# **EXECUTIVE SUMMARY**

#### Introduction

- This is the 23<sup>rd</sup> Monthly Environmental Monitoring and Audit (EM&A) Report prepared by Cinotech Consultants Ltd. for "Contract No. KL/2012/03 - Kai Tak Development –Stage 4 Infrastructure at Former North Apron Area" (Hereafter referred to as "the Project"). This contract comprises the construction of Schedule 2 Designated Projects (DP) Road D2 & Sewage Pumping Station PS2 and PS NPS which forms a part of the works under two Environmental Permits (EP), EP-337/2009 and EP-344/2009. The title of the designated projects under Environmental Permit No.: EP-344/2009 is "New sewage pumping stations serving Kai Tak Development" and under Environmental Permit No.: EP-337/2009 is "New distributor roads serving the planned Kai Tak Development". This report documents the findings of EM&A Works conducted from 1 to 31 October 2015.
- 2. The major site activities undertaken in the reporting month included:
  - Base slab, wall, roof construction of Box culvert B5;
  - Backfilling of box culvert B5
  - Excavation of trench for sewers;
  - Excavation for NPS for Portion 4 and Box culvert B6;
  - Strut and waling of NPS;
  - Installation of DN750 drainage pipe and sewer at L19;
  - Installation of precast box culvert B6;
  - Installation of DCS;
  - Fixing of reinforcement and concreting to walls and slab of pumping station for PS2;
  - Laying concrete pipes DN750 from FMH10\_345 to FHH10\_350;
  - Construction of jacking pits 10, 11, 3 & 4; and
  - Widening works of Sung Wong Toi Road.

# **Environmental Monitoring Works**

- 3. Environmental monitoring for the Project was performed in accordance with the EM&A Manual and the monitoring results were checked and reviewed. Site Inspections/Audits were conducted once per week. The implementation of the environmental mitigation measures, Event Action Plans and environmental complaint handling procedures were also checked.
- 4. Summary of the breaches of action and limit levels in the reporting month for the Project is tabulated in **Table I**.

Parameter	No. of Project-related Exceedance		Action Taken
1 al alletel	Action Level	Limit Level	Action Taken
1-hr TSP	0	0	N/A
24-hr TSP	0	0	N/A
Noise	0	0	N/A

1-hour & 24-hour TSP Monitoring

- 5. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 6. All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

#### Construction Noise Monitoring

7. All construction noise monitoring was conducted as scheduled in the reporting month. No Action and Limit Level exceedance was recorded.

#### **Environmental Licenses and Permits**

- 8. Licenses/Permits granted to the Project include the Environmental Permit (EP) for the Project, Environmental Permits No. EP-344/2009 and EP-337/2009 were issued on 23 April 2009.
- 9. Registration of Chemical Waste Producer (Waste Producer Number: 5213-286-K2958-05).
- 10. Water Discharge License (WT00020971-2015).

# Key Information in the Reporting Month

11. Summary of complaint received, reporting changes and notifications of any summons and successful prosecutions in the reporting month is tabulated in **Table II**.

Event	Event Details		Action Taken	Status	Remark
	Number	Nature			
Complaint received	0		N/A	N/A	
Reporting Changes	0		N/A	N/A	
Notifications of any summons & prosecutions received	0		N/A	N/A	

#### Table II Summary Table for Key Information in the Reporting Month

#### **Future Key Issues**

- 12. The future key environmental issues in the coming month include:
  - Dust generation from stockpiles of dusty materials, exposed site area, excavation works and rock breaking activities;
  - Water spraying for dust generating activity and on haul road;
  - Proper storage of construction materials on site;
  - Storage of chemicals/fuel and chemical waste/waste oil on site;
  - Accumulation of general and construction waste on site;
  - Noise from operation of the equipment, especially for rock-breaking activities, piling works and machinery on-site; and
  - Review and implementation of temporary drainage system for the surface runoff.

# 1. INTRODUCTION

#### Background

- 1.1 The Kai Tak Development (KTD) is located in the south-eastern part of Kowloon Peninsula, comprising the apron and runway areas of the former Kai Tak Airport and existing waterfront areas at To Kwa Wan, Ma Tau Kok, Kowloon Bay, Kwun Tong and Cha Kwo Ling. It covers a land area of about 328 hectares. Stage 4 Infrastructure at Former North Apron Area is one of the construction stages of KTD. Schedule 2 DPs in this Project include new distributor roads serving the planned KTD and new sewage pumping stations serving the planned KTD. The general layout of the Project is shown in **Figure 1**.
- 1.2 Two Environmental Permits (EPs) No. EP-344/2009 and EP-337/2009 were also issued to the Permit Holder Civil Engineering and Development Department on 23 April 2009 for new sewage pumping stations serving the planned KTD and new distributor roads serving the planned KTD respectively.
- 1.3 A study of environmental impact assessment (EIA) was undertaken to identify the key issues of air quality, noise, water quality, waste, land contamination, cultural heritage and landscape and visual impact, and recommend possible mitigation measures associated with the works. The EIA Report (Register No. AEIAR-130/2009) was approved by the Environmental Protection Department (EPD) on 4 April 2009.
- 1.4 Cinotech Consultants Limited (Cinotech) is commissioned by Kwan On Construction Co., Ltd. (the Contractor) to undertake the role of the Environmental Team (ET) for the Contract No. KL/2012/03 Stage 4 Infrastructure at Former North Apron Area. The construction work under KL/2012/03 comprises the construction of Road D2 & Sewage Pumping Station PS2 and PS NPS which forms a part of the works under two EPs (EP-337/2009 and EP-344/2009).
- 1.5 The construction commencement of this Contract was on 1<sup>st</sup> December 2013 for Road D2, Sewage Pumping Station PS2 and PS NPS. This is the 23<sup>rd</sup> Monthly EM&A report summarizing the EM&A works for the Project from 1 to 31 October 2015.

# **Project Organizations**

- 1.6 Different parties with different levels of involvement in the project organization include:
  - Project Proponent Civil Engineering and Development Department (CEDD).
  - The Engineer and the Engineer's Representative (ER) AECOM.
  - Environmental Team (ET) Cinotech Consultants Limited (CCL).
  - Independent Environmental Checker (IEC) Hyder Consulting Limited. (Hyder).
  - Contractor Kwan On Construction Co., Ltd. (Kwan On).

#### 1.7 The key contacts of the Project are shown in Table 1.1 and Figure 5.

Table 1.1	Ke	ey Project Contacts			
Party	Role	Contact Person	Position	Phone No.	Fax No.
CEDD	Project Proponent	Mr. Roger Wong	Senior Engineer	2301 1174	2301 1277
AECOM	Engineer's	Mr. John Yam	SRE	2798 0771	3013 8864
ALCOM	Representative	Mr. Ivan Yim	RE	2798 0771	3013 8804
	Cinotech Environmental Team	Dr. Priscilla Choy	Environmental Team Leader	2151 2089	
Cinotech		Ms. Ivy Tam	Project Coordinator and Audit Team Leader	2151 2090	3107 1388
Hyder	Independent Environmental Checker	Mr. Wong Fu Nam	Independent Environmental Checker	2911 2744	2805 5028
Kwan On	Contractor	Mr. Terry Yu	Site Agent	3689 7752 6146 676 telephone nut	

#### **Construction Activities undertaken during the Reporting Month**

- 1.8 The site activities undertaken in the reporting month included:
  - Daily Clearance; •
  - Base slab, wall, roof construction of Box culvert B5; •
  - Backfilling of box culvert B5 •
  - Excavation of trench for sewers; •
  - Excavation for NPS for Portion 4 and Box culvert B6; •
  - Strut and waling of NPS: •
  - Installation of DN750 drainage pipe and sewer at L19; •
  - Installation of precast box culvert B6; •
  - Installation of DCS; •
  - Fixing of reinforcement and concreting to walls and slab of pumping station for PS2;
  - Laying concrete pipes DN750 from FMH10\_345 to FHH10\_350; •
  - Construction of jacking pits 10, 11, 3 & 4; and •
  - Widening works of Sung Wong Toi Road. •
- 1.9 The construction programme showing the inter-relationship with environmental protection/mitigation measures is presented in Table 1.2.

