Attention: Mr. William WONG

14 March 2023

Dear William,

Contract No.: NDO/02/2018

Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po Monthly Environmental Monitoring and Audit Report for February 2023

I refer to the email received on 14 March 2023 of the Environmental Team concerning the captioned. I have no adverse comment on the Monthly EM&A Report for February 2023 (Version 1.0) and verify the report according to Conditions 1.9 and 3.5 of the Environmental Permit with permit number EP-510/2016.

Yours faithfully,

Melody Cheng

EXECUTIVE SUMMARY

Introduction

- 1. This is the 32nd monthly Environmental Monitoring and Audit (EM&A) Report for the Project of Police Facilities in Kong Nga Po under Environmental Permit No. EP-510/2016. This report was prepared by Wellab Limited (Wellab) under "Service Contract No. NDO 07/2019 Environmental Team for Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po" (hereinafter called the "Service Contract"). This report documents the findings of Environmental Monitoring and Audit (EM&A) work conducted from 1st to 28th February 2023.
- 2. Part of the construction site was handed over to Architectural Services Department (ArchSD) on 23rd December 2022 whom taken over responsibility for the construction of building works and as maintenance agent for Hong Kong Police Force (HKPF) during operation phase. A further environmental permit (FEP) (FEP no.: FEP-01/510/2016) was issued by the Director of Environmental Protection (DEP) on 16 February 2023 to Architectural Services Department as permit holder for the construction of building works.
- 3. A separate Monthly EM&A Report documents the findings of EM&A works for the construction of building works under ArchSD's Contract will be submitted starting from March 2023 tentatively.
- 4. During the reporting month, the following Works Contracts were undertaken for the Project of Police Facilities in Kong Nga Po under Environmental Permit No. EP-510/2016 and FEP no.: FEP-01/510/2016:
 - Contract No. ND/2018/01 Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po (Environmental Permit No. EP-510/2016)
 - Contract No. SSK509 Design and Construction of Kong Nga Po Police Training Facilities (FEP no.: FEP-01/510/2016)

Environmental Monitoring and Audit Progress

5. A summary of the EM&A activities in this reporting month is listed in **Table I** below:

Table I Summary Table for EM&A Activities in the Reporting Month

| EM&A Activities | Date |
|-------------------------------|--|
| Air Quality Monitoring | 2, 6, 8, 10, 14, 16, 20, 22, 24 and 28 February 2023 |
| Noise Monitoring | 2, 6, 8, 14, 16, 20, 22 and 28 February 2023 |
| Ecological Monitoring | 24 February 2023 |
| Environmental Site Inspection | 3, 10, 17 and 24 February 2023 |

Breaches of Action and Limit Levels

6. Summary of the environmental exceedances of the reporting month is tabulated in **Table II**.

Air Quality

7. All construction air quality monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Construction Noise

8. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Table II Summary Table for Events Recorded in the Reporting Month

| Environmental | Parameter | | n-Project ceedances | No. of Exc related t Construction | to the | Action |
|---------------|------------------------|-----------------|------------------------|---|----------------|--------|
| Monitoring | | Action Level | Limit Level | Action Level | Limit Level | Taken |
| Air Quality | 1-hr TSP | 0 | 0 | 0 | 0 | N/A |
| Noise | L _{eq(30min)} | 0 | 0 | 0 | 0 | N/A |

Ecological Monitoring

9. All ecological monitoring was conducted as scheduled in the reporting month. The ecological monitoring result in the reporting month is shown in **Appendix H**.

Environmental Non-Compliance

10. No environmental non-compliance was recorded in the reporting month

Environmental Complaint

11. One environmental complaint related to air quality was received in the reporting month.

Notification of Summons and Successful Prosecutions

12. No notification of summons or successful prosecutions was received in the reporting month.

Reporting Changes

13. No reporting change was made in the reporting month.

Future Key Issues

14. The major site activities for the coming three months include:

Contract No. ND/2018/01 – Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po

- Retaining Wall Construction
- Slope Upgrading Works
- Road & Associated Works
- Sewerage Trenchless Works
- Drainage & Watermain Trenchless works
- Bridge & Associated Works

Contract No. SSK509 - Design and Construction of Kong Nga Po Police Training Facilities

Setting up of site office

Service Contract No. NDO 07/2019
Environmental Team for Site
Formation and Infrastructure Works
for Police Facilities in Kong Nga Po
Monthly EM&A Report – February 2023

- Ground investigation
- Plate load test and soil test
- Open cut excavation
- Removal of soil
- Construction of footings
- 15. Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, noise, water quality and waste management. For the details, please refer to **Appendix A** regarding the anticipated major impacts from the construction works and corresponding recommended mitigation measures.

1 INTRODUCTION

- 1.1 Wellab Limited was commissioned by the Civil Engineering Development Department (CEDD) as the Environmental Team to undertake the Environmental Monitoring and Audit (EM&A) works for the Project of Police Facilities in Kong Nga Po under Environmental Permit No. EP-510/2016 to ensure that the environmental performance of the Works Contracts comply with the requirements specified in the Environmental Permits (EPs), Environmental Impact Assessment (EIA) Report and Environmental Monitoring & Audit (EM&A) Manual of the Police Facilities in Kong Nga Po Project and other relevant statutory requirements.
- 1.2 The major construction works for the Project commenced on 3rd July 2020 and the main site in Kong Nga Po was handed over to Architectural Services Department (ASD) on 23rd December 2022 whom taken over responsibility for the construction of building works and as maintenance agent for Hong Kong Police Force (HKPF) during operation phase.

Purpose of the report

1.3 This is the 32nd EM&A Report which summarises the impact monitoring results and audit findings for the EM&A programme during the reporting period from 1st to 28th February 2023.

Structure of the report

- 1.4 The structure of the report is as follows:
 - Section 1: **Introduction -** purpose and structure of the report.
 - Section 2: **Project Information** summarises background and scope of the Project, site description, project organisation and contact details, construction programme, the construction works undertaken and the status of Environmental Permits/Licences during the reporting month.
 - Section 3: **Air Quality Monitoring** summarises the monitoring parameters, monitoring programmes, monitoring methodologies, monitoring frequencies, monitoring locations, Action and Limit Levels, monitoring results and Event /Action Plans.
 - Section 4: **Noise Monitoring** summarises the monitoring parameters, monitoring programmes, monitoring methodologies, monitoring frequencies, monitoring locations, Action and Limit Levels, monitoring results and Event/Action Plans.
 - Section 5: **Ecological Monitoring** summarises the monitoring results of the monthly ecological monitoring undertaken within the reporting month.
 - Section 6: **Landscape and Visual Monitoring** summarises the audit results of the site inspection undertaken within the reporting month.
 - Section 7: **Environmental Site Inspection** summarises the audit findings of the weekly site inspections undertaken within the reporting month.
 - Section 8: **Environmental Non-conformance** summarises any monitoring exceedance, environmental complaints, environmental summons and successful prosecutions within the reporting month.
 - Section 9: **Future Key Issues** summarises the impact forecast for the next three months and monitoring schedule in the next month.

Service Contract No. NDO 07/2019
Environmental Team for Site
Formation and Infrastructure Works
for Police Facilities in Kong Nga Po
Monthly EM&A Report – February 2023

Section 10: Conclusions and Recommendations

2 PROJECT INFORMATION

Background

- 2.1 The Project consists of site formation works and building works for the co-location of various police facilities in the Project site at Kong Nga Po as well as road improvement works to a section of the existing Kong Nga Po Road between the police facilities and Man Kam To Road. The police facilities include:
 - Lo Wu Firing Range (LWFR) to be relocated from Lo Wu;
 - Ma Tso Lung Firing Range (MTLFR) to be relocated from Ma Tso Lung;
 - Weapons Training Facilities (WTF) and Police Driving and Traffic Training Facilities (PD&TTF) to be relocated from Fan Garden;
 - Helipad to be relocated from Lo Wu;
 - A Proposed Police Training Facility (PTF); and
 - A new internal access road network with underpass within the Project site.
- 2.2 The improvement works to Kong Nga Po Road between the police facilities and Man Kam To Road includes roadworks, viaduct of less than 100m between abutments, and associated works such as slopeworks and retaining walls.
- 2.3 In addition to the above, associated supporting infrastructure and utilities including an underground stormwater storage tank, sewage pumping station, petrol / diesel filling station, a multi-storey training complex associated with the PD&TFF, and other ancillary facilities will also be provided.
- 2.4 The Project is a Designated Project under the Environmental Impact Assessment Ordinance (EIAO). An Environmental Impact Assessment (EIA) Report (Report No.: AEIAR-201/2016) for the Project was approved under EIAO in October 2016 in accordance with the EIA Study Brief (No. ESB-276/2014) and the Technical Memorandum on Environmental Impact Assessment Process (EIAO-TM). The corresponding Environmental Permit was issued (EP no.: EP-510/2016) by the Director of Environmental Protection (DEP) in November 2016.
- 2.5 Part of the construction site was handed over to Architectural Services Department (ArchSD) on 23rd December 2022 whom taken over responsibility for the construction of building works and as maintenance agent for Hong Kong Police Force (HKPF) during operation phase. A further environmental permit (FEP) (FEP no.: FEP-01/510/2016) was issued by the Director of Environmental Protection (DEP) on 16 February 2023 to Architectural Services Department as permit holder for the construction of building works.
- 2.6 According to approved Environmental Monitoring and Audit (EM&A) Manual, an air quality and noise monitoring programme is recommended during the construction phases of the Project to monitor the expected dust and noise nuisances. Baseline air quality and noise monitoring were conducted by ET from 14th March 2020 to 2nd April 2020 to establish the background conditions of the designated sensitive receivers prior to the commencement of the Project's construction works.
- 2.7 The site layout plan for the Project is shown in **Figure 1**.

Project Organization

- 2.8 Different parties with different levels of involvement in the Project organization under EP no.: EP-510/2016 include:
 - Project Proponent Civil Engineering and Development Department (CEDD)
 - Supervisor / Supervisor's Representative AECOM
 - Environmental Team (ET) Wellab Limited
 - Independent Environmental Checker (IEC) Acuity Sustainability Consulting Limited
- 2.9 The key personnel contact names and numbers under Contract No. ND/2018/01 and the other contact names and numbers under ArchSD Contract No. SSK509 are summarised in **Table 2.1**.

Table 2.1 Key Contacts of the Project

Summary of Construction Works Undertaken During Reporting Month

2.10 The major site activities undertaken in the reporting month included:

<u>Contract No. ND/2018/01 – Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po</u>

- Retaining Wall Construction
- Slope Upgrading Works
- Road & Associated Works
- Sewerage Trenchless Works
- Drainage & Watermain Trenchless Works
- Bridge & Associated Works

Contract No. SSK509 - Design and Construction of Kong Nga Po Police Training Facilities

- Concreting of temporary slab for site office
- Ground investigation

Construction Programme

2.11 A copy of Contractors' construction programmes are provided in **Appendix A**.

Status of Environmental Licences, Notifications and Permits

2.12 A summary of the relevant permits, licences, and/or notifications on environmental protection for this Project is presented in **Table 2.2(a-b)**.

