to be disposed to a public filling area and liquid bentonite slurry, if mixed with inert fill material, to be disposed to a public filling area) and disposal at landfill should be the last resort. | Contractor | All relevant worksites | Implemented |
| AEIAR-174/2013 S6.4.8.8 | AEIAR-174/2013 EM&A Manual S4.2.1.1 | In order to protect against impacts to the surrounding marine waters of the KTTS and Victoria Harbour in the event of an accidental spillage of fuel or oil, the Contractor will be required to prepare a spill response plan to the satisfaction of AFCD, EPD, FSD, Police, TD and WSD to define procedures for the control, containment and clean-up of any spillage that could occur on the construction site. | Contractor | All relevant worksites | Implemented |
| | | Dredging, Reclamation and Filling | | | |
| | | No dredging, reclamation or filling in the marine environment shall be carried out. | Contractor | All relevant worksites | Implemented |

|--|---|--|------------------------------|---------------------------|---|
| AEIAR-130/2009 S5.4 | AEIAR 130/2009 EM&A Manual S4.4 | The site practices outlined in ProPECC PN 1/94 "Construction Site Drainage" should be followed as far as practicable in order to minimise surface runoff and the chance of erosion. | Contractor | All relevant worksites | Not Applicable |
| | 54.4 | There is a need to apply to EPD for a discharge licence under the WPCO for discharging effluent from the construction site. The discharge quality is required to meet the requirements specified in the discharge licence. All the runoff, wastewater or extracted groundwater generated from the works areas should be treated so that it satisfies all the standards listed in the TM-DSS. It is anticipated that the wastewater generated from the works areas would be of small quantity. Monitoring of the treated effluent quality from the works areas should be carried out in accordance with the WPCO license which is under the ambit of regional office (RO) of EPD. | Contractor | All relevant worksites | Not Applicable |
| | | General Construction Works | | | |
| | | Construction Runoff | | | |
| AEIAR- 130/2009 S3.4, S5.4/ AEIAR- 174/2013 S6.4.8.1 | AEIAR 130/2009 EM&A Manual S2.4, S4.4/ AEIAR- 174/2013 EM&A Manual S4.2.1.1 | Exposed soil areas should be minimised to reduce the potential for increased siltation, contamination of runoff, and erosion. Construction runoff related impacts associated with the above ground construction activities can be readily controlled through the use of appropriate mitigation measures which include the use of sediment traps and adequate maintenance of drainage systems to prevent flooding and overflow. | Contractor | All relevant worksites | Implemented |
| | | Construction site should be provided with adequately designed perimeter channel and pretreatment facilities and proper maintenance. The boundaries of critical areas of earthworks should be marked and surrounded by dykes or embankments for flood protection. Temporary ditches should be provided to facilitate runoff discharge into the appropriate watercourses, via a silt retention pond. Permanent drainage channels should incorporate sediment basins or traps and baffles to enhance deposition rates. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC PN 1/94. | Contractor | All relevant worksites | Implemented |
| | | Ideally, construction works should be programmed to minimise surface excavation works during the rainy season (April to September). All exposed earth areas should be completed as soon as possible after earthworks have been completed, or alternatively, within 14 days of the cessation of earthworks where practicable. If excavation of soil cannot be avoided during the | Contractor | All relevant worksites | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|---------|----------|--|------------------------------|---------------------------|---|
| | | rainy season, or at any time of year when rainstorms are likely, exposed slope surfaces should be covered by tarpaulin or other means. | | | |
| | | Sediment tanks of sufficient capacity, constructed from pre-formed individual cells of approximately 6 to 8 m3 capacity, are recommended as a general mitigation measure which can be used for settling surface runoff prior to disposal. The system capacity is flexible and able to handle multiple inputs from a variety of sources and particularly suited to applications where the influent is pumped. | Contractor | All relevant worksites | Implemented |
| | | Open stockpiles of construction materials (for examples, aggregates, sand and fill material) of more than 50 m³ should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system. | Contractor | All relevant worksites | Implemented |
| | | Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and storm runoff being directed into foul sewers. | Contractor | All relevant worksites | Implemented |
| | | Precautions to be taken at any time of year when rainstorms are likely, actions to be taken when a rainstorm is imminent or forecast, and actions to be taken during or after rainstorms are summarised in Appendix A2 of ProPECC PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events. | Contractor | All relevant worksites | Implemented |
| | | Oil interceptors should be provided in the drainage system and regularly cleaned to prevent the release of oils and grease into the storm water drainage system after accidental spillages. The interceptor should have a bypass to prevent flushing during periods of heavy rain. | Contractor | All relevant worksites | Implemented |
| | | An adequately designed and located wheel washing bay should be provided at every site exit, and wash-water should have sand and silt settled out and removed at least on a weekly basis to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains. | Contractor | All relevant worksites | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|---------|----------|---|------------------------------|---------------------------|---|
| | | <u>Drainage</u> | | | |
| | | It is recommended that on-site drainage system should be installed prior to the commencement of other construction activities. Sediment traps should be installed in order to minimise the sediment loading of the effluent prior to discharge into foul sewers. There should be no direct discharge of effluent from the site into the sea. | Contractor | All relevant worksites | Implemented |
| | | All temporary and permanent drainage pipes and culverts provided to facilitate runoff discharge should be adequately designed for the controlled release of storm flows. All sediment control measures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly following rain storms. The temporarily diverted drainage should be reinstated to its original condition when the construction work has finished or the temporary diversion is no longer required. | Contractor | All relevant worksites | Implemented |
| | | Stormwater Discharges | | | |
| | | Minimum distances of 100 m should be maintained between the existing or planned stormwater discharges and the existing or planned seawater intakes. | Contractor | All relevant worksites | Implemented |
| | | Sewage Effluent | | | |
| | | Construction work force sewage discharges on site are expected to be connected to the existing trunk sewer or sewage treatment facilities. The construction sewage may need to be handled by portable chemical toilets prior to the commission of the on-site sewer system. Appropriate numbers of portable toilets should be provided by a licensed contractor to serve the large number of construction workers over the construction site. The Contractor should also be responsible for waste disposal and maintenance practices. | Contractor | All relevant worksites | Implemented |
| | | Debris and Litter | | | |
| | | In order to maintain water quality in acceptable conditions with regard to aesthetic quality, contractors should be required, under conditions of contract, to ensure that site management is optimised and that disposal of any solid materials, litter or wastes to marine waters does not occur. Debris and refuse generated on-site should be collected, handled and disposed of | Contractor | All relevant worksites | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|------------------------------|---|---|------------------------------|---------------------------|---|
| | | properly to avoid entering into the adjacent harbour waters. Stockpiles of cement and other construction materials should be kept covered when not being used. | | | |
| | | Accidental Spillage | | | |
| | | Oils and fuels should only be used and stored in designated areas which have pollution prevention facilities. To prevent spillage of fuels and solvents to the nearby harbour waters, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank, to prevent spilled fuel oils from reaching the coastal waters of the Victoria Harbour WCZ. The bund should be drained of rainwater after a rain event. | Contractor | All relevant worksites | Implemented |
| | | Waste Management Measures | | | |
| | | Waste Management Plan | | | |
| AEIAR-174/2013 S11.4.8.1 | AEIAR-174/2013 EM&A Manual S9.2.1.2 | Contractor should be requested to submit an outline Waste Management Plan (WMP) prior to the commencement of construction work, in accordance with the ETWB TC(W) No.19/2005 so as to provide an overall framework of waste management and reduction. | Contractor | All relevant worksites | Implemented |
| | | Good Site Practices | | | |
| AEIAR-130/2009 S3.5, S5.5 | AEIAR 130/2009 EM&A Manual S2.5, S4.5 | Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site. | Contractor | All relevant worksites | Implemented |
| | | Training of site personnel in proper waste management and chemical waste handling procedures. | Contractor | All relevant worksites | Implemented |
| | | Provision of sufficient waste disposal points and regular collection for disposal. | Contractor | All relevant worksites | Implemented |
| | | Appropriate measures to minimize windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers. | Contractor | All relevant worksites | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |

| | | A recording system for the amount of wastes generated, recycled and disposed of (including the disposal sites). | Contractor | All relevant worksites | Implemented |
| | | Waste Reduction Measures | | | |
| | | Sort C&D waste from demolition of the remaining structures to recover recyclable portions such as metals. | Contractor | All relevant worksites | Implemented |
| | | Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal. | Contractor | All relevant worksites | Implemented |
| | | Encourage collection of aluminum cans, PET bottles and paper by providing separate labelled bins to enable these wastes to be segregated from other general refuse generated by the work force. | Contractor | All relevant worksites | Implemented |
| | | Any unused chemicals or those with remaining functional capacity should be recycled. | Contractor | All relevant worksites | Implemented |
| | | Proper storage and site practices to minimize the potential for damage or contamination of construction materials. | Contractor | All relevant worksites | Implemented |
| | | Construction and Demolition Materials | | | |
| | | Where it is unavoidable to have transient stockpiles of C&D material within the work site pending collection for disposal, the transient stockpiles shall be located away from waterfront or storm drains as far as possible. | Contractor | All relevant worksites | Implemented |
| | | Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric. | Contractor | All relevant worksites | Implemented |
| | | Skip hoist for material transport should be totally enclosed by impervious sheeting. | Contractor | All relevant worksites | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|---------|----------|---|------------------------------|---------------------------|---|
| | | Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving a construction site. | Contractor | All relevant worksites | Implemented |
| | | The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores. | Contractor | All relevant worksites | Implemented |
| | | The load of dusty materials carried by vehicle leaving a construction site should be covered entirely by clean impervious sheeting to ensure dust materials do not leak from the vehicle. | Contractor | All relevant worksites | Implemented |
| | | All dusty materials should be sprayed with water prior to any loading, unloading or transfer operation so as to maintain the dusty materials wet. | Contractor | All relevant worksites | Implemented |
| | | The height from which excavated materials are dropped should be controlled to a minimum practical height to limit fugitive dust generation from unloading. | Contractor | All relevant worksites | Implemented |
| | | When delivering inert C&D material to public fill reception facilities, the material should consist entirely of inert construction waste and of size less than 250mm or other sizes as agreed with the Secretary of the Public Fill Committee. In order to monitor the disposal of the surplus C&D material at the designed public fill reception facility and to control fly tipping, a trip-ticket system as stipulated in the ETWB TCW No. 31/2004 "Trip Ticket System for Disposal of Construction and Demolition Materials" should be included as one of the contractual requirements and implemented by an Environmental Team undertaking the Environmental Monitoring and Audit work. An Independent Environmental Checker should be responsible for auditing the results of the system. | Contractor | All relevant worksites | Implemented |
| | | Chemical Waste | | | |
| | | After use, chemical wastes (for example, cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Spent chemicals should be collected by a licensed collector for disposal at the CWTF or other licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation. | Contractor | All relevant worksites | Implemented |

Fugro Development Centre, 5 Lok Yi Street, Tai Lam, Tuen Mun, N.T., Hong Kong.

| EIA Ref | EM&A Ref | Environmental Protection Measures / Mitigation Measures | Who to implement the measure | Location / Timing | Construction Phase Implementation Status |
|--------------------|-------------|---|------------------------------|---------------------------|---|
| | | General Refuse | | | |
| | | General refuse should be stored in enclosed bins or compaction units separate from C&D material. A licensed waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D material. Effective collection and storage methods (including enclosed and covered area) of site wastes would be required to prevent waste materials from being blown around by wind, wastewater discharge by flushing or leaching into the marine environment, or creating odour nuisance or pest and vermin problem. | Contractor | All relevant worksites | Implemented |
| Land Contamination | on Measures | | | | |
| | | For any excavation works conducted at Radar Station | | | |
| | | As the risk due to dermal contact with groundwater by site workers is uncertain, it is recommended that personnel protective equipment (PPE) be used by site workers as a mitigation measure. | Contractor | All relevant worksites | Not Applicable |

BY EMAIL

Attn.: Mr. K.S Lee

Dear Sir.

