Attention: Mr. Kenneth Chow / Environmental
Engineer II

Dear Sir,

**Consultancy Agreement A130-13
Independent Environmental Checker for CRS and LTS
Verification for Second Monthly Environmental Monitoring and
Audit (EM&A) Report (April 2014) (Report No.: EB001340R0041-v3)**

We refer to the Second Monthly EM&A Report (April 2014) received under cover of the email from the Environmental Team, Hyder Consulting Limited (HCL), dated on 14 May 2014.

Further to our comments provided on 13 May 2014 and subsequent revision of the Report by HCL on 14 May 2014, we have no comment and have verified the captioned report (Report No.: EB001340R0041-v3).

Should you have any queries, please feel free to contact the undersigned at 2410 3750 or our Mr. Thomas Wong at 2410 3795.

Yours faithfully
URS Hong Kong Ltd

Rodney Ip
Independent Environmental Checker

EXECUTIVE SUMMARY

Breaches of Action and Limit Levels

- ES01 No Notice of Exceedance and the associated investigation and follow-up actions were required as the environmental monitoring results registered no exceedances of Action / Limit Levels of air quality and construction noise during the Reporting Period.
- ES02 No corrective actions were required as the environmental audit during the Reporting Period observed:
- a) no deficiencies with major environmental significance of the required environmental mitigation measures;
 - b) no non-compliance with the required waste management; and
 - c) no adverse environmental impacts on the sensitive receivers environed with the site of the Project.

Environmental Complaints

- ES03 No environmental complaints were recorded during the Reporting Period.

Notification of Summons and Successful Prosecutions

- ES04 No notification of summons and successful prosecutions were recorded during the Reporting Period.

Reporting Changes

- ES05 No major reporting changes were made during the Reporting Period.

Future Key Issues

General

- ES06 Full implementation of the environmental mitigation measures, which are required in the EM&A Plan and summarized in Implementation Schedule of Appendix D, is recommended. Where necessary, proper maintenance and improvement of the implemented mitigation measures are reminded.

Air quality

- ES06 Construction dust is considered to be one of the key issues in the coming construction period, in particular during dusty activities under dry and windy conditions.
- ES07 Where appropriate, construction dust suppression measures including decking over the excavation areas, watering of exposed site surface and covering of all excavated and stockpiles of dusty material by impervious sheeting, etc., are reminded.

Construction Noise

- ES08 Construction noise is another key issue in the coming construction period. Working method, equipment and noise mitigation should be regularly reviewed to ensure compliance with statutory and non-statutory requirements and guidelines.

Water Quality

- ES09 As rain season has been approaching, particular attention is drawn to the compliance with water quality mitigation measures.

1. INTRODUCTION

1.1 REPORTING PERIOD

- 1.1.1 This is the 2nd monthly EM&A report (hereinafter referred as 'This Report') covering construction period from 1 to 30 April 2014 (hereinafter referred as 'the Reporting Period').
- 1.1.2 This Report has been written in accordance with the **Environmental Monitoring and Audit Plan** (hereinafter referred as 'the EM&A Plan') enclosed in the **Project Profile – MTR Tsim Sha Tsui Station Carnarvon Road Subway and Entrances Modification Works**, which is registered in the **Environmental Permit No. EP-440/2012** (hereinafter referred as 'the EP') (Register No.: PP-462/2012).

1.2 PROJECT BACKGROUND

- 1.2.1 In order to improve the appearance of Carnarvon Road Entrance D1 and D2 of Tsim Sha Tsui (hereafter referred as 'TST') Station and to provide a more comfortable walking environment nearby, MTR Corporation Limited (hereafter referred as 'MTRC' or 'the Corporation') has commissioned Maeda Corporation (hereinafter referred as 'MC') the contract **MTR Tsim Sha Tsui Station Carnarvon Road Subway and Entrances Modification Works** (hereafter referred as 'the Project'). The Project is proposed to rebuild the existing Entrance D1 and D2 and construct a new Entrance D3 at the basement B2 level of the K11 Art Mall to connect to the TST station by a subway, which extends from the Entrance D1 and D2 and runs approximately 80m along Carnarvon Road and across the Bristol Avenue to the Entrance D3. The tentative programme for the Project is approximately 25 months, scheduled to be commenced in March 2014.
- 1.2.2 The existing TST Station had been in operation before the **Environmental Impact Assessment Ordinance** (hereafter referred as 'EIAO') came into effect on 1 April 1998. It constitutes an exempted Designated Project (hereinafter referred as 'DP') according to Section 9(2) (g) of the EIAO (Cap. 499). As the Project involves a material change to an exempted DP which may have potential environmental impacts, an environmental permit is required prior to the commencement of the modification works. The Project Profile has been developed to provide information for direct application of an environmental permit. The EP has been granted since 18 July 2012, where the Project Profile and the associated **EM&A Plan** are registered.
- 1.2.3 Site map, works area and locations of the environmental monitoring under the Project are illustrated in Figure 1.1 Site Location Plan of **Appendix A**.
- 1.2.4 Management structure of the Project, including organization chart, lines of communication and contact names and telephone numbers of key personnel, is demonstrated in **Appendix B**.
- 1.2.5 Construction programme is shown in **Appendix C**, whereas implementation schedule for the recommended environmental mitigation measures is summarized in **Appendix D**, which fine tunes construction activities and shows inter-relationship with environmental protection / mitigation measures for the construction period.

