Attention: Mr. William WONG

14 October 2021

Dear William,

Contract No. NDO/02/2018

Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po Monthly Environmental Monitoring and Audit Report for September 2021

I refer to the email from the Environmental Team concerning the captioned. I have no adverse comment on the Monthly Environmental Monitoring and Audit Report for September 2021 (Version 1.0) and verify the report according to Conditions 1.9 and 3.5 of Environmental Permit with permit number EP-510/2016.

Yours faithfully,

Kevin W.M. Li Independent Environmental Checker

EXECUTIVE SUMMARY

Introduction

1. This is the 15th monthly Environmental Monitoring and Audit (EM&A) Report under the Work Contract (Contract No. ND/2018/01 – Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po) (the Project). This report was prepared by Wellab Limited (Wellab) under "Service Contract No. NDO 07/2019 Environmental Team for Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po" (hereinafter called the "Service Contract"). This report documents the findings of Environmental Monitoring and Audit (EM&A) work conducted from 1st to 30th September 2021.

Summary of Construction Works undertaken during the Reporting Month

- 2. The major site activities undertaken in the reporting month include:
 - Site formation at Portion D
 - Retaining wall construction
 - Piling works (foundation socketed H-piles for Retaining Walls)
 - Stormwater Storage Tank, Sewage storage tank and underpass construction
 - Slope upgrading works
 - Road and associated works
 - Sewage trenchless works

Environmental Monitoring and Audit Progress

3. A summary of the EM&A activities in this reporting month is listed in **Table I** below:

Table I Summary Table for EM&A Activities in the Reporting Month

EM&A Activities	Date	
Air Quality Monitoring	2, 6, 8, 10 ,14, 16, 20, 21, 24, 27, 28	
7th Quanty Womtoring	and 30 September 2021	
Noise Menitoring	2, 8, 10, 14, 16, 21, 24, 27 and 28	
Noise Monitoring	September 2021	
Ecological Monitoring	17 September 2021	
Environmental Site Inspection	3, 10, 17, 24 and 30 September 2021	

Breaches of Action and Limit Levels

4. Summary of the environmental exceedances of the reporting month is tabulated in **Table II**.

Table II Summary Table for Events Recorded in the Reporting Month

Environmental	Parameter	No. of Exceedance No. of Non-Project related Exceedances No. of Exceedance related to the Construction Works				Action
Monitoring		Action Level	Limit Level	Action Level	Limit Level	Taken
Air Quality	1-hr TSP	0	0	0	0	N/A
Noise	Leq(30min)	0	0	0	0	N/A

Air Quality

5. All construction air quality monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Construction Noise

6. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Ecological Monitoring

7. All ecological monitoring was conducted as scheduled in the reporting month. The ecological monitoring result in the reporting month is shown in **Appendix H**.

Environmental Non-Compliance

8. No environmental non-compliance was recorded in the reporting month

Environmental Complaint

9. No environmental complaint was received in the reporting month.

Notification of Summons and Successful Prosecutions

10. No notification of summons or successful prosecutions was received in the reporting month.

Reporting Changes

11. No reporting change was made in the reporting month.

Future Key Issues

- 12. The major site activities for the coming three months include:
 - Tree felling works
 - Site formation at Portion D
 - Retaining walls, stormwater storage tank, sewage storage tank and underpass construction
 - Piling works (foundation socketed H-piles)
 - Road and associated works at Kong Nga Po Road
 - Slope upgrading works
 - Drainage and watermains trenchless works
- 13. Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, noise, water quality and waste management.

1 INTRODUCTION

1.1 Wellab Limited was commissioned by the Civil Engineering Development Department (CEDD) as the Environmental Team to undertake the Environmental Monitoring and Audit (EM&A) works for the Work Contract (Contract No. ND/2018/01 – Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po) to ensure that the environmental performance of the Works Contracts comply with the requirements specified in the Environmental Permits (EPs), Environmental Impact Assessment (EIA) Report and Environmental Monitoring & Audit (EM&A) Manual of the Police Facilities in Kong Nga Po Project and other relevant statutory requirements.

Purpose of the report

1.2 This is the 15th EM&A Report which summarises the impact monitoring results and audit findings for the EM&A programme during the reporting period from 1st to 30th September 2021. The major construction works for the Project commenced on 3rd July 2020.

Structure of the report

- 1.3 The structure of the report is as follows:
 - Section 1: **Introduction -** purpose and structure of the report.
 - Section 2: **Project Information** summarises background and scope of the Project, site description, project organisation and contact details, construction programme, the construction works undertaken and the status of Environmental Permits/Licences during the reporting month.
 - Section 3: **Air Quality Monitoring** summarises the monitoring parameters, monitoring programmes, monitoring methodologies, monitoring frequencies, monitoring locations, Action and Limit Levels, monitoring results and Event /Action Plans.
 - Section 4: **Noise Monitoring** summarises the monitoring parameters, monitoring programmes, monitoring methodologies, monitoring frequencies, monitoring locations, Action and Limit Levels, monitoring results and Event/Action Plans.
 - Section 5: **Ecological Monitoring** summarises the monitoring results of the monthly monitoring undertaken within the reporting month.
 - Section 6: **Landscape and Visual Monitoring** summarises the audit results of the site inspection undertaken within the reporting month.
 - Section 7: **Environmental Site Inspection** summarises the audit findings of the weekly site inspections undertaken within the reporting month.
 - Section 8: **Environmental Non-conformance** summarises any monitoring exceedance, environmental complaints, environmental summons and successful prosecutions within the reporting month.
 - Section 9: **Future Key Issues** summarises the impact forecast and monitoring schedule for the next three months.
 - Section 10: Conclusions and Recommendations

2 PROJECT INFORMATION

Background

- 2.1 The Project consists of site formation works and building works for the co-location of various police facilities in the Project site at Kong Nga Po as well as road improvement works to a section of the existing Kong Nga Po Road between the police facilities and Man Kam To Road. The police facilities include:
 - Lo Wu Firing Range (LWFR) to be relocated from Lo Wu;
 - Ma Tso Lung Firing Range (MTLFR) to be relocated from Ma Tso Lung;
 - Weapons Training Facilities (WTF) and Police Driving and Traffic Training Facilities (PD&TTF) to be relocated from Fan Garden;
 - Helipad to be relocated from Lo Wu;
 - A Proposed Police Training Facility (PTF); and
 - A new internal access road network with underpass within the Project site
- 2.2 The improvement works to Kong Nga Po Road between the police facilities and Man Kam To Road includes roadworks, viaduct of less than 100m between abutments, and associated works such as slopeworks and retaining walls.
- 2.3 In addition to the above, associated supporting infrastructure and utilities including an underground stormwater storage tank, sewage pumping station, petrol / diesel filling station, a multi-storey training complex associated with the PD&TFF, and other ancillary facilities will also be provided.
- 2.4 The Project is a Designated Project under the Environmental Impact Assessment Ordinance (EIAO). An Environmental Impact Assessment (EIA) Report (Report No.: AEIAR-201/2016) for the Project was approved under EIAO in October 2016 in accordance with the EIA Study Brief (No. ESB-276/2014) and the Technical Memorandum on Environmental Impact Assessment Process (EIAO-TM). The corresponding Environmental Permit was issued (EP no.: EP-510/2016) by the Director of Environmental Protection (DEP) in November 2016.
- 2.5 The Works Contract (Contract No. ND/2018/01 Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po) generally consists of site formation & infrastructure works for the co-location of various police facilities at Kong Nga Po as well as upgrading works to a section of the existing Kong Nga Po Road between the police facilities and Man Kam To Road (hereinafter called "the Project").
- 2.6 The major construction activities of the Project are site formation and infrastructure works which will include site clearance, excavation and filling, construction of access road, utilities laying and landscaping works. As such, an air quality and noise monitoring programme is recommended in the approved Environmental Monitoring and Audit (EM&A) Manual during the construction phases of this Project to monitor the expected dust and noise nuisances. Baseline air quality and noise monitoring were conducted by ET from 14th March 2020 to 2nd April 2020 to establish the background conditions of the designated sensitive receivers prior to the commencement of the Project's construction works.
- 2.7 The site layout plan for the Project is shown in **Figure 1**.

Project Organization

- 2.8 Different parties with different levels of involvement in the Project organization include:
 - Project Proponent Civil Engineering and Development Department (CEDD)
 - Supervisor / Supervisor's Representative AECOM
 - Environmental Team (ET) Wellab Limited
 - Independent Environmental Checker (IEC) Acuity Sustainability Consulting Limited
- 2.9 The key personnel contact names and numbers are summarised in **Table 2.1**.

Table 2.1 Key Contacts of the Project

Party	Role	Contact Person	Phone No.	Fax No.
Civil Engineering and Development Department, HKSAR (CEDD)	Project Proponent	Mr. Raymond Cheng	3152 3500	3547 1658
Supervisor / Supervisor's Representative (AECOM)	Chief Resident Engineer	Ms. Gloria Tang	9325 0836	3922 9797
Environmental Team (Wellab Limited)	Environmental Team Leader	Ms. Ivy Tam	2151 2090	2898 7076
Independent Environmental Checker (Acuity Sustainability Consulting Limited)	Independent Environmental Checker	Mr. Kevin Li	9779 2247	2693 9383
Contractor (Build King	Site Agent	Mr. Book Kin Man	2272 3128	
Construction Limited)	Environmental Officer	Mr. Kyan Yan	5308 4367	2528 1751

Summary of Construction Works Undertaken During Reporting Month

- 2.10 The major site activities undertaken in the reporting month included:
 - Site formation at Portion D
 - Retaining wall construction
 - Piling works (foundation socketed H-piles for Retaining Walls)
 - Stormwater storage tank, Sewage storage tank and underpass construction
 - Slope upgrading works
 - Road and associated works
 - Sewage trenchless works

Construction Programme

2.11 A copy of Contractors' construction programme is provided in **Appendix A**.

Status of Environmental Licences, Notifications and Permits

2.12 A summary of the relevant permits, licences, and/or notifications on environmental protection for this Project is presented in **Table 2.2**.

Table 2.2 Status of Environmental Licences, Notifications and Permits

Damit / Liana - Na	Valid	C4 - 4					
Permit / Licence No.	From	To	Status				
Environmental Permit (EP)	Environmental Permit (EP)						
EP-510/2016	N/A	N/A	Valid				
Construction Noise Permit (CN	IP)		_				
GW-RN0398-21	8-6-2021	7-9-2021	Expired in the reporting month				
GW-RN0330-21*	24-5-2021	20-11-2021	Cancelled				
GW-RN0425-21*	1-7-2021	30-11-2021	Cancelled				
GW-RN0560-21*	15-8-2021	14-2-2021	Cancelled				
GW-RN0698-21	28-9-2021	27-12-2021	Valid				
Notification pursuant to Air Po	ollution Control (Con	struction Dust) Regula	ation				
EPD Ref no.: 451555	N/A	N/A	N/A				
Billing Account for Construction	on Waste Disposal						
Account No. 7036173	24-12-2019	N/A	Valid				
Registration of Chemical Wast	Registration of Chemical Waste Producer						
Waste Producer No. 5213-641- B2590-01	18-5-2020	N/A	Valid				
Effluent Discharge Licence under Water Pollution Control Ordinance							
WT00035709-2020	11-5-2020	31-5-2025	Valid				

^{*} CNP No. GW-RN0330-21, GW-RN0425-21 and GW-RN0560-21 for carrying out construction work at construction site near Kong Nga Po and Hung Lung Hang were cancelled and replaced by one new CNP GW-RN0698-21 which include the same location.

Summary of EM&A Requirement

- 2.13 The EM&A programme requires construction noise monitoring, air quality monitoring, ecological monitoring and environmental site audits. The EM&A requirements are described in the following sections, including:
 - All monitoring parameters;
 - Action and Limit levels for all environmental parameters;
 - Event / Action Plans;
 - Environmental mitigation measures, as recommended in the Project EIA study final report; and
 - Environmental requirements in contract documents.