Contract No. KL/2015/02 Kai Tak Development -Stage 5A Infrastructure at Former North Apron Verification of Monthly EM&A Report for April 2019

We refer to your emails dated 7 and 10 May 2019 regarding the Monthly EM&A Report for April 2019 for the captioned project prepared by the ET.

We have no further comment and hereby verify the Report in accordance with Clause 3.3 of Environmental Permit no. EP-337/2009.

Should you require further information, please do not hesitate to contact Mr. Wingo So at 3565 4374 or the undersigned on 3565 4114.

Assuring you of our best attention at all times.

Yours faithfully, For and on behalf of FUGRO TECHNICAL SERVICES LIMITED

Colin K. L. Yung

EXECUTIVE SUMMARY

Introduction

- 1. This is the 28th Monthly Environmental Monitoring and Audit Report prepared by Cinotech Consultants Ltd. for "Contract No. KL/2015/02 Kai Tak Development Stage 5A Infrastructure at Former North Apron Area" (Hereafter referred to as "the Project"). This contract comprises one Schedule 2 designated project (DP), namely the new distributor road D1 serving the planned KTD. The DP is part of the designated project under Environmental Permit (EP) No.: EP-337/2009 ("New distributor roads serving the planned Kai Tak Development") respectively. This report documents the findings of EM&A Works conducted during April 2019.
- 2. With reference to the same principle of EIA report of the Project, air quality monitoring stations within 500m and noise monitoring stations within 300m from the boundary of this Project are considered as relevant monitoring locations. In such regard, the relevant air quality and noise monitoring locations are tabulated in **Table I** (see **Figure 2 and 3** for their locations).

Table I – Air Quality and Noise Monitoring Stations for this Project

| Locations | Monitoring Stations In accordance with EM&A Manual | Alternative Monitoring Stations | | | | | |
|-----------------------------------|--|--|--|--|--|--|--|
| Air Quality Monitoring Stations | | | | | | | |
| | Yes (1-hour TSP) | N/A | | | | | |
| AM2 - Lee Kau Yan Memorial School | No (24-hour TSP) | AM2(A) – Ng Wah Catholic Secondary School | | | | | |
| Noise Monitoring Stations | Noise Monitoring Stations | | | | | | |
| M3 - Cognitio College | Yes | N/A | | | | | |
| M4 - Lee Kau Yan Memorial School | Yes | N/A | | | | | |
| M5 – Nam Yuen | No | M5(C) – Mercy Grace's Home | | | | | |

- 3. The major site activities undertaken in the reporting month included: Excavate with ELS works for subway construction at PERE
- Structural works and backfilling works for subway construction at PERE
- Backfilling works for extracting sheet piles along subway SW6 from CH0 to CH4
- Erection of underpinning frame and jacked up the exiting Bridge K72
- Grouting works at SKLR playground (Stage 4)
- Construction of chain-link fence for land sale sites
- Filling work for slip road S15
- DCS works in Portion 6
- DCS works at Road D1, L7 in Portion 1

Water works at Road L7 in Portion 1 & Portion 4

Environmental Monitoring Works

- 4. Environmental monitoring for the Project was performed in accordance with the EM&A Manual and the monitoring results were checked and reviewed. Site Inspections/Audits were conducted once per week. The implementation of the environmental mitigation measures, Event Action Plans and environmental complaint handling procedures were also checked.
- 5. Summary of the non-compliance in the reporting month for the Project is tabulated in **Table II**.

| Table 11 Non-combilance Necorded for the Project in the Neborting Mo | oliance Recorded for the Project in the Reporting Mo | t in the Reporting Mo | iect in | the Proje | for | ecorded | oliance I | Non-com | Table II | |
|--|--|-----------------------|---------|-----------|-----|---------|-----------|---------|----------|--|
|--|--|-----------------------|---------|-----------|-----|---------|-----------|---------|----------|--|

| _ | No. of Project-rel | | |
|-----------|--------------------|-------------|--------------|
| Parameter | Action Level | Limit Level | Action Taken |
| 1-hr TSP | 0 | 0 | N/A |
| 24-hr TSP | 0 | 0 | N/A |
| Noise | 0 | 0 | N/A |

1-hour & 24-hour TSP Monitoring

- 6. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 7. All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Construction Noise Monitoring

8. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Environmental Licenses and Permits

- 9. Licenses/Permits granted to the Project include the Environmental Permit (EP) for the Project, EP-337/2009 issued on 23 April 2009. All valid Licenses/Permits for this Project are shown in **Table 6.1**.
- Billing Account for Construction Waste Disposal (A/C# 7026164).
- Effluent Discharge License (WT00027495-2017).
- Registration of Chemical Waste Producer (WPN5213-286-P3271-01).

Key Information in the Reporting Month

10. Summary of key information in the reporting month is tabulated in **Table III**.

Table III Summary Table for Key Information in the Reporting Month

| Event | Event Details | | Action Taken | Status | Remark | |
|--|---------------|--------|--------------|--------|--------|--|
| Event | Number | Nature | Action Taken | Status | Kemark | |
| Complaint received | | | N/A | N/A | | |
| Reporting Changes | | | N/A | N/A | | |
| Notifications of any summons & prosecutions received | | | N/A | N/A | - | |

Future Key Issues

- 11. The future key environmental issues in the coming month include:
 - Dust generation from stockpiles of dusty materials, exposed site area, excavation works and rock breaking activities;
- Water spraying for dust generating activity and on haul road;
- Proper storage of construction materials on site;
- Storage of chemicals/fuel and chemical waste/waste oil on site;
- Accumulation of general and construction waste on site;
- Noise from operation of the equipment, especially for rock-breaking activities, piling works and machinery on-site;
- Wastewater and runoff discharge from site;
- Regular removal of silt, mud and sand along u-channels and sedimentation tanks; and
- Review and implementation of temporary drainage system for the surface runoff.

1 INTRODUCTION

Background

- 1.1. The Kai Tak Development (KTD) is located in the south-eastern part of Kowloon Peninsula, comprising the apron and runway areas of the former Kai Tak Airport and existing waterfront areas at To Kwa Wan, Ma Tau Kok, Kowloon Bay, Kwun Tong and Cha Kwo Ling. It covers a land area of about 328 hectares. Stage 5A Infrastructure at Former North Apron Area is one of the construction stages of KTD. It contains one Schedule 2 DP including new distributor roads serving the planned KTD. The general layout of the Project is shown in **Figure 1.**
- 1.2. An Environmental Permit (EP) No. EP-337/2009 was issued on 23 April 2009 for new distributor roads serving the planned KTD to Civil Engineering and Development Department as the Permit Holder.
- 1.3. A study of environmental impact assessment (EIA) was undertaken to consider the key issues of air quality, noise, water quality, waste, land contamination, cultural heritage and landscape and visual impact, and identify possible mitigation measures associated with the works. An EIA Report (Register No. AEIAR-130/2009) was approved by the Environmental Protection Department (EPD) on 4 April 2009.
- 1.4. Cinotech Consultants Limited (Cinotech) was commissioned by Civil Engineering and Development Department (CEDD) to undertake the role of the Environmental Team (ET) for the Contract No. KL/2015/02 Stage 5A Infrastructure at Former North Apron Area. The construction work under KL/2015/02 comprises the construction of part of the Road D1 under the EP (EP-337/2009).
- 1.5. Cinotech Consultants Limited was commissioned by Civil Engineering and Development Department (CEDD) to undertake the Environmental Monitoring and Audit (EM&A) works for the Project. The commencement date of construction of Road D1 (part) under this Contract was on 16 January 2017.

Project Organizations

- 1.6. Different parties with different levels of involvement in the project organization include:
 - Project Proponent Civil Engineering and Development Department (CEDD).
 - The Engineer and the Engineer's Representative (ER) AECOM Asia Co. Ltd (AECOM).
 - Environmental Team (ET) Cinotech Consultants Limited (Cinotech).
 - Independent Environmental Checker (IEC) Fugro Technical Services Limited (FTS).
 - Contractor Peako Wo Hing Joint Venture (PWHJV).

1.7. The key contacts of the Project are shown in **Table 1.1**.

Table 1.1 Key Project Contacts

| Party | Role | Contact Person | Position | Phone No. | Fax No. | |
|----------|---|----------------------------|---|-----------|-----------|--|
| CEDD | Project Proponent | Mr. CHAN Wai Kit, Ricky | Senior Engineer | 2116 3753 | 2116 0714 | |
| AECOM | Engineer's Representative | Mr. Vincent Lee | SRE | 2798 0771 | 2210 6110 | |
| Cinotech | Environmental Team | Mr. K.S Lee | Environmental Team Leader | 2151 2091 | 3107 1388 | |
| | | Ms. Betty Choy | Audit Team Leader | 2151 2072 | 3107 1366 | |
| FTS | Independent Environmental Checker | Mr. Colin Yung | Independent Environmental Checker | 3565 4114 | 2450 8032 | |
| PWHJV | Contractor | Mr. W.M. Wong | Site Agent | 6386 3535 | 2398 8301 | |

Construction Activities undertaken during the Reporting Month

- 1.8. The site activities undertaken in the reporting month included:
 - Structural works and backfilling works for subway construction at PERE
 - Backfilling works for extracting sheet piles along subway SW6 from CH0 to CH4
 - Erection of underpinning frame and jacked up the exiting Bridge K72
 - Grouting works at SKLR playground (Stage 4)
 - Construction of chain-link fence for land sale sites
 - Filling work for slip road S15
 - DCS works in Portion 6
 - DCS works at Road D1. L7 in Portion 1
 - Water works at Road L7 in Portion 1 & Portion 4
- 1.9. The construction programme for the Project is shown in **Appendix N**.
- 1.10. The construction programme showing the inter-relationship with environmental protection/mitigation measures are presented in **Table 1.2**.

