## Attention: Mr. Gary CHUNG

15 September 2023

Dear Gary,

## Port Shelter Sewerage, Stage 3 - Sewerage Works at Po Toi 0

Monthly EM\&A Report for August 2023

Reference is made to your submission of the Monthly EM\&A Report for August 2023 received by email on 11 September 2023 and the subsequent revision on 14 September 2023. We are pleased to inform you that we have no adverse comment on the captioned report.

Thank you for your attention. Please do not hesitate to contact the undersigned should you have any queries.

Yours faithfully,

F.C. Tang

## 1. EXECUTIVE SUMMARY

1.1 The proposed sewerage works in Po Toi O (hereafter as "the Project") is an environmental enhancement project that aims to improve environmental hygiene of the Po Toi O area. The Environmental Impact Assessment (EIA) Report for the Project (Register No: AEIAR-206/2017) was approved on 27 January 2017. The Environmental Permit (EP) (Permit No.: EP-516/2016) was issued on 27 January 2017 and is the current permit for the Project.
1.2 Société Générale de Surveillance (SGS) Hong Kong Limited has been appointed by Drainage Services Department (DSD) under service contract no. SD 3/2022 as the Environmental Team (ET) to undertake the EM\&A programme during construction phase of the Project in accordance with the approved EM\&A Manual for the Project.
1.3 This is the $30^{\text {th }}$ monthly Environmental Monitoring \& Audit (EM\&A) Report prepared by SGS for the Project. This report summarized the monitoring results and audits findings of the EM\&A programme under the EP and the EM\&A Manual of the Project during the reporting period of 1 August 2023 to 31 August 2023.

## Key Construction Works During the Reporting Period

1.4 The main works undertaken during the reporting period are as follows:

- Major activities in the reporting month:
a) Construction of village sewer;
b) Slope works;
c) Construction of ELS for Po Toi O Sewage Treatment Plant;

## Summary of Exceedances, Investigation and Follow-up

1.5 There was no action or limit level exceedance record of construction noise and air quality was recorded in the reporting month.

## Complaint Handling, Prosecution and Public Engagement

1.6 No complaints, notification of summons and successful prosecution was received in the reporting period. No public engagement activity was conducted in the reporting month.
1.7 No notification of summons and successful prosecution was received in the reporting period. No public engagement activity was conducted in the reporting month.
1.8 No air quality, noise and water complaints was received in the reporting month.

|  |  | Rev. | 01 |

## Reporting Change of EM\&A Programme

1.9 No reporting change of the EM\&A programme in this reporting month.

## Future Key Issues

1.10 The main works will be anticipated in the next reporting period are as follows:
-Major activities in the upcoming month:

- Construction of village sewer;
- Slope works;
- Construction of ELS for Po Toi O Sewage Treatment Plant

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | 6 |

## 2. INTRODUCTION

## Project Information

2.1 Société Générale de Surveillance (SGS) Hong Kong Limited has been appointed by Drainage Services Department (DSD) as the Environmental Team (ET) to undertake the EM\&A programme during construction phase of the Project in accordance to the approved EM\&A Manual for the proposed sewerage works in Po Toi O (hereafter as "The Project"), an environmental enhancement project that aims to improve environmental hygiene of the Po Toi O area.

## Project Background

2.2 Po Toi O is located in the southern part of Sai Kung District, next to Clear Water Bay. There is a small settlement called Po Toi O village around the bay. There is currently no public sewerage system for the village. Sewage and wastewater generated by local residents and local restaurants are treated by septic tanks/ soakaway system (STS).
2.3 Sewage works at Po Toi O comprise sewage collection, treatment and disposal facilities at Po Toi O under Port Shelter Sewerage, Stage 3 - Sewerage Works at Po Toi O.
2.4 The Project in Po Toi O mainly comprises of the following items:
a. Provision of village sewerage to the unsewered areas of Po Toi O. The works involve construction of about 800 m of gravity sewers and 400 m of rising mains;
b. Construction of a local sewage treatment plant (STP) with Average Dry Weather Flow (ADWF) of about $139 \mathrm{~m} 3 /$ day; and
c. Construction of a submarine outfall of about 385 m in length.
2.5 The Project consists of the following works, which are classified as Designated Projects under Part I, Schedule 2 of the Environmental Impact Assessment Ordinance (EIAO):
a. Item Q. 1 - A sewage treatment plant and portion of sewer alignments in a conservation area;
b. Item C. 12 (a) (v) and (vii) - A dredging operation which is less than 500 m from the nearest boundary of an existing fish culture zone and coastal protection area; and
c. Item F. 6 - A submarine sewage outfall.
2.6 The Environmental Impact Assessment (EIA) Report "Port Shelter Sewerage, Stage 3 - Sewerage Works at Po Toi O" (Register No: AEIAR-206/2017) was approved on 27 January 2017. An Environmental Permit (EP) (Permit No.: EP-516/2016) was issued on 27 January 2017 and is the current permit for the Project. The EM\&A programme of the Project shall be implemented in accordance with the requirements and procedures set out in the EM\&A Manual and the Environmental Permit (EP) of the Project (Permit No.: EP-516/2016).

2.7 The air quality and noise baseline monitoring works were conducted from 23 December 2020 to 5 January 2021 and the water quality baseline monitoring work was conducted from 17 December 2020 to 12 January 2021. A Baseline Monitoring Report had been submitted to EPD on 10 March 2021.

## Scope of Report

2.8 This is the $30^{\text {th }}$ EM\&A Report prepared by SGS for the Port Shelter Sewerage, Stage 3 - Sewerage Works at Po Toi O. This report summarized the monitoring results and audits findings of the EM\&A programme under the EP of the Project and in accordance with the EM\&A Manual during the reporting period of 1 August 2023 to 31 August 2023.

## Project Organisation

2.9 The project organization structure is shown in Appendix A. The key personnel contact names and numbers are summarized in Table 2-1.

Table 2-1 Contact information of key personnel

| Position | Party | Name | Telephone |
| :---: | :---: | :---: | :---: |

|  |  | Date | Sep 23 |

## Construction Programme and Activities

2.10 The main works undertaken in the reporting period are as follows:

Major activities in the reporting month:

1. Construction of village sewer;
2. Slope works;
3. Construction of ELS for Po Toi O Sewage Treatment Plant;

The Construction Programme is shown in Appendix B. The general layout plan of the Project is shown in Figure 2-1.

|  |  | Rev. | 01 |

## 3. AIR QUALITY

## Monitoring Requirements

3.1 In accordance with the EM\&A Manual, impact air quality monitoring shall be carried out throughout the construction period at all approved air quality monitoring locations (AMSs). 24- hours total suspended particles (TSP) monitoring shall be conducted at least once every 6 days. Meanwhile, 1-hour TSP monitoring shall be conducted at least 3 times every 6 days when the highest dust impact takes place. The Action and Limit levels for 1 -hour and 24 -hours TSP level are provided in Table 3-1 and Table 3-2.

Table 3-1 Action and Limit Levels for 1-hour-TSP

| Parameter | Air Quality Monitoring Station (AMSs) | Action Level ( $\mu \mathrm{g} / \mathrm{m}^{3}$ ) | Limit Level ( $\mu \mathrm{g} / \mathrm{m}^{3}$ ) |
| :---: | :---: | :---: | :---: |
| 1-hr TSP ( $\mu \mathrm{g} / \mathrm{m}^{3}$ ) | AMS1N | 319 | $500 \mu \mathrm{~g} / \mathrm{m}^{3}$ |
|  | AMS2N1 | 279 |  |
|  | AMS3N | 303 |  |
|  | AMS4N | 278 |  |

Table 3-2 Action and Limit Levels for 24-hour-TSP

| Parameter | Air Quality <br> Monitoring Station <br> (AMSs) | Action Level $\left(\mu \mathrm{g} / \mathbf{m}^{3}\right)$ | Limit Level $\left(\mu \mathrm{g} / \mathbf{m}^{3}\right)$ |
| :---: | :---: | :---: | :---: |
| $24-\mathrm{hr}$ TSP $\left(\mu \mathrm{g} / \mathrm{m}^{3}\right)$ | AMS1N | 153 | $260 \mu \mathrm{~g} / \mathrm{m}^{3}$  <br>  AMS2N1 |
|  | AMS3N | 179 |  |
|  | AMS4N | 158 |  |

| Works at Po Toi O |  | | Page | 10 |
| :--- | :--- |
|  | Monthly EM\&A Report |

## Monitoring Equipment

3.2 The 24-hour TSP air quality monitoring was performed using High Volume Air Samplers (HVS) at each of the designated monitoring stations. The HVS are calibrated by a HVS calibrator. Meanwhile 1-hour TSP air quality monitoring was performed using portable TSP monitors. The equipment used for air quality monitoring are given in Table 3-3.

Table 3-3 Equipment Used for Air Quality Monitoring

| Air Quality Monitoring | Brand and Model of Equipment | Serial Number |
| :---: | :---: | :---: |
| 24-hour TSP* | Graseby GMW High Volume Sampler | 1180 |
|  |  | 1174 |
|  |  | 9795 |
|  |  | 2483 |
|  | Tisch TE-5025A High Volume Sampler Calibrator | 4128 |
| 1-hour TSP | Sibata LD-3B Portable TSP Monitors | 014746 |
|  |  | 155331 |
|  |  | 597340 |
|  |  | 597227 |

3.3 Meteorological information (such as the humidity, rainfall, air pressure and temperature etc.) were collected from Hong Kong Observatory (HKO)'s Weather Stations.
3.4 According to the approved EM\&A Manual, wind data monitoring equipment shall be provided and setup for logging wind speed and wind direction near the dust monitoring locations. The equipment installation location shall be proposed by the ET and agreed with the IEC. For installation and operation of wind data monitoring equipment, the following points shall be observed:
a. The wind sensors should be installed 10 m above ground so that they are clear of obstructions or turbulence caused by buildings.
b. The wind data should be captured by a data logger. The data shall be downloaded for

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | 11 |
| :--- | :--- | :--- | :--- | :--- |
|  |  | Ref\# | EMA2204/03/22 |
|  |  | Rev. | 01 |

analysis at least once a month.
c. The wind data monitoring equipment should be re-calibrated at least once every six months.
d. Wind direction should be divided into 16 sectors of 22.5 degrees each.
3.5 It is noted that after liaison with the Po Toi O resident's representative on 22 December 2020, the resident's representative has rejected the access to the space and power supply for ET to install the wind data monitoring stations. Therefore, ET had proposed the alternative method for wind data collection according to section 3.4.7 of EM\&A Manual.
3.6 The alternative method for wind data collection was adopt the wind data information collected from the HKO's Waglan Island weather station as the representative wind data. Although there are other closer weather stations, Waglan Island Station was selected as it is the nearest weather station that measures wind data information mentioned above.
3.7 The meteorological data from HKO's Weather Station is given in Appendix C.

