EXECUTIVE SUMMARY

The baseline air quality monitoring was carried out between 4 December 2009 and 17 December 2009 for all designated air quality monitoring locations described in the updated EM&A Manual. Air quality was recorded in terms of 1-hour Total Suspended Particulates (TSP) and 24-hour TSP.

The monitoring results were presented in this report and no major pollution source and extreme weather, which might affect the results, were observed during the baseline monitoring period.

The averaged 1-hour TSP levels and 24-hour TSP levels at 6 monitoring locations are summarized as follows:

Air Quality Monitoring location	CMA1a	CMA2a	CMA3	CMA4a	CMA5	CMA6
Averaged 1-hr TSP ($\mu\text{g}/\text{m}^3$)	107.8	112.9	94.3	96.2	126.1	77.1
Averaged 24-hr TSP ($\mu\text{g}/\text{m}^3$)	71.9	60.7	63.1	63.4	78.5	88.2

The Action and Limit Levels for air quality impact monitoring were derived based on the criteria adopted from the updated EM&A Manual.

1 INTRODUCTION

1.1 Background

- 1.1.1 The Project is located mainly in Wan Chai North, Causeway Bay and North Point, and is demarcated by Gloucester Road and Victoria Park Road to the south, Fenwick Pier Street to the west and Tong Shui Road Interchange to the east.
- 1.1.2 The project area encompasses existing developments along the Wan Chai, Causeway Bay and North Point shorelines. Major land uses include the Hong Kong Convention & Exhibition Centre (HKCEC) Extension, the Wan Chai Ferry Pier, the ex-Wan Chai Public Cargo Working Area (ex-PCWA), the Royal Hong Kong Yacht Club (RHKYC), the Police Officers' Club, the Causeway Bay Typhoon Shelter (CBTS) and commercial and residential developments.
- 1.1.3 The scope of the Project comprises:
- (i) Land formation for key transport infrastructure and facilities, including the Trunk Road (i.e. CWB) and the associated slip roads for connection to the Trunk Road and for through traffic from Central to Wan Chai and Causeway Bay. The land formed for the above transport infrastructure will provide opportunities for the development of an attractive waterfront promenade for the enjoyment of the public.
 - (ii) Reprovisioning / protection of the existing facilities and structures affected by the land formation works mentioned above.
 - (iii) Extension, modification, reprovisioning or protection of existing storm water drainage outfalls, sewerage outfalls and watermains affected by the revised land use and land formation works mentioned above.
 - (iv) Upgrading of hinterland storm water drainage system and sewerage system, which would be rendered insufficient by the land formation works mentioned above.
 - (v) Provision of the ground level roads, flyovers, footbridges, necessary transport facilities and the associated utility services.
 - (vi) Construction of the new waterfront promenade, landscape works and the associated utility services.
 - (vii) The Trunk Road (i.e. CWB) within the project area and the associated slip roads for connection to the Trunk Road.
- 1.1.4 The proposed Project is an engineering feasibility study of an urban development project with a project area covering more than 20 ha. Under the EIAO, this Project is classified as a Schedule 3 Designated Project (DP) under item 1 of the Schedule 3 "Major Designated Projects Requiring Environmental Impact Assessment Reports". The Project also contains various Schedule 2 DPs that, under the EIAO, require Environmental Permits (EPs) to be granted by the DEP before they may be either constructed or operated.

1.2 Purpose of Baseline Air Quality Monitoring Report

- 1.2.1 The purpose of this report is to review the baseline conditions of air quality at the Project site, and to establish baseline levels for air quality in accordance with the updated EM&A Manual. These levels would be used as the basis for assessing environmental impact and compliance during construction of the Project.
- 1.2.2 This baseline monitoring report presents the baseline monitoring requirements, methodologies and monitoring results of air quality at 6 air quality monitoring locations described in the updated EM&A Manual.
- 1.2.3 The baseline monitoring results for noise, water quality and coral survey will be presented in their individual baseline monitoring reports.

2 AIR QUALITY MONITORING

2.1 Monitoring Requirements

- 2.1.1 In accordance with the updated EM&A Manual, baseline 1-hour and 24-hour TSP levels at 6 air quality monitoring stations should be established by conducting baseline 1-hour and 24-hour TSP monitoring for at least 14 days.