Table 1.2 Construction Programme Showing the Inter-Relationship with Environmental Protection/Mitigation Measures

| Construction Works | Major Environmental Impact | Control Measures |
|-------------------------|--|--|
| Refer to Section 1.8 | Noise, dust impact, water quality and waste generation | Sufficient watering of the works site with active dust emitting activities; Properly cover the stockpiles; On-site waste sorting and implementation of trip ticket system Appropriate desilting/sedimentation devices provided on site for treatment before discharge; Use of quiet plant and well-maintained construction plant; Provide movable noise barrier; Well maintain the drainage system to prevent the spillage of wastewater during heavy rainfall; Provide sufficient mitigation measures as recommended in Approved EIA Report/Lease requirement. |

Summary of EM&A Requirements

- 1.11. The EM&A programme requires construction noise monitoring, air quality monitoring, landscape and visual monitoring and environmental site audit. The EM&A requirements for each parameter are described in the following sections, including:
 - All monitoring parameters;
 - Action and Limit levels for all environmental parameters;
 - Event Action Plans;
 - Environmental requirements and mitigation measures, as recommended in the EM&A Manual under the EP.
- 1.12. The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 6 of this report.
- 1.13. This report presents the monitoring results, observations, locations, equipment, period, methodology and QA/QC procedures of the required monitoring parameters, namely air quality and noise levels and audit works for the Project during April 2019.

2 AIR QUALITY

Monitoring Requirements

2.1. According to EM&A Manual under the EP, 1-hour and 24-hour TSP monitoring were conducted to monitor the air quality for this Project. For regular impact monitoring, a sampling frequency of at least once in every six days at all of the monitoring stations for 24-hour TSP monitoring. For 1-hour TSP monitoring, the sampling frequency of at least three times in every six days shall be undertaken when the highest dust impact occurs. Appendix A shows the established Action/Limit Levels for the environmental monitoring works.

Monitoring Locations

- 2.2. 1-hour TSP impact dust monitoring was conducted at the air quality monitoring station, AM2 Lee Kau Yan Memorial School and 24-hour TSP impact dust monitoring were conducted at the air quality monitoring station, AM2(A) Ng Wah Catholic Secondary School in the reporting month.
- 2.3. **Table 2.1** describes the air quality monitoring locations, which are also depicted in **Figure 2**.

Table 2.1 Locations for Air Quality Monitoring

| Monitoring Stations | Locations | Location of Measurement |
|----------------------------|----------------------------------|--------------------------------|
| AM2 (1-hour TSP) | Lee Kau Yan Memorial School | Rooftop (about 8/F) Area |
| AM2(A) (24-hour TSP) | Ng Wah Catholic Secondary School | Rooftop (about 8/F) Area |

Monitoring Equipment

2.4. **Table 2.2** summarizes the equipment used in the impact air monitoring programme. Copies of calibration certificates are attached in **Appendix B**.

Table 2.2 Air Quality Monitoring Equipment

| Equipment | Model and Make | Quantity |
|-----------------------|---|----------|
| Calibrator | TISCH TE-5025A | 1 |
| 1-hour TSP Dust Meter | Hal Technology Hal-HPC300 / 301 Sibata Scientific Technology LD-3B / LD-5R | 4 |
| HVS Sampler | • TE-5170 c/w of TSP sampling inlet | 1 |
| Wind Anemometer | Davis Instruments 6152 | 1 |

Monitoring Parameters, Frequency and Duration

2.5. **Table 2.3** summarizes the monitoring parameters and frequencies of impact dust monitoring for the whole construction period. The air quality monitoring schedule for the reporting month is shown in **Appendix D**.

 Table 2.3
 Impact Dust Monitoring Parameters, Frequency and Duration

| Parameters | Frequency | |
|------------|----------------------|--|
| 1-hr TSP | Three times / 6 days | |
| 24-hr TSP | Once / 6 days | |

Monitoring Methodology and QA/QC Procedure

1-hour TSP Monitoring

Measuring Procedures

2.6. The measuring procedures of the 1-hour dust meters were in accordance with the Manufacturer's Instruction Manual as follows:

(Equipment: Hal Technology; Model no. Hal-HPC300, Hal-HPC301)

- The 1-hour dust meter is placed at least 1.3 meters above ground.
- Set POWER to "ON" and make sure that the battery level was not flash or in low level.
- Allow the instrument to stand for about 3 minutes and then the cap of the air sampling inlet has been released.
- Push the knob at MEASURE position.
- Set time/mode setting to [BG] by pushing the time setting switch. Then, start the background measurement by pushing the start/stop switch once. It will take 6 sec. to complete the background measurement.
- Push the time setting switch to change the time setting display to [MANUAL] at the bottom left of the liquid crystal display.
- Finally, push the start/stop switch to stop the measuring after 1 hour sampling.
- Information such as sampling date, time, count value and site condition were recorded during the monitoring period.

(Equipment: Sibata Scientific Technology; Model no. LD-3B, LD-5R)

- The 1-hour dust meter is placed at least 1.3 meters above ground.
- Set POWER to "ON" and make sure that the battery level was not flash or in low level.
- Allow the instrument to stand for about 3 minutes and then the cap of the air sampling inlet has been released.
- Push the knob at MEASURE position.
- Set time/mode setting to [BG] by pushing the time setting switch. Then, start the background measurement by pushing the start/stop switch once. It will take 6 sec. to complete the background measurement.
- Push the time setting switch to change the time setting display to [MANUAL] at the bottom left of the liquid crystal display.
- Finally, push the start/stop switch to stop the measuring after 1 hour sampling.

- Information such as sampling date, time, count value and site condition were recorded during the monitoring period.

Maintenance/Calibration

2.7. The following maintenance/calibration was required for the direct dust meters:

Check the meter at a 3-month interval and calibrate the meter at a 1-year interval throughout all stages of the air quality monitoring.

24-hour TSP Monitoring

Instrumentation

2.8. High volume (HVS) samplers (Model TE-5170), completed with appropriate sampling inlets, were employed for 24-hour TSP monitoring. The sampler was composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complied with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50). Moreover, the HVS also met all the requirements in section 2.5 of the updated EM&A Manual.

Operating/Analytical Procedures

- 2.9. Operating/analytical procedures for the operation of HVS were as follows:
- A horizontal platform was provided with appropriate support to secure the samplers against gusty wind.
- No two samplers were placed less than 2 meters apart.
- The distance between the sampler and an obstacle, such as buildings, was at least twice the height that the obstacle protrudes above the sampler.
- A minimum of 2 meters of separation from walls, parapets and penthouses was required for rooftop samples.
- A minimum of 2 meters separation from any supporting structure, measured horizontally was required.
- No furnaces or incineration flues were nearby.
- Airflow around the sampler was unrestricted.
- The sampler was more than 20 meters from the drip line.
- Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring.
- Prior to the commencement of the dust sampling, the flow rate of the high volume sampler was properly set (between 1.1 m3/min. and 1.4 m3/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50.
- For TSP sampling, fiberglass filters have a collection efficiency of > 99% for particles of 0.3µm diameter were used.

- 2.12. The power supply was checked to ensure the sampler worked properly. On sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air monitoring station.
- 2.13. The filter holding frame was then removed by loosening the four nuts and a weighted and conditioned filter was carefully centered with the stamped number upwards, on a supporting screen.
- 2.14. The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- 2.15. The shelter lid was closed and secured with the aluminium strip.
- 2.16. The timer was then programmed. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
- 2.17. After sampling, the filter was removed and sent to the HOKLAS laboratory (Wellab Ltd.) for weighing. The elapsed time was also recorded.
- 2.18. Before weighing, all filters were equilibrated in a conditioning environment for 24 hours. The conditioning environment temperature should be between 25°C and 30°C and not vary by more than ±3°C; the relative humidity (RH) should be < 50% and not vary by more than ±5%. A convenient working RH is 40%.

Maintenance/Calibration

- 2.19. The following maintenance/calibration was required for the HVS:
- The high volume motors and their accessories were properly maintained. Appropriate maintenance such as routine motor brushes replacement and electrical wiring checking were made to ensure that the equipment and necessary power supply are in good working condition.
- High volume samplers were calibrated at bi-monthly intervals using TE-5025A Calibration Kit through\hout all stages of the air quality monitoring.

Results and Observations

- 2.20. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 2.21. All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 2.22. The weather information for the reporting month is summarized in **Appendix C.**
- 2.23. The monitoring data and graphical presentations of 1-hour and 24-hour TSP monitoring results are shown in **Appendices E and F** respectively.
- 2.24. The summary of exceedance record in reporting month is shown in **Appendix H**. No exceedance was recorded for the air quality monitoring.

- 2.25. According to our field observations during the monitoring, the major dust source identified at the two designated air quality monitoring stations are road traffic dust, exposed site area and open stockpiles, excavation works and site vehicle movements.
- 2.26. The summary of 1-hour and 24-hour TSP air quality monitoring results during the reporting month are shown in **Appendix E** and **Appendix F** respectively.

3 NOISE

Monitoring Requirements

3.1. According to EM&A Manuals under the EP, construction noise monitoring was conducted to monitor the construction noise arising from the construction activities within KTD. The regular monitoring frequency for each monitoring station shall be on a weekly basis and conduct one set of measurements between 0700 and 1900 hours on normal weekdays. **Appendix A** shows the established Action and Limit Levels for the environmental monitoring works.

Monitoring Locations

3.2. Three designated monitoring stations were selected for noise monitoring programme. Noise monitoring was conducted at three designated monitoring stations (M3, M4, and M5(C)). **Figure 3** shows the locations of these stations.

Table 3.1 Noise Monitoring Stations

| Monitoring Stations | Locations | Location of Measurement |
|----------------------------|-----------------------------|--------------------------------|
| M3 | Cognitio College | Rooftop (about 6/F) Area |
| M4 | Lee Kau Yan Memorial School | Rooftop (about 7/F) Area |
| M5(C) | Mercy Grace's Home | Rooftop (about 5/F) Area |

Monitoring Equipment

3.3. **Table 3.2** summarizes the noise monitoring equipment. Copies of calibration certificates are provided in **Appendix B**.

Table 3.2 Noise Monitoring Equipment

| Equipment | Model and Make | Qty. |
|-------------------------------|--------------------------|------|
| Integrating Sound Level Meter | • SVANTEK SVAN 959 & 957 | 3 |
| Calibrator | • SVANTEK SV30A | 2 |
| Candiator | Brüel & Kjær 4231 | 2 |

Monitoring Parameters, Frequency and Duration

3.4. **Table 3.3** summarizes the monitoring parameters, frequency and total duration of monitoring. The noise monitoring schedule is shown in **Appendix D**.