1.3 ENVIRONMENTAL STATUS

1.3.1 As required in the EP, URS Hong Kong Ltd has been appointed as the Independent Environmental Checker under the Project (hereinafter referred as 'the IEC'), whereas Hyder Consulting Limited has been appointed as the Environmental Team under the Project (hereinafter referred as 'the ET').

1.3.2 According to the EP Condition 3.2 (a) under Environmental Monitoring and Audit (EM&A) during the Construction Period, baseline monitoring has been completed and the required Baseline Monitoring Report has been submitted to EPD on 14 February 2014 prior to commencement of the works under the Project.

1.3.3 Status of relevant environmental permits, licences, and/or notifications on environmental protection for the Project is summarized in **Table 1-1** below. They are detailed in **Appendix E**.

Table 1-1 Summary of Status of Environmental Licenses and Permits

Item	Description	License/Permit Status
1	Air pollution Control (Construction Dust)	Notification Ref. 365953 acknowledged on 21 Oct 2013.
2	Water Pollution Control Ordinance (Discharge License)	Water Discharge Licence Ref. WT00018229-2014 granted on 4 Mar 2014
3	Billing Account for Disposal of Construction Waste	A/C Ref. 7018523 granted on 25 October 2013
4	Chemical waste Producer Registration	Registration Ref. 5213-2214-M2446-16 granted on 4 Mar 2014

1.4 CONSTRUCTION ACTIVITIES

1.4.1 Construction activities undertaken during the Reporting Period and the following month are summarized in the following **Table 1-2**:

Table 1-2 Construction Activities Undertaken during the Reporting Period and Up-Coming Month

Item	Description
<u>Construction Activities Undertaken during the Reporting Period</u>	
1	Excavation and exposure of the existing unidentified utility (UU) at south side.
2	Erection of site hoarding.
3	Installation of the noise insulation mat to the site hoarding.
4	Demolition of Entrance D1 above ground level
<u>Construction Activities to be Undertaken in the Following Month</u>	
5	Pipe piling for excavation lateral support (ELS).

6 Exposure of the existing unidentified utility (UU) at south side.

7 Realignment of the hoarding

2. EM&A REQUIREMENTS

2.1 Air Quality

Monitoring Parameters and Frequency

- 2.1.1 24-Hour Total Suspended Particulates (hereinafter referred as '24-Hr TSP') is required to be monitored once a week during construction period of the Project.
- 2.1.2 1-Hour Total Suspended Particulates (hereinafter referred as '1-Hr TSP') is required to be monitored when exceedances of 24-Hr TSP occur, following the Event and Action Plan presented in **Appendix F**.
- 2.1.3 Schedules for 24-Hr TSP monitoring for the Reporting Period and the next Reporting Period are prepared and submitted to MTRC, IEC and MC prior to implementation via e-mail and / or facsimile for ease of necessary inspection. Where amendment is necessary under ad hoc conditions, including actual and broadcast adverse weather, accidental instrument failures, etc., advanced notification is given at least 24 hours prior to implementation or as practical as possible. The Monitoring Schedules are enclosed in **Appendix G**.

Monitoring Location

- 2.1.4 According to the EM&A Plan, Mirador Mansion was designated to be the air quality monitoring station of the Project. As the access to the air monitoring location designated in the EM&A Plan has been denied by the owner of the property, the ET proposes an alternative monitoring location on the roof-top above the 4/F of the commercial complex of K11 (hereinafter referred as 'K11'), which has been agreed among MTRC, IEC and MC, and the associated access to K11 has been granted by the management office of K11 prior to the commencement of the baseline monitoring in January 2014.
- 2.1.5 Air quality monitoring location is summarized in **Table 2-1-1** below and illustrated in **Appendix A**.

Table 2-1-1 Air Quality Monitoring Location

Location ID	Name of Premises	Description
K11	K11 Art Mall	Rooftop, 4/F

Monitoring Equipment

- 2.1.6 The air quality monitoring equipment to be used for construction air impact monitoring is shown in **Table 2-1-2** below:

Table 2-1-2 Air Quality Monitoring Equipment

Equipment Type	Model	Serial Number	Calibration Orifice Number	Location
High Volume Air Sampler	TE5005X	1713	1785	K11
Sibata Digital Dust Monitor	LD-3B	296098	Not Applicable	K11

2.1.7 High Volume Air Sampler (hereinafter referred as ‘the HVAS’) is used to monitor 24-Hr TSP, following the standard sampling method set out in High Volume Method for Total Suspended Particulates, Part 50 Chapter 1 Appendix B, Title 40 of the Code of Federal Regulations of the USEPA.

2.1.8 Weather information including wind speeds and wind directions is obtained from King’s Park Weather Station (about 1.7 km to the north of the monitoring station) and used as weather conditions during the Reporting Period. They are presented in **Appendix H**.

Calibration of Monitoring Equipment

2.1.9 The HVAS is calibrated before commencement of monitoring using standard orifice 5-points calibration method with orifice calibrator to determine the actual flow rate of each HVAS. Calibration Kit Model - TE5025A is used for calibration of the HVAS. Recalibration of the HVAS is carried out after motor maintenance, at least once every six months, which is about the expected life of carbon brush.

