Attention: Mr. Kenneth Chow / Environmental Engineer II

Dear Sir,

Consultancy Agreement A130-13
Independent Environmental Checker for CRS and LTS
CRS - Verification for Tenth Monthly Environmental Monitoring and Audit (EM&A) Report (December 2014) (Report No.: EB001340R00152)

We refer to the Tenth Monthly EM&A Report (December 2014) received under cover of the email from the Environmental Team, Hyder Consulting Limited (HCL), dated on 9 January 2015.

HCL revised the Report addressing the comments from Maeda Corporation and provided on 13 January 2015. We have no further comment and have verified the captioned report (Report No.: EB001340R00152).

Should you have any queries, please feel free to contact the undersigned at 24103750 or our Dr. Alex Cheung at 2410 3796.

Yours faithfully
URS Hong Kong Ltd

EXECUTIVE SUMMARY

Breaches of Action and Limit Levels

ES01 No Notice of Exceedance and the associated investigation and follow-up actions were required as the environmental monitoring results registered no exceedances of Action/ Limit Levels of air quality and construction noise during the Reporting Period.

ES02 One corrective action was required as the environmental audit during the Reporting Period observed:

1) One deficiencies with environmental significance of the required environmental mitigation measures;

2) No non-compliance with the required waste management; and

3) No adverse environmental impacts on the sensitive receivers environed with the site of the Project.

Environmental Complaints

ES03 One complaint against air nuisance was recorded during the Reporting Period.

Notification of Summons & Successful Prosecutions

ES04 No notification of summons and successful prosecutions were recorded during the Reporting Period.

Reporting Changes

ES05 No major reporting changes were made during the Reporting Period.

Future Key Issues

General

ES06 Full implementations of the environmental mitigation measures, which are required in the EM&A Plan and summarised in the Implementation Schedule, are recommended. Whenever necessary, proper maintenance and improvement of the implemented mitigation measures are reminded.

Construction Noise

ES07 Particular attention should be paid to construction noise mitigation measures, especially during piling works during the coming construction period to ensure full compliance with statutory and non-statutory requirements and guidelines. Proactive review of working methods, careful selection and arrangement of the noisy equipment as well as effective noise mitigation measures are strongly recommended.

Water Quality

ES08 In addition, compliance with water quality mitigation measures remains one of the key environmental issues within the construction period, especially when water usage is high.

Air quality

ES09 Furthermore, implying of construction dust suppression measures are recommended during dusty activities under dry and windy conditions.

ES10 Where appropriate, construction dust suppression measures including decking over the excavation areas, watering of exposed site surface and covering of all excavated and stockpiles of dusty material by impervious sheeting or similar materials are reminded.

1 INTRODUCTION

1.1 The Reporting Period

1.1.1 This is the 10th monthly EM&A report (hereinafter referred as 'This Report') covering construction period from 1 to 31 December 2014 (hereinafter referred as 'the Reporting Period').

1.1.2 This Report has been written in accordance with the ***Environmental Monitoring and Audit Plan*** (hereinafter referred as 'the EM&A Plan') enclosed in the ***Project Profile – MTR Tsim Sha Tsui Station Carnarvon Road Subway and Entrances Modification Works***, which is registered in the Environmental Permit No. EP-440/2012 (hereinafter referred as 'the EP') (Register No.: PP-462/2012).

1.2 Project Background

1.2.1 In order to improve the appearance of Carnarvon Road Entrance D1 and D2 of Tsim Sha Tsui (hereafter referred as 'TST') Station and to provide a more comfortable walking environment nearby, MTR Corporation Limited (hereafter referred as 'MTRC' or 'the Corporation') has commissioned Meada Corporation (hereinafter referred as 'MC') the contract MTR Tsim Sha Tsui Station Carnarvon Road Subway and Entrances Modification Works (hereafter referred as 'the Project'). The Project is proposed to rebuild the existing Entrance D1 and D2 and construct a new Entrance D3 at the basement B2 level of the K11 Art Mall to connect to the TST station by a subway, which extends from the Entrance D1 and D2 and runs approximately 80m along Carnarvon Road and across the Bristol Avenue to the Entrance D3. The Project was commenced in March 2014 and is anticipated to be completed in September 2017.

1.2.2 The existing TST Station had been in operation before the ***Environmental Impact Assessment Ordinance*** (hereafter referred as 'EIAO') comes into effect on 1 April 1998. It constitutes an exempted Designated Project (hereinafter referred as 'DP') according to Section 9(2) (g) of the EIAO (Cap. 499). As the Project involves a material change to an exempted DP which may have potential environmental impacts, an environmental permit is required prior to the commencement of the modification works. The Project Profile has been developed to provide information for direct application of an environmental permit. The EP has been granted since 18 July 2012, after the Project Profile and the associated ***EM&A Plan*** were registered.

1.2.3 Site map, works area and locations of the environmental monitoring under the Project are illustrated in Figure 1.1 Site Location Plan of ***Appendix A***.

1.2.4 Management structure of the Project, including organization chart, lines of communication and contact names and telephone numbers of key personnel, is demonstrated in ***Appendix B***.

1.2.5 Construction programme is shown in ***Appendix C***, whereas implementation schedule for the recommended environmental mitigation measures (hereinafter referred as 'the Implementation Schedule') are summarised in ***Appendix D***, which fine tunes the construction activities and shows inter-relationships with the environmental protection / mitigation measures for the construction period.

1.3 Environmental Status

1.3.1 As required in the EP, URS Hong Kong Ltd has been appointed as the Independent Environmental Checker under the Project (hereinafter referred as 'the IEC'), whereas Hyder Consulting Limited has been appointed as the Environmental Team under the Project (hereinafter referred as 'the ET').

1.3.2 According to the EP Condition 3.2 (a) under Environmental Monitoring and Audit (EM&A) during the Construction Period, baseline monitoring has been completed and the required Baseline Monitoring Report has been submitted to EPD on 14 February 2014 prior to commencement of the works under the Project.

1.3.3 Status of relevant environmental permits, licences, and/or notifications on environmental protection for the Project is summarised in ***Table 1-3-1*** below. They are detailed in ***Appendix E***.

Table 1-3-1 Summary of Status of Environmental Licenses and Permits

Item	Description	License/Permit Status
1	Air Pollution Control (Construction Dust)	Notification Ref. 365953 acknowledged on 21 Oct 2013.
2	Water Pollution Control Ordinance (Discharge License)	The discharge license (Ref No. WT00019722-2014) was granted on 01 Sep 2014 superseding the previous license (Ref No. WT00018229-2014).
3	Billing Account for Disposal of Construction Waste	A/C Ref. 7018523 granted on 25 Oct 2013
4	Chemical Waste Producer Registration	Registration Ref. 5213-2214-M2446-16 granted on 4 Mar 2014
5	Noise Control Ordinance	The Noise Permit (Ref No.GW-RE1475-14) was granted on 17 Dec 2014 superseding the previous permit (Ref No. GW-RE0876-14).