 Table 3.3
 Noise Monitoring Parameters, Frequency and Duration

| Monitoring Stations | Parameter | Period | Frequency | Measurement |
|------------------------|--|------------------|-----------|-------------|
| M3 M4 | L ₁₀ (30 min.) dB(A) L ₉₀ (30 min.) dB(A) | 0700-1900 hrs on | Once per | Façade |
| M5(C) | $L_{eq}(30 \text{ min.}) dB(A)$ | normal weekdays | week | , |

Monitoring Methodology and QA/QC Procedures

- The Sound Level Meter was set on a tripod at a height of 1.2 m above the ground.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:

frequency weighting
time weighting
Fast
time measurement
30 minutes

- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with the portable wind meter.
- At the end of the monitoring period, the L_{eq} , L_{90} and L_{10} were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- Noise measurement was paused temporarily during periods of high intrusive noise if possible and observation was recorded when intrusive noise was not avoided.
- Noise monitoring was cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s.

Maintenance and Calibration

- 3.5. The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.
- 3.6. The sound level meter and calibrator were checked and calibrated at yearly intervals.
- 3.7. Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

Results and Observations

- 3.8. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded. The summary of exceedance record in reporting month is shown in Appendix H.
- 3.9. The baseline noise level and the Noise Limit Level at each designated noise monitoring station are presented in **Table 3.5**.
- 3.10. Noise monitoring results and graphical presentations are shown in **Appendix G**.
- 3.11. The major noise source identified at the designated noise monitoring stations are shown in **Table 3.4**.

Monthly EM&A Report – April 2019

Table 3.4 Major Noise Source identified at the Designated Noise Monitoring Stations

| Monitoring Stations | Locations | Major Noise Source |
|----------------------------|--------------------------------|---|
| M3 | Cognitio College | Traffic Noise Daily school activities |
| M4 | Lee Kau Yan Memorial School | Traffic Noise Site vehicle movement Excavation works Piling works Daily school activities |
| M5(C) | Mercy Grace's Home | Traffic Noise Site vehicle movement |

Table 3.5 Baseline Noise Level and Noise Limit Level for Monitoring Stations

| Station | Baseline Noise Level, dB (A) | Noise Limit Level, dB (A) |
|---------|--|--|
| M3 | N/A ⁽¹⁾ (at 0700 – 1900 hrs on normal weekdays) | 70* (at 0700 – 1900 hrs on |
| M4 | 76.7 (at 0700 – 1900 hrs on normal weekdays) | normal weekdays) |
| M5(C) | N/A ⁽¹⁾ (at 0700 – 1900 hrs on normal weekdays) | 75 (at 0700 – 1900 hrs on normal weekdays) |

^(*) Noise Limit Level is 65 dB(A) during school examination periods.

 $CNL = 10 \log (10^{MNL/10} - 10^{BNL/10})$

Remarks: MNL = Measured Noise Level, BNL = Baseline Noise Level

Note (1): The background Noise Level was recorded during the Lunch Hour of Construction Site

⁽i.e. 12:00-13:00) and to be used as the referencing value for compliance checking for Noise Action and Limit Level.

Note (2): The noise level due to the construction work (CNL) was calculated by the following formula:

4

4.1. The EM&A data was compared with the EIA predictions as summarized in Tables 4.1 to 4.3.

COMPARISON OF EM&A RESULTS WITH EIA PREDICTIONS

Table 4.1 Comparison of 1-hr TSP data with EIA predictions

| Predicted 1-hr TSP conc. | | | Measured 1-hr TSP conc. | |
|--------------------------------------|--|--------------------|-------------------------------------|-----------|
| Station | Scenario1 (Mid Scenario2 (Mid 2009 to Mid-2013 to Late | | Reporting Month (April 2019), µg/m³ | |
| | 2013), $\mu g/m^3$ | 2016), $\mu g/m^3$ | Average | Range |
| AM2 – Lee Kau Yan Memorial School | 290 | 312 | 128 | 112 – 144 |

Table 4.2 Comparison of 24-hr TSP data with EIA predictions

| | Predicted 24-hi | TSP conc. | Measured 24-hr TSP conc. | |
|---|------------------------------------|----------------------------------|-----------------------------|-----------------------|
| Station | 2009 to Mid-2013) (Mid 2013 to (Ma | | Reportin (March 20 | g Month 19), µg/m³ |
| | μg/m³ | Late 2016), μg/m ³ | Average | Range |
| AM2(A) – Ng Wah Catholic Secondary School | 145 | 169 | 49 | 37 – 67 |

Table 4.3 Comparison of Noise Monitoring Data with EIA predictions

| Stations | | $\begin{array}{c} \textbf{Predicted Mitigated Construction} \\ \textbf{Noise Levels during Normal} \\ \textbf{Working Hour } (L_{eq~(30min)}~dB(A)) \end{array}$ | Reporting Month (March 2019), L _{eq (30min)} dB(A) |
|---------------------------------|-------|--|---|
| M3 – Cognitio Col | llege | 47 – 75 | $61 - 80^{\ (1)}$ |
| M4 – Lee Kau Y Memorial Scho | | 47 – 74 | 56 – 76 |
| M5(C) – Mercy Gr Home | ace's | Not predicted in EIA Report | 62 – 79 ⁽¹⁾ |

Remarks:

- (1) Since the baseline noise level was higher than those recorded during the construction period, the recorded noise levels were considered non-valid exceedance of Noise Limit Level.
- 4.2. The average 1-hour TSP concentrations at AM2 in the reporting month were below the prediction in the approved Environmental Impact Assessment (EIA) Report.
- 4.3. The average 24-hour TSP concentrations at AM2(A) in the reporting month were below the prediction in the approved EIA Report.
- 4.4. The noise monitoring results in the reporting month from M3 and M4 were within the ranges of the predicted mitigated constriction noise levels in the EIA Report.
- 4.5. Construction noise levels at M5(C) were not predicted in EIA Report.

5 LANDSCAPE AND VISUAL

Monitoring Requirements

5.1. According to EM&A Manual of the Kai Tak Development EIA Study, ET shall monitor and audit the contractor's operation during the construction period on a weekly basis, and to report on the contractor's compliance.

Results and Observations

- 5.2. Site audits were conducted on a weekly basis to monitor the timely implementation of landscape and visual mitigation measures within the site boundaries of this Project. The summaries of site audits are attached in **Appendix I**.
- 5.3. No non-compliance of the landscape and visual impact was recorded in the reporting month.
- 5.4. Should non-compliance of the landscape and visual impact occur, action in accordance with the action plan presented in **Appendix J** shall be performed.

6 ENVIRONMENTAL AUDIT

Site Audits

- 6.1. Site audits were carried out on a weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures in the Project site. The summaries of site audits are attached in **Appendix I**.
- 6.2. Site audits were conducted on 1, 10, 15, 23 and 29 April 2019 in the reporting month. A joint site audit with the representative of IEC, ER, the Contractor and the ET was conducted on 15 April 2019. The details of the observations during site audit are summarized in **Table 6.2**.

Review of Environmental Monitoring Procedures

6.3. The monitoring works conducted by the monitoring team were inspected regularly. The following observations have been recorded for the monitoring works:

Air Quality Monitoring

- The monitoring team recorded all observations around the monitoring stations within and outside the construction site.
- The monitoring team recorded the temperature and weather conditions on the monitoring days.

Noise Monitoring

- The monitoring team recorded all observations around the monitoring stations, which might affect the monitoring result.
- Major noise sources were identified and recorded. Other intrusive noise attributing to the result was trimmed off by pausing the monitoring temporarily.

Status of Environmental Licensing and Permitting

6.4. All permits/licenses obtained for the Project are summarized in **Table 6.1**.

Table 6.1 Summary of Environmental Licensing and Permit Status

| Day 24 No | Valid F | Valid Period | | |
|---|----------|--------------|--------|--|
| Permit No. | From | To | Status | |
| Environmental Permit (EP) | | | | |

| Billing Account for Construction Waste Disposal | | | | |
| A/C# 7026164 | 20/10/16 | N/A | Valid | |
| Registration of Chemical Waste Producer | | | | |
| WPN5213-229-P3271-01 | 14/08/17 | N/A | Valid | |
| Construction Noise Permit (CNP) | | | | |

| D 44 N | Valid Po | G4 4 | |
|------------|----------|------|--------|
| Permit No. | From | То | Status |
| - | - | - | - |

Status of Waste Management

6.5. The amount of wastes generated by the major site activities of this Project during the reporting month is shown in **Appendix M**.

Implementation Status of Environmental Mitigation Measures

6.6. During site inspections in the reporting month, no non-conformance was identified. ET weekly site inspections were carried out during the reporting month and the observations and recommendations are summarized in **Table 6.2**.

Table 6.2 Observations and Recommendations of Site Inspections

| Table 6.2 Observations and Recommendations of Site Inspections | | | | | |
|--|---------------|---------------------------|---|--|--|
| Parameters | Ref No. | Date | Observations and Recommendations | Follow-up/Rectification | |
| Water Quality | N/A | N/A | | | |
| | 190415- R1 | 15 th Apr 2019 | - Contractor should cover the dusty materials in portion L7. | 23 rd Apr 2019: The dusty material in portion L7 was covered with impervious materials. | |
| Air Quality | 190423- R1 | 23 rd Apr 2019 | - Contractor should cover the dusty materials in portion L7. | 29th Apr 2019: Contractor should cover the dusty materials in portion L7. | |
| | 190423- R2 | 23 rd Apr 2019 | - Contractor should place the NRRM label on the generator in portion K72. | 29 th Apr 2019: The NRRM label was placed on the generator in portion K72. | |
| | 190429- R1 | 29 th Apr 2019 | - The dusty material should be covered in portion 1. | | |
| Noise | N/A | N/A | | | |

Summary of Mitigation Measures Implemented

6.7. An updated summary of the EMIS is provided in **Appendix K**.

Implementation Status of Event Action Plans

6.8. The Event Action Plans for air quality, noise and landscape and visual are presented in **Appendix J**.

1-hr TSP Monitoring

6.9. No Action/Limit Level exceedance was recorded in the reporting month.

24-hr TSP Monitoring

6.1 No Action/Limit Level exceedance was recorded in the reporting month.

Construction Noise

6.10. No Action/Limit Level exceedance was recorded in the reporting month.

Landscape and visual

6.11. No non-compliance was recorded in the reporting month.

Summary of Complaint, Warning, Notification of any Summons and Successful Prosecution

6.12. The summaries of environmental complaint, warning, summon and notification of successful prosecution for the Project is presented in **Appendix L**.