Status of Compliance with Environmental Permits Conditions

2.14 The status of compliance with Environmental Permit (EP) No. EP-510/2016 and required submission related to this Project under the EP is summarised in **Table 2.3**:

Table 2.3 Summary Table for Status of Compliance / Required Submission under EP No. EP-510/2016

EP Conditions	Submission	Submission Date	Approval Status	
1.12	Notification of Commencement Date of Construction	3 rd June 2020	*	
2.7	Proposal on the Reporting Mechanism and Curriculum Vitae of the IEC	6 th February 2020	*	
2.11	Management Organizations	9 th March 2020	*	
2.12	Construction Works Schedule and Location Plans	20 th March 2020	*	
	Detailed Vegetation Survey Report (Version 1.0)	2 nd April 2020		
2.13 & 2.14	Detailed Vegetation Survey Report (Version 2.0)	8 th May 2020	Approved	
	Detailed Vegetation Survey Report (Version 3.0)	9 th July 2020		
	Transplantation Proposal (Version 1.0)	2 nd April 2020		
2.4 & 2.14	Transplantation Proposal (Version 2.0)	8 th May 2020	Approved	
	Transplantation Proposal (Version 3.0)	9 th July 2020		
2.15	Baseline Survey Report for Golden- Headed Cisticola	9 th March 2020	Approved	
2.16	Explanatory Statement for Revised Layout Plan of Kong Nga Po Road	10 th March 2020	Approved	
	Landscape and Visual Mitigation Plan	7 th April 2020		
2.18 & 2.19	Landscape and Visual Mitigation Plan (Revised Final Rev. 4)	28 th September 2020	Approved	
2.20	Plan for Perimeter Walls/ Boundary Walls at Project Site and Side Walls of Firing Range	To be submitted at least one month before the commencement of construction of relevant part(s) of the Project	N/A	
2.23	Helicopter Flight Plan	To be submitted at least one month before the commencement of operation of the Helipad	N/A	
3.4	Baseline Air Quality and Noise Monitoring Report	20 th April 2020	*	
3.4	Baseline Monitoring Report for Landscape and Visual Resources	21st April 2020	*	

Remarks: * Approval not required in EP-510/2016 N/A – Not applicable at this stage

3 AIR QUALITY MONITORING

Monitoring Requirements

- 3.1 In accordance with the EM&A Manual, impact 1-hour TSP monitoring was conducted to monitor the air quality for the Works Contracts. **Appendix B** shows the established Action/Limit Levels for the air quality monitoring works.
- 3.2 Impact 1-hour TSP monitoring was conducted for at least three times every 6 day at one air quality monitoring station.

Monitoring Location

3.3 According to Section 2.2.5 of the EM&A Manual, impact air quality monitoring was conducted at the two designated monitoring stations for the Project as shown in **Figure 2**. **Table 3.1** describes the location of the air quality monitoring stations.

Table 3.1 Location for Air Quality Monitoring Stations

Monitoring Station	Location of Measurement
AM1	Village House, Kong Nga Po
AM2	Village House, Kong Nga Po

Monitoring Equipment

- 3.4 As the setup of HVS for 1-hour TSP monitoring at the designated locations and request for secured supply of electricity for HVS were not allowed by the villager, direct reading dust meters was therefore used to carry out the 1-hour TSP monitoring. Dust meter has been commonly used for measuring 1-hour TSP levels in a number of designated projects of major infrastructure works. The proposed use of direct reading dust meter was submitted to IEC and agreed by the IEC. With the use of direct reading dust meter, it can allow prompt and direct results for the EM&A reporting and the implementation of the event and action plan. The 1-hour sampling was determined on bi-monthly basis by the HVS to check the validity and accuracy of the results measured by direct reading method.
- 3.5 **Table 3.2** summarises the equipment used in the impact air quality monitoring programme. Copies of calibration certificates are attached in **Appendix C**.

 Table 3.2
 Air Quality Monitoring Equipment

Equipment	Model and Make	Quantity
Dust Monitor	AEROCET-831	5

3.6 Meteorological information was extracted from "Hong Kong Observatory - Ta Kwu Ling Weather Station" as the alternative method to obtain representative wind data. For Ta Kwu Ling Weather Station, it is located nearby the Project site and situated at approximately 15m above mean sea level. The station's wind data monitoring equipment is set above the existing ground ten meters in compliance with the general setting up requirement. Furthermore, this station also provides other meteorological information, such as the humidity, rainfall, air pressure and temperature etc. The general meteorological conditions and the meteorological data at Ta Kwu Ling Weather Station is presented in **Appendix G**.

3.7 The general weather conditions (i.e. sunny, cloudy or rainy) were recorded by the field staffs during the monitoring day.

Monitoring Parameters, Frequency and Duration

3.8 **Table 3.3** summarises the monitoring parameters and frequencies of impact dust monitoring during the Works Contracts activities. The air quality monitoring schedule for the reporting month is shown in **Appendix D**.

 Table 3.3
 Impact Dust Monitoring Parameters, Frequency and Duration

Parameters	Frequency	
1-hr TSP	Three times/ 6 days	

Monitoring Methodology and QA/QC Procedure

1-hour TSP Air Quality Monitoring

Instrumentation

- 3.9 Direct reading dust meter was deployed for the air quality monitoring as shown in **Table 3.2**.
- 3.10 The measuring procedures of the dust meter are in accordance with the Manufacturer's Instruction Manual as follows:

(Met One Instrument: Model no/ AEROCET-831)

- The 1-hour dust meter is placed at least 1.3 meters above ground.
- Press and hold the Power key momentarily to power on the unit and make sure that the battery level was not flash or in low level.
- Allow the instrument to stand for about 3 second to display the Sample Screen minutes.
- Press the START / STOP key to run the internal vacuum pump for 1 minute and ready to use.
- Use the select dial to select the PM range and press the START / STOP key to start a measurement.
- Finally, push the START/STOP key to stop the measuring after 1 hour sampling.
- Information such as sampling date, time, value and site condition were recorded during the monitoring period.
- All data were recorded in the data logger for further data processing.

Maintenance/Calibration

- 3.11 The following maintenance/calibration was required for the direct dust meters:
 - Check and calibrate the dust meter by high volume sampler (HVS) to check the validity and accuracy of the results measured by direct reading method. Calibration of dust meter should be carried out on a bi-monthly basis throughout all stages of the air quality monitoring.
 - The correlation of dust meter and HVS in TSP measurement was obtained by direct comparison of the weight of dust particle trapped in a filter paper using HVS with the

- reading of the dust meter. Calibration of the dust meter with HVS should be powered on and off at the same location and the same time.
- The correlation coefficient was checked to establish the correlation relationship between the dust meter and HVS. The correlation factor was determined by comparing the results of HVS and dust meter.
- Checking is made prior to dust monitoring commencing to ensure all equipment is in good working condition with necessary power supply. Zero count test were conducted before and after each monitoring event.

Results and Observations

3.12 The monitoring results for 1-hour TSP monitoring are summarised in **Table 3.4**. Detailed monitoring results and graphical presentations of 1-hour TSP monitoring results are shown in **Appendix E**.

Table 3.4 Summary Table of 1-hour TSP Monitoring Results during the Reporting Month

Monitoring Station		centration ug/m³)	Action Level,	Limit Level, µg/m³
Station	Average	Range	μg/m ³	μg/m°
AM1	86.6	24.4 – 163.9	308	500
AM2	61.2	24.3 – 120.4	311	500

- 3.13 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedances were recorded.
- 3.14 According to our field observations, the major dust source identified at the designated air quality monitoring stations in the reporting month are shown in **Table 3.5**:

Table 3.5 Observation at Dust Monitoring Stations

Monitoring Station	Major Dust Source
AM1	Road traffic
AM2	Road traffic, mobile crane, excavator, other construction site
	(crane, forklift

Event and Action Plan

3.15 Should project-related non-compliance of the criteria occur, action in accordance with the Action Plan in **Appendix I** shall be carried out.

4 NOISE MONITORING

Monitoring Requirements

4.1 In accordance with EM&A Manual, construction noise monitoring was conducted in terms of the A-weighted equivalent continuous sound pressure level (L_{eq}) to monitor the construction noise arising from the construction activities. The regular monitoring frequency for each monitoring station shall be on a weekly basis and conduct one set of measurements between 0700 and 1900 hours on normal weekdays. Appendix B shows the established Action/Limit Levels for the environmental monitoring works.

Monitoring Location

4.2 According to Section 3.2.3 of the EM&A manual, impact noise monitoring was conducted at fourteen designated noise monitoring stations as shown in **Figure 3**. **Table 4.1** describes the locations of the noise monitoring stations.

Table 4.1 Location of Noise Monitoring Stations

Monitoring Station	Location of Measurement
NM1	Village House, Sha Ling
NM2	Village House, Sha Ling
NM3	Village House No. 248, Sha Ling
NM4	Village House, Sha Ling

NM10	Village House, Kong Nga Po
NM11	Village House, Kong Nga Po
NM12	Village House, Kong Nga Po
NM13	Village House, Kong Nga Po
NM14	Village House, near Man Kam To Road

Note: *The location of NM5 as shown in Figure 3.1 of EM&A Manual and Figure 4.2 of the EIA Report is Village House No.270, Sha Ling, not Village No. 272, Sha Ling according to https://www.map.gov.hk/gm/map/s/B/1107625418

Monitoring Equipment

4.3 Integrating Sound Level Meter was used for impact noise monitoring. The meters are Type 1 sound level meter capable of giving a continuous readout of the noise level readings including equivalent continuous sound pressure level (L_{eq}) and percentile sound pressure level (Lx) that

for Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po

Monthly EM&A Report – September 2021

also complied with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications. **Table 4.2** summarises the noise monitoring equipment being used. Copies of calibration certificates are attached in **Appendix C**.

Remarks:

Monitoring Methodology and QA/QC Procedures

- 4.5 The monitoring procedures are as follows:
 - The sound level meter was set on a tripod at a point 1m from the exterior of the noise sensitive facade and at the position of 1.2m above the ground;
 - For free field measurement, the meter was positioned away from any nearby reflective surfaces. Free field noise levels was adjusted with a correction of +3 dB(A);
 - The battery condition was checked to ensure the correct functioning of the meter;
 - Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:

^{[1]:} Correction of +3dB (A) for Free-field Measurement.

^{[2]:} A-weighted equivalent continuous sound pressure level (L_{eq}). It is the constant noise level which, under a given situation and time period, contains the same acoustic energy as the actual time-varying noise level.

 L_{10} is the level exceeded for 10% of the time. For 10% of the time, the sound or noise has a sound pressure level above L_{10} . L_{90} is the level exceeded for 90% of the time. For 90% of the time, the noise level is above this level.

frequency weightingtime weightingFast

time measurement : $L_{eq(30 \text{ min.})} dB(A)$

(as six consecutive $L_{\text{eq, 5min}}$ readings) during non-restricted hours (i.e. 0700-1900 hrs on normal

weekdays)

- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re- calibration or repair of the equipment;
- During the monitoring period, the L_{eq} , L_{90} and L_{10} were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet;
- Noise measurement was paused temporarily during periods of high intrusive noise (e.g. dog barking, helicopter noise) if possible and observation record during measurement period should be provided; and
- Noise monitoring was cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s. The wind speed should be checked with a portable wind speed meter capable of measuring the wind speed in m/s.

Maintenance and Calibration

- 4.6 The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.
- 4.7 The sound level meter and calibrator were checked and calibrated at yearly intervals.
- 4.8 Immediately prior to and following each noise measurement, the accuracy of the sound level meter should be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements would be accepted as valid only if the calibration levels before and after the noise measurement agreed to within 1.0 dB.

Results and Observations

4.9 The noise monitoring results are summarised in **Table 4.4**. Detailed monitoring results and graphical presentations of noise monitoring are shown in **Appendix F**. The weather information for the reporting month is summarised in **Appendix G**.

