1. INTRODUCTION

Project Background

- 1.1 To support social and economic development in Hong Kong, there is a pressing need to optimize the supply of land for various uses by sustainable and innovative approaches. One possible approach is rock cavern development. The Policy Agenda of the 2016 Policy Address has stated that works for the relocation of the Sha Tin Sewage Treatment Works (STSTW) is to commence as soon as possible to release the existing site, of a size about 28 hectares, for development purpose.
- 1.2 The Relocation of Sha Tin Sewage Treatment Works (STSTW) to Caverns (the Project) is a Designated Project under the Environmental Impact Assessment Ordinance (EIAO). An Environmental Impact Assessment (EIA) Report for the Project was approved under EIAO in November 2016 in accordance with the EIA Study Brief (No.ESB-273/2014) and the Technical Memorandum on Environmental Impact Assessment Process (EIAO-TM). The corresponding Environmental Permit was issued (EP no.: EP-533/2017) by the Director of Environmental Protection (DEP) in March 2017.
- 1.3 The major construction activities of the Project are demolition of existing structures, drill & blasts for caverns and access tunnels by excavation and rock crushing, construction of temporary haul road / access road / explosive compound structure. As such, an air quality and noise monitoring programme is recommended in the approved Environmental Monitoring and Audit (EM&A) Manual during the construction phases of this Project to monitor the expected dust and noise nuisances. In order to establish the background conditions of the designated sensitive receivers prior to the commencement of the Project's construction / demolition works, a baseline air quality and noise monitoring programmes is therefore proposed. The updated construction programme is shown in **Appendix E**.
- 1.4 Cinotech Consultants Limited (Cinotech) was commissioned by the Drainage Service Department under Contract No. SPW 09/2018 as Environmental Team to undertake the Baseline Environmental Monitoring for the Project with reference to the requirements specified in the approved EM&A Manual of the approved EIA and baseline air quality and noise monitoring plan submitted to EPD on 15th October 2018 (the Plan).

Purpose of Baseline Air Quality and Noise Monitoring Report

- 1.5 The purpose of this “Baseline Air Quality and Noise Report” (the “Report”) is to set out baseline levels for the air quality and noise in accordance with the EM&A Manual of the Project. These baseline levels will be used as the basis for the impact and compliance monitoring during the construction period of the Project. This report presents the monitoring locations, equipment, period, methodology, results and observations for air quality and noise during the baseline period.

Structure of the Baseline Air Quality and Noise Monitoring Report

1.6 The structure of the Report is summarized as follows:

Section 1: Introduction, purpose, background and the structure of the report.

Section 2: Air Quality, which describes the baseline air quality monitoring.

Section 3: Noise, which describes the baseline noise monitoring.

Section 4: Conclusions

2. AIR QUALITY MONITORING

Monitoring Requirements

- 2.1 According to Section 2.2.5 of the EM&A manual, baseline monitoring shall be conducted to determine the ambient 1-hour TSP levels at all designated monitoring locations prior to the commencement of the Project to provide data for the determination of the appropriate Action levels (ALs) with the Limit levels (LLs) set against statutory or otherwise agreed limits.
- 2.2 The 1-hour TSP shall be conducted for at least three times per day at each monitoring stations for at least 14 consecutive days prior to the commencement of the construction works when highest dust impacts are expected. During the baseline monitoring, there shall not be any construction or dust generating activities in the vicinity of the monitoring stations.
- 2.3 General meteorological conditions (wind speed, direction and precipitation) and notes regarding any significant adjacent dust producing sources should also be recorded throughout the baseline monitoring period.

Monitoring Locations

- 2.4 According to Section 2.2.4 of the EM&A manual, six designated air monitoring stations are listed in **Table 2.1** and their locations shown in **Figure 1**.

Seeking Permission from Premises Owner for Setting up Monitoring Station

AM3 – Ma On Shan Tsung Tsin Secondary School

- 2.5 A letter requesting permission to undertake baseline air quality monitoring works was sent to the school on 25th June 2018. However, we received a notification rejecting the setup of HVS and using Direct Reading Dust Meter for 1-hour TSP monitoring at their premises on 28th September 2018. The written reply from the school is presented in **Appendix F**. According to the School Principal, the proposal of baseline monitoring works at Tsung Tsin Secondary School were rejected during the meeting with school's parent club.

Alternative Monitoring Locations

- 2.6 According to the approved EM&A Manual, alternative dust monitoring location should be chosen based on the following criteria:
- at the site boundary or such locations close to the major dust emission source;
 - close to the air sensitive receivers as defined in the EIAO-TM;
 - proper position / sitting and orientation of the monitoring equipment; and
 - take into account the prevailing meteorological conditions.
- 2.7 1 alternative air quality monitoring station was proposed in **Table 2.2**. The location of the alternative monitoring station is shown in **Figure 1**.