## Monitoring Parameters, Frequency and Duration

3.8 The parameters, duration and frequency for air quality impact monitoring is given in Table 3-4. Monitoring stations AMS1N, AMS2N1, AMS3N and AMS4N were set up in accordance to the requirements for placement of equipment, as set out in section 3.5.3 of the EM\&A manual of the Project. Locations of the alternative AMSs are given in Figure 3-1.

Table 3-4 Monitoring Parameters for Air Quality Monitoring

| Identification no. | Location | Type of monitoring | Parameters | Frequency |
| :---: | :---: | :---: | :---: | :---: |
| AMS1N* | Footpath above House No. 28 Po Toi O Chuen Road | TSP | 1-hr TSP <br> 24-hr TSP | 1-hour TSP: At least 3 times for 1-hour with every 6 days <br> 24-hour TSP: Once every 6 days |
| AMS2N1* | Open space Approx. 15 $m$ from Hung Shing Temple |  |  |  |
| AMS3N* | Vacant land near Temporary Structure (House) Rocky Shore |  |  |  |
| AMS4N* | Resting shelter near Seacrest Villas |  |  |  |

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | 12 |
| :--- | :--- | :--- | :--- | :--- |
|  |  | Ref\# | EMA2204/03/22 |
|  |  | Rev. | 01 |

Notes:
*- Due to a number of limitations identified at the air quality monitoring stations in the Approved EM\&A Manual for the Project, the monitoring location AMS1 - AMS4 were replaced by alternative monitoring location AMS1N - AMS4N, which were approved by ER and IEC.

## Monitoring Methodology for 24-hour TSP Monitoring

3.9 The HVS was installed in the vicinity of the air quality monitoring stations. The following criteria were considered in the installation of the HVS:
a. A horizontal platform with appropriate support to secure the sampler against gusty wind was provided.
b. The distance between the HVS and any obstacles, such as buildings, was at least twice the height that the obstacle protrudes above the HVS.
c. A minimum of 2 meters separation from walls, parapets and penthouse for rooftop sampler.
d. A minimum of 2 meters separation from any supporting structure, measured horizontally.
e. No furnace or incinerator flues nearby.
f. Airflow around the sampler was unrestricted.
g. Permission was obtained to set up the samplers and access to the monitoring stations.
h. A secured supply of electricity was obtained to operate the samplers.
i. The sampler was located more than 20 meters from any dripline.
j. Any wire fence and gate, required to protect the sampler, did not obstruct the monitoring process.
k. Flow control accuracy was kept within $\pm 2.5 \%$ deviation over 24 -hour sampling period.
3.10 The following procedures to be followed for the preparation of filter papers of the HVS:
a. Glass fibre filters, G810 were labelled and sufficient filters that were clean and without pinholes were selected.
b. All filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around $25^{\circ} \mathrm{C}$ and not variable by more than $\pm 3^{\circ} \mathrm{C}$; the relative humidity ( RH ) was $<50 \%$ and not variable by more than $\pm 5 \%$. A convenient working RH was $40 \%$.
c. All filter papers were prepared and analysed by a HOKLAS accredited laboratory and has comprehensive quality assurance and quality control programmes.

3.11 The following procedures are followed throughout air quality monitoring works:
a. The power supply was checked to ensure the HVS works properly.
b. The filter holder and the area surrounding the filter were cleaned.
c. The filter holder was removed by loosening the four bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully.
d. The filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter.
e. The swing bolts were fastened to hold the filter holder down to the frame. The pressure applied was sufficient to avoid air leakage at the edges.
f. Then the shelter lid was closed and was secured with the aluminum strip.
g. The HVS was warmed-up for about 5 minutes to establish run-temperature conditions.
h. A new flow rate record sheet was set into the flow recorder.
i. On site temperature and atmospheric pressure readings were taken and the flow rate of the HVS was checked and adjusted at around $1.1 \mathrm{~m} 3 / \mathrm{min}$ and complied with the range specified in the updated EM\&A Manual (i.e., 0.6-1.7 m3/min).
j. The programmable digital timer was set for a sampling period of 24 hrs , and the starting time, weather condition and the filter number were recorded.
k. The initial elapsed time was recorded.
I. At the end of sampling, on site temperature and atmospheric pressure readings were taken and the final flow rate of the HVS was checked and recorded.
m. The final elapsed time was recorded.
n. The sampled filter was removed carefully and folded in half-length so that only surfaces with collected particulate matter were in contact.
o. It was then placed in a clean plastic envelope and sealed.
p. All monitoring information was recorded on a standard data sheet.
3.12 The following procedures are followed for the maintenance and calibration of HVS:
a. The HVS and its accessories were maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
b. 5-point calibration of the HVS was conducted using TE-5025A Calibration Kit prior to the commencement of monitoring. Bi-monthly 5-point calibration of the HVS will be carried out

during impact monitoring. The details for HVS calibration against the TE-5025A Calibration Kit is given in Appendix D.

## Monitoring Methodology for 24-hour TSP Monitoring by Direct Reading Dust Meters

3.13 Since power supply for HVS for 24 -hour TSP monitoring at alternative monitoring locations (i.e., AMS1N to AMS4N) were rejected, the use of direct reading dust meters is adopted to measure both 1 -hour and 24 -hour average TSP levels for the reporting month.
3.14 In accordance to Condition 3.1 of the Project's EP and Section 3.3 of the Project's EM\&A Manual, the proposal for alternative monitoring equipment (i.e., direct reading dust meter) for TSP monitoring was approved by IEC and ER.
3.15 The measuring procedures of the direct reading dust meters are given in Section 3.5.10.
3.1624 consecutive 1-hour TSP concentration measurement results is adopted for the evaluation of 24-hour TSP concentration. Results are manually logged daily, during daily maintenance of the dust meter. Calculation of the value of 24 -hour TSP concentration is given by the average of 24 calculated 1 -hour TSP concentration, where the calculated 1 -hr TSP concentration is given by the product of the direct reading and the K-factor based on the correlation results between the direct reading meter and HVS. Details for the correlation methodology and correlation record are given in Appendix D and Appendix E.
3.17 HVS for 24-hr TSP monitoring will be adopted once secured supply of electricity becomes available for any agreed TSP monitoring locations.

## Monitoring Methodology for 1-Hour TSP Monitoring

3.18 The measuring procedures of the direct reading dust meters were in accordance with the Manufacturer's Instruction Manual as follows:
a. Turn the power on.
b. Close the air collecting opening cover.
c. Push the "TIME SETTING" switch to [BG].
d. Push "START/STOP" switch to perform background measurement for 6 seconds.
e. Turn the knob at SENSI ADJ position to insert the light scattering plate.
f. Leave the equipment for 1 minute upon "SPAN CHECK" is indicated in the display.
g. Push "START/STOP" switch to perform automatic sensitivity adjustment. This measurement takes 1 minute.
h. Pull out the knob and return it to MEASURE position.

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage Works at Po Toi O | Page | 15 |
| :---: | :---: | :---: | :---: |
|  |  | Ref\# | EMA2204/03/22 |
|  | Monthly EM\&A Report | Rev. | 01 |
|  |  | Date | Sep 23 |

i. Push the "TIME SETTING" switch the time set in the display to 3 hours.
j. Lower down the air collection opening cover.
k. Push "START/STOP" switch to start measurement.
3.19 The following procedures are followed for the maintenance and calibration of direct reading dust meters:
a. The 1-hour TSP meter was calibrated at 1-year intervals against with high volume sampler.
b. Calibration certificates of the Laser Dust Monitors are provided in Appendix D. 1-hour validation checking of the TSP meter against HVS is carried out yearly at the air quality monitoring locations.

## Monitoring Results and Observations

3.20 The schedule for environmental monitoring in the reporting period is provided in Appendix F.
3.21 The air quality monitoring results for 1-hour and 24-hour air quality monitoring are summarized in Table 3-6 and Table 3-7. Air quality monitoring data and graphical presentation of the data are provided in Appendix G.

Table 3-6 1-hour Air Quality Monitoring Results in the Reporting Period

| Parameter | Monitoring Station | Average $\left(\mu \mathrm{g} / \mathrm{m}^{3}\right)$ | Range $\left(\mu \mathrm{g} / \mathrm{m}^{3}\right)$ |
| :---: | :---: | :---: | :---: |
| 1 -hr TSP in $\mu \mathrm{g} / \mathrm{m}^{3}$ | AMS1N | 53.1 | $27-84$ |
|  | AMS2N1 | 62.9 | $30-113$ |
|  | AMS3N | 47.1 | $28-72$ |
|  | AMS4N | 48.7 | $29-73$ |

Table 3-7 24-hour Air Quality Monitoring Results in the Reporting Period

| Parameter | Monitoring Station | Average $\left(\mu \mathrm{g} / \mathrm{m}^{3}\right)$ | Range $\left(\mu \mathrm{g} / \mathrm{m}^{3}\right)$ |
| :---: | :---: | :---: | :---: |
| $24-\mathrm{hr}$ TSP in $\mu \mathrm{g} / \mathrm{m}^{3}$ | AMS1N | 44.0 | $28-65$ |
|  | AMS2N1 | 53.4 | $28-80$ |
|  | AMS3N | 41.6 | $25-60$ |

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | 16 |
| :--- | :--- | :--- | :--- | :--- |
|  |  | Ref\# | EMA2204/03/22 |
|  |  | Rev. | 01 |
|  |  | Date | Sep 23 |

|  | AMS4N | 43.8 | $26-63$ |
| :--- | :---: | :---: | :---: |

3.22 No Action or Limit Level exceedances of air quality were recorded in the reporting month. No air quality complaints between 0700 - 1900 hours on normal weekdays (i.e., Mondays to Saturdays) were received in the reporting month.

## Other Influencing Factors of the Monitoring Results

3.23 Major emission sources during air quality monitoring in the reporting period were mainly vehicle emission from Po Toi O Chuen Road and nearby residents' activities.
3.24 The event and action plan for air quality monitoring are given in Appendix H.

## 4. NOISE

## Monitoring Requirements

4.1 In accordance with the EM\&A Manual, noise impact monitoring was conducted during daytime construction work on normal weekdays (0700-1900 hours between Monday to Saturday), 1 set of 30-min measurement shall be carried out at approved noise monitoring stations (NMSs) every week based on the measurement procedures under EPD's" Technical Memorandum for the Assessment of Noise from Places Other Than Domestic Premises, Public Places or Construction Sites". The Action and Limit levels for construction noise monitoring is provided in Table 4-1.