# Table 1.2 Construction Programme Showing the Inter-Relationship with Environmental Protection/Mitigation Measures

Construction Works	Generated Major Environmental Impact	Control Measures
Daily Clearance	N/A	N/A
Excavation of trench for sewers; Excavation for NPS for Portion 4 and Box culvert B6.	Dust, Water Quality	<ul> <li>Sufficient watering of the works site with active dust emitting activities;</li> <li>Properly cover the stockpiles;</li> <li>Appropriate desilting/sedimentation devices provided on site for treatment before discharge;</li> <li>Well maintain the drainage system to prevent the spillage of wastewater during heavy rainfall; and</li> <li>On-site waste sorting and implementation of trip ticket system.</li> </ul>
Base slab , wall and roof slab construction for B5	Noise, Waste Management	<ul> <li>Use of quiet plant and well-maintained construction plant; and</li> <li>Provide hoarding.</li> <li>Good management and control on construction waste reduction</li> </ul>
Road widening works for Sun Wong Tai Road; Strut and waling of NPS; Fixing of	Noise	<ul> <li>Use of quiet plant and well-maintained construction plant; and</li> <li>Provide hoarding.</li> </ul>
reinforcement and concreting to walls and slab of pumping station for PS2	Noise	<ul> <li>Use of quiet plant and well-maintained construction plant; and</li> <li>Provide hoarding.</li> </ul>
Installation of DN750 drainage pipe and sewer at L19, precast box culvert B6 and DCS; Laying concrete pipes DN750 from FMH10_345 to FHH10_350; Construction of jacking pits 10, 11, 3 & 4	Noise, Water Quality	<ul> <li>Use of quiet plant and well-maintained construction plant; and</li> <li>Well maintain the drainage system to prevent the spillage of wastewater during heavy rainfall.</li> </ul>

# Summary of EM&A Requirements

- 1.10 The EM&A programme requires construction noise monitoring, air quality monitoring, landscape and visual monitoring and environmental site audit. The EM&A requirements for each parameter are described in the following sections, including:
- All monitoring parameters;
- Action and Limit levels for all environmental parameters;
- Event Action Plans;
- Environmental requirements and mitigation measures, as recommended in the EM&A Manual under the EP.
- 1.11 The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 6 of this report.
- 1.12 This report presents the implementation of the EM&A programme for the Project from 1 to 31 October 2015.

1.13 Air quality monitoring stations within 500m and noise monitoring stations within 300m from the boundary of this Project are considered as relevant monitoring locations. In such regard, the relevant air quality and noise monitoring locations are tabulated in **Table 1.3** (see **Figure 2 and 3** for their locations).

	-	
Locations	Monitoring Stations In accordance with EM&A Manual	Alternative Monitoring Stations
Air Quality Monitoring Stations		
AM2 - Lee Kau Yan Memorial School	Yes	N/A
AM3 – Sky Tower	No	AM3(A) – Holy Trinity Bradbury Centre
AM4 – Grand Waterfront	No	AM4(A) – EMSD Workshop
AM5 – CCC Kei To Secondary School	No	AM5(A) – Po Leung Kuk Ngan Po Ling College
AM6 – Site 1B4 (Planned)		N/A
Noise Monitoring Stations		
M6 – Holy Carpenter Primary School	No	M6(A) – Oblate Primary School
M7 – CCC Kei To Secondary School	Yes	N/A
M8 – Po Leung Kuk Ngan Po Ling College	Yes	N/A
M9 – Tak Long Estate	Yes	N/A
M10 – Site 1B4 (Planned)		N/A

Table 1.3	Air Ouality and Noise	Monitoring S	Stations for this Project

Remarks:

"Yes" - Monitoring station is the same as that stated in EM&A Manual

> No - Monitoring station is not the same as that stated in EM&A Manual. Request for carrying monitoring works at the monitoring stations stated in EM&A Manual was rejected by owner of premise. Alternative monitoring stations were proposed by the ET of Schedule 3 EIA and approved by the EPD.

> N/A - No alternative monitoring station is required.

1.14 According to the Environmental Monitoring and Audit Manual (EM&A Manual) of the Kai Tak Development (KTD) Schedule 3 Environmental Impact Assessment (EIA) Report, the impact monitoring at the designated monitoring stations as required in KTD EM&A Manual under the EP, has been conducted in Environmental Monitoring Works for Kai Tak Development under Schedule 3 of KTD, which is on-going starting from December 2010. The impact monitoring data under Schedule 3 of KTD will be adopted for the Project. Therefore, this report presents the air quality and noise monitoring works extracted from Schedule 3 of KTD.

#### Status of Compliance with Environmental Permits Conditions

1.15 The status of required submission related to this Project under the Environmental Permits No. EP-337/2009 and EP-344/2009 is summarized in the **Table 1.4** and **Table 1.5** respectively:

EP Conditions	Submission	Submission Date	Remark
1.11	Notification of Commencement Date of Construction of Project	31 October 2013	For Road D2
2.3	Management Organization of Main Construction Companies	31 October 2013	For Contract No. KL/2012/03
2.4	Design Drawing(s) of the Project	28 October 2013	For Road D2
2.11	Landscape Mitigation Plan(s) for distributors road(s)	7 January 2014	For Road D2
2.12	As-built drawing(s) for the distributor road(s)	To be submitted at least one commencement of operation	
3.2	Baseline Monitoring Report	26 November 2010 (Part I) 24 December 2010 (Part II)	/
3.3	Four hard copies and one electronic copy of the Monthly EM&A Report No.22 (September 2015)	29 October 2015	Monthly EM&A Report for Contract No. KL/2012/03

 Table 1.4
 Summary Table for Required Submission under EP No. EP-337/2009

#### Table 1.5 Summary Table for Required Submission under EP No. EP-344/2009

EP Conditions	Submission	Submission Date	Remark
1.11	Notification of Commencement Date of Construction of Project	31 October 2013	For Pumping Station PS2 and PS NPS
2.3	Management Organization of Main Construction Companies	31 October 2013	For Contract No. KL/2012/03
2.4	Design Drawing(s) of the Project	28 October 2013	For Pumping Station PS2 and PS NPS
2.11	Landscape Mitigation Plan(s) for sewage pumping station(s)	7 January 2014	For Pumping Station PS2 and PS NPS
2.12	As-built drawing(s) for the sewage pumping station (s)	To be submitted at least one commencement of operation	
3.2	Baseline Monitoring Report	26 November 2010 (Part I) 24 December 2010 (Part II)	/
3.3	Four hard copies and one electronic copy of the Monthly EM&A Report No.22 (September 2015)	29 October 2015	Monthly EM&A Report for Contract No. KL/2012/03

# 2. AIR QUALITY

# **Monitoring Requirements**

2.1 According to EM&A Manual under the EPs, 1-hour and 24-hour Total Suspended Particulates (TSP) monitoring were conducted to monitor the air quality for this Project. For regular impact monitoring, a sampling frequency of at least once in every six days at all of the monitoring stations for 24-hour TSP monitoring. For 1-hour TSP monitoring, the sampling frequency of at least three times in every six days shall be undertaken when the highest dust impact occurs. **Appendix A** shows the established Action/Limit Levels for the environmental monitoring works.

# **Monitoring Locations**

2.2 Five designated monitoring stations were selected for air quality monitoring programme. Impact dust monitoring was conducted at four of the air quality monitoring stations (AM2, AM3(A), AM4(A) and AM5(A)). **Table 2.1** describes the air quality monitoring locations, which are also depicted in **Figure 2**.

Monitoring Stations	Locations	Location of Measurement
AM2	Lee Kau Yan Memorial School	Rooftop (about 8/F) Area
AM3(A)	Holy Trinity Bradbury Centre	Rooftop (about 8/F) Area
AM4(A)	EMSD Workshops	Rooftop (about 6/F) Area
AM5(A)	Po Leung Kuk Ngan Po Ling College	Rooftop (about 10/F) Area
#AM6	PA 15	Site 1B4 (Planned)

Table 2.1Locations for Air Quality Monitoring

Remarks: # The impact monitoring at these locations will only be carried out until the sensitive receivers at the building are resided.

# **Monitoring Equipment**

2.3 **Table 2.2** summarizes the equipment used in the impact air monitoring programme. Copies of calibration certificates and laboratory accreditation are attached in **Appendix B**.

Equipment	Model and Make	Quantity
Calibrator	G25A	1
1-hour TSP Dust Meter	Laser Dust Monitor – Model LD-3 & LD-3B, AEROCET-531	8
	Hal Technology Model Hal-HPC300	1
HVS Sampler	GMWS 2310 c/w of TSP sampling inlet	4
Wind Anemometer	Davis Weather Monitor II, Model no. 7440	1

 Table 2.2
 Air Quality Monitoring Equipment

# **Monitoring Parameters, Frequency and Duration**

2.4 Table 2.3 summarizes the monitoring parameters and frequencies of impact dust monitoring for the whole construction period. The air quality monitoring schedule for the reporting month is shown in **Appendix D**.