Table 2.2 Proposed Alternative Air Quality Monitoring Station

Monitoring Stations	Location	Alternative Monitoring Stations	Location
AM3	Ma On Shan Tsung Tsin Secondary School	AM3(A)	Kowloon City Baptist Church Hay Nien Primary School

Rationale for Proposing Alternative Air Quality Monitoring Locations

- 2.8 During our site visit, the alternative air quality monitoring station is proposed at Kowloon City Baptist Church Hay Nien Primary School. The reasons for the proposal are as follows:

AM3(A) – Kowloon City Baptist Church Hay Nien Primary School

- Kowloon City Baptist Church Hay Nien Primary School is at the site boundary close to the major dust emission source including the construction activities for the Project;
- Kowloon City Baptist Church Hay Nien Primary School is an ASR and close to the designated air quality monitoring station in EM&A Manual (AM3 - Ma On Shan Tsung Tsin Secondary School);
- Permission for setting the air quality monitoring equipment (HVS) has been obtained. The written reply from the school is presented in **Appendix F**;
- Secured supply of electricity for operation of the sampler.
- It is in the same downwind direction as AM3 and has similar meteorological condition.

Monitoring Equipment

- 2.9 High Volume Samplers (HVS) in compliance with the specification stipulated in the EM&A Manual, Section 2.2.2 and direct reading dust meter were used to measure 1-hour average TSP levels, which is subjected to the permission of the premises owners of the monitoring station to set up the sampler or dust meter. The 1-hour sampling was determined by HVS to check the validity and accuracy of the results measured by direct reading method prior to baseline air quality monitoring.
- 2.10 Wind data was obtained from the Meteorological Observations. Wind data monitoring equipment was also set at rooftop (about 40/F) of Kam Tai Court for logging wind speed and wind direction such that the wind sensors are clear of obstructions or turbulence caused

by building.

- 2.11 The wind data monitoring equipment is re-calibrated at least once every six months and the wind directions are divided into 16 sectors of 22.5 degrees each. The data captured by a data logger was downloaded for analysis. The location of wind data monitoring is shown in **Figure 1**.
- 2.12 **Table 2.3** summarizes the equipment to be used in the baseline air quality monitoring programme. Copies of calibration certificates are attached in **Appendix A1**.

Rationales for Using Direct Reading Dust Meter for Measurement at AM1, AM4 and AM6

AM1 - Ah Kung Kok Fishermen Village

- 2.13 A letter requesting permission to undertake baseline air quality and noise monitoring works was sent to the premises on 25th June 2018. We have conducted a site visit to sensitive receiver and liaised with the villager to explain them the purpose and details regarding the environmental monitoring on 5th and 10th July 2018. However, we received a verbal notification rejecting the setup of HVS for 1-hour TSP monitoring at their premises and supply of electricity for HVS. The villager refused to provide a written reply of the rejection and there was no specific reason provided by villager for the rejection.

AM4 - Wellborn Kindergarten

- 2.14 A letter requesting permission to undertake baseline air quality and noise monitoring works was sent to the Wellborn Kindergarten on 25th June 2018. However, we received a notification rejecting the setup of HVS for 1-hour TSP monitoring at Wellborn Kindergarten through fax on 15th August 2018. The written reply from the school is presented in **Appendix F**. The reason for the rejection is the school does not expect an additional equipment to be set up within their premises. In addition, the school has also declined the request of electricity for operation of HVS due to safety reason.

AM6 - Seaview Villa

- 2.15 A letter requesting permission to undertake baseline air quality monitoring works was sent to the premises on 25th June 2018. We have conducted a site visit to sensitive receiver and liaised with the premises owner to explain them the purpose and details regarding the air quality monitoring on 10th July 2018. However, we received a verbal notification rejecting the setup of HVS for 1-hour TSP monitoring at their premises and supply of electricity for HVS. The premises owner refused to provide a written reply of the rejection and there was

no specific reason provided by premises owner for the rejection.

- 2.16 Although the permission for setting up of HVS at AM1, AM4 and AM6 was not granted, direct reading dust meter was used for 1-hour TSP monitoring at the designated air quality monitoring locations according to approved EM&A Manual under the Project.

Monitoring Parameters, Frequency and Duration

- 2.17 **Table 2.4** summarizes the monitoring parameters and frequencies of baseline air quality monitoring.

Table 2.4 Baseline Air Quality Monitoring Parameters, Frequency and Duration

Parameter	Frequency	Duration
1-hour TSP	3 times per day	Consecutive days of at least 2 weeks before commencement of major construction works

Monitoring Methodology and QA/QC Procedure

Instrumentation

- 2.18 High Volume Samplers (HVS) with appropriate sampling inlets and direct reading dust meter were deployed for the air quality monitoring as shown in **Table 2.3**.

HVS Installation

- 2.19 Each sampler is composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complied with the requirement of USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50). Moreover, the HVS also met all the requirements in Section 2.2.2 of the EM&A Manual.

- 2.20 The following guidelines were adopted during the installation of HVS:

- A horizontal platform with appropriate support to secure the samplers against gusty wind shall be provided.
- No two samplers shall be placed less than 2 metres apart;
- The distance between the sampler and an obstacle, such as buildings, must be at least twice the height that the obstacle protrudes above the sampler;
- A minimum of 2 metres of separation from walls, parapets and penthouses is required for rooftop samplers;
- A minimum of 2 metres of separation from any supporting structure, measured horizontally is required;
- No furnace or incinerator flue is nearby;
- Airflow around the sampler is unrestricted;
- The sampler is more than 20 metres from the dripline;
- Any wire fence and gate, to protect the sampler, shall not cause any obstruction during monitoring;
- Permission must be obtained to set up the samplers and to obtain access to the monitoring stations; and

- A secured supply of electricity is needed to operate the samplers.