2.2 Monitoring Equipment

- 2.2.1 The 24-hour TSP air quality monitoring was performed using High Volume Sampler (HVS) located at each designated monitoring station. The HVS meets all the requirements of the updated EM&A Manual. Portable direct reading dust meters were used to carry out the 1-hour TSP monitoring. Brand and model of the equipment is given in **Table 2.1**.

Table 2.1 Air Quality Monitoring Equipment

Equipment	Brand and Model
Portable direct reading dust meter (1-hour TSP)	Sibata Digital Dust Monitor (Model No. LD-3)
High Volume Sampler (24-hour TSP)	Tisch Total Suspended Particulate Mass Flow Controlled High Volume Air Sampler (Model No. TE-5170)

2.3 Monitoring Locations

- 2.3.1 In accordance with the updated EM&A Manual, the air quality monitoring stations for baseline air quality monitoring is presented in **Table 2.2** and shown in **Figure 2.1**.

Table 2.2 Baseline Air Quality Monitoring Stations

Monitoring Location	Description	Level (in terms of no. of floor)
CMA1a	North Point – PLK Yu Lee Mo Fan Memorial School	4 (roof-top)
CMA2a	Causeway Bay – Causeway Bay Community Centre	4
CMA3	Causeway Bay – Royal Hong Kong Yacht Club	3 (roof-top)
CMA4a	Wanchai – Society for the Prevention of Cruelty to Animals (SPCA)	6 (roof-top)
CMA5	Wanchai – Pedestrian Plaza	0
CMA6	Wanchai – Servicemen's Guides Association)	3 (roof-top)

2.4 Monitoring Parameters, Frequency and Duration

- 2.4.1 The monitoring parameters, frequency and duration of air quality monitoring are summarized in **Table 2.3**.

Table 2.3 Air Quality Monitoring Parameters, Frequency and Duration

Parameter	Frequency and Duration
1-hour TSP	3 times (at three consecutive hours) per day while the highest dust impact was expected, for 14 days
24-hour TSP	Daily, for 14 days

2.5 Monitoring Methodology

2.5.1 24-hour TSP Monitoring

- (a) The HVS was installed in the vicinity of the air sensitive receivers. The following criteria were considered in the installation of the HVS.
- (i) A horizontal platform with appropriate support to secure the sampler against gusty wind was provided.
 - (ii) The distance between the HVS and any obstacles, such as buildings, was at least twice the height that the obstacle protrudes above the HVS.
 - (iii) A minimum of 2 meters separation from walls, parapets and penthouse for rooftop sampler.
 - (iv) No furnace or incinerator flues nearby.
 - (v) Airflow around the sampler was unrestricted.
 - (vi) Permission was obtained to set up the samplers and access to the monitoring stations.
 - (vii) A secured supply of electricity was obtained to operate the samplers.
 - (viii) The sampler was located more than 20 meters from any dripline.
 - (ix) Any wire fence and gate, required to protect the sampler, did not obstruct the monitoring process.
 - (x) Flow control accuracy was kept within $\pm 2.5\%$ deviation over 24-hour sampling period.
- (b) Preparation of Filter Papers
- (i) Glass fibre filters, G810 were labelled and sufficient filters that were clean and without pinholes were selected.
 - (ii) All filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ± 3 °C; the relative humidity (RH) was < 50% and not variable by more than $\pm 5\%$. A convenient working RH was 40%.
 - (iii) All filter papers were prepared and analysed by ALS Technichem (HK) Pty Ltd. and has comprehensive quality assurance and quality control programmes.
- (c) Field Monitoring
- (i) The power supply was checked to ensure the HVS works properly.
 - (ii) The filter holder and the area surrounding the filter were cleaned.
 - (iii) The filter holder was removed by loosening the four bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully.
 - (iv) The filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter.
 - (v) The swing bolts were fastened to hold the filter holder down to the frame. The pressure applied was sufficient to avoid air leakage at the edges.
 - (vi) Then the shelter lid was closed and was secured with the aluminum strip.
 - (vii) The HVS was warmed-up for about 5 minutes to establish run-temperature conditions.
 - (viii) A new flow rate record sheet was set into the flow recorder.