Table 2.2a Status of Environmental Licences, Notifications and Permits (Contract No. ND/2018/01)

Summary of EM&A Requirement

- 2.13 The EM&A programme requires construction noise monitoring, air quality monitoring, ecological monitoring and environmental site audits. The EM&A requirements are described in the following sections, including:
 - All monitoring parameters;
 - Action and Limit levels for all environmental parameters;
 - Event / Action Plans;
 - Environmental mitigation measures, as recommended in the Project EIA study final report; and
 - Environmental requirements in contract documents.

Status of Compliance with Environmental Permits Conditions

2.14 The status of compliance with Environmental Permit (EP) No. EP-510/2016 and required submission related to this Project under the EP is summarized in **Table 2.3**:

 $Table \ 2.3 \quad Summary \ Table \ for \ Status \ of \ Compliance \ / \ Required \ Submission \ under \ EP \\ No. \ EP-510/2016$

| EP Conditions | Submission | Submission Date | Approval Status |
|------------------|---|--|--------------------|
| 1.12 | Notification of Commencement Date of Construction | 3 rd June 2020 | * |
| 2.7 | Proposal on the Reporting Mechanism and Curriculum Vitae of the IEC | 6 th February 2020 | * |
| 2.11 | Management Organizations | 9 th March 2020 | * |

| | Detailed Vegetation Survey Report (Version 3.0) | 9 th July 2020 | |
| | Transplantation Proposal (Version 1.0) | 2 nd April 2020 | |
| 2.4 & 2.14 | Transplantation Proposal (Version 2.0) | 8 th May 2020 | Approved |
| | Transplantation Proposal (Version 3.0) | 9 th July 2020 | |
| 2.15 | Baseline Survey Report for Golden- Headed Cisticola 9th March 2020 | | Approved |
| 2.16 | Explanatory Statement for Revised Layout Plan of Kong Nga Po Road | 10 th March 2020 | Approved |
| 2.17 | Layout Plan for Permeable Pavings | 2 nd August 2022 (The demarcation and detail design of the permeable paving is subject to the design by ArchSD's Contractor) | N/A |
| | Landscape and Visual Mitigation Plan | 7 th April 2020 | |
| 2.18 & 2.19 | Landscape and Visual Mitigation Plan (Revised Final Rev. 4) | 28 th September 2020 | Approved |
| 2.20 | Plan for Perimeter Walls/ Boundary Walls at Project Site and Side Walls of Firing Range | To be submitted at least one month before the commencement of construction of relevant part(s) of the Project (under ArchSD's building works Contract) | N/A |
| 2.23 | To be submitted at least one month before the commencement | | N/A |
| 3.4 | Baseline Air Quality and Noise Monitoring Report | 20 th April 2020 | * |
| 3.4 | Baseline Monitoring Report for Landscape and Visual Resources | 21st April 2020 | * |

Remarks: * Approval not required in EP-510/2016 N/A-Not applicable at this stage

3 AIR QUALITY MONITORING

Monitoring Requirements

- 3.1 In accordance with the EM&A Manual, impact 1-hour TSP monitoring was conducted to monitor the air quality for the Works Contracts. **Appendix B** shows the established Action/Limit Levels for the air quality monitoring works.
- 3.2 Impact 1-hour TSP monitoring was conducted for at least three times every 6 day at one air quality monitoring station.

Monitoring Location

3.3 According to Section 2.2.5 of the EM&A Manual, impact air quality monitoring was conducted at the two designated monitoring stations for the Project as shown in **Figure 2**. **Table 3.1** describes the location of the air quality monitoring stations.

Table 3.1 Location for Air Quality Monitoring Stations

| Monitoring Station | Location of Measurement |
|--------------------|----------------------------|
| AM1 | Village House, Kong Nga Po |
| AM2 | Village House, Kong Nga Po |

Monitoring Equipment

- 3.4 As the setup of HVS for 1-hour TSP monitoring at the designated locations and request for secured supply of electricity for HVS were not allowed by the villager, direct reading dust meters was therefore used to carry out the 1-hour TSP monitoring. Dust meter has been commonly used for measuring 1-hour TSP levels in a number of designated projects of major infrastructure works. The proposed use of direct reading dust meter was submitted to IEC and agreed by the IEC. With the use of direct reading dust meter, it can allow prompt and direct results for the EM&A reporting and the implementation of the event and action plan. The 1-hour sampling was determined on bi-monthly basis by the HVS to check the validity and accuracy of the results measured by direct reading method.
- 3.5 **Table 3.2** summarises the equipment used in the impact air quality monitoring programme. Copies of calibration certificates are attached in **Appendix C**.

Table 3.2 Air Quality Monitoring Equipment

| Equipment | Model and Make | Quantity |
|--------------|----------------|----------|
| Dust Monitor | AEROCET-831 | 4 |

3.6 Meteorological information was extracted from "Hong Kong Observatory - Ta Kwu Ling Weather Station" as the alternative method to obtain representative wind data. For Ta Kwu Ling Weather Station, it is located nearby the Project site and situated at approximately 15m above mean sea level. The station's wind data monitoring equipment is set above the existing ground ten meters in compliance with the general setting up requirement. Furthermore, this station also provides other meteorological information, such as the humidity, rainfall, air pressure and temperature etc. The general meteorological conditions and the meteorological data at Ta Kwu Ling Weather Station are presented in **Appendix G**.

3.7 The general weather conditions (i.e. sunny, cloudy or rainy) were recorded by the field staffs during the monitoring day.

Monitoring Parameters, Frequency and Duration

3.8 **Table 3.3** summarises the monitoring parameters and frequencies of impact dust monitoring during the Works Contracts activities. The air quality monitoring schedule for the reporting month is shown in **Appendix D**.

Table 3.3 Impact Dust Monitoring Parameters, Frequency and Duration

| Parameters | Frequency |
|------------|---------------------|
| 1-hr TSP | Three times/ 6 days |

Monitoring Methodology and QA/QC Procedure

1-hour TSP Air Quality Monitoring

Instrumentation

- 3.9 Direct reading dust meter was deployed for the air quality monitoring as shown in **Table 3.2**.
- 3.10 The measuring procedures of the dust meter are in accordance with the Manufacturer's Instruction Manual as follows:

(Met One Instrument: Model no/ AEROCET-831)

- The 1-hour dust meter is placed at least 1.3 meters above ground.
- Press and hold the Power key momentarily to power on the unit and make sure that the battery level was not flash or in low level.
- Allow the instrument to stand for about 3 second to display the Sample Screen minutes.
- Press the START / STOP key to run the internal vacuum pump for 1 minute and ready to use
- Use the select dial to select the PM range and press the START / STOP key to start a measurement.
- Finally, push the START/STOP key to stop the measuring after 1 hour sampling.
- Information such as sampling date, time, value and site condition were recorded during the monitoring period.
- All data were recorded in the data logger for further data processing.

Maintenance/Calibration

- 3.11 The following maintenance/calibration was required for the direct dust meters:
 - Check and calibrate the dust meter by high volume sampler (HVS) to check the validity and accuracy of the results measured by direct reading method. Calibration of dust meter should be carried out on a bi-monthly basis throughout all stages of the air quality monitoring.
 - The correlation of dust meter and HVS in TSP measurement was obtained by direct comparison of the weight of dust particle trapped in a filter paper using HVS with the

- reading of the dust meter. Calibration of the dust meter with HVS should be powered on and off at the same location and the same time.
- The correlation coefficient was checked to establish the correlation relationship between the dust meter and HVS. The correlation factor was determined by comparing the results of HVS and dust meter.
- Checking is made prior to dust monitoring commencing to ensure all equipment is in good working condition with necessary power supply. Zero count test were conducted before and after each monitoring event.

Results and Observations

3.12 The monitoring results for 1-hour TSP monitoring are summarised in **Table 3.4**. Detailed monitoring results and graphical presentations of 1-hour TSP monitoring results are shown in **Appendix E**.

Table 3.4 Summary Table of 1-hour TSP Monitoring Results during the Reporting Month

| Monitoring | Concentration (µg/m³) | | Action Level, | Limit Level, μg/m³ |
|------------|-----------------------|--------------|-------------------|--------------------|
| Station | Average | Range | μg/m ³ | |
| AM1 | 117.8 | 47.3 – 272.9 | 308 | 500 |
| AM2 | 86.4 | 32.2 – 116.2 | 311 | 500 |

- 3.13 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedances were recorded.
- 3.14 According to our field observations, the major dust source identified at the designated air quality monitoring stations in the reporting month are shown in **Table 3.5**:

Table 3.5 Observation at Dust Monitoring Stations

| Monitoring Station | Major Dust Source | | |
|---------------------------|---|--|--|
| AM1 | Road traffic, exposed site area, site vehicle / equipment operation and | | |
| | movement | | |
| AM2 | Road traffic, exposed site area, site vehicle / equipment operation and | | |

| | nearby | | |

Event and Action Plan

3.15 Should project-related non-compliance of the criteria occur, action in accordance with the Event Action Plan in **Appendix I** shall be carried out.

4 NOISE MONITORING

Monitoring Requirements

4.1 In accordance with EM&A Manual, construction noise monitoring was conducted in terms of the A-weighted equivalent continuous sound pressure level (Leq) to monitor the construction noise arising from the construction activities. The regular monitoring frequency for each monitoring station shall be on a weekly basis and one set of measurements between 0700 and 1900 hours on normal weekdays shall be conducted. **Appendix B** shows the established Action/Limit Levels for the environmental monitoring works.

Monitoring Location

4.2 According to Section 3.2.3 of the EM&A Manual, impact noise monitoring was conducted at fourteen designated noise monitoring stations as shown in **Figure 3**. **Table 4.1** describes the locations of the noise monitoring stations.

Table 4.1 Location of Noise Monitoring Stations

| Monitoring Station | Location of Measurement | |
|--------------------|-------------------------------------|--|

Note: *The location of NM5 as shown in Figure 3.1 of the EM&A Manual and Figure 4.2 of the EIA Report is Village House No.270, Sha Ling, not Village No. 272, Sha Ling according to https://www.map.gov.hk/gm/map/s/B/1107625418

Monitoring Equipment

4.3 Integrating Sound Level Meters were used for impact noise monitoring. The meters were Type 1 sound level meter capable of giving a continuous readout of the noise level readings including equivalent continuous sound pressure level (Leq) and percentile sound pressure level (Lx) that also complied with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications. **Table 4.2** summarises the noise monitoring equipment being used. Copies of calibration certificates are attached in **Appendix C**.