Operating/Analytical Procedures

2.21 Operating/analytical procedures of HVS for the air quality monitoring are highlighted as follows:

- Prior to the commencement of the TSP monitoring, the flow rate of the HVS was properly set (between 1.1 m³/min. and 1.4 m³/min).
- The power supply was checked to ensure the sampler worked properly.
- Upon sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air quality monitoring station.
- Before sampling, the filter was checked to ensure it is clean with no pinhole.
- The filter holding frame was then removed by loosening the four nuts and a weighted and conditioned filter was centred carefully with the stamped number upwards, on a supporting screen.
- The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- The shelter lid was closed and secured with the aluminium strip.
- The timer was then programmed. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
- After sampling, the filter was removed and kept in a clean and tightly sealed plastic bag. The filter paper was then be returned to the Wellab Ltd. for reconditioning in the humidity-controlled chamber followed by accurate weighting by an electronic balance with a readout down to 0.1mg. The elapsed time was also recorded.
- Before weighing, all filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ± 3 °C; the relative humidity (RH) is < 50% and not variable by more than $\pm 5\%$. A convenient working RH is 40%. Weighing results was returned to Cinotech for further analysis of TSP concentrations collected by each filter.

2.22 The measuring procedures of the 1-hour dust meter are in accordance with the Manufacturer's Instruction Manual as follows:

(Hal Technology; Model no. Hal-HPC300 / Hal-HPC301)

- The 1-hour dust meter was placed at least 1.3 meters above ground.
- Set POWER to "ON" and make sure that the battery level was not flash or in low level.
- Allow the instrument to stand for about 3 minutes and then the cap of the air sampling inlet has been released.
- Push the knob at MEASURE position.
- Set time/mode setting to [BG] by pushing the time setting switch. Then, start the background measurement by pushing the start/stop switch once. It took about 6 sec. to complete the background measurement.
- Push the time setting switch to change the time setting display to [MANUAL] at the

bottom left of the liquid crystal display. Finally, push the start/stop switch to stop the measuring after 1 hour sampling.

- Information such as sampling date, time, count value and site condition were recorded during the monitoring period.

Maintenance/Calibration

2.23 The following maintenance/calibration is required for the HVS:

- The high volume motors and their accessories were properly maintained by the monitoring team. Appropriate maintenances such as routine motor brushes replacement and electrical wiring checking are made to ensure that the equipment and necessary power supply are in good working condition.
- All HVSs were calibrated (five point calibration) using TE-5025A Calibration Kit prior to the commencement of the baseline monitoring.
- High volume samplers will be calibrated at bi-monthly intervals using TE-5025A Calibration Kit throughout the air quality monitoring period, if necessary.

2.24 The following maintenance/calibration is required for the direct dust meters:

- Check and calibrate the meter by HVS to check the validity and accuracy of the results measured by direct reading method prior to the commencement of the baseline monitoring. Dust meter will be checked and calibrated at bi-monthly intervals throughout the air quality monitoring period, if necessary.

Laboratory Measurement / Analysis

2.25 Fiberglass filters of size 8" x 10" were labelled before sampling. A HOKLAS accredited laboratory, Wellab Ltd., is responsible for the preparation of 24-hr conditioned and pre-weighed filter papers for the monitoring team. The balance for weighting filter paper was regularly calibrated against a traceable standard.

2.26 All filters, which were prepared by Wellab Ltd., were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ± 3 °C; the relative humidity (RH) was < 50% and not variable by more than ± 5 %. A convenient working RH was 40%.

2.27 Wellab Ltd. provided comprehensive quality assurance and quality control programmes.

3. NOISE MONITORING

Monitoring Requirements

- 3.1 According to Section 3.5 of the EM&A manual, baseline noise monitoring shall be conducted daily in all of the identified monitoring stations for at least 2 weeks prior to the commencement of the construction works.
- 3.2 A schedule of the baseline monitoring was submitted to the ER for approval before the monitoring starts.
- 3.3 During the baseline monitoring, construction activities under this Project shall not be conducted in the vicinity of the monitoring stations.

Monitoring Locations

- 3.4 According to Section 3.4 of the EM&A manual, five designated noise monitoring stations are listed in **Table 3.1** and their location shown in **Figure 2** for construction of relocated STSTW.

Table 3.1 Noise Monitoring Stations for Construction of Relocated STSTW

- 3.5 Baseline noise monitoring at construction noise monitoring stations for demolition of existing STSTW will be conducted under a separate baseline noise monitoring programme after the completion of construction of relocated STSTW and therefore it is not covered in this baseline monitoring report.

Seeking Permission from Premises Owner for Setting up Monitoring Station

CM2 – Ma On Shan Tsung Tsin Secondary School

- 3.6 A letter requesting permission to undertake baseline noise monitoring works was sent to the school on 25th June 2018. However, we received a notification rejecting the setup of noise equipment for noise monitoring at their premises on 28th September 2018. The written reply from the school is presented in **Appendix F**. According to the School Principal, the proposal of baseline monitoring works at Tsung Tsin Secondary School were rejected during the meeting with school's parent club.