- (ix) On site temperature and atmospheric pressure readings were taken and the flow rate of the HVS was checked and adjusted at around 1.1 m³/min, and complied with the range specified in the updated EM&A Manual (i.e. 0.6-1.7 m³/min).
 - (x) The programmable digital timer was set for a sampling period of 24 hrs, and the starting time, weather condition and the filter number were recorded.
 - (xi) The initial elapsed time was recorded.
 - (xii) At the end of sampling, on site temperature and atmospheric pressure readings were taken and the final flow rate of the HVS was checked and recorded.
 - (xiii) The final elapsed time was recorded.
 - (xiv) The sampled filter was removed carefully and folded in half length so that only surfaces with collected particulate matter were in contact.
 - (xv) It was then placed in a clean plastic envelope and sealed.
 - (xvi) All monitoring information was recorded on a standard data sheet.
 - (xvii) Filters were then sent to laboratory for analysis.
- (d) Maintenance and Calibration
- (i) The HVS and its accessories were maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
 - (ii) HVSs were calibrated at 2-month intervals using TE-5025A Calibration Kit prior to the commencement of baseline monitoring.
 - (iii) Calibration certificate of the HVSs are provided in **Appendix A**.

2.5.2 1-hour TSP Monitoring

(a) Measuring Procedures

The measuring procedures of the 1-hour dust meter were in accordance with the Manufacturer's Instruction Manual as follows:

- (i) Turn the power on.
- (ii) Close the air collecting opening cover.
- (iii) Push the "TIME SETTING" switch to [BG]
- (iv) Push "START/STOP" switch to perform background measurement for 6 seconds.
- (v) Turn the knob at SENSI ADJ position to insert the light scattering plate.
- (vi) Leave the equipment for 1 minute upon "SPAN CHECK" is indicated in the display.
- (vii) Push "START/STOP" switch to perform automatic sensitivity adjustment. This measurement takes 1 minute.
- (viii) Pull out the knob and return it to MEASURE position.
- (ix) Push the "TIME SETTING" switch the time set in the display to 3 hours.
- (x) Lower down the air collection opening cover.
- (xi) Push "START/STOP" switch to start measurement.

(b) Maintenance and Calibration

- (i) The 1-hour TSP meter was calibrated at 1-year intervals against a continuous particulate TEOM Monitor, Series 1400ab. Calibration certificates of the Laser Dust Monitors are provided in **Appendix A**.

2.6 Results and Observations

- 2.6.1 The baseline 1-hour and 24-hour monitoring was carried out from 4 December 2009 to 17 December 2009 for consecutive 14 days and the weather were mostly sunny. Major dust sources were from nearby traffic emissions.
- 2.6.2 The baseline monitoring results for 1-hour TSP and 24-hour TSP are summarized in **Table 2.4** and **Table 2.5** respectively. Detailed air quality monitoring results are presented in **Appendix B**.

Table 2.4 Summary of 1-hour TSP Baseline Monitoring Results

Parameter	Monitoring Location	Average ($\mu\text{g}/\text{m}^3$)	Range ($\mu\text{g}/\text{m}^3$)
1-hour TSP Level in $\mu\text{g}/\text{m}^3$	CMA1a	107.8	53.8 – 173.0
	CMA2a	112.9	69.6 – 181.4
	CMA3	94.3	53.5 – 142.0
	CMA4a	96.2	64.7 – 140.8
	CMA5	126.1	72.4 – 185.1
	CMA6	77.1	50.5 – 124.6

Table 2.5 Summary of 24-hour TSP Baseline Monitoring Results

Parameter	Monitoring Location	Average ($\mu\text{g}/\text{m}^3$)	Range ($\mu\text{g}/\text{m}^3$)
24-hour TSP Level in $\mu\text{g}/\text{m}^3$	CMA1a	71.9	26.0 – 142.0
	CMA2a	60.7	18.0 – 124.0
	CMA3	63.1	27.0 – 123.0
	CMA4a	63.4	9.0 – 119.0
	CMA5	78.5	37.0 – 132.0
	CMA6	88.2	37.0 – 163.0

2.7 Event and Action Levels

- 2.7.1 The air quality monitoring results, in terms of 1-hour TSP and 24-hour TSP, were below the Limit Level set out in the Air Quality Objective (AQO) at both monitoring locations.
- 2.7.2 The Action and Limit Levels for air quality impact monitoring were based on the criteria adopted from the updated EM&A Manual as presented in **Table 2.6**.