7 FUTURE KEY ISSUES

- 7.1. Major site activities undertaken for the coming two months include:
 - Road reinstatement works at PERE W/B and implement stage 2 TTA at PERE E/B
 - Extracting sheet piles along subway SW6 from CH0 to CH45 and Staircase ST3
 - Jacking up the existing bridge K72 and demolish the exiting wall
 - Excavation works with ELS installation at SKLR playground
 - Footing works for traffic deck at SKLR playground (stage 4-1)
 - Drainage work and road pavement construction at slip road S15
 - Refurbishment of bridge K72
 - Demolition of existing structure of K72
 - Drainage work at Road D1
 - Construction of chain-link fence for land sale sites
 - DCS works in Portion 1
 - Water works in Portion 1 & 6
- 7.2. Key environmental issues in the coming month include:
 - Wastewater and runoff discharge from site;
 - Regular removal of silt, mud and sand along u-channels and sedimentation tanks;
 - Review and implementation of temporary drainage system for the surface runoff;
 - Noise from operation of the equipment, especially for rock-breaking activities, piling works and machinery on-site;
 - Dust generation from stockpiles of dusty materials, exposed site area, excavation works and rock breaking activities;
 - Water spraying for dust generating activity and on haul road;
 - Proper storage of construction materials on site;
 - Storage of chemicals/fuel and chemical waste/waste oil on site;
 - Accumulation of general and construction waste on site.
- 7.3. The tentative major site activities is mentioned in Section 7.1 of this report. The impact prediction and control measures for the coming two months are summarized as follows:

Air quality impact (dust)

- Frequent watering of haul road and unpaved/exposed areas;
- Frequent watering or covering stockpiles with tarpaulin or similar means; and
- Watering of any earth moving activities.

Water quality impact (surface run-off)

- Diversion of the collected effluent to de-silting facilities for treatment prior to discharge to public storm water drains;
- Provision of adequate de-silting facilities for treating surface run-off and other collected effluents prior to discharge;
- Provision of perimeter protection such as sealing of hoarding footings to avoid run-off from entering the existing storm water drainage system via public road; and
- Provision of measures to prevent discharge into the stream.

Contract No. KLN/2016/04

 $Environmental\ Monitoring\ Works\ for\ Contract\ No.\ KL/2015/02$ Kai Tak Development – Stage 5A Infrastructure at Former North Apron Area

Monthly EM&A Report – April 2019

Noise Impact

- Scheduling of noisy construction activities if necessary to avoid persistent noisy operation;
- Controlling the number of plants use on site;
- Regular maintenance of machines; and
- Use of acoustic barriers if necessary.

Monitoring Schedule for Next Month

7.4. The tentative environmental monitoring schedules for next month are shown in **Appendix D**.

8 CONCLUSIONS AND RECOMMENDATIONS

Conclusions

8.1. Environmental monitoring works were performed in the reporting month and all monitoring results were checked and reviewed.

1-hr TSP Monitoring

8.2. All 1-hr TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

24-hr TSP Monitoring

8.3. All 24-hr TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Construction Noise Monitoring

8.4. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Landscape and visual

8.1 No non-compliance was recorded in the reporting month.

Complaint and Prosecution

8.2 No environmental complaint and environmental prosecution was received in the reporting month.

Recommendations

8.3 According to the environmental audit performed in the reporting month, the following recommendations were made:

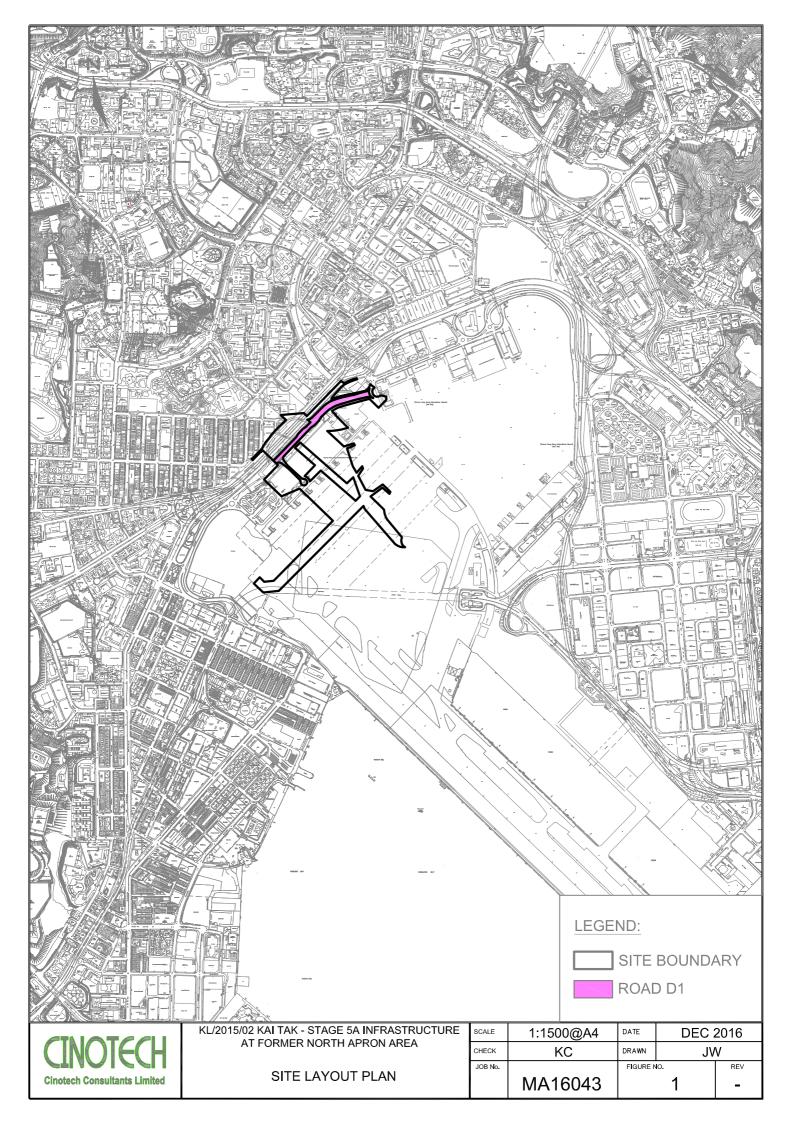

Waste / Chemical Management

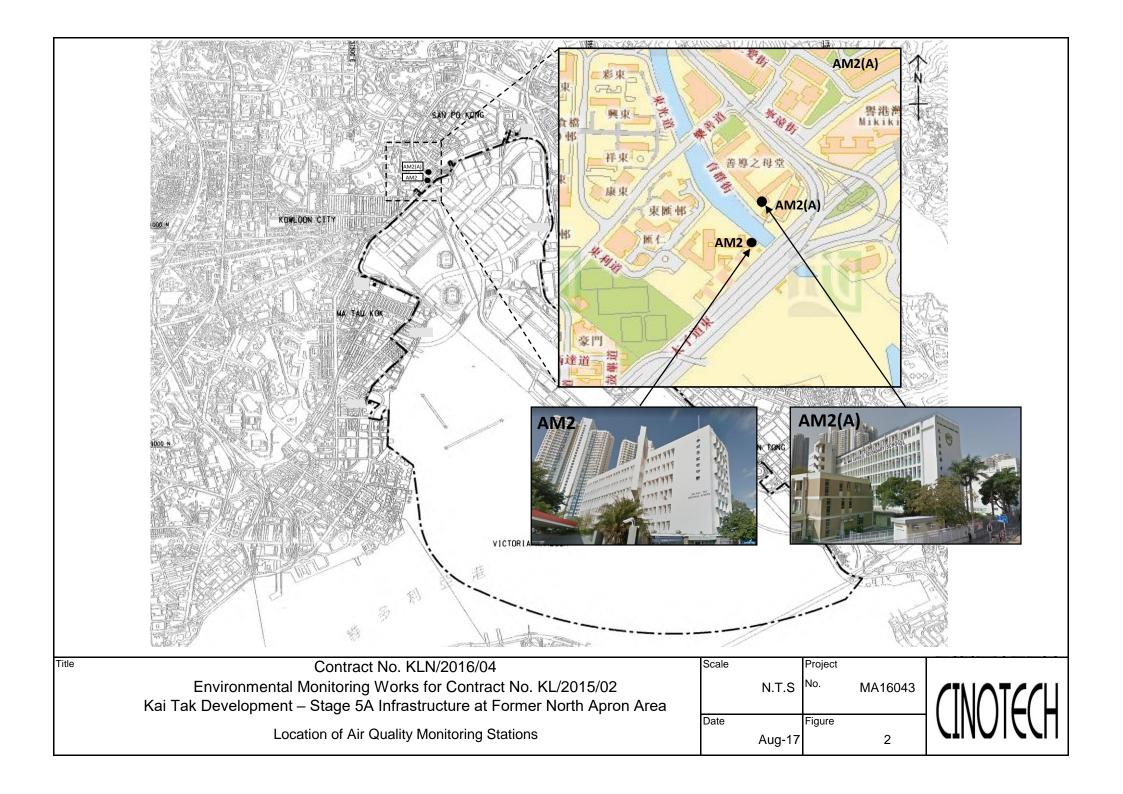

• The Contractor is suggested to maintain the site cleaning frequency and reminded to prevent the waste accumulation.