Table 4.2 Noise Monitoring Equipment

| Equipment | Model | Quantity |

Remarks:

Monitoring Methodology and QA/QC Procedures

- 4.5 The monitoring procedures are as follows:
 - The sound level meter was set on a tripod at a point 1m from the exterior of the noise sensitive facade and at the position of 1.2m above the ground;
 - For free field measurement, the meter was positioned away from any nearby reflective surfaces. Free field noise levels was adjusted with a correction of +3 dB(A);
 - The battery condition was checked to ensure the correct functioning of the meter;

^{[1]:} Correction of +3dB (A) for Free-field Measurement.

^{[2]:} A-weighted equivalent continuous sound pressure level (L_{eq}). It is the constant noise level which, under a given situation and time period, contains the same acoustic energy as the actual time-varying noise level.

 L_{10} is the level exceeded for 10% of the time. For 10% of the time, the sound or noise has a sound pressure level above L_{10} . L_{90} is the level exceeded for 90% of the time. For 90% of the time, the noise level is above this level.

• Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:

frequency weighting : Atime weighting : Fast

time measurement $: L_{eq(30 \text{ min.})} dB(A)$

(as six consecutive $L_{eq, 5min}$ readings) during non-restricted hours (i.e. 0700-1900 hrs on normal

weekdays)

- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re- calibration or repair of the equipment;
- During the monitoring period, the L_{eq} , L_{90} and L_{10} were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet;
- Noise measurement was paused temporarily during periods of high intrusive noise (e.g. dog barking, helicopter noise) if possible and observation record during measurement period should be provided; and
- Noise monitoring was cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s. The wind speed should be checked with a portable wind speed meter capable of measuring the wind speed in m/s.

Maintenance and Calibration

- 4.6 The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.
- 4.7 The sound level meter and calibrator were checked and calibrated at yearly intervals.
- 4.8 Immediately prior to and following each noise measurement, the accuracy of the sound level meter should be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements would be accepted as valid only if the calibration levels before and after the noise measurement agreed to within 1.0 dB.

Results and Observations

4.9 The noise monitoring results are summarised in **Table 4.4**. Detailed monitoring results and graphical presentations of noise monitoring are shown in **Appendix F**. The weather information for the reporting month is summarised in **Appendix G**.

Table 4.4 Summary Table of Noise Monitoring Results during the Reporting Month

| Monitoring | Average | Range | Baseline Level | Limit Level |
|--------------------|-------------------------|-------------------------|----------------|-------------|
| Station | $L_{eq (30 min)} dB(A)$ | $L_{eq (30 min)} dB(A)$ | dB(A) | dB(A) |

for Police Facilities in Kong Nga Po
Monthly EM&A Report – February 2023

Event and Action Plan

4.12 Should any project related non-compliance of the criteria occur, action in accordance with the Event Action Plan in **Appendix I** shall be carried out.

5 ECOLOGICAL MONITORING

Monitoring of Flora Species of Conservation Interest

- 5.1 As required under Section 8.3.2 of EM&A Manual, during construction phase, temporary protective fence shall be erected enclosing the flora species of conservation interest identified under the detailed vegetation survey. The temporary protective fence shall be properly maintained and monitored for the effectiveness. Monthly monitoring of individual of flora species of conservation interest identified in the detailed vegetation survey shall be conducted during the construction phase to make sure that the flora species of conservation interest are not affected by the construction activities of the Project.
- 5.2 The purpose of the monitoring is to monitor the timely implementation of proper environmental management practices and mitigation measures for the retained and transplanted individuals of flora species of conservation interest. Proper erection and maintenance of the temporary protective fence enclosing the individuals was inspected for the effectiveness. The recommended protection measures in the implementation schedule as stated in approved transplantation proposal were monitored and the conditions of the individuals of flora species of conservation interest were recorded as shown in **Table 5.1**.
- 5.3 According to the approved detailed vegetation survey report and transplantation proposal, 71 individuals of *Brainea insignis*, 41 individuals of *Spiranthes sinensis* and 3 individuals of *Aquilaria sinensis* were identified to be transplanted to the receptor site. 51 individuals of *Keteleeria fortunei*, 26 undersized seedlings of *Keteleeria fortunei* and 7 undersized seedlings of *Aquilaria sinensis* were identified to be retained along Kong Nga Po Road near Police Dog Unit and Force Search Unit Training School.

Post-Transplantation Monitoring and Maintenance Programme

- 5.4 According to approved transplantation proposal, post-transplantation monitoring should be conducted by the Contractor once per week in the first three months and once per month afterwards during the 12-month establishment period and the post-establishment period until the end of construction phase of the Project. Regular monitoring allows early detection of the growth status of transplanted species, sign of construction activity within and nearby the receptor site, and any environmental change of the receptor site.
- 5.5 Maintenance works were recommended for the first year of establishment to allow health growth of the transplanted species. In view of the condition of transplanted individuals after the 12-month establishment period, maintenance works were recommended to extend during the Post-establishment Period until the end of Construction Phase. Watering was recommended in daily practice during the first three months after the transplantation and during dry season. Watering frequency may be reduced to at least twice a week and adjusted based on the plant condition to keep the soil moist. Other maintenance works like use of mulch and weeding shall be conducted if required.
- 5.6 Part of the construction site including the approved receptor site for *Brainea insignis* and *Spiranthes sinensis* was handed over to Architectural Services Department (ArchSD) on 23rd December 202. The post-transplantation maintenance and monitoring works for *Brainea insignis* and *Spiranthes sinensis* were conducted by the Contractor under Contract No. SSK509 starting from February 2023.

Service Contract No. NDO 07/2019
Environmental Team for Site
Formation and Infrastructure Works
for Police Facilities in Kong Nga Po
Monthly EM&A Report – February 2023

Results and Observations

5.7 Monthly monitoring of flora species of conservation interest was conducted by ET on 24th February 2023 during the reporting month. The implementation status of protection measures as stated in approved transplantation proposal and the maintenance of temporary protective fence were inspected. The implementation status of protection measures is shown in **Table 5.1** and photographic record and checklists for monthly monitoring are shown in **Appendix H.** The health conditions of the transplanted / retained species are generally in fair to poor condition. The Contractor was reminded to closely monitored the transplanted species and implemented the protection measures according to the approved transplantation proposal to protect the transplanted / retained species.

Transplanted Brainea insignis and Spiranthes sinensis

- 5.8 71 individuals of *Brainea insignis* and 41 individuals of *Spiranthes sinensis* were transplanted to receptor site from 21st to 26th May 2020. Transplantation Report recording the process of transplantation have been submitted to ET, IEC and the *Supervisor* for review and record. Post-transplantation monitoring was conducted once per week in the first three months (June to August 2020) and once per month during the 12-month establishment period and the post-establishment period until the end of construction phase of the Project. The health condition of the transplanted species was monitored by the Contractor. The Contractor provided maintenance works including watering, use of mulch and weeding in the first year of establishment to allow health growth of the transplanted species. Post-transplantation monitoring on transplanted *Brainea insignis* and *Spiranthes sinensis* was conducted by the Contractor under Contract No. SSK509 on 25th February 2023 during the reporting month and the post-transplantation monitoring record is shown in **Appendix H**. The health condition of the transplanted *Brainea insignis* affected by bushfire on 2nd February 2021 were closely monitored and reported in the post-transplantation monitoring records.
- 5.9 During monthly monitoring, no construction activity and equipment storage was observed within the receptor site. Temporary protective fence was properly erected and maintained for the transplanted species.

Transplanted *Aquilaria sinensis*

- 5.10 3 individuals of *Aquilaria sinensis* were transplanted to receptor site from 3rd to 19th October 2020. Transplantation Report recording the process of transplantation have been submitted to ET, IEC and the *Supervisor* for review and record. Post-transplantation monitoring was conducted once per week in the first three months (October 2020 to January 2021) and once per month during the 12-month establishment period and the post-establishment period until the end of construction phase of the Project. The health conditions of the transplanted species were monitored by the Contractor. The Contractor provided maintenance works including watering, use of mulch and weeding in the first year of establishment to allow health growth of the transplanted species.
- 5.11 The three individuals of transplanted *Aquilaria sinensis* A-008, A-0009 and A-0010 were collapsed after Typhoon Signal No. 8 in July 2022. According to the Tree Risk Assessment Report provided by the Contractor's landscape specialist, the collapsed trees have been removed on 16th July 2022.

Retained Keteleeria fortunei and Aquilaria sinensis

- 5.12 51 individuals of *Keteleeria fortunei*, 26 undersized seedlings of *Keteleeria fortunei* and 7 undersized seedlings of *Aquilaria sinensis* were identified to be retained along Kong Nga Po Road near Police Dog Unit and Force Search Unit Training School. Individuals of *Keteleeria fortunei* and *Aquilaria sinensis* were preserved based on the revised layout plan of Kong Nga Po Road.
- 5.13 During monitoring, no construction activity was observed within the area of retained species. Temporary protective fence was properly erected and maintained for the retained species. The photographic records for the retained individuals are shown in **Appendix H**.

| | To set up a protection zone at least 1m from the plant / retained tree and erect robust, | ۸ |
| L | bright-coloured fencing of 1.5m in height. | |
| Ma | intenance of the Protection Zone for Flora Species of Conservation Interest / | |
| Re | tained Tree | |
| a) | Monthly monitoring of flora species of conservation interest identified in the | ^ |
| | detailed vegetation survey should be conducted. | |
| b) | To inspect the temporary protective fence whether it is properly erected and | ۸ |
| | maintained during construction. | |
| Pos | st-transplantation Monitoring | |
| a) | Weekly post-transplantation monitoring of transplanted species in the first three | N/A |
| | months and monthly afterwards. | |

| Recommended Mitigation Measures | Implementation Status |
|--|--------------------------|
| Maintenance of Transplanted Species | |
| a) To keep the soil moist by watering the receptor sites properly and adequately. | N/A |
| b) To apply mulches on the soil surface over the plant root system, if required. | N/A |
| c) To remove unwanted weeds found in receptor sites. | N/A |
| Other Protection Measures for Flora Species of Conservation Interest / Retained | |
| Tree / Vegetated Areas | |
| a) All works should be confined within the site boundary. | ٨ |
| b) Access of site staff should be controlled. | ٨ |
| c) Care should be taken to prevent trees/plants being damaged by mechanical | ٨ |
| equipment or stockpile both during site clearance works and construction works. | |
| d) No fixings should be driven into trees/plants. | ^ |
| e) No workshop, canteens, or similar should be installed beneath trees/plants, nor will | ٨ |
| equipment maintenance etc. be carried out under trees/plants. | |
| f) No excavation, including that for services or changes in ground level will take place | ٨ |
| within the spread of the crown of the trees / plants. | |
| g) No soil, debris or construction materials should be deposited around and against | ٨ |
| the trunk of a tree/plant as this causes bark damage and compaction of the soil. | |
| h) No fire should be lit below the branches and no petrol, oil or caustic substances | ٨ |
| stored near the trees/plants. | |
| i) No trees/plants should be used for anchoring or winching purposes or for the | ^ |
| display of signs. | |
| j) Any damage or injury to the retained / transplanted plants should be reported as | ٨ |
| soon as possible for repair immediately. | |

| Implementation | ^ | Mitigation measure was fully implemented |
|----------------|-----|--|
| status: | * | Observation/reminder was made during monitoring but improved/rectified by the contractor |
| | # | Observation/reminder was made during monitoring but not yet improved/rectified by the contractor |
| | X | Non-compliance of mitigation measure |
| | • | Non-compliance but rectified by the contractor |
| | N/A | Not Applicable at this stage as no such site activities were conducted in the reporting period |