Table 2.6 Derivation of Action and Limit Levels for Air Quality

Parameters	Action	Limit
24-hour TSP Level in $\mu\text{g}/\text{m}^3$	For baseline level $\leq 200 \mu\text{g}/\text{m}^3$, Action level = (baseline level * 1.3 + Limit level)/2; For baseline level $> 200 \mu\text{g}/\text{m}^3$ Action level = Limit level	260 $\mu\text{g}/\text{m}^3$
1-hour TSP Level in $\mu\text{g}/\text{m}^3$	For baseline level $\leq 384 \mu\text{g}/\text{m}^3$, Action level = (baseline level * 1.3 + Limit level)/2; For baseline level $> 384 \mu\text{g}/\text{m}^3$, Action level = Limit level	500 $\mu\text{g}/\text{m}^3$

2.7.3 The derived Action and Limit levels are presented in **Table 2.7**.

Table 2.7 Derived Action and Limit Levels for Air Quality

Parameter	Monitoring Location	Action Level ($\mu\text{g}/\text{m}^3$)	Limit Level ($\mu\text{g}/\text{m}^3$)
1-hour TSP Level in $\mu\text{g}/\text{m}^3$	CMA1a	320.1	500
	CMA2a	323.4	500
	CMA3	311.3	500
	CMA4a	312.5	500
	CMA5	332.0	500
	CMA6	300.1	500
24-hour TSP Level in $\mu\text{g}/\text{m}^3$	CMA1a	176.7	260
	CMA2a	169.5	260
	CMA3	171.0	260
	CMA4a	171.2	260
	CMA5	181.0	260
	CMA6	187.3	260

2.8 Event and Action Plan

2.8.1 Should non-compliance of the air quality criteria occur, actions in accordance with the Action Plan in **Table 2.8** shall be carried out.

Table 2.8 Event / Action Plan for Construction Air Quality

EVENT	ACTION			
	ET	IEC	ER	CONTRACTOR
ACTION LEVEL				
1. Exceedance for one sample	<ol style="list-style-type: none"> Identify source, investigate the causes of exceedance and propose remedial measures; Inform IEC and ER; Repeat measurement to confirm finding; Increase monitoring frequency to daily. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Check monitoring data submitted by ET; Check Contractor's working method. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Notify Contractor. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Rectify any unacceptable practice; Amend working methods if appropriate. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>
2. Exceedance for two or more consecutive samples	<ol style="list-style-type: none"> Identify source; Inform IEC and ER; Advise the ER on the effectiveness of the proposed remedial measures; Repeat measurements to confirm findings; Increase monitoring frequency to daily; Discuss with IEC and Contractor on remedial actions required; If exceedance continues, arrange meeting with IEC and ER; If exceedance stops, cease additional monitoring. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Check monitoring data submitted by ET; Check Contractor's working method; Discuss with ET and Contractor on possible remedial measures; Advise the ET on the effectiveness of the proposed remedial measures; Supervise Implementation of remedial measures. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Confirm receipt of notification of failure in writing; Notify Contractor; Ensure remedial measures properly implemented. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Submit proposals for remedial to ER within 3 working days of notification; Implement the agreed proposals; Amend proposal if appropriate. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>
LIMIT LEVEL				
1. Exceedance for one sample	<ol style="list-style-type: none"> Identify source, investigate the causes of exceedance and propose remedial measures; Inform ER, Contractor and EPD; Repeat measurement to confirm finding; Increase monitoring frequency to daily; Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Check monitoring data submitted by ET; Check Contractor's working method; Discuss with ET and Contractor on possible remedial measures; Advise the ER on the effectiveness of the proposed remedial measures; Supervise implementation of remedial measures. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Confirm receipt of notification of failure in writing; Notify Contractor; Ensure remedial measures properly implemented. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Take immediate action to avoid further exceedance; Submit proposals for remedial actions to IEC within 3 working days of notification; Implement the agreed proposals; Amend proposal if appropriate. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>
2. Exceedance for two or more consecutive samples	<ol style="list-style-type: none"> Notify IEC, ER, Contractor and EPD; Identify source; Repeat measurement to confirm findings; Increase monitoring frequency to daily; Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; Arrange meeting with IEC and ER to discuss the remedial actions to be taken; Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; If exceedance stops, cease additional monitoring. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Discuss amongst ER, ET, and Contractor on the potential remedial actions; Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; Supervise the implementation of remedial measures. 	<ol style="list-style-type: none"> Confirm receipt of notification of failure in writing; Notify Contractor; In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; Ensure remedial measures properly implemented; If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>	<ol style="list-style-type: none"> Take immediate action to avoid further exceedance; Submit proposals for remedial actions to IEC within 3 working days of notification; Implement the agreed proposals; Resubmit proposals if problem still not under control; Stop the relevant portion of works as determined by the ER until the exceedance is abated. <p>(The above actions should be taken within 2 working days after the exceedance is identified)</p>