Alternative Monitoring Locations

3.7 According to the approved EM&A Manual, alternative noise monitoring location should be chosen based on the following criteria:

- at locations close to the major site activities which are likely to have noise impacts;
- close to the noise sensitive receivers; and
- for monitoring locations located in the vicinity of the sensitive receivers, care shall be taken to cause minimal disturbance to the occupants during monitoring.

3.8 1 alternative noise monitoring station was proposed in **Table 3.2**. The location of the alternative monitoring station is shown in **Figure 2**.

Rationale for Proposing Alternative Noise Monitoring Locations

3.9 During our site visit, the alternative noise monitoring station is proposed at Kowloon City Baptist Church Hay Nien Primary School. The reasons for the proposal are as follows:

CM2(A) – Kowloon City Baptist Church Hay Nien Primary School

- The proposed location is at the site boundary close to the major site activities which are likely to have noise impact under the Project;
- The proposed location is close to the designated noise monitoring station in EM&A Manual (CM2 – Ma On Shan Tsung Tsin Secondary School);
- The type of proposed location is same as the designated noise monitoring station in EM&A Manual (i.e. Educational Institution); and
- Permission for setting the noise monitoring station at rooftop has been obtained and therefore the disturbance to the occupants during monitoring is minimal. The written reply from the school is presented in **Appendix F**.

Monitoring Equipment

3.10 Integrating Sound Level Meter was used for baseline noise monitoring. The meters are Type 1 sound level meter capable of giving a continuous readout of the noise level readings including equivalent continuous sound pressure level (L_{eq}) and percentile sound pressure level (L_x) that also complied with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications. **Table 3.3** summarizes the noise monitoring equipment being used. Copies of calibration certificates are attached in **Appendix B1**.

Table 3.3 Noise Monitoring Equipment

Equipment	Model and Make	Quantity
Integrating Sound Level Meter	SVAN 957 / 977 and BSWA 801	3
Calibrator	SV30A	1

Monitoring Parameters, Frequency and Duration

3.11 In accordance with the EM&A Manual, continuous baseline noise monitoring in terms of the 30-minute A-weighted equivalent sound pressure level (L_{Aeq} (30-min)) was carried out daily at all of the identified monitoring stations for the time period between 0700-1900 hours on normal weekdays at least 2 weeks prior to the commissioning of the construction works. Supplementary information for data auditing and statistical results such as L₁₀ and L₉₀ were obtained for reference. For all other time periods, (L_{Aeq} (5-min)) was employed for comparison with the Noise Control Ordinance (NCO) criteria. Data obtained from the baseline noise monitoring was processed and presented according to the following three periods:

- Daytime: 0700-1900 hrs on normal weekdays
- Evening time on all days (1900-2300 hrs) and Holidays (including Sundays) during the daytime and evening (0700-1900 hrs)
- Night-time: 2300-0700 hrs of next days

3.12 The frequency and parameters of noise measurement are presented in **Table 3.4**.

Table 3.4 Baseline Noise Monitoring Parameters, Frequency and Duration

Monitoring Stations	Time Period	Interval, min	Parameter
CM1, CM2(A), CM3, CM4, CM5	Daytime on normal weekdays (0700-1900 hrs)	30 min	L _{eq} , L ₁₀ & L ₉₀
	Evening time on all days (1900- 2300 hrs) and Holidays (including Sundays) during the daytime and evening (0700-1900 hrs)	5 min	
	All days during the night-time (2300-0700 hrs)		

Monitoring Methodology and QA/QC Procedure

3.13 The monitoring procedures are as follows:

- The monitoring stations was normally be set at 1m away from the exterior building façade of the sensitive receivers and at a position of 1.2m above the ground.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces. Free field noise levels was adjusted with a correction of +3 dB(A).
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the interval was set as follows:
 - Frequency weighting : A
 - Time weighting : Fast
 - Interval : *5 minutes ($L_{eq(30\text{-min})}$ was calculated from the six $L_{eq(5\text{min})}$ data for each 30-minute interval)

*Justification for measuring the baseline noise levels at an interval of 5 minutes

According to EM&A Manual and General Technical Requirements of Environmental Monitoring under Guidelines for Development Projects in Hong Kong, $L_{eq(30\text{ min})}$ shall be used as the monitoring parameter for the time period between 0700-1900 hours on normal weekdays. For all other time periods, $L_{eq(5\text{ min})}$ shall be employed for comparison with the NCO criteria.

In order to cause minimal disturbance to the occupants during monitoring, sound level meters were set at the sensitive receivers to measure the baseline noise levels at an interval of 5 minutes for all time periods instead of arranging field staff to measure the noise level at the sensitive receiver to avoid any security concerns.

Therefore, the $L_{eq(30\text{-min})}$ was calculated from the six $L_{eq(5\text{min})}$ data for each 30-minute interval.

- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement will be more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- At the end of the monitoring period, the L_{eq} , L_{90} and L_{10} was recorded. In addition, noise sources were recorded on a standard record sheet.
- Noise monitoring will be cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s. Supplementary monitoring will be provided to ensure sufficient data would be obtained.

3.14 **Table 3.5** summarizes the types of measurement undertaken in the five monitoring stations.

Maintenance and Calibration

- 3.15 The microphone head of the sound level meter and calibrator was cleaned with a soft cloth at quarterly intervals.
- 3.16 The sound level meter and calibrator was checked and calibrated at yearly intervals.
- 3.17 Immediately prior to and following each noise measurement the accuracy of the sound level meter was checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

In addition, direct reading dust meter were also proposed to conduct the 1-hr TSP monitoring at AM1, AM4 and AM6 (Section 2.13 to 2.16).
- 4.3 The parameters monitored are all in line with the EM&A Manual.
- 4.4 Summary of revisions to be included in the revised EM&A Manual are shown in the **Table 4.1**.

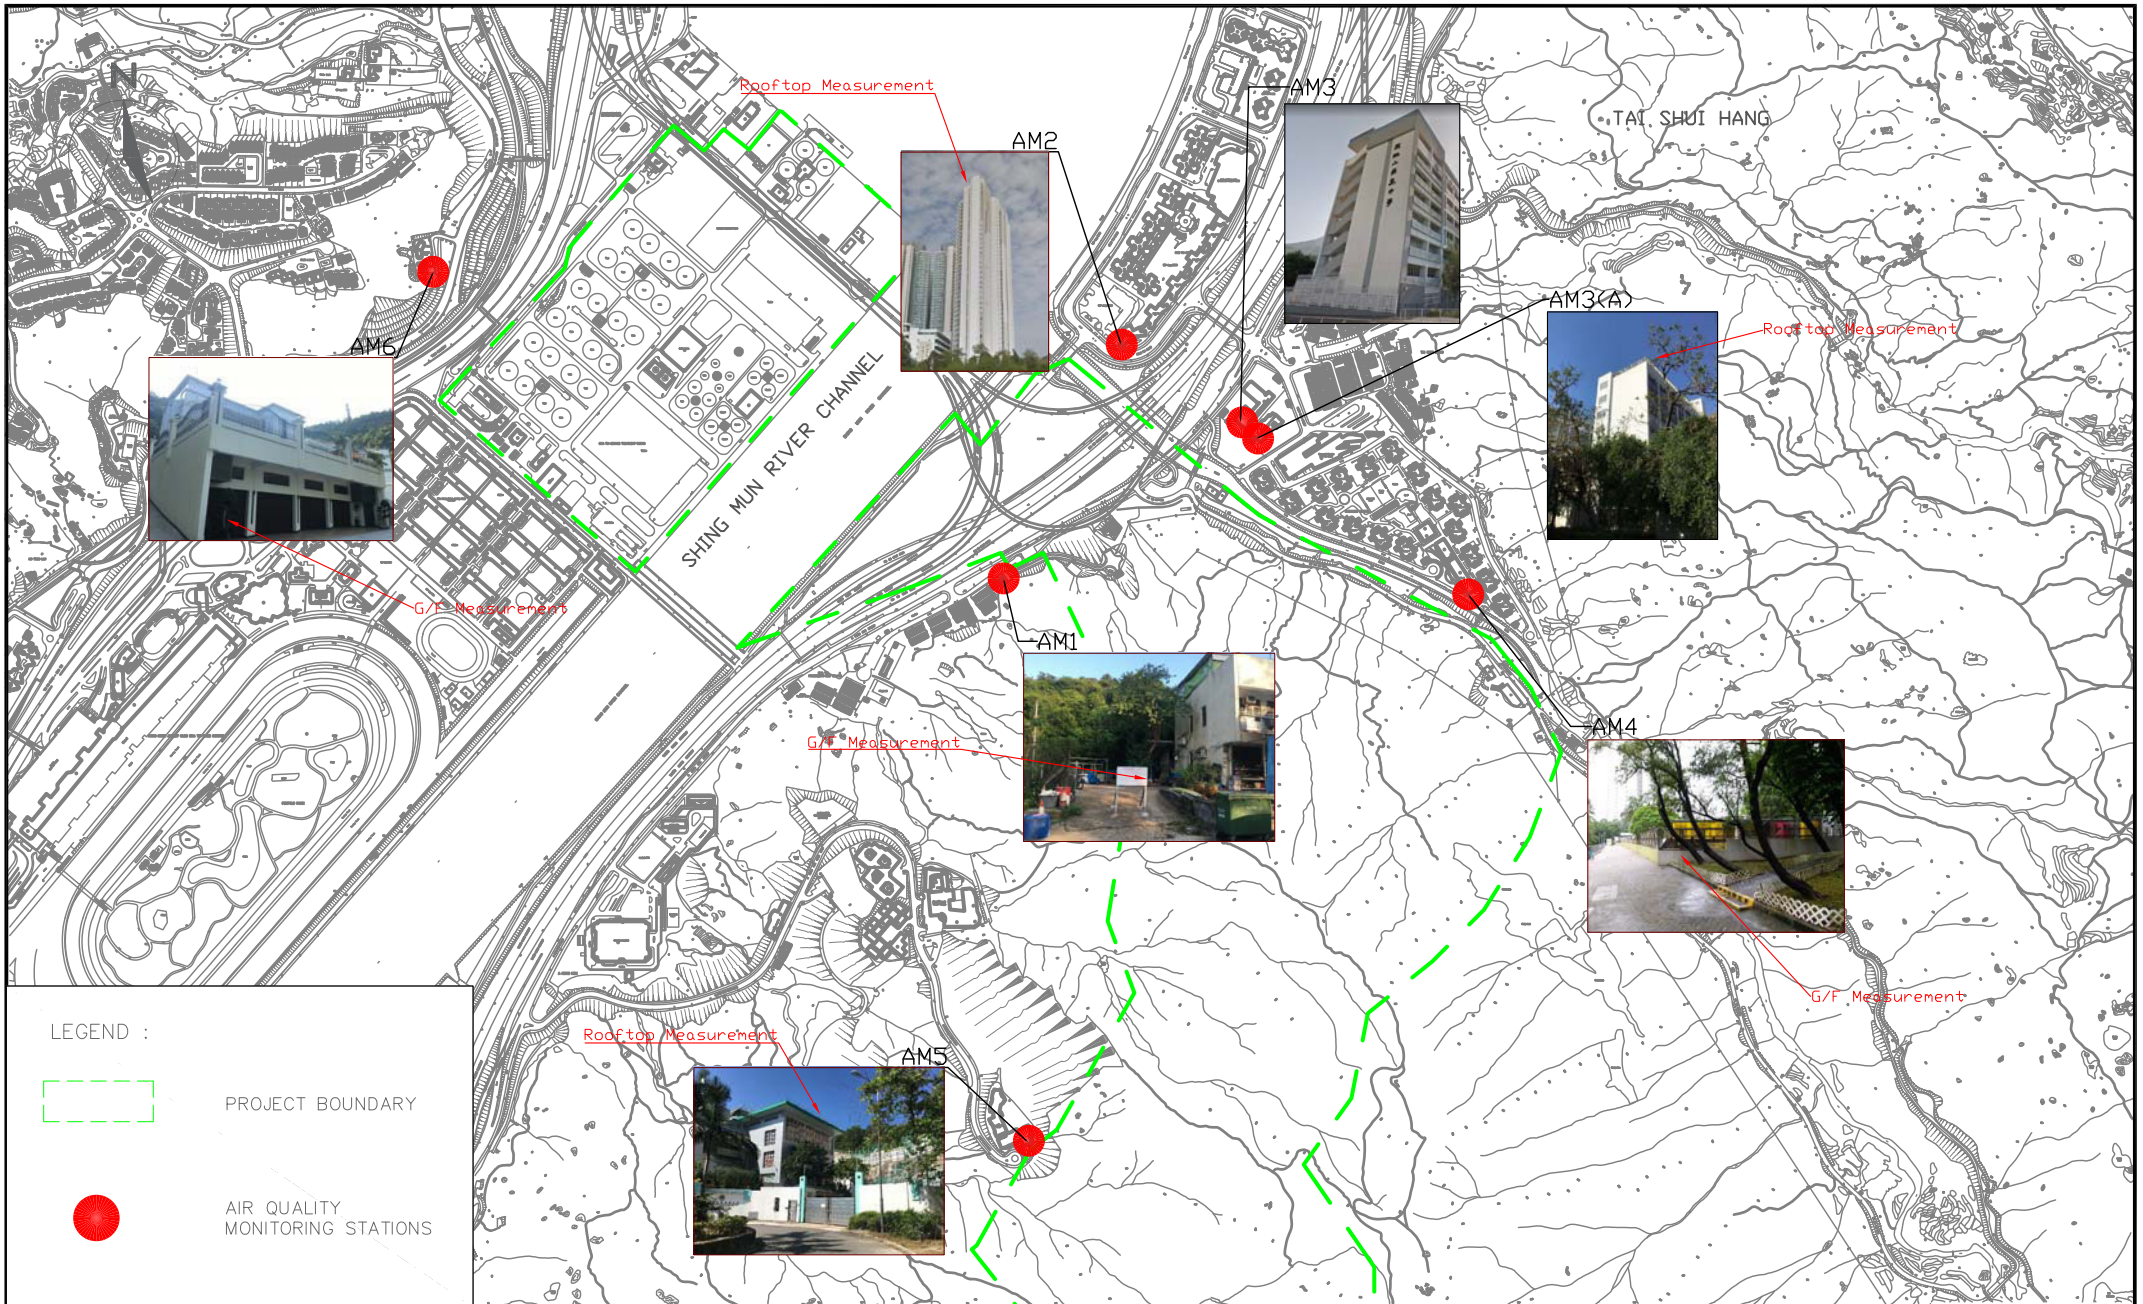

Table 4.1 Summary of Revisions for Inclusion in the EM&A Manual

Revision(s)	Details	Relevant Section(s) in this Baseline Monitoring Report

5. CONCLUSIONS

- 5.1 The baseline environmental monitoring was conducted for air quality (Stations AM1, AM2, AM3(A), AM4, AM5, AM5) and noise (Station CM1, CM2(A), CM3, CM4, CM5) in the period between 18th October 2018 and 16th November 2018.
- 5.2 The baseline environmental monitoring was carried out in accordance with the EM&A Manual and contract specification, in respect of the methodology, equipment, location and monitoring parameters.
- 5.3 The baseline air quality (1-hour TSP levels) monitoring was conducted at six monitoring locations (Stations AM1, AM2, AM3(A), AM4, AM5, AM5) between 18th October 2018 and 15th November 2018. During the monitoring, some influencing factors (e.g. road traffic dust) may be affected the baseline dust monitoring results in the vicinity of the monitoring stations. The baseline air quality monitoring results are considered representative to the ambient air quality conditions of the respective sensitive receivers. The Action and Limit Levels for the air quality were established based on the baseline monitoring results.
- 5.4 Baseline noise monitoring was conducted at five monitoring stations (Station CM1, CM2(A), CM3, CM4, CM5) between 18th October 2018 and 16th November 2018. The major noise sources identified at the monitoring stations are the noise from road traffic and school activities. The baseline monitoring results are considered representative to the ambient noise level at all monitoring stations.