1.4 Construction Activities

1.4.1 Construction activities undertaken during the Reporting Period and the following month are summarised in ***Table 1-4-1***:

Table 1-4-1 Construction Activities Undertaken during the Reporting Period and Up-Coming Month

Item	Description
	Construction Activities Undertaken during the Reporting Period
1	Pipe piling for the cut and cover tunnel
2	Pipe piling for the temporary staircase
3	Curtain Grout for the temporary staircase
4	Lower the level to expose the utilities at Excavation Lateral Support (ELS)
5	Excavation (Stage 1) at ELS
6	Re-alignment of site hoarding
7	Installation of shaft wailing
	Construction Activities to be Undertaken in the Up-Coming Month
1	Pumping test for temporary staircase
2	Pipe piling for the cut and cover tunnel
3	Pipe piling for the temporary staircase
4	Curtain Grout for the temporary staircase
5	Installation of shaft wailing
6	ELS ground formation and preparation works
7	Plant and material mobilization to the ELS
8	Horizontal pipe piling for mined tunnel
9	Demolition of underground structure of Entrance D1

2 EM&A REQUIREMENTS

2.1 Air Quality

Monitoring Parameters and Frequency

2.1.1 24-Hour Total Suspended Particulates (hereinafter referred as '24-Hr TSP') is required to be monitored once a week during construction period of the Project.

2.1.2 1-Hour Total Suspended Particulates (hereinafter referred as '1-Hr TSP') is required to be monitored when exceedances of 24-Hr TSP occur, following the Event and Action Plan presented in ***Appendix F***.

2.1.3 Schedules for 24-Hr TSP monitoring for the Reporting Period and the next month were prepared and submitted to MTRC, IEC and MC prior to implementation via e-mail and / or facsimile for ease of necessary inspection. If amendment is necessary under ad hoc conditions, including actual and broadcast adverse weather, accidental instrument failures, etc., notification will be given at least 24 hours prior to implementation or as practical as possible. The monitoring schedules are enclosed in ***Appendix G***.

Monitoring Location

2.1.4 According to the EM&A Plan, Mirador Mansion was designated to be the air quality monitoring station of the Project. As the access to the air monitoring location designated in the EM&A Plan has been denied by the owner of the property, the ET proposes an alternative monitoring location on the roof-top above the 4/F of the commercial complex of K11 (hereinafter referred as 'K11'), which has been agreed among MTRC, IEC and MC, and the associated access to K11 has been granted by the management office of K11 prior to the commencement of the baseline monitoring in January 2014.

2.1.5 Air quality monitoring location is summarised in ***Table 2-1-1*** below and illustrated in ***Appendix A***.

Table 2-1-1 Air Quality Monitoring Location

Location ID	Name of Premises	Description
K11	K11 Art Mall	Rooftop, 4/F

Monitoring Equipment

2.1.6 The air quality monitoring equipment to be used for construction air impact monitoring is shown in ***Table 2-1-2*** below:

Table 2-1-2 Air Quality Monitoring Equipment

Equipment Type	Model	Serial Number	Calibration Orifice Number	Location
High Volume Air Sampler	TE5005X	1713	1785	K11
Sibata Digital Dust Monitor	LD-3B	296098	Not Applicable	K11

2.1.7 High Volume Air Sampler (hereinafter referred as 'the HVAS') is used for monitoring 24-Hr TSP, following the standard sampling method set out in High Volume Method for Total Suspended Particulates, Part 50 Chapter 1 Appendix B, Title 40 of the Code of Federal Regulations of the USEPA (hereinafter referred as 'the USEPA High Volume Method').

2.1.8 Weather information including wind speeds and wind directions is obtained from King's Park Weather Station, which is about 1.7 km to the north of the monitoring station K11. The weather information is used as weather conditions during the Reporting Period. They are presented in ***Appendix H***.

Calibration of Monitoring Equipment

2.1.9 The HVAS is calibrated before commencement of monitoring using standard orifice 5-points calibration method with orifice calibrator to determine the actual flow rate of each HVAS. A calibration Kit (Model - TE5025A) is used for calibration of the HVAS. At least once every 12 months, recalibration of the calibration kit is carried out during its maintenance.

2.1.10 Calibration of the HVAS is conducted following the manufacturer's instruction manual. Initial calibration of the equipment is conducted upon installation and thereafter at bi-monthly intervals throughout the period of impact monitoring. The transfer standard should be traceable to the internationally recognised primary standard and be calibrated annually.

2.1.11 The Sibata Digital Dust Monitor LD-3B for 1-hour TSP monitoring is calibrated annually and the calibration certificates of the equipment are shown in ***Appendix I***.

Monitoring Methodology – 24-Hr TSP

2.1.12 Air quality monitoring (24-Hr TSP) will be conducted once a week under typical weather conditions (with no adverse weather such as typhoon signal or rain storm warning).

Installation of HVAS

2.1.13 When positioning the HVAS, the following points will be noted:

a) A horizontal platform with appropriate support to secure the samplers against gusty wind will be provided;

b) No two samplers will be placed less than 2 m apart;

c) The distance between the sampler and an obstacle, such as buildings, must be at least twice the height that the obstacle protrudes above the sampler where possible;

d) A minimum of 2 m of separation from walls, parapets and penthouses is required for rooftops samplers;

e) A minimum of 2 m of separation from any supporting structure, measured horizontally is required;

f) No furnace or incinerator flue or building vent is nearby;

g) Airflow around the sampler is unrestricted;

h) The sampler is more than 20 m from the drip line;

i) Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring;

j) Permission must be obtained to set up the samplers and to obtain access to the monitoring stations; and

k) A secured supply of electricity is needed to operate the samplers.

Preparation of Filter Papers and Laboratory Analysis

2.1.14 Sufficient pieces of filter paper should be labelled before sampling. It should be a clean filter paper with no pinholes, and should be conditioned in a humidity-controlled chamber for over 24-hour and be pre-weighed before use for the sampling. The preferred room temperature is around 25 °C ±3 °C with relative humidity (hereinafter referred as 'the RH') less than 50% ± 5%, preferably 40%.

2.1.15 Preparation of filters and subsequent laboratory analysis of the collected 24-Hr TSP samples were performed by ALS Technetiem (HK) Pty Ltd (hereinafter referred as 'ALS'), a local laboratory which have been accredited under Hong Kong Laboratory Accreditation Scheme (HOKLAS).

2.1.16 All the collected samples should be kept by the ET in standard office conditions for 6 months before disposal.

Field Monitoring Procedures

2.1.17 Procedures for field monitoring are as follows:

a) Check power supply to ensure the HVAS works properly.

b) Clean the filter holder and the area surrounding the filter.

c) Remove the filter holder by loosening the four bolts and carefully align a new filter, with stamped number upward, on a supporting screen.

d) Align the filter properly on the screen so that the gasket forms an airtight seal on the outer edges of the filter.

e) Fasten the swing bolts to hold the filter holder down to the frame. The pressure applied should be sufficient to avoid air leakage at the edges.

f) Close the shelter lid and secure with the aluminium strip.

g) Warmed-up the HVAS for about 5 minutes to establish run-temperature conditions.

h) Set a new flow rate record sheet into the flow recorder.

i) Checked and adjust the flow rate of the HVAS at around 1.1 m^3 per minute. (The range specified in the EM&A Plan is between 0.6-1.7 m3 per minute.)

j) Set the programmable timer for a sampling period of 24 hours, and record the starting time, weather condition and the filter number.

k) Record the initial elapsed time.

l) At the end of sampling, remove the sampled filter carefully and fold it in half-length so that only surfaces with collected particulate matter are in contact.

m) Place the sampled filter in a clean plastic envelope and seal.

n) Record all monitoring information on a Field Data Sheet as shown in ***Appendix J***.

o) Send the filters to ALS for analysis.