#### Table 2.3 Impact Dust Monitoring Parameters, Frequency and Duration

Parameters	Frequency	
1-hr TSP	At least three times every 6 days	
24-hr TSP	At least once every 6 days	

Monitoring Methodology and Quality Assurance and Quality Control (QA/QC) Procedure

#### 1-hour TSP Monitoring

#### Measuring Procedures

- 2.5 The measuring procedures of the 1-hour dust meters were in accordance with the Manufacturer's Instruction Manual as follows:
  - The 1-hour dust meter is placed at least 1.3 meters above ground.
  - Set POWER to "ON" and make sure that the battery level was not flash or in low level.
  - Allow the instrument to stand for about 3 minutes and then the cap of the air sampling inlet has been released.
  - Push the knob at MEASURE position.
  - Set time/mode setting to [BG] by pushing the time setting switch. Then, start the background measurement by pushing the start/stop switch once. It will take 6 sec. to complete the background measurement.
  - Push the time setting switch to change the time setting display to [MANUAL] at the bottom left of the liquid crystal display. Finally, push the start/stop switch to stop the measuring after 1 hour sampling.
  - Information such as sampling date, time, count value and site condition were recorded during the monitoring period.

#### Maintenance/Calibration

- 2.6 The following maintenance/calibration was required for the direct dust meters:
  - Check and calibrate the meter by High-Volume Sampler (HVS) to check the validity and accuracy of the results measured by direct reading method at 2-month intervals throughout all stages of the air quality monitoring.

24-hour TSP Monitoring

#### Instrumentation

2.7 High volume samplers (HVS) (Model GMWS-2310 Accu-Vol) completed with appropriate sampling inlets were employed for 24-hour TSP monitoring. The sampler was composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complied with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50). Moreover, the HVS also met all the requirements in section 2.5 of the updated EM&A Manual.

### Operating/Analytical Procedures

- 2.8 Operating/analytical procedures for the operation of HVS were as follows:
  - A horizontal platform was provided with appropriate support to secure the samplers against gusty wind.
  - No two samplers were placed less than 2 meters apart.
  - The distance between the sampler and an obstacle, such as buildings, was at least twice the height that the obstacle protrudes above the sampler.
  - A minimum of 2 meters of separation from walls, parapets and penthouses was required for rooftop samples.
  - A minimum of 2 meters separation from any supporting structure, measured horizontally was required.
  - No furnaces or incineration flues were nearby.
  - Airflow around the sampler was unrestricted.
  - The sampler was more than 20 meters from the drip line.
  - Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring.
- 2.9 Prior to the commencement of the 24-hour TSP sampling, the flow rate of the high volume sampler was properly set (between 1.1 m<sup>3</sup>/min. and 1.4 m<sup>3</sup>/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50.
- 2.10 For 24-hour TSP sampling, fiberglass filters having a collection efficiency of  $\ge 99\%$  for particles of 0.3µm (DOP) diameter were used.
- 2.11 The power supply was checked to ensure the sampler worked properly. On sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air monitoring station.
- 2.12 The filter holding frame was then removed by loosening the four nuts and a weighted and conditioned filter was carefully centered with the stamped number upwards, on a supporting screen.
- 2.13 The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- 2.14 The shelter lid was closed and secured with the aluminum strip.

- 2.15 The timer was then programmed so that the TSP will be sampled for 24 hours. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
- 2.16 After completion of sampling, the filter was removed and sent to Wellab Ltd., which is accredited under HOKLAS for laboratory analysis. The elapsed time was also recorded.
- 2.17 Before weighing, all filters were equilibrated in a conditioning environment for 24 hours. The conditioning temperature should be between 25°C and 30°C and not vary by more than  $\pm 3$ °C; the relative humidity (RH) should be < 50% and not vary by more than  $\pm 5\%$ . A convenient working RH is 40%.

#### Maintenance/Calibration

- 2.18 The following maintenance/calibration was required for the HVS:
  - The high volume motors and their accessories were properly maintained. Appropriate maintenance such as routine motor brushes replacement and electrical wiring checking were made to ensure that the equipment and necessary power supply are in good working condition.
  - High volume samplers were calibrated at bi-monthly intervals using G25A Calibration Kit throughout all stages of the air quality monitoring.
  - Orifice Transfer Standards were calibrated at yearly intervals throughout all stages of the air quality monitoring.

# **Results, Observations and Action/Limit Level Exceedance**

- 2.19 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 2.20 All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 2.21 The air temperature, precipitation and the relative humidity data were obtained from Hong Kong Observatory where the wind speed and wind direction were recorded by the installed Wind Anemometer set at rooftop (about 8/F) Lee Kau Yan Memorial School. The location is shown in **Figure 4**. This weather information for the reporting month is summarized in **Appendix C.**
- 2.22 The monitoring data and graphical presentations of 1-hour and 24-hour TSP monitoring results are shown in **Appendices E and F** respectively.
- 2.23 The summary of exceedance record in the reporting month is shown in **Appendix H**. No exceedance in Action/Limit Levels of 1-hour and 24-hour TSP was recorded for the air quality monitoring.

2.24 According to our field observations, the major dust source identified at the designated air quality monitoring stations is as follows:

Table 2.4	Major dust source identified at the designated air quality monitoring
stations	

Station	Major Dust Source
AM2 – Lee Kau Yan Memorial School	Road Traffic Dust
	Exposed site area and open stockpiles
	Site vehicle movement
AM3(A) – Holy Trinity Bradbury	Road Traffic Dust
Centre	Exposed site area
	Excavation works
	Site vehicle movement
AM4(A) – EMSD Workshops	Site vehicle movement
AM5(A) – Po Leung Kuk Ngan Po	Road Traffic Dust
Ling College	Excavation works at the site (Contract No.:
	1/WSD/14(K)) facing Po Leung Kuk Ngan Po
	Ling College

# 3. NOISE

# **Monitoring Requirements**

3.1 According to EM&A Manuals under the EP, construction noise monitoring was conducted to monitor the construction noise arising from the construction activities within KTD. The regular monitoring frequency for each monitoring station shall be on a weekly basis to conduct one set of measurements between 0700 and 1900 hours on normal weekdays. Appendix A shows the established Action and Limit Levels for the environmental monitoring works.

# **Monitoring Locations**

- 3.2 Five designated monitoring stations were selected for noise monitoring programme. Noise monitoring was conducted at four designated monitoring stations (M6, M7, M8 and M9). **Figure 3** shows the locations of these stations.
- 3.3 Construction noise monitoring at Station M6 Holy Carpenter Primary School was rejected by the premise owner on 6<sup>th</sup> October 2014. The monitoring station has been relocated at a proposed alternative noise monitoring station M6(A) Oblate Primary School since 10<sup>th</sup> October 2014 to carry out the monitoring works.

Monitoring Stations	Locations	Location of Measurement	
*M6(A)	Oblate Primary School	Rooftop (about 7/F) Area	
M7	CCC Kei To Secondary School	Rooftop (about 8/F) Area	
M8	Po Leung Kuk Ngan Po Ling College	Staircase Area (about 9/F)	
M9	Tak Long Estate	Car Park Building (about 2/F)	
#M10	Site 1B4 (Planned)	-	

#### Table 3.1Noise Monitoring Stations

Remarks:

\* Alternative noise monitoring station for M6 – Holy Carpenter Primary School from 10<sup>th</sup> October 2014 onwards

# The impact monitoring at these locations will only be carried out until existence of the sensitive receiver at the building.

# **Monitoring Equipment**

3.4 **Table 3.2** summarizes the noise monitoring equipment. Copies of calibration certificates are provided in **Appendix B**.

#### Table 3.2Noise Monitoring Equipment

Equipment	Model and Make	Qty.
Integrating Sound Level Meter	SVAN 955, 957	7
Calibrator	SVAN 30A	4
	B&K4231	2

#### Monitoring Parameters, Frequency and Duration

3.5 Table 3.3 summarizes the monitoring parameters, frequency and total duration of monitoring. The noise monitoring schedule is shown in **Appendix D**.