		levels of groundwater to be recharged shall not be higher than pollutant levels of ambient groundwater at the recharge well. Groundwater monitoring wells should be installed near the recharge points to monitor the effectiveness of the recharge wells and to ensure that no likelihood of increase of groundwater level and transfer of pollutants beyond the site boundary. Prior to recharge, free products should be removed as necessary by installing the petrol interceptor. The Contractor should apply for a discharge licence under the WPCO through the Regional Office of EPD for groundwater recharge operation or discharge of treated groundwater							
5.7.2	4.10	THEES connection works should be synchronized with the THEES maintenance, for a duration not longer than 4 weeks each outside the algae blooming season (January to May) and frequency of THEES maintenance shall be no more than once per year during the construction phase of the Project.	Tolo Harbour / Construction Phase	Project Proponent / Contractor	√	√			EIAO-TM
Construction and Operation Phases									
5.10.2	4.10	Shutdown of the THEES for maintenance should be shortened as far as possible. It is recommended that the maintenance of the THEES tunnel should be avoided during the algae blooming season (January to May).	Tolo Harbour / Construction and Operation Phase	Project Proponent		√	√		WPCO, EIAO-TM
5.10.2	4.10	Relevant government departments including EPD, WSD, AFCD as well as the key stakeholders for mariculture and fisheries in Tolo Harbour should be informed of the maintenance event prior to any discharge.	Tolo Harbour / Construction and Operation Phase	Project Proponent		√	√		WPCO, EIAO-TM
5.10.3	4.2-4.5	An event and action plan and a water quality monitoring programme (as presented in the EM&A Manual) should be implemented for the THEES maintenance discharge	Tolo Harbour / Construction and Operation Phase	Project Proponent		√	√		WPCO, EIAO-TM
5.10.1	4.10	Silt screen may be installed at the flushing water intakes during the THEES maintenance discharge should it appear necessary. Close communication between DSD and WSD should be maintained to minimize any impact on the flushing water intakes due to THEES maintenance discharge.	WSD flushing water intakes / Construction and Operation Phase	WSD / Project Proponent		√	√		WPCO, EIAO-TM
Design and Operation Phases									