Monitoring Methodology – 1-Hr TSP

Field Monitoring

2.1.18 The procedures for measurement of 1-Hr TSP follow Manufacturer's Instruction Manual, which is summarised as follows:

a) Set power to "ON", push BATTERY button, make sure that the meter's indicator is in the range with a red line and allow the instrument to stand for about 3 minutes (Then, the air sampling inlet has been capped).

b) Push the knob at MEASURE position.

c) Push "O-ADJ" button. (Then meter's indication is 0).

d) Push the knob at SENSI ADJ position and set the meter's indication to S value described on the Test Report using the trimmer for SENSI ADJ.

e) Pull out the knob and return it to MEASURE position.

f) Push "START" button.

g) Record all monitoring information on a Field Data Sheet as shown in ***Appendix J***.

Maintenance and Calibration

2.1.19 The procedures for maintenance and calibration of 1-Hr TSP follow Manufacturer's Instruction Manual as follows:

a) The Sibata is checked at 3-month intervals and calibrated at 1-year intervals throughout the whole construction period.

b) Calibration records for the Sibata Digital Dust Monitor direct dust meters are shown in ***Appendix I***.

Action and Limit Levels

2.1.20 The Action and Limit levels (hereinafter referred as 'the A/L Levels) at K11 have been established in the Baseline Monitoring Report in accordance with the derivation criteria specified in Section 3.7 of the EM&A Plan, which are summarised in ***Table 2-1-3*** as follows:

Table 2-1-3 Derivation of Action and Limit Levels for Air Quality at K11, μg/m³

Parameter	Action Level	Limit Level
24-Hr TSP	For baseline level ≤200 μg/m^3, Action level = (130% of baseline level + Limit level)/2 For baseline level >200 μg/m^3, Action level = Limit level	260
1-Hr TSP	For baseline level ≤384 μg/m^3, Action level = (130% of baseline level + Limit level)/2 For baseline level >384 μg/m^3, Action level = Limit level	500

2.1.21 The established A/L Levels for 24-Hr and 1-Hr TSP are summarised in ***Table 2-1-4*** as follows:

Table 2-1-4 Action & Limit Levels for Air Quality at K11, µg/m3

Parameter	Action Level	Limit Level
24-Hr TSP	222	260
1-Hr TSP	373	500

Event and Action Plan

2.1.22 In case exceedances of Action and/or Limit levels for air quality occur, Event and Action Plan for Air Quality enclosed in ***Appendix F*** will be implemented.

Environmental Mitigation Measures for Air Quality

2.1.23 Although most of the construction works would be carried out underground, appropriate dust mitigation measures as stipulated in the EP, Project Profile, related environmental regulation including Air Pollution Control (Construction Dust) Regulation as well as those recommended in the Implementation Schedule should be implemented to control fugitive dust emission. The following key dust suppression measures are recommended:

a) Decking over the excavation areas;

b) Regular watering to reduce dust emissions from all exposed site surface, particularly during dry weather;

c) Frequent watering for particularly dusty construction areas and areas close to air sensitive receivers;

d) Cover all excavated or stockpiles of dusty material by impervious sheeting or spraying with water to maintain the entire surface wet;

e) Provision of vehicle washing facilities at the exit points of the site; and

f) Provision of tarpaulin covering for any dusty materials on a vehicle leaving the site.

2.1.24 Details of the implementation schedule for the required environmental mitigation measures are presented in ***Appendix D.***

2.2 Construction Noise

Monitoring Parameters and Frequency

2.2.1 ***Table 2-2-1*** summarizes the monitoring parameters and frequency for construction noise:

Table 2-2-1 Noise Monitoring Parameters and Frequency

Parameters	Frequency
L_{eq} in 30 minutes	Once a week

2.2.2 Monitoring schedules for construction noise for the Reporting Period and the next Reporting Period are prepared and submitted to MTRC, IEC and MC prior to

implementation via e-mail and / or facsimile for ease of necessary inspection. Where amendment is necessary under ad hoc conditions, including actual and broadcast adverse weather, accidental instrument failures, etc., advanced notification is given at least 24 hours prior to implementation or as practical as possible.

Monitoring Equipment

2.2.3 With reference to the Technical Memorandum (TM) issued under the Noise Control Ordinance (NCO), sound level meters in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications (both publications have been withdrawn and replaced by 61672:2003) are used for carrying out the noise monitoring. The details of the calibration of the sound level meters and their respective calibrators are as shown in the following ***Table 2-2-2***:

Table 2-2-2 Construction Noise Monitoring Equipment

Item	Equipment Name	Model
1	Sound Level Meter	B&K 2238 (Serial no. 2562782)
2	Acoustic Calibrator	Larson Davis CAL200 (Serial no. 10929)

Monitoring Location

2.2.4 As stated in previous ***Section 2.1.4***, the alternative air quality monitoring location K11 which is proposed by the ET and agreed among MTRC, IEC and MC, i.e. on the roof-top above the 4/F of the commercial complex of K11, is used for the construction noise monitoring location. The access to K11 has been granted by the management office of the K11 prior to the commencement of the baseline monitoring in January 2014.

2.2.5 ***Table 2-2-3*** summarizes the recommended alternative noise monitoring location, which is illustrated in ***Appendix A***.

Table 2-2-3 Noise Monitoring Location

Location ID	Name of Premises	Description
K11	K11 Art Mall	Rooftop, 4/F

Monitoring Methodology

Field Monitoring

2.2.6 Procedures for noise monitoring summarised as follows:

a) The microphones of the Sound Level Meter are about 1 m from the exterior of the building façade.

b) The battery condition is checked to ensure the correct functioning of the meter.

c) Parameters such as frequency weighting, the time weighting, the measurement time and monitoring frequency are set as follows:

   i. Frequency weighting: A

   ii. Time weighting: Fast

iii. Time measurement: 30 minutes intervals (between 0700-1900 on normal weekdays)

iv. Monitoring frequency: one set of measurement on a weekly basis

d) Prior to and after each noise measurement, the meter is calibrated using a Calibrator for 94 dB at 1 kHz. If the difference in the calibration level before and after measurement is more than 1 dB, the measurement should be considered invalid and the measurement repeated after re-calibration or repair of the equipment.

e) During the monitoring period, the Leq(30 min) are recorded.

f) Record all monitoring information on a Field Data Sheet as shown in ***Appendix J***.

g) Maintenance and Calibration.

h) The meter and calibrator are sent to the supplier or HOKLAS laboratory to check and calibrate prior to the monitoring. Calibration records are presented in ***Appendix I***.

Weather Condition

2.2.7 The wind speeds and directions during the monitoring period are recorded and shown in ***Appendix H.***

Action and Limit Levels

2.2.8 The Action and Limit levels (hereinafter referred as 'the A/L Levels) at K11 have been established in the Baseline Monitoring Report. They are summarised in ***Table 2-2-4*** as follows:

Table 2-2-4 Action and Limit Levels for Construction Noise

Time Period	Action Level	Limit Level
0700-1900 hours on normal weekdays	When one valid documented complaint is received.	75*

*Note: *70 dB(A) for schools and 65 dB(A) during school examination periods. If works are to be carried out during restricted hours, the conditions stipulated in the Construction Noise Permit (CNP) issued by the Noise Control Authority have to be followed.*

Event and Action Plan

2.2.9 In case exceedances of Action and/or Limit levels for construction noise occur, the Event and Action Plan enclosed in ***Appendix F*** will be triggered.