Mitigation Measure for Golden-headed Cisticola

5.14 According to EP Condition 2.15, a baseline survey-for Golden-headed Cisticola for the Project was conducted and the baseline survey report was submitted. The mitigation measures detailed in the documents are recommended to minimise the noise, light and water quality impact from construction works to avifauna. Good site practice measures shall be implemented throughout the construction period. The recommended mitigation measures are summarised as following:

Noise

- Silencers or mufflers on well-maintained construction equipment should be utilized and properly maintained during the construction program
- Noise enclosure or acoustic shed should be effectively utilized, where practicable
- Machines or equipment known to emit noise or light strongly in one direction should, wherever possible, be orientated the noise away from the adjacent habitat

Light

- Adjusting the outdoor lighting to lower intensity
- Use of directional lighting to avoid light spill into sensitive areas
- Control/timing of lighting periods of some facilities, particularly those close to the ecological sensitive receivers

Water

- Proper drainage system installed to collect and dispose rainwater.
- Installation of sediment/rubbish trapping facilities (e.g. catch pits or sand/silt traps to contain the increase in suspended solids and materials in the storm water drainage system so as to avoid pollutants being washed out during heavy rainstorms)

Good Site Practice Measures

- Placement of stockpiling into designated area should be selected at disturbed area in order to minimize the disturbance to wildlife
- Open fire should be strictly prohibited
- The boundary of project boundary should be clearly demarcated
- General drainage system arrangement should include sediment and oil trapper to collect the site run-off
- Waste bin should be provided to collect the general refuse and construction waste
- 5.15 Site audits were conducted by ET on weekly basis to monitor the timely implementation of the recommended mitigation measures by the Contractor on the Project site. The observations are summarised in **Table 7.1** and the implementation status is given in **Appendix K**. Toolbox talk training related to ecological protection has been provided by the Contractor to site staff and frontline workers. Presence of avifauna and bird nest were checked prior to site clearance work.

Precautionary Measure for Butterfly Species of Conservation Interest

- 5.16 According to EP Condition 2.21, with consideration of minimizing impact on butterfly species of conservation interest recorded at the grassland in the Project site, planting of common grass species which are the larval food plants for butterfly species such as Small Three-Ring are included in Landscape and Visual Mitigation Plan.
- 5.17 The re-establishment of grassland areas in the Project shall be implemented before Commencement of Operation of the Project. Details of the plant species as larval food plants of butterflies including design and implementation arrangement will be further submitted under ArchSD's building works contract.

Precautionary Measures to Minimize Indirect Disturbance on Ecology

5.18 In accordance with Section 9.7.3 of EIA Report, mitigation measures for air, noise, water,

Service Contract No. NDO 07/2019
Environmental Team for Site
Formation and Infrastructure Works
for Police Facilities in Kong Nga Po
Monthly EM&A Report – February 2023

waste and landscape aspects could act as precautionary measures to prevent and minimize any indirect disturbance impact or pollution arisen from the construction activities on the local ecology and offsite habitats. Site audits were carried out by ET on weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures on the Project site and the observations are summarised in Section 7.3.

6 LANDSCAPE AND VISUAL MONITORING

Monitoring Requirements

- 6.1 The EIA Report has recommended mitigation measures for landscape and visual resources to be undertaken during the construction and operation phases of the Project.
- 6.2 These measures include the consideration of a number of development options and the provision of mitigation measures to directly offset unavoidable impacts. The measures include strategies for reducing, offsetting and compensating impacts during construction and operation phases according to Section 10.13 in the EIA Report.
- 6.3 The implementation and maintenance of landscape compensatory planting measures is a key aspect of this and shall be checked to ensure that they are fully realised and that potential conflicts between the proposed landscape measures and any other Project works and operational requirements are resolved at the earliest possible date and without compromise to the intention of the mitigation measures. In addition, implementation of the mitigation measures recommended by the EIA shall be monitored throughout the construction phase site audit programme.
- 6.4 Bi-weekly inspection of the implementation of landscape and visual mitigation measures was conducted by ET during weekly site audit. The observation and recommendations made during the audit sessions are summarised in **Table 7.1**. The implementation status is given in **Appendix K**.

7 ENVIRONMENTAL SITE INSPECTION

Site Audits

- 7.1 Site audits were carried out by ET on weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures on the Contract site.
- 7.2 Site audits were conducted by ET with the representative of the *Supervisor*'s Representative and the Contractor on 3rd, 10th, 17th and 24th February 2023 in the reporting month. Joint site audits with the representative of the *Supervisor*'s Representative, the Contractor and IEC were carried out on 17th February 2023.
- 7.3 During site inspections in the reporting month, no non-conformance was identified. The observations and recommendations made during the audit sessions are summarised in **Table** 7.1.

Table 7.1 Observations and Recommendations of Site Audit

| Parameters | Date | Observations | Follow Up Action |
|------------------------------|------------|---|--|
| Air Quality | | No environmental deficiency was identified during the reporting month. | |
| Construction Noise Impact | | No environmental deficiency was identified during the reporting month. | |
| | 03/02/2023 | Mud trails were observed at the site exit of the works area near dog unit. The Contractor was reminded to ensure the access road leading to and existing from the wheel washing facilities should be paved. | The site exit has been closed to further control the vehicle in-out-out of the site. Wheel washing facilities have also been provided and workers has performed road washing regularly to maintain cleanliness at interfaces as observed during follow-up audit session on 10/02/2023. |
| Water Quality | 17/02/2023 | To clear the sand and debris at the slope drains near dog unit. | The slope drains have been cleared by the Contractor as observed during follow-up audit session on 24/02/2023. |
| | 17/02/2023 | To clear the rubbish at the silt retention pond as well as the connecting drain and ensure the adequate capacity of the silt retention pond with regular maintenance of wetsep (Abutment B). | The rubbish at the silt retention pond and the connecting drain have been cleared by the Contractor as observed during follow-up audit session on 24/02/2023. The maintenance records of wetsep have also been updated by the Contractor as observed during follow-up audit session on 24/02/2023. |

| Parameters | Date | Observations | Follow Up Action |
|----------------------------------|------------|---|--|
| | 03/02/2023 | The construction waste materials should be disposed properly at Platform E. | The construction waste materials have been cleared by the Contractor as observed during follow-up audit session on 10/02/2023. |
| | | Clear the oil leakage at near the air compressor at works area near dog unit. | The oil leakage has been cleared by the Contractor as observed during follow-up audit session on 10/02/2023. |
| Wastal | 10/02/2023 | The dusty materials remaining after realignment of construction site should be cleared from the surface of roads near dog unit. | The remaining dusty materials have been cleared by the Contractor as observed during follow-up audit session on 17/02/2023. |
| Waste/ Chemical Management | 17/02/2023 | To clear the sand and debris at the slope drains near dog unit. | The slope drains have been cleared by the Contractor as observed during follow-up audit session on 24/02/2023. |
| | 24/02/2023 | The accumulated construction waste materials at the works area near dog unit should be cleared regularly. | The accumulated construction waste materials have been cleared by the Contractor as observed during follow-up audit session on 03/03/2023. |
| | 24/02/2023 | The chemical containers should be placed on site with drip tray (near dog unit and C43). | The chemical containers without drip tray have been removed off site by the Contractor as observed during follow-up audit session on 03/03/2023. |
| | 03/02/2023 | Provide remedial works for the retain trees with exposed roots (near dog unit). | Follow-up action is needed in the next audit session. |
| | 10/02/2023 | Provide remedial works for the retain trees with exposed roots (near dog unit). | Follow-up action is needed in the next audit session. |
| Landscape and Visual | 17/02/2023 | Provide remedial works for the retain trees with exposed roots (near dog unit). | The preserved tree has been staked by bamboo poles by the Contractor as observed during follow-up audit session on 24/02/2023. |
| | 17/02/2023 | To remove and avoid materials hanging from the retain tree at Abutment B. | The hanging materials have been removed by the Contractor as observed during follow-up audit session on 24/02/2023. |
| Ecology | | No environmental deficiency was identified during the reporting month. | |
| Permit/Licences | | No environmental deficiency was identified during the reporting month. | |

Implementation Status of Environmental Mitigation Measures

- 7.4 According to the EIA Report, Environmental Permit and the EM&A Manual of the Project, the mitigation measures detailed in the documents are recommended to be implemented during the construction phase. An updated summary of the Environmental Mitigation Implementation Schedule (EMIS) is provided in **Appendix K**.
- 7.5 During site inspections in the reporting month, the Contractor's readiness with the mitigation measures during dry season against dust emission was found generally satisfactory despite some observations/recommendations as detailed above were raised. The mitigation measures implemented in February 2023 are shown in the summary table in **Appendix K.**

Solid and Liquid Waste Management Status

- 7.6 In accordance with the EM&A Manual, waste management was audited during weekly site audit to determine if wastes are being managed in accordance with the Waste Management Plan (WMP) prepared for the Project and the relevant legislative and contractual requirements. Waste management practice including waste handling, storage, transportation and disposal were audited.
- 7.7 The Contractor have nominated on-site Environmental Officers to oversee the environmental management, pollution control measures, good site practices and training of site personnel in waste management. Proactive measures have been undertaken to make use of construction and demolition (C&D) materials to minimize the waste generated. On-site sorting and screening of excavated materials have been carried out to recover any recyclable portions. Inert C&D materials were used on-site for backfilling works and hard paving of haul road. In addition, inert C&D materials generated from excavation works were reused as fill materials in other local projects. The surplus inert C&D materials were disposed of at the Government's public fill reception facilities (PFRFs) for beneficial use by other projects. In order to monitor the disposal of inert and non-inert C&D materials and to control fly-tipping, every excavated materials before leaving the site are weighted by a weight bridge and Trip Ticket System is strictly followed.
- 7.8 The Contractors are advised to minimize the wastes generated through the recycling or reusing. All mitigation measures stipulated in the EM&A Manual and waste management plans shall be fully implemented. The status of implementation of waste management and reduction measures are summarised in **Appendix K**.
- 7.9 Waste generated from this Project includes inert C&D materials and non-inert C&D materials. Non-inert C&D materials are made up of general refuse and waste that cannot be reused or recycled and has to be disposed of at the designated landfill sites. The amount of wastes generated by the construction works of the Project during the reporting month is shown in **Appendix L**.