2.1.10 Calibration of the HVAS is conducted following the instruction manual of the manufacturer. Initial calibration of the dust monitoring equipment is conducted upon installation (and thereafter at bi-monthly intervals during impact monitoring). The transfer standard should be traceable to the internationally recognized primary standard and be calibrated annually.

2.1.11 The Sibata Digital Dust Monitor (hereinafter referred as ‘the Sibata’) is calibrated annually.

2.1.12 The calibration certificate of the equipment is shown in **Appendix I**.

Monitoring Methodology for 24-Hr TSP

2.1.13 Air quality monitoring will be conducted once a week under typical weather conditions (with no adverse weather such as typhoon signal or rain storm warning).

Installation of HVAS for 24-Hr TSP Monitoring

2.1.14 When positioning the HVAS, the following points will be noted:

- a) A horizontal platform with appropriate support to secure the samplers against gusty wind will be provided;
- b) No two samplers will be placed less than 2 m apart;
- c) The distance between the sampler and an obstacle, such as buildings, must be at least twice the height that the obstacle protrudes above the sampler where possible;
- d) A minimum of 2 m of separation from walls, parapets and penthouses is required for rooftops samplers;
- e) A minimum of 2 m of separation from any supporting structure, measured horizontally is required;
- f) No furnace or incinerator flue or building vent is nearby;
- g) Airflow around the sampler is unrestricted;

- h) The sampler is more than 20 m from the dripline;
- i) Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring;
- j) Permission must be obtained to set up the samplers and to obtain access to the monitoring stations; and
- k) A secured supply of electricity is needed to operate the samplers.

Preparation of Filter Papers and Laboratory Analysis

- 2.1.15 Sufficient pieces of filter paper should be labelled before sampling. It should be a clean filter paper with no pinholes, and should be conditioned in a humidity-controlled chamber for over 24-hour and be pre-weighed before use for the sampling. The preferred room temperature is around 25 °C ±3 °C with relative humidity (hereinafter referred as 'the RH') less than 50% ± 5%, preferably 40%.
- 2.1.16 Preparation of filters and subsequent laboratory analysis of the collected 24-Hr TSP samples were performed by ALS Technichem (HK) Pty Ltd (hereinafter referred as 'ALS'), a local laboratory which have been accredited under Hong Kong Laboratory Accreditation Scheme (HOKLAS).
- 2.1.17 All the collected samples should be kept by the ET in standard office conditions for 6 months before disposal.

Field Monitoring Procedures

- 2.1.18 Procedures for field monitoring are as follows:
 - a) Check power supply to ensure the HVAS works properly.
 - b) Clean the filter holder and the area surrounding the filter.
 - c) Remove the filter holder by loosening the four bolts and carefully align a new filter, with stamped number upward, on a supporting screen.
 - d) Align the filter properly on the screen so that the gasket forms an airtight seal on the outer edges of the filter.
 - e) Fasten the swing bolts to hold the filter holder down to the frame. The pressure applied should be sufficient to avoid air leakage at the edges.
 - f) Close the shelter lid and secure with the aluminium strip.
 - g) Warmed-up the HVAS for about 5 minutes to establish run-temperature conditions.
 - h) Set a new flow rate record sheet into the flow recorder.
 - i) Checked and adjust the flow rate of the HVAS at around 1.1 m³ per minute. (The range specified in the EM&A Plan is between 0.6-1.7 m³ per minute.)
 - j) Set the programmable timer for a sampling period of 24 hours, and record the starting time, weather condition and the filter number.
 - k) Record the initial elapsed time.
 - l) At the end of sampling, remove the sampled filter carefully and fold it in half-length so that only surfaces with collected particulate matter are in contact.
 - m) Place the sampled filter in a clean plastic envelope and seal.
 - n) Record all monitoring information on a Field Data Sheet as shown in **Appendix J**.
 - o) Send the filters to ALS for analysis.

Monitoring Methodology for 1-Hr TSP

Field Monitoring

- 2.1.19 The procedures for measurement of 1-Hr TSP follow Manufacturer's Instruction Manual, which is summarised as follows:
- Set power to "ON", push BATTERY button, make sure that the meter's indicator is in the range with a red line and allow the instrument to stand for about 3 minutes (Then, the air sampling inlet has been capped).
 - Push the knob at MEASURE position.
 - Push "O-ADJ" button. (Then meter's indication is 0).
 - Push the knob at SENSI ADJ position and set the meter's indication to S value described on the Test Report using the trimmer for SENSI ADJ.
 - Pull out the knob and return it to MEASURE position.
 - Push "START" button.
 - Record all monitoring information on a Field Data Sheet as shown in **Appendix J**.

Maintenance and Calibration

- The Sibata is checked at 3-month intervals and calibrated at 1-year intervals throughout the whole construction period.
- Calibration records for the Sibata Digital Dust Monitor direct dust meters are shown in **Appendix I**.