Mitigation Measures for Construction Noise

2.2.10 Although no residual noise impact would be generated after the proposed mitigation measures are in place, the general construction noise control measures stipulated in the EP, Project Profile as well as those recommended in the Implementation Schedule should be fully implemented in order to minimise noise impacts during the construction phase. They are summarised as follows:

i) The Code of Practice on Good Management Practice to Prevent Violation of the Noise Control Ordinance (Chapter 400) (for Construction Industry) published by EPD shall be adopted;

j) The statutory and non-statutory requirements and guidelines shall be complied with;

k) Approval for the method of working, equipment and noise mitigation measures intended to be used at the site shall be granted from the Project Engineer before commencing any work;

l) Working methods to minimize the noise impact on the surrounding NSRs shall be formulated and executed, and the implementation of these methods shall be monitored by experienced personnel with suitable training;

m) Noisy equipment and noisy activities shall be located as far away from the NSRs as is practical;

n) Unused equipment shall be turned off;

o) PME should be kept to a minimum and the parallel use of noisy equipment / machinery should be avoided;

p) All plant and equipment shall be maintained regularly;

q) Material stockpiles and other structures shall be effectively utilised as noise barriers, whenever practicable; and

r) Enclosure of Entrance D1 with acoustic mat during demolition.

2.2.11 Details of the implementation schedule for the mitigation measures are presented in ***Appendix D***.

3 MONITORING RESULTS

3.1 Air Quality

Monitoring Results

3.1.1 24-Hr TSP monitoring during the Reporting Period was conducted following the agreed monitoring schedule.

3.1.2 24-Hr TSP results of the Reporting Period are summarised in the following ***Table 3-1-1***. Graphical plots of the parameter are illustrated in ***Appendix K***.

Table 3-1-1 Summary of 24-Hr TSP Monitoring Results, ug/m3

Monitoring Date	24-Hr TSP	Action Level	Limit Level
1-Dec-2014	59.0	**222**	**260**
8-Dec-2014	121.0		
15-Dec-2014	114.8		
22-Dec-2014	117.3		
29-Dec-2014	74.5		
Mean (Min – Max)	**97.3 (59.0 – 121.0)**		

Discussion

3.1.3 ***Table 3-1-1*** demonstrates that all 24-Hr TSP results of the Reporting Period fluctuated well below the A/L Levels of the parameter, i.e. neither Action Level nor Limit Level exceedances were recorded. One complaint regarding air nuisance from the exhaust fumes and odour at the junction of Carnarvon Road and Nathan Road was received on 17 December 2014.

3.1.4 A complaint investigation was carried out by the ET, in responding to the air nuisance complaint.

3.1.5 No Notice of Exceedances (thereinafter referred as 'NOE') and the associated NOE Investigation as well as remedial actions was required during the Reporting Period.

3.2 Construction Noise

Monitoring Results

3.2.1 Construction noise monitoring during the Reporting Period was conducted following the agreed monitoring schedule.

3.2.2 Construction noise monitoring results of the Reporting Period are summarised in the following ***Table 3-2-1***. Graphical plots of the parameter are illustrated in ***Appendix K***.

Table 3-2-1 Summary of Construction Noise Monitoring Results at K11, dB(A)

Monitoring Date	$L_{eq\ (30\ min)}$	A/L Levels
2-Dec-2014	68.8	**Limit Level: *75***
9-Dec-2014	66.6	
16-Dec-2014	69.8	**Action Level:**
23-Dec-2014	69.8	***Any documented complaint against construction noise.***
29-Dec-2014	73.7	
Mean (Min – Max), *Leq* (30 min)	**70.4 (66.6 – 73.7)**	

3.3 Discussion

3.3.1 No environmental complaint against construction noise was registered during the Reporting Period, whereas ***Table 3-2-1*** demonstrates that all construction noise results of the Reporting Period were fell below the Limit Level of the parameter. Neither exceedances of Action Level nor exceedances of Limit Level were recorded.

3.3.2 Neither NOE nor NOE investigation and the associated remedial actions were required during the Reporting Period.

3.3.3 Nevertheless, it is noted that the noise impact monitoring result recorded on 29 December 2014, was significantly higher than the baseline noise level of 65.3 dB(A).

3.3.4 The Contractor's attention is drawn to certain noisy construction activities, which were scheduled to be conducted during the coming month as listed in ***Table 1-4-1*** under ***Section 1.4:*** *Construction Activities Undertaken during the Reporting Period and Up-Coming Month*.

3.3.5 It is re-instated that adequate mitigation measures should be implemented during the noisy construction activities in order to alleviate noise nuisance generated from the Project related construction activities.

Weather Conditions

3.3.6 No weather conditions and any other factors were identified to have significant effects on the air and noise monitoring results within the Reporting Period.

3.3.7 Weather information during the Reporting Period which is extracted from Hong Kong Observatory King's Park Weather Station and enclosed for reference in ***Appendix H***.

3.4 Conclusions and Recommendations

Conclusions

3.4.1 No exceedances of A/L Levels of air quality and construction noise were registered during the Reporting Period.

3.4.2 One air nuisance complaint investigation was conducted during the Reporting Period.

Recommendations

3.4.3 Full implementation of the environmental mitigation measures, which are required in the EM&A Plan and summarised in Implementation Schedule of ***Appendix D***, is

recommended. Where necessary, proper maintenance and improvement of the implemented mitigation measures are reminded.

3.4.4 Nevertheless, construction dust shall be suppressed during dusty construction activities under dry and windy conditions.

3.4.5 In addition, construction noise shall be eliminated to avoid adverse impacts on the nearby sensitive receivers.

4 ENVIRONMENTAL AUDIT

4.1 Site inspection

4.1.1 Weekly site inspections during the Reporting Period were conducted by MTRC, MC and ET, whereas the monthly site inspection of the Reporting Period was jointly conducted by the IEC, MTRC, MC and ET. The site inspection follows strictly to the agreed Site Inspection Checklist, which covers all the site audit requirements stipulated in the EM&A Plan, PS and all relevant environmental laws.

4.1.2 The completed Site Inspection Checklists are distributed to relevant parties upon completion of the site inspection for agreement and signature of the relevant parties and, where appropriate, for implementation of the recommended corrected actions to promptly rectify the situation.

4.1.3 The site inspections during the Reporting Period were conducted on 2, 9, 16, 23 and 30 December 2014. Deficiencies or findings of the site audit and the associated follow up actions are summarised in the following ***Table 4-1-1***:

Table 4-1-1 Summary of Findings and Follow-Up Actions of the Site Inspection

Date	Deficiencies or findings	Follow-Up Action
2-Dec-2014	***Follow-up item(s)***	
	No follow-up item.	Not required.
	Observation(s) on the day of inspection	
	Chemical containers were observed without drip tray at site. The Contractor was reminded to store any chemical container with a drip tray or remove it from site.	To be followed-up on the next site inspection.
9-Dec-2014	***Follow-up item(s)***	
	Chemical containers were observed without drip tray at site. The Contractor was reminded to store any chemical container with a drip tray or remove it from site.	Closed. The containers were stored on a tarpaulin sheet with sand bags placed on the open side to prevent possible leakage of chemical at site.
	Observation(s) on the day of inspection	
	No deficiency was observed on site.	Not required.
16-Dec-2014	***Follow-up item(s)***	
	No follow-up item.	Not required.
	Observation(s) on the day of inspection	
	No deficiency was observed on site.	Not required.
23-Dec-2014	***Follow-up item(s)***	
	No follow-up item.	Not required.