Table 4-1 Action and Limit Levels for Construction Noise

| NMSs ID | Noise <br> Sensitive <br> Receivers | Descriptions | Action Level | Limit <br> Level |
| :---: | :---: | :---: | :---: | :---: |
| NMS1N | PTO_N1 | Footpath Above House No. 28 <br> Po Toi O Chuen Road |  |  |
| NMS2N1 | PTO_N2 | Open Space Approx. 15 m from <br> Hung Shing Temple | When one <br> documented complaint <br> is received from any <br> one of the noise <br> sensitive receivers | 75 dB(A)* |
| NMS3N | PTO_N3 | Vacant Land Near Temporary <br> Structure (House) Rocky Shore |  |  |
| NMS4N | PTO_N4 | Resting Shelter Near Seacrest <br> Villas |  |  |

## Monitoring Equipment

4.2 Noise monitoring was completed using sound level meters at each NMSs. The sound levels meters deployed comply with the International Electrotechnical Commission Publications (IEC) 651:1979 (Type 1) and 804:1985 (Type 1) specifications. Acoustic calibrator was deployed to calibrate the sound level meters at a given sound pressure level. The equipment used for noise impact monitoring is given in Table 4-2.

Table 4-2 Noise Monitoring Equipment

## Monitoring Locations

4.3 Due to the limitation posed by the approved monitoring stations set out by the EM\&A manual, alternative monitoring stations NMS1N, NMS2N1, NMS3N and NMS4N were proposed in accordance to Section 4.5 .3 of the EM\&A Manual of the Project and approved from the ER and the IEC. The locations of the NMSs are given in Figure 3-1, and the details of the monitoring stations are illustrated in Table 4-3.

Table 4-3 Description of Proposed Noise Monitoring Locations

| NMSs ID | Location | Type of measurement | Type of Monitoring | Duration |
| :---: | :---: | :---: | :---: | :---: |
| NMS1N* | Footpath above House No. 28 <br> Po Toi O Chuen Road | Free-Field | Noise | 30 mins |
| NMS2N1* | Open space approximately 15 m from Hung Shing Temple |  |  | 30 mins |
| NMS3N* | Vacant land near Temporary <br> Structure (House) Rocky Shore |  |  | 30 mins |
| NMS4N* | Resting shelter near Seacrest <br> Villas |  |  | 30 mins |

[^0]|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | 19 |
| :--- | :--- | :--- | :--- | :--- |
|  |  | Ref\# | EMA2204/03/22 |
|  |  | Rev. | 01 |

## Monitoring Parameters and Frequency

4.4 The monitoring parameters, frequency and duration of impact noise monitoring are summarized in Table 4-4.

Table 4-4 Parameters for Noise Impact Monitoring

| Parameter and Duration | Frequency |
| :---: | :---: |
| 30-mins measurement at each monitoring station <br> between 0700 and 1900 on normal weekdays. <br> Leq, $L_{10}$ and L90 would be recorded | At least once per week |

## Monitoring Methodology

4.5 The measuring procedures of the sound level meter were in accordance with the Manufacturer's Instruction Manual as follows:
a. Free-field measurement was made for the noise monitoring stations.
b. The sound level meter was set on a tripod at a height of 1.2 m above the ground.
c. The battery condition was checked to ensure the correct functioning of the meter.
d. Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
i. frequency weighting: A
ii. Time weighting: Fast
iii. Time measurement: Leq(30-minutes) during non-restricted hours i.e., 07:00-1900 on normal weekdays; Leq(5-minutes) during restricted hours i.e., 19:00 23:00 and 23:00-07:00 of normal weekdays, whole day of Sundays and Public Holidays
e. Prior to and after each noise measurement, the meter was calibrated using the acoustic calibrator at a specified sound pressure level at a specified frequency. If the difference in the calibration level before and after measurement was more than $1 \mathrm{~dB}(\mathrm{~A})$, the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
f. During the monitoring period, the Leq, L10 and L90 were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
g. Noise measurement was paused during periods of high intrusive noise (e.g., dog barking, helicopter noise) if possible. Observations were recorded when intrusive noise was unavoidable.
h. Noise monitoring was cancelled in the presence of fog, rain, wind with a steady speed exceeding $5 \mathrm{~m} / \mathrm{s}$, or wind with gusts exceeding $10 \mathrm{~m} / \mathrm{s}$.

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | 20 |
| :--- | :--- | :--- | :--- | :--- |
|  | Monthly EM\&A Report | Ref\# | EMA2204/03/22 |
|  |  | Rev. | 01 |

4.6 The following procedures are followed for the maintenance and calibration of sound level meters:
a. The microphone head of the sound level meter was cleaned with soft cloth at regular
b. intervals.
c. The meter and calibrator were sent to the supplier or HOKLAS laboratory to check
d. and calibrate at yearly intervals.
e. Calibration certificates of the sound level meters, and acoustic calibrators are provided in Appendix I.

## Monitoring Results and Observations

4.7 The schedule for environmental monitoring in the reporting period is provided in Appendix $\mathbf{F}$.
4.8 The monitoring results for construction noise are summarized in Table 4-5. The noise monitoring data graphical presentation of the data is provided in Appendix $\mathbf{J}$.

## Table 4-5 Summary of Construction Noise Monitoring Results in the Reporting Period

| NMSs ID | Construction Noise <br> Level, <br> $\mathrm{dB}(\mathrm{A})^{*}$, Leq (30 min) | Baseline Level, dB(A) | Limit Level, db(A) |
| :---: | :---: | :---: | :---: |
| NMS1N | $64.3 \mathrm{~dB}(\mathrm{~A})$ | $62.7 \mathrm{~dB}(\mathrm{~A})$ |  |
| NMS2N1 | $61.6 \mathrm{~dB}(\mathrm{~A})$ | $61.8 \mathrm{~dB}(\mathrm{~A})$ | 75 |
| NMS3N | $58.9 \mathrm{~dB}(\mathrm{~A})$ | $64.6 \mathrm{~dB}(\mathrm{~A})$ | 75 |
| NMS4N | $53.7 \mathrm{~dB}(\mathrm{~A})$ | $58.1 \mathrm{~dB}(\mathrm{~A})$ | 75 |

## Note

*- A correction of $+3 \mathrm{~dB}(\mathrm{~A})$ was made to the free field measurements. Leq $(30 \mathrm{~min})$ was measured at $0700-1900$ hours on normal weekdays.
4.9 No Action or Limit Level exceedance of construction noise was recorded in the reporting month.
4.10 No noise complaints from between 0700 - 1900 hours on normal weekdays was received in the reporting month.
4.11 The event and action plan are provided in Appendix H.

## Other Influencing Factors of the Monitoring Results

4.12 Major noise sources during noise monitoring in the reporting period were mainly road traffic noise.

## 5. WATER QUALITY

## Monitoring Requirements

5.1 With the recommendations of the Project's EIA report, water quality impact monitoring shall be carried out carried out 3 days per week, at mid-flood and mid-ebb tides (within $\pm 1.75$ hour of the predicted time required) at all the approved Water Quality Monitoring Stations (WQMSs) during whole cofferdam installation/extraction work and during dredging works. The interval between two sets of monitoring shall not be less than 36 hours.
5.2 Replicate in-situ measurements of Suspended Solids (SS) and in-situ water quality data (temperature, pH , turbidity, water depth, salinity, dissolved oxygen and percentage of saturation) shall be collected.
5.3 Other relevant data should also be recorded, including monitoring location/position, time, tidal stages, weather conditions and any special observation or works that may affect the monitoring results in the vicinity.
5.4 To ensure sufficient data for robust analysis, duplicate in-situ data shall be collected. In case the difference in the duplicate in-situ measurement results is larger than $25 \%$, the third set of in-situ measurement shall be carried out for result confirmation purpose.
5.5 Water samples shall be extracted at 1 m below surface, 1 m above seabed and the mid-depth level at where the water depth is at least 6 m . However, if the water depth is less than 3 m , water samples shall only be collected at the mid-depth level. For stations with depth less than 6 m , the mid-depth sample can be omitted.
5.6 In addition, duplicated water samples for suspended solid analysis shall be collected at all the above stations and delivered to the HOKLAS accredited laboratory for analysis. Results for suspended solids shall be received back from the laboratory within 24 -hour of the receipt of the samples.
5.7 Water quality impact monitoring shall also be conducted at the same frequency as monitoring throughout the whole cofferdam installation/extraction work and during dredging work. In case of exceedance of Action/Limit Level recorded, the frequency of water quality monitoring shall be increased as per the Event and Action Plan.
5.8 The water quality impact monitoring schedule shall be issued to IEC at least one month prior to the commencement of Impact Monitoring.

## Monitoring Parameters and Frequency

5.9 The monitoring parameters, monitoring periods and frequencies of the water quality monitoring are summarized in Table 5-1.

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | 22 |

|  |  | Rev. | 01 |

Table 5-1 Parameters of Water Quality Monitoring

| Parameters | Duration | Frequency |
| :---: | :---: | :---: |
| Temperature (Oc) | During Construction Phase: | 3 Days Per Week |
| Ph (Ph Unit) | Throughout Installation | (The Interval Between Two |
| Turbidity (Ntu) | And Extraction Of | Sets of Monitoring Shall Not |
| Water Depth (M) | Cofferdam; And | Be Less Than 36 Hours.) |
| Salinity (Ppt) | During Dredging |  |
| Do (Mg/L And \% Of Saturation) |  |  |
| SS (Mg/L) |  |  |

## Monitoring Locations

5.10 According to section 5.2 .6 of the EM\&A manual of the project, 6 water quality monitoring stations (WMSs) are proposed at the Po Toi O FCZs, major amphioxus habitats and rocky shores where coral thrives. With reference to the tidal characteristics of Po Toi O Bay, 3 control stations are proposed where fresh marine water is not affected by the cofferdam installation/ extraction works, and 2 impact stations are proposed near the cofferdam under different tidal periods. All water quality monitoring stations show as Figure 5-1 and Table 5-2.

Table 5-2 Summary of Water Quality Impact Monitoring Stations

| Station | Monitoring period | Description | Easting | Northing |
| :---: | :---: | :---: | :---: | :---: |
| ${ }^{*}$ WMS1N | Mid-Ebb, Mid-Flood | Po Toi O Fish Culture Zone | 848416 | 845209 |
| *WMS2N | Mid-Ebb, Mid-Flood | Po Toi O Fish Culture Zone | 848505 | 815375 |
| WMS3 | Mid-Ebb, Mid-Flood | Rocky Shore with Corals | 848644 | 815391 |
| WMS4 | Mid-Ebb, Mid-Flood | Rocky Shore with Corals | 848774 | 815602 |
| WMS5 | Mid-Ebb, Mid-Flood | Rocky Shore with Corals | 848578 | 815591 |
| WMS6 | Mid-Ebb, Mid-Flood | Major Amphioxus Habitat | 848639 | 815523 |
| I1 | Mid-Flood | Impact monitoring Station | 848643 | 815692 |
| I2 | Mid-Ebb | Impact monitoring Station | 848722 | 815910 |
| C1 | Mid-Flood | Control station | 848904 | 816052 |
| C2 | Mid-Ebb | Control station | 848529 | 815373 |
| C3 | Mid-Ebb | Control station | 848243 | 815710 |
| WMS1 | Mid-Ebb, Mid-Flood | Po Toi O Fish Culture Zone | 848387 | 815201 |
| WMS2 | Mid-Ebb, Mid-Flood | Po Toi O Fish Culture Zone | 848479 | 815378 |

Notes:

*WMS1N, WMS2N are new proposed alterative monitoring location. As previous EIA proposed monitoring location WMS1, WMS2 are situated in fish barges within the Fish Culture Zone (FCZ), and accesses to WMS1 and WMS2 were subsequently denied by the tenants of the fish barges. The relocation of WMS1 and WMS2 were approved by IEC and the ER of the Project.