Table 5.5 Noise Womening Farameters, Frequency and Duration				
Monitoring Stations	Parameter	Period	Frequency	Type of Measurement
M7 M8 M9	L <sub>10</sub> (30 min.) dB(A) L <sub>90</sub> (30 min.) dB(A) L <sub>eq</sub> (30 min.) dB(A)	0700-1900 hrs on normal weekdays	Once per week	Façade <sup>(*)</sup>
M6(A)	$L_{10}(30 \text{ min.}) dB(A)$ $L_{90}(30 \text{ min.}) dB(A)$ $L_{eq}(30 \text{ min.}) dB(A)$	0700-1900 hrs on normal weekdays	Once per week	Free Field <sup>(*)</sup>

(\*) Refer to bullet point 1 and 2 in the following section.

#### Monitoring Methodology and QA/QC Procedures

- The Sound Level Meter was set on a tripod at a point 1m from the exterior of the sensitive receivers building façade and be at a position 1.2m above the ground.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces. All records for free field noise levels was adjusted with a correction of +3 dB(A).
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
  - frequency weighting : A
  - time weighting : Fast
  - time measurement : 30 minutes
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with the portable wind meter.
- At the end of the monitoring period, the  $L_{eq}$ ,  $L_{90}$  and  $L_{10}$  were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- Noise measurement was paused temporarily during periods of high intrusive noise if possible and observation was recorded when intrusive noise was not avoided.
- Noise monitoring was cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s.

#### Maintenance and Calibration

- 3.6 The microphone head of the sound level meter and calibrator was cleaned with a soft cloth at quarterly intervals.
- 3.7 The sound level meter and calibrator were checked and calibrated at yearly intervals.
- 3.8 Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

### **Results, Observations and Action/Limit Level Exceedance**

- 3.9 All construction noise monitoring was conducted as scheduled in the reporting month. No Action and Limit Level exceedance was recorded.
- 3.10 The baseline noise level and the Noise Limit Level at each designated noise monitoring station are presented in **Table 3.4**.
- 3.11 Noise monitoring results and graphical presentations are shown in Appendix G.
- 3.12 The major noise source identified at the designated noise monitoring stations is as follows:

Monitoring Stations	Locations	Major Noise Source
M6(A)	Oblate Primary School	Road and marine traffic Noise
M7	CCC Kei To Secondary School	Road and marine traffic Noise
M8	Po Leung Kuk Ngan Po Ling College	Excavation works at the site (Contract No.: 1/WSD/14(K)) facing Po Leung Kuk Ngan Po Ling College
M9	Tak Long Estate	Road paving and asphalt paving works

 Table 3.4
 Major noise source identified at the designated noise monitoring stations

#### Table 3.5 Baseline noise level and noise limit level for monitoring stations

Monitoring	Baseline Noise Level, dB (A)	Noise Limit Level, dB (A)
Stations		
M6(A)	63.9 (at 0700 – 1900 hrs on normal weekdays)	
М7	68.7 (at 0700 – 1900 hrs on normal weekdays)	70* (at 0700 – 1900 hrs on normal weekdays)
M8	61.9 (at 0700 – 1900 hrs on normal weekdays)	
M9	59.0 (at 0700 – 1900 hrs on normal weekdays)	75 (at 0700 – 1900 hrs on normal weekdays)

(\*) Noise Limit Level is 65 dB(A) during school examination periods.

# 4. COMPARISON OF EM&A RESULTS WITH EIA PREDICTIONS

4.1 According to Section 16.1.6 (vi) of the EM&A Manual, the EM&A data were compared with the EIA predictions as summarized in **Table 4.1** to **4.3** below.

Station	Predicted 1-hr TSP conc.			
	Scenario1 (Mid 2009 to	Scenario2 (Mid 2013 to	Reporting Month (October 2015), μg/m3	
	Mid 2013), µg/m3	Late 2016), µg/m3	Average	Range
AM2 – Lee Kau Yan Memorial School	290	312	162.4	88.7 – 221.7
AM3(A) - Holy Trinity Bradbury Centre (Alternative station for Sky Tower)	217	247	159.9	117.2 - 245.8
AM4(A) – EMSD Workshops (Alternative station for Grand Waterfront)	246	258	174.4	125.0 - 253.1
AM5(A) – Po Leung Kuk Ngan Po Ling College (Alternative station for CCC Kei To Secondary School)	159	221	169.3	112.9 – 260.6

 Table 4.1
 Comparison of 1-hr TSP data with EIA predictions

#### Table 4.2Comparison of 24-hr TSP data with EIA predictions

Station	Predicted 24-hr TSP conc.			
	Scenario1 (Mid 2009 to	Scenario2 (Mid 2013 to	Reporting Month (October 2015), μg/m3	
	Mid 2013), µg/m3	Late 2016), µg/m3	Average	Range
AM2 – Lee Kau Yan Memorial School	145	169	61.5	46.5 – 79.1
AM3(A) - Holy Trinity Bradbury Centre (Alternative station for Sky Tower)	106	138	65.2	49.5 - 74.3
AM4(A) – EMSD Workshops (Alternative station for Grand Waterfront)	143	152	123.3	72.1 – 168.1
AM5(A) – Po Leung Kuk Ngan Po Ling College (Alternative station for CCC Kei To Secondary School)	103	128	41.0	28.9 - 58.3

MA13056\Monthly\Mrpt1510\_v1.0

Stations	Predicted Mitigated Construction Noise Levels during Normal Working	Reporting Month (October 2015), L <sub>eq (30min)</sub> dB(A)	
M6(A) - Oblate Primary School ^	Hour (L <sub>eq (30min)</sub> dB(A)) N/A	61.0 - 69.8	
M7 - CCC Kei To Secondary School	45 - 68	61.7 – 69.1	
M8 - Po Leung Kuk Ngan Po Ling College	44 – 70	58.4 - 69.4	
M9 – Tak Long Estate	Not predicted in EIA Report	58.6 - 70.9	

Table 4.3	Comparison of Noise Monitoring Data with EIA predictions	

(^) Alternative noise monitoring station for M6 – Holy Carpenter Primary School from 10<sup>th</sup> October 2014 onwards.

- 4.2 The averages of 1-hour TSP concentrations in all stations in the reporting month were below the prediction in the approved Environmental Impact Assessment (EIA) Report.
- 4.3 The averages of 24-hour TSP concentrations in all stations in the reporting month were below the prediction in the approved Environmental Impact Assessment (EIA) Report.
- 4.4 The noise monitoring results in the reporting month were within the range of predicted mitigated construction noise levels in the EIA report.

# 5. LANDSCAPE AND VISUAL

### **Monitoring Requirements**

5.1 According to EM&A Manual of the Kai Tak Development EIA Study, ET shall monitor and audit the contractor's activities during the construction period on a weekly basis, and to report on the contractor's performance.

#### **Results and Observations**

- 5.2 Site audits were carried out on a weekly basis to monitor and audit the timely implementation of landscape and visual mitigation measures within the site boundaries of this Project. The summaries of site audits are attached in **Appendix I**.
- 5.3 No non-compliance of the landscape and visual impact was recorded in the reporting month.
- 5.4 In accordance with the Action Plan presented in **Appendix J**, no corrective actions were required in the reporting month.

# 6. ENVIRONMENTAL AUDIT

#### Site Audits

- 6.1 Site audits were carried out on a weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures in the Project site. The summaries of site audits are attached in **Appendix I**.
- 6.2 Site audits were conducted on 2<sup>nd</sup>, 9<sup>th</sup>, 14<sup>th</sup>, 23<sup>th</sup> and 30<sup>th</sup> October 2015 in the reporting month. IEC site inspection was conducted on 14<sup>th</sup> October 2015. No non-compliance was observed during the site audits.

#### Status of Environmental Licensing and Permitting

6.3 All permits/licenses obtained for the Project are summarized in Table 6.1.

Permit No.	Valid Period		Dataila	Stat a
Permit No.	From	То	- Details	Status
<b>Environmental Perm</b>	it (EP)		·	
EP-337/2009	23/04/09	9 N/A Construction of new distributor roads serving the planned Kai Tak development.		Valid
EP-344/2009	23/04/09	Construction of a new sewage pumping station serving the planned Kai Tak development with installed capacity of		Valid
Effluent Discharge Li	icense		· · · · · · · · · · · · · · · · · · ·	
WT00020971-2015	22/04/15	15 N/A Discharge Licence for the discharge of wastewater from the construction site including contaminated surface run-off to the communal storm water drain		Valid

Construction Noise Permit (CNP)				
PR-RE0005-15	18 February 2015	31 July 2015	J I I J J J HYT	

 Table 6.1
 Summary of Environmental Licensing and Permit Status

#### **Status of Waste Management**

- 6.4 The amount of wastes generated by the major site activities of this Project during the reporting month is shown in **Appendix M**.
- 6.5 In respect of the dump truck cover, the Contractor is advised to take record photos and inspection to ensure that the skips of all dump trucks have been fully covered before leaving the site.