Date	Deficiencies or findings	Follow-Up Action
	Reminder(s) on the day of inspection	
	1. Waste water tank was observed overloaded at site. The Contractor was reminded to monitor the drainage system regularly to avoid overflow of waste water from site, or modify the drainage capacity when necessary. 2. Further to the complaint regarding air nuisance received on 17 December 2014, significant odour was not detected at site during the site inspection. Also, the latest purchasing record of ULSD was inspected and no deficiency was observed.	Not required.
30-Dec-2014	***Follow-up item(s)***	
	No follow-up item.	Not required.
	Observation(s) on the day of inspection	
	As a general reminder, the Contractor was reminded to store any chemical containers with a drip tray or at a designated chemical storage area at site.	Not required.

4.1.4 As shown in ***Table 4-1-1***, no major deficiencies or non-compliance of environmental mitigation measures or adverse environmental impacts were observed during the Reporting Period.

4.2 Compliance with Legal/Contractual Requirement

4.2.1 Construction activities under the Project must comply with all environmental protection and pollution control laws in Hong Kong, as well as the contractual requirements of the Project. ***Table 4-2-1*** summarizes breaches of legal and contractual requirements.

Table 4-2-1 Summary of Breaches of Legal and Contractual Requirements

Month	No. of Breach(s)	Cumulative no. from March to the Reporting Period
December 2014	0	0

4.3 Environmental Complaints

4.3.1 Environmental complaints are handled following closely the flow chart of complaint response procedure which is enclosed in ***Appendix L***.

4.3.2 One air nuisance complaint was received on 17 December 2014 during the Reporting Month.

4.3.3 According the Environmental Protection Department (EPD), complainant at 2/F Mirador Mansion complained about air nuisance from the exhaust fumes and odour from the construction plants from the construction site on 17 December 2014. A joint complaint investigation was carried out by the ET, Contractor, MTRC and EPD on 18 December 2014. During the investigation, dust mitigation measures was observed fully implemented, no smoke was observed generating from site and odour was considered intermittently detectable at site. Purchase records of ultra-low sulphur diesel (ULSD) provided by the Contractor was also inspected and no deficiency was found. The complaint was

considered as project related but the odour detected during the investigation was considered not a nuisance. No further action is considered necessary, the Contractor was recommended to keep track on the implementation status of the mitigation measures at site. Details of the complaint investigation and observations can be referred to ***Appendix N***.

4.3.4 Environmental complaints registered during the Reporting Period are summarised in ***Table 4-3-1*** below:

Table 4-3-1 Summary of Complaint

Month	No. of Complaint(s)	Cumulative no. from March to the Reporting Period
December 2014	1	3

4.4 Notification of Summons/Successful Prosecutions

4.4.1 Notification of summons and successful prosecutions registered during the Reporting Period are summarised in ***Table 4-4-1*** below:

Table 4-4-1 Summary of Summon and Successful Prosecutions

Month	No. of Breach(s)	Cumulative no. from March to the Reporting Period
December 2014	0	0

5 CONSTRUCTION WASTE

5.1 Waste Management

5.1.1 Waste management under the Project is performed in accordance with the Waste Management Plan, which has been prepared for implementation of the construction waste mitigation measures in compliance with the requirements stipulated in the EM&A Plan, PS, Waste Disposal Ordinance and the associated subsidiary regulations.

5.2 Waste Management Status and Record

5.1.2 Updated waste management status is detailed in ***Appendix M***, where the 3-R status of the construction waste generated from construction of the Project during the Reporting Period is presented.

5.1.3 Despite small scale of the Project and the amount of C&D material that needs to be hauled off site and disposed of is anticipated not to be significant, 3-R waste management i.e. Reduce, Reuse and Recycle, is adopted in order to minimize adverse environmental impacts to be generated from construction of the Project.

6 FUTURE ENVIRONMENTAL ISSUES

6.1 Key Environmental Issues

6.1.1 Future key environmental issues include:

1) Air quality in particular construction dust during dusty construction activities, e.g. demolishment of the Entrance D1 and excavation works, under dry and windy conditions;

2) Construction noise during noisy activities; and

3) Site surface water run-off and construction wastewater discharge.

6.2 Mitigation Measures

6.1.2 To avoid potential adverse environmental impacts of the future key environmental issues stated above, full implementation of the mitigation measures as stipulated in the Implementation Schedule shown in ***Appendix D*** is required.

6.1.3 Mitigation measures for air quality, construction noise and water quality implemented to date shall be properly maintained.

6.1.4 Where appropriate, improvement of the implemented mitigation measures is reminded to ensure effectiveness of the mitigation measures.

7 CONCLUSIONS AND RECOMMENDATIONS

7.1 Conclusions

7.1.1 A complaint investigation was required as an air nuisance complaint was received during the Reporting Period. The investigation report can be referred to ***Appendix N*** of this report. The investigation was commenced on 18 December 2014. Although the odour detected during the investigation was considered as a non-nuisance with no deficiency observed at site, the complaint was considered as project related. The Contractor was reminded to keep track on the implementation status of the mitigation measures at site. No further complaint was received up to the reported date and the complaint was closed on 18 December 2014.

7.1.2 Base on the findings listed in ***Table 4-1-1*** within the Reporting Period, one corrective action was required:

1) The Contractor was reminded to store any chemical container with a drip tray or remove it from site.

7.1.3 In addition, no remedial actions were required as no notification of summons and successful prosecutions were reported during the Reporting Period.

7.1.4 Nevertheless, occasional observations of inadequacies of proactive environmental mitigation measures were recorded during the regular site inspection and audit. They were rectified in situ or before the following site audit upon identification or notification.

7.2 Recommendations

7.2.1 Full implementation of the environmental mitigation measures stipulated in the EM&A Plan and summarised in the ***Implementation Schedule*** of ***Appendix D,*** are recommended. Where necessary, proper maintenance and improvement of the implemented mitigation measures are reminded.

7.2.2 As noisy construction activities such as piling works were being conducted during the Reporting Period, adequate mitigation measures should be implemented in order to alleviate noise nuisance.

7.2.3 In addition, suppression of construction dust is reminded during dusty construction activities under dry and windy conditions.

7.2.4 Furthermore, monitoring of site water runoff is reminded to prevent any direct water discharge off site, especially when water usage is high during the construction period. When necessary, the Contractor is reminded to apply additional precautionary measures to prevent any possible environmental deficiency.