Table 4.4 Summary Table of Noise Monitoring Results during the Reporting Month

Monitoring	Average	Range	Baseline Level	Limit Level
Station	L_{eq} (30 min) $dB(A)$	$L_{eq(30min)}dB(A)$	dB(A)	dB(A)
NM1 ^[1]	55.8	48.6 – 59.9	54.9	
NM2 ^[1]	59.1	45.8 – 64.5	56.7

Remarks:

[1]: Correction of +3dB (A) for Free-field Measurement.

- 4.10 Construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 4.11 According to our field observations, the major noise sources identified at the designated noise monitoring stations in the reporting month are as follows:

Table 4.5 Observation at Noise Monitoring Stations

Monitoring Station	Major Noise Source
NM1	Road traffic, excavator
NM2	Road traffic, excavator
NM3	Road traffic
NM4	Road traffic
NM5	Road traffic
NM6	Road traffic, excavator
NM7	Road traffic
NM8	Road traffic, breaker

NM10	Road traffic
NM11	Road traffic
NM12	Road traffic, excavator, mobile crane
NM13	Road traffic
NM14	Road traffic

Event and Action Plan

4.12 Should any project related non-compliance of the criteria occur, action in accordance with the Action Plan in **Appendix I** shall be carried out.

5 ECOLOGICAL MONITORING

Monitoring of Flora Species of Conservation Interest

- 5.1 As required under Section 8.3.2 of EM&A Manual, during construction phase, temporary protective fence shall be erected enclosing the flora species of conservation interest identified under the detailed vegetation survey. The temporary protective fence shall be properly maintained and monitoring for the effectiveness. Monthly monitoring of individual of flora species of conservation interest identified in the detailed vegetation survey shall be conducted during the construction phase to make sure that the flora species of conservation interest are not affected by the construction activities of the Project.
- 5.2 The purpose of the monitoring is to monitor the timely implementation of proper environmental management practices and mitigation measures for the retained and transplanted individuals of flora species of conservation interest. Proper erection and maintenance of the temporary protective fence enclosing the individuals was inspected for the effectiveness. The recommended protection measures in the implementation schedule as stated in approved transplantation proposal were monitored and the conditions of the individuals of flora species of conservation interest were recorded.
- 5.3 According to the approved detailed vegetation survey report and transplantation proposal, 71 individuals of *Brainea insignis*, 41 individuals of *Spiranthes sinensis* and 3 individuals of *Aquilaria sinensis* were identified to be transplanted to the receptor site. 51 individuals of *Keteleeria fortunei*, 26 undersized seedlings of *Keteleeria fortunei* and 7 undersized seedlings of *Aquilaria sinensis* were identified to be retained along Kong Nga Po Road near Police Dog Unit and Force Search Unit Training School.

Post-Transplantation Monitoring and Maintenance Programme

- 5.4 According to approved transplantation proposal, post-transplantation monitoring should be conducted by the Contractor once per week in the first three months and once per month afterwards during the 12-month establishment period and the post-establishment period until the end of construction phase of the Project. Regular monitoring allows early detection of the growth status of transplanted species, sign of construction activity within and nearby the receptor site, and any environmental change of the receptor site.
- 5.5 Maintenance works were recommended for the first year of establishment to allow health growth of the transplanted species. Watering was recommended in daily practice during the first three months after the transplantation and during dry season. Watering frequency may be reduced to at least twice a week and adjusted based on the plant condition to keep the soil moist. Other maintenance works like use of mulch and weeding shall be conducted if required.

Results and Observations

5.6 Monthly monitoring of flora species of conservation interest was conducted by ET on 17th September 2021 during the reporting month. The implementation status of protection measures as stated in approved transplantation proposal and the maintenance of temporary protective fence were inspected. The implementation status of protection measures is shown in **Table 5.1** and photographic record and checklists for monthly monitoring are shown in **Appendix H.**

Transplanted Brainea insignis and Spiranthes sinensis

- 5.7 71 individuals of *Brainea insignis* and 41 individuals of *Spiranthes sinensis* were transplanted to receptor site from 21st to 26th May 2020. Transplantation Report recording the process of transplantation have been submitted to ET, IEC and the *Supervisor* for review and record. Post-transplantation monitoring were conducted once per week in the first three months (June to August 2020) and once per month during the 12-month establishment period and the post-establishment period until the end of construction phase of the Project. The health condition of the transplanted species were monitored by the Contractor. The Contractor provided maintenance works including watering, use of mulch and weeding in the first year of establishment to allow health growth of the transplanted species. Post-transplantation monitoring on transplanted *Brainea insignis* and *Spiranthes sinensis* was conducted on 25th September 2021 during the reporting month and the post-transplantation monitoring record is shown in **Appendix H**. The health condition of the transplanted species affected by bushfire were closely monitored and reported in the post-transplantation monitoring record.
- 5.8 During monthly monitoring, no construction activity and equipment storage was observed within the receptor site. Temporary protective fence were properly erected and maintained for the transplanted species.

Transplanted Aquilaria sinensis

- 3 individuals of *Aquilaria sinensis* were transplanted to receptor site from 3rd to 19th October 2020. Transplantation Report recording the process of transplantation have been submitted to ET, IEC and the *Supervisor* for review and record. Post-transplantation monitoring were conducted once per week in the first three months (October 2020 to January 2021) and once per month during the 12-month establishment period and the post-establishment period until the end of construction phase of the Project. The health condition of the transplanted species were monitored by the Contractor. The Contractor provided maintenance works including watering, use of mulch and weeding in the first year of establishment to allow health growth of the transplanted species. Post-transplantation monitoring on transplanted *Aquilaria sinensis* was conducted on 25th September 2021 during the reporting month and the post-transplantation monitoring record is shown in **Appendix H**.
- 5.10 During monthly monitoring, poor health condition of *Aquilaria sinensis* A-008, A-0009 and A-0010 (defoliation, dead branches, dieback twigs on tree crown etc.) were found. The Contractor was reminded to take prompt action to rescue the tree accordingly to approved transplantation proposal. No construction activity and equipment storage was observed within the receptor site. Temporary protective fence were properly erected and maintained for the transplanted species.

Retained Keteleeria fortunei and Aquilaria sinensis

5.11 51 individuals of *Keteleeria fortunei*, 26 undersized seedlings of *Keteleeria fortunei* and 7 undersized seedlings of *Aquilaria sinensis* were identified to be retained along Kong Nga Po Road near Police Dog Unit and Force Search Unit Training School. Individuals of *Keteleeria fortunei* and *Aquilaria sinensis* were preserved based on the revised layout plan of Kong Nga Po Road.

5.12 During monitoring, no construction activity was observed within the area of retained species. Temporary protective fence were properly erected and maintained for the retained species. The photographic record for the collapsed individual is shown in **Appendix H**.

Table 5.1 Implementation Status of Protection Measures for Flora Species of Conservation Interest

Recommended Mitigation Measures	Implementation Status
Brainea insignis	
Identification of Plant Species of Conservation Importance to be Retained / Transplanted To mark trees/plants proposed to be retained and to be transplanted on the layout plan prior to commencement of site construction works.	۸
Protection of Plant Species of Conservation Importance prior to Site Clearance /	
Transplantation Works	
a) No site clearance shall be started at the locations of flora species of conservation interest until the transplantation works completed.	N/A
b) Set up buffer zone to enhance the protection of flora species of conservation importance to be preserved / transplanted including the proposed location for transplantation when the site clearance works shall commence before the transplantation works completed.	N/A
Temporary Protective Fence for Flora Species of Conservation Interest / Retained Tree	
a) To erect a temporary protective fence enclosing the flora species of conservation interest identified under the detailed vegetation survey.	۸
b) To set up a protection zone at least 1m from the plant / retained tree and erect robust, bright-coloured fencing of 1.5m in height.	۸
Maintenance of the Protection Zone for Flora Species of Conservation Interest / Retained	
Tree	
a) Monthly monitoring of flora species of conservation interest identified in the detailed vegetation survey should be conducted.	۸
b) To inspect the temporary protective fence whether it is properly erected and maintained during construction.	۸
Post-transplantation Monitoring	
a) Weekly post-transplantation monitoring of transplanted species in the first three months and monthly afterwards.	۸
Maintenance of Transplanted Species	
a) To keep the soil moist by watering the receptor sites properly and adequately.	^
b) To apply mulches on the soil surface over the plant root system, if required.	^
c) To remove unwanted weeds found in receptor sites.	^
Other Protection Measures for Flora Species of Conservation Interest / Retained Tree /	
Vegetated Areas	
a) All works should be confined within the site boundary.	^
b) Access of site staff should be controlled.	^
c) Care should be taken to prevent trees/plants being damaged by mechanical equipment or stockpile both during site clearance works and construction works.	^
d) No fixings should be driven into trees/plants.	۸
e) No workshop, canteens, or similar should be installed beneath trees/plants, nor will equipment maintenance etc. be carried out under trees/plants.	^
f) No excavation, including that for services or changes in ground level will take place within the spread of the crown of the trees / plants.	^
g) No soil, debris or construction materials should be deposited around and against the trunk of a tree/plant as this causes bark damage and compaction of the soil.	۸
a are plant as and causes out canage and compaction of the son.	^

	N/A	Not Applicable at this stage as no such site activities were conducted in the reporting period

Mitigation Measure for Golden-headed Cisticola

5.13 According to EP Condition 2.15, a baseline survey-for Golden-headed Cisticola for the Project was conducted and the baseline survey report was submitted. The mitigation measures detailed in the documents are recommended to minimise the noise, light and water quality impact from construction works to avifauna. Good site practice measures shall be implemented throughout the construction period. The recommended mitigation measures are summarised as following:

Noise

- Silencers or mufflers on well-maintained construction equipment should be utilized and properly maintained during the construction program
- Noise enclosure or acoustic shed should be effectively utilized, where practicable
- Machines or equipment known to emit noise or light strongly in one direction should, wherever possible, be orientated the noise away from the adjacent habitat

<u>Light</u>

- Adjusting the outdoor lighting to lower intensity
- Use of directional lighting to avoid light spill into sensitive areas
- Control/timing of lighting periods of some facilities, particularly those close to the ecological sensitive receivers

Water

- Proper drainage system installed to collect and dispose rainwater.
- Installation of sediment/rubbish trapping facilities (e.g. catch pits or sand/silt traps to contain the increase in suspended solids and materials in the storm water drainage system so as to avoid pollutants being washed out during heavy rainstorms)

Good Site Practice Measures

- Placement of stockpiling into designated area should be selected at disturbed area in order to minimize the disturbance to wildlife
- Open fire should be strictly prohibited
- The boundary of project boundary should be clearly demarcated
- General drainage system arrangement should include sediment and oil trapper to collect the site run-off
- Waste bin should be provided to collect the general refuse and construction waste
- 5.14 Site audit were conducted by ET on weekly basis to monitor the timely implementation of the recommended mitigation measures by the Contractor on the Contract site. The observations are summarised in **Table 7.1** and the implementation status is given in **Appendix K**. Toolbox talk training related to ecological protection will be provided by the Contractor to site staff and frontline workers. Presence of avifauna and bird nest will be checked prior to site clearance work.

Precautionary Measure for Butterfly Species of Conservation Interest

- 5.15 According to EP Condition 2.21, with consideration of minimizing impact on butterfly species of conservation interest recorded at the grassland in the Project site, planting of common grass species which are the larval food plants for butterfly species such as Small Three-Ring are included in Landscape and Visual Mitigation Plan.
- 5.16 The re-establishment of grassland areas in the Project shall be implemented before Commencement of Operation of the Project. Details of the plant species as larval food plants of butterflies including design and implementation arrangement will be further submitted under ArchSD's building works contract.