#### **Implementation Status of Environmental Mitigation Measures**

6.6 During site inspections in the reporting month, no non-conformance was identified. ET weekly site inspections were carried out during the reporting month and the observations and recommendations are summarized in Table 6.2.

Parameters	Date	Observations and Recommendations	Follow-up
Water Quality	2 October 2015	Observation: The water pipe should be relocated into the first chamber of the sedimentation tank; The accumulated sediment in the sedimentation tank should be cleared to maintain the drainage system.	The concerned sedimentation tank was removed.
Air Quality			
Noise			
Waste/Chemical Management			
Landscape and Visual			
Permits /Licences			

 Table 6.2
 Observations and Recommendations of Site Inspections for EP-337/2009

Parameters	Date	Observations and Recommendations	Follow-up
Water On alter	9 October 2015	Observation: Muddy track was observed at site exit of Gate 6. The Contractor was reminded to clear the muddy track and provide wheel washing for vehicles leaving the site properly.	Wheel washing was observed provided using high pressure water jet.
Water Quality	14 October 2015	Observation: Vehicle was observed leaving the site without wheel wash at Gate 6. The Contractor was reminded to provide wheel wash properly to vehicles leaving the site.	Wheel washing was observed provided using high pressure water jet.
Air Quality	14 October 2015	<u>Reminder:</u> Dust generation was observed at NPS site area. The Contractor was reminded to provide water spray for exposed area of the site.	Water spray was observed provided for the exposed site area for dust suppression.
Noise			
Waste/Chemical Management			
Landscape and Visual			
Permits /Licences			

Table 6.3Observations and Recommendations of Site Inspections for EP-344/2009

#### **Summary of Mitigation Measures Implemented**

6.7 The monthly IEC audit was carried out on 14<sup>th</sup> October 2015, the observations were recorded and they are presented as follows:

Follow up of last monthly audit:

 Construction waste was observed piled within the site, regular cleaning is reminded to avoid excessive accumulation. (PS2) (Closed. The Construction waste was cleared.)

Observation(s) in the reporting month:

- As a general reminder, groundwater pumped out from tunneling, no cylinder treated by the environmental protection. (NPS)
- As a reminder, the Contractor is reminded the worker, all vehicle are washing facilities provided at six exit. (NPS)
- 6.8 An updated summary of the EMIS is provided in **Appendix K**.

#### **Implementation Status of Event Action Plans**

6.9 The Event Action Plans for air quality, noise and landscape and visual are presented in Appendix J.

1-hr TSP Monitoring

6.10 No Action/Limit Level exceedance was recorded in the reporting month.

24-hr TSP Monitoring

6.11 No Action/Limit Level exceedance was recorded in the reporting month.

Construction Noise

6.12 No Action/Limit Level exceedance was recorded in the reporting month.

Landscape and visual

6.13 No non-compliance was recorded in the reporting month.

# Summary of Complaint, Warning, Notification of any Summons and Successful Prosecution

6.14 No environmental complaints and environmental prosecution were received in the reporting month. The summaries of environmental complaint, warning, summon and notification of successful prosecution for the Project are presented in **Appendix L**.

# 7. FUTURE KEY ISSUES

- 7.1 Major site activities undertaken for the coming two months include:
  - Daily Clearance;
  - Backfilling of box culvert B5;
  - Excavation of trench for sewers;
  - Concerting of base slab and walls of NPS.
  - Installation of DN750 drainage pipe at L19;
  - Excavation of Box culvert B6;
  - Installation of precast box culvert B6;
  - Installation of DCS;
  - Fixing of reinforcement and concreting to walls and slab of pumping station for PS2;
  - Laying concrete pipes DN750 from FMH10\_345 to FHH10\_350;
  - Excavation and installation of clay pipe in Portion 4;
  - Construction of jacking pits 10, 11, 3 & 4; and
  - Widening works of Sung Wong Toi Road.
- 7.2 The tentative construction program for the Project is provided in **Appendix N.**

# Key Issues for the Coming Month

- 7.3 Key environmental issues in the coming month include:
  - Dust generation from stockpiles of dusty materials, exposed site area, excavation works and rock breaking activities;
  - Water spraying for dust generating activity and on haul road;
  - Proper storage of construction materials on site;
  - Storage of chemicals/fuel and chemical waste/waste oil on site;
  - Accumulation of general and construction waste on site;
  - Noise from operation of the equipment, especially for rock-breaking activities, piling works and machinery on-site; and
  - Review and implementation of temporary drainage system for the surface runoff.
- 7.4 The tentative program of major site activities and the impact prediction and environmental mitigation measures for the coming two months, i.e. November and December 2015 are summarized as follows:

Table 7.1	Summary of the tentative program of major site activities, the impact prediction
	and control measures for November and December 2015

Construction Works	Major Impact Prediction	Control Measures
As mentioned in Section 7.1	Air quality impact (dust) Water quality impact (surface run-off)	<ul> <li>a) Frequent watering of haul road and unpaved/exposed areas;</li> <li>b) Frequent watering or covering stockpiles with tarpaulin or similar means; and</li> <li>c) Watering of any earth moving activities.</li> <li>d) Diversion of the collected effluent to de-silting facilities for treatment prior to discharge to public storm water drains;</li> <li>e) Provision of adequate de-silting facilities for treating surface run-off and other collected effluents prior to discharge;</li> <li>f) Provision of site boundary bund such as sealing of hoarding footings to avoid run-off from entering the existing storm water drainage system via public road; and</li> <li>g) Provision of measures to prevent discharge into the stream.</li> </ul>
	Noise Impact	<ul> <li>h) Scheduling of noisy construction activities if necessary to avoid persistent noisy operation;</li> <li>i) Controlling the number of plants use on site;</li> <li>j) Regular maintenance of machines; and</li> <li>k) Use of acoustic barriers if necessary.</li> </ul>

# Monitoring Schedule for the Next Month

7.5 The tentative environmental monitoring schedules for the next month are shown in **Appendix D**.

#### 8. CONCLUSIONS AND RECOMMENDATIONS

#### Conclusions

8.1 Environmental monitoring works required under the EM&A Manual were performed in the reporting month and all monitoring results were checked and reviewed.

#### 1-hr TSP Monitoring

8.2 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded. 1-hour TSP concentrations in all stations in the reporting month were below the prediction in the approved Environmental Impact Assessment (EIA) Report.

#### 24-hr TSP Monitoring

8.3 All 24-hr TSP monitoring required under the EM&A Manual was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded. 24-hour TSP concentrations in all stations in the reporting month were below the prediction in the approved Environmental Impact Assessment (EIA) Report.

#### Construction Noise Monitoring

8.4 All construction noise monitoring was conducted as scheduled in the reporting month. No Action and Limit Level exceedance was recorded. The construction noise levels in all stations in the reporting month were within the range of predicted mitigated construction noise levels in the approved Environmental Impact Assessment (EIA) report.

#### Complaints, Notification of any Summons and Prosecution Received

8.5 No environmental complaints and environmental prosecution were received in the reporting month. The summaries of environmental complaint, warning, summon and notification of successful prosecution for the Project are presented in **Appendix L**.

#### Recommendations

8.6 According to the environmental audit performed in the reporting month, the following recommendations were made:

#### Air Quality Impact

- To implement dust suppression measures on all haul roads, stockpiles, dry surfaces and excavation works.
- To mitigate the dust generation by adequate water spraying in dry days.

#### Noise Impact

- To inspect the noise sources inside the site.
- To disperse the locations of noisy equipments and position the equipments as far away as possible from sensitive receivers.
- To provide temporary noise barriers for operations of noisy equipment near the noise sensitive receivers in an appropriate location.

#### Water Impact

- To prevent any surface runoff discharge into any stream course.
- To review and implement temporary drainage system.
- To identify any wastewater discharges from site.
- To ensure properly maintenance for de-silting facilities.
- To clear the silt and sediment in the sedimentation tanks.
- To review the capacity of de-silting facilities for discharge.
- To divert all the water generated from construction site to de-silting facilities with enough handling capacity before discharge.