Implementation Schedule

Appendix VIII

Implementation Schedule

Project Profile Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Parties	Location of the measure	When to implement the measure	Relevant requirements or standards for the measure to achieve
	Noise Impact					
S.3.1	Use of quieter plant	To minimise construction noise emissions	Contractor	Work site	Construction Stage	ProPECC PN2/93 and Noise Control Ordinance
S.3.1	Use of noise enclosure and movable barrier • movable barrier can achieve a 5 dB(A) reduction for movable PME and 10 dB(A) reduction for stationary PME; • noise enclosure can achieve 15dB(A) reduction for PME; • A typical design barrier with a steel frame of vertical / cantilever type would be adopted and located close to the noise generating part of PME; • Barrier material of surface mass in excess of 7kg/m^2 shall be required to achieve the maximum screening effect (and minimum 10kg/m^2 for noise enclosure); • The length of barrier should generally be at least five times greater than its height and the minimum height of a barrier should be such that no part of the noise source will be visible from the noise sensitive receiver being protected.	To minimize construction noise emissions	Contractor	Work site	Construction Stage	ProPECC PN2/93, Noise Control Ordinance and EIAO Guidance Note NO. 9/2010
S.3.1	General Construction Noise Control Measures • The Code of Practice on Good Management Practice	To minimize construction noise	Contractor	Work site	Construction Stage	ProPECC PN2/93 and Noise Control

Project Profile Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Parties	Location of the measure	When to implement the measure	Relevant requirements or standards for the measure to achieve
	to Prevent Violation of the Noise Control Ordinance (Chapter 400) (for Construction Industry) published by EPD shall be adopted; • The statutory and non-statutory requirements and guidelines shall be complied with; • Approval for the method of working, equipment and noise mitigation measures intended to be used at the site shall be granted from the Project Engineer before commencing any work; • Working methods to minimize the noise impact on the surrounding NSRs shall be formulated and executed, and the implementation of these methods shall be monitored by experienced personnel with suitable training; • Noisy equipment and noisy activities shall be located as far away from the NSRs as is practical; • Unused equipment shall be turned off; • PME should be kept to a minimum and the parallel use of noisy equipment / machinery should be avoided; • All plant and equipment shall be maintained regularly; and • Material stockpiles and other structures shall be effectively utilized as noise barriers, whenever practicable.	emissions				Ordinance
	Air Quality Impact					
S.3.2	Construction Dust Control Measures • Decking will be provided subsequent to the completion of surface excavation works. The duration	To minimise the dust impacts arising from the	Contractor	Work site	Construction Stage	Air Pollution Control (Construction

Project Profile Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Parties	Location of the measure	When to implement the measure	Relevant requirements or standards for the measure to achieve
	of decking is around 13 months after surface excavation works; • Regular watering to reduce dust emissions from all exposed site surface, particularly during dry weather; • Frequent watering for particularly dusty construction areas and areas close to air sensitive receivers; • Cover all excavated or stockpile of dusty material by impervious sheeting or spraying with water to maintain the entire surface wet; • Provision of vehicle washing facilities at the exit points of the site; and • Provision of tarpaulin covering of any dusty materials on a vehicle leaving the site.	construction works				Dust) Regulation
	Water Quality Impact					
S.3.3	Construction Water Quality Impact Measures • The Contractor should design and implement all the mitigation measures and practices specified in the ProPECC PN 1/94 "Construction Site Drainage" and "Recommended Pollution Control Clauses for Construction Contracts" issued by EPD. • All runoffs arising from the construction site should be properly collected and treated to ensure the discharge standards as stipulated in WPCO are met. Silt trap and oil interceptor should be provided to remove the oil, lubricants, grease, silt, grit and debris from the wastewater before being pumped to the public stormwater drainage system. The silt traps and oil interceptors should be cleaned and maintained regularly.	To reduce water quality impact induced by the construction work	Contractor	Work Site	Construction Stage	ProPECC PN1/94; Water Pollution Control Ordinance

Project Profile Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Parties	Location of the measure	When to implement the measure	Relevant requirements or standards for the measure to achieve
	• Any foul effluent should not be discharged into any public sewer and stormwater drain, unless an effluent discharge permit is obtained under the WPCO by the Contractor. • Site toilet facilities, if needed, should be chemical toilets or should have the foul water effluent directed to a foul sewer.					
	Waste Management					
S.3.4	Construction Waste Management Measures • Excavated material should be reused on site as far as possible to minimise off-site disposal. Scrap metals or abandoned equipment should be recycled if possible. • Waste arising should be kept to a minimum and be handled, transported and disposed of in a suitable manner. • The Contractor should adopt a trip ticket system for the disposal of C&D materials to any designated public filling facility and/or landfill. Independent audits of the Contractor and resident site staff will be undertaken to ensure that the correct procedures are being followed. • Chemical waste shall be handled in accordance with the Code of Practice on the Packaging, Handling and Storage of Chemical Wastes. • All general refuse should be segregated and stored in enclosed bins or compaction units and waste separation facilities for paper, aluminium cans, plastic bottles etc. should be provided to facilitate reuse or	To adopt waste management measures in the way of avoiding, minimising, reusing and recycling so as to reduce waste generation	Contractor	Work Site	Construction Stage	Waste Disposal Ordinance (Cap. 54); Waste Disposal (Chemical Waste) (General) Regulation; ETWB TCW No. 31/2004; ETWB TCW No. 19/2005.

Project Profile Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Parties	Location of the measure	When to implement the measure	Relevant requirements or standards for the measure to achieve
	recycling of materials and their proper disposal.					
	Landscape and Visual Impact					
S.3.5	Landscape and Visual Measures • Screening of construction works by hoardings/noise barriers around works area with visually unobtrusive colours	To reduce visual impact by construction works.	Contractor	Temporary Storage Area at Salisbury Road	Construction Stage	EIAO
S.3.5	• Reinstating the affected amenity planting area at Salisbury Road after the completion of works	To prevent loss of planter after construction	Contractor	Temporary Storage Area at Salisbury Road	Operation Stage	ETWB TCW No. 2/2004

Appendix F

Event and Action Plan

Event and Action Plan for Air Quality

In case the Action and Limit Levels are not complied during construction stage, the Event and Action Plan shown below should be followed.

Event / Action	ET	IEC	ER	Contractor
Action Level				
Exceedance for one sample	1. Identify source; 2. If valid, inform IEC and ER; 3. Repeat measurement to confirm finding; 4. Increase monitoring frequency to daily.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method.	1. Notify Contractor	1. Rectify any unacceptable practice; 2. Amend working methods if appropriate
Exceedance for two or more consecutive samples	1. Identify source; 2. Inform IEC and EPD; 3. Repeat measurements to confirm findings; 4. Increase monitoring frequency to daily; 5. Discuss with IEC and Contractor on remedial action required; 6. If exceedance continues, arrange meeting with IEC and ER; 7. If exceedance stops, cease additional monitoring.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method; 3. Discuss with ET and Contractor on possible remedial measures; 4. Advise the ER on the effectiveness of the proposed remedial measures; 5. Supervise implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Ensure remedial measure properly implemented.	1. Submit proposals for remedial action to IEC within 3 working days of notification; 2. Implement the agreed proposals; 3. Amend proposal if appropriate.
Limit Level				
Exceedance for one sample	1. Identify source; 2. Inform ER and EPD; 3. Repeat measurement to confirm finding; 4. Increase	1. Check monitoring 2. data submitted by ET; 3. Check Contractor's working	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Ensure remedial	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC

Event / Action	ET	IEC	ER	Contractor
	monitoring frequency to daily; 5. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results.	method; 4. Discuss with ET and the Contractor on possible remedial measures; 5. Advise the ER on the effectiveness of the proposed remedial measures; 6. Supervise implementation of remedial measures.	measures properly implemented.	within 3 working days of notification; 3. Implement the agreed proposals; 4. Amend proposal if appropriate.
Exceedance for two or more consecutive samples	1. Notify IEC, ER, Contractor and EPD; 2. Identify sources; 3. Repeat measurement to confirm findings; 4. Increase monitoring frequency to daily; 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; 6. Arrange meeting with IEC and ER to discuss the remedial actions to be taken; 7. Assess the effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the	1. Discuss amongst ER, ET and Contractor on the potential remedial actions; 2. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ET accordingly. 3. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. In consultation with IEC, agree with the Contractor on the remedial measures to be implemented; 4. Ensure remedial measures properly implemented; 5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; 4. Resubmit proposals if problem still not under control; 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated.