## Results and Observations

5.11 According to submission of construction works schedule and location plan under the EP of Project, the proposed period of commencement construction work with cofferdam installation / extraction work and during dredging works is October 2023.
5.12 Marine construction was not commenced within the reporting month; hence no water quality monitoring was conducted.
5.13 Refer to Sections 5.2.10 and 5.2.11 of approved EM\&A Manual, construction phase site inspection for water quality mitigation measures and check the contractor's work practice on water pollution prevention during construction phase has been conducted during weekly site audit.
5.14 During the weekly site audit of this reporting month, no non-conformance water pollution was identified / observed in the commencement works area.

| :--- | :--- | :--- | :--- | :--- |
|  |  | Ref\# | EMA2204/03/22 |
|  |  | Rev. | 01 |

## 6. WASTE MANAGEMENT

6.1 As advised by the Contractor, $96 \mathrm{~m}^{3}$ of inert C\&D material was generated in the reporting month. For C\&D wastes, $0 \mathrm{~m}^{3}$ of general refuse was disposed of at NENT landfill, 0 kg waste were collected by recycling contractors, and 0 kg of chemical wastes was collected by licensed Contractors in the reporting period.
6.2 The actual amounts of different types of waste generated by the activities of the Project in the reporting period are shown in Table 6-3, the detailed monthly summary of waste flow is detailed in Appendix K.

Table 6-3 Summary of Waste Flow Table

| Waste Type | Quantity | Disposal/ Reuse Locations |
| :---: | :---: | :---: |
| Inert C\&D Waste Disposed as <br> Public Fill | $96 \mathrm{~m}^{3}$ | Tseung Kwan O Area 137 Fill <br> Bank (TKO137FB). |
| C\&D Wastes Disposed as General <br> Refuse | $0 \mathrm{~m}^{3}$ | North East New Territories <br> (NENT) |
| Recycle Materials | 0 kg | Recycling Facilities |
| General Refuse | 0 kg | North East New Territories <br> (NENT) |
| Chemical Waste | 0 kg | Licensed Contractors |

6.3 During regular site auditing, the mitigation measures proposed in the Implementation Schedule of the Environmental Mitigation Measures (EMIS) in the approved EIA report of the Project has been effectively implemented in the commenced works area. No adverse waste impact was observed from the construction works in reporting month.

## 7. ENVIRONMENTAL SITE INSPECTION AND AUDIT

## Site Inspection

7.1 Site inspections were carried out by ET on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures for the Project. Key observations were recorded in the site inspection checklist and passed to the Contractor together with the appropriate recommended mitigation measures where necessary.
7.2 In the reporting period, 5 site inspections were carried out on 3, 10, 17, 23 and 29 August 2023. No noncompliance was recorded during the site inspection. Details of observations recorded during the site inspections are presented in Table 7-1.

Table 7-1 Observations and Recommendations in the Reporting Month

## Implementation Status on Environmental Protection Requirements

7.4 The Implementation Schedule of the Environmental Mitigation Measures (EMIS) of the reporting period is summarized in Appendix L. The implementation of the key mitigation measures during the reporting period is presented in Appendix M.

## Summary of Complaints, Notification of Summons, Successful Prosecutions and Public Engagement Activities

7.5 No complaints, notification of summons and successful prosecution was received in the reporting

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | 28 |

## 8. FUTURE KEY ISSUES

## CONSTRUCTION PROGRAMME FOR THE UPCOMING REPORTING MONTH

8.1 Major activities in the upcoming month:
a. Construction of village sewer;
b. Slope works.
c. Construction of ELS for Po Toi O Sewage Treatment Plant

## Reinstatement Works Key Issues for the Upcoming Reporting Month

8.2 Potential environmental impacts due to the construction activities, including air quality, noise, water quality, waste, landscape and visual, will be monitored or reviewed. The ET will continue to implement the environmental monitoring \& audit programme in accordance with the EM\&A Manual and Environmental Permit requirement. The recommended environmental mitigation measures shall be implemented on site and regular inspections as required will be carried out to ensure that the environmental conditions are acceptable.
8.3 The anticipated impact of major work activities within the site and the recommended mitigation measures are shown in Appendix M.

## Monitoring Schedule for the Coming Month

8.4 The tentative schedule for environmental monitoring in September 2023 is provided in Appendix F.

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | 30 |

## 9. CONCLUSION

## General

9.1 This Report Summarized the Monitoring Results and Audits Findings of the EM\&A Programme Under the EP of The Project and In Accordance with the EM\&A Manual During the Reporting Period of 1 August 2023 to 31 August 2023.

## Environmental Impact Monitoring

9.2 No Action or Limit Level exceedance of construction air quality, noise was recorded in the reporting month. No air quality complaints and noise complaints were received in the reporting month.

## Environmental Site Inspections

9.3 The environmental site inspections were carried out in the reporting month. Recommendations on remedial actions were given to the contractors for the deficiencies identified during the site inspection. The contractor had been follow-up the recommendations on the remedial action accordingly.

## Complaint Log

9.4 There was no complaint received in relation to the environmental impact during the reporting period.

Reporting Changes
9.5 No report changes in this reporting period.

Notifications of Summons and Successful Prosecutions
9.6 There was no notification of summons and successful prosecution was received in the reporting period.

## Correlation between Portable laser dusty meter and High-volume Sampler Methodology

Correlation results between the direct reading meter and High-Volume Sampler

High - Volume Sampler Calibration

The specification, a sample of calibration certificate and certificate of comparison check with High volume sampler of the proposed air quality monitoring equipment listed in Table 2.1 are attached in appendix.

The High-Volume air sampler calibration procedure based on the requirement of manufacturer is shown below.
a. Disconnect the sampler motor from the mass flow controller and connect the motor to a stable AC power source.
b. Mount the calibrator orifice and top loading adapter plate to the sampler. A sampling filter is generally not used during this procedure. Tighten the top loading adapter hold down nuts securely to ensure that no air leaks are present.
c. Allow the sampler motor to warm up to its normal operating temperature
d. (approximately 10-15 minutes).
e. Conduct a leak test by covering the hole(s) on top of the orifice and pressure tap on the orifice with your hands. Listen for a high-pitched squealing sound made by escaping air. If this sound is heard, a leak is present and the top loading adapter hold-down nuts need to be re-tightened. If the sound is lower, the leak is near one of the other gaskets in the system. Avoid running the sampler for longer than 30 seconds at a time with the orifice blocked to avoid overheating the motor. Do not perform this leak test procedure with a manometer connected to the side tap on the calibration orifice or the blower motor. Liquid from the manometer could be drawn into the system and cause motor damage
f. Connect one side of a water manometer to the pressure tap on the side of the orifice with a rubber vacuum tube. Leave the opposite side of the manometer open to the atmosphere. Note: Both valves on the manometer have to be open for the liquid to flow freely. One side of the 'U' tube goes up the other goes down; add together for the "H2O reading.
g. A manometer must be held vertically to ensure accurate readings. Tapping the backside of the continuous flow recorder will help to center the pen and provide accurate readings. When using a variable orifice, five flow rates are achieved in this step by adjusting the knob on the variable orifice to five different positions and taking five different reading.

| :--- | :--- | :--- | :--- | :--- |
|  |  | Ref\# | EMA2204/03/22 |  |
|  |  | Rev. | 01 |  |
|  |  |  | Date | Sep 23 |

h. Record the ambient air temperature, the ambient barometric pressure, the sampler serial number, the orifice $s / n$, the orifice slope and intercept with date last certified, today's date, site location and the operators initial on the attached blank calibration sheet.
i. An example of a Lead (or TSP) Sampler Calibration Data Sheet has been attached with data filled in from a typical calibration. This includes the transfer standard orifice calibration relationship which was taken from the Orifice Calibration Worksheet that accompanies the calibrator orifice.

Disconnect the sampler motor from its power source and remove the orifice and top loading adapter plate. Re-connect the sampler motor to the electronic mass flow controller.

Since this calibration is for a TSP sampler, the slope and intercept for this orifice uses standard flows rather than actual flows and is taken from the Q standard section of the Orifice Calibration Worksheet. The Q actual flows are only used when calibrating a PM-10 sampler.

The five orifice manometer readings taken during the calibration have been recorded in the column on the data worksheet titled Orifice " H 2 O . The five continuous flow recorder readings taken during the calibration have been recorded under the column titled I chart.

The orifice manometer readings need to be converted to the standard air flows they represent using the following equation:

$$
\text { Qstd }=1 / \mathrm{m}\left[\operatorname{Sqrt}\left(\left(\mathrm{H}_{2} 0\right)(\mathrm{Pa} / 760)(298 / \mathrm{Ta})\right)-\mathrm{b}\right]
$$

## where:

Qstd = actual flow rate as indicated by the calibrator orifice, $\mathrm{m}^{3} / \mathrm{min}$
$\mathrm{H}_{2} \mathrm{O}=$ orifice manometer reading during calibration, " $\mathrm{H}_{2} \mathrm{O}$
$\mathrm{Ta}=$ ambient temperature during calibration, $\mathrm{K}\left(\mathrm{K}=273+{ }^{\circ} \mathrm{C}\right)$
298 = standard temperature, a constant that never changes, K
$\mathrm{Pa}=$ ambient barometric pressure during calibration, mm Hg
$760=$ standard barometric pressure, a constant that never changes, mm Hg
$\mathrm{m}=$ Qstandard slope of orifice calibration relationship
$\mathrm{b}=$ Qstandard intercept of orifice calibration relationship.

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | E-4 |  |
| :--- | :--- | :--- | :--- | :--- |
|  |  | Ref\# | EMA2204/03/22 |  |
|  |  | Rev. | 01 |  |
|  |  |  | Date | Sep 23 |

Once these standard flow rates have been determined for each of the five run points, they are recorded in the column titled Qstd and are represented in cubic meters per minute.

The continuous flow recorder readings taken during the calibration need to be corrected to the current meteorological conditions using the following equation:
IC = I[Sqrt((Pa/760)(298/Ta))]
where:
IC = continuous flow recorder readings corrected to current Ta and Pa
$\mathrm{I}=$ continuous flow recorder readings during calibration
$\mathrm{Pa}=\mathrm{ambient}$ barometric pressure during calibration, mm Hg .
$760=$ standard barometric pressure, a constant that never changes, mm Hg
$\mathrm{Ta}=$ ambient temperature during calibration, $\mathrm{K}\left(\mathrm{K}=273+{ }^{\circ} \mathrm{C}\right)$
298 = standard temperature, a constant that never changes, K

After each of the continuous flow recorder readings have been corrected, they are recorded in the column titled IC (corrected).