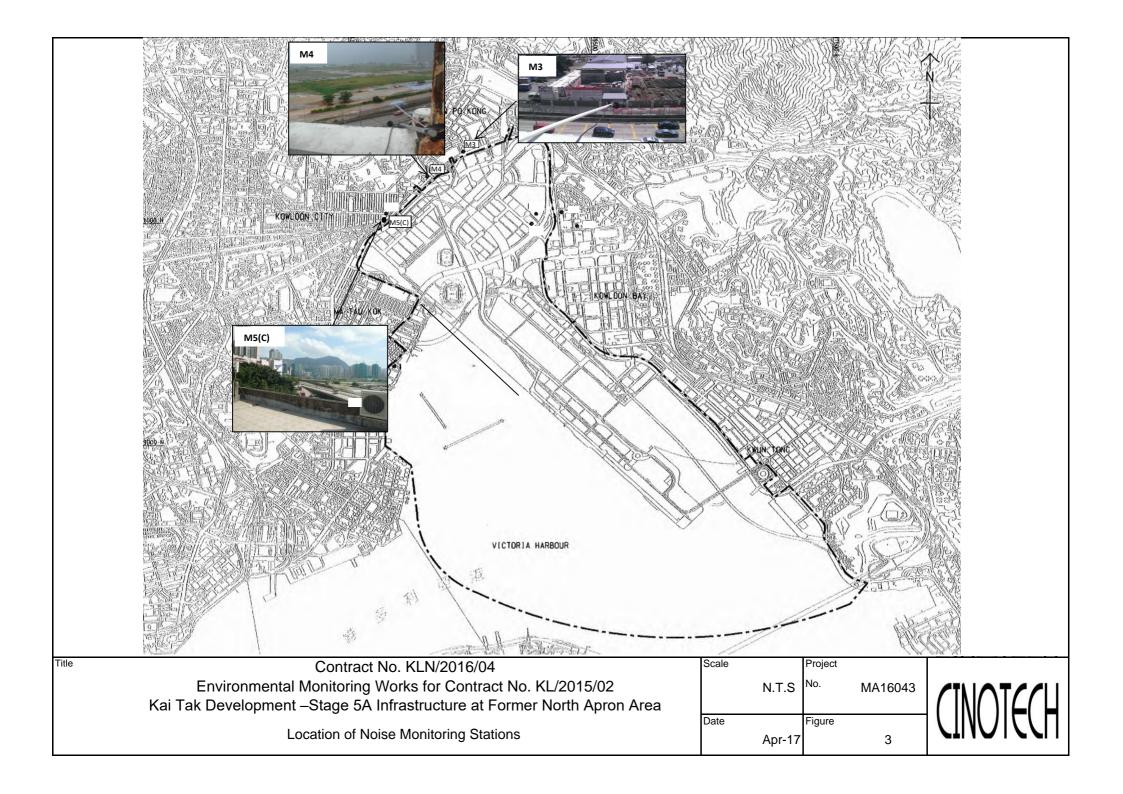

Air Quality

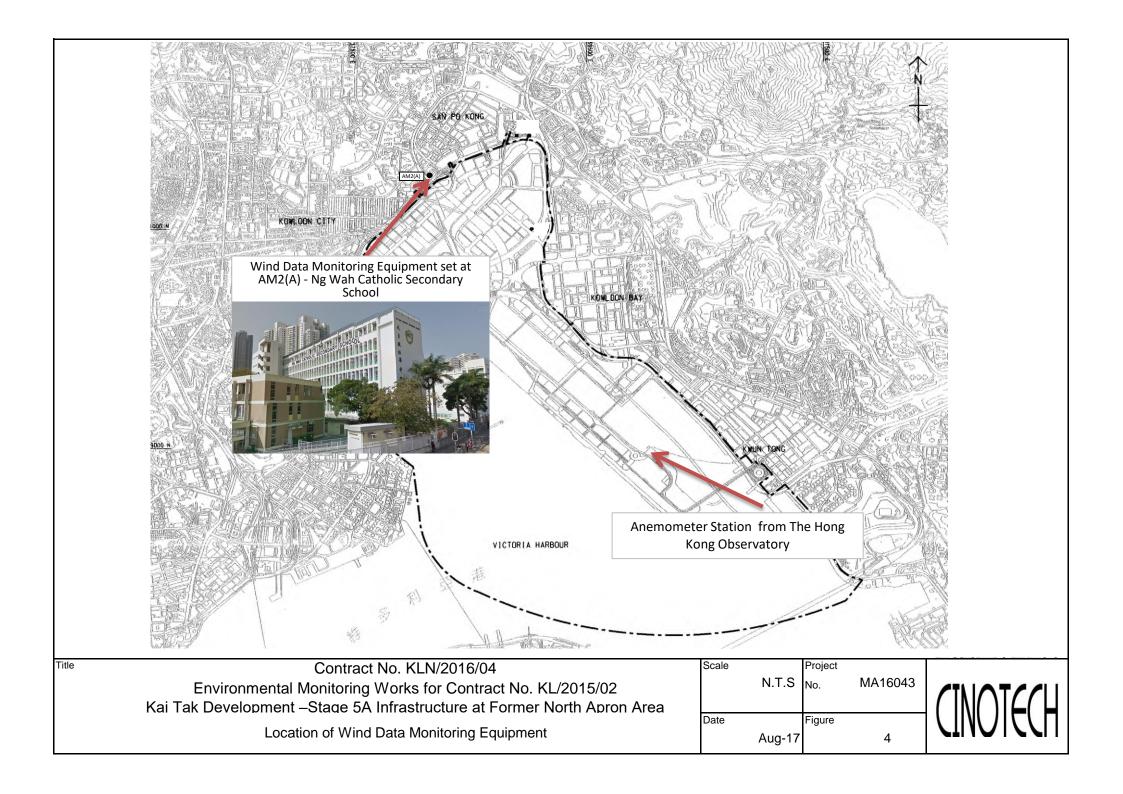

• The Contractor is suggested to review the status of dusty materials and reminded to cover it if no excavation works.

Certificate of Calibration

Item for calibration:

Description

: Weather Stations, Vantage Pro2

Manufacturer

: Davis Instruments

Model No.

: 6152

Serial No.

: BC180522050

Test conditions:

Room Temperature

: 17-22 degree Celsius

Relative Humidity

: 40-70 %

Test Specifications:

- 1. Performance check of anemometer
- 2. Performance check of wind direction sensor

Methodology:

In-house method with reference anemometer (RS232 Integral Vane Digital Anemometer)

PREPARED AND CHECKED BY:

APPENDIX K ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE (EMIS)

| EIA Ref. | Recommended Mitigation Measures | Implementation |
|------------|---|----------------|
| | | Status |
| Constructi | ion Air Quality | |
| S6.5 | 8 times daily watering of the work site with active dust emitting activities. | ^ |
| S6.8 | Implementation of dust suppression measures stipulated in Air Pollution Control (Construction Dust) Regulation. The following mitigation | |
| | measures, good site practices and a comprehensive dust monitoring and audit programme are recommended to minimize cumulative dust impacts. | |
| | Stockpiling site(s) should be lined with impermeable sheeting and bunded. Stockpiles should be fully covered by impermeable sheeting to | |
| | reduce dust emission. | * |
| | Misting for the dusty material should be carried out before being loaded into the vehicle. Any vehicle with an open load carrying area should | |
| | have properly fitted side and tail boards. | ۸ |
| | Material having the potential to create dust should not be loaded from a level higher than the side and tail boards and should be dampened | |
| | and covered by a clean tarpaulin. | ۸ |
| | The tarpaulin should be properly secured and should extent at least 300 mm over the edges of the sides and tailboards. The material should | |
| | also be dampened if necessary before transportation. | * |
| | The vehicles should be restricted to maximum speed of 10 km per hour and confined haulage and delivery vehicle to designated roadways | |
| | insider the site. Onsite unpaved roads should be compacted and kept free of lose materials. | ^ |
| | Vehicle washing facilities should be provided at every vehicle exit point. | ^ |
| | The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with | ^ |
| | concrete, bituminous materials or hardcores. | ^ |
| | Every main haul road should be scaled with concrete and kept clear of dusty materials or sprayed with water so as to maintain the entire road | |
| | surface wet. | * |
| | • Every stock of more than 20 bags of cement should be covered entirely by impervious sheeting placed in an area sheltered on the top and the | |
| | three sides. | ^ |
| | Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving the construction sites. | |
| | | ^ |

| S6.8 | • | DWFI compound for JVBC: | N/A |
|------|---|---|-----|
| | | A DWFI compound is proposed at the downstream of JVC to contain pollution in drainage systems entering the KTAC and KTTS by | |
| | | interception facilities until the ultimate removal of the pollution sources. Tidal barriers and desiliting facilities will form part of the | |
| | | compounds to prevent any accumulation of sediment within the downstream section of JVBC and hence fully mitigate the potential odour | |
| | | emissions from the headspace of JVBC near the existing discharge locations. The odour generating operations within the proposed desilting | |
| | | compound will be fully enclosed and the odorous air will be collected and treated by high efficiency deodorizers before discharge to the | |
| | | atmosphere. | |
| | | Desilting compound for KTN: | N/A |
| | | Two desilting compounds are proposed for KTN (at Site 1D6 and Site 1P1) to contain pollution in drainage systems entering the KTAC and | |
| | | KTTS by interception facilities until the ultimate removal of the pollution sources. Tidal barriers and desiliting facilities will form part of the | |
| | | compounds to prevent any accumulation of sediment within the downstream section of KTN and hence fully mitigate the potential odour | |
| | | emissions from the headspace of KTN near the existing discharge locations. The odour generating operations within the proposed desilting | |
| | | compound will be fully enclosed and the odorous air will be collected and treated by high efficiency deodorizers before discharge to the | |
| | | atmosphere. | |
| | | Decking or reconstruction of KTN within apron area: | N/A |
| | | It is proposed to deck the KTN or reconstruct the KTN within the former Apron area into Kai Tak River from the south of Road D1 to the | |
| | | north of Road D2 along the existing alignment of KTN. The Kai Tak River will compose of a number of channels flowing with nonodorous | |
| | | fresh water and THEES effluent. The channel flowing with THEES effluent will be designed with the width of water surface of not more | |
| | | than 16m. | |
| | | Localised maintenance dredging: | N/A |
| | | Localised maintenance dredging should be conducted to provide water depth of not less than 3.5m over the whole of KTAC and KTTS. With | |
| | | reference to the water depth data recorded during the odour survey, only some of the areas in the northern part of KTAC (i.e. to the north of | |
| | | taxiway bridge) including the area near the northern edge of KTAC, the area near western bank of KTAC, and the area near the JVC | |
| | | discharge have water depths shallower than 3.5m. The area involved would be about 40% of the northern KTAC and the dredging depth | |
| | | required would be from about 2.7m to less than 1m. The maintenance dredging to be carried out prior to the occupation of any new | |
| | | development in the immediate vicinity of KTAC to avoid potential localized odour impacts at the future ASRs during the maintenance | |

| | dredging operation. | |
|-----------|---|-----|
| | Improvement of water circulation in KTAC and KTTS: | N/A |
| | 600m gap opening at the northern part of the former Kai Tak runway, the water circulation in KTAC and KTTS would be substantially | |
| | improved. Together with the improvement in water circulation, the DO level in KTAC and KTTS would also be increased. | |
| | In-situ sediment treatment by bioremediation: | |
| | Bioremediation would be applied to the entire KTAC and KTTS. | N/A |
| Construct | tion Noise | |
| S7.8 | Use of quiet PME, movable barriers barrier for Asphalt Paver, Breaker, Excavator and Hand-held breaker and full enclosure for Air Compressor, Bar | ٨ |
| | Bender, Concrete Pump, Generator and Water Pump. | |
| S7.9 | Good Site Practice: | |
| | Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program. | ٨ |
| | Silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction program. | ٨ |
| | Mobile plant, if any, should be sited as far away from NSRs as possible. | |
| | Machines and plant (such as trucks) that may be in intermittent use should be shut down between works periods or should be throttled down | ٨ |
| | to a minimum. | ٨ |
| | Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the | |
| | nearby NSRs. | ٨ |
| | Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction | |
| | activities. | ٨ |
| S7.9 | Scheduling of Construction Works during School Examination Period | ۸ |
| S7.8 | (i) Provision of low noise surfacing in a section of Road L2; and | N/A |
| | (ii) Provision of structural fins | N/A |
| S7.8 | (i) Avoid the sensitive façade of class room facing Road L2 and L4; and | N/A |
| | (ii) Provision of low noise surfacing in a section of Road L2 & L4 | N/A |
| | | |