3 CONCLUSIONS AND RECOMMENDATIONS

- 3.1.1 Baseline air quality monitoring was carried out from 4 December 2009 to 17 December 2009 at 6 monitoring locations. Action Levels for air quality at each location were derived from the baseline monitoring results. No recommendation was provided in this baseline air quality monitoring report.

From the Regression Equation, the "Y" value according to	
$mw \times Qstd + bw = IC \times [(Pa/760) \times (298/Ta)]^{1/2}$	
Therefore, Set Point; IC = (mw x Qstd + bw) x [(760 / Pa) x (Ta / 298)] ^{1/2} =	<u>45.71</u>

TSP High Volume Sampler Field Calibration Report

Station SPCA - CMA4a Next Due Date: 13-Feb-10
 Cal. Date: 13-Nov-09 Serial No. 10377
 Equipment No.: A-001-10T

Ambient Condition			
Temperature, Ta (K)	295.7	Pressure, Pa (mmHg)	763.4

Orifice Transfer Standard Information					
Serial No:	1559	Slope, mc	1.97702	Intercept, bc	-0.0007
Last Calibration Date:	18-May-09	$mc \times Qstd + bc = [DH \times (Pa/760) \times (298/Ta)]^{1/2}$			
Next Calibration Date:	18-May-10	$Qstd = \{[DH \times (Pa/760) \times (298/Ta)]^{1/2} - bc\} / mc$			

Calibration of TSP Sampler					
Resistance Plate No.	Orifice			HVS Flow Recorder	
	DH (orifice), in. of water	[DH x (Pa/760) x (298/Ta)] ^{1/2}	Qstd (m ³ /min) X-axis	Flow Recorder Reading (CFM)	Continuous Flow Recorder Reading IC (CFM) Y-axis
18	10.5	3.26	1.65	56.0	56.34
13	8.3	2.90	1.47	50.0	50.31
10	6.4	2.55	1.29	44.0	44.27
7	4.2	2.06	1.04	36.0	36.22
5	2.6	1.62	0.82	28.0	28.17

By Linear Regression of Y on X

Slope, mw = 33.8756 Intercept, bw = 0.5959

Correlation Coefficient* = 0.9997

*If Correlation Coefficient < 0.990, check and recalibrate.

Set Point Calculation

From the TSP Field Calibration Curve, take Qstd = 1.30m³/min

From the Regression Equation, the "Y" value according to

$$mw \times Qstd + bw = IC \times [(Pa/760) \times (298/Ta)]^{1/2}$$

Therefore, Set Point; IC = (mw x Qstd + bw) x [(760 / Pa) x (Ta / 298)]^{1/2} = 44.36

Responses to Comments

Response to Comment - EPD's letter ref.: (26) in EP2/H4/S3/15 Pt.3 dated 25 January 2010