Action and Limit Levels

- 2.1.20 The Action and Limit levels (hereinafter referred as 'the A/L Levels) at K11 have been established in the Baseline Monitoring Report in accordance with the derivation criteria specified in Section 3.7 of the EM&A Plan, which are summarised in **Table 2-1-3** as follows:

Table 2-1-3 Derivation of Action and Limit Levels for Air Quality at K11, $\mu\text{g}/\text{m}^3$

Parameter	Action Level	Limit Level
24-Hr TSP	For baseline level $\leq 200 \mu\text{g}/\text{m}^3$, Action level = (130% of baseline level + Limit level)/2	260
	For baseline level $> 200 \mu\text{g}/\text{m}^3$, Action level = Limit level	
1-Hr TSP	For baseline level $\leq 384 \mu\text{g}/\text{m}^3$, Action level = (130% of baseline level + Limit level)/2	500
	For baseline level $> 384 \mu\text{g}/\text{m}^3$, Action level = Limit level	

- 2.1.21 The established A/L Levels for 24-Hr and 1-Hr TSP are summarized in **Table 2-1-4** as follows:

Table 2-1-4 Action & Limit Levels for Air Quality at K11, $\mu\text{g}/\text{m}^3$

Parameter	Action Level	Limit Level
24-Hr TSP	222	260
1-Hr TSP	373	500

Event and Action Plan

- 2.1.22 In case exceedances of Action and/or Limit levels for air quality occur, **Event and Action Plan** for Air Quality enclosed in **Appendix F** will be implemented.

Environmental Mitigation Measures for Air Quality

- 2.1.23 Although most of the construction works would be carried out underground, appropriate dust mitigation measures as stipulated in the EP, Project Profile as well as related environmental regulation including Air Pollution Control (Construction Dust) Regulation should be implemented to control fugitive dust emission. The following key dust suppression measures are recommended:

- Decking over the excavation areas;
- Regular watering to reduce dust emissions from all exposed site surface, particularly during dry weather;
- Frequent watering for particularly dusty construction areas and areas close to air sensitive receivers;
- Cover all excavated or stockpiles of dusty material by impervious sheeting or spraying with water to maintain the entire surface wet;
- Provision of vehicle washing facilities at the exit points of the site; and
- Provision of tarpaulin covering for any dusty materials on a vehicle leaving the site.

- 2.1.24 Details of the implementation schedule for the required environmental mitigation measures are presented in **Appendix D**.

2.2 Construction Noise

Monitoring Parameters and Frequency

- 2.2.1 **Table 2-2-1** summarizes the monitoring parameters and frequency for construction noise.

Table 2-2-1 Noise Monitoring Parameters and Frequency

Parameters	Frequency
L_{eq} in 30 minutes	Once a week

- 2.2.2 Monitoring schedules for construction noise for the Reporting Period and the next Reporting Period are prepared and submitted to MTRC, IEC and MC prior to implementation via e-mail and / or facsimile for ease of necessary inspection. Where amendment is necessary under ad hoc conditions, including actual and broadcast adverse weather, accidental instrument

failures, etc., advanced notification is given at least 24 hours prior to implementation or as practical as possible.

Monitoring Equipment

- 2.2.3 With reference to the Technical Memorandum (TM) issued under the Noise Control Ordinance (NCO), sound level meters in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications (both publications have been withdrawn and replaced by 61672:2003) are used for carrying out the noise monitoring. The details of the calibration of the sound level meters and their respective calibrators are as shown in the following **Table 2-2-2**.

Table 2-2-2 Construction Noise Monitoring Equipment

Item	Equipment Name	Model
1	Sound Level Meter	B&K 2238 (Serial no. 2562782)
2	Larson Davis CAL200 Acoustic Calibrator	(Serial no. 10929)

Monitoring Location

- 2.2.4 As stated in previous **Section 2.1.4**, the alternative air quality monitoring location K11 which is proposed by the ET and agreed among MTRC, IEC and MC, i.e. on the roof-top above the 4/F of the commercial complex of K11, is used for the construction noise monitoring location. The access to K11 has been granted by the management office of the K11 prior to the commencement of the baseline monitoring in January 2014.

- 2.2.5 **Table 2-2-3** summarizes the recommended alternative noise monitoring location, which is illustrated in **Appendix A**.

Table 2-2-3 Noise Monitoring Location

Location ID	Name of Premises	Description
K11	K11 Art Mall	Rooftop, 4/F

Monitoring Methodology

Field Monitoring

- 2.2.6 Procedures for noise monitoring summarized as follows:
- The microphones of the Sound Level Meter are about 1 m from the exterior of the building façade.
 - The battery condition is checked to ensure the correct functioning of the meter.
 - Parameters such as frequency weighting, the time weighting and the measurement time are set as follows:
 - Frequency weighting: A
 - Time weighting: Fast
 - Time measurement: 30 minutes intervals (0700-1900 daily)
 - Prior to and after each noise measurement, the meter is calibrated using a Calibrator for 94 dB at 1 kHz. If the difference in the calibration level before and after measurement is

more than 1 dB, the measurement should be considered invalid and the measurement repeated after re-calibration or repair of the equipment.

- e) During the monitoring period, the $L_{eq(30\ min)}$ are recorded.
- f) Record all monitoring information on a **Field Data Sheet** as shown in **Appendix J**.

