List of Appendices

1. Introduction

1.1 Project Background

1.1.1 The Railway Development Strategy 2014 (RDS-2014) announced by the Government of the Hong Kong Special Administrative Region included the conceptual scheme of Tung Chung West (TCW) Extension and a possible Tung Chung East (TCE) Station.

1.1.2 The potential environmental impact of this new railway system has been assessed and included in the approved Schedule 3 Environmental Impact Assessment (EIA) for Tung Chung New Town Extension (TCNTE), which has included the new stations at TCE area and TCW area and the associated trackwork and tunnel. However, a separate Schedule 2 EIA study for this railway system is conducted to address the associated environmental impacts, taking into account of the latest design.

1.1.3 The at-grade TCE Station will be located approximately 2 km east of the existing Tung Chung Station (TUC) at the south of the future TCNTE new reclamation area. The station is bounded by the future roads in the reclamation area and the existing TCL and Airport Express Line (AEL).

1.1.4 The EIA Report for Tung Chung Line Extension (AEIAR-235/2022) was approved on 12 July 2022 and the Environmental Permit (EP) (No. EP-614/2022) was then issued on 9 August 2022.

1.1.5 Under Contract 1202, the scope of work includes:

- Construction of a new TCE Station between Sunny Bay Station and Tung Chung Station.
- Construction of two footbridges connecting TCE and Area 113 development.
- Cable containment and associated enabling works for track diversions.
- Construction of station associated building services and Architectural Builders Works and Finishes (ABWF).

1.2 Purpose of the Plan

1.2.1 Two Construction Noise Management Plans (CNMP) are submitted under EP (EP-614/2022). One CNMP is submitted for Contract 1201 (Tung Chung West Station, tunnels and barging facilities), another CNMP is submitted for Contract 1202 (Tung Chung East Station and Associated Enabling Works for Track Diversions). Only works and associated construction noise mitigation measures under Contract 1202 is reviewed and discussed in this CNMP. This CNMP covers the construction works from November 2023 until the completion of construction works in February 2028 only.

1.2.2 With reference to Clause 2.13 of the EP (EP-614/2022), the purposes of this CNMP are to:

- Identify the noise source inventory and assess the effectiveness of construction noise mitigation measures, including the use of quieter powered mechanical equipment, noise barriers and noise enclosures as recommended in the Environmental Impact Assessment (EIA) Report (EIA Ordinance Register No. AEIAR-235/2022).

- Review the practicality of the use of quieter construction equipment/methods; and

- Propose implementation schedule in table form to clearly list out the mitigation measures to be implemented, and the implementation party, location, timing, and environmental performance required for implementation of the mitigation measures.

1.2.3 As stipulated in Clause 2.13 of the EP (EP-614/2022), all mitigation measures recommended and requirements specified in the CNMP shall be fully implemented.

2. Description of Construction Works in the Study Area

2.1 Legislation and Standards

2.1.1 The main piece of legislation controlling environmental noise impact is the Noise Control Ordinance (NCO). The NCO enables regulations and Technical Memoranda (TM) to be made, which introduce detailed control criteria, measurement procedures and other technical matters.

2.1.2 Construction noise is governed under the following TMs:

- Technical Memorandum on Noise from Percussive Piling (PP-TM);
- Technical Memorandum on Noise from Construction Work other than Percussive Piling (GW-TM); and
- Technical Memorandum on Noise from Construction Work in Designated Areas (DA-TM).

2.1.3 In addition, the construction contractor shall comply with the following requirements under the NCO:

- Hand-held breakers having a mass of above 10 kg and any air compressor capable of supplying compressed air at 500 kPa or above must be fitted with a Noise Emission Label issued under the Noise Control (Hand Held Percussive Breakers) Regulation and Noise Control (Air Compressors) Regulation of NCO.
- The construction contractor must apply for and receive a Construction Noise Permit (CNP) from the Environmental Protection Department (EPD) for percussive piling (at any time) or any other construction activities conducted within the Restricted Hours. (Should an application for a CNP be deemed necessary, the Noise Control Authority will process CNP application based on the NCO, the relevant technical memoranda under the NCO, and the contemporary conditions disregard of the assessment results in this CNMP. To minimize the construction noise impact, alternative construction methods to replace percussive piling shall be proposed as far as practicable.)

2.1.4 For noise arising from construction activities during non-restricted hours (i.e. 7 am to 7 pm from Monday to Saturday, not including public holidays), the noise impact is assessed against the noise standards stipulated in Table 1B of Annex 5 in the Technical Memorandum on Environmental Impact Assessment Process (EIAO-TM).

2.1.5 It is anticipated that construction works will be carried out between 7 a.m. and 7 p.m. on working days except Sundays and public holidays. The construction noise impacts are assessed with reference to the EIAO-TM as shown in **Table 2.1**.

Table 2.1 Construction Noise Criteria for Non-Restricted Hours

Uses	Noise Standard (dB(A))
Domestic Premises, Hotels and Hostels	75
Educational Institutions (normal periods)	70
Educational Institutions (during examination periods)	65

Notes:
[1] The above standards apply to uses which rely on openable windows for ventilation.
[2] The above standards shall be viewed as the maximum permissible noise levels assessed at 1 m from the external façade.

2.1.6 The Noise Control Authority will consider a well-justified CNP application for construction works within restricted hours (i.e. 7 pm to 7 am and any time on a general holiday, including Sunday) as guided by the relevant Technical Memorandum issued under the NCO. The Noise Control Authority will take into account adjoining land uses and any previous complaints against construction activities at the site before making a decision. The Noise Control Authority may include any conditions in a CNP that it considers appropriate. Failure to comply with any such conditions may lead to cancellation of the CNP and prosecution action under the NCO.

2.2 Airborne Construction Noise Impact Assessment Methodology

2.2.1 With reference to Section 4.4.1.2 of the approved EIA report (Register No. AEIAR-235/2022), the construction noise impact assessment was conducted as the following procedure:

- Determine 300 m from the boundary of the Project and from any works of the Project;
- Identify and locate representative NSRs that may be affected by the works;
- Obtain the construction method and work sequence for the construction period;
- Obtain the construction plant inventory for each corresponding construction work sequence;
- Determine the Sound Power Levels (SWLs) of the plant items according to the information stated in the GW-TM or other recognised sources of reference, where appropriate;
- Calculate the correction factors based on the distance between the Noise Sensitive Receivers (NSRs) and the notional noise source positions of the work sites;
- Apply corrections for façade, distance, barrier attenuation, acoustic reflection where applicable;
- Predict construction noise levels at the NSRs;
- Quantify the level of impact at the NSRs, in accordance with GW-TM;
- Predict the cumulative noise impacts for any concurrent construction works (e.g. Tung Chung New Town Extension (TCNTE)) in the vicinity of the proposed work;

- For any exceedance of noise criteria, all practical mitigation measures such as alternative quieter construction methodology, quiet plant, silencer, enclosure, etc, shall be examined to alleviate the predicted noise impacts as much as practicable; and

- Consideration of noise mitigation measures will follow Annex 13 of Technical Memorandum on Environmental Impact Assessment Process (EIAO-TM) and EIAO Guidance Note "Preparation of Construction Noise Impact Assessment under the Environmental Impact Assessment Ordinance" [GN 9/2010].