31

8 ENVIRONMENTAL NON-CONFORMANCE

Summary of Exceedances

- 8.1 No exceedance of Action and Limit Levels of air quality was recorded in the reporting month.
- 8.2 No exceedance of Action and Limit Levels of construction noise was recorded in the reporting month.
- 8.3 Should the monitoring results of the environmental monitoring parameters at any designated monitoring stations indicate that the Action / Limit Levels are exceeded, the actions in accordance with the Event and Action Plans in **Appendix I** be carried out. The summary of exceedance record in reporting month is shown in **Appendix J**.

Summary of Environmental Non-Compliance

8.4 No environmental non-compliance was recorded in the reporting month.

Summary of Environmental Complaint

- 8.5 In accordance with the EM&A Manual, Section 11.3, complaints should be referred to the ET for action. During the complaint investigation works, the ET and IEC as established according to EP Condition 2.1 and 2.6 can carry out *Ad-hoc* site inspections to identify the source of the complaint, review the effectiveness of the Contractor's remedial measures and the updated situation once received the complaint. In addition, additional monitoring and audit can also be arranged immediately to verify the situation if necessary. ET and IEC will also oversee the circumstances that leading to the complaint do not recur. Moreover, ET and IEC can cooperate efficiently with the Contractor and *Supervisor* on site for completion of the investigation.
- 8.6 There was one environmental complaint related to air quality received in the reporting month. The Cumulative Complaint Log since the commencement of the Project is presented in **Appendix M**.

Summary of Environmental Summon and Successful Prosecution

8.7 There was no successful environmental prosecution or notification of summons received since the Project commencement. The Cumulative Log for environmental summon and successful prosecution since the commencement of the Project is presented in **Appendix N**.

9 FUTURE KEY ISSUES

Key Issues in the Coming Three Months

9.1 The tentative construction programmes for the Project are provided in **Appendix A**. The major construction activities undertaken in the coming three months will include:

<u>Contract No. ND/2018/01 – Site Formation and Infrastructure Works for Police Facilities in Kong Nga Po</u>

- Retaining Wall Construction
- Slope Upgrading Works
- Road & Associated Works
- Sewerage Trenchless Works
- Drainage & Watermain Trenchless works
- Bridge & Associated Works

Contract No. SSK509 - Design and Construction of Kong Nga Po Police Training Facilities

- Setting up of site office
- Ground investigation
- Plate load test and soil test
- Open cut excavation
- Removal of soil
- Construction of footings
- 9.2 With reference to the site layout plan including the indication of coming three months construction site activities in **Appendix A**, potential environmental impacts arising from the above construction activities are mainly associated with construction dust, noise, water quality, waste management, landscape and visual and ecology. The foreseeable environmental impacts were taken into consideration of the planned mitigation measures in the coming months.
- 9.3 The mitigation measures to be implemented for the coming three months were proposed by the Contractor and reviewed by ET, IEC and the *Supervisor* through Email, during site audit and SSMC meeting. The Proactive Environmental Protection Proforma summarizing the major site activities, potential environmental impacts and recommended mitigation measures was reviewed and endorsed by the *Supervisor*, ET and IEC and was shown in **Appendix A**.
- 9.4 The Contractor is recommended to arrange early preparation of water quality mitigation measures for the upcoming wet season (i.e., March to October). The dikes or embankments for flood protection should be implemented around the boundaries of earthwork areas. Temporary ditches should be provided to facilitate the runoff discharge into an appropriate watercourse, through a site/sediment trap. The sediment/silt traps should be incorporated in the permanent drainage channels to enhance deposition rates. Efficient silt removal facilities shall deploy to ensure all treated effluent from wastewater treatment plant shall meet the requirements as stated in WPCO licences. The site drainage plan shall also be updated based on the site condition and construction programme.
- 9.5 Dust can be generated during construction works and exposed site area especially in dry days. To prevent high dust concentrations during the dry weather, the Contractor should pay

Service Contract No. NDO 07/2019
Environmental Team for Site
Formation and Infrastructure Works
for Police Facilities in Kong Nga Po
Monthly EM&A Report – February 2023

attention on the air quality mitigation measures as far as practicable to minimise the dust impact to the villages which are located adjacent to the Project works (refer to the layout plan in **Appendix A**). The Contractor was also reminded to follow the Project Implementation Schedule in approved EIA report / EM&A Manual to implement appropriate dust control measure including "Use of regular water spraying (once every 1.25 hours or 8 times per day) to reduce dust emissions from heavy construction activities (including ground excavation, earth moving, etc.) at all active works area exposed site surfaces and unpaved roads, particularly during dry weather and covering 80% of stockpiling area by impervious sheets and spraying all dusty material with water immediately prior to any loading transfer operations to keep the dusty materials wet during material handling at the stockpile areas" as well as the relevant dust control practices as stipulated in the Air Pollution Control (Construction Dust) Regulation so that no adverse dust impact arising from the Project works site.

- 9.6 In addition, construction noise is also one of the key environmental issues during construction of the Project. Noise mitigation measures such as using quiet plants and noise barriers should be in place, where applicable. In addition, the Contractor was reminded to frequently check and maintain the acoustic materials wrapped on noisy part of PME and ensure no gaps between noise barriers; proactively identify any potential construction noise impact to NSRs and provide sufficient mitigation measures if necessary; and provide notification to nearby villagers in Kong Nga Po for potential noisy works at works area.
- 9.7 Moreover, the tree protection zone for the existing *Keteleeria fortunei* and *Aquilaria sinensis* shall be properly maintained during the Kong Nga Po Road upgrading works in close proximity of the plant species of conservation importance according to the approved "Explanatory Statement for Revised Layout Plan of Kong Nga Po Road (Final)".
- 9.8 All other mitigation measures recommended in the Project Implementation Schedule in the approved EIA report / EM&A Manual should be properly implemented and maintained as far as practicable.

Monitoring Schedule for the Next Month

9.9 The tentative environmental monitoring schedule for the next month is shown in **Appendix D**.

10 CONCLUSIONS AND RECOMMENDATIONS

Conclusions

- 10.1 This Monthly EM&A Report presents the EM&A work undertaken in February 2023 in accordance with EM&A Manual.
- 10.2 No Action/Limit Level exceedance was recorded for air quality monitoring in the reporting month.
- 10.3 No Action/Limit Level exceedance was recorded for construction noise monitoring in the reporting month.
- 10.4 Environmental site inspections were conducted on 3rd, 10th, 17th and 24th February 2023 by ET in the reporting month. No environmental non-compliance was recorded in the reporting month.
- 10.5 One environmental complaint related to air quality, no notification of summons or successful prosecutions were received in the reporting month.
- 10.6 The ET would keep track on the EM&A programme to ensure compliance of environmental requirements and the proper implementation of all necessary mitigation measures.

Recommendations

10.7 According to the environmental audits performed in the reporting month, the following recommendations were made:

Air Quality Impact

- To maintain the cover for stockpile of dusty materials and exposed slope for dust suppression;
- To enhance the dust suppression measures including watering for the dust generation works, exposed site area and haul road;
- To regular check the valid NRMM labels are properly displayed on the regulated machines and non-road vehicles: and
- To maintain the wheel washing facilities provided at every construction site exit where practicable are functioning properly.

Construction Noise

- To keep inspect the noise sources inside the site;
- To keep space out noisy equipment and position the equipment as far away as possible from sensitive receivers; and
- To maintain temporary noise barriers for operations of noisy equipment near the noise sensitive receivers, if necessary.

Water Impact

- To maintain the cover for open stockpile of and exposed slope;
- To keep reviewing and updating temporary drainage system;
- To maintain the earth bunds or sand bag barriers on site to direct stormwater to silt removal

facilities;

- To maintain and ensure the silt removal facilities are functioning properly;
- To maintain the wheel washing facilities provided at every construction site exit where practicable are functioning properly;
- To divert the muddy water at the retention pond to the wetsep for treatment before discharging out; and
- To review and update site drainage plan based on the current site condition, and implement water quality mitigation measures as appropriate.

Waste/Chemical Management

- To check for any accumulation of waste materials or rubbish on site;
- To avoid any discharge or accidental spillage of chemical waste or oil directly from the site;
- To maintain the drip tray well to prevent oil and chemical leakage; and
- To avoid improper handling, storage and dispose of oil drums or chemical containers on site.

Ecology

- To erect and maintain the protection fence around the retained trees / conservation species;
- To keep the tree protection zone large enough to protect the tress; and
- To remove the construction materials within the tree protection zone.

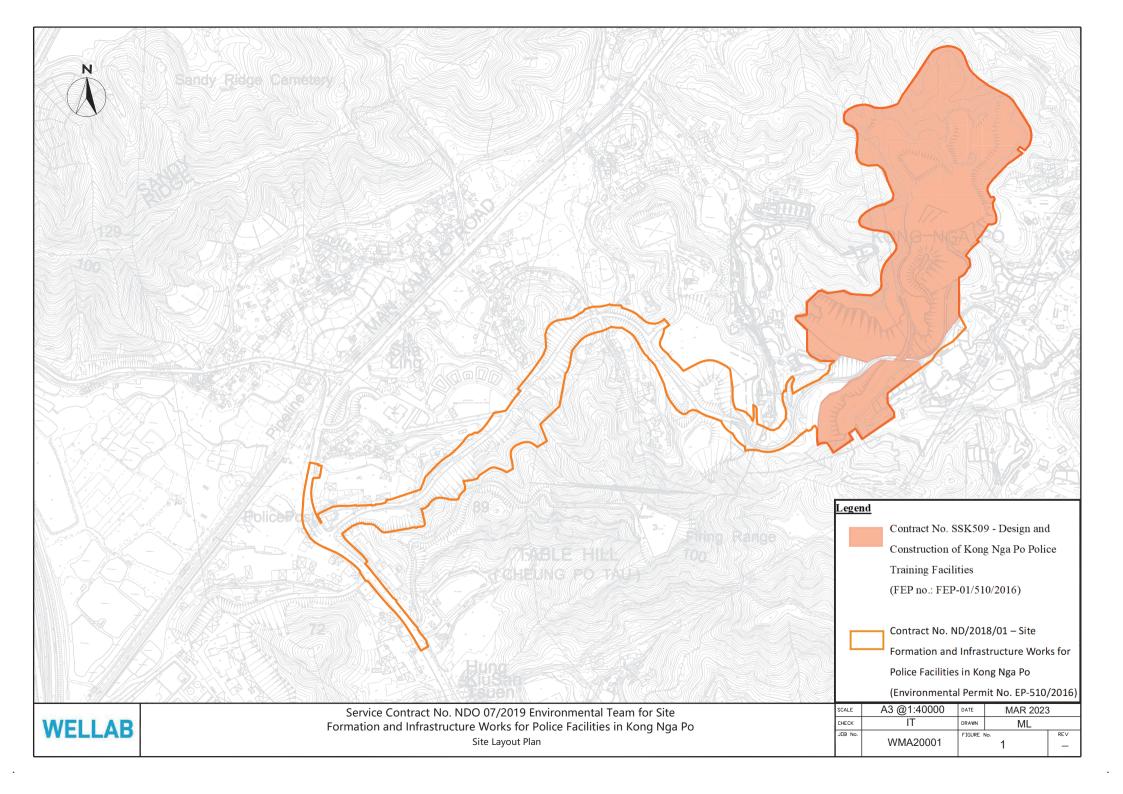

Landscape and Visual

- To erect and maintain the protection fencing and tree protection zone around the preserved trees;
- To remove the construction materials within the tree protection zone;
- To keep the tree protection zone large enough to protect the tress; and
- To avoid handing materials on the preserved trees.