#### Waste/Chemical Management

- To check for any accumulation of waste materials or rubbish on site.
- To ensure the performance of sorting of C&D materials at source (during generation);
- To avoid any discharge or accidental spillage of chemical waste or oil directly from the site.
- To provide proper storage area or drip trays for oil containers/ equipment on site.
- To avoid improper handling or storage of oil drum on site.

#### Landscape and Visual

- To protect the existing trees to be retained.
- To transplant the trees unavoidably affected by the works.
- To control of night-time lighting.
- To provide decorative screen hoarding.
- To complete landscape works at site area as early as possible.

#### **Effectiveness of Environmental Management**

- 8.7 The above recommendations and the recommended mitigation measures in the EM&A Manual were carried out by the Contractor during construction. No non-compliance was recorded during the environmental site inspections as shown in **Appendix I**.
- 8.8 The effectiveness of environmental management is satisfactory as the above recommendations are met. Some of the examples of mitigation measures for the following recommendations are given in **Table 8.1** below.
  - Surface runoff discharge into any stream course is prevented;
  - Provision of sedimentation facilities after identification of wastewater discharges from site;
  - Discharge or accidental spillage of chemical waste or oil directly from the site is avoided;
  - Improper handling or storage of oil drum on site is avoided;
  - The existing trees to be retained are protected; and
  - Night-time lighting is controlled.

#### DATA TABULATION

Vstd	(x axis) Qstd	(y axis)		Va	(x axis) Qa	(y axis)
1.0086 1.0044 1.0023 1.0011 0.9959	0.6913 0.9723 1.0835 1.1377 1.3718	1.4233 2.0129 2.2505 2.3603 2.8467		0.9958 0.9916 0.9895 0.9884 0.9832	0.6825 0.9599 1.0697 1.1231 1.3542	0.8799 1.2443 1.3912 1.4591 1.7598
Qstd slop intercept coefficie	(b) =	2.09317 -0.02195 0.99997		Qa slope intercept coefficie	z (b) =	1.31071 -0.01357 0.99997
y axis = SQRT[H2O(Pa/760)(298/Ta)]			[ [a)]	y axis =	SQRT [H20 (7	[a/Pa)]

#### CALCULATIONS

Vstd = Diff. Vol[(Pa-Diff. Hg)/760](298/Ta) Qstd = Vstd/Time

Va = Diff Vol [(Pa-Diff Hg)/Pa] Qa = Va/Time

For subsequent flow rate calculations:

Qstd =  $1/m\{ [SQRT(H2O(Pa/760)(298/Ta))] - b \}$ Qa =  $1/m\{ [SQRT(H2O(Ta/Pa)] - b \}$

## **Certificate of Calibration**

Item for Calibration:	
Description	: Laser Dust Monitor
Manufacturer	: Sibata
Model No.	: LD-3
Serial No.	: 251634
Sensitivity (K) 1 CPM	: 0.001 mg/m <sup>3</sup>
Sen. Adjustment Scale Setting	: 550 CPM
Equipment No.	: A-02-01
Test Conditions:	
Room Temperature	: 23 degree Celsius
Relative Humidity	: 67 %

### **Test Specifications & Methodology:**

Instruction and Operation Manual High Volume Sampler, Andersen Samplers, Inc.
 In-house method in according to the instruction manual: The Laser Dust Monitor was compared with a calibrated High Volume Sampler and the result was used to generate the Correlation Factor (CF) between the Laser Dust Monitor and High Volume Sampler.

Results:	
Correlation Factor (CF)	0.0033

# **Certificate of Calibration**

: 4231

:2412367

: N-02-03

#### Item for calibration:

Description Manufacturer Model No. Serial No. Equipment No.

Test conditions:

Room Temperatre Relative Humidity : 22 degree Celsius : 54%

: Acoustical Calibrator

: Brüel & Kjær

#### Methodology:

The Sound Level Calibrator has been calibrated in accordance with the documented procedures and using standard(s) and instrument(s) which are recommended by the manufacturer, or equivalent.

#### **Results:**

Sound Pressure Level (1kHz)	Measured SPL	Tolerance
At 94 dB SPL	94.0	94.0 ± 0.1 dB
At 114 dB SPL	114.0	$114.0 \pm 0.1 \text{ dB}$

PREPARED AND CHECKED BY: For and On Behalf of **WELLAB Ltd.** 

PATRICK TSE Laboratory Manager

APPENDIX C WEATHER INFORMATION

# I. General Information

Date	Mean Air Temperature (°C)	Mean Relative Humidity (%)	Precipitation (mm)
1 October 2015	26.4 - 31.7	71 – 88	0.3
2 October 2015	26.5 - 31.6	61 – 93	7.0
3 October 2015	24.2 - 29.7	67 – 96	46.4
4 October 2015	24.9 - 27.8	89 – 97	38.1
5 October 2015	25.4 - 27.8	89 – 98	15.6
6 October 2015	25.3 - 26.8	95 – 98	50.7
7 October 2015	25.0 - 27.6	82 - 98	5.8

APPENDIX D ENVIRONMENTAL MONITORING SCHEDULES

#### Contract No. KL/2012/03 Kai Tak Development –Stage 4 Infrastructure at Former North Apron Area Impact Air and Noise Monitoring Schedule for October 2015

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
-			-	1-Oct	2-Oct	3-Oct
					Noise (M6(A) and M7) 24 hr TSP	
4-Oct	5-Oct	6-Oct	7-Oct	8-Oct	9-Oct	10-Oct
+01	Noise (M9)	1 hr TSP X3 AM2, AM3(A), AM4(A) & AM5(A) Noise	<i>,-</i>	24 hr TSP	Noise (M6(A) and M7)	10-00
		(M8)		24 hr 18P		
11-Oct	12-Oct	13-Oct	14-Oct	15-Oct	16-Oct	17-Oct
	1 hr TSP X3 AM2, AM3(A), AM4(A) & AM5(A) Noise (M8)		Noise (M6(A) and M7) 24 hr TSP	Noise (M9)	1 hr TSP X3 AM2, AM3(A), AM4(A) & AM5(A)	
18-Oct	19-Oct	20-Oct	21-Oct	22-Oct	23-Oct	24-Oc
		Noise (M9) 24 hr TSP		1 hr TSP X3 AM2, AM3(A), AM4(A) & AM5(A) Noise (M8)	Noise (M6(A) and M7)	
25-Oct	26-Oct	27-Oct	28-Oct	29-Oct	30-Oct	31-Oct
	Noise (M9) 24 hr TSP		1 hr TSP X3 AM2, AM3(A), AM4(A) & AM5(A) Noise (M8)	Noise (M6(A) and M7)		

The schedule may be changed due to unforeseen circumstances (adverse weather, etc)

#### Air Quality Monitoring Station

AM2 - Lee Kau Yan Memorial School AM3(A) - Holy Trinity Bradbury Centre AM4(A) - EMSD Workshops AM5(A) - Po Leung Kuk Ngan Po Ling College

#### **Noise Monitoring Station**

M6(A) - Oblate Primary School M7 - CCC Kei To Secondary School M8 - Po Leung Kuk Ngan Po Ling College M9 - Tak Long Estate

#### Contract No. KL/2012/03 Kai Tak Development –Stage 4 Infrastructure at Former North Apron Area Tentative Impact Air and Noise Monitoring Schedule for November 2015

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
1-Nov	2-Nov	3-Nov	4-Nov	5-Nov	6-Nov	7-Nov
		1 hr TSP X3 AM2, AM3(A), AM4(A) & AM5(A) Noise (M8)		Noise (M9) 24 hr TSP	Noise (M6(A) & M7)	
8-Nov	9-Nov	10-Nov	11-Nov	12-Nov	13-Nov	14-Nov
	1 hr TSP X3 AM2, AM3(A), AM4(A) & AM5(A) Noise (M8)		Noise (M6(A), M7 & M9) 24 hr TSP		1 hr TSP X3 AM2, AM3(A), AM4(A) & AM5(A)	
15-Nov	16-Nov	17-Nov	18-Nov	19-Nov	20-Nov	21-Nov
	Noise (M9)	24 hr TSP	Noise (M6(A) & M7)	1 hr TSP X3 AM2, AM3(A), AM4(A) & AM5(A) Noise (M8)		
22-Nov	23-Nov	24-Nov	25-Nov	26-Nov	27-Nov	28-Nov
	24 hr TSP		1 hr TSP X3 AM2, AM3(A), AM4(A) & AM5(A) Noise (M8)	Noise (M9)	Noise (M6(A) & M7)	24 hr TSP
29-Nov	30-Nov					