2.3 Identification of Assessment Area and Noise Sensitive Receivers

2.3.1 The assessment area for airborne construction area includes the area within 300 m outside boundary of the Project site. With reference to the Noise Sensitive Receivers (NSRs) identified in the approved EIA report (Register No. AEIAR-235/2022) where to be affected by the airborne construction noise induced by the Project, seven (7) representative NSRs, including three (3) existing NSRs and four (4) planned NSRs which would be affected by the construction noise of Contract 1202 are summarized in **Table 2.2** and their corresponding Noise Assessment Points (NAPs) is presented in **Appendix 2.1**.

Table 2.2 Representative NSRs for Construction Noise Assessment

ID No.[1]	NSRs[2]	Land Use	No. of Storey	NAP[5]	Population Intake Year
Existing NSRs					
E1	Ying Tung Estate	Residential Premises	35 – 40	YTT-02f	NA[4]
E20	Ho Yu College and Primary School	Educational Institutions	7	EHYC-01a	NA[4]
E21	Lantau North (Extension) Country Park	Others	NA[4]	LNCP-01	NA[4]
Planned NSRs					
P1[3]	Residential Premises in Tung Chung East – Area 100	Residential Premises	40[3]	A100-02j	2025[6]
	Residential Premises in Tung Chung East – Area 116	Residential Premises	32[3]	A116-01c	2029
	Residential Premises in Tung Chung East – Area 133a	Residential Premises	32[3]	A133a-01b	2030
P4[3]	Tung Chung Area 113	Residential Premises	31 – 58[3]	A113-01e, A113-12e	2027

Note:
[1] The assessment will only include the NSRs which rely on opened windows for ventilation.
[2] Only the first tier of NSRs has been selected for assessment.
[3] Referring to the updated information concluded in the previously submitted CNMP prepared by Ove Arup & Partners Hong Kong Limited.
[4] NA – Not applicable.
[5] NAP – Noise Assessment Point
[6] The population intake year for Area 100 has been reviewed and updated according to information provided by the Housing Department on 25 May 2023.

2.3.2 The existing NSRs has been revisited in May 2023. No change of the NSRs was observed. Thus, no update is made for the existing NSRs listed in **Table 2.2**.

2.3.3 In view of no change or update for the NSRs identified in the EIA Report (Register No. AEIAR-235/2022), the above-mentioned NSRs are still considered valid for the assessment work.

2.4 Inventory of Noise Sources

2.4.1 With reference to the tentative construction programme given in **Appendix 2.2**, which has been agreed and confirmed by the project engineer from Main Contractor, the key airborne construction activities to be undertaken in this Project are summarized below:

- Construction of the above-ground TCE Station;
- Realignment of ballast tracks to the TCE Station;
- Works such as site clearance, site formation and reinstatement, etc.

2.4.2 No change of key airborne construction activities was observed between the key airborne construction activities summarized in Section 4.4.2.2 of the approved EIA Report (EIA Ordinance Register No. AEIAR-235/2022) and the latest construction programme. Thus, the key airborne construction activities identified in the approved EIA Report (EIA Ordinance Register No. AEIAR-235/2022) are still considered valid.

2.4.3 The list of Power Mechanical Equipment (PME) to be used for carrying out the construction work of TCE station and associated enabling works for track diversions has been confirmed by the project engineers from the Main Contractor and summarized in **Table 2.3**. The list of PME is extracted from the approved EIA Report (EIA Ordinance Register No. AEIAR-235/2022) and no major change of PME model and relevant Sound Power Levels (SWLs) was made on the list. SWLs established according to GW-TM for each PME to be used for the Project are also presented in **Table 2.3**.

2.4.4 No update was made on the concurrent projects and workfronts. As the construction programme and plant inventories under Contract 1202 have been updated, the cumulative noise levels of each NAPs listed in **Table 2.6** is different from the levels documented in both approved EIA Report (EIA Ordinance Register No. AEIAR-235/2022) and the previously approved CNMP. The updated construction programme and plant inventories have been reviewed and confirmed as workable and practicable by the project engineers from the Main Contractor.

Table 2.3 Sound Power Levels of Powered Mechanical Equipment

PME	Unmitigated SWLs			PME			Mitigated Scenario	
	Identification Code	Description	PME SWL, dB(A)	ID Code[1][2]	Model / Size	PME SWL, dB(A)	Barrier, dB(A)[6]	PME SWL, dB(A)

Ampd Enertainer	–	Energy Storage System	89[7]	–	–	–	-10	79

Notes:

[1] PME with ID code "EPD-XXXXX" are registered Quality Powered Mechanical Equipment (QPME) with SWLs extracted from EPD's QPME inventory: https://www.epd.gov.hk/epd/qpme/eng/index.html

[2] The SWL of PME with code "CPME#" are based on "Sound power levels of other commonly used PME" from https://www.epd.gov.hk/epd/sites/default/files/epd/english/application_for_licences/guidance/files/OtherSWLe.pdf

[3] EPD-09608 has been replaced by EPD-09708. The model, size and SWL remain unchanged.

[4] EPD-03948 has been replaced by EPD-13019. The model, size and SWL remain unchanged.

[5] EPD-03845 has been replaced by EPD-10735. The model, size and SWL remain unchanged.

[6] Estimation made in the approved EIA report Section 4.4.4.8 with at least 5 dB(A) reduction for movable plant and 10 dB(A) for stationary plant.

[7] The SWL of Ampd Enertainer is based on the SWL at full load listed on the catalogue given in **Appendix 2.3**.

[8] The SWL of Quieter Type Wire Saw is based on the sound pressure level at 7m at EPD's webpage of "Quieter Construction Methods" from: https://www.epd.gov.hk/epd/misc/construction_noise/contents/index.php/en/home2/quieter-construction-methods/item/93-concrete-removal/133-quieter-type-wire-saw.html)

2.5 Prediction and Evaluation of Construction Noise Impact

2.5.1 The key airborne construction work under Contract 1202 mainly includes construction of the above-ground TCE Station, realignment of ballast tracks to the TCE Station and site clearance, site formation and reinstatement works. As per the discussion made in **Section 2.3.3** and **Section 2.4.2** of this CNMP, no major change was observed in identified NSRs when compared to the approved EIA Report (EIA Ordinance Register No. AEIAR-235/2022).

2.5.2 Referring to the approved EIA Report, the airborne construction activities mainly comprise the construction works stated in **Section 2.4.1** of this CNMP. The SWLs of PMEs to be used for the airborne construction activities has been presented in **Table 2.3**. The plant inventory of PMEs to be deployed at each workfront is given in **Appendix 2.4**. The location of each workfront is given in **Appendix 2.5**.

2.5.3 The predicted construction noise impacts at each representative NSRs under unmitigated scenario are summarized in **Table 2.4**. The predication is made with reference to the updated construction programme and plant inventories confirmed by the project engineers from the Main Contractor.