5.8.3	4.6	In case adverse impact on KTN is identified based on the result of the three-month monitoring programme after commissioning of the project, the operation conditions of the treatment and THEES system should be investigated, and corrective and remedial action should be implemented to improve the effluent discharge from the CSTW. Furthermore, DSD should extend the water quality monitoring programme for at least three months or as agreed by the Director of Environmental Protection.	Project site / Design and Operation Phases	Project Proponent			√		WPCO, EIAO-TM
5.11.2	4.10	Dual power supply or ring main supply from CLP Power Hong Kong Ltd. CLP should be provided for the CSTW to prevent the occurrence of power failure. In addition, standby facilities for the main treatment units and standby equipment parts / accessories should also be provided in order to minimise the chance of emergency discharge. CLP should be consulted in order to ascertain the power supply for normal plant operation within the caverns. It is recommended that government departments including EPD, WSD and AFCD as well as the key stakeholders for mariculture and fisheries in Tolo Harbour should be informed as soon as possible in case of any emergency discharge so that appropriate actions can be taken.	Project site / Design and Operation Phases	Project Proponent	√		√		WPCO, EIAO-TM
5.11.2	4.10	In case of emergency discharge, the plant operators of CSTW should carry out necessary follow-up actions according to the procedures of the current contingency plan formulated for the existing STSTW to minimise the water quality impact.	Project site / Operation Phase	Project Proponent			√		WPCO, EIAO-TM
5.11.2	4.10	WSD may also consider, should it appear necessary, to shut down the Sha Tin seawater pumping station for a short period of time in case of emergency discharge in order to minimize any adverse impacts.	Sha Tin seawater pumping station / Operation Phase	WSD / Project Proponent			√		WPCO, EIAO-TM
5.13.2	4.10	Best Management Practices to reduce storm water and non-point source pollution are also proposed as follows: Design Measures - Exposed surface shall be avoided within the road and portal sites to minimise soil erosion. The access road and the portal areas shall be either hard paved or covered by landscaping area where appropriate. - Streams near the Project site will be retained to maintain the original flow path. The drainage system will be designed to avoid flooding. - Green areas / planting etc. should be introduced alongside the access road and within the portal areas, as far as possible, to minimise runoff pollution. Devices/Facilities to Control Pollution - Screening facilities such as standard gully grating and trash grille, with spacing which is capable of screening off large substances such as fallen leaves and rubbish should be provided at the inlet of drainage system. - Road gullies with standard design and silt traps should be provided to	Project site / Design and Operation Phase	Project Proponent	√		√		WPCO, ProPECC PN 5/93