Comments	Reponses
Initial Comments:	
General:	
<p>(1) The baseline report was submitted to meet the requirements of the capitoned 2 permits. Since the scopes of the two permits are different and the EM&A requirements shall follow the 2 standardalone EM&A Manuals to be approved under each of the 2 permits, two standalone baseline montiroing reports shall be submitted to meet the requirements of the 2 permits separately.</p>	<p>As the works under the two separate permits are actually carried out together under a number of works contracts divided geographically, and the EM&A works for all these works contracts (with DPs) are conducted by a single ET and verified by a single IEC, we suggest the updated EM&A Manuals for these two permits are combined into a single volume which is applicable to both EPs, with those EM&A items applicable to only one particular EP properly annotated. This will give a more complete overall picture of the EM&A for the whole Project.</p>
<p>(2) The baseline air quality montiroing shall be conducted to fulfill the standard/established EM&A requirements/guidelines and the relevant requirements in the EM&A Manual (Dec 2007). Please refer to our recent intial comments via our letter dated 19.1.2010 to you on the updated EM&A Manuals submitted in Dec 2009 and ensure the baseline air quality montiroing complies with the Manuals to be approved, e.g. to address the odour baseline quality. You may also want to refer to the odour surveys conducted during the EIA study stage.</p>	<p>Two odour surveys including odour patrol and sampling were conducted on Sept-06 and Jul-07 by the Hong Kong Polytechnic University, and the results are included in Appendix 3.13 of the EIA Report for Wan Chai Development Phase II and Central-Wan Chai Bypass (Register No. AEIAR-125/2008).</p> <p>Both Sept-06 and Jul-07 odour patrols and sampling had been carried out during noon/afternoon at low tide condition for capturing the potential worst odour level of that day and hence are considered representative for the odour baseline quality. Hence, the Sept-06 and Jul-07 odour patrols and sampling will be taken as the odour baseline.</p>
Specific:	
Background	
<p>(3) S1.1: The project locations and scopes of the 2 permits are different. The project site of EP-364/2009 includes Central harbourfront area (but not mentioned in s.1.1.1). The term "study area" should be replaced by "proejct area" in the baseline reports where appropriate. S1.1.4 copying from the WDII&CWB EIA report should be amended to suit the corresponding baseline reports.</p>	<p>Noted and the wordings will be revised.</p>

<p><u>Monitoring equipment for 1-hr TSP Monitoring</u></p>	
<p><u>Sections 2.2, 2.5, 2.6 & 2.7 of Baseline Air Quality Monitoring Report:</u></p>	
<p>(4) As stated in S 2.3.1 of the EM&A Manual (Dec 2007) and “<i>Guidelines for Development project in Hong Kong – Environmental Monitoring and Audit</i>”, high volume samplers (HVS) shall be used for carrying out the <u>1-hour</u> and 24-hour TSP monitoring”. The 1-hr TSP monitoring shall be conducted using HVSs instead of portable direct reading dust meter. Before baseline monitoring and the initial stage of construction stage monitoring, it is doubtful that any proper calibration of a direct reading dust meter against HVS could be achieved since the dust contents/particle-size distribution could be site specific and changing from time to time. If direct reading dust meters are proposed to be used, please follow the requirements in the EM&A Manual (Dec 2007) and provide documentation to demonstrate if the calibration is properly achieved and the specific certification by IEC on the calibration and acceptability to use the direct reading dust meter(s). Besides, even after “initial” calibration, further regular calibrations using HVS is required to check the validity and accuracy of the results measured by direct reading dust method as stated in EM&A Manual (Dec 2007). All these should be reported in the baseline report and the future EM&A reports.</p>	<p>The portable direct reading dust meter were used for 1-hr TSP baseline monitoring and these meters are calibrated against a continuous particulate meter, Tapered Element Oscillating Microbalance (TEOM), which is an USEPA approved instrument for the continuous TSP monitoring.</p> <p>The calibration records for the portable direct reading dust meter were presented in Appendix A and such calibration will be carried out annually for checking the data accuracy.</p> <p>The use of portable direct reading dust meter is a usual and acceptable practice for the measurement of 1-hr TSP for most of current EM&A projects in Hong Kong such as EM&A for the Widening of Tolo Highway between Island House Interchange & Tai Hang-Investigation and Development of Anderson Road - Site Formation & Infrastructure Works.</p> <p>As the dust content for TSP including all particle sizes which can be suspended in the air and therefore the particle size distribution is not the concerned factor in measuring TSP concentrations.</p> <p>The calibration was carried out for a consecutive 4-hr period in order to determine the conversion factor between the portable direct reading dust meter and the standard equipment, TEOM. The calibration is to be considered valid if the calculated correlation coefficient is >0.990.</p>
<p>(5) S2.3 – TSP monitoring Locations: Both WDII&CWB EIA report (AEIAR-125/2008) and CWB&IECL EIA report (AEIAR-041/2001) predicted that the worst case construction dust impacts would be at a level of 1.5m above ground. The monitoring samplers should be placed at that level as far as practicable. In particular, a location of roof-top (24-storeys) of a high-rise building (i.e. Station MA1b) is not representative nor acceptable for construction dust monitoring in this project with construction works mainly at ground/low levels. Please explore whether there are alternative locations, e.g. any site office nearby, any low podium or at the site boundary close to the air sensitive receivers. Please provide justifications for the proposed monitoring locations/elevations in the baseline reports.</p>	<p>The monitoring station at Harbour Building (Station MA1b), which is an alternative location for Airport Railway Hong Kong Station (MA1) with similar environmental condition and near the site boundary, is one of the existing air sensitive receivers presented in the EIA Study Report. As the nearby relatively low-rise domestic premises and commercial buildings did not allow us to carry out the baseline air quality monitoring, therefore MA1b was considered to be the most appropriate alternative monitoring location.</p> <p>The monitoring station at roof-top of Harbour Building (Station MA1b) is the only accessible building with the electricity supply for carrying out the consecutive 14-day baseline monitoring. None of the nearby locations at lower level are allowed for such monitoring. Therefore, this location is considered to be the best alternative</p>