Table 2.4 Summary of Predicted Construction Noise Impact at Representative NSRs under Unmitigated Scenario

ID No.[1]	NSR	NAP[2][3][5]	Uses	Criterion[6] ($L_{eq\ (30min)}$, dB(A))	Maximum Noise Level due to the Project [7] ($L_{eq\ (30min)}$, dB(A))	Exceedance ($L_{eq\ (30min)}$, dB(A))
Existing NSRs						
E1	Ying Tung Estate	YTT-02f	Residential Premises	75	79	4
E20	Ho Yu College and Primary School	EHYC-01a	Educational Institutions	70 (65)	70	- (5)
E21	Lantau North (Extension) Country Park	LNCP-01	Others	NA[4]	77	-
Planned NSRs						
P1	Residential Premises in Tung Chung East	A100-02j	Residential Premises	75	77	2
		A116-01c	Residential Premises	75	-[8]	-[8]
		A133a-01b	Residential Premises	75	-[8]	-[8]
P4	Tung Chung Area 113	A113-01e	Residential Premises	75	78	3
		A113-12e	Residential Premises	75	78	3

Note:
[1] The assessment will only include the NSRs which rely on opened windows for ventilation.
[2] Only the first tier of NSRs has been selected for assessment.
[3] Referring to the updated information concluded in the previously submitted CNMP prepared by Ove Arup & Partners Hong Kong Limited.
[4] NA – Not applicable.
[5] NAP – Noise Assessment Point.
[6] 65 dB(A) is adopted as the limit level during the examination period.
[7] The noise level at NSRs is calculated with general acoustic principle using the equation = $10 \times \log_{10}[10^{(W1/10)} + 10^{(W2/10)} + 10^{(W3/10)} \ldots + 10^{(Wn/10)}]$, where W1, W2, W3 and Wn are the respective noise levels at the NSRs due to individual noise sources of simultaneous construction works.
[8] Since the population intake year is later than the completion date of construction work under Contract 1202, construction noise impact is not anticipated at the NSRs.

2.6 Mitigation Measures for Airborne Construction Noise

2.6.1 To mitigate the adverse airborne noise impact induced by the construction works, a list of mitigation measures was suggested, including:

- Good site practices to limit noise emissions at the source;
- Use of QPME;
- Use of temporary noise barriers to screen noise from relatively static PMEs; and
- Alternative use of quieter construction methods/ quieter plant items within worksite, wherever practicable.

Good Site Management Practices

2.6.2 Referring the approved EIA Report (Register No. AEIAR-235/2022), good site practice and noise management techniques could considerably reduce the noise impact from construction site activities on nearby NSRs. The following measures should be practised during each phase of construction:

- Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction programme;
- Machine and plants (such as trucks, cranes) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum;
- Plant known to emit noise strongly in one direction, where possible, be orientated so that the noise is directed away from nearby NSRs;
- Silencers or mufflers which are available on construction equipment should be properly fitted and maintained during the construction works;
- Spoil transportation routes should be directed away from NSRs as far as practicable;
- Mobile plant should be sited as far away from NSRs as possible and practicable;
- Material stockpiles, site office and other structures should be effectively utilised, where practicable, to screen noise from on-site construction activities; and
- Noise monitoring at selected NSRs should be conducted as far as practicable.

Use of QPME

2.6.3 Quiet plant associated with the construction works with reference to the PME listed in the TM, or the QPME or other commonly used PME listed in the EPD web pages that include the SWLs for specific quiet PME, should be adopted as far as possible.

Use of Movable Noise Barrier for Movable Plant and Stationary Plant Sources

2.6.4 Movable temporary noise barriers can be deployed adjacent to noisy plant and be moved concurrently with the plant along a worksite, this practice could be the effective way for screening noise from the NSRs.

2.6.5 As suggested in the approved EIA Report (EIA Ordinance Register No. AEIAR-235/2022), the typical noise barrier shall be with a small-cantilevered upper portion of superficial density not less than 7 kg/m^2 on a skid footing with 25 mm thick internal sound absorptive lining. This measure is particularly effective for low level zone of NSRs. A cantilevered top cover would be required to achieve screening benefits at upper floors of NSRs.

2.6.6 Movable temporary noise barriers could be used for some PMEs. It is anticipated that suitably designed barriers could achieve at least 5 dB(A) reduction for movable plant and 10 dB(A) for stationary plant.

2.6.7 The attenuation effect from noise barrier towards the noise emitted from the various PMEs is summarized in **Table 2.5**. The sectional drawing of typical temporary noise barrier to be adopted is illustrated in **Appendix 2.6**.

Table 2.5 Summary of barrier adopted for PMEs

PME	Attenuation effect, dB(A)
Air Compressor	-10
Bar Bender and Cutter	-10
Breaker, excavator mounted	-10 [1]
Hand-Held Breaker	-5
Cherry Picker	-5
Concrete Lorry Mixer	-5
Concrete Mixer	-10
Concrete Pump	-10
Mobile Crane/ Service Crane/ Lifting Crane	-5
Electric drill	-5
Grinder	-5
Dump Truck	-5
Drill Rig	-10
Excavator	-5
Generator	-5
Grout Pump	-10
Lorry	-5
Lorry, with crane/grab	-5
Piling, Large Diameter Bored, Oscillator	-10
Vibratory Poker	-10
Rock Drill	-10
Roller, Vibratory	-5
Saw, Circular, Wood	-10

PME	Attenuation effect, dB(A)
Saw/groover, Concrete	-10
Ampd Enertainer	-10

Notes:
[1] With reference to Chapter 6 of *Best Practice Guide for Environmental Protection on Construction Sites*, noise reduction up to 10 dB(A) can be achieved with the installation of hammer bracket. The relevant section is extracted and presented in **Appendix 2.7**.

Use of Quieter Construction Method

2.6.8 Various quieter construction methods are reviewed, and their applicability is assessed for different construction activities. The applicable quieter construction methods are summarized below. Other applicable quieter construction methods will be used as far as practicable.

a. Use of quieter type saw

Saw cutting will be adopted as the alternative method for the demolition works of the concrete footing for existing noise barriers along Tung Chung Line at workfronts W1 to W4. The traditional method for demolition works with excavator mounted breaker would be avoided as far as practicable. The operation time of excavator mounted breaker for demolition works would therefore be minimized.

b. Use of non-percussive pile types

Pre-bored socketed steel H-pile will be adopted for foundation construction of TCE station and Integrated Entrance. No percussive piling will be adopted for the construction works under Contract 1202. Since percussive piling will not be adopted to construction works, the adverse construction noise impact generated from piling works to nearby NSRs would be alleviated.

c. Use of Self-compacting concrete

Self-compacting concrete will be used for road works. With the advantage of the nature of self-compacting concrete, the use of vibratory poker would be avoided.

Use of Energy Storage System

2.6.9 An advanced energy storage system "Ampd Enertainer" will be deployed at construction site for the alternative energy supply with quieter operation noise compared with diesel-powered generator. The introduction of energy storage system can minimize the operation time of diesel-powered generator.

2.7 Prediction of Noise Impact with Implementation of Noise Mitigation Measures

2.7.1 The predicted construction noise impact at each representative NSRs as listed in **Table 2.2** is given in **Appendix 2.8**. The concurrent effect of nearby construction projects has been taken into consideration, including Tung Chung New Town Development Extension (TCNTE), Reprovisioning, Remedial and Improvement Works (RRIW) and Additional Sewerage Rising Main and Rehabilitation of the Existing Sewage Rising Main between Tung Chung and Siu Ho Wan. The predicted construction noise impacts at each representative NSRs under mitigated scenario is summarized in **Table 2.6**.