Maintenance and Calibration

2.2.7 The meter and calibrator are sent to the supplier or HOKLAS laboratory to check and calibrate prior to the monitoring. Calibration records are presented in **Appendix I**.

Weather Condition

2.2.8 The wind speeds and directions during the monitoring period are recorded and shown in **Appendix H**.

Action and Limit Levels

2.2.9 The Action and Limit levels (hereinafter referred as ‘the A/L Levels) at K11 have been established in the **Baseline Monitoring Report**. They are summarised in **Table 2-2-4** as follows:

Table 2-2-4 Action and Limit Levels for Construction Noise

Time Period	Action Level	Limit Level
0700-1900 hours on normal weekdays	When one valid documented complaint is received.	75*

*Note: *70 dB(A) for schools and 65 dB(A) during school examination periods. If works are to be carried out during restricted hours, the conditions stipulated in the Construction Noise Permit (CNP) issued by the Noise Control Authority have to be followed.*

Event and Action Plan

- 2.2.10 In case exceedances of Action and/or Limit levels for construction noise occur, the Event and Action Plan enclosed in **Appendix F** will be triggered.

Mitigation Measures for Construction Noise

- 2.2.11 Although no residual noise impact would be generated after the proposed mitigation measures are in place, the general construction noise control measures stipulated in the EP, Project Profile are recommended in order to minimise noise impacts during the construction phase. They are summarized as follows:
- a) The Code of Practice on Good Management Practice to Prevent Violation of the Noise Control Ordinance (Chapter 400) (for Construction Industry) published by EPD shall be adopted;
 - b) The statutory and non-statutory requirements and guidelines shall be complied with;
 - c) Approval for the method of working, equipment and noise mitigation measures intended to be used at the site shall be granted from the Project Engineer before commencing any work;
 - d) Working methods to minimize the noise impact on the surrounding NSRs shall be formulated and executed, and the implementation of these methods shall be monitored by experienced personnel with suitable training;
 - e) Noisy equipment and noisy activities shall be located as far away from the NSRs as is practical;
 - f) Unused equipment shall be turned off;
 - g) PME should be kept to a minimum and the parallel use of noisy equipment / machinery should be avoided;
 - h) All plant and equipment shall be maintained regularly;
 - i) Material stockpiles and other structures shall be effectively utilized as noise barriers, whenever practicable; and
 - j) Enclosure of Entrance D1 with acoustic mat during demolition.
- 2.2.12 Details of the implementation schedule for the mitigation measures are presented in **Appendix D**.

3. MONITORING RESULTS

3.1 Air Quality

Monitoring Results

3.1.1 24-Hr TSP monitoring during the Reporting Period was conducted following the agreed monitoring schedule.

3.1.2 24-Hr TSP results of the Reporting Period are summarized in the following **Table 3-1-1**. Graphical plots of the parameter are illustrated in **Appendix K**.

Table 3-1-1 Summary of 24-Hr TSP Monitoring Results, ug/m³

Monitoring Date	24-Hr TSP	A/L Levels	
4 April 2014	138		
8 April 2014	37		
10 April 2014	49		
15 April 2014	98	Action Level:	Limit Level:
24 April 2014	98	222	260
28 April 2014	63		
Mean (Min – Max)	84 (37-138)		

Discussion

3.1.3 **Table 3-1-1** demonstrates that all 24-Hr TSP results of the Reporting Period fluctuated well below the A/L Levels of the parameter, i.e. neither Action Level nor Limit Level exceedances were recorded.

3.1.4 No Notice of Exceedances (thereinafter referred as 'NOE') and the associated NOE Investigation as well as remedial actions were required during the Reporting Period.

3.2 Construction Noise

Monitoring Results

3.2.1 Construction noise monitoring during the Reporting Period was conducted following the agreed monitoring schedule.

3.2.2 Construction noise monitoring results of the Reporting Period are summarized in the following **Table 3-2-1**. Graphical plots of the parameter are illustrated in **Appendix K**.

Table 3-2-1 Summary of Construction Noise Monitoring Results at K11, dB(A)

Monitoring Date	L_{eq} (30 min)	A/L Levels
4 April 2014	69	Limit Level: 75
11 April 2014	68	
15 April 2014	67	Action Level: Documented complaint against construction noise.
25 April 2014	66	
30 April 2014	66	
Mean (Min – Max), L_{eq} (30 min)	68 (66-69)	

Discussion

- 3.2.3 No environmental complaint against construction noise was registered during the Reporting Period, whereas **Table 3-2-1** demonstrates that all construction noise results of the Reporting Period were well below the Limit Level of the parameter, i.e. neither exceedances of Action Level nor exceedances of Limit Level were recorded.
- 3.2.4 Neither NOE nor NOE investigation and the associated remedial actions were required during the Reporting Period.

Weather Conditions

- 3.2.5 No weather conditions and any other factors were identified to have significant effects on the monitoring results of air quality and construction noise during the Reporting Period were identified.
- 3.2.6 Weather information during the Reporting Period which is extracted from Hong Kong Observatory King's Park Weather Station is enclosed for reference in **Appendix H**.

3.3 Conclusions and Recommendations

Conclusions

- 3.3.1 No exceedances of A/L Levels of air quality and construction noise were registered during the Reporting Period.
- 3.3.2 No NOE and the associated NOE Investigation and corrected actions were required during the Reporting Period.