Precautionary Measures to Minimize Indirect Disturbance on Ecology

5.17 In accordance with Section 9.7.3 of EIA Report, mitigation measures for air, noise, water, waste and landscape aspects could act as precautionary measures to prevent and minimize any indirect disturbance impact or pollution arisen from the construction activities on the local ecology and offsite habitats. Site audits were carried out by ET on weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures on the Contract site and the observations are summarised in Section 7.3.

6 LANDSCAPE AND VISUAL MONITORING

Monitoring Requirements

- 6.1 The EIA Report has recommended mitigation measures for landscape and visual resources to be undertaken during the construction and operation phases of the Project.
- 6.2 These measures include the consideration of a number of development options and the provision of mitigation measures to directly offset unavoidable impacts. The measures include strategies for reducing, offsetting and compensating impacts during construction and operation phases according to Section 10.13 in EIA Report.
- 6.3 The implementation and maintenance of landscape compensatory planting measures is a key aspect of this and shall be checked to ensure that they are fully realised and that potential conflicts between the proposed landscape measures and any other project works and operational requirements are resolved at the earliest possible date and without compromise to the intention of the mitigation measures. In addition, implementation of the mitigation measures recommended by the EIA shall be monitored throughout the construction phase site audit programme.
- 6.4 Bi-weekly inspection of the implementation of landscape and visual mitigation measures was conducted by ET during weekly site audit. The observation and recommendations made during the audit sessions are summarised in **Table 7.1**. The implementation status is given in **Appendix K**.

7 ENVIRONMENTAL SITE INSPECTION

Site Audits

- 7.1 Site audits were carried out by ET on weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures on the Contract site.
- 7.2 Site audits were conducted on 3rd, 10th, 17th 24th and 30th September 2021 in the reporting month. Joint site audits with the representative of the *Supervisor*'s Representative, the Contractor and IEC were carried out on 3rd, 10th, 17th, 24th and 30th September 2021.
- 7.3 During site inspections in the reporting month, no non-conformance was identified. The observations and recommendations made during the audit sessions are summarised in **Table** 7.1.

Table 7.1 Observations and Recommendations of Site Audit

Parameters	Date	Observations	Follow Up Action
Air Quality	26/8/2021	Reminder To enhance the dust suppression measures at DA-C.	Improvement/Rectification was observed during follow-up audit session on 3/9/2021.
	3/9/2021	Reminder To replace the faded NRMM label for the generator at Hin Sum Container Office.	Improvement/Rectification was observed during follow-up audit session on 10/9/2021.
	10/9/2021	Reminder To ensure sufficient dust suppression measures for the dusty haul road and stockpiles.	Improvement/Rectification was observed during follow-up audit session on 17/9/2021.
	10/9/2021	Reminder Properly check and maintain the piling equipment to avoid heavy smoke emission at piling area.	Improvement/Rectification was observed during follow-up audit session on 17/9/2021.
	10/9/2021	Reminder Properly cover the dusty materials on trucks entirely during transportation on site	Improvement/Rectification was observed during follow-up audit session on 17/9/2021.
	30/9/2021	Dust emission was observed from the silo tank at piling area. The Contractor was reminded to check and rectify it as soon as possible.	Follow-up action is needed to be reported in the following month.
	30/9/2021	Reminder Provide dust mitigation measures for the dusty stockpiles at platform G.	Follow-up action is needed to be reported in the following month.
Construction Noise Impact		No environmental deficiency was identified during the reporting month.	
Water Quality	26/8/2021	Reminder Properly reuse / discharge the treated water from the water tank at dead end road.	Improvement/Rectification was observed during follow-up audit session on 3/9/2021.
	26/8/2021	Reminder To clear the sedimentation tank at Portion BC-37.	Improvement/Rectification was observed during follow-up audit session on 3/9/2021.
	3/9/2021	Reminder Properly check and maintain the pH senor for the Wetsep at Abatement A.	Improvement/Rectification was observed during follow-up audit session on 10/9/2021.
	10/9/2021	Reminder To modify the maintenance checklist or the wetsep at C38 so that the records can be shown clearly.	Improvement/Rectification was observed during follow-up audit session on 24/9/2021.

Service Contract No. NDO 07/2019 Environmental Team for Site Formation and Infrastructure Works

for Police Facilities in Kong Nga Po Monthly EM&A Report – September 2021

Parameters	Date	Observations	Follow Up Action
	17/9/2021	Reminder To ensure the exposed slope is completed covered at Abutement A.	Improvement/Rectification was observed during follow-up audit session on 24/9/2021.
	17/9/2021	Reminder To modify the maintenance checklist or the wetsep at C38 so that the records can be shown clearly.	Improvement/Rectification was observed during follow-up audit session on 24/9/2021.
	24/9/2021	The wetsep at the lower platform at Portion D was observed not functioning properly. The Contractor was reminded to enhance the maintenance of the wetsep and regular check the discharge complies with WPOC license.	Improvement/Rectification was observed during follow-up audit session on 30/9/2021.
	24/9/2021	Reminder To review the site drainage system at the lower platform at Portion D so that the site surface runoff can be diverted into the treatment facilities.	Improvement/Rectification was observed during follow-up audit session on 30/9/2021.
	24/9/2021	Reminder To review the capacity of the sedimentation tank at RD-B and RD-A.	Improvement/Rectification was observed during follow-up audit session on 30/9/2021.
	26/8/2021	Reminder Properly clear general refuse at Portion B and provide rubbish bin on site.	Improvement/Rectification was observed during follow-up audit session on 3/9/2021.
	26/8/2021	Reminder Provide mitigation measures to avoid rainwater getting into the drip tray at chemical storage area at Hin Sum Container office.	Improvement/Rectification was observed during follow-up audit session on 3/9/2021.
	26/8/2021	Reminder Clear the contaminated soil at C8 as soon as possible.	Improvement/Rectification was observed during follow-up audit session on 3/9/2021.
	3/9/2021	Reminder To clear oily stagnant water at the drip tray as chemical waste at Hin Sum Container Office.	Improvement/Rectification was observed during follow-up audit session on 10/9/2021.
	3/9/2021	Reminder Clear the oil leakage from the container and provide drip tray at Portion B.	Improvement/Rectification was observed during follow-up audit session on 10/9/2021.
Waste/ Chemical	10/9/2021	Reminder Regularly clear the used cement bags at C38.	Improvement/Rectification was observed during follow-up audit session on 24/9/2021.
Management	10/9/2021	Reminder To maintain the function of the drip tray at C38, Hin Sum Container office and near water tank area.	Improvement/Rectification was observed during follow-up audit session on 17/9/2021.
	10/9/2021	Reminder Provide drip tray for the oil containers and replace with appropriate containers for the chemical.	Improvement/Rectification was observed during follow-up audit session on 17/9/2021.
	17/9/2021	Reminder Provide drip tray and replace the container for the chemical storage at Abutement A.	Improvement/Rectification was observed during follow-up audit session on 24/9/2021.
	17/9/2021	Reminder The generator at near the piling site area should be checked and repaired, if necessary to avoid oil leakage.	Improvement/Rectification was observed during follow-up audit session on 24/9/2021.
	17/9/2021	Reminder Regularly clear the used cement bags at C38.	Improvement/Rectification was observed during follow-up audit session on 24/9/2021.

Service Contract No. NDO 07/2019
Environmental Team
for Site Formation and Infrastructure Works
for Police Facilities in Kong Nga Po

Monthly EM&A Report – September 2021

Parameters	Date	Observations	Follow Up Action
	30/9/2021	Reminder Clear the drip tray for the air compressor at C37.	Follow-up action is needed to be reported in the following month.
Landscape and Visual	26/8/2021	Reminder Properly erect the protection fence for the retain trees at dead end road.	Improvement/Rectification was observed during follow-up audit session on 3/9/2021.
	10/9/2021	Reminder To ensure the fencing erected surrounding the retained trees at C38.	Improvement/Rectification was observed during follow-up audit session on 17/9/2021.
	17/9/2021	Reminder Properly erect the fencing surrounding the retained trees at Portion B1.	Improvement/Rectification was observed during follow-up audit session on 24/9/2021.
	24/9/2021	Reminder To clear the waste materials within the tree protection zone and provide fencing surrounding the retained tree at lower platform at Portion D.	Improvement/Rectification was observed during follow-up audit session on 30/9/2021.
Ecology		No environmental deficiency was identified during the reporting month.	
Permit/Licences	30/9/2021	Reminder To replace the expired CNP at the site entrance of lower platform (Portion D).	Follow-up action is needed to be reported in the following month.

Implementation Status of Environmental Mitigation Measures

7.4 According to the EIA Report, Environmental Permit and the EM&A Manual of the Project, the mitigation measures detailed in the documents are recommended to be implemented during the construction phase. An updated summary of the Environmental Mitigation Implementation Schedule (EMIS) is provided in **Appendix K**.

Solid and Liquid Waste Management Status

- 7.5 In accordance with the EM&A Manual, waste management was audited during weekly site audit to determine if wastes are being managed in accordance with the Waste Management Plan (WMP) prepared for the Project and the relevant legislative and contractual requirements. Waste management practice including waste handling, storage, transportation and disposal were audited.
- 7.6 The Contractor have nominated on-site Environmental Officers to oversee the environmental management, pollution control measures, good site practices and training of site personnel in waste management. Proactive measures have been undertaken to make use of construction and demolition (C&D) materials to minimize the waste generated. On-site sorting and screening of excavated materials have been carried out to recover any recyclable portions. Inert C&D materials were used on-site for backfilling works and hard paving of haul road. In addition, inert C&D materials generated from excavation works were reused as fill materials in other local projects. The surplus inert C&D materials were disposed of at the Government's public fill reception facilities (PFRFs) for beneficial use by other projects. In order to monitor the disposal of inert and non-inert C&D materials and to control fly-tipping, every excavated materials before leaving the site are weighted by a weight bridge and Trip Ticket System is strictly followed.

- 7.7 The Contractors are advised to minimize the wastes generated through the recycling or reusing. All mitigation measures stipulated in the EM&A Manual and waste management plans shall be fully implemented. The status of implementation of waste management and reduction measures are summarised in **Appendix K**.
- 7.8 Waste generated from this Project includes inert C&D materials and non-inert C&D materials. Non-inert C&D materials are made up of general refuse and waste that cannot be reused or recycled and has to be disposed of at the designated landfill sites. The amount of wastes generated by the construction works of the Project during the reporting month is shown in **Appendix L**.

8 ENVIRONMENTAL NON-CONFORMANCE

Summary of Exceedances

- 8.1 No exceedance of Action and Limit Levels of air quality and construction noise was recorded in the reporting month. The summary of exceedance record in reporting month is shown in **Appendix J**.
- 8.2 Should the monitoring results of the environmental monitoring parameters at any designated monitoring stations indicate that the Action / Limit Levels are exceeded, the actions in accordance with the Event and Action Plans in **Appendix I** be carried out.

Summary of Environmental Non-Compliance

8.3 No environmental non-compliance was recorded in the reporting month.

Summary of Environmental Complaint

- 8.4 In accordance with the EM&A Manual, Section 11.3, complaints should be referred to the ET for action. During the complaint investigation works, the ET and IEC as established according to EP Condition 2.1 and 2.6 can carry out *Ad-hoc* site inspections to identify the source of the complaint, review the effectiveness of the Contractor's remedial measures and the updated situation once received the complaint. In addition, additional monitoring and audit can also be arranged immediately to verify the situation if necessary. ET and IEC will also oversee the circumstances that leading to the complaint do not recur. Moreover, ET and IEC can cooperate efficiently with the Contractor and *Supervisor* on site for completion of the investigation.
- 8.5 No environmental complaint was received in the reporting month. The Cumulative Complaint Log since the commencement of the Project is presented in **Appendix M**.

Summary of Environmental Summon and Successful Prosecution

8.6 There was no successful environmental prosecution or notification of summons received since the Project commencement. The Cumulative Log for environmental summon and successful prosecution since the commencement of the Project is presented in **Appendix N**.