2.7.2 The implementation schedule of the noise mitigation measures is given in **Appendix 2.9**.

Table 2.6 Summary of Predicted Construction Noise Impact and Exceedance Representative NSRs under Mitigated Scenario

ID No.[1]	NSR	NAP[2][3][5]	Uses	Criterion[6] ($L_{eq\ (30min)}$, dB(A))	Mitigated Scenario			
					Maximum Cumulative Noise Level [7] ($L_{eq\ (30min)}$, dB(A))	Exceedance ($L_{eq\ (30min)}$, dB(A))	Maximum Noise Level due to the Project[7] ($L_{eq\ (30min)}$, dB(A))	Exceedance ($L_{eq\ (30min)}$, dB(A))

		A113-12e	Residential Premises	75	74	-	67	-

Notes:
[1] The assessment will only include the NSRs which rely on opened windows for ventilation.
[2] Only the first tier of NSRs has been selected for assessment.
[3] Referring to the updated information concluded in the previously submitted CNMP prepared by Ove Arup & Partners Hong Kong Limited.
[4] NA – Not applicable.
[5] NAP – Noise Assessment Point.
[6] 65 dB(A) is adopted as the limit level during the examination period.
[7] The noise level at NSRs is calculated with general acoustic principle using the equation = $10 \times \log_{10}[10^{(W1/10)} + 10^{(W2/10)} + 10^{(W3/10)} \ldots + 10^{(Wn/10)}]$, where W1, W2, W3 and Wn are the respective noise level at the NSRs due to individual noise sources of simultaneous construction works.
[8] Since the population intake year is later than the completion date of construction work under Contract 1202, construction noise impact is not anticipated at the NSRs.

3. Conclusion

3.1.1 In this CNMP, the representative NSRs to be affected by the Project have been identified with reference to the approved EIA Report (EIA Ordinance Register No. AEIAR-235/2022). Update was made on the plant inventory and construction programme compared with the approved EIA Report and the previously approved CNMP. Thus, the cumulative noise level towards NSRs has been updated.

3.1.2 It is expected the construction noise impact would comply with the relevant noise criteria stipulated under the EIAO-TM with proper implementation of recommended mitigation measures.

Appendix 2.3 Catalogue of Ampd Enertainer

Ampd Enertainer

Up to 85% reduction in CO_2 & OPEX

The Ampd Enertainer is an advanced energy storage system which provides diesel-free power for the next-generation of construction projects. Available in various configurations, the Ampd Enertainer is designed for the tough, dynamic and space-constrained needs of construction sites, without compromise.

Significant Cost Savings

Up to 75% lower all-inclusive OPEX[1] & lower total cost of ownership

Ultra Low Noise Footprint

32 times quieter[1], enabling use during noise sensitive hours

Minimise Carbon Footprint

Up to 85% carbon reduction[1] & zero direct NO_X, PM & SO_2 fumes

Enhance On-Site Safety

Eliminate diesel fire hazards & reduce on-site diesel storage quantity

Maximise Productivity

Zero recharging downtime and near-zero annual maintenance downtime

Internet Connected, 24x7

Connect to the Enertainer's IoT platform, anywhere & any time

[1]Compared to generators of a similar capacity

Using energy storage technologies which are tested and certified to international standards (UL, UN, CE, IEC, IEEE and ENA standards), the Ampd Enertainer is designed to:

- be rugged, robust and built to last (up to 10+ years expected operating life);
- deliver extremely high levels of reliability through a redundancy, modular design and
- operate safely, even in tough environments.

The Ampd Enertainer M and Enertainer L are on the **Construction Innovation Technology Fund (CITF) Pre-Approved List**. Please refer to www.citf.cic.hk for more details.

For more information or a no-obligations consultation on how the Enertainer could benefit your project, **please contact us at +852 3705 9441 or at sales@ampd.energy**

CITF 建造業創科基金
CITF Pre-approved Product

Ampd Enertainer

Key Specifications[1]

Parameter		Specification		
Model		**Enertainer F**	**Enertainer M**	**Enertainer L**
On CITF Pre Approved List		–	Yes (PA20-045)	
Maximum output current per phase	Peak (<1 minute)	340 A	455 A	795 A
	Continuous	285 A	380 A	665 A
Energy storage subsystem chemistry		Lithium-ion NMC		
Example applications		Tower cranes, material hoist, passenger hoists, welders, bar benders, grouting station		
Power conversion subsystem	Type	Heavy-duty, modular power conversion system		
	Input voltage range	320 – 440 VAC (3Ph + N + PE)		
	Maximum input current	80 A (standard)		
		50 A (with optional input leakage current reduction system)		
	Output voltage	380 – 415 VAC ± 1% (3Ph + N + PE)		
	Output frequency range	50/60 Hz ± 0.5 Hz		
Thermal management subsystem	Type	Industrial, wall-mounted recirculating air-conditioning system		
	Number of cooling units	2 units		
	Refrigerant type	R134a		
Mechanical	Dimensions (L x W x H)[2]	3.21m (L) x 2.44m (W) x 2.6m (H) (10' container)		
	Net weight	7.2 tons	7.8 tons	8.7 tons
	Fire extinguishing subsystem	Aerosol based, triggered by heat and/or smoke sensors		
	Ingress protection	IP54* (rain and typhoon proof)		
	Operating temperature range	0 to +45 °C external ambient temperature		
	Sound power level[3] at full load	85-89 dB(A) (32 times quieter vs. comparable diesel generator)		
	Sound pressure level at full load	57-61dB(A) (at 7 meters)		
Connectivity		Cellular data (4G)		
Expected Lifetime[4]		10+ years		
Standards		UL, UN 38.3, CE, IEC, IEEE		

* For DC room

Recommended Combination & Input Requirement[5]

2 x mid-size tower cranes	Enertainer L	25 A
1 x large-size tower crane	Enertainer L	25 A
1 x mid-size tower crane + 1 x material/passenger hoist	Enertainer M	15 A
5 x welders	Enertainer F	40 A

Available Options

Input leakage current reduction system		Optional
Warranty and field engineering	5-year on-site warranty	Included
	8-Year extended on-site warranty	Optional
	Standard support plan	Included
	Premium (Gold) support plan	Optional
	Premium (Platinum) support plan	Optional
Remote access and data	Standard web monitoring interface	Included
	Premium web monitoring interface	Optional
	Data analytics package	Optional

AMPD ENERGY

[1]In the interests of continual product improvement, specifications are subject to change without notice. Please contact us for the latest specifications.

[2]An additional 0.9 m clearance on all sides of the Enertainer should be provided for maintenance access.

[3]ISO 3746:2010 measurement methodology.

[4]Provided for guidance purpose. Life is defined as the ability of the Enertainer to provide the specified rated power. Actual life may vary and will depend on factors such as (but not limited to): (i) operating temperature; (ii) quality of maintenance of the system; (iii) frequency of use; and (iv) time duration spent at different battery states.

[5]Provided for guidance purposes. Actual grid input requirement will depend on factors such as (but not limited to): (i) actual equipment electrical requirements; (ii) utilisation/duty cycle; (iii) daily duration of availability of input power supply; (iv) state-of-health and age of the Enertainer; (v) duration of daily construction site operations.