The schedule may be changed due to unforeseen circumstances (adverse weather, etc)

#### Air Quality Monitoring Station

AM2 - Lee Kau Yan Memorial School AM3(A) - Holy Trinity Bradbury Centre AM4(A) - EMSD Workshops AM5(A) - Po Leung Kuk Ngan Po Ling College

#### Noise Monitoring Station

M6(A) - Oblate Primary School M7 - CCC Kei To Secondary School M8 - Po Leung Kuk Ngan Po Ling College M9 - Tak Long Estate

APPENDIX E 1-HOUR TSP MONITORING RESULTS AND GRAPHICAL PRESENTATION

Date	Time	Weather	Particulate Concentration ( µg/m3)
6-Oct-15	13:00	Cloudy	208.3
6-Oct-15	14:00	Cloudy	206.6

APPENDIX K ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE (EMIS)

## Appendix K - Summary of Implementation Schedule of Mitigation Measures for Construction Phase

Types of Impacts	Mitigation Measures	Status
	<ul> <li>8 times daily watering of the work site with active dust emitting activities.</li> <li>Implementation of dust suppression measures stipulated in Air Pollution Control (Construction Dust) Regulation.</li> <li>The following mitigation measures, good site practices and a comprehensive dust monitoring and audit programme are recommended to minimize cumulative dust impacts.</li> <li>Stockpiling site(s) should be lined with impermeable</li> </ul>	Λ
	<ul> <li>sheeting and bunded. Stockpiles should be fully covered by impermeable sheeting to reduce dust emission.</li> <li>Misting for the dusty material should be carried out</li> </ul>	~
	<ul> <li>before being loaded into the vehicle.</li> <li>Any vehicle with an open load carrying area should have properly fitted side and tail boards.</li> </ul>	^
	<ul> <li>Material having the potential to create dust should not be loaded from a level higher than the side and tail boards and should be dampened and covered by a clean tamped.</li> </ul>	^
	<ul> <li>clean tarpaulin.</li> <li>The tarpaulin should be properly secured and should extent at least 300 mm over the edges of the sides and tailboards. The material should also be dampened if necessary before transportation.</li> </ul>	٨
Construction Dust	<ul> <li>The vehicles should be restricted to maximum speed of 10 km per hour and confined haulage and delivery vehicle to designated roadways insider the site. On- site unpaved roads should be compacted and kept free of lose materials.</li> </ul>	٨
	<ul> <li>Vehicle washing facilities should be provided at every</li> </ul>	*
	<ul> <li>vehicle exit point.</li> <li>The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete,</li> </ul>	^
	<ul> <li>bituminous materials or hardcores.</li> <li>Every main haul road should be scaled with concrete and kept clear of dusty materials or sprayed with water so as to maintain the entire road surface wet.</li> </ul>	^
	<ul> <li>Every stock of more than 20 bags of cement should be covered entirely by impervious sheeting placed in an area sheltered on the top and the three sides.</li> </ul>	^
	<ul> <li>Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving the construction sites.</li> </ul>	^

	Use of quiet PME, movable barriers barrier for Asphalt Paver, Breaker, Excavator and Hand-held breaker and full enclosure for Air Compressor, Bar Bender, Concrete Pump, Generator and Water Pump	٨
Construction	<ul> <li>Good Site Practice:</li> <li>Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program.</li> <li>Silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction program.</li> <li>Mobile plant, if any, should be sited as far away from NSRs as possible.</li> <li>Machines and plant (such as trucks) that may be in intermittent use should be shut down between works periods or should be throttled down to a minimum.</li> <li>Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs.</li> <li>Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction activities.</li> <li>Scheduling of Construction Works during School Examination Period</li> <li>(i) Provision of low noise surfacing in a section of Road L2; and</li> </ul>	^ N/A(1) ^ ^ ^ ^ N/A

	<ul> <li>(i) avoid any sensitive facades with openable window facing the slip road connecting Prince Edward Road East and San Po Kong or other alternative mitigation measures and at-source mitigation measures for the surrounding new local roads to minimise the potential traffic noise impacts from the slip road</li> </ul>	N/A
	All the ventilation fans installed in the below will be provided with silencers or acoustics treatment. (i) SPS (ii) ESS (iii) Tunnel Ventilation Shaft (iv) EFTS depot	N/A N/A N/A N/A
	Installation of retractable roof or other equivalent measures	N/A
	The following mitigation measures are proposed to be incorporated in the design of the SPS at KTD, including:	
	<ul> <li>Dual power supply or emergency generator should be provided at all the SPSs to secure electrical power supply;</li> </ul>	N/A
	<ul> <li>Standby pumps should be provided at all SPSs to ensure smooth operation of the SPS during maintenance of the duty pumps;</li> </ul>	N/A
	<ul> <li>An alarm should be installed to signal emergency high water level in the wet well at all SPSs; and</li> </ul>	N/A
Construction Water	<ul> <li>For all unmanned SPSs, a remote monitor system connecting SPSs with the control station through telemetry system should be provided so that swift actions could be taken in case of malfunction of unmanned facilities.</li> </ul>	N/A
Quality	Land-based Construction	
	Construction Runoff	
	Exposed soil areas should be minimised to reduce the potential for increased siltation, contamination of runoff, and erosion. Construction runoff related impacts associated with the above ground construction activities can be readily controlled through the use of appropriate mitigation measures which include: • use of sediment traps • adequate maintenance of drainage systems to prevent	^ ^ ^
	flooding and overflow	

Construction site should be provided with adequately designed perimeter channel and pre-treatment facilities and proper maintenance. The boundaries of critical areas of earthworks should be marked and surrounded by dykes or embankments for flood protection. Temporary ditches should be provided to facilitate runoff discharge into the appropriate watercourses, via a silt retention pond. Permanent drainage channels should incorporate sediment basins or traps and baffles to enhance deposition rates. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC PN 1/94.	^
Ideally, construction works should be programmed to minimise surface excavation works during the rainy season (April to September). All exposed earth areas should be completed as soon as possible after earthworks have been completed, or alternatively, within 14 days of the cessation of earthworks where practicable. If excavation of soil cannot be avoided during the rainy season, or at any time of year when rainstorms are likely, exposed slope surfaces should be covered by tarpaulin or other means.	^
Sediment tanks of sufficient capacity, constructed from pre-formed individual cells of approximately 6 to 8 m <sup>3</sup> capacity, are recommended as a general mitigation measure which can be used for settling surface runoff prior to disposal. The system capacity is flexible and able to handle multiple inputs from a variety of sources and particularly suited to applications where the influent is pumped.	^
Open stockpiles of construction materials (for examples, aggregates, sand and fill material) of more than 50 m <sup>3</sup> should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.	۸
Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and storm runoff being directed into foul sewers.	^
Precautions to be taken at any time of year when rainstorms are likely, actions to be taken when a rainstorm is imminent or forecast, and actions to be taken during or after rainstorms are summarised in Appendix A2 of ProPECC PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events.	^
Oil interceptors should be provided in the drainage system and regularly cleaned to prevent the release of oils and grease into the storm water drainage system after accidental spillages. The interceptor should have a bypass to prevent flushing during periods of heavy rain.	^

All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and located wheel washing bay should be provided at every site exit, and wash-water should have sand and silt settled out and removed at least on a weekly basis to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains.	*
Drainage	
It is recommended that on-site drainage system should be installed prior to the commencement of other construction activities. Sediment traps should be installed in order to minimise the sediment loading of the effluent prior to discharge into foul sewers. There should be no direct discharge of effluent from the site into the sea.	۸
All temporary and permanent drainage pipes and culverts provided to facilitate runoff discharge should be adequately designed for the controlled release of storm flows. All sediment control measures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly following rain storms. The temporarily diverted drainage should be reinstated to its original condition when the construction work has finished or the temporary diversion is no longer required.	Λ
All fuel tanks and storage areas should be provided with locks and be located on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank, to prevent spilled fuel oils from reaching the coastal waters of the Victoria Harbour WCZ.	٨
Sewage Effluent	
Construction work force sewage discharges on site are expected to be connected to the existing trunk sewer or sewage treatment facilities. The construction sewage may need to be handled by portable chemical toilets prior to the commission of the on-site sewer system. Appropriate numbers of portable toilets should be provided by a licensed contractor to serve the large number of construction workers over the construction site. The Contractor should also be responsible for waste disposal and maintenance practices.	Λ
Stormwater Discharges	
Minimum distances of 100 m should be maintained between the existing or planned stormwater discharges and the existing or planned seawater intakes	N/A