Using Qstd and IC (or FLOW (corrected)) as the x and y axis respectively, a slope, intercept, and correlation coefficient can be calculated using the least squares regression method. The correlation coefficient should never be less than 0.990 after a five-point calibration. A coefficient below . 990 indicates a calibration that is not linear, and the calibration should be performed again. If this occurs, it is most likely the result of an air leak during the calibration or high wind speed during the calibration procedure.

The equations for determining the slope ( m ) and intercept (b) are as follows:

$$
\left(\sum x\right)\left(\sum y\right)
$$

$m=$

$$
\mathrm{m}=
$$

$$
\frac{\sum x y-n}{\sum x^{2}-\frac{\left(\sum x\right)^{2}}{n}} ; b=\bar{y}-m \bar{x}
$$

The equation for the coefficient of correlation (r) is as follows:

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage <br> Works at Po Toi O | Page | E-5 |
| :--- | :--- | :--- | :--- | :--- |
|  |  | Ref\# | EMA2204/03/22 |
|  |  | Rev. | 01 |

$\mathrm{r}=\frac{\sum x y-\quad \frac{\left(\sum x\right)\left(\sum y\right)}{n}}{\sqrt{\left[\sum x^{2}-\frac{\left(\sum x\right)^{2}}{n}\right]\left[\sum y^{2}-\frac{(\Sigma y)^{2}}{n}\right]}}$
where: n = number of observations
$\Sigma=$ sum of

The acceptable operating flow range of a TSP sampler is 1.1 to $1.7 \mathrm{m3} / \mathrm{min}$ ( 39 to 60 CFM). Looking at the worksheet column Qstd(see page 38), the flow rates that are within this range can be identified along with the chart reading (I) that represents them. For instance, if you wanted to set this sampler at 1.265 $\mathrm{m} 3 / \mathrm{min}$ (44.67 CFM) (Make sure the mass flow controller is plugged in and a filter is in place) you would turn the Flow Adjustment screw until the continuous flow recorder read 37 on the chart. By making sure that the sampler is operating at a chart reading (or manometer reading) that is within the acceptable range, it can be assumed that valid TSP data is being collected.

A calibration that has a correlation coefficient of less than .990 is not considered linear and should be re-calibrated. Therefore, if $\mathrm{r}<0.990$, return all the points or only the point with the greatest deviation and the recalculate.

The 24-hour TSP levels to be measured by direct reading methods, utilising portable Laser Particle Photometer Monitors (Sibata Model LD-3B), in place of High-Volume Sampler (HVS) if HVS experience difficulties in operation during monitoring. It is demonstrated by the previous project experiences, that 24-hour TSP monitoring results collected by direct reading method are comparable to those produced by the high-volume sampling method, to indicate short event impacts. The projects utilising the collection of 24 -hour TSP levels data by direct reading methods are shown below.

Project Reference for utilising the collection of 24-hour TSP levels data by direct reading methods

| Project Contract Number | Location | Status |
| :---: | :--- | :---: |
| NDO 03/2018 | Road Widening and Retrofitting Noise Barriers on <br> Tai Po Road (Sha Tin Section) | On-going |

|  |  | Ref\# | EMA2204/03/22 |
|  |  | Rev. | 01 |
|  |  | Date | Sep 23 |

| NDO 14/2018 | Advance and First Stage Works of Kwu Tung North <br> and Fanling North New Development Areas | On-going |
| :--- | :--- | :---: |

Calculation of the value of 24 -hour TSP concentration is given by the average of 24 calculated 1-hour TSP concentration, where the calculated 1-hr TSP concentration is given by the product of the direct reading and the K-factor based on the correlation results between the direct reading meter and HighVolume Sampler.

The correlation results between the direct reading meter and High-Volume Sampler shall be review with bimonthly internal calibration. To maintain the correlation with two sets of data (monitoring data from HVS and monitoring data from Portable Laser Particle Photometer Monitors) bimonthly internal calculated are strongly linked together two sets of data.

To protect the dust meter from being damaged and to operate without disturbances or nuisance, temporary barriers shall be erected around the monitoring equipment during the monitoring period. Temporary barriers will be placed approx. 0.5 m away from the dust meter.

## Maintenance/ Calibration for the High-Volume Sampler (HVS) being correlation

The HVS shall be calibrated bimonthly in accordance to the specification in the manufacturer's manual. The calibration certificates shall be available to the IEC for checking upon request. The validity and accuracy of the HVS shall also be tested against the result by the TE-5025A Calibration Kit periodically, Details of Calibration Cert and Specification for HVS - Graseby GMW and HVS- Calibration Kit TE5025A are given in Appendix 2-1 and Appendix 2-3.

Graseby GMW is chosen as the HVS for 24-hour TSP monitoring and Tisch TE - 5025A is chosen as the HVS Calibration-Kit for HVS calibration.

APPENDIX H - EVENT AND ACTION PLAN

AIR QUALITY MONITORING

| EVENT | ACTION |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | ET | IEC | ER | CONTRACTOR |
| ACTION LEVEL |  |  |  |  |
| Exceedance for one sample | 1. Repeat measurement to confirm findings; <br> 2. If exceedance is confirmed, inform the Contractor, IEC and ER; <br> 3. Identify source(s), investigate the causes of exceedance and propose remedial measures; and <br> 4. Increase monitoring frequency. | 1. Check monitoring data submitted by the ET; <br> 2. Check Contractor's working method; and <br> 3. Discuss with ET, ER and Contractor on possible remedial measures <br> 4. Review and advise the ET and ER on the effectiveness of the proposed remedial measures. | 1. Confirm receipt of notification of exceedance in writing. | 1. Identify source(s), investigate the causes of exceedance and propose remedial measures; <br> 2. Implement remedial measures; and <br> 3. Amend working methods agreed with the ER as appropriate. |
| Exceedance for two or more consecutive samples | 1. Repeat measurements to confirm findings; <br> 2. If exceedance is confirmed, inform Contractor, IEC and ER; <br> 3. Identify source(s), investigate the causes of exceedance and propose remedial measures; <br> 4. Increase monitoring frequency to daily; <br> 5. Advise the Contractor and ER on the effectiveness of the proposed remedial measures; <br> 6. Discuss with IEC and Contractor on remedial actions required; | 1. Check monitoring data submitted by the ET; <br> 2. Check Contractor's working method; and <br> 3. Discuss with ET, ER and Contractor on possible remedial measures; <br> 4. Review and advise the ET and ER on the effectiveness of the proposed remedial measures; and <br> 5. Supervise Implementation of remedial measures. | 1. Confirm receipt of notification of exceedance in writing; <br> 2. In consultation with the ET and IEC agree with the Contractor on the remedial measures to be implemented; and <br> 3. Supervise implementation of remedial measures | 1. Identify source(s) and investigate the causes of exceedance; <br> 2. Submit proposals for remedial measures to the ER, ET and IEC within three working days of notification for agreement; <br> 3. Implement the agreed proposals; and <br> 4. Amend proposal as appropriate. |

| EVENT | ACTION |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | ET <br> 7. If exceedance continues, arrange meeting with Contractor, IEC and ER to discuss the remedial measures to be taken; and <br> 8. If exceedance stops, cease additional monitoring. | IEC | ER | CONTRACTOR |
| LIMIT LEVEL |  |  |  |  |
| Exceedance for one sample | 1. Repeat measurement to confirm findings; <br> 2. If exceedance is confirmed, inform the Contractor, IEC, EPD and ER; <br> 3. Identify source(s), investigate the causes of exceedance and propose remedial; <br> 4. Increase monitoring frequency to daily; and <br> 5. Discuss with the ER, IEC and Contractor on the remedial measures and assess effectiveness. | 1. Check monitoring data submitted by the ET; <br> 2. Check Contractor's working method; <br> 3. Discuss with the ET, ER and Contractor on possible remedial measures; <br> 4. Review and advise the ET and ER on the effectiveness of the proposed remedial measures; and <br> 5. Supervise implementation of remedial measures. | 1. Confirm receipt of notification of exceedance in writing; <br> 2. Review and agree on the remedial measures proposed by the Contractor; and <br> 3. Ensure remedial measures properly implemented. | 1. Identify source(s) and investigate the causes of exceedance; <br> 2. Take immediate action to avoid further exceedance; <br> 3. Submit proposals for remedial measures to ER, ET and IEC within three working days of notification for agreement; <br> 4. Implement the agreed proposals; and <br> 5. Amend proposal if appropriate. |
| Exceedance for two or more consecutive samples | 1. Repeat measurement to confirm findings; <br> 2. If exceedance is confirmed, inform IEC, ER, Contractor and EPD; <br> 3. Identify source(s), investigate the causes of | 1. Check monitoring data submitted by the ET; <br> 2. Discuss amongst ER, ET, and Contractor on the potential remedial actions; | 1. Confirm receipt of notification of exceedance in writing; <br> 2. In consultation with the ET and IEC, agree with the Contractor on the remedial measures to be implemented; | 1. Identify source(s) and investigate the causes of exceedance; <br> 2. Take immediate action to avoid further exceedance; <br> 3. Submit proposals for remedial measures to the |

NOISE IMPACT MONITORING

| Event | Action |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | ET | IEC | ER | CONTRACTOR |
| Action Level | 1. Notify IEC, ER and Contractor of exceedance; <br> 2. Identify source <br> 3. Investigate the causes of exceedance and propose remedial measures; <br> 4. Report the results of investigation to the IEC, ER and Contractor; <br> 5. Discuss with the IEC, ER and Contractor and formulate remedial measures; <br> 6. Increase monitoring frequency to check mitigation effectiveness | 1. Review the analysed results submitted by the ET; <br> 2. Review the proposed remedial measures by the Contractor and advise the ER accordingly; <br> 3. Supervise the implementation of remedial measures. | 1. Confirm receipt of notification of failure in writing; <br> 2. Notify Contractor; <br> 3. Require Contractor to propose remedial measures for the analysed noise problem; <br> 4. Ensure remedial measures are properly implemented | 1. Submit noise mitigation proposals to ER with copy to ET and IEC; Implement noise mitigation proposals. |

| Event | Action |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | ET | IEC | ER | CONTRACTOR |
| Limit Level |  |  |  |  |
|  | 1. Inform IEC, ER, EPD and Contractor; <br> 2. Identify source; <br> 3. Repeat measurements to confirm findings; <br> 4. Increase monitoring frequency; <br> 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; <br> 6. Inform IEC, ER and EPD the causes and actions taken for the exceedances; <br> 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; <br> 8. If exceedance stops, cease additional monitoring. | 1. Discuss amongst ER, ET, and Contractor on the potential remedial actions; <br> 2. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; <br> 3. Supervise the implementation of remedial measures. | 1. Confirm receipt of notification of failure in writing; <br> 2. Notify Contractor; <br> 3. Require Contractor to propose remedial measures for the analyzed noise problem; <br> 4. Ensure remedial measures are properly implemented; <br> 5. If exceedance continues, investigate what portion of the work is responsible and instruct the Contractor to terminate that portion of work until the exceedance ceases. | 1. Take immediate action to avoid further exceedance; <br> 2. Submit proposals for remedial actions to ER with copy to ET and IEC within 3 working days of notification; <br> 3. Implement the agreed proposals; <br> 4. Resubmit proposals if problem still not under control; <br> 5. Terminate the relevant portion of works as determined by the ER until the exceedance ceases. |