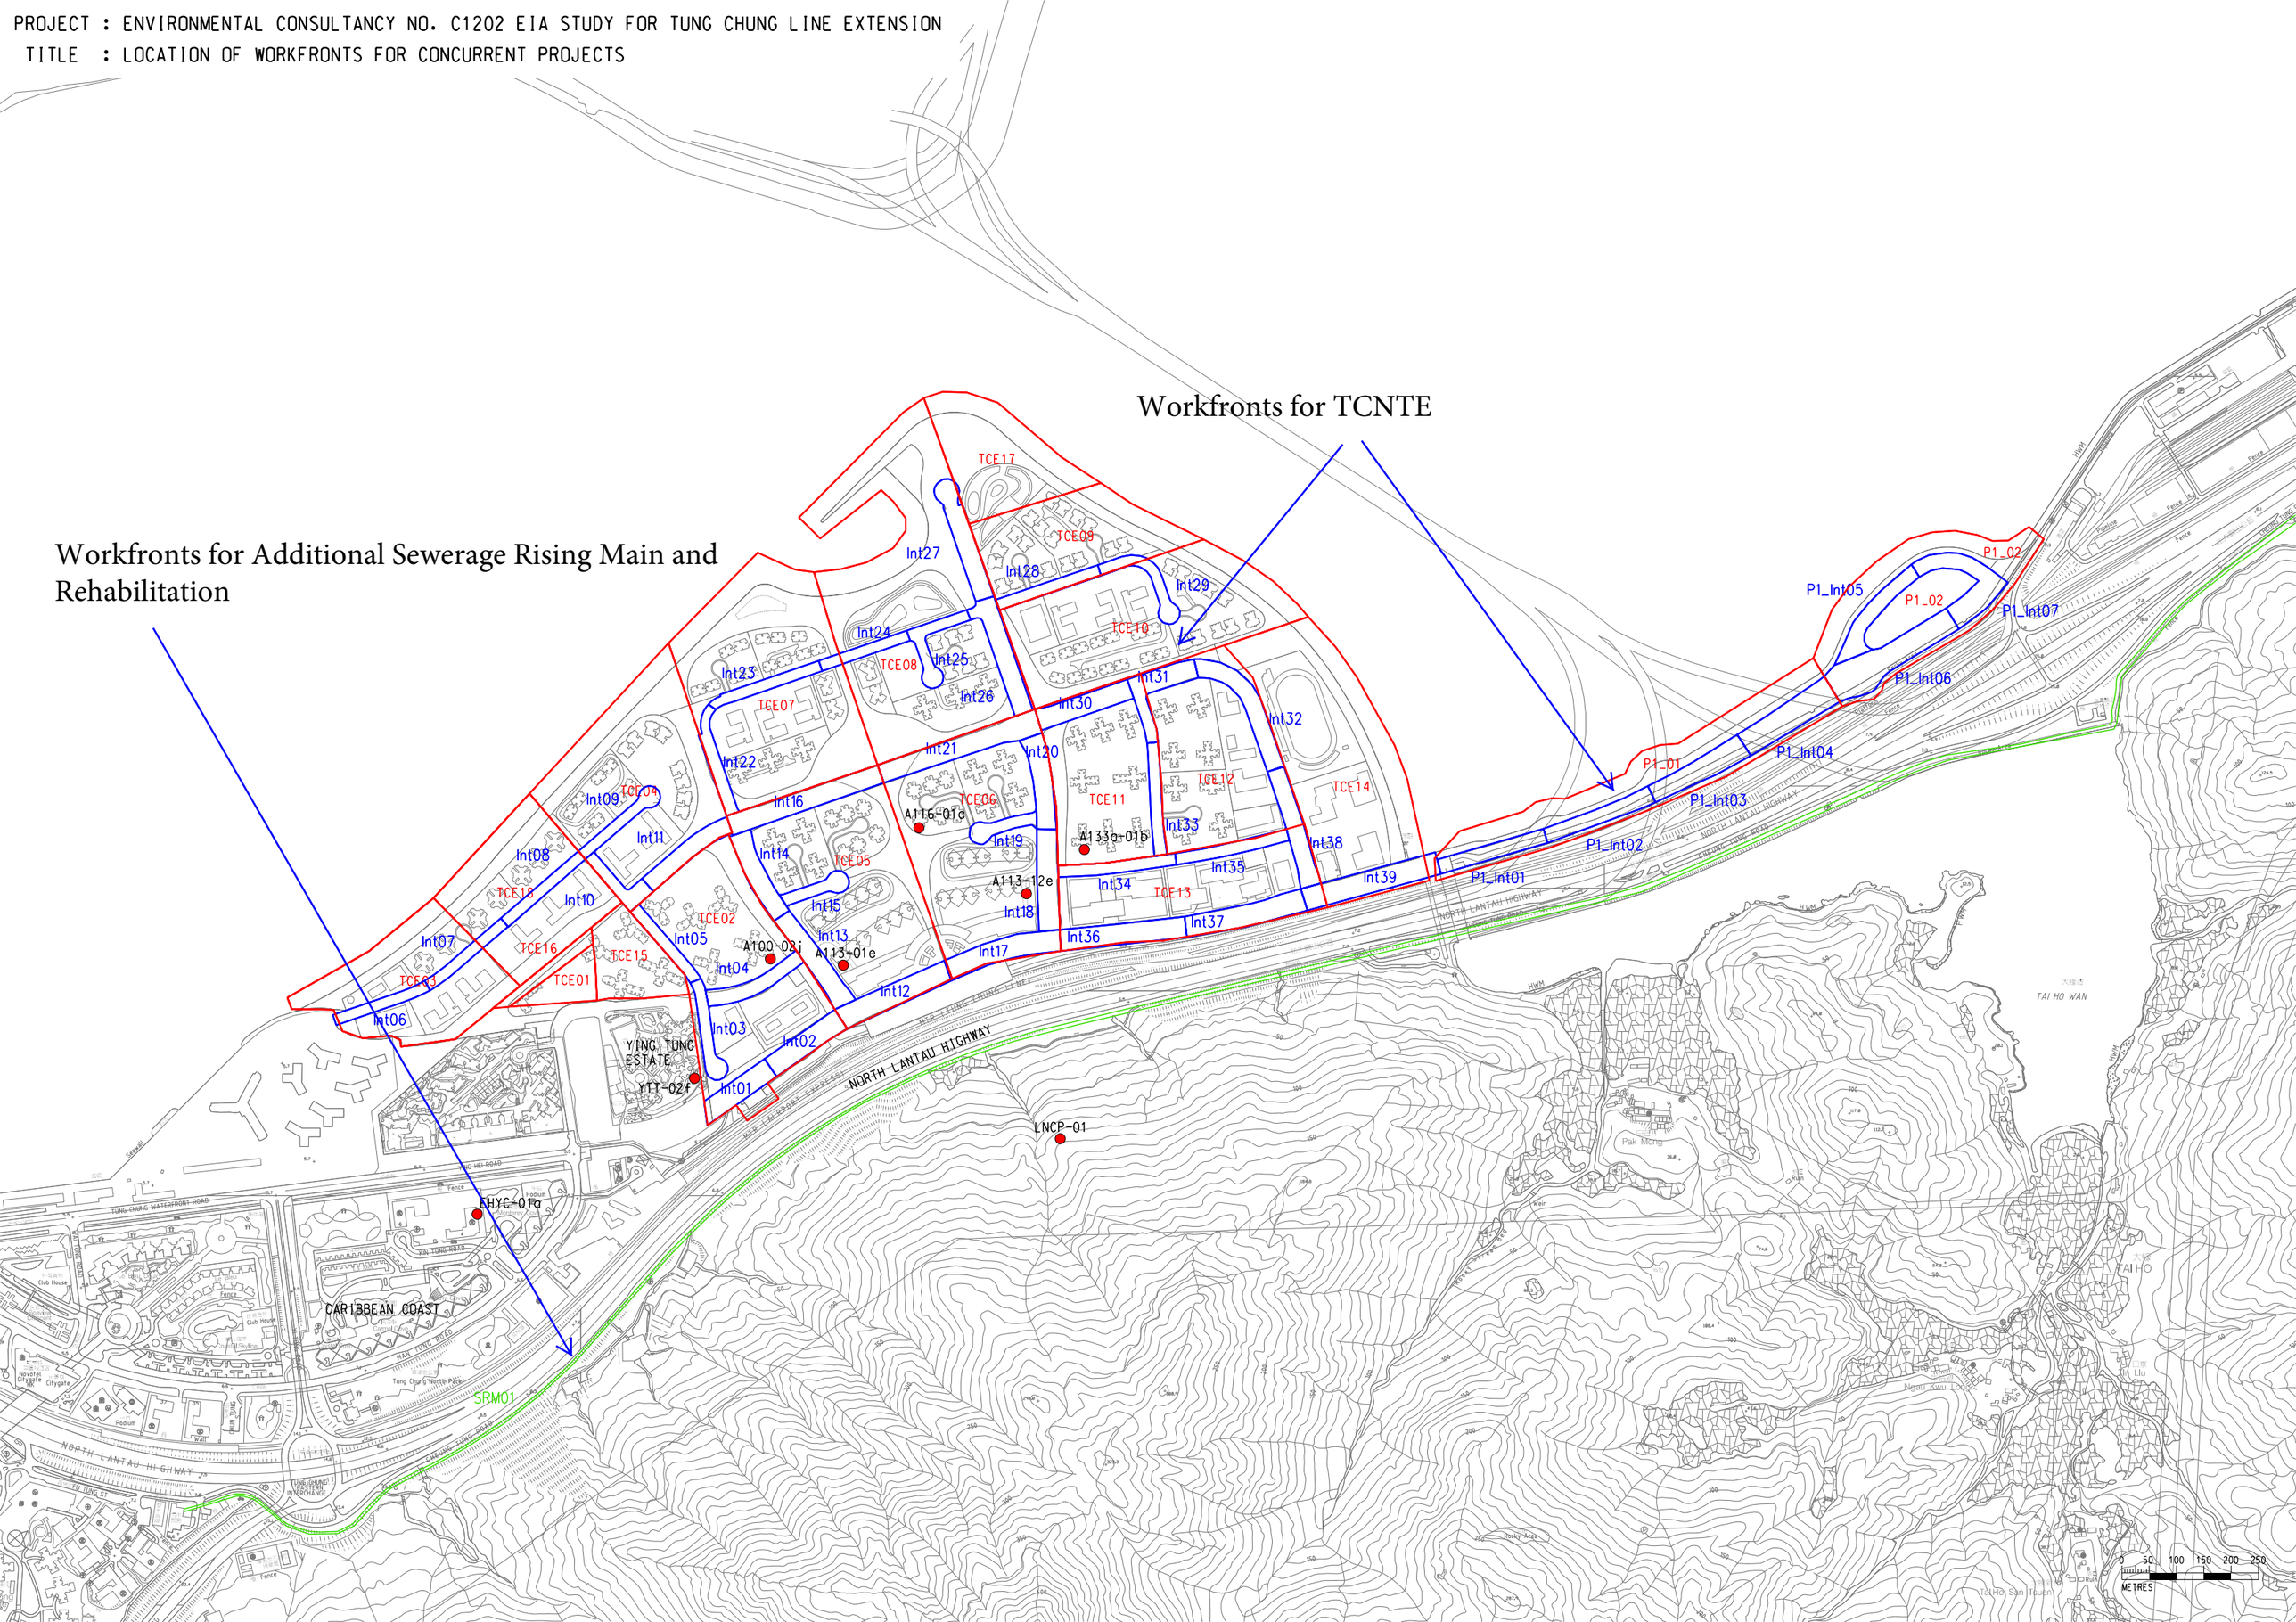
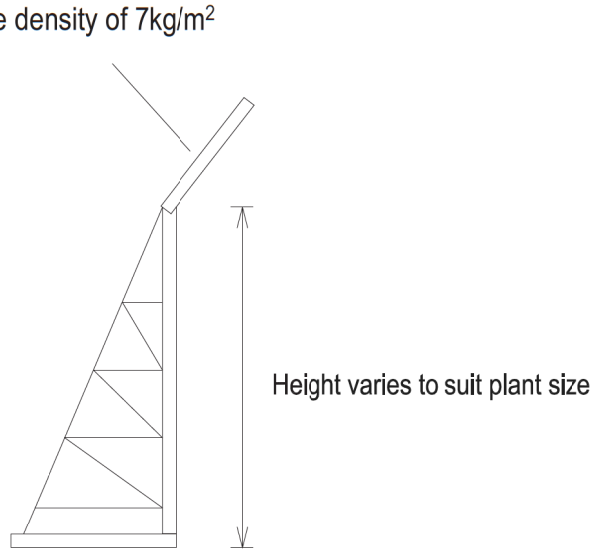
TITLE : LOCATION OF WORKFRONTS FOR CONCURRENT PROJECTS