Permit / Licences

• To maintain the display the valid construction noise permit on the construction site at a proper location at the boundary of the working area for public information.

Certificate of Calibration

Item for Calibration:

Description : Dust Monitor

Manufacturer : Met One Instruments : AEROCET-831 Model No.

Serial No. : X23809 Flow rate : 0.1 cfm

Zero Count Test : 0 count per 1 minute

: WA-01-03 Equipment No.

Test Conditions:

Room Temperature : 17-22 degree Celsius

Relative Humidity : 40-70%

Test Specifications & Methodology:

- 1. Instruction and Operation Manual High Volume Sampler, Tisch Environmental Inc.
- 2. In-house method in according to the instruction manual: The Dust Monitor was compared with a calibrated High Volume Sampler and the result was used to generate the Correlation Factor (CF) between the Dust Monitor and High Volume Sampler.

Results:

1.101 Correlation Factor (CF)

Certificate of Calibration

Item for Calibration:

Description

: Dust Monitor

Manufacturer

: Met One Instruments

Model No.

: AEROCET-831

Serial No.

: X24478

Flow rate

: 0.1 cfm

Zero Count Test

: 0 count per 1 minute

Equipment No.

: WA-01-10

Test Conditions:

Room Temperature

: 17-22 degree Celsius

Relative Humidity

: 40-70%

Test Specifications & Methodology:

- 1. Instruction and Operation Manual High Volume Sampler, Tisch Environmental Inc.
- 2. In-house method in according to the instruction manual: The Dust Monitor was compared with a calibrated High Volume Sampler and the result was used to generate the Correlation Factor (CF) between the Dust Monitor and High Volume Sampler.

Results:

Correlation Factor (CF) 1.102

PREPARED AND CHECKED BY:

For and On Behalf of WELLAB Ltd.

PATRICK TSE

| | | | | | | | |

Remarks/Observations

Most of the Cycad-fern (Brainea insignis) described with poor health condition in previous report found with basal leaves germinated from the base of stem and the health condition was expected to be improved.

| | | ACTION | | |
|---|--|--|--|--|
| EVENT | ET | IEC | ER | CONTRACTOR |
| ACTION LEVE | L | | | |
| 1. Exceedance for one sample 2. Exceedance for two or more | 1. Identify source, investigate the causes of exceedance and propose remedial measures; 2. Inform IEC,ER and Contractor; 3. Repeat measurement to confirm finding; and 4. Increase monitoring frequency to daily. 1. Identify source; 2. Inform IEC, ER and Contractor; | 1. Check monitoring data submitted by ET; 2. Check Contractor's working method. 1. Check monitoring data submitted by ET; | 1. Notify Contractor. 1. Confirm receipt of notification of failure in | 1. Rectify any unacceptable practice: 2. Amend working methods if appropriate. 1. Submit proposals for remedial to ER within 3 |
| consecutive samples | Advise the WKCDA on the effectiveness of the proposed remedial measure; Repeat measurements to confirm findings; Increase monitoring frequency to daily; Discuss with IEC and Contractor on remedial actions required; If exceedance continues, arrange meeting with IEC and ER; and | Check Contractor's working method; Discuss with ET and Contractor on possible remedial measures; Advise the ET on the effectiveness of the proposed remedial measures; and Monitor Implementation of remedial measures. | writing; 2. Notify Contractor; and 3. Ensure remedial measures properly implemented. | working days of notification; 2. Implement the agreed proposals; and 3. Amend proposal if appropriate. |

| | | ACTI | ION | |
|--|--|---|--|--|
| EVENT | ЕТ | IEC | ER | CONTRACTOR |
| LIMIT LEVEL | 8. If exceedance stops, cease additional monitoring. | | | |
| 1.Exceedance for one sample | Identify source, investigate the causes of exceedance and propose remedial measures; Inform ER, Contractor and EPD; Repeat measurement to confirm finding; Increase monitoring frequency to daily; and Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and the ER informed of the results. | 1. Check monitoring data submitted by ET; 2. Check Contractor's working method; 3. Discuss with ET and Contractor on possible remedial measures; 4. Advise the ER on the effectiveness of the proposed remedial measures; and 5. Monitor the implementation of remedial measures. | 1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; and 3. Ensure remedial measures properly implemented. | Take immediate action to avoid furthrt exceedance; Submit proposals for remedial actions to IEC within 3 working days of notification; Implement the agreed proposals; and Amend proposal if appropriate. |
| 2.Exceedance for two or more consecutive samples | Notify IEC, the ER, Contractor and EPD; Identify source; Repeat measurement to confirm findings; Increase monitoring frequency to daily; Carry out analysis of Contractor's working procedures to determine | Check monitoring data submitted by ET; Check Contractor's working method; Discuss amongst ER, ET, and Contractor on the potential remedial actions; | 1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. In consultation with IEC, agree with the Contractor on the remedial measures to be implemented; | 1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; |

| | ACTION | | | | | | | | |
|-------|--|---|--|--|--|--|--|--|--|
| EVENT | ET | IEC | ER | CONTRACTOR | | | | | |
| | possible mitigation to be implemented; 6. Arrange meeting with IEC, and ER to discuss the remedial actions to be taken; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; and 8. If exceedance stops, cease additional monitoring. | 4. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; and 5. Monitor implementation of remedial measures. | 4. Ensure remedial measures properly implemented; and 5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedances is | 4. Resubmit proposals if problem still not under control; and 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated. | | | | | |

|-----------------------------|--------------------------------|------------------------|-------------------------|--|------------------------------------|----------|
| 9 | | Action Level | Limit Level | Action Level | Limit Level | recorded |
| Noise | L _{eq(30 min.)} dB(A) | 0 | 0 | 0 | 0 | 6 |

APPENDIX K ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE (EMIS)

| EIA Ref. | EM&A | Recommended Mitigation Measures | Objectives of the | Who to implement | Location of the | When to | Implementation |
|----------------|--------------|--|----------------------|------------------|---------------------|---------------|----------------|
| | Log | (What Measures) | recommended Measures | the measures? | measures | Implement the | Status |
| | Ref | | & Main Concerns to | (Who) | (Where) | measures? | |
| | | | address (What | | | (When) | |
| | | | Requirements) | | | | |
| Air Quality Im | pact – Const | ruction Phase | | | | | |
| 3.91 | 2.2 | Dust Control Measures | Construction Dust | Contractor | Project | Construction | |
| | | To achieve compliance with the FSP, RSP and TSP criteria | | | construction site / | phase | |
| | | during the construction phase, good practices for dust control | | | Duration of the | | |
| | | should be implemented to reduce dust impacts. The dust control | | | construction phase | | |
| | | measures are detailed as follows: | | | / Prior to | | |
| | | • Use of regular water spraying (once every 1.25 hours or 8 | | | commencement of | | ^ |
| | | times per day) to reduce dust emissions from heavy | | | operation | | |
| | | construction activities (including ground excavation, earth | | | | | |
| | | moving, etc.) at all active works area exposed site | | | | | |
| | | surfaces and unpaved roads, particularly during dry | | | | | |
| | | weather. | | | | | |
| | | Covering 80% of stockpiling area by impervious sheets | | | | | |
| | | and spraying all dusty material with water immediately | | | | | ^ |
| | | prior to any loading transfer operations to keep the dusty | | | | | |
| | | materials wet during material handing at the stockpile | | | | | |
| | | areas. | | | | | |
| | | Relevant dust control practices as stipulated in the Air Pollution | | | | | |
| | | Control (Construction Dust) Regulation should be adopted: | | | | | |
| | | Good Site Management | | | | | |
| | | Good site management is important to help reduce | | | | | ^ |
| | | potential air quality impact down to an acceptable level. | | | | | |

| EIA Ref. | EM&A | Recommended Mitigation Measures | Objectives of the | Who to implement | Location of the | When to | Implementation |
|----------|------|--|----------------------|------------------|-----------------|---------------|----------------|
| | Log | (What Measures) | recommended Measures | the measures? | measures | Implement the | Status |
| | Ref | | & Main Concerns to | (Who) | (Where) | measures? | |
| | | | address (What | | | (When) | |
| | | | Requirements) | | | | |
| | | As a general guide, the Contractor should maintain high | | | | | |
| | | standards of housekeeping to prevent emissions of | | | | | |
| | | fugitive dust. Loading, unloading, handling and storage of | | | | | |
| | | raw materials, wastes or byproducts should be carried out | | | | | |
| | | in a manner so as to minimise the release of visible dust | | | | | |
| | | emission. Any piles of materials accumulated on or | | | | | |
| | | around the work areas should be cleaned up regularly. | | | | | |
| | | Cleaning, repair and maintenance of all plant facilities | | | | | |
| | | within the work areas should be carried out in a manner | | | | | |
| | | minimising generation of fugitive dust emissions. The | | | | | |
| | | material should be handled properly to prevent fugitive | | | | | |
| | | dust emission before cleaning. | | | | | |
| | | Disturbed Parts of the Roads | | | | | |
| | | Main temporary access points should be paved with | | | | | ^ |
| | | concrete, bituminous hardcore materials or metal plates | | | | | |
| | | and be kept clear of dusty materials; or | | | | | |
| | | Unpaved parts of the road should be sprayed with water or | | | | | |
| | | a dust suppression chemical so as to keep the entire road | | | | | ^ |
| | | wet. | | | | | |
| | | Exposed Earth | | | | | |
| | | Exposed earth should be properly treated by compaction, | | | | | ^ |
| | | hydroseeding, vegetation planting or seating with latex, | | | | | |