9 FUTURE KEY ISSUES

Key Issues in the Coming Three Months

- 9.1 The tentative construction programme for the Project is provided in **Appendix A**. The major construction activities undertaken in the coming three months will include:
 - Tree felling works
 - Site formation at Portion D
 - Retaining walls, stormwater storage tank, sewage storage tank and underpass construction
 - Piling works (foundation socketed H-piles)
 - Road and associated works at Kong Nga Po Road
 - Slope upgrading works
 - Sewage trenchless works
 - Drainage and watermains trenchless works
- 9.2 With reference to the site layout plan with the indication of coming three months construction site activities in **Appendix A**, potential environmental impacts arising from the above construction activities are mainly associated with construction dust, noise, water quality, waste management, landscape and visual and ecology. The foreseeable environmental impacts were taken into consideration of the planned mitigation measures in the coming months.
- 9.3 The mitigation measures to be implemented for the coming three months were proposed by the Contractor and reviewed by ET, IEC and the *Supervisor* through Email, during site audit and SSMC meeting. The Proactive Environmental Protection Proforma summarizing the major site activities, potential environmental impacts and recommended mitigation measures was reviewed and endorsed by the *Supervisor*, ET and IEC and was shown in **Appendix A**.

Monitoring Schedule for the Next Month

9.4 The tentative environmental monitoring schedule for the next month is shown in **Appendix D**.

10 CONCLUSIONS AND RECOMMENDATIONS

Conclusions

- 10.1 This Monthly EM&A Report presents the EM&A work undertaken in September 2021 in accordance with EM&A Manual.
- 10.2 No Action/Limit Level exceedance was recorded for air quality and construction noise monitoring in the reporting month.
- 10.3 Environmental site inspections were conducted on 3rd, 10th, 17th 24th and 30th September 2021 by ET in the reporting month. No environmental non-compliance was recorded in the reporting month.
- 10.4 No environmental complaint and notification of summons or successful prosecutions was received in the reporting month.
- 10.5 The ET would keep track on the EM&A programme to ensure compliance of environmental requirements and the proper implementation of all necessary mitigation measures.

Recommendations

10.6 According to the environmental audits performed in the reporting month, the following recommendations were made:

Air Quality Impact

- To provide dust mitigation measures for dusty work like grouting during operation;
- Non-Road Mobile Machinery (NRMM) Labels must be demonstrated on the registered equipment for inspection;
- To cover stockpile of dusty materials for dust suppression; and
- To deploy dust screen for socketed H pile during piling work.

Water Impact

- To keep review on and enhance the sediment control measures regarding the storm water management, especially during the rainy season;
- To review and implement temporary drainage system;
- To divert all the water generated from construction site to de-silting facilities with enough handling capacity before discharge; and
- To ensure surface runoff discharge to temporary drainage and treated before discharging.

Waste/Chemical Management

- To check for any accumulation of waste materials or rubbish on site;
- To avoid any discharge or accidental spillage of chemical waste or oil directly from the site; and
- To maintain the drip tray well to prevent oil and chemical leakage

Landscape & Visual Impact

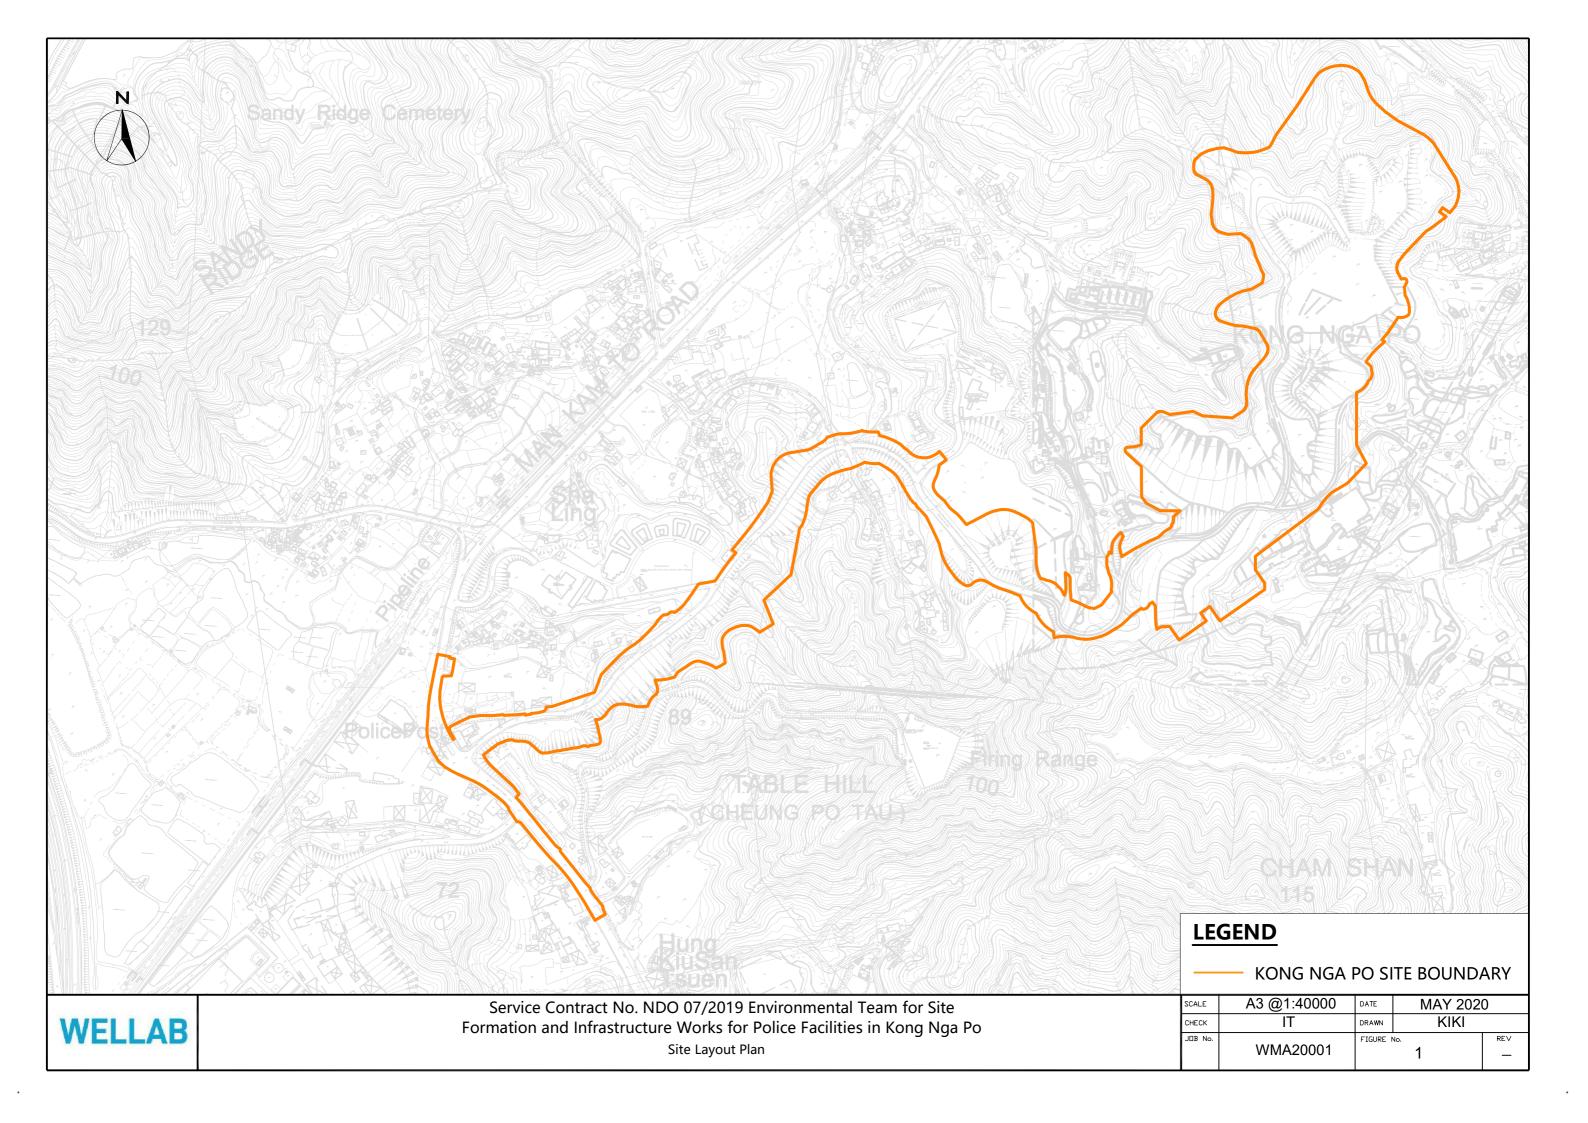

• To avoid any construction materials being placed inside the tree protection zone.

Service Contract No. NDO 07/2019 Environmental Team for Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po Monthly EM&A Report – September 2021

Ecology

- To erect and maintain the protection fence around the retained trees; and
- To keep close monitor of conservation species and avoid dead/ detached branches.

				age	2			

Ref*	Proposed Construction	Location/Working	Anticipated Major	Recommended Mitigation Measures
	Method**	Period	Impacts :	
EIA 7.5.1.3;	Tree felling works	Kong Nga Po Main Site	Generation of timber waste	Sorting, cutting and delivering suitable timber to
EM&A Log		Kong Nga Po Road	and yard waste	shredding facilities for recycling and reused
6.2		:		Regular inspection for compliance of tree
				treatment schedule
_				Provide training to frontline workers for
				conservative species
EIA Table			Landscape and visual	Properly fenced off the conservative species
10.11			impact	Preservation of existing trees will be undertaken
EM&A Table				in accordance with DEVB TC(W) 7/2015 and
9.1				Guidelines for Tree Risk Assessment and
				Management Arrangement.
				Control construction area to minimize the impact
				on existing retained trees.

Ref*	Proposed Construction Method**	Location/Working Period	Anticipated Major Impacts	Recommended Mitigation Measures
EIA 3.91;	Piling Works	Kong Nga Po Main Site	Air Pollution	Regular inspection and maintenance of plant &
EM&A Log	(Foundation Socketed			equipment in good condition
2.2	H-Piles)			
EIA 5.6.1.2;			Wastewater generated from	Re-circulation of water will be adopted for
EM&A Log			drilling works	drilling rigs to minimize wastewater generation
4.2				Provide wastewater treatment facilities (Wetsep)
-				for treatment before discharge
				Regular inspection and maintenance of
		,		wastewater treatment facilities by the supplier
				Enclosure will be provided to drill rods to
	•			minimize the risk of water spillage
				Establish soil berm near piling area to control
				water outflow
EIA 4.4.6;			Noise from drilling rigs and	Regular inspection and maintenance of plant &
EM&A Log			accessory equipment	equipment in good condition
3.2				Use of proprietary noise barrier (SilentUP) for
				noisy works near sensitive receiver
				Deployment of quality powered mechanical
				equipment as possible
				Regular inspection and maintenance of plant &
				equipment in good condition

Ref*	Proposed Construction Method**	Location/Working Period	Anticipated Major Impacts	Recommended Mitigation Measures
EIA 4.4.6; EM&A Log 3.2	(Cont') Piling Works (Foundation Socketed H-Piles)	(Cont') Kong Nga Po Main Site	Working in Restricted Hours	 Valid construction noise permit should be obtained and displayed on site Conditions of the permit should be strictly complied with Deployed supervisory staff to monitoring the compliance of construction noise permit In case of non-compliance with the construction noise criteria, more frequent monitoring and
EIA 7.5.1.4; EM&A Log 6.2			Chemicals such as diesel and lubricants from maintenance of construction vehicles and mechanical equipment	action should be carried out Drip tray and chemical spillage kit will be provided on site