Workfronts for Additional Sewerage Rising Main and Rehabilitation

Workfronts for TCNTE

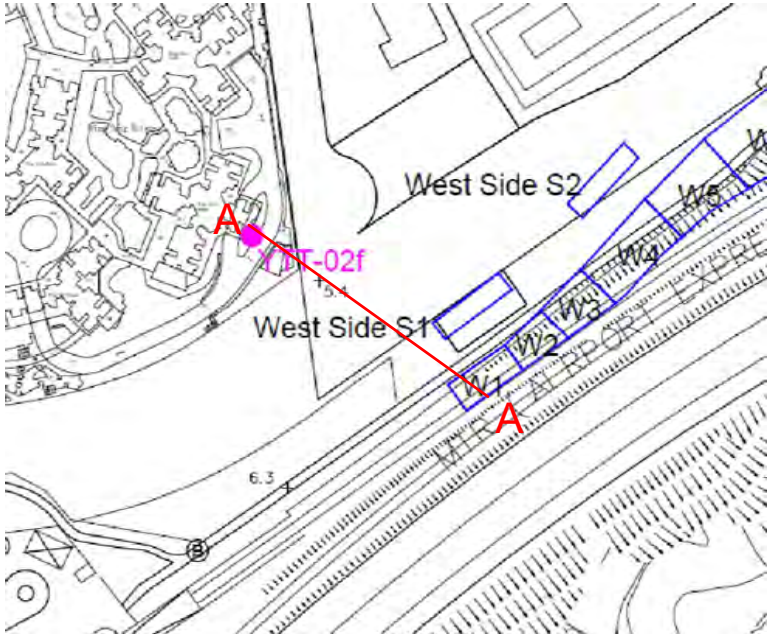


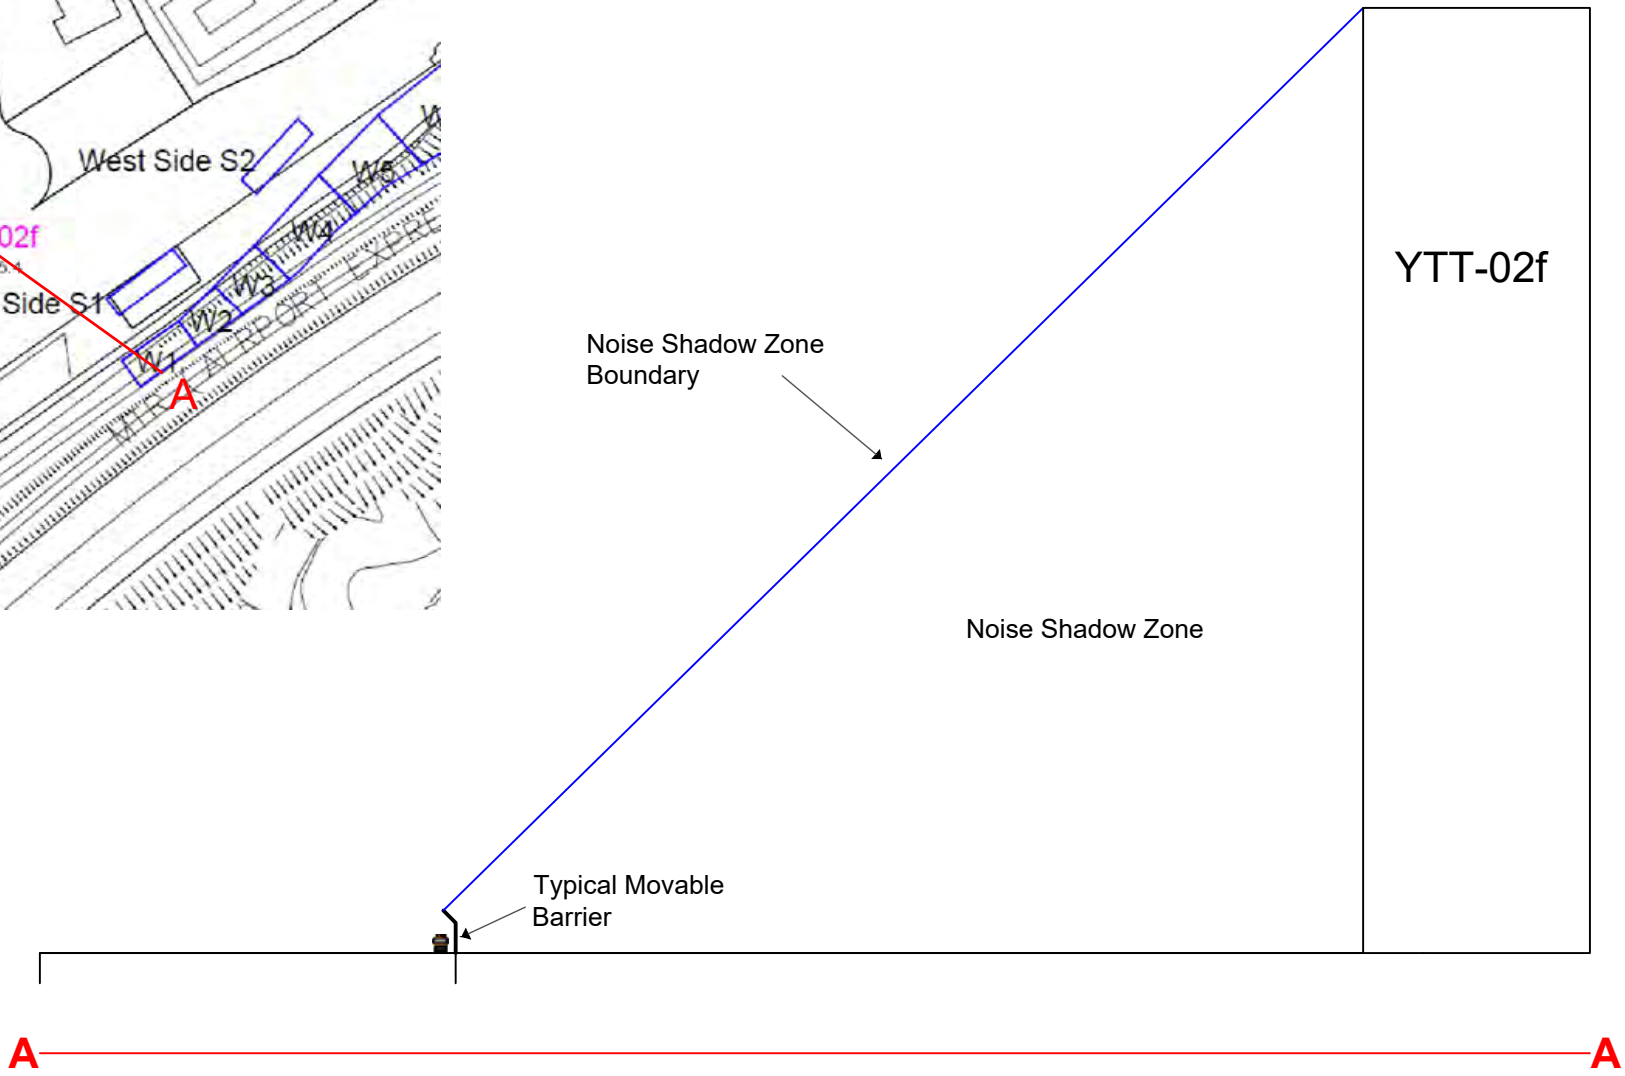
Appendix 2.6 Sectional Drawing of Typical Temporary Noise Barrier



Typical Section of Temporary Movable Noise Barrier
(2-4m tall)

Section of Typical Temporary Noise Barrier





Typical Arrangement of Movable Noise Barriers During Construction Stage

Note:
The height of movable noise barrier is subject to the on-site condition and undertaking construction works. For maximum effectiveness, a barrier should be located as close as possible to either the noise source, and should be built so as to shield totally the noise source. Gaps and openings at joints in the barrier material should be avoided. The NSRs shall be covered by noise shadow zone, no direct line of sight from NSRs to PMEs.

Appendix 2.7 Extract from Chapter 6 of Best Practice Guide for Environmental Protection on Construction Sites

Idle equipment should be turned off or throttled down to reduce noise, emissions and to save energy.

Excavator-mounted breakers
Excavator-mounted breakers are amongst the noisiest items of general construction equipment. To reduce noise from excavator-mounted breakers, use of a hammer bracket (the bracket is made of special alloy and the inside of it is lined with sound insulation material). A noise reduction of up to 10 dB(A) can be provided.

Equipment with Internal Combustion Engines
Equipment with Internal Combustion Engines include stationary and mobile plant, examples include:

- Stationary Plant: compressors, generators, concrete pumps and welding sets
- Mobile Plant: excavators, bulldozers, loaders and dump trucks

The nature of the noise emissions relating to this kind of equipment includes exhaust noise, cooling system noise and engine noise. Control measures for these include:

- Exhaust Noise
  - Install suitably designed exhaust silencers
- Cooling System Noise (including noise from water pumps, belts, pulleys and cooling fans)
  - Replace poor fan blade design or damaged fan blades with an aerodynamic model
  - Install a contoured fan shroud or cowl with a close fan tip-to-shroud clearance
  - Remove all obstructions such as bars and pipes from the inlet airflow
- Engine Noise
  - Installing a vibration isolator for individual components to reduce transmission of engine noise
  - Installing specially designed partial or full acoustic enclosures for individual noise generating components. Partial or full enclosures can result in a reduction in the overall noise level of up to 5 and 10 dB(A) respectively
  - Apply damping material to vibrating panels

It is essential to regularly maintain and service all mechanical plant and equipment:

- Implement a preventive maintenance programme to ensure equipment is operating in good order and not emitting abnormal noise
- Make sure stocks of regularly required spare parts are available

Piling
Typical noise sources for percussive piling include:

- Ringing noise (radiated from the surface of the pile);
- Impact noise; and
- Exhaust noise (created by the release of pressurized gases from exhaust ports).