| | | | Requirements) | | | | |
| | | excavated material should be covered when not in use to | | | | | |
| | | reduce the potential for water pollution. | | | | | |
| 5.6.1.2 | 4.2 | Construction Site Runoff | Minimise / control | Contractor | Within the Project | Construction Phase | |
| | | The site practices outlined in ProPECC Note PN 1/94 should be | construction site runoff to | | site / During | | |
| | | followed as far as practicable in order to minimise surface runoff | avoid pollution of water | | construction phase | | |
| | | and the chance of erosion. The following measures are | courses | | | | |
| | | recommended: | | | | | |
| | | Temporary site drainage facilities are to be designed and | | | | | ^ |
| | | implemented by the Contractor prior to commencement of | | | | | |
| | | construction to convey surface runoff to storm drains | | | | | |
| | | applying adequately designed silt/ sand removal traps and | | | | | |
| | | sediment basins. | | | | | |
| | | Perimeter cut-off drains shall be installed in advance of | | | | | ^ |
| | | any earthworks and site formation work to convey site | | | | | |
| | | runoff from the works areas to the silt removal facilities. | | | | | |
| | | Runoff into the excavation areas during rainstorm events | | | | | ^ |
| | | shall be minimised as far as practicable. Any wastewater | | | | | |
| | | pumped out of the excavation areas shall be treated to | | | | | |
| | | remove suspended solids prior to discharge. | | | | | |
| | | Maintenance and inspection of the drainage system and | | | | | * |
| | | sediment removal facilities should be carried out regularly | | | | | |
| | | to remove any sediment and blockages, especially when | | | | | |

| EIA Ref. | EM&A | Recommended Mitigation Measures | Objectives of the | Who to implement | Location of the | When to | Implementation |

| | | rainstorms are forecast. | | | | | |
| | | Final surface levels should be compacted and final surface | | | | | ^ |
| | | protections installed to prevent erosion caused by | | | | | |
| | | rainstorms. | | | | | |
| | | Open stockpiles of material should be covered on site | | | | | ^ |
| | | with waterproof layers such as tarpaulin to reduce the | | | | | |
| | | potential for sediment laden runoff entering the drainage | | | | | |
| | | system. | | | | | |
| | | The wheels of all vehicles and plant should be cleaned | | | | | * |
| | | before leaving the works areas to remove sediment, soil | | | | | |
| | | and debris from the tracks. The washwater should be | | | | | |
| | | treated to remove any suspended sediment. | | | | | |
| | | Surface water from concrete batching areas and the rest of | | | | | ^ |
| | | the site should be separated as far as possible. Wastewater | | | | | |
| | | from any concrete batching plant (if required) shall be | | | | | |
| | | treated to the required standards including pH adjustment | | | | | |
| | | and settlement of suspended sediments before discharging | | | | | |
| | | to stormwater drains | | | | | |
| | | Manholes (including those constructed as part of the | | | | | ^ |
| | | Project) should be adequately covered and temporarily | | | | | |
| | | sealed at all times to prevent silt, construction materials or | | | | | |
| | | debris from entering the drainage system, and to prevent | | | | | |

| | Ref | | & Main Concerns to | (Who) | (Where) | measures? | |
| | | | address (What | | | (When) | |
| | | | Requirements) | | | | |
| | | Good management and control can prevent the generation of a | management and control to | | construction site / | | |
| | | significant amount of waste. Waste reduction is best achieved at | minimize waste generation | | Throughout | | |
| | | the planning and design stage, as well as by ensuring the | | | construction stage | | |
| | | implementation of good site practices. Recommendations to | | | / Until completion | | |
| | | achieve waste reduction include: | | | of all construction | | |
| | | Sort non-inert C&D materials to recover any recyclable | | | activities | | ^ |
| | | portions | | | | | |
| | | Segregation and storage of different types of waste in | | | | | ^ |
| | | different containers or skips or stockpiles to enhance reuse | | | | | |
| | | or recycling of materials and their proper disposal | | | | | |
| | | Encourage collection of recyclable waste such as waste | | | | | ^ |
| | | paper and aluminum cans by providing separate labelled | | | | | |
| | | bins to enable such waste to be segregated from other | | | | | |
| | | general refuse generated by the work force | | | | | |
| | | Proper site practices to minimize the potential for damage | | | | | ^ |
| | | or contamination of inert C&D materials | | | | | |
| | | Plan the use of construction materials carefully to | | | | | ^ |
| | | minimise amount of waste generated and avoid | | | | | |
| | | unnecessary generation of waste | | | | | |
| 7.5.1.3 | 6.2 | Inert and Non-inert C&D Materials | Minimise impacts resulting | Contractor | Project | Construction phase | |
| | | In order to minimise impacts resulting from collection and | from collection and | | construction site / | | ^ |
| | | transportation of inert C&D materials for off-site disposal, the | transportation of inert C&D | | Throughout | | |

| EIA Ref. | EM&A | Recommended Mitigation Measures | Objectives of the | Who to implement | Location of the | When to | Implementation |
|----------|------|---|----------------------|------------------|---------------------|---------------|----------------|
| | Log | (What Measures) | recommended Measures | the measures? | measures | Implement the | Status |
| | Ref | | & Main Concerns to | (Who) | (Where) | measures? | |
| | | | address (What | | | (When) | |
| | | | Requirements) | | | | |
| | | inert C&D materials should be reused on-site as fill material as | materials | | construction stage | | |
| | | far as practicable. In addition, inert C&D materials generated | | | / Until completion | | |
| | | from excavation works could be reused as fill materials in local | | | of all construction | | |
| | | projects that require public fill for reclamation. | | | activities | | |
| | | The surplus inert C&D materials will be disposed of at the | | | | | ^ |
| | | Government's PFRFs for beneficial use by other projects in | | | | | |
| | | Hong Kong. | | | | | |
| | | The C&D materials generated from general site clearance should | | | | | ^ |
| | | be sorted on site to segregate any inert materials for reuse or | | | | | |
| | | disposal at PFRFs whereas the non-inert materials will be | | | | | |
| | | disposed of at the designated landfill site. | | | | | |
| | | In order to monitor the disposal of inert and non-inert C&D | | | | | |
| | | materials at respectively PFRFs and the designated landfill site, | | | | | ^ |
| | | and to control fly-tipping, it is recommended that the Contractor | | | | | |
| | | should follow the DEVB Technical Circular (Works) No. 6/2010 | | | | | |
| | | for Trip Ticket System for Disposal of Construction & | | | | | |
| | | Demolition Materials issued by Development Bureau. In | | | | | |
| | | addition, it is also recommended that the Contractor should | | | | | |
| | | prepare and implement a Waste Management Plan detailing their | | | | | |
| | | various waste arising and waste management practices in | | | | | |
| | | accordance with the relevant requirements of the ETWB | | | | | |
| | | Technical Circular (Works) No. 19/2005 Environmental | | | | | |

| EIA Ref. | EM&A | Recommended Mitigation Measures | Objectives of the | Who to implement | Location of the | When to | Implementation |

Contracto No.: ND/2018/01

Notes:

- (1) Not Used.
- (2) The waste flow table shall also include C&D materials that are specified in this contract to be imported for use at the Site
- (3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging materials.
- (4) The summary table shall be submitted to the Supervisor monthly together with the Waste Flow Table for review and monitoring in accordance with the PS Clause 25.20A(4)
- (5) The density of inert C&D is assumed 2.2 tonnes per cubic meter
- (6) The density of non-inert C&D is assumed 1.5 tonnes per cubic meter
- (7) The C&D materials generated before Jul 2020 are from domestic activities, site investigation, clearance, and preparation for surveying works
- #Quantity to be included in Mar-2022 since lack of manpower of Survey Team for data logging in Feb-2022 due to Covid-19

^{*}The quantity of Inert Materials reused in the contract to be updated upon surveying record

Notes:

- (1) The performance targets are given in the Particular Specification on Environmental Management Plan.
- (2) The waste flow table shall also include construction waste that are specified in the Contract to be imported for use at the site.
- (3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material.
- (4) Broken concrete for recycling into aggregates.
- (5) If necessary, use the conversion factor: 1 full load of dumping truck being equivalent to 6.5 m3 by volume.

APPENDIX M COMPLAINT LOG

Appendix M - Complaint Log

Reporting month: February 2023

| Complaint Log Ref. | EPD Log Ref. | Location | Received Date | Details of Complaint | Investigation/ Mitigation Action | Status |
|-----------------------|-------------------------|---------------------|------------------------------------|---|---|--------|
| C-001 | EP3/N07/RN/18746- 20 | Kong Nga Po Road | 19 th August 2020 | The complainant complained about the construction noise nuisance of the Kong Nga Po Road and requested noise monitoring and mitigation measures to lower the noise level. | According to the results from regular noise monitoring, no Limit Level Exceedance was recorded at sensitive receivers since the commencement of the construction of the Project. In addition, there was no environmental deficiency regarding construction noise impact recorded during site inspection. It is considered that no adverse construction noise impact was brought to the nearby sensitive receivers due to the site works in July and August 2020. Upon receipt of the complaint, the Contractor had undertaken the follow up action as follow: • Erect noise isolating mat at Portion B1 to reduce noise nuisance arising from the site Nevertheless, the Contractor was reminded to fully implement the relevant noise mitigation measures according to the EM&A Manual on site, such as: • Selection of quieter plant; • Provision of sufficient noise mitigation measures (e.g. movable noise barrier, noise enclosure. acoustic shed, noise insulating fabric etc.) for the site activities on nearby NSRs where appropriate. • To strengthen site supervision and provide regular training to the workers to increase awareness of their environmental responsibilities and minimize the noise impact | Closed |

| Complaint Log Ref. | EPD Log Ref. | Location | Received Date | Details of Complaint | Investigation/ Mitigation Action | Status |
|-----------------------|--------------|---------------------|------------------|--|---|--------|
| | | | | | to the nearby residents during working hours as well as restricted hours. According to EM&A Manual of the Project, the complaint was referred to the ET for investigation. Adhoc site inspections were conducted by ET and IEC to | |
| | | | | | identify the source of the complaint, review the effectiveness of the Contractor's remedial measures and the updated situation once received the complaint. | |
| C-002 | | Kong Nga Po Road | | The complainant complained about the polluting effluent discharged from construction site, leading to flooding and pollution | According to the site inspection finding, no muddy effluent discharged from Portion D entrance was observed at Kong Nga Po Road. Wastewater generated from wheel washing, construction works or surface runoff was collected and treated in wastewater treatment facilities. Wastewater treatment facilities were functioning properly. No Limit Level exceedance for pH, suspended solid and chemical oxygen demand was recorded in effluent discharge monitoring. | Closed |
| | | | | problem. | In order to avoid any circumstances that may lead to the complaint, ET and IEC have recommended enhancement on water quality mitigation measures. The Contractor had undertaken the follow up actions and additional mitigation measures on drainage system to minimize the water quality impact arising from the construction works as follow: • Provision of soil berm at edge near retaining wall DAM Bay 43-46 • Setting up of wastewater treatment facilities near wheel washing bay | |