 Debris and Litter	
Debris and Litter	Λ
In order to maintain water quality in acceptable conditions with regard to aesthetic quality, contractors should be required, under conditions of contract, to ensure that site management is optimised and that disposal of any solid materials. litter or wastes to marine waters does not occur	
Construction Works at or in Close Proximity of Storm Culvert or Seafront	
The proposed works should preferably be carried out within the dry season where the flow in the drainage channel /storm culvert/ nullah is low.	۸
The use of less or smaller construction plants may be specified to reduce the disturbance to the bottom sediment at the drainage channel /storm culvert / nullah.	٨
Temporary storage of materials (e.g. equipment, filling materials, chemicals and fuel) and temporary stockpile of construction materials should be located well away from any water courses during carrying out of the construction works.	۸
Stockpiling of construction materials and dusty materials should be covered and located away from any water courses.	۸
Construction debris and spoil should be covered up and/or disposed of as soon as possible to avoid being washed into the nearby water receivers.	Λ
Construction activities, which generate large amount of wastewater, should be carried out in a distance away from the waterfront, where practicable.	۸
Mitigation measures to control site runoff from entering the nearby water environment should be implemented to minimize water quality impacts. Surface channels should be provided along the edge of the waterfront within the work sites to intercept the runoff.	٨
Construction effluent, site run-off and sewage should be properly collected and/or treated.	٨
Any works site inside the storm water courses should be temporarily isolated, such as by placing of sandbags or silt curtains with lead edge at bottom and properly supported props to prevent adverse impact on the storm water quality.	^
Silt curtain may be installed around the construction activities at the seafront to minimize the potential impacts due to accidental spillage of construction materials.	۸
Proper shoring may need to be erected in order to prevent soil/mud from slipping into the storm culvert/drainage channel/sea.	۸
K 6	-

	Supervisory staff should be assigned to station on site to losely supervise and monitor the works	Λ
C	iosely supervise and monitor the works	
	Marine water quality monitoring and audit programme	^
	shall be implemented for the proposed sediment	
1	treatment operation.	
(	Good Site Practices	
	t is not anticipated that adverse waste management	
	related impacts would arise, provided that good site practices are adhered to. Recommendations for good site	
	practices during construction activities include:	
1	<ul> <li>Nomination of an approved person, such as a site</li> </ul>	Λ
	manager, to be responsible for good site practices,	X
	arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at	
	the site	
	<ul> <li>Training of site personnel in proper waste</li> </ul>	^
	management and chemical waste handling	
	<ul> <li>procedures</li> <li>Provision of sufficient waste disposal points and</li> </ul>	
	<ul> <li>Provision of sufficient waste disposal points and regular collection for disposal</li> </ul>	^
	<ul> <li>Appropriate measures to minimise windblown litter</li> </ul>	Λ
	and dust during transportation of waste by either	
	covering trucks or by transporting wastes in enclosed containers	
	<ul> <li>A recording system for the amount of wastes</li> </ul>	^
	generated, recycled and disposed of (including the	
	disposal sites)	
N N	Waste Reduction Measures	
	Good management and control can prevent the	
	generation of a significant amount of waste. Waste	
	reduction is best achieved at the planning and design stage, as well as by ensuring the implementation of good	
	site practices. Recommendations to achieve waste	
	reduction include:	
	<ul> <li>Sort C&amp;D waste from demolition of the remaining</li> </ul>	^
	structures to recover recyclable portions such as metals	
	<ul> <li>Segregation and storage of different types of</li> </ul>	Λ
	waste in different containers, skips or stockpiles to	X
	enhance reuse or recycling of materials and their	
	<ul> <li>proper disposal</li> <li>Encourage collection of aluminium cans, PET</li> </ul>	
	bottles and paper by providing separate labelled	^
	bins to enable these wastes to be segregated from	
	other general refuse generated by the work force	
	<ul> <li>Any unused chemicals or those with remaining functional capacity should be recycled</li> </ul>	^
	<ul> <li>Proper storage and site practices to minimise the</li> </ul>	^
	potential for damage or contamination of	
	construction materials	
	K-7	
	N - /	

1	Construction and Demolition Material	
	Mitigation measures and good site practices should be incorporated into contract document to control potential environmental impact from handling and transportation of C&D material. The mitigation measures include: • Where it is unavoidable to have transient stockpiles of C&D material within the Project work	۸
	<ul> <li>stockpiles of Cab material within the Project work site pending collection for disposal, the transient stockpiles should be located away from waterfront or storm drains as far as possible</li> <li>Open stockpiles of construction materials or</li> </ul>	
	construction wastes on-site should be covered with tarpaulin or similar fabric	٨
	<ul> <li>Skip hoist for material transport should be totally enclosed by impervious sheeting</li> <li>Every vehicle should be washed to remove any</li> </ul>	۸ ۸
	dusty materials from its body and wheels before leaving a construction site	Χ
	<ul> <li>The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores</li> <li>The load of dusty materials carried by vehicle</li> </ul>	٨
	leaving a construction site should be covered entirely by clean impervious sheeting to ensure dust materials do not leak from the vehicle	٨
	<ul> <li>All dusty materials should be sprayed with water prior to any loading, unloading or transfer operation so as to maintain the dusty materials wet</li> <li>The height from which excavated materials are</li> </ul>	٨
	dropped should be controlled to a minimum practical height to limit fugitive dust generation from unloading	۸
	When delivering inert C&D material to public fill reception facilities, the material should consist entirely of inert construction waste and of size less than 250mm or other sizes as agreed with the Secretary of the Public Fill Committee. In order to monitor the disposal of the surplus C&D material at the designed public fill reception facility and to control fly tipping, a trip-ticket system as stipulated in the ETWB TCW No. 31/2004 "Trip Ticket System for Disposal of Construction and Demolition Materials" should be included as one of the contractual requirements and implemented by an Environmental Team undertaking the Environmental Monitoring and Audit work. An Independent Environmental Checker should be responsible for auditing the results of the system.	٨
1	Chemical Waste	
	After use, chemical wastes (for example, cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Spent chemicals should be collected by a licensed collector for disposal at the CWTF or other licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation	۸
	K-8	

	General Refuse	
	General refuse should be stored in enclosed bins or compaction units separate from C&D material. A licensed waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D material. Effective collection and storage methods (including enclosed and covered area) of site wastes would be required to prevent waste materials from being blown around by wind, wastewater discharge by flushing or leaching into the marine environment, or creating odour nuisance or pest and vermin problem	~
	CM1 All existing trees should be carefully protected during construction.	^
Landscape and Visual	CM2 Trees unavoidably affected by the works should be transplanted where practical. Detailed transplanting proposal will be submitted to relevant government departments for approval in accordance with ETWBC 2/2004 and 3/2006. Final locations of transplanted trees should be agreed prior to commencement of the work.	N/A
	CM3 Control of night-time lighting.	^
	CM4 Erection of decorative screen hoarding.	^

Remarks:	Compliance of mitigation measure;
	X Non-compliance of mitigation measure;
	N/A Not Applicable at this stage;
	N/A(1) Not observed;
	• Non-compliance but rectified by the contractor;
	* Recommendation was made during site audit but improved/rectified by the contractor.

APPENDIX L SUMMARIES OF ENVIRONMENTAL COMPLAINT, WARNING, SUMMON AND NOTIFICATION OF SUCCESSFUL PROSECUTION

#### Warnings / Summons and Successful Prosecutions received in the reporting month

Remarks: No warning/summon and prosecution were received in the reporting period.

#### **Complaint Log**

EPD Complaint Ref No.	Date of Complaint	Complaint Details	Investigation / Mitigation Action	Status
15-14258	10/6/2015	Complainant said dust emission from the construction work affecting him/her. The stockpiles was not covered properly such that dust emission was observed. Some muddy water was found in To Kwa Wan Typhoon Shelter.	Complaint cases referred to the Contractor. Investigation conducted by the Contract ET. The investigation results showed that no major construction activities were conducted at the time of complaint on the day - 10 <sup>th</sup> June 2015. Since no marine works or land-based construction activities near the To Kwa Wan Typhoon Shelter were conducted, muddy effluent discharged to the To Kwa Wan Typhoon Shelter is not anticipated. The regular impact air monitoring results in the first three weeks of June 2015 were in full compliance with the Action and Limit levels. No major environmental deficiencies were observed related to the air quality and water quality, and the deficiencies as mentioned in the complaint were not recorded during the site inspections.	Closed