Ref*	Proposed Construction Method**	Location/Working Period	Anticipated Major Impacts	Recommended Mitigation Measures
EIA 10.11, EM&A Log 9.4	(Cont') Piling Works (Foundation Socketed H-Piles)	(Cont') Kong Nga Po Main Site	Ecology Concern	 Provide training to frontline workers for conservative species Use of proprietary noise barrier (SilentUP) for noise works to minimize impact to nearby species Deployment of quality powered mechanical equipment as possible Regular inspection and maintenance of plant & equipment in good condition
EIA Table 10.11 EM&A Table 9.1	·	·	Landscape and visual impact	Construction area had been controlled with proper fencing to minimize the landscape and visual impacts arising from construction activities

Ref*	Proposed Construction Method**	Location/Working Period	Anticipated Major Impacts	Recommended Mitigation Measures
EIA 3.91;	Site Formation	Kong Nga Po Main Site	Dust impact from	Provision of sprinklers provide dust suppression
EM&A Log			excavation activities	control. Moisture senor-operated sprinklers had
2.2				been installed for automatic water spraying
				Deployment of water tank truck for regular water
				spraying to enhance dust suppression
				Speed control of site vehicles
				Stockpile of dusty materials will be covered by
				tarpaulin to avoid wind-blow dust
			,	Vehicles used for transporting dusty
				materials/spoils will be covered by mechanical
				cover before leaving the site
				Wheel washing facilities had been provided and
				cleaning the wheel of all vehicles before leaving
				the site
EIA 5.6.1.2;			Water Pollution Control	Existing drainage/runoff within the site where
EM&A Log				connected to communal drainage system will be
4.2				covered or sealed to prevent water entering the
	·			communal drainage/sewerage system.
-				Appropriate and sufficient desilting devices,
				wastewater treatment facilities provided on site
				prior to discharge

Ref*	Proposed Construction	Location/Working	Anticipated Major	Recommended Mitigation Measures
	Method**	Period	Impacts	The second secon
	(Cont')	(Cont')	(Cont')	Regular inspection and maintenance of
	Site Formation	Kong Nga Po Main Site	Water Pollution Control	wastewater treatment facilities by the supplier
				Provision of soil berms, rock check dam and
	•			retention pit near excavation area/low-lying
				region, grassy vegetation had been provided to
				bare face of soil berm as natural filtration
				Cover the stockpiling with appropriate materials
	·			Hard paving or well-compact of main haul road to
				minimize washout of soil
				Slope stabilization such as hydroseeding and
				shotcrete provision
				Wheels of all vehicles and plants should be
				cleaned before leaving the site. The wastewater
				generated from wheel washing activities will be
				treated and reused on site
EIA 4.4.6;			Noise	Scheduling of works to minimize the
EM&A Log				concentration of noisy works
3.2				Regular inspection and maintenance of plant &
				equipment in good condition
		·		• Enclose the noisy part of machineries with noise
				isolating mats

Ref*	Proposed Construction Method**	Location/Working Period	Anticipated Major Impacts	Recommended Mitigation Measures
	(Cont')	(Cont')	(Cont')	Deployment of quality powered mechanical
	Site Formation	Kong Nga Po Main Site	Noise	equipment as possible
EIA 7.5.1.4;			Chemicals such as diesel	Oils and fuel should be stored in designated area
EM&A Log			and lubricants from	Drip tray and chemical spillage kit will be
6.2			maintenance of	provided on site
			construction vehicles and	
			mechanical equipment	
EIA 7.5.1.1 &	V.		Waste Generation	• Training of site personnel in proper waste
7.5.1.2;				management and chemical handling procedures
EM&A Log				Provision of sufficient waste disposal point and
6.2				regular collection of wastes
				• Trash bins with cover had been provided at
			•	designated location for domestic refuse collection
				Encourage recycling of useful wastes such as
		:		aluminum, plastic and paper and provided
				facilities for collection
				• The excavated materials will be sorted and
				screened for subsequent backfilling works.
٠.				·

Ref*	Proposed Construction Method**	Location/Working Period	Anticipated Major Impacts	Recommended Mitigation Measures
	(Cont')	(Cont')	(Cont')	Alternative disposal ground had been sought
	Site Formation	Kong Nga Po Main Site	Waste Generation	(Tung Chung Extension, Tseung Kwan O Road
				D9, Fanling North and Kwu Tung South) and
				delivered to other projects to minimize the use of
	·			Public Fills
EIA 10.11,			Ecology Concern	Provide training to frontline workers for the
EM&A Log				conservative species
9.4				Provision of protective fence for the conservative
				species
				Regular inspection for concerned vegetation and
				conservative species
				Adopted low intensity lighting to minimize the
				light impact to surrounding species
				Regular inspection and maintenance of plant &
				equipment in good condition
				Enclose the noisy part of machineries with noise
			·	isolating mats to minimize noise level to nearby
				species
		•		Deployment of quality powered mechanical
				equipment as possible

Ref*	Proposed Construction	Location/Working	Anticipated Major	Rec	commended Mitigation Measures
	Method**	Period	Impacts		
EIA Table	(Cont')	(Cont')	Landscape and visual	•	Preservation of existing trees will be undertaken
10.11	Site Formation	Kong Nga Po Main Site	impact		in accordance with DEVB TC(W) 7/2015 and
EM&A Table					Guidelines for Tree Risk Assessment and
9.1					Management Arrangement
				•	Restrict construction area to minimize the impact
					on existing retained trees
				•	Provide grassy vegetation on soil berms greening
					effect on the construction works

Ref*	Proposed Construction Method**	Location/Working Period	Anticipated Majora	Recommended Mitigation Measures
EIA 3.91;	Retaining Wall Construction	Kong Nga Po Main Site	Air	• Dusty materials that exceeded 20 bags will be
EM&A Log	Stormwater Storage Tank,	Kong Nga Po Road		stored in area sheltered on top and the three sides
2.2	Sewage Storage Tank and			or covered entirely by impervious sheeting.
EIA 5.6.1.2;	Underpass Construction		Waste water pollution	Soil berm and retention pit will be provided for
EM&A Log	Bridge Piers and Abutments		control	the control of water outflow
4.2	Construction			Desilting/sedimentation devices will be provided
				for wastewater treatment prior to discharge
				Designated location for residual concrete washout
EIA 4.4.6;			Noise	• Well-planning of concreting works to prevent
EM&A Log				working in restricted hours
3.2				·
EIA 4.4.6;			Working in Restricted	• Valid construction noise permit should be
EM&A Log			Hours	obtained and displayed on site
3.2				• Conditions of the permit should be strictly complied with
				• Deployed supervisory staff to monitoring the compliance of construction noise permit
				• In case of non-compliance with the construction noise criteria, more frequent monitoring and action should be carried out

Ref*	Proposed Construction	Location/Working	Anticipated Major	Re	commended Mitigation Measures
	Method**	Period	Impacts		
EIA 7.5.1.4;		(Cont')	Chemicals for concreting	•	Chemical for concreting works such as curing
EM&A Log	(Cont')	Kong Nga Po Main Site	works		compound and retarder should be stored in
6.2	Retaining Wall Construction	Kong Nga Po Road			designated area with proper labelling and packing
	Stormwater Storage Tank,		·	•	Designated location for residual concrete washout
	Sewage Storage Tank and				
	Underpass Construction				
	Bridge Piers and Abutments				•
	Construction				. •

Ref*	Proposed Construction Method**	-Location/Working Period	Anticipated Major Impacts	Recommended Mitigation Measures
EIA 3.91;	Slope Upgrading Works	Kong Nga Po Main Site	Dust impact from soil nail	Three side enclosure with top shelter for cement
EM&A Log		Kong Nga Po Road	works	mixing works
2.2				Regular spraying of water on dusty materials
				Cover the drilling part of machine to minimize
			,	dust generation
				Dusty materials should be exceeded 20 bags and
				stored in area sheltered on top and the three sides
				or covered entirely by impervious sheeting.
EIA 5.6.1.2;			Water	Deployment of desilting/sedimentation devices
EM&A Log				for wastewater treatment prior to discharge
4.2				Establish soil berm with retention pit to control
				water outflow.
EIA 4.4.6;			Noise	Regular inspection and maintenance of plant and
EM&A Log				equipment in good condition
3.2				Provide noise isolating mat to drilling rigs where
				near to the sensitive receiver
EIA 10.11,			Ecology Concern	Provide training to frontline workers for the
EM&A Log				conservative species
9.4				Provision of protective fence for the conservative
				species
				Regular inspection for concerned vegetation

Ref*	Proposed Construction Method**	Location/Working Period	Anticipated Major Impacts	Recommended Mitigation Measures
EIA Table	(Cont')	(Cont')	Landscape and visual	Properly fenced off the conservative species
10.11	Slope Upgrading Works	Kong Nga Po Main Site	impact	Preservation of existing trees will be undertaken
EM&A Table		Kong Nga Po Road		in accordance with DEVB TC(W) 7/2015 and
9.1	•			Guidelines for Tree Risk Assessment and
				Management Arrangement
EIA 3.91;	Trenchless Works	Kong Nga Po Road	Air	Regular inspection and maintenance of plant and
EM&A Log				equipment in good condition
2.2				Regularly clean up stockpiles and debris to avoid
				accumulation of materials
				Dusty materials should be exceeded 20 bags and
				stored in area sheltered on top and the three sides
				or covered entirely by impervious sheeting.
EIA 5.6.1.2;			Water	Provide desilting/sedimentation devices for
EM&A Log	1			wastewater treatment before discharge
4.2				
EIA 4.4.6;			Noise from roadworks	• Enclose the noise part of machineries with noise
EM&A Log				isolating mats during hard surface breaking
3.2				
EIA 7.5.1.4;			Chemical Waste	Drip tray and chemical spillage kit will be
EM&A Log				provided on site
6.2				

Ref*	Proposed Construction	Location/Working	Anticipated Major	Recommended Mitigation Measures
	Method**	Period	Impacts	
EIA Table	(Con't)	Kong Nga Po Road	Landscape and visual	Properly fenced off the conservative species
10.11	Trenchless Works		impact	Properly implement temporary traffic
EM&A Table				arrangement which control construction area to

Certificate of Calibration

Item for Calibration:

Description : Dust Monitor

Manufacturer : Met One Instruments Model No. : AEROCET-831

: X23808 Serial No. : 0.1 cfm Flow rate

: 0 count per 1 minute Zero Count Test

: WA-01-02 Equipment No.

Test Conditions:

: 17-22 degree Celsius Room Temperature

: 40-70% Relative Humidity

Test Specifications & Methodology:

- 1. Instruction and Operation Manual High Volume Sampler, Tisch Environmental Inc.
- 2. In-house method in according to the instruction manual: The Dust Monitor was compared with a calibrated High Volume Sampler and the result was used to generate the Correlation Factor (CF) between the Dust Monitor and High Volume Sampler.

Results:

1.066 Correlation Factor (CF) *************************

Certificate of Calibration

Item for Calibration:

Description

: Dust Monitor

Manufacturer

: Met One Instruments

Model No.

: AEROCET-831

Serial No.

: X24479

Flow rate

: 0.1 cfm

Zero Count Test

: 0 count per 1 minute

Equipment No.

: WA-01-08

Test Conditions:

Room Temperature

: 17-22 degree Celsius

Relative Humidity

: 40-70%

Test Specifications & Methodology:

- 1. Instruction and Operation Manual High Volume Sampler, Tisch Environmental Inc.
- 2. In-house method in according to the instruction manual: The Dust Monitor was compared with a calibrated High Volume Sampler and the result was used to generate the Correlation Factor (CF) between the Dust Monitor and High Volume Sampler.

Doeulte

Correlation Factor (CF) 1.068

APPENDIX H ECOLOGICAL MONITORING RESULTS

1. Brainea insignis

Photo 1

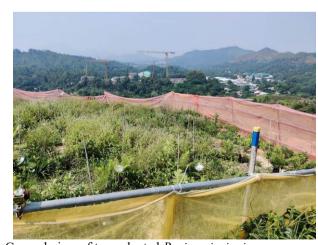

Description: Protective fence for transplanted *Brainea insignis* are properly erected with warning flags for bushfire prevention.