APPENDIX I - NOISE MONITORING EQUIPMENT CALIBRATION CERTIFICATES

# 東業德勤測試顧問有限公司 

Form arAsicioe Issue 1（1／4）［02／22］

## Calibration Certificate

| Certificate No． | ：CSA27669 |  |  |
| :--- | :--- | :--- | :--- |
| Page | $: 1$ | of | 2 |

Information Provided by Customer

| Customer | $:$ ETS－Testconsult Limited |
| :--- | :--- | :--- |
| Address | $: \quad$ B／F．，Block B，Veristrong Industrial Centre，34－36 Au Pui Wan Street，Fotan，Shatin，Hong Kong |

Information of Unit－under－test（UUT）

| Description | $:$ Sound Level Calibrator |  |  |
| :--- | :--- | :--- | :--- |
| Manufacturer | $:$ | RION | Equipment I．D． |
| Type | NC－73 | Serial No． | ET／EN／002／01 |
|  | Ny | 10196943 |  |

| Laboratory Information |  |  |  |
| :---: | :---: | :---: | :---: |
| Lab．Ref．No． | Q／CAL／22／9442／I | Procedure | ：CQS／002／A |
| Date of Calibration | ：7－Nov－2022 | Date of Receipt | ：1－Nov－2022 |
| Date of Issue | 10－Nov－2022 | Calibration Location | ：Calibration Laboratory |
| Calibration Condition |  |  |  |
| Ambient Temperature | ：$(20 \pm 3){ }^{\circ} \mathrm{C}$ | Relative Hurnidity | ：$(50 \pm 20) \%$ |
| Stabilizing Tirne | ： 30 minutes | Sampling | ：As received |
| Ambient Pressure | $=(1000 \pm 5) \mathrm{hPa}$ |  |  |

## Reference equipment

－Mult－function sound calibrator，ET／2801／0
－Measuring Amplifier，ET／2702／01／01
－Signal generator，ET／2503／01
Reference Oscilloscope，ET／2502／01

## Calibration specification

－To perform the calibration of sound level calibrator

## Calibration result

－The results are detailed on the subsequent pages．

## Remarks

The calibration results apply to the particular unit－under－test only．
The values given in this calibration certificate only to the values measureed at the time of test \＆any uncarfainties quoted will not include allowance for the equipment long term drift，varifications with environmental changes，vibrat on and shock during transportation，overloading，mis－handling，or the capability of any other laboratory to repeat the measurement

Calibrated By ：

Approved By： $\qquad$

The results shown in this certificate are traceatile to the International System of Unls（Si）or recogrised measurement standards．
This report shall not be reproduced unless with prior written approval from this laboratory．

## 東業德勤測試顧問有限公司 <br> ETS－TESTCONSULT LTD．＂

Calibration Certificate

# Certificate No．：CSA27669 <br> Page ： 2 of 2 

Calibration Result：
1．Measured Sound Pressure Level：

| Nominal Frequency <br> $(\mathrm{Hz})$ | Nominal Output <br> Sound Pressure（dB） | Measured Output（dB） | Expanded <br> Uncertatiny（dB） | Coverage <br> Factor |
| :---: | :---: | :---: | :---: | :---: |
| 1000 | 94.0 | 94.0 | 0.13 | 2.0 |

2．Actual Oulput Frequency：

| Nominal Frequency <br> $(\mathrm{Hz})$ | Nominal Output <br> Sound Pressure（dB） | Measured Output（ Hz$)$ | Expanded <br> Uncertatiny $(\mathrm{Hz})$ | Coverage <br> Factor |
| :---: | :---: | :---: | :---: | :---: |
| 1000 | 94.0 | 981.906 | 0.13 | 2.0 |

Remark：
－The uncertainty quoted is based on $95 \%$ confidence level．
－Measured output are mean of three measurements．

## Reference equipment

－Muib－lunction sound caliorator，ET／8801／01
－Measuring Amplifier，ET／2702／01／01
－Signal generator，ET／2503j01
－Reference Osciloscope，ET／2502j01

## Calibration specification

－To perform the calibration of sound level calibrator．

Calibration result
－The results are detailed on the subsequent pages．

## Remarks

－The calibration resuits apply to the particular unit－under－18st anly．
－The values given in this calbration certificate only to the values messureed at the time of test $\&$ any uncernainties quoled will not include allowance for the equipenent long term drift，varifications with envivunmental changes，viloration and ahock during transportation，overloading，mis－handing，or the capability of any other laboratory to repeat the measuroment

Approved By： $\qquad$

[^3]Th＇s report shal not be recroduced uriess with prise willion approval tom this laboratory．

| $\begin{aligned} & \hline \text { EIA } \\ & \text { Ref. } \end{aligned}$ | $\begin{aligned} & \text { EM } \\ & \& A \\ & \text { Ref. } \end{aligned}$ | Recommended Mitigation Measures * | Objectives of the <br>  <br> Main Concerns to address | Implementation Agent | Location of the measure | Duration of the measure | Implementation stages | Relevant Legislation \& Guidelines |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Air Quality impact |  |  |  |  |  |  |  |  |
| Project Specific Measures |  |  |  |  |  |  |  |  |
| 3.8 | A1 | Deodourizer should have at least 99.5\% hydrogen sulfide removal efficiency. | To minimize odour nuisance to sensitive receivers | DSD | Sewage Treatment Plant | Throughout operational phase | Operational phase | EIAO-TM |
| 3.8 | A2 | Odourous materials (sludge, screenings and grits, worn filter) should be stored and removed in sealed tankers and containers. | To minimize odour nuisance to sensitive receivers | DSD | Sewage Treatment Plant | Throughout operational phase | Operational phase | EIAO-TM |
| 3.8 | A3 | Sludge should be transferred to sludge tanker by coupling method. | To minimize odour nuisance to sensitive receivers | DSD | Sewage Treatment Plant | Throughout operational phase | Operational phase | EIAO-TM |
| 3.8 | A4 | During release of pressure from the tanker, the odourous gas should be discharged into the sludge storage room for extraction to deodourization unit. | To minimize odour nuisance to sensitive receivers | DSD | Sewage <br> Treatment Plant | Throughout operational phase | Operational phase | EIAO-TM |
| 3.8 | A5 | Regular inspection should be conducted to check for leakage of odourous gas. | To minimize odour nuisance to sensitive receivers | DSD | Sewage <br> Treatment Plant | Throughout operational phase | Operational phase | EIAO-TM |
| 3.8 | A6 | Maintain the removal efficiency of screenings and grits by flushing the screens and grit sump regularly to prevent buildup of solids | To maintain the removal efficiency of screenings and grits | DSD | Sewage Treatment Plant | Throughout operational phase | Operational phase | EIAO-TM |
| 3.8 | A7 | Maintain the efficiency of MBR membrane by removing organic and inorganic debris regularly | To maintain the efficiency of MBR membrane | DSD | Sewage Treatment Plant | Throughout operational phase | Operational phase | EIAO-TM |
| 3.8 | A8 | Replace worn filter to maintain the odour removal efficiency at 99.5\% | To minimize odour nuisance to sensitive receivers | DSD | Sewage Treatment Plant | Throughout operational phase | Operational phase | EIAO-TM |
| 3.8 | A9 | Clean all the tanks with water regularly | To minimize odour nuisance to sensitive receivers | DSD | Sewage Treatment Plant | Throughout operational phase | Operational phase | EIAO-TM |
| General/Standard Measures |  |  |  |  |  |  |  |  |
| 3.8 | A10 | Good housekeeping to minimize dust generation, e.g. by properly handling and storing dusty materials | To minimize dust generation | DSD's Contractor | Whole construction site | Throughout construction phase | Construction Phase | $\begin{gathered} \text { EIAO-TM, } \\ \text { APCO } \end{gathered}$ |
| 3.8 | A11 | Adopt dust control measures, such as dust suppression using water spray on exposed soil (at least 4 times per day), in areas with dusty construction activities and during material handling | To minimize dust generation due to erosion | DSD's Contractor | Whole construction site | Throughout construction phase | Construction phase | $\begin{aligned} & \text { EIAO-TM, } \\ & \text { APCO } \end{aligned}$ |

| EIA <br> Ref. | EM \& A Ref. | Recommended Mitigation Measures * | Objectives of the <br>  <br> Main Concerns to address | Implementation Agent | Location of the measure | Duration of the measure | Implementation stages | Relevant <br> Legislation \& Guidelines |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 3.8 | A12 | Store cement bags in shelter with 3 sides and the top covered by impervious materials if the stack exceeds 20 bags | To prevent leakage of cement | $\overline{\text { DSD's }}$ <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A13 | Maintain a reasonable height when dropping excavated materials to limit dust generation | To minimize dust generation during movement of excavated materials | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A14 | Limit vehicle speed within construction site and in Po Toi O to $10 \mathrm{~km} / \mathrm{hr}$ and confine vehicle movement in haul road | To minimize dust generation due to traffic movement | $\overline{\text { DSD's }}$ <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A15 | Minimize exposed earth after completion of work in a certain area by hydroseeding, vegetating, soil compacting or covering with bitumen | To minimize dust generation due to erosion | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A16 | Provide wheel washing at construction site exit to clean the vehicle body and wheel | To prevent dust from being brought offsite | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A17 | Cover materials on trucks before leaving the construction site to prevent debris from dropping during traffic movement or being blown away by wind | To prevent falling of debris during traffic movement and by wind | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A18 | Regular maintenance of plant equipment to prevent black smoke emission | To minimize black smoke emission | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A19 | Throttle down or switch off unused machines or machine in intermittent use | To minimize unnecessary emission | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A20 | Minimize excavation area as far as possible | To minimize dust emission and potential release of odour from exposed ground | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |

|  | EP-516/2016 - Port Shelter Sewerage, Stage3 - Sewerage Works at Po Toi O | Page | L-4 |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 3.8 | A21 | Store odourous excavated materials in covered containers and remove off-site as soon as possible within 24 hours | To minimize odour nuisance to sensitive receivers | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | $\begin{gathered} \text { Whole } \\ \text { construction } \\ \text { site } \end{gathered}$ | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A22 | Cover open stockpiles of construction materials (e.g. aggregates, sand and fill materials) with impermeable materials such as tarpaulin during rainstorms | To prevent soil erosion under rainstorm | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A23 | Hoarding of not less than 2.4 m high shall be erected from ground level to surround the construction site for sewage treatment plant along Po Toi O Chuen Road except for a construction site entrance or exit | To minimize dust emission | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 3.8 | A24 | Carry out air quality monitoring throughout the construction period | To monitor construction dust level | DSD's <br> Contractor | At representative ASRs | Prior to and throughout construction phase | Construction phase | EIAO-TM |
| 3.8 | A25 | Carry out regular site inspection to audit the implementation of mitigation measures | To check the implementation status and effectiveness of mitigation measures | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |

| EIA <br> Ref. | $\begin{aligned} & \text { EM } \\ & \& ~ A \\ & \text { Ref. } \end{aligned}$ | Recommended Mitigation Measures * | Objectives of the <br>  <br> Main Concerns to address | Implementation Agent | Location of the measure | Duration of the measure | Implementation stages | Relevant Legislation \& Guidelines |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Noise Impact |  |  |  |  |  |  |  |  |
| Project Specific Measures |  |  |  |  |  |  |  |  |
| 4.7 | N1 | Use hand-held plant equipment or manual equipment within village area | To minimize construction noise level | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction phase | NCO, EIAO-TM |
| 4.7 | N2 | For HDD, enclose the stationary plant equipment on three sides with cover. Only the side facing the sea shall be opened for heat exhaustion. | To lower noise transmission | DSD's Contractor | HDD work site | Throughout construction phase | Construction Phase | NCO, EIAO-TM |
| 4.7 | N3 | Generator should be placed at a fixed location at least 5-6m away from the NSRs and screened by noise barrier whenever excavation work has to be carried out at their front doors | To lower noise transmission | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction Phase | NCO, EIAO-TM |
| 4.7 | N4 | Avoid carrying out noisy activities at the same time. The work front of village sewer installation near NSRs PTO_N1 and PTO_N3 shall not be conducted concurrently with installation of Po Toi O Chuen Road sewer and horizontal directional drilling respectively. | To minimize noise production | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction Phase | NCO, EIAO-TM |
| 4.7 | N5 | Vibratory poker shall only be operated 4m away from NSR and with noise barrier properly erected. Surfacing work within 4 m from NSR shall be carried out by manual method | To minimize noise production | DSD's Contractor | Whole construction site | Throughout construction phase | Construction phase | NCO, EIAO-TM |
| Generic/Standard Measures |  |  |  |  |  |  |  |  |
| 4.7 | N6 | Schedule noisy activities to minimise exposure of nearby NSRs to high levels of construction noise | To minimize construction noise level | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction Phase | NCO, EIAO-TM |
| 4.7 | N7 | Use Quality Powered Mechanical Equipment (QPME) which produces lower noise level | To minimize construction noise level | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction Phase | NCO, EIAO-TM |
| 4.7 | N8 | Erect 3 m high mobile barriers with skid footing and a small cantilevered upper portion within a few metres of stationary plants and within about 5 m of more mobile plant. | To lower noise transmission | DSD's Contractor | Whole construction site | Throughout construction phase | Construction phase | NCO, EIAO-TM |

|  | EP-516/2016 - Port Shelter Sewerage, Stage3-Sewerage Works at Po Toi 0 | Page | L-6 |

|  |  | Date | Sep 23 |

| EIA <br> Ref. |  <br> A Ref. | Recommended Mitigation Measures * | Objectives of the <br>  <br> Main Concerns to address | Implementation Agent | Location of the measure | Duration of the measure | Implementation stages | Relevant <br> Legislation \& Guidelines |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 4.7 | N9 | Hand-held breaker shall be fitted with mufflers. A movable enclosure made up of plywood is proposed to surround both worker and breaker during breaking process. The internal wall of the enclosure should be laid with sound absorbent such as mineral wool. | To lower noise transmission | $\overline{\text { DSD's }}$ <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 4.7 | N10 | Regular maintenance of plant equipment to prevent noise emission due to impair | To prevent noise emission due to impair | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 4.7 | N11 | Position mobile noisy equipment in location and direction away from NSR | To minimize noise transmission to NSR | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 4.7 | N12 | Use silencer or muffler on plant equipment and should be properly maintained | To minimize noise transmission | $\begin{gathered} \hline \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 4.7 | N13 | Throttle down or switch off unused machines or machine in Intermittent use between work | To minimize noise production | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 4.7 | N14 | Make good use of stockpiles or other structures for noise screening | To minimize noise transmission | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 4.7 | N15 | Mobile plant should be sited as far away from NSRs as possible | To minimize noise transmission | DSD's <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 4.7 | N16 | Reduce the percentage on-time for some noisy PMEs | To mimize noise production | $\overline{\text { DSD's }}$ <br> Contractor | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM, APCO |
| 4.7 | N17 | Carry out noise monitoring | To monitor construction noise level | $\overline{\text { DSD's }}$ <br> Contractor | At representative NSRs | Prior to and throughout construction phase | Construction phase | EIAO-TM, APCO |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Water Quality Impact |  |  |  |  |  |  |  |  |
| Project Specific Measures |  |  |  |  |  |  |  |  |
| 5.8 | W1 | Divert the water from outfall of W3 (stream near Fairway Vista) during open cut excavation for laying of gravity sewer nearby | To prevent the excavated materials from falling into the water and being carried into the sea | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction phase | ProPECC PN 1/94, EIAOTM |
| 5.8 | W2 | Place sandbag along the upstream section of the stream near Fairway Vista and along rocky shore during open cut excavation for laying of gravity sewers/rising mains nearby. | To prevent the excavated materials from falling into the water and being carried into the sea | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction Phase | ProPECC PN 1/94, EIAOTM |
| 5.8 | W3 | Intercept the water from u-channel at the foot of the slope where the STP will be built | To prevent water from entering the construction site | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction Phase | EIAO-TM |
| 5.8 | W4 | Install cofferdam around the proposed excavation area for entry pit of HDD work to prevent falling of debris into the sea | To prevent debris from entering the waterbodies | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | HDD work site | Throughout construction phase | Construction Phase | EIAO-TM |
| 5.8 | W5 | Install sheet piles in marine waters by vibratory action. | To minimize dispersion of marine sediment | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM |
| 5.8 | W6 | Marine works (dredging, construction and installation works at diffuser location, backfilling) shall be carried out inside the watertight cofferdam. The cofferdam can only be removed after completion of work | To minimize dispersion of marine sediment | DSD's Contractor | Whole construction site | Throughout construction phase | Construction Phase | EIAO-TM |
| 5.8 | W7 | Dredging should be carried out by grab dredgers anchored outside the cofferdam. The marine sediment should be placed in sealed compartment of the marine barge. | To minimize dispersion of marine sediment | DSD's Contractor | Whole construction site | Throughout construction phase | Construction Phase | EIAO-TM |
| 5.8 | W8 | Water removed from the cofferdam should be desilted before discharge back into the sea. | To prevent discharge of silty water into the sea | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction phase | EIAO-TM |

| $\begin{aligned} & \hline \text { EIA } \\ & \text { Ref. } \end{aligned}$ | EM \& A Ref. | Recommended Mitigation Measures * | Objectives of the Recommended Measure \& Main Concerns to address | Implementation Agent | Location of the measure | Duration of the measure | Implementation stages | Relevant Legislation \& Guidelines |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 5.8 | W9 | Carry out water quality monitoring at water sensitive receivers before and during cofferdam installation works, throughout dredging works, and during cofferdam extraction works | To identify any water quality impact due to construction works | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Water Monitoirng Stations | Before and throughout installation and extraction works of cofferdam | Construction phase | EIAO-TM |
| 5.8 | W10 | The following summarizes the precautionary measures for minimizing chance of emergency discharge: <br> - Provision of dual power by CLP; <br> - Equipped with Supervisory control and data acquisition system (SCADA), which signals to the operation and maintenance personnel for emergency attendance in case of plant failure; <br> - Provision of standby pump and screen at the PTOSTW. <br> - Provision of emergency generator within 4 hours by DSD's future term contractor. <br> - Provision of emergency storage with capacity of 4 -hr sewage retention time. <br> - Arrangement of tankers for removing incoming sewage to other sewage treatment plants for treatment. | To prevent emergency discharge | DSD | Sewage Treatment Plant | Operational phase | Operational phase | EIAO-TM |
| 5.8 | W11 | Carry out water quality monitoring at water sensitive receivers during normal operation | To identify any water quality impact due to the normal operation of the Sewage Treatment Plant (STP) | DSD | At representative WSRs | 6 months before and in 1st year of operation | Operational phase | WPCO, EIAO-TM |
| Generic/Standard Measures |  |  |  |  |  |  |  |  |
| 5.8 | W12 | Set up sedimentation tank for settling suspended solids in wastewater before discharge into storm drains. Sand/silt removal facilities such as sand traps, silt traps and sedimentation basin should be provided with adequate capacity. | To reduce the amount of suspended solid in wastewater | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction <br> phase | $\begin{gathered} \text { ProPECC PN } 1 / 94, \\ \text { EIAO-TM } \end{gathered}$ |
| 5.8 | W13 | Follow ProPECC PN 1/94 "Construction Site Drainage" as far as practicable | To minimize surface runoff and chance of erosion | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction <br> phase | ProPECC PN 1/94, EIAO-TM |
| 5.8 | W14 | Construct catchpits and perimeter channels prior to commencement of site formation works and earthworks. | To stop runoff from flowing across the construction site | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole <br> construction <br> site | Throughout construction phase | Construction <br> phase | $\begin{gathered} \text { ProPECC PN } 1 / 94, \\ \text { EIAO-TM } \end{gathered}$ |
| 5.8 | W15 | Maintain silt removal facilities, channels, manholes before and after rainstorm. | To prevent failure that may lead to flooding | $\begin{gathered} \text { DSD's } \\ \text { Contractor } \end{gathered}$ | Whole construction site | Throughout construction phase | Construction <br> phase | $\begin{gathered} \text { ProPECC PN } 1 / 94, \\ \text { EIAO-TM } \end{gathered}$ |