Recommendations

- 3.3.3 Full implementation of the environmental mitigation measures, which are required in the EM&A Plan and summarized in Implementation Schedule of **Appendix D**, is recommended.

Where necessary, proper maintenance and improvement of the implemented mitigation measures are reminded.

- 3.3.4 Nevertheless, construction dust shall be suppressed during dusty construction activities under dry and windy conditions.
- 3.3.5 In addition, construction noise shall be eliminated to avoid adverse impacts on the nearby sensitive receivers.

4. ENVIRONMENTAL AUDIT

4.1 Site Inspection

- 4.1.1 Weekly site inspections are jointly conducted among MTRC, MC and ET. The site inspection follows strictly the agreed Site Inspection Checklist, which covers all the site audit requirements stipulated in the EM&A Plan, PS and all relevant environmental laws.
- 4.1.2 The completed Site Inspection Checklists are distributed to all relevant parties within 48 hours upon completion of the site inspection for agreement and signature of the relevant parties and, where appropriate, for implementation of the recommended corrected actions to promptly rectify the situation.
- 4.1.3 The site inspections during the Reporting Period were conducted on 4, 11, 18 and 25 April 2014. Deficiencies or findings of the site audit and the associated follow up actions are summarized in the following **Table 4-1**:

Table 4-1 Summary of Findings and Follow-Up Actions of the Site Inspection

Date of Site Inspection	Deficiencies or findings	Follow-Up Action
01 April 2014	No observations were recorded.	Not required.
08 April 2014	Stagnant water was observed within the site, posing potential of direct discharge to the receiving water body and mosquito breeding. Regular clearance was required.	Stagnant water was cleared.
15 April 2014	No observations were recorded.	Not required.
22 April 2014	No observations were recorded.	Not required.
29 April 2014	No observations were recorded.	Not required.

- 4.1.4 As shown in **Table 4-1**, no deficiencies or non-compliance of environmental mitigation measures or adverse environmental impacts were observed during the Reporting Period.

4.2 Compliance with Legal/Contractual Requirements

- 4.2.1 Construction activities under the Project must comply with all environmental protection and pollution control laws in Hong Kong, as well as the contractual requirements of the Project. **Table 4-2** summarizes breaches of legal and contractual requirements.

Table 4-2 Summary of Breaches of Legal and Contractual Requirements

Month	Number of Breaches	Cumulative
April 2014	0	0

4.3 Environmental Complaints

4.3.1 Environmental complaints are handled following closely the flow chart of complaint response procedure which is enclosed in **Appendix L**.

4.3.2 Environmental complaints registered during the Reporting Period are summarised in **Table 4-3** below:

Table 4-3 Summary of Complaint

Month	Number of Complaint	Nature of Complaint	Cumulative Number of Complaint
April 2014	0	Not Applicable	0

4.4 Notification of Summons /Successful Prosecutions

4.4.1 Notification of summons and successful prosecutions registered during the Reporting Period are summarised in **Table 4-4** below:

Table 4-4 Summary of Summon and Successful Prosecutions

Month	Number of Issue	Nature of Issue	Cumulative Number of Issue
April 2014	0	Not Applicable	0

4.5 Future key environmental issues

4.5.1 Future key environmental issues include

- a) air quality in particular construction dust during dusty construction activities, e.g. demolition of the Entrance D1 and excavation works, under dry and windy conditions;
- b) construction noise during noisy activities; and
- c) particularly in the approaching rain season, site surface water run-off and construction wastewater discharge.

4.5.2 To avoid potential of adverse environmental impacts of the key environmental issues stated above, full implementation of the mitigation measures as stipulated in the Implementation Schedule shown in **Appendix D** is required, and the mitigation measures for air quality, construction noise and water quality implemented to date shall be properly maintained. Where appropriate, improvement of the implemented mitigation measures is reminded to ensure effectiveness of the mitigation measures.

5. WASTE MANAGEMENT

5.1 Waste Management

5.1.1 Despite small scale of the Project and the amount of C&D material that needs to be hauled off site and disposed of is anticipated not to be significant, 3-R waste management i.e. Reduce, Reuse and Recycle, is adopted in order to minimize adverse environmental impacts to be generated from construction of the Project.

5.1.2 Waste management under the Project is performed in accordance with the Waste Management Plan, which has been prepared for implementation of the construction waste mitigation measures in compliance with the requirements stipulated in the EM&A Plan, PS, Waste Disposal Ordinance and the associated subsidiary regulations.

5.2 Waste Management Record

5.2.1 Updated waste management status is detailed in **Appendix M**, where the 3-R status of the construction waste generated from construction of the Project during the Reporting Period is presented.

6. CONCLUSIONS / RECOMMENDATIONS

6.1 Conclusions

- 6.1.1 No NOE and the associated NOE investigation and follow-up actions were required as the environmental monitoring results registered no exceedances of A/L Levels of air quality and construction noise during the Reporting Period.
- 6.1.2 No corrective actions were required as the environmental audit during the Reporting Period observed:
- a) no deficiencies with major environmental significance of the required environmental mitigation measures;
 - b) no non-compliance with the required waste management; and
 - c) no adverse environmental impacts on the sensitive receivers environed with the site of the Project.
- 6.1.3 In addition, no remedial actions were required as no environmental complaints, notification of summons and successful prosecutions were reported during the Reporting Period.
- 6.1.4 Nevertheless, occasional observations of inadequacies of proactive environmental mitigation measures were recorded during the regular site inspection and audit. They were rectified in situ or before the following site audit upon identification or notification.