Event / Action	ET	IEC	ER	Contractor
	results; 8. If exceedance stops, cease additional monitoring.			

Event and Action Plan for Construction Noise

In case the Action and Limit Levels are not complied during the construction stage, the Event and Action Plan shown below should be followed.

Event / Action	ET	IEC	ER	Contractor
Action Level	1. Notify IEC and Contractor. 2. Carry out investigation. 3. Report the results of investigation to the IEC and Contractor. 4. Discuss with the Contractor and formulate remedial measures 5. Increase monitoring frequency to check mitigation effectiveness.	1. Review the analyzed result submitted by ET. 2. Review the proposed remedial measures by the Contractor and advise the ER accordingly. 3. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of exceedance 2. Notify Contractor 3. Require Contractor to propose remedial measures for the analysed noise problem 4. Ensure remedial measures are properly implemented.	1. Submit noise mitigation proposals to IEC 2. Implement noise mitigation proposals
Limit Level	1. Notify IEC, ER, EPD and Contractor, and follow other actions 2. Identify source 3. Repeat measurement to confirm findings 4. Increase monitoring frequency 5. Check Contractor's working procedures to determine possible mitigation to be implemented 6. Inform IEC, ER and EPD the causes and actions taken for the exceedances 7. Assess effectiveness of Contractor's	1. Discuss amongst ER, ET and Contractor on the potential remedial actions 2. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ET accordingly 3. Supervise the implementation of remedial measures	1. Confirm receipt of notification of exceedances 2. Notify Contractor 3. Require Contractor to propose remedial measures 4. Ensure remedial measures are properly implemented 5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	1. Take immediate action to avoid further exceedance 2. Submit proposals for remedial actions to IEC within 3 working days of notifications 3. Implement the agreed proposals 4. Revise and resubmit proposals if problem still not under control 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated

Event / Action	ET	IEC	ER	Contractor
	remedial actions and keep IEC, EPD, ER informed of the results 8. If exceedance stops, cease additional monitoring

Qstd slope (m) =		2.01484
intercept (b) =		-0.01898
coefficient (r) =		0.99991

y axis = SQRT[H2O(Pa/760)(298/Ta)]

Va	(x axis) Qa	(y axis)
0.9958	0.7037	0.8791
0.9916	0.9976	1.2433
0.9895	1.1130	1.3900
0.9885	1.1643	1.4579
0.9833	1.4008	1.7583
Qa slope (m) =		1.26166
intercept (b) =		-0.01171
coefficient (r) =		0.99991

y axis = SQRT[H2O(Ta/Pa)]

CALCULATIONS

Vstd = Diff. Vol[(Pa-Diff. Hg)/760](298/Ta)
Qstd = Vstd/Time

Va = Diff Vol [(Pa-Diff Hg)/Pa]
Qa = Va/Time

For subsequent flow rate calculations:

Qstd = 1/m{[SQRT(H2O(Pa/760)(298/Ta))]- b}
Qa = 1/m{[SQRT H2O(Ta/Pa)]- b}

Environmental test conditions as shown on calibration report.

Affirmations

This Certificate attests that this instrument has been calibrated under the stated conditions with Measurement and Test Equipment (M&TE) Standards traceable to the U.S. National Institute of Standards and Technology (NIST). All of the Measurement Standards have been calibrated to their manufacturers' specified accuracy / uncertainty. Evidence of traceability and accuracy is on file at Provo Engineering & Manufacturing Center. An acceptable accuracy ratio between the Standard(s) and the item calibrated has been maintained. This instrument meets or exceeds the manufacturer's published specification unless noted.

The collective uncertainty of the Measurement Standard used does not exceed 25% of the applicable tolerance for each characteristic calibrated unless otherwise noted.

The results documented in this certificate relate only to the item(s) calibrated or tested. A one year calibration is recommended, however calibration interval assignment and adjustment are the responsibility of the end user. This certificate may not be reproduced, except in full, without the written approval of the issuer.

Environmental Conditions

Temperature (°C):	23
Relative Humidity (%):	33

Reference Microphone

Model: Larson Davis 2559
Serial Number: 2506

Static pressure was measured with a calibrated Motorola pressure sensor MPX2100AP.
Temperature and humidity was measured with a calibrated Fluke 1620A sensor.
Expanded uncertainty of environmental measurements: 0.3 °C, 3 %RH, 1.0 kPa
Uncertainty values are given at 95% confidence level (k = 2).

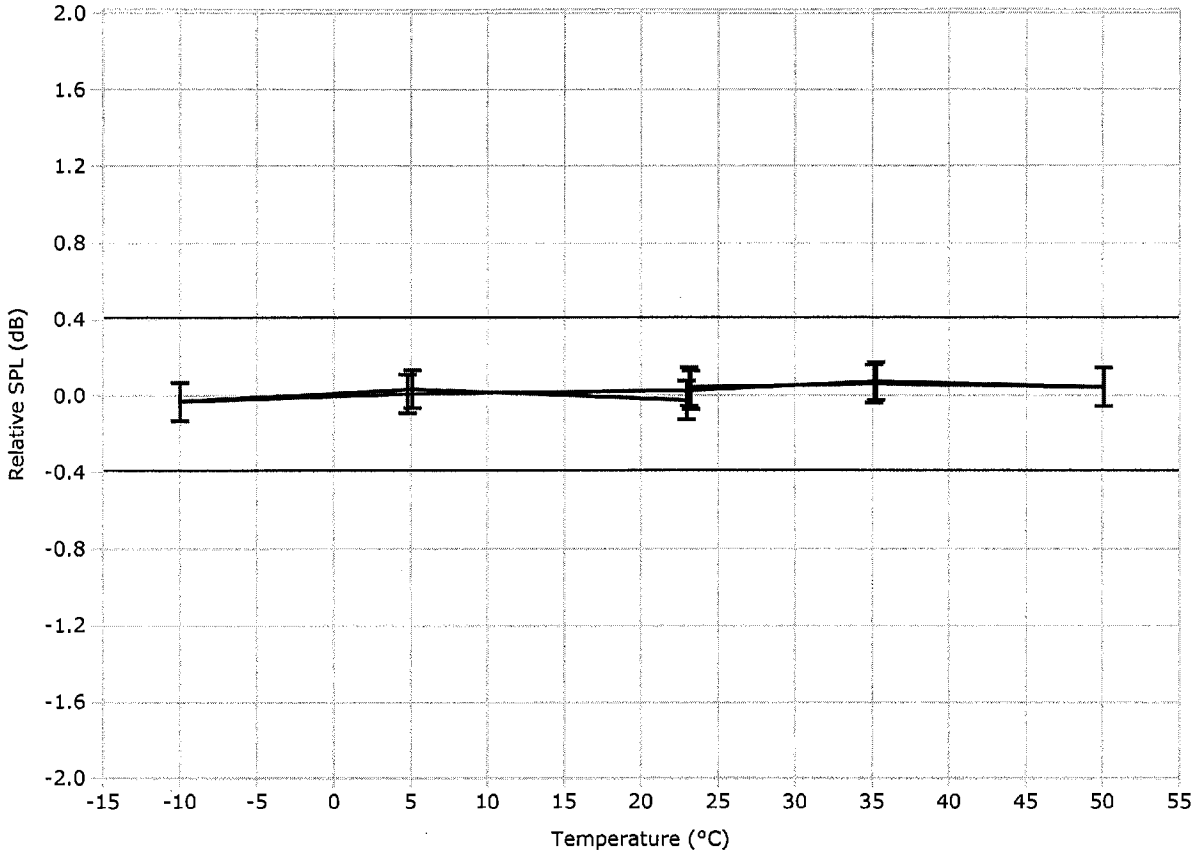
A Sound Level Meter can be calibrated to a level (L) defined as: L = measured level + pressure sensitivity
or if a Sound Level Meter is calibrated using the nominal level, the adjustments to data (X) are defined as:
X = measured level - nominal level - pressure sensitivity

Model CAL200 Relative SPL vs. Temperature

Larson Davis Model CAL200 Serial Number: 10929

Model CAL200 Relative SPL vs. Temperature at 50% RH.
A 2559 Mic (SN: 2980) with a PRM901 Preamp (SN: 0205), station 24 was used to check the levels.