| S7.8 | (i) | Provision of low noise surfacing in a section of Road L4 before occupation of Site 111; and | N/A |
|---------|-----------|---|-----|
| | (ii) | Setback of building about 5m from site boundary. | N/A |
| S7.8 | Setback | c of building about 35m to the northwest direction at 1L3 and 5m at Site 1L2. | N/A |
| S7.8 | (i) | avoid any sensitive façades with openable window facing the existing Kowloon City Road network; and Avoid the sensitive façade of | N/A |
| | | class room facing Road L2 and L4; and | |
| | (ii) | for the sensitive facades facing the To Kwa Wan direction, either setback the facades by about 5m to the northeast direction or do not | N/A |
| | | provide the facades with openable window. | |
| S7.8 | (i) | avoid any sensitive facades with openable window facing the existing To Kwa Wan Road or | N/A |
| | (ii) | provision of 17.5m high noise tolerant building fronting To Kwa Wan Road and restrict the height of the residential block(s) located at | N/A |
| | | less than 55m away from To Kwa Wan Road to no more than 25m above ground | |
| S7.8 | (i) | avoid any sensitive facades with openable window facing the slip road connecting Prince Edward Road East and San Po Kong or other | ٨ |
| | | alternative mitigation measures and at-source mitigation measures for the surrounding new local roads to minimise the potential traffic | |
| | | noise impacts from the slip road | |
| S7.8 | All the | ventilation fans installed in the below will be provided with silencers or acoustics treatment. | |
| | (i) | SPS | N/A |
| | (ii) | ESS | N/A |
| | (iii) | Tunnel Ventilation Shaft | N/A |
| | (iv) | EFTS depot | N/A |
| S7.8 | Installa | tion of retractable roof or other equivalent measures | N/A |
| Constru | ction Wat | er Quality | |
| S8.8 | The fol | lowing mitigation measures are proposed to be incorporated in the design of the SPS at KTD, including: | |
| | • | Dual power supply or emergency generator should be provided at all the SPSs to secure electrical power supply; | N/A |
| | • | Standby pumps should be provided at all SPSs to ensure smooth operation of the SPS during maintenance of the duty pumps; | N/A |
| | • | An alarm should be installed to signal emergency high water level in the wet well at all SPSs; and | |
| | • | For all unmanned SPSs, a remote monitor system connecting SPSs with the control station through telemetry system should be provided | N/A |
| | | so that swift actions could be taken in case of malfunction of unmanned facilities | N/A |

| S8.8 | Construction Phase | |
|------|--|-----|
| | Marine-based Construction | |
| | Capital and Maintenance Dredging for Cruise Terminal | |
| | Mitigation measures for construction of the proposed cruise terminal should follow those recommended in the approved EIA for CT Dredging. | N/A |
| S8.8 | Fireboat Berth, Runway Opening and Road T2 | |
| | Silt curtains should be deployed around the close grab dredger to minimize release of sediment and other contaminants for any dredging and filling activities in open water. | N/A |
| S8.8 | Dredging at and near the seawall area for construction of the public landing steps cum fireboat berth should be carried out at a maximum production | N/A |
| | rate of 1,000m³ per day using one grab dredger. | |
| S8.8 | The proposed construction method for runway opening should adopt an approach where the existing seawall at the runway will not be removed until | N/A |
| | completion of all excavation and dredging works for demolition of the runway. Thus, excavation of bulk fill and majority of the dredging works will | |
| | be carried out behind the existing seawall, and the sediment plume can be effectively contained within the works area. As there is likely some | |
| | accumulation of sediments alongside the runway, there will be a need to dredge the existing seabed after completion of all the demolition works. | |
| | Dredging alongside the 600m opening should be carried out at a maximum production rate of 2,000m³ per day using one grab dredger. | |
| 8.8 | Dredging for Road T2 should be conducted at a maximum rate of 8,000m³ per day (using four grab dredgers) whereas the sand filling should be | N/A |
| | conducted at a maximum rate of 2,000m3 per day (using two grab dredgers). | |
| 8.8 | Silt screens shall be applied to seawater intakes at WSD seawater intake. | N/A |

| S8.8 | <u>Land-based Construction</u> | |
|------|---|---|
| | Construction Runoff | |
| | Exposed soil areas should be minimised to reduce the potential for increased siltation, contamination of runoff, and erosion. Construction runoff | |
| | related impacts associated with the above ground construction activities can be readily controlled through the use of appropriate mitigation measures | |
| | which include: | |
| | use of sediment traps | ^ |
| | adequate maintenance of drainage systems to prevent flooding and overflow | ^ |
| S8.8 | Ideally, construction works should be programmed to minimise surface excavation works during the rainy season (April to September). All exposed | ^ |
| | earth areas should be completed as soon as possible after earthworks have been completed, or alternatively, within 14 days of the cessation of | |
| | earthworks where practicable. If excavation of soil cannot be avoided during the rainy season, or at any time of year when rainstorms are likely, | |
| | exposed slope surfaces should be covered by tarpaulin or other means. | |
| S8.8 | Construction site should be provided with adequately designed perimeter channel and pre-treatment facilities and proper maintenance. The | ۸ |
| | boundaries of critical areas of earthworks should be marked and surrounded by dykes or embankments for flood protection. Temporary ditches | |
| | should be provided to facilitate runoff discharge into the appropriate watercourses, via a silt retention pond. Permanent drainage channels should | |
| | incorporate sediment basins or traps and baffles to enhance deposition rates. The design of efficient silt removal facilities should be based on the | |
| | guidelines in Appendix A1 of ProPECC PN 1/94. | |
| S8.8 | Sediment tanks of sufficient capacity, constructed from pre-formed individual cells of approximately 6 to 8 m ³ capacity, are recommended as a | * |
| | general mitigation measure which can be used for settling surface runoff prior to disposal. The system capacity is flexible and able to handle | |
| | multiple inputs from a variety of sources and particularly suited to applications where the influent is pumped. | |
| S8.8 | Open stockpiles of construction materials (for examples, aggregates, sand and fill material) of more than 50 m³ should be covered with tarpaulin or | ۸ |
| | similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any | |
| | drainage system. | |
| S8.8 | Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent silt, construction | ۸ |
| | materials or debris being washed into the drainage system and storm runoff being directed into foul sewers. | |
| S8.8 | Precautions to be taken at any time of year when rainstorms are likely, actions to be taken when a rainstorm is imminent or forecast, and actions to | ۸ |
| | be taken during or after rainstorms are summarised in Appendix A2 of ProPECC PN 1/94. Particular attention should be paid to the control of silty | |

| | surface runoff during storm events. | |
|------|--|--------|
| S8.8 | Oil interceptors should be provided in the drainage system and regularly cleaned to prevent the release of oils and grease into the storm water | N/A(1) |
| | drainage system after accidental spillages. The interceptor should have a bypass to prevent flushing during periods of heavy rain. | |
| S8.8 | All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on | ٨ |
| | roads. An adequately designed and located wheel washing bay should be provided at every site exit, and wash-water should have sand and silt | |
| | settled out and removed at least on a weekly basis to ensure the continued efficiency of the process. The section of access road leading to, and | |
| | exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking | |
| | of soil and silty water to public roads and drains. | |
| S8.8 | Drainage | |
| | | |
| | It is recommended that on-site drainage system should be installed prior to the commencement of other construction activities. Sediment traps | ٨ |
| | should be installed in order to minimise the sediment loading of the effluent prior to discharge into foul sewers. There should be no direct discharge | |
| | of effluent from the site into the sea | |
| S8.8 | All temporary and permanent drainage pipes and culverts provided to facilitate runoff discharge should be adequately designed for the controlled | ٨ |
| | release of storm flows. All sediment control measures should be regularly inspected and maintained to ensure proper and efficient operation at all | |
| | times and particularly following rain storms. The temporarily diverted drainage should be reinstated to its original condition when the construction | |
| | work has finished or the temporary diversion is no longer required. | |
| S8.8 | All fuel tanks and storage areas should be provided with locks and be located on sealed areas, within bunds of a capacity equal to 110% of the | ٨ |
| | storage capacity of the largest tank, to prevent spilled fuel oils from reaching the coastal waters of the Victoria Harbour WCZ. | |
| S8.8 | Sewage Effluent | |
| | | |
| | Construction work force sewage discharges on site are expected to be connected to the existing trunk sewer or sewage treatment facilities. The | ٨ |
| | construction sewage may need to be handled by portable chemical toilets prior to the commission of the on-site sewer system. Appropriate numbers | |
| | of portable toilets should be provided by a licensed contractor to serve the large number of construction workers over the construction site. The | |
| | Contractor should also be responsible for waste disposal and maintenance practices. | |

| S8.8 | Stormwater Discharges | |
|------|--|-----|
| | | |
| | Minimum distances of 100 m should be maintained between the existing or planned stormwater discharges and the existing or planned seawater | ٨ |
| | intakes | |
| S8.8 | Debris and Litter | |
| | | |
| | In order to maintain water quality in acceptable conditions with regard to aesthetic quality, contractors should be required, under conditions of | ٨ |
| | contract, to ensure that site management is optimised and that disposal of any solid materials, litter or wastes to marine waters does not occur | |
| S8.8 | Construction Works at or in Close Proximity of Storm Culvert or Seafront | |
| | | |
| | The proposed works should preferably be carried out within the dry season where the flow in the drainage channel /storm culvert/ nullah is low. | ٨ |
| S8.8 | The use of less or smaller construction plants may be specified to reduce the disturbance to the bottom sediment at the drainage channel /storm | ۸ |
| | culvert / nullah. | |
| S8.8 | Temporary storage of materials (e.g. equipment, filling materials, chemicals and fuel) and temporary stockpile of construction materials should be | ٨ |
| | located well away from any water courses during carrying out of the construction works | |
| S8.8 | Stockpiling of construction materials and dusty materials should be covered and located away from any water courses. | ۸ |
| S8.8 | Construction debris and spoil should be covered up and/or disposed of as soon as possible to avoid being washed into the nearby water receivers. | ^ |
| S8.8 | Construction activities, which generate large amount of wastewater, should be carried out in a distance away from the waterfront, where practicable. | ٨ |
| S8.8 | Mitigation measures to control site runoff from entering the nearby water environment should be implemented to minimize water quality impacts. | ٨ |
| | Surface channels should be provided along the edge of the waterfront within the work sites to intercept the runoff. | |
| S8.8 | Construction effluent, site run-off and sewage should be properly collected and/or treated. | ٨ |
| S8.8 | Any works site inside the storm water courses should be temporarily isolated, such as by placing of sandbags or silt curtains with lead edge at | N/A |
| | bottom and properly supported props to prevent adverse impact on the storm water quality. | |
| S8.8 | Silt curtain may be installed around the construction activities at the seafront to minimize the potential impacts due to accidental spillage of | N/A |
| | construction materials. | |
| S8.8 | Proper shoring may need to be erected in order to prevent soil/mud from slipping into the storm culvert/drainage channel/sea. | N/A |