Reporting Period: 2023-06-01 - 2023-06-30
Construction Works Area: PTO-SW-03, PTO-Trenchless -01\& STP
Anticipated Impacts: Dust, Noise, Water Quality, Terrestrial Ecology, Marine Ecology, Fisheries, Waste Management, Landscape and Visual and Build Heritage Impact

| Item | EIA Ref. | $\begin{gathered} \hline \text { EM\&A } \\ \text { Ref. } \end{gathered}$ | Environmental Aspect | Corresponding Mitigation Measures | EM\&A Manual Recommended Mitigation/ Actions | Action By | Measurement Procedures/Methods |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { Air } \\ \text { Quality } \\ \text { Impact } \end{gathered}$ | 3.8 | $\begin{gathered} \hline \text { A10 - } \\ \text { A25 } \end{gathered}$ | a) Major air quality impact in construction phase would arise from excavation of slope at the proposed sewage treatment plant. <br> b) Excavation, Gas welding, slope cutting, Rock dowel, fencing, flexible barrier installation Loading \& Unloading Dusty Materials storage, Dusty Waste Sorting, Temporary Site Traffic Control | a) All construction plants / machineries will be checked / serviced on a regular basis during the courses of construction to minimize the emission of noise generation and eliminate dark smoke emission. <br> b) All dump trucks will be equipped with mechanical covers to prevent the dust emission during transportation when necessary. <br> c) Dust control measures, such as water spraying, will be provided during demolition works when necessary. <br> d) Maintaining of wet surface on access road and keep slow speed in the site. <br> e) Conditions in the Environmental Permit and Discharge License should be followed. <br> f) Predict required quantity of concrete accurately and collect the unused fresh concrete at designated locations in the site for subsequent disposal. <br> g) Provide sufficient mitigation measures as recommended in approved EIA Manual requirement. | (a) Hoarding of not less than 2.4 m high shall be erected from ground level to surround the work area along Po Toi O Chuen Road except for a site entrance or exit. <br> (b) Good housekeeping to minimize dust generation, e.g. by properly handling and storing dusty materials. <br> (c) Adopt dust control measures, such as dust suppression using water spray on exposed soil at least 4 times a day, in areas with dusty construction activities and during material handling. <br> d) Minimize exposed earth after completion of work in a certain area by hydroseeding, vegetating, soil compacting or covering with bitumen. <br> (e) Provide wheel washing at site exit to prevent carrying dust outside of the site. <br> (f) Cover materials on trucks before leaving the site. <br> (g) Limit vehicle speed of construction trucks within the construction site and in Po Toi O, maximum at $10 \mathrm{~km} / \mathrm{hr}$, and confine vehicle movement in haul road. <br> (h) As there is limited space in Po Toi O, stockpiling should be avoided. However, if found necessary, the materials should be covered by impervious materials such as tarpaulin. | Contractor | a) 1-hour and 24-hour TSP levels will be measured in accordance to the standard high-volume sampling method as set out in the Title 40 of the Code of Federal Regulations, Chapter 1 (Part 50), Appendix A. <br> b) Due to objection from the residents of Po Toi $O$ village of the use of high-volume sampler (HVS) in conducting 24-hours TSP measurement, 24-hour TSP measures for impact monitoring is to be measured by portable dust meters during construction phase of the project. This is to be approved and verified by ER and IEC. <br> c) Other than using high volume sampler, 1 hour TSP levels can be measured alternatively by direct reading from portable dust meters upon approval from ER. The meters should be capable of producing comparable results as that by the highvolume sampling method, to indicate short event impacts. <br> d) -The ET shall agree with the IEC on the monitoring position and the corrections adopted. <br> e) -The agreed position shall be chosen in subsequent baseline and impact monitoring. |

| Water Quality impact | 5.8 | $\begin{aligned} & \hline \text { W1- } \\ & \text { W33 } \end{aligned}$ | a) Major Water quality impact will be originated from minor displacement of suspended solids during installation, testing pipe and extraction of cofferdam around the proposed diffuser. | a) Wastewater to be treated by wastewater treatment facilities before discharge. <br> b) Conditions in the Environmental Permit and Discharge License should be followed. | a) Well manage construction materials, chemicals, sewage for proper storage and usage and to prevent accumulation onsite. <br> (b) Immediately clean up contaminated soil upon chemical and oil leakage. <br> (c) Label chemical waste containers according to the Code of Practice to notify and warn the waste handlers. Store fuels, chemicals and chemical waste at designated area with locks and bunds. <br> (d) Register as chemical waste producer. <br> (e) Set up sedimentation tank for settling suspended solids in wastewater before discharge into storm drains. Sand/silt removal facilities such as sand traps, silt traps and sedimentation basin should be provided with adequate capacity. <br> (f) Provide sufficient number of chemical toilets if necessary and employ licensed contractor for regular clean-up and maintenance. <br> (g) Provide wheel washing at site exit to prevent dust and silty water from leaving the construction site. <br> (h) Cover slope and loose materials with tarpaulin before rainstorm and inspect the area afterwards. <br> (i) Cover manhole to prevent silt, construction materials or debris and surface runoff from entering the foul sewer. <br> (j) Install fully enclosed cofferdam around the proposed diffuser and deploy a dredger barge outside the cofferdam for dredging and filling works. | Contractor | a) Weekly site audit to monitor the implementation of the proposed water quality mitigation measures and check the Contractor's work practice on water pollution prevention during construction phase. <br> b) Should water pollution is observed (e.g. discharge of silty water into storm drains), the ET should record the environmental deficiency for investigation. <br> c) The Contractor should be notified and responsible for carrying out rectification work immediately. <br> d) The ET shall re-inspect the Project Site and review the effectiveness of the remedial measure performed until satisfaction. <br> e) The Contractor shall implement preventive measure to avoid causing the same problem. |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Terrestrial Ecology | 6.12 | E1-E8 | a) The proposed Project will cause minor habitat loss of shrubland, temporary habitat loss of woodland, developed area and rocky shore, and removal of one individual climber species of conservation importance that is common within the Study Area and Hong Kong. Indirect water quality impact may arise from surface runoff or accidental spillage of chemicals in construction Phase. <br> b) Use of powered plant equipment may bring noise disturbance on wildlife | a) Conditions in the Environmental Permit and Discharge License should be followed. <br> b) Provide sufficient mitigation measures as recommended in approved EIA Manual requirement. | a) Construction noise and water quality mitigation measures proposed in the previous sections will be applicable to terrestrial ecology. | Contractor | (a) Bright colour fencing shall be erected along the boundary of the undisturbed region of the shrubland and woodland, and around Diospyros vaccinioides, a plant species of conservation importance, near the work boundary to remind workers not to trespass or occupy the area, and to be careful during operation of equipment. <br> (b)Inspect the condition of Diospyros vaccinioides as part of weekly site audit. <br> (c) Reinstate the disturbed rocky shore with the rocks temporarily removed. <br> (d) Carry out compensatory tree planting in accordance with DEVB TCW No. 7/2015 to reinstate the affected woodland. |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Marine Ecology | 7 | 7 | a) The proposed Project will cause minor habitat loss of muddy seabed. <br> b) Indirect water quality impact may arise from installation and extraction of sheet pile of cofferdam in construction phase. <br> c) Dredging and backfilling for installation of diffuser will be conducted inside fully enclosed cofferdam. No marine sediment loss to water column is expected. | a) Conditions in the Environmental Permit and Discharge License should be followed | a) The variation in water quality at coral and amphioxus habitats during cofferdam installation and extraction works will be overseen by water quality monitoring mentioned. | Contractor | (a) No specific monitoring and audit programme is required. With proper implementation of water quality mitigation measures, residual impact is expected to be acceptable. |

| Fisheries | 8 | 8 | a) No direct encroachment on Fish Culture Zone and Artificial Reefs in the Study Area is expected. <br> b) About $1,920 \mathrm{~m} 2$ of fishing ground and 500 m 2 of benthic spawning ground will be affected. Except the 5 m 2 benthic spawning ground will be lost permanently, other impacted area will only be affected in construction phase temporarily (reversible impact). Indirect impact on fisheries resources by the water quality deterioration will be insignificant with proper implementation of water quality mitigation measures. | a) Conditions in the Environmental Permit and Discharge License should be followed | Water quality at FCZ will be monitored during cofferdam installation and extraction works and dredging works in the construction phase as proposed. | Contractor | (a) No specific monitoring and audit programme are required. With proper implementation of water quality mitigation measures, residual impact is expected to be acceptable. |

| Waste Management | 9.8 | WM4- <br> WM23 | a) Construction of the sewage treatment plant, laying of gravity sewers and rising mains and submarine outfall are expected to generate mainly inert construction and demolition (C\&D) materials (or public fill) from excavation, and unused building materials. Other wastes include noninert C\&D materials (or C\&D waste), plant materials, scaffolding, formwork and packaging, chemical waste from plant maintenance, bentonite slurry from drilling works and general refuse from workers. <br> b) Dredging at the proposed diffuser location will generate marine sediment. | a) All C\&D materials generated will be transported and stored at temporary storage area. Cover will be provided during transportation of dusty materials. Suitable materials will be sorted for reuse on-site. Only non-inert C\&D material will be disposed offsite to NENT Landfill. <br> b) Conditions in the Environmental Permit and Discharge License should be followed <br> c) Fueling of equipment will be conducted carefully onsite by mobile tanker to avoid storage of fuel and oil spillage. <br> d) Provision of drip trays for equipment likely cause spillage of chemical / fuel and provide routine maintenance. | (a) Reuse C\&D materials onsite and dispose excess uncontaminated ones to public fill. <br> (b) Provide sufficient waste collection points for general refuse and regularly maintained to avoid accumulation. Dispose the waste at waste transfer or disposal facilities. <br> (c) Minimize wastage through careful planning and avoiding over purchase of construction materials. <br> (d) Provide training to workers on site cleanliness, waste management (waste reduction, reuse and recycle) and chemical handling procedures. <br> (e) Hire licensed waste disposal contractors for waste collection and removal. Dispose waste at licensed waste disposal facilities. <br> (f) Recondition and reuse bentonite as far as practical. <br> (g) Conduct marine sediment test and dump dredged marine sediment according to ETWB TCW No. 34/2002 Management of Dredged/Excavated Sediment and Dumping at Sea Ordinance. <br> (h) Chemical waste shall be handled, stored and disposed properly, according to the relevant guidelines. | Contractor | The Contractor should apply for relevant licenses/permits for waste disposal under different regulations and ordinances as follows: <br> (a) Chemical Waste Permits/licenses under the Waste Disposal Ordinance (Cap 354); <br> (b) Public Dumping License under the Land Miscellaneous Provisions) Ordinance (Cap 28); <br> (c) Marine Dumping Permit under Dumping at Sea Ordinance (Cap 466); and <br> (d) Effluent Discharge License under the Water Pollution Control Ordinance (Cap 358). <br> b) Reference should be made to EPD's booklets on licenses/permits. The Contractor shall also document recycling receipts/ disposal record to keep track of waste movement. The ET shall check with the Contractor that these licenses/permits have been obtained. He should also review the above documentations regularly to ensure compliance with legislations and specifications. |

| Cumulative Project-to-Date | 1 | 0 | 0 |

[^0]:    Notes:
    *For Free-field measurement, a correction of $+3 \mathrm{~dB}(\mathrm{~A})$ should be made to the measured results.

    * Due to the limitation posed by the approved monitoring stations set out by the EM\&A manual, four alternative representative Noise Quality Monitoring Stations
    (NMSs) are proposed. The alternative monitoring Locations were approved by ER and IEC.