Photo 2

Description: Protective fence for transplanted *Brainea insignis* are properly erected.

Photo 3

Description: General view of transplanted Brainea insignis.

Photo 4

Description: General view of transplanted Brainea insignis.

2. Spiranthes sinensis

Description: General view of transplanted Spiranthes sinensis.

Photo 7

Description: General view of transplanted Spiranthes sinensis.

Photo 6

Description: General view of transplanted Spiranthes sinensis.

Photo 8

Description: Protective fence for transplanted *Spiranthes sinensis* are properly erected.

3. Keteleeria fortunei

Photo 9

Description: Protective fence for Keteleeria fortunei are properly erected.

Photo 11

Description: Protective fence for $Keteleeria\ fortunei$ are properly erected.

Photo 10

Description: Protective fence for Keteleeria fortunei are properly erected.

Photo 12

Description: An undersized seedling of *Keteleeria fortunei* (F-0081) was found collapsed due to internal decay.

4. Aquilaria sinensis

Photo 13

Description: General view of transplanted *Aquilaria sinensis* and protective fence for *Aquilaria sinensis* are properly erected.

Photo 14

Description: Poor health condition of *Aquilaria sinensis* A-008 (defoliation, dead branches, dieback twigs on tree crown etc.) was found. The Contractor was reminded to take prompt action to rescue the tree accordingly to approved transplantation proposal.

Service Contract No. NDO 07/2019 Environmental Team for Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po

Photo 15

Description: Poor health condition of *Aquilaria sinensis* A-0010 (defoliation, dead branches, dieback twigs on tree crown etc.) was found. The Contractor was reminded to take prompt action to rescue the tree accordingly to approved transplantation proposal.

Photo 16

Description: Poor health condition of *Aquilaria sinensis* A-0009(defoliation, dead branches, dieback twigs on tree crown etc.) was found. The Contractor was reminded to take prompt action to rescue the tree accordingly to approved transplantation proposal.

5. Undersized seedling of Aquilaria sinensis

Description: General view of undersized seedling of Aquilaria sinensis

Photo 18

Description: Protective fence for undersized seedling of *Aquilaria sinensis* are properly erected.

APPENDIX K ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE (EMIS)

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the	Who to implement	Location of the	When to	Implementation
	Log	(What Measures)	recommended Measures	the measures?	measures	Implement the	Status
	Ref		& Main Concerns to	(Who)	(Where)	measures?	
			address (What			(When)	
			Requirements)				
Air Quality Im	pact – Const	ruction Phase	<u></u>	T	T		1
3.91	2.2	Dust Control Measures	Construction Dust	Contractor	Project	Construction	
		To achieve compliance with the FSP, RSP and TSP criteria			construction site /	phase	
		during the construction phase, good practices for dust control			Duration of the		
		should be implemented to reduce dust impacts. The dust control			construction phase		
		measures are detailed as follows:			/ Prior to		
		Use of regular water spraying (once every 1.25 hours or 8			commencement of		*
		times per day) to reduce dust emissions from heavy			operation		
		construction activities (including ground excavation, earth					
		moving, etc.) at all active works area exposed site					
		surfaces and unpaved roads, particularly during dry					
		weather.					
		Covering 80% of stockpiling area by impervious sheets					
		and spraying all dusty material with water immediately					^
		prior to any loading transfer operations to keep the dusty					
		materials wet during material handing at the stockpile					
		areas.					
		Relevant dust control practices as stipulated in the Air Pollution					
		Control (Construction Dust) Regulation should be adopted:					
		Good Site Management					
		Good site management is important to help reduce					^
		potential air quality impact down to an acceptable level.					1

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the	Who to implement	Location of the	When to	Implementation
	Log	(What Measures)	recommended Measures	the measures?	measures	Implement the	Status
	Ref		& Main Concerns to	(Who)	(Where)	measures?	
			address (What			(When)	
			Requirements)				
		As a general guide, the Contractor should maintain high					
		standards of housekeeping to prevent emissions of					
		fugitive dust. Loading, unloading, handling and storage of					
		raw materials, wastes or byproducts should be carried out					
		in a manner so as to minimise the release of visible dust					
		emission. Any piles of materials accumulated on or					
		around the work areas should be cleaned up regularly.					
		Cleaning, repair and maintenance of all plant facilities					
		within the work areas should be carried out in a manner					
		minimising generation of fugitive dust emissions. The					
		material should be handled properly to prevent fugitive					
		dust emission before cleaning.					
		Disturbed Parts of the Roads					
		Main temporary access points should be paved with					^
		concrete, bituminous hardcore materials or metal plates					
		and be kept clear of dusty materials; or					
		Unpaved parts of the road should be sprayed with water or					
		a dust suppression chemical so as to keep the entire road					*
		wet.					
		Exposed Earth					
		Exposed earth should be properly treated by compaction,					^
		hydroseeding, vegetation planting or seating with latex,					

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the	Who to implement	Location of the	When to	Implementation
	Log	(What Measures)	recommended Measures	the measures?	measures	Implement the	Status
	Ref		& Main Concerns to	(Who)	(Where)	measures?	
			address (What			(When)	
			Requirements)				
		vinyl, bitumen within six months after the last					
		construction activity on the site or part of the site where					
		the exposed earth lies.					
		Loading, Unloading or Transfer of Dusty Materials					
		All dusty materials should be sprayed with water					^
		immediately prior to any loading or transfer operation so					
		as to keep the dusty material wet.					
		Debris Handing					
		Any debris should be covered entirely by impervious					^
		sheeting or stored in a debris collection area sheltered on					
		the top and the three sides.					
		Before debris is dumped into a chute, water should be					^
		sprayed onto the debris so that it remains wet when it is					
		dumped.					
		Transport of Dusty Materials					
		Vehicles used for transporting dusty materials/spoils					*
		should be covered with tarpaulin or similar material. The					
		cover should extend over the edges of the sides and					
		tailboards.					
		Wheel Washing					
		Vehicle wheel washing facilities should be provided at					^
		each construction site exit. Immediately before leaving the			_		

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the	Who to implement	Location of the	When to	Implementation
	Log	(What Measures)	recommended Measures	the measures?	measures	Implement the	Status
	Ref		& Main Concerns to	(Who)	(Where)	measures?	
			address (What			(When)	
			Requirements)				
		construction site, every vehicle should be washed to					
		remove any dusty materials from its body and wheels.					
		Use of Vehicles					
		The speed of the trucks within the site should be					^
		controlled to about 10 km/hour in order to reduce adverse					
		dust impacts and secure the safe movement around the					
		site					
		Immediately before leaving the construction site, every					^
		vehicle should be washed to remove any dusty materials					
		from its body and wheels.					
		Where a vehicle leaving the construction site is carrying a					*
		load of dusty materials, the load should be covered					
		entirely by clean impervious sheeting to ensure that the					
		entirely by clean impervious sheeting to ensure that the					
		dusty materials do not leak from the vehicle.					
		Site hoarding					
		Where a site boundary adjoins a road, street, service lane					^
		or other area accessible to the public, hoarding of not less					
		than 2.4m high from ground level should be provided					
		along the entire length of that portion of the site boundary					
		except for a site entrance or exit.

Noise Impact	– Constructio	on Phase					
4.4.6	3.2	Good Site Practice	Maintain good site practice	Contractor	Within the	Construction Phase	
		Good site practice and noise management can significantly	to minimise / avoid		Project site /		
		reduce the impact of construction site activities on nearby NSRs.	construction noise impact		During		
		The following package of measures should be followed during			construction		
		each phase of construction:			phase / Prior to		
		Only well-maintained plant to be operated onsite and plant			commencement		^
		should be serviced regularly during the construction			of operation.		
		works;					
		Machines and plant that may be in intermittent use to be					^
		shut down between work periods or should be throttled					
		down to a minimum;					
		Plant known to emit noise strongly in one direction,					۸
		should, where possible, be orientated to direct noise away					
		from the NSRs;					
		Mobile plant should be sited as far away from NSRs as					^
		possible; and					
		Material stockpiles and other structures to be effectively					^
		utilised, where practicable, to screen noise from on-site					,
		construction activities.					
4.4.6	3.2	Adoption of QPME	Minimise/ avoid	Contractor	Within the	Construction Phase	
		QPME should be adopted as far as applicable.	construction noise				^

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the	Who to implement	Location of the	When to	Implementation
	Log	(What Measures)	recommended Measures	the measures?	measures	Implement the	Status
	Ref		& Main Concerns to	(Who)	(Where)	measures?	
			address (What			(When)	
			Requirements)				
4.4.6	3.2	Use of Movable Barriers	impacts to the		Project site /		
		Movable noise barriers should be placed along the active	surrounding NSRs		During		۸
		works area and mobile plants to block the direct line of			construction		
		sight between PME and the NSRs.			phase / Prior to		
4.4.6		Use of Noise Enclosure/Acoustic Shed			commencement		
		Noise enclosure or acoustic shed should be used to cover			of operation.		^
		stationary PME such as air compressor and generator.					
4.4.6		Use of Noise Insulating Fabric					
		Noise insulating fabric can also be adopted for certain					^
		PME (e.g. pilling machine etc.).					
Water Quality	Impact – Co	nstruction Phase					
5.6.1.1	4.2	General Construction Activities	Maintain good site practices	Contractor	Within the Project	Construction Phase	
		The following measures should be implemented:	to avoid pollution of water		site / During		
		Construction waste, debris and refuse generated on-site	courses		construction phase		^
		should be stored or contained appropriately to prevent					
		them entering nearby watercourses or blocking					
		stormwater drains.					
		Regular off-site removal of these materials should be					^
		maintained to minimise the volume of waste present on					
		the construction site at any one time.					
		Stockpiles of construction materials such as cement and					۸

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the	Who to implement	Location of the	When to	Implementation

	Ref		& Main Concerns to	(Who)	(Where)	measures?	
			address (What			(When)	
			Requirements)				
		excavated material should be covered when not in use to					
		reduce the potential for water pollution.					
5.6.1.2	4.2	Construction Site Runoff	Minimise / control	Contractor	Within the Project	Construction Phase	
		The site practices outlined in ProPECC Note PN 1/94 should be	construction site runoff to		site / During		
		followed as far as practicable in order to minimise surface runoff	avoid pollution of water		construction phase		
		and the chance of erosion. The following measures are	courses				
		recommended:					
		Temporary site drainage facilities are to be designed and					*
		implemented by the Contractor prior to commencement of					
		construction to convey surface runoff to storm drains					
		applying adequately designed silt/ sand removal traps and					
		sediment basins.					
		Perimeter cut-off drains shall be installed in advance of					^
		any earthworks and site formation work to convey site					
		runoff from the works areas to the silt removal facilities.					
		Runoff into the excavation areas during rainstorm events					^
		shall be minimised as far as practicable. Any wastewater					
		pumped out of the excavation areas shall be treated to					
		remove suspended solids prior to discharge.					
		Maintenance and inspection of the drainage system and					#
		sediment removal facilities should be carried out regularly					
		to remove any sediment and blockages, especially when					

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the	Who to implement	Location of the	When to	Implementation
	Log	(What Measures)	recommended Measures	the measures?	measures	Implement the	Status
	Ref		& Main Concerns to	(Who)	(Where)	measures?	
			address (What			(When)	
			Requirements)				
		rainstorms are forecast.					
		Final surface levels should be compacted and final surface					^
		protections installed to prevent erosion caused by					
		rainstorms.					
		Open stockpiles of material should be covered on site					^
		with waterproof layers such as tarpaulin to reduce the					
		potential for sediment laden runoff entering the drainage					
		system.					
		The wheels of all vehicles and plant should be cleaned					^
		before leaving the works areas to remove sediment, soil					
		and debris from the tracks. The washwater should be					
		treated to remove any suspended sediment.					
		Surface water from concrete batching areas and the rest of					^
		the site should be separated as far as possible. Wastewater					
		from any concrete batching plant (if required) shall be					
		treated to the required standards including pH adjustment					
		and settlement of suspended sediments before discharging					
		to stormwater drains					
		Manholes (including those constructed as part of the					N/A
		Project) should be adequately covered and temporarily					
		sealed at all times to prevent silt, construction materials or					
		debris from entering the drainage system, and to prevent					