		occurs post grouting will be undertaken before the lining is installed. Whilst unlikely to be required in significant measure, such a contingency should be allowed for reduction in permeability of the tunnel / cavern surround (by grouting) to limit inflow to acceptable levels. The practical groundwater control measures stated above are proven technologies and have been extensively applied in other past projects. These measures or other similar methods, as approved by the Engineer to suit the works condition shall be applied to minimise the groundwater infiltration.							
8.8.3	7.2.2	In case seepage of groundwater occurs, groundwater should be pumped out from works areas and discharged to the storm system via silt trap. Uncontaminated groundwater from dewatering process should also be discharged to the storm system via silt removal facilities.	Project site / Construction Phase	Contractor	√				-
8.8.3	7.2.2	Mitigation measures recommended in the water quality impact assessment for controlling water quality impact will also serve to protect marine ecological resources from indirect impacts and ensure no unacceptable impact on marine ecological resources. Relevant government departments including EPD, WSD and AFCD as well as key stakeholders for mariculture and fisheries in Tolo Harbour should be informed of the THEES maintenance / emergency discharge event prior to any discharge. It is recommended that the temporary effluent bypass event and the THEES maintenance period should be shortened as far as possible.	Tolo Harbour / Construction Phase	Contractor and Operator	√				-
Construction and Operation Phase									
8.8.3	7.2.2	Overall reduction of glare during both construction and operation phase should be considered. A balance between lighting for safety, and avoiding excessive lighting can be achieved through the use of directional lighting to avoid light spill into sensitive areas, and controlling timing of lighting periods of some facilities, particularly at the secondary portal which lies approximately 200 m northwest of Ma On Shan Country Park.	Project site / Construction and Operation Phase	Contractor and Operator		√			-
8.8.3	7.2.2	During the decommissioning and demolition of the existing STSTW, the direction and lighting periods should be controlled during ardeid breeding season (March to August) to minimise the potential indirect impact on Penfold Park Egret and the ardeids flying over the existing STSTW.	Existing STSTW / Decommissioning / March to August	Contractor				√	-
8.10	7.3	It is anticipated that the construction of rock caverns would not have adverse impacts on groundwater in Nui Po Shan. Nonetheless, surface water level or groundwater level near the caverns will be closely monitored during the construction and operation stage.	Project site / Construction and Operation Phase	Contractor and Operator	√	√			-
Compensatory Planting									
8.8.4 & 8.10.1	7.2.3	Compensatory planting would be provided at main and secondary portal areas, and along the access road.	Main portal, secondary portal, and along access road	Project Proponent	√	√			DEVB TC(W) No. 7/2015
8.8.4 & 8.10.1	7.2.3	To facilitate successful planting, a detailed Woodland Compensation Plan should be prepared by local ecologists with at least 10 years relevant experience to form the basis of the proposed compensatory planting. The Woodland Compensation Plan should include implementation details, management requirement, as well as monitoring requirements (e.g. frequency and parameters) of the compensatory planting area. Approval of the Plan should be obtained from EPD at least three months before the prior to commencement of compensatory woodland planting.	Compensatory planting area (Main portal, secondary portal, and along access road) / pre-construction	Project Proponent	√	√			
8.8.4 & 8.10.1	7.2.3	Upon the completion of planting, monitoring of the woodland compensation areas should be implemented, with maintenance works (e.g. irrigation, weeding, pruning, control of pests and diseases, replacement planting, repair of damage, etc.) conducted as necessary.	Compensatory planting area (Main portal, secondary portal, and along access road) / Operation	Project Proponent / CSTW Operator		√			
Fisheries Impact									
9.6	8.2	Potential impacts on fisheries resources and fishing operations arising from the Project have been avoided and minimised by construction of a connection pipes to the existing emergency outfall of STSTW by trenchless method underneath Shing Mun River with the least water quality impact. In addition, the temporary effluent bypass event for THEES connection work would be synchronized within regular THEES maintenance. Therefore, additional water quality impact and fisheries impact from changes of water quality have been avoided. Furthermore, the THEES maintenance discharge would avoid the blooming season of algae (i.e. January to May) to minimise the potential water quality impacts. It is recommended that any THEES maintenance period should be shortened as far as possible.	Tolo Harbour / Construction and Operation Phase	Project Proponent / Contractor	√	√			-
9.6	8.2	Mitigation measures recommended in the water quality impact assessment for controlling water quality impact will also serve to protect fisheries from indirect impacts and ensure no unacceptable impact on fisheries resources and operations.