Test Date: 09 Jan 2014 1:22:36 PM



0.1dB expanded uncertainty at ~95% confidence level (k=2)

Address : 47/F., Hopewell Centre, 183 Queens Road East, Wanchai, Hong Kong

Order No. : Q40515 **Date of receipt :** 25-Feb-14

Item Tested

Description : Sound Level Meter

Manufacturer : B&K

Model : 2238 **Serial No. :** 2562782

Test Conditions

Date of Test : 6-Mar-14 **Supply Voltage :** --

Ambient Temperature : (23 ± 3)°C **Relative Humidity :** (50 ± 25) %

Test Specifications

Calibration check.

Ref. Document/Procedure: Z01, IEC 651, IEC 804.

Test Results

All results were within the IEC 651 Type 1, IEC 804 Type 1 specification.

The results are shown in the attached page(s).

Main Test equipment used:

Equipment No.	Description	Cert. No.	Traceable to
S017	Multi-Function Generator	C127181	SCL-HKSAR
S205	Ref. Sound Level Calibrator	PHCO40002	SCL-HKSAR

The values given in this Calibration Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Hong Kong Calibration Ltd. shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to International System of Units (SI).
The test results apply to the above Unit-Under-Test only

Total	0.9342	-	-	-	0.9342	-	-	-	-	-	0.0035

Notes:

(1) The performance targets are given below:
- All excavated materials to be sorted for recovering the inert portion of C&D materials, e.g. hard rocks, soil and broken concrete, for reuse on the Site or disposal to designated outlets;
- All metallic waste to be recovered for collection by recycling contractors;
- All cardboard and paper packaging (for plant, equipment and materials) to be recovered, properly stockpiled in dry and covered condition to prevent cross contamination;
- All chemical wastes to be collected and properly disposed of by specialist contractors; and
- All demolition debris to be stored to recover broken concrete, reinforcement bars, mechanical and electrical fittings, hardware as well as other fitting / materials that have established recycling outlets.

(2) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material.

(3) Broken concrete for recycling into aggregates.

(4) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.

Appendix N

Complaint Investigation Report

Complaint Investigation Report

Contractor: Maeda Corporation	**Complaint Received Date:** 17 December 2014	**Ref:** CIR – 03
Project: C3840-13C MTRCL Tsim Sha Tsui Station Carnarvon Road Subway and Entrances Modification Works		
COMPLAINANT		
Name: Unknown Tel: Unknown Fax: Unknown	Address: 2/F of Mirador Manson	
COMPLAINT INVESTIGATION		
Description (cause of impact, type of impact and location, etc.)		

Details of the Complaint

A complaint was forwarded to the Environmental Team (ET) via e-mail dated 18 December 2014 by the Contractor, who received by e-mail on 18 December 2014 regarding the complaint against air nuisance from the exhaust fumes and odour from the construction plants at the junction of Carnarvon Road and Nathan Road, Tsim Sha Tsui on 17 December 2014 at 1819hr received by the Environmental Protection Department (EPD).

Construction Activities during the Complaint Period

According to the Contractor, the major site construction activities on the date of complaint (17 December 2014) were pipe piling works for cut and cover tunnel, pipe installation by drill rig for curtain grout of the temporary entrance and welding works inside ELS. A total number of 7 major plants were operating for those major activities at site, including: 1 crawler crane, 2 drill rigs, 1 air compressor, 1 generator and 3 electricity welding machines (in which 2 of them were for ELS steelworks installation and the other one was for piling & H-beam).

With reference to the information provided by the Contractor, the following dust and odour mitigation measures were implemented on the date of complaint:

- The air compressor and generator were fully enclosed;
- The air compressor and generator were at site corner near Nathan Road where having the best ventilation;
- Welding at ELS were under decking;
- Welding for piping and H-beam inside the enclosure made by tarpaulin;
- Regular cleaning of the oil filter of drill rigs and crawler crane to avoid dark smoke;
- Replacement of crawler crane with same model for offsite maintenance where necessary; and
- The crawler crane and drill rigs will be switched off when idle or not in use.

EM&A Findings and Observations

A joint complaint investigation was carried out by the ET, Contractor, MTRC and EPD at 14:00 on 18 December 2014. During the investigation, dust mitigation measures was observed fully implemented at site including provision of three side enclosures for the grout mixing area and other fixed plant, provision of decking for excavation works and tarpaulin for drill rigs. Moreover, the equipment at site was observed placing as close to Nathan Road as possible, in maximizing the ventilation performance and enhancing the gas dispersion of exhaustion emitted from site. Smoke was not observed generating from site during the investigation. Odour was intermittently detectable at site during the investigation and was considered non-nuisance to the surrounding receivers. Photos of the inspection are attached in this report for reference.

Purchase records of ultra-low sulphur diesel (ULSD), fully complied with the Air Pollution Control (Fuel Restriction) Regulations (Cap. 311I), was provided by the Contractor and to certify that only ULSD is used for all diesel powered equipment at site. Details of the purchase records are as shown in the attachment.

Conclusion / Recommendation

Although the odour detected during the investigation was not a nuisance, the complaint on odour nuisance was considered as project related. The odour nuisance on 17 December 2014 was considered to be contributed by the combustion emissions of equipment at site and possible vehicle emissions from Nathan Road. In view of the conclusion drawn, the Contractor was recommended to keep track on the implementation status of the following mitigation measures at site:

1) Ensure the implementation of dust mitigation measures during all construction and dusty activities to minimize dust and odour generation;
2) Machines used at site are inspected and maintained regularly to ensure they are operating efficiently and the exhaust emissions are not causing nuisance;
3) Only ULSD is used for diesel powered equipment at site and they are fully complied with the Air Pollution

Control Regulation in Hong Kong; and

4) Foster better public relations with the sensitive receivers or complainants nearby.

FOLLOW UP ACTION(S)

No further action is considered necessary. Nevertheless, the ET will keep a close eye on the condition of the site during the routine site inspections and audit to ensure proper function of the dust/ odour mitigation measures implemented on site, and where appropriate advise the Contractor to be vigilant and tailor mitigation measures in advance of future planned site work activities. This complaint case will be registered in the complaint log in the monthly EM&A Report (December 2014).

Prepared & Confirmed by:

Name: Fu Nam Wong (ET Leader) Signature:  Date: 18 December 2014

ATTACHMENT(S):

1) Photos taken at the construction site on 18 December 2014.

2) Delivery Order of ULSD on 17 December 2014 provided by the Contractor.

3) Quotation of ULSD on 16 December 2014 provided by the Contractor.