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the	Who to implement	Location of the	When to	Implementation
	Log	(What Measures)	recommended Measures	the measures?	measures	Implement the	Status
	Ref		& Main Concerns to	(Who)	(Where)	measures?	
			address (What			(When)	
			Requirements)				
		storm runoff from entering foul sewers. The discharge of					
		surface runoff into foul sewers should be prevented so as					
		not to overload the sewerage system.					
		Discharges should be collected by the temporary drainage system					*
		installed by the Contractor and treated on-site to remove sediment					
		prior to discharge to the off-site drainage areas. The Contractor is					
		required to obtain a discharge licence from EPD under the WPCO					
		for all discharges from site with all discharges meeting the water					
		quality requirements of the Technical Memorandum on Standards					
		for Effluents Discharged into Drainage and Sewerage Systems,					
		Inland and Coastal Waters (TM-DSS).					
5.6.1.3	4.2	Accidental Spillage of Chemicals	Prevent accidental discharge	Contractor	Within the Project	Construction phase	
		In accordance with the Waste Disposal (Chemical Waste)	of chemicals into the		site / During		
		(General) Regulation (Cap 354C), the following measures should	surrounding environment		construction phase		
		be implemented:					
		The labelling and storage of chemicals should be in					۸
		accordance with the Code of Practice on the Packaging,					
		Labelling and Storage of Chemical Wastes and maintained					
		at all times by the Contractor.					
		Oils and fuels should only be stored in designated areas					^
		which have appropriate pollution prevention control					
		facilities such as oil and grease traps.					

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the	Who to implement	Location of the	When to	Implementation
	Log	(What Measures)	recommended Measures	the measures?	measures	Implement the	Status
	Ref		& Main Concerns to	(Who)	(Where)	measures?	
			address (What			(When)	
			Requirements)				
		The maintenance of vehicles should only be undertaken in					^
		areas of the site served by appropriate pollution					
		prevention control facilities.					
		To prevent the spillage of fuels and solvents to nearby					^
		stormwater drains, all fuel tanks and storage areas should					
		be locked and sited on sealed areas of the site, within					
		bunded areas with a capacity equal to 110% of the storage					
		capacity of the largest container. The bund should be kept					
		free of surface water at all times and after each rainfall					
		event.

Contracto No.: ND/2018/01

Notes:

- (1) Not Used.
- (2) The waste flow table shall also include C&D materials that are specified in this contract to be imported for use at the Site
- (3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging materials.
- (4) The summary table shall be submitted to the Supervisor monthly together with the Waste Flow Table for review and monitoring in accordance with the PS Clause 25.20A(4)
- (5) The density of inert C&D is assumed 2.2 tonnes per cubic meter
- (6) The density of non-inert C&D is assumed 1.5 tonnes per cubic meter
- (7) The C&D materials generated before Jul 2020 are from domestic activities, site investigation, clearance, and preparation for surveying works
- *The total quantity of C&D materials to be generated from the Contract had been updated by surveying record

APPENDIX M COMPLAINT LOG

Appendix M - Complaint Log

Reporting month: September 2021

Complaint Log Ref.			Received Date	Details of Complaint	Investigation/ Mitigation Action	Status
C-001	EP3/N07/RN/18746- 20	Kong Nga Po Road	19 th August 2020	The complainant complained about the construction noise nuisance of the Kong Nga Po Road and requested noise monitoring and mitigation measures to lower the noise level.	According to the results from regular noise monitoring, no Limit Level Exceedance was recorded at sensitive receivers since the commencement of the construction of the Project. In addition, there was no environmental deficiency regarding construction noise impact recorded during site inspection. It is considered that no adverse construction noise impact was brought to the nearby sensitive receivers due to the site works in July and August 2020. Upon receipt of the complaint, the Contractor had undertaken the follow up action as follow: • Erect noise isolating mat at Portion B1 to reduce noise nuisance arising from the site Nevertheless, the Contractor was reminded to fully implement the relevant noise mitigation measures according to the EM&A Manual on site, such as: • Selection of quieter plant; • Provision of sufficient noise mitigation measures (e.g. movable noise barrier, noise enclosure. acoustic shed, noise insulating fabric etc.) for the site activities on nearby NSRs where appropriate. • To strengthen site supervision and provide regular training to the workers to increase awareness of their environmental responsibilities and minimize the noise impact	Closed

Complaint Log Ref.	EPD Log Ref.	Location	Received Date	Details of Complaint	Investigation/ Mitigation Action	Status
					to the nearby residents during working hours as well as restricted hours.	
C-002	EP3/N07/RN/ 21538-20	Kong Nga Po Road	22 nd September 2020	The complainant complained about the polluting effluent discharged from construction site, leading to flooding and pollution problem.	well as restricted hours. According to EM&A Manual of the Project, the complaint was referred to the ET for investigation. Adhoc site inspections were conducted by ET and IEC to identify the source of the complaint, review the effectiveness of the Contractor's remedial measures and the updated situation once received the complaint. According to the site inspection finding, no muddy effluent discharged from Portion D entrance was observed at Kong Nga Po Road. Wastewater generated from wheel washing, construction works or surface runoff was collected and treated in wastewater treatment facilities. Wastewater treatment facilities were functioning properly. No Limit Level exceedance for pH, suspended solid and chemical oxygen demand was recorded in effluent discharge monitoring. In order to avoid any circumstances that may lead to the complaint, ET and IEC have recommended enhancement on water quality mitigation measures. The Contractor had undertaken the follow up actions and additional mitigation measures on drainage system to minimize the water quality impact arising from the construction works as follow:	Closed
					 Provision of soil berm at edge near retaining wall DAM Bay 43-46 Setting up of wastewater treatment facilities near wheel washing bay 	

Complaint Log Ref.	EPD Log Ref.	Location	Received Date	Details of Complaint	Investigation/ Mitigation Action	Status
					 Re-formation of haul road in Portion D Provision of soil berm near Platform B Increase in capacity of retention pit near Platform B Reinforcement of soil berm near excavation area and near retaining wall at Portion D to minimize water leakage Regular maintenance of clear U-channel which was blocked by natural debris at Kong Nga Po Road Nevertheless, the Contractor was reminded to ensure the wastewater generated from construction works must comply with the condition stated in the Effluent Discharge license and enhance sediment control measure regarding storm water management to assure no muddy water is being discharged from the construction site. The environmental conditions of the site and the control of works will be continuously reviewed and monitored by the Supervisor, ET and IEC. 	
C-003	N/A	Kong Nga Po Road	8 th October 2020	The complainant complained about the muddy water discharged from construction site into Kong Nga Po Road during heavy rainfall. Also, he concerned if there is illegal discharge and if the design of drainage system	According to the finding of <i>ad-hoc</i> site inspection, no muddy effluent discharge was observed on road surface and road drainage along the Kong Nga Po road section from construction site to the location of complaint during rainfall. Also, no direct slope surface and pathway for muddy water outflew from the site to the location of complaint was observed. Potential source of muddy water to the location of complaint is likely from natural surface runoff from shrubland and grassland	Closed

Complaint Log Ref.	EPD Log Ref.	Location	Received Date	Details of Complaint	Investigation/ Mitigation Action	Status
	EPD Log Ref.	Kong Nga Po		The complaint complained about the polluting discharged from	along the Kong Nga Po Road during heavy rainfall. Continuous improvement works on the temporary drainage system at Project site have been conducted for water pollution control since September 2020. Regular checking were carried out by the Contractor to ensure the system is working properly. All wastewater were collected and treated to ensure discharge comply with condition stated in the Effluent Discharge Licence. In addition, the Contractor has taken the following mitigation measures to minimize the water quality impact arising from the construction works: Regular inspection and maintenance on sediment control measure at Project site;	Status
C-004	N/A	Nga Po Road	October 2020	discharged from construction site, leading to flooding and water pollution problem.	 Ad-hoc inspection on the water pollution control measures at Project site before onset of the typhoon; Regular maintenance record on wastewater treatment facilities; and Provision of vegetated filter strips at outer side of existing soil berms and slope surface to act as natural filtration for water pollution control. The environmental condition of the site and the control of work will be continuously reviewed and monitored by the Supervisor, ET and IEC. 	

Complaint Log Ref.	EPD Log Ref.	Location	Received Date	Details of Complaint	Investigation/ Mitigation Action	Status
C-005	N/A	Slope Feature A at Kong Nga Po Road	28 th October 2020	The complainant complained about the noise generated from the construction activities at Slope Feature A that caused annoyance to his family.	According to the results from regular noise monitoring, no Limit Level exceedance was recorded at sensitive receivers during the time of complaint. In addition, there was no environmental deficiency regarding construction noise impact was recorded during site inspection. In view of the above, it is considered that no adverse construction noise impact was brought to the nearby sensitive receivers due to the site works. Upon receipt of the complaint, the Contractor had undertaken the follow up action as follow: Setting up of double layers of noise barrier to block the transmission of noise from breaking point to Noise Sensitive Receivers; Conducting internal noise monitoring to ensure the noise mitigation measures are properly implemented; and To check and maintain the noise insulating fabric enclosed the noisy part of the breaker. Nevertheless, the Contractor was reminded to fully implement the relevant noise mitigation measures according to the EM&A Manual on site, such as To frequently check and maintain the acoustic materials wrapped on noisy part of PME and ensure no gaps between noise barriers; To proactively identify any potential construction noise impact to NSRs and provide sufficient mitigation measures if necessary; To provide regular training to the workers to	Closed

Complaint Log Ref.	EPD Log Ref.	Location	Received Date	Details of Complaint	Investigation/ Mitigation Action	Status
					 increase awareness of their environmental responsibilities and minimize the noise impact to the nearby residents during working hours as well as restricted hours; To provide notification to nearby villagers in Kong Nga Po for potential noisy works at works area 	
C-006	N/A	Portion C at Kong Nga Po Road	30 th November 2020	The complainant complained about the noise nuisance from the construction activities at Portion C on Kong Nga Po Road.	No complaint investigation is required as this complaint has been withdrawn by the complainant.	Closed
C-007	N/A	Portion C at Kong Nga Po Road	30 th November 2020	The complainant complained about the muddy water discharged from construction site into nearby drainage system and some oil slicks observed at the downstream of the drainage.	No complaint investigation is required as this complaint has been withdrawn by the complainant.	Closed
C-008	EP3/N07/RN/8845- 21	Near Lamp Post BD2370 at Kong Nga Po Road	19 th April 2021	The complainant complained about suspected dumping soil at nullah, causing blockage and flooding near lamp post BD2370.	According to the finding of <i>ad-hoc</i> site inspection conducted by the Contractor, no excavation nor construction works were carried out by ND/2018/01 near Lamp Post BD2370. Slope excavation was carrying out at Slope Feature 3NW-C/C38, the disposal was recorded and controlled by trip ticket system. Existing U-channel near slope toe had been covered and	Closed

Complaint Log Ref.	EPD Log Ref.	Location	Received Date	Details of Complaint	Investigation/ Mitigation Action	Status
	submersible pump. No discharge was tal		surface runoff was guided to sedimentation tank by submersible pump. No discharge was taken place due to dry season and excavation was not a wastewater-generated activity.			
					 Upon receipt of the complaint, the Contractor had undertaken the follow up action as follow: Excavated slop had been covered by erosion mat Strictly implemented trip ticket system to monitor the C&D waste disposal Deployed sufficient submersible pump and wastewater treatment facilities for the surface runoff treatment