| S8.8 | Supervisory staff should be assigned to station on site to closely supervise and monitor the works | ۸ |
|---------|--|-----|
| S8.8 | Marine water quality monitoring and audit programme shall be implemented for the proposed sediment treatment operation. | N/A |
| Constru | ction Waste Management | |
| S9.5 | Good Site Practices | |
| | It is not anticipated that adverse waste management related impacts would arise, provided that good site practices are adhered to. Recommendations | |
| | for good site practices during the dredging activities include: | |
| | Nomination of an approved person, such as a site manager, be responsible for good site practices, arrangements for collection and effective | ٨ |
| | disposal to an appropriate facility, of all wastes generated at the site. | |
| | Training of site personnel in proper waste management and chemical waste handling procedures. | ٨ |
| | Provision of sufficient waste disposal points and regular collection for disposal. | ٨ |
| | Appropriate measure to minimize windblown litter and dust during transportation of waste by either covering trucks or by transporting | ٨ |
| | wastes in enclosed containers. | |
| | A recording system for the amount of wastes generated, recycled and disposed of (including the disposal sites). | ٨ |
| S9.5 | Waste Reduction Measures | |
| | Good management and control can prevent the generation of a significant amount of waste. Waste reduction is best achieved at the planning and | |
| | design stage, as well as by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include: | |
| | Sort C&D waste from demolition of the remaining structures to recover recyclable portions such as metals | |
| | Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and | ۸ |
| | their proper disposal | ٨ |
| | Encourage collection of aluminium cans, PET bottles and paper by providing separate labelled bins to enable these wastes to be segregated | |
| | from other general refuse generated by the work force | ۸ |
| | Any unused chemicals or those with remaining functional capacity should be recycled | |
| | Proper storage and site practices to minimise the potential for damage or contamination of construction materials | ٨ |

| S9.5 | Dredged Marine Sediment | |
|------|---|-----|
| | The basic requirements and procedures for dredged mud disposal are specified under the ETWB TCW No. 34/2002. The management of the | N/A |
| | dredging, use and disposal of marine mud is monitored by the MFC, while the licensing of marine dumping is required under the Dumping at Sea | |
| | Ordinance and is the responsibility of the Director of Environmental Protection (DEP) | |
| S9.5 | The dredged marine sediments would be loaded onto barges and transported to the designated disposal sites allocated by the MFC depending on | N/A |
| | their level of contamination. Sediment classified as Category L would be suitable for Type 1 - Open Sea Disposal. Contaminated sediment would | |
| | require either Type 1 – Open Sea Disposal (Dedicated Sites), Type 2 - Confined Marine Disposal, or Type 3 – Special Treatment / Disposal and must | |
| | be dredged and transported with great care in accordance with ETWB TCW No. 34/2002. Subject to the final allocation of the disposal sites by | |
| | MFC, the dredged contaminated sediment must be effectively isolated from the environment and disposed properly at the designated disposal site | |
| S9.5 | It will be the responsibility of the contractor to satisfy the appropriate authorities that the contamination levels of the marine sediment to be dredged | |
| | have been analysed and recorded. According to the ETWB TCW No. 34/2002, this will involve the submission of a formal Sediment Quality Report | |
| | to the DEP, prior to the dredging contract being tendered. The contractor for the dredging works should apply for allocation of marine disposal sites | |
| | and all necessary permits from relevant authorities for the disposal of dredged sediment. During transportation and disposal of the dredged marine | |
| | sediments requiring Type 1, Type 2, or Type 3 disposal, the following measures should be taken to minimise potential impacts on water quality: | |
| | Bottom opening of barges should be fitted with tight fitting seals to prevent leakage of material. Excess material should be cleaned from the | |
| | decks and exposed fittings of barges and hopper dredgers before the vessel is moved | N/A |
| | Monitoring of the barge loading should be conducted to ensure that loss of material does not take place during transportation. Transport | |
| | barges or vessels should be equipped with automatic selfmonitoring devices as required under the Dumping at Sea Ordinance and as | N/A |
| | specified by the DEP | |
| | Barges or hopper barges should not be filled to a level that would cause the overflow of materials or sediment laden water during loading or | |
| | transportation | N/A |
| S9.5 | Construction and Demolition Material | |
| | Mitigation measures and good site practices should be incorporated into contract document to control potential environmental impact from handling | |
| | and transportation of C&D material. The mitigation measures include: | |
| | Where it is unavoidable to have transient stockpiles of C&D material within the Project work site pending collection for disposal, the | ^ |

| | transient stockpiles should be located away from waterfront or storm drains as far as possible | |
|------|---|---|
| | • Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric | ٨ |
| | Skip hoist for material transport should be totally enclosed by impervious sheeting | ٨ |
| | • Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving a construction site | ٨ |
| | • The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with | ٨ |
| | concrete, bituminous materials or hardcores | |
| | The load of dusty materials carried by vehicle leaving a construction site should be covered entirely by clean impervious sheeting to ensure | ٨ |
| | dust materials do not leak from the vehicle | |
| | All dusty materials should be sprayed with water prior to any loading, unloading or transfer operation so as to maintain the dusty materials | ٨ |
| | wet | |
| | The height from which excavated materials are dropped should be controlled to a minimum practical height to limit fugitive dust generation | ٨ |
| | from unloading | |
| | | |
| | When delivering inert C&D material to public fill reception facilities, the material should consist entirely of inert construction waste and of size less | ٨ |
| | than 250mm or other sizes as agreed with the Secretary of the Public Fill Committee. In order to monitor the disposal of the surplus C&D material | |
| | at the designed public fill reception facility and to control fly tipping, a trip-ticket system as stipulated in the ETWB TCW No. 31/2004 "Trip Ticket | |
| | System for Disposal of Construction and Demolition Materials" should be included as one of the contractual requirements and implemented by an | |
| | Environmental Team undertaking the Environmental Monitoring and Audit work. An Independent Environmental Checker should be responsible for | |
| | auditing the results of the system. | |
| S9.5 | Chemical Waste | |
| | | |
| | After use, chemical wastes (for example, cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on | ^ |
| | the Packaging, Labelling and Storage of Chemical Wastes. Spent chemicals should be collected by a licensed collector for disposal at the CWTF or | |
| | other licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation | |
| | | |

| S9.5 | General R | Refuse | |
|------------|------------|--|--------|
| | | | |
| | General re | efuse should be stored in enclosed bins or compaction units separate from C&D material. A licensed waste collector should be employed by | * |
| | the contra | actor to remove general refuse from the site, separately from C&D material. Effective collection and storage methods (including enclosed | |
| | and cover | red area) of site wastes would be required to prevent waste materials from being blown around by wind, wastewater discharge by flushing | |
| | or leachin | g into the marine environment, or creating odour nuisance or pest and vermin problem | |
| Constructi | ion Lands | scape and Visual | |
| S13.9 | CM1 | All existing trees should be carefully protected during construction. | ^ |
| | CM2 | Trees unavoidably affected by the works should be transplanted where practical. Detailed transplanting proposal will be submitted to | ^ |
| | | relevant government departments for approval in accordance with ETWBC 2/2004 and 3/2006. Final locations of transplanted trees | |
| | | should be agreed prior to commencement of the work. | |
| | CM3 | Control of night-time lighting. | N/A(1) |
| | CM4 | Erection of decorative screen hoarding. | ^ |

Remarks:

| ^ | Compliance of mitigation measure |
|--------|--|
| * | Recommendations were made during site audits but improved/rectified by the Contractor |
| # | Recommendations were made during site audits but has not yet been improved/rectified by the Contractor |
| • | Non-compliance but rectified by the Contractor |
| X | Non-compliance of mitigation measure |
| N/A | Not Applicable at this stage |
| N/A(1) | Not observed |

APPENDIX L
SUMMARIES OF ENVIRONMENTAL
COMPLAINT, WARNING, SUMMON
AND NOTIFICATION OF SUCCESSFUL
PROSECUTION

Contract No. KLN/2016/04 Environmental Monitoring Works for Contract No. KL/2015/02 Kai Tak Development – Stage 5A Infrastructure at Former North Apron Area

Appendix L – Summary of environmental complaint, warning, summon and notification of successful prosecution

Complaint Log

| EPD Complaint Ref No. | Location | Received Date | Details of Complaint | Investigation/Mitigation Action | Status |
|-----------------------------|---------------------------------------|-----------------|--|---|--------|
| 17-34438 | Dakota Drive and Olympic Avenue | 23 October 2017 | The complainant concerned about the dust emission when vehicle running on the dry surface outside Dakota Drive and Olympic Avenue. In addition, vehicles were not clear enough before leaving the construction site. | In accordance with the information gathered in the investigation, construction activities were conducted with proper mitigation measures to minimize the dust impact arise from the construction site to the vicinity of this Project. Regular water spraying was provided to haul roads and unpaved areas within the site areas to reduce the dust impact arise from the construction site to the vicinity of this Project. The Contractor had also ensured vehicles and plants were wheel washed to be cleaned of mud and debris before leaving the construction site area. Therefore, the complaint is considered as non-project related. The following recommendations were made to further enhance the mitigation measures: • Where practicable, to provide sheltered area on the top and three sides for stockpiles of dusty materials, or perform frequent water spraying so as to maintain the entire surface wet; • Frequent checking and repair the gaps or broken tarpaulin sheets; and • To provide a hard-surfaced road between any cleaning facility and the public Road | Closed |

Remarks: No complaint was received in the reporting month.

Notes:

- (1) The performance targets are given in PS clause 6(14).
- (2) The waste flow table shall also include C & D materials that are specified in the Contract to be imported for use at the Site.
- (3) Plastics refer to plastic bottles/ containers, plastic sheets/ foam from packaging material.
- (4) The Contractor shall also submit the latest forcast of the total amount of C&D materials exected to be generated from the Works, together with a braskdown of the nature where the total amount of C&D materials expected to be generated from the Works is equal to or excreeding 50,00 m³. (PS Cleuse 25.02A(7) refers).