	location for Airport Railway Hong Kong Station (MA1)												
<u>Proposed alternative monitoring location</u>													
<u>Section 2.3 of Baseline Report:</u>													
<p>(6) It is noted that some alternative air monitoring locations are proposed when compared with the EIA reports. According to S1.4.2, Appendix D2, 'Guidelines for Development project in Hong Kong – Environmental Monitoring and Audit', <i>“When alternative monitoring locations are proposed, the following criteria, as far as practicable, shall be followed:</i></p> <p>(a) <i>at the site boundary or such locations close to the major dust emission source;</i> (b) <i>close to the sensitive receptors; and</i> (c) <i>take into account the prevailing meteorological conditions.”</i></p> <p>Please provide your considerations and justifications for the proposed changes in monitoring locations in the baseline reports</p>	<table border="1"> <tr> <td>CMA1 - City Garden Block 11 CMA1a - PLK Yu Lee Mo Fan Memorial School (alternative location)</td> </tr> <tr> <td><u>Justification:</u></td> </tr> <tr> <td> <ul style="list-style-type: none"> CMA1 rejected us to carry out the baseline air monitoring CMA1 and CMA1a were both located at the site boundary with similar environmental condition The roof-top height of CMA1a (4 floor) was lower than CMA1 (27 floor) </td> </tr> <tr> <td>CMA2 - Victoria Centre CMA2a - Causeway Bay Community Centre (alternative location)</td> </tr> <tr> <td><u>Justification:</u></td> </tr> <tr> <td> <ul style="list-style-type: none"> CMA2 rejected us to carry out the baseline air monitoring CMA2 and CMA2a were both located at the site boundary with similar environmental condition The roof-top height of CMA2a (4 floor) was lower than CMA2 (30 floor) </td> </tr> <tr> <td>CMA4 - Wanchai Sports Ground CMA4a - Society for the Prevention of Cruelty to Animals (alternative location)</td> </tr> <tr> <td><u>Justification:</u></td> </tr> <tr> <td> <ul style="list-style-type: none"> CMA4 rejected us to carry out the baseline air monitoring CMA4a was also one of air sensitive receivers in EIA Study Report CMA4 and CMA4a were both located at the site boundary with similar environmental condition </td> </tr> <tr> <td>MA1 - Airport Railway Hong Kong Station MA1b - Harbour Building (alternative location)</td> </tr> <tr> <td><u>Justification:</u></td> </tr> <tr> <td> <ul style="list-style-type: none"> Refer to response to comment item (5) </td> </tr> </table>	CMA1 - City Garden Block 11 CMA1a - PLK Yu Lee Mo Fan Memorial School (alternative location)	<u>Justification:</u>	<ul style="list-style-type: none"> CMA1 rejected us to carry out the baseline air monitoring CMA1 and CMA1a were both located at the site boundary with similar environmental condition The roof-top height of CMA1a (4 floor) was lower than CMA1 (27 floor) 	CMA2 - Victoria Centre CMA2a - Causeway Bay Community Centre (alternative location)	<u>Justification:</u>	<ul style="list-style-type: none"> CMA2 rejected us to carry out the baseline air monitoring CMA2 and CMA2a were both located at the site boundary with similar environmental condition The roof-top height of CMA2a (4 floor) was lower than CMA2 (30 floor) 	CMA4 - Wanchai Sports Ground CMA4a - Society for the Prevention of Cruelty to Animals (alternative location)	<u>Justification:</u>	<ul style="list-style-type: none"> CMA4 rejected us to carry out the baseline air monitoring CMA4a was also one of air sensitive receivers in EIA Study Report CMA4 and CMA4a were both located at the site boundary with similar environmental condition 	MA1 - Airport Railway Hong Kong Station MA1b - Harbour Building (alternative location)	<u>Justification:</u>	<ul style="list-style-type: none"> Refer to response to comment item (5)