| Complaint Log Ref. | EPD Log Ref. | Location | Received Date | Details of Complaint | Investigation/ Mitigation Action | Status |
|-----------------------|--------------|---------------------|------------------------------------|--|---|--------|
| | | | | | Re-formation of haul road in Portion D Provision of soil berm near Platform B Increase in capacity of retention pit near Platform B Reinforcement of soil berm near excavation area and near retaining wall at Portion D to minimize water leakage Regular maintenance of clear U-channel which was blocked by natural debris at Kong Nga Po Road Nevertheless, the Contractor was reminded to ensure the wastewater generated from construction works must comply with the condition stated in the Effluent Discharge license and enhance sediment control measure regarding storm water management to assure no muddy water is being discharged from the construction site. The environmental conditions of the site and the control of works will be continuously | |
| | | | | | reviewed and monitored by the Supervisor, ET and IEC. | |
| C-003 | N/A | Kong Nga Po Road | 8 th October 2020 | The complainant complained about the muddy water discharged from construction site into Kong Nga Po Road during heavy rainfall. Also, he concerned if there is illegal discharge | muddy effluent discharge was observed on road surface and road drainage along the Kong Nga Po road section from construction site to the location of complaint during rainfall. Also, no direct slope surface and pathway for muddy water outflew from the site to the location of complaint was observed. Potential source of | Closed |

| Complaint Log Ref. | EPD Log Ref. | Location | Received Date | Details of Complaint | Investigation/ Mitigation Action | Status |
|-----------------------|--------------|---------------------|-------------------------------------|---|--|--------|
| | | | | and if the design of drainage system is sufficient to handle the discharge. | natural surface runoff from shrubland and grassland along the Kong Nga Po Road during heavy rainfall. Continuous improvement works on the temporary | |
| C-004 | N/A | Kong Nga Po Road | 28 th October 2020 | The complainant complained about the polluting effluent discharged from construction site, leading to flooding and water pollution problem. | drainage system at Project site have been conducted for water pollution control since September 2020. Regular checking were carried out by the Contractor to ensure the system is working properly. All wastewater were collected and treated to ensure discharge comply with condition stated in the Effluent Discharge Licence. In addition, the Contractor has taken the following mitigation measures to minimize the water quality impact arising from the construction works: Regular inspection and maintenance on sediment control measure at Project site; Ad-hoc inspection on the water pollution control measures at Project site before onset of the typhoon; Regular maintenance record on wastewater treatment facilities; and Provision of vegetated filter strips at outer side of existing soil berms and slope surface to act as natural filtration for water pollution control. The environmental condition of the site and the control of work will be continuously reviewed and monitored by the Supervisor, ET and IEC. | |

| Complaint Log Ref. | EPD Log Ref. | Location | Received Date | Details of Complaint | Investigation/ Mitigation Action | Status |
|-----------------------|--------------|--|-------------------------------------|---|--|--------|
| C-005 | N/A | Slope Feature A at Kong Nga Po Road | 28 th October 2020 | The complainant complained about the noise generated from the construction activities at Slope Feature A that caused annoyance to his family. | According to the results from regular noise monitoring, no Limit Level exceedance was recorded at sensitive receivers during the time of complaint. In addition, there was no environmental deficiency regarding construction noise impact was recorded during site inspection. In view of the above, it is considered that no adverse construction noise impact was brought to the nearby sensitive receivers due to the site works. Upon receipt of the complaint, the Contractor had undertaken the follow up action as follow: Setting up of double layers of noise barrier to block the transmission of noise from breaking point to Noise Sensitive Receivers; Conducting internal noise monitoring to ensure the noise mitigation measures are properly implemented; and To check and maintain the noise insulating fabric enclosed the noisy part of the breaker. Nevertheless, the Contractor was reminded to fully implement the relevant noise mitigation measures according to the EM&A Manual on site, such as To frequently check and maintain the acoustic materials wrapped on noisy part of PME and ensure no gaps between noise barriers; To proactively identify any potential construction noise impact to NSRs and provide sufficient mitigation measures if necessary; To provide regular training to the workers to | Closed |

| Complaint Log Ref. | EPD Log Ref. | Location | Received Date | Details of Complaint | Investigation/ Mitigation Action | Status |
|-----------------------|------------------------|---|--------------------------------------|--|---|--------|
| | | | | | increase awareness of their environmental responsibilities and minimize the noise impact to the nearby residents during working hours as well as restricted hours; To provide notification to nearby villagers in Kong Nga Po for potential noisy works at works area | |
| C-006 | N/A | Portion C at Kong Nga Po Road | 30 th November 2020 | The complainant complained about the noise nuisance from the construction activities at Portion C on Kong Nga Po Road. | No complaint investigation is required as this complaint has been withdrawn by the complainant. | Closed |
| C-007 | N/A | Portion C at Kong Nga Po Road | 30 th November 2020 | The complainant complained about the muddy water discharged from construction site into nearby drainage system and some oil slicks observed at the downstream of the drainage. | No complaint investigation is required as this complaint has been withdrawn by the complainant. | Closed |
| C-008 | EP3/N07/RN/8845- 21 | Near Lamp Post BD2370 at Kong Nga Po Road | 19 th April 2021 | The complainant complained about suspected dumping soil at nullah, causing blockage and flooding near lamp post BD2370. | According to the finding of <i>ad-hoc</i> site inspection conducted by the Contractor, no excavation nor construction works were carried out by ND/2018/01 near Lamp Post BD2370. Slope excavation was carrying out at Slope Feature 3NW-C/C38, the disposal was recorded and controlled by trip ticket system. Existing U-channel near slope toe had been covered | Closed |

| Complaint Log Ref. | EPD Log Ref. | Location | Received Date | Details of Complaint | Investigation/ Mitigation Action | Status |
|-----------------------|--------------|------------------------------------|-------------------------------------|--|--|--------|
| | | | | | and surface runoff was guided to sedimentation tank by submersible pump. No discharge was taken place due to dry season and excavation was not a wastewatergenerated activity. | |
| | | | | | Upon receipt of the complaint, the Contractor had undertaken the follow up action as follow: • Excavated slop had been covered by erosion mat • Strictly implemented trip ticket system to monitor the C&D waste disposal • Deployed sufficient submersible pump and wastewater treatment facilities for the surface runoff treatment | |
| C-009 | N/A | Kong Nga Po Road (Feature A) | 22 nd October 2021 | The complainant complained about noise generated from rock breaking activities at Construction Site caused nuisance to his family and the village. | In addition, Contractor has also undertaken the follow up action as follow: • The hammer of excavator had been wrapped with | Closed |

| Complaint Log Ref. | EPD Log Ref. | Location | Received Date | Details of Complaint | Investigation/ Mitigation Action | Status |
|-----------------------|--------------|---------------------|--------------------------------------|--|---|--------|
| | | | | | To frequently check and maintain the acoustic materials wrapped on noisy part of PME and ensure no gaps between noise barriers; To proactively identify any potential construction noise impact to NSRs and provide sufficient mitigation measures if necessary; o provide regular training to the workers to increase awareness of their environmental responsibilities and minimize the noise impact to the nearby residents during working hours as well as restricted hours; and To provide notification to nearby villagers in Kong Nga Po for potential noisy works at works area. | |
| C-010 | N/A | Kong Nga Po Road | 18 th November 2021 | The complainant complained about noise and vibration generated from sheet-piling works and rock breaking works for pipe laying works at Kong Nga Po Road | Noise mitigation measures have been implemented for sheet-piling works as below: noisy part of sheet-piling plant has been enclosed by sound insulation materials; proactive environmental protection proforma has been prepared to identify the potential noise impact to NSRs and corresponding mitigation measures has been implemented; toolbox talk training for site engineers and frontline workers on construction noise suppression has been conducted. In addition, noise mitigation measures have been implemented for rock breaking activities as below: hammer of the excavator has been wrapped by | Closed |

| | | GD0460 at Kong Nga Po Road | | Noise from construction activities that caused nuisance to public Vibration may cause damage to nearby structure Suspected muddy water discharged into private drainage | during the investigation as below: Noise & Vibration - Additional noise barrier has been erected for the pre-boring works to minimize the noise transmitted | |

| Complaint Log Ref. | EPD Log Ref. | Location | Received Date | Details of Complaint | Investigation/ Mitigation Action | Status |
|-----------------------|--------------|---|-------------------------------|--|---|--------|
| | | | | | Leq,T = 58.7dB(A) that no exceedance of noise level from the pre-boring works. self-monitoring on vibration at the NSR has been conducted and the result showed a vibration level of 2.977mm/s that was far lower than the Peak Particle Velocity Limits of 15mm/s. Muddy Water Discharge additional clearance works for the existing drainage to help to clear the soil accumulated in the drainage brought from nearby existing earth and to ensure no blockage of the drainage. | |
| C-013 | N/A | Works Area Near Lamp Post BD2355 at Kong Nga Po Road | 23 rd June 2022 | The complainant complained about vibration from construction activities that caused nuisance to a nearby Sensitive Receiver of the Police Dog Unit and Force Search Unit Training School (HKPDU) | The main construction works near the HKPDU mentioned by the complainant was the pre-boring works at Works Area "RD-A". The works were commenced on 11 June 2022 and completed on 21 June 2022. The following observations were made during the investigation: - no vibration was noticed during the site inspection at Works Area "RD-A" for the pre-boring works on 15 June 2022 - a difference in elevation (at least 3m) between the Works Area "RD-A" and the nearby Sensitive Receiver was formed after the completion of backfilling for the retaining wall system and might has already reduced the vibration transmission to the Sensitive Receiver The following additional measures were implemented by the Contractor: | Closed |

| Complaint Log Ref. | EPD Log Ref. | Location | Received Date | Details of Complaint | Investigation/ Mitigation Action | Status |
|-----------------------|--------------|---|------------------------------|--|--|--------|
| | | | | | self-monitoring on vibration at the nearby Sensitive Receiver was conducted on 21 June 2022 and the result showed a vibration level of 0.348 mm/s that was far lower than the Peak Particle Velocity Limits of 15mm/s feasibility of alternative working methods to further minimize the vibration to nearby Sensitive Receivers for upcoming pre-boring works at other works area will be considered by the Contractor | |
| C-014 | N/A | Works Area Near Lamp Post GD0460 at Kong Nga Po Road | 17 th Aug 2022 | The complainant complained about the muddy surface runoff flowing from the construction site into the private lots during rainy days | According to the finding of ad-hoc site inspection conducted during raining on 13 August 2022, the surface runoff was flowing from the carriageway surface and passing through Kong Nga Po Bridge works area, where had been hard paved, to the lower drainage. No muddy water generated from the construction works area was observed. The discharged effluent from the wastewater treatment system has been sampled on 24 July 2022 and the test report showed a result of Total Suspended Solid of < 1mg/L which complied with the requirement of < 30mg/L as stipulated in Discharge Licence. In addition, the suspected complaint location is an existing low-lying area even before the commencement of the construction. The water accumulation at the suspected location of complaint is considered due to the existing terrain according to the initial topographic survey records. | Closed |