6.2 Recommendations

- 6.2.1 Full implementation of the environmental mitigation measures stipulated in the EM&A Plan and summarized in **Implementation Schedule** of **Appendix D** is required. Where necessary, proper maintenance and improvement of the implemented mitigation measures are reminded.
- 6.2.2 Particular attention is drawn to the compliance with water quality mitigation measures during the approaching rain season.
- 6.2.3 In addition, suppression of construction dust is required during dusty construction activities under dry and windy conditions.
- 6.2.4 Furthermore, construction noise shall be eliminated to avoid adverse impacts on the nearby sensitive receivers.

3	NA	NA	1.00	0.8890	7.9	5.00
4	NA	NA	1.00	0.8490	8.7	5.50
5	NA	NA	1.00	0.7020	12.6	8.00

DATA TABULATION

Vstd	(x axis) Qstd	(y axis)	Va	(x axis) Qa	(y axis)
1.0103	0.7140	1.4245	0.9958	0.7037	0.8791
1.0061	1.0122	2.0146	0.9916	0.9976	1.2433
1.0040	1.1293	2.2524	0.9895	1.1130	1.3900
1.0030	1.1814	2.3623	0.9885	1.1643	1.4579
0.9977	1.4213	2.8491	0.9833	1.4008	1.7583
Qstd slope (m) = 2.01484			Qa slope (m) = 1.26166		
intercept (b) = -0.01898			intercept (b) = -0.01171		
coefficient (r) = 0.99991			coefficient (r) = 0.99991		
y axis = SQRT[H2O(Pa/760)(298/Ta)]			y axis = SQRT[H2O(Ta/Pa)]		

CALCULATIONS

$$Vstd = \text{Diff. Vol} [(Pa - \text{Diff. Hg}) / 760] (298 / Ta)$$

$$Qstd = Vstd / \text{Time}$$

$$Va = \text{Diff Vol} [(Pa - \text{Diff Hg}) / Pa]$$

$$Qa = Va / \text{Time}$$

For subsequent flow rate calculations:

$$Qstd = 1/m \{ [\text{SQRT}(\text{H2O}(\text{Pa}/760)(298/\text{Ta}))] - b \}$$

$$Qa = 1/m \{ [\text{SQRT}(\text{H2O}(\text{Ta}/\text{Pa}))] - b \}$$

TSP Sampler Calibration

SITE

Location: **Tsim Sha Tsui**
 Sampler:

Date: **January 10, 2014**
 Tech: **Sam Wong**

CONDITIONS

Barometric Pressure (in Hg):	40.35	Corrected Pressure (mm Hg):	1025
Temperature (deg F):	59	Temperature (deg K):	288
Average Press. (in Hg):	40.35	Corrected Average (mm Hg):	1025
Average Temp. (deg F):	59	Average Temp. (deg K):	288

CALIBRATION ORIFICE

Make: **Tisch**
 Model: **TE-5025A**
 Serial#: **1785**

Qstd Slope: **2.00979**
 Qstd Intercept: **-0.01403**
 Date Certified: **April 9, 2013**

CALIBRATIONS

Plate or Test #	H2O (in)	Qstd (m3/min)	I (chart)	IC (corrected)	LINEAR REGRESSION
1	12.60	2.093	56.0	66.15	Slope = 30.5358 Intercept = 2.6204 Corr. coeff.= 0.9995
2	9.80	1.847	50.0	59.06	
3	7.30	1.595	44.0	51.98	
4	4.60	1.268	35.0	41.34	
5	2.90	1.008	28.0	33.08	
					# of Observations: 5

Calculations

$$Qstd = 1/m[\text{Sqrt}(H2O(Pa/Pstd) (Tstd/Ta)) - b]$$

$$IC = I[\text{Sqrt}(Pa/Pstd) (Tstd/Ta)]$$

Qstd = standard flow rate
 IC = corrected chart response
 I = actual chart response
 m = calibrator Qstd slope
 b = calibrator Qstd intercept
 Ta = actual temperature during calibration (deg K)
 Pa = actual pressure during calibration (mm Hg)
 Tstd = 298 deg K
 Pstd = 760 mm Hg
 For subsequent calculation of sampler flow:
 $1/m((I) [\text{Sqrt}(298/Tav) (Pav/760)] - b)$

m = sampler slope
 b = sampler intercept
 I = chart response
 Tav = daily average temperature
 Pav = daily average pressure

High Volume Air Sampler Calibration Worksheet

Project Title: MTR Tsim Sha Tsui Station Carnarvon Road Subway and Entrances Modification Works
 Monitoring Location: K11 Commercial Complex
 Calibration Date: 11-Mar-14
 Calibration Due Date: 10-May-14
 Time: 11:30

Sampler Model:	TE5005X
Serial No.:	1713
Calibrator Orifice no.:	1785
Slope (m):	2.00979
Intercept (b):	-0.01403
Correction coeff. (r)	0.99995