CMA1 - City Garden Block 11 CMA1a - PLK Yu Lee Mo Fan Memorial School (alternative location)													
<u>Justification:</u>													
<ul style="list-style-type: none"> CMA1 rejected us to carry out the baseline air monitoring CMA1 and CMA1a were both located at the site boundary with similar environmental condition The roof-top height of CMA1a (4 floor) was lower than CMA1 (27 floor) 													
CMA2 - Victoria Centre CMA2a - Causeway Bay Community Centre (alternative location)													
<u>Justification:</u>													
<ul style="list-style-type: none"> CMA2 rejected us to carry out the baseline air monitoring CMA2 and CMA2a were both located at the site boundary with similar environmental condition The roof-top height of CMA2a (4 floor) was lower than CMA2 (30 floor) 													
CMA4 - Wanchai Sports Ground CMA4a - Society for the Prevention of Cruelty to Animals (alternative location)													
<u>Justification:</u>													
<ul style="list-style-type: none"> CMA4 rejected us to carry out the baseline air monitoring CMA4a was also one of air sensitive receivers in EIA Study Report CMA4 and CMA4a were both located at the site boundary with similar environmental condition 													
MA1 - Airport Railway Hong Kong Station MA1b - Harbour Building (alternative location)													
<u>Justification:</u>													
<ul style="list-style-type: none"> Refer to response to comment item (5) 													
<u>Calibration details</u>													
<u>Appendix A of Baseline Report (re: S.10.2.2(vi) of EM&A Manual):</u>													
<p>(7) As required under S 10.2.2(iv) of the EM&A Manual (Dec 2007), which states that <i>“the baseline monitoring report should include monitoring result together with the <u>name of laboratory</u> and types of equipment used and calibration details”</i>. Please provide the name of laboratory and the necessary information in the baseline reports.</p>	Noted. The name of laboratory is provided in Section 2.5.1 b (iii). The calibration record of HVS and 1-hr portable direct reading dust meter are provided in Appendix A.												
<u>Maintenance and calibration of HVSS</u>													
<u>Section 2.5(d)(ii) of Baseline Report (re: S.2.3.3 of EM&A Manual)</u>													
<p>(8) It is noted that the HVSSs were calibrated at 3-month intervals, which does not comply with S2.3.3 of EM&A Manual (Dec 2007), which states that <i>“initial calibration of dust monitoring equipment shall be conducted upon installation and thereafter at <u>bi-monthly intervals</u>”</i>. Please clarify and justify whether the monitoring results</p>	Noted and the calibration frequency for the HVSSs will be revised to bi-monthly interval in the baseline report and all the monitoring results are valid.												

are still valid or not.	
(9) Please advise whether the wind data monitoring equipment as required in the EM&A Manual, has been set-up; if affirmative, whether the results from the equipemnt have been recorded during the baseline monitoring.	NO wind data montiroing equipment was set-up during the baseline monitoring and the meteorological data were obtained from the Hong Kong Observatory.
<u>Figures</u>	
(10) Figures/location plans should be provided in each baseline reports to show the project elements and works under the corresponding permits. For example, Figure 2.1 did not show some of the project area udner EP-364/2009 at the western end near Shun Tak Centre. Besides, some of the project elements (e.g. water mains and sewage outfall – although are marines works) under EP-356/2009 were also missing. Please amend.	Noted and will be provided.