Standard pressure (mmHg) Pstd:	763.9
Standard temp. (K) Tstd:	290.8
Calibration pressure (mmHg) Pa:	766.4
Calibration temp. (K) Ta:	288.3

$$\text{Flow (corrected)} = \sqrt{H \times \frac{Pa}{Pstd} \times \frac{Tstd}{Ta}}$$

$$Qstd = \frac{1}{m} \times (\sqrt{H \times \frac{Pa}{Pstd} \times \frac{Tstd}{Ta}} - b)$$

Sample no.	Pressure Drop (H), inch	Flow (corrected), m ³ /min	Actual flow rate (Qstd), m ³ /min	Flow indication (I), arbitrary
1	11.7	3.483	1.740	55.0
2	9.0	3.055	1.527	50.0
3	7.5	2.789	1.395	44.0
4	4.1	2.062	1.033	37.0
5	2.8	1.704	0.855	30.0

Correlation Coefficient : 0.9931

Remark
 1 hPa = 0.750062 mmHg

Calibration Certificate

Certificate No. 37521

Page 1 of 2 Pages

Customer : Enovative Environmental Service Limited

Address : Room 3, 12/F., New City Centre, 2 Lei Yue Mun Road, Kwun Tong, Kowloon, H.K.

Order No. : Q32432

Date of receipt : 16-Oct-13

Item Tested

Description : Sound Level Calibrator

Manufacturer : B&K

Model : Type 4231

Serial No. : 2685684

Test Conditions

Date of Test : 31-Oct-13

Supply Voltage : --

Ambient Temperature : (23 ± 3)°C

Relative Humidity : (50 ± 25) %

Test Specifications

Calibration check.

Ref. Document/Procedure : F21, Z02.

Test Results

All results were within the IEC 942 Class 1 specification.

The results are shown in the attached page(s).

Main Test equipment used:

<u>Equipment No.</u>	<u>Description</u>	<u>Cert. No.</u>	<u>Traceable to</u>
S014	Spectrum Analyzer	35730	NIM-PRC & SCL-HKSAR
S205	Ref. Sound Level Calibrator	PHCO40002	SCL-HKSAR
S041	Universal Counter	34621	SCL-HKSAR
S206	Sound Level Meter	36203	SCL-HKSAR
S031	6½ dgt. Multimeter	30128	NIM-PRC

The values given in this Calibration Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Hong Kong Calibration Ltd. shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to International System of Units (SI).

The test results apply to the above Unit-Under-Test only

Calibrated by : 
Dorothy Cheuk

Approved by : 
Steve Kwan

This Certificate is issued by:

6. Toneburst response (4kHz)

UUT Setting	Tone Burst Duration(ms)	UUT Reading(dB)	Difference (dB)	IEC 61672 Type 1 Spec.
Fast	Steady	127.0(Ref)	--	--
	200	126.0	-1.0	-1.0 ± 0.8dB
	2	108.9	-18.1	-18.0, +1.3 dB ~ -1.8 dB
	0.25	99.9	-27.1	-27.0, +1.3 dB ~ -3.3 dB
Slow	Steady	127.0(Ref)	--	--
	200	120.2	-6.8	-7.4 ± 0.8dB
	2	100.6	-26.4	-27.0, +1.3 dB ~ -3.3 dB
Time averaging	Steady	127.0(Ref)	--	--
	200	120.1	-6.9	-7.0±0.8dB
	2	99.5	-27.5	-27.0, +1.3 dB ~ -1.8 dB
	0.25	91.7	-35.3	-36.0, +1.3 dB ~ -3.3 dB

Uncertainty : ± 0.1 dB

7. Overload indication (130 dB range, A-weighted, Time-average, 4kHz)

UUT Reading at overload (dB)		Difference (dB)	IEC 61672 Type 1 Spec.
+ ve one half cycle	- ve one half cycle		
138.4	138.2	0.2	< 1.8 dB

The overload indicator latched on until reset

Uncertainty : ± 0.1 dB

Remarks : 1. UUT : Unit-Under-Test

2. The uncertainty claimed is for a confidence probability of not less than 95%.

3. Atmospheric Pressure : 996 hPa.

4. Preamplifier model : NH-25 , S/N : 10553

5. Firmware Version: 1.2

6. Power Supply Check: OK

7. The UUT was adjusted with the laboratory's sound calibrator at the reference sound pressure level before the calibration.

Notes:

- (1) The performance targets are given below:
 - All excavated materials to be sorted for recovering the inert portion of C&D materials, e.g. hard rocks, soil and broken concrete, for reuse on the Site or disposal to designated outlets;
 - All metallic waste to be recovered for collection by recycling contractors;
 - All cardboard and paper packaging (for plant, equipment and materials) to be recovered, properly stockpiled in dry and covered condition to prevent cross contamination;
 - All chemical wastes to be collected and properly disposed of by specialist contractors; and
 - All demolition debris to be stored to recover broken concrete, reinforcement bars, mechanical and electrical fittings, hardware as well as other fitting / materials that have established recycling outlets.
- (2) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material.
- (3) Broken concrete for recycling into aggregates.
- (4) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.