Control measures for piling include:

- Use non-percussive piling techniques such as pre-bore, vibratory hammers or hydraulic hammer for driving steel piles.
- Use resilient packing and dolly
  - For percussive piling, the head of the pile should be protected by a helmet fitted with resilient packing over the top of the pile and a dolly which cushions the blow of the hammer.
- Use of a shroud
  - Enclose the complete pile and the pile driver. The shroud should consist of a robust framework fitted with an acoustically designed cladding or acoustic panels.
  - Alternatively, a flexible acoustic curtain of appropriate thickness can be suspended to enclose the whole length of the exposed pile and pile driver.

Joint Cutter / Stone Saw
Noise mitigation measures that can be fitted to a joint cutter and stone saw include:

- A metal hood to screen the operator from the machine;
- Anti-vibration mounts between the engine/motor and the support frame; and
- A small pad supplied with water (for cooling the blade) to serve as a viscous damping layer between pad and blade.

Demolition and Concrete Breaking Works
Noise mitigation measures for demolition and concrete breaking works include using non-percussive equipment such as a hydraulic crusher and quiet plant. The sound pressure level of some commonly used quiet plant is shown in Table 6.3.

- Hydraulic concrete cutter and crushers can replace excavator-mounted percussive breakers in demolition work resulting in noise

Appendix 2.8 Prediction of Noise Impact on Representative NSRs

Note:

[1] The postion of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.

[2] Façade correction is applied to cumulative noise level.

[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Regidter No.: AEIAR - 196/2016).

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Ho Yu College and Primary School (EHYC-01a)
Scenario : Unmitigated Scenario for Tung Chung East

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Ho Yu College and Primary School (EHYC-01a)
Scenario : Unmitigated Scenario for Tung Chung East

Note:

[1] The position of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.

[2] Façade correction is applied to cumulative noise level.

[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Register No.: AEIAR - 196/2016).

[4] Examination ususlly is conducted in January, March, April, May, June, October, November and December every year .

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Lantau North (Extension) Country Park (LNCP-01)
Scenario : Unmitigated Scenario for Tung Chung East

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Lantau North (Extension) Country Park (LNCP-01)
Scenario : Unmitigated Scenario for Tung Chung East

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Lantau North (Extension) Country Park (LNCP-01)
Scenario : Unmitigated Scenario for Tung Chung East

Note:
[1] The postion of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.
[2] Façade correction is applied to cumulative noise level.
[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Regidter No.: AEIAR - 196/2016).

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Residential Premises in Tung Chung East – Area 100 (A100-02))
Scenario : Unmitigated Scenario for Tung Chung East

Note:
[1] The postion of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.
[2] Façade correction is applied to cumulative noise level.
[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Regidter No.: AEIAR - 196/2016).

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Tung Chung Area 113 (A113-01e)
Scenario : Unmitigated Scenario for Tung Chung East

Note:
[1] The postion of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.
[2] Façade correction is applied to cumulative noise level.
[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Regidter No.: AEIAR - 196/2016).
[4] The shaded peroid means no occupancy at the NSRs

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Tung Chung Area 113 (A113-12e)
Scenario : Unmitigated Scenario for Tung Chung East

	2027												2028

Note:
[1] The postion of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.
[2] Façade correction is applied to cumulative noise level.
[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Regidter No.: AEIAR - 196/2016).
[4] The shaded peroid means no occupancy at the NSRs

Note:
[1] The postion of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.
[2] Façade correction is applied to cumulative noise level.
[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Regidter No.: AEIAR - 196/2016).

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Ho Yu College and Primary School (EHYC-01a)
Scenario : Mitigated Scenario for Tung Chung East

Note:

[1] The position of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.

[2] Façade correction is applied to cumulative noise level.

[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Register No.: AEIAR - 196/2016).

[4] Examination ususlly is conducted in January, March, April, May, June, October, November and December every year .

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Lantau North (Extension) Country Park (LNCP-01)
Scenario : Mitigated Scenario for Tung Chung East

Note:
[1] The position of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.
[2] Façade correction is applied to cumulative noise level.
[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Regidter No.: AEIAR - 196/2016).

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Residential Premises in Tung Chung East – Area 100 (A100-02))

Note:
[1] The postion of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.
[2] Façade correction is applied to cumulative noise level.
[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Regidter No.: AEIAR - 196/2016).
[4] The shaded peroid means no occupancy at the NSRs

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Tung Chung Area 113 (A113-01e)
Scenario : Mitigated Scenario for Tung Chung East

Note:
[1] The postion of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.
[2] Façade correction is applied to cumulative noise level.
[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Regidter No.: AEIAR - 196/2016).
[4] The shaded peroid means no occupancy at the NSRs

Project: Contract 1202 Tung Chung East Station and Associated Enabling Works for Track Diversion

Title : Cumulative Noise Level to Tung Chung Area 113 (A113-12e)
Scenario : Mitigated Scenario for Tung Chung East

Note:
[1] The postion of notonal sources are considered as all items of PME to be grouped at a position mid-way between the approximate geographical centre of each workfronts and its boundary point that is nearest to the NSRs.
[2] Façade correction is applied to cumulative noise level.
[3] The cumulative sound power levels of each workfront are acquired from Appendix 4.9 of the approved EIA Report for Tung Chung New Town Extension (Regidter No.: AEIAR - 196/2016).
[4] The shaded peroid means no occupancy at the NSRs

Appendix 2.9 Implementation Schedule of Noise Mitigation Measure

Noise Mitigation Implementation Schedule
Tung Chung Line Extension Contract 1202

CNMP Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase
S2.6.2	The following measures should be implemented: - Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction programme; - Machines and plant (such as trucks, cranes) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; - Plant known to emit noise strongly in one direction, where possible, be orientated so that the noise is directed away from nearby NSRs; - Silencers or mufflers which available on construction equipment should be properly fitted and maintained during the construction works; - Spoil transportation routes should be directed away from NSRs as far as practicable; - Mobile plant should be sited as far away from NSRs as possible and practicable; - Material stockpiles, site office and other structures should be effectively utilised, where practicable, to screen noise from on-site construction activities; and - Noise monitoring at selected NSRs (i.e NM1 - Ying Tung Estate) should be conducted as far as practicable.	Control construction airborne noise	Contractor	All construction sites (Tung Chung East Station and realignment works)	Construction Phase
S2.6.3	Use of quiet plant which should be made reference to the Powered Mechanical Equipment (PME) listed in the Technical Memorandum or the Quality Powered Mechanical Equipment (QPME) / other commonly	Reduce the noise levels from plant items	Contractor	All construction sites (Tung Chung East Station and	Construction Phase

Noise Mitigation Implementation Schedule
Tung Chung Line Extension Contract 1202

CNMP Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase
	used PME listed in Environmental Protection Department (EPD) web pages as far as possible which includes the Sound Power Level (SWLs) for specific quiet PME.			realignment works)	
S2.6.4 – S2.6.7	Install movable temporary noise barriers (typical design is wooden framed barrier with a small-cantilevered upper portion of superficial density no less than 7kg/m^2 on a skid footing with 25mm thick internal sound absorptive lining), and full enclosure, screen the noisy plants including water pump etc.	Minimise the construction noise levels through screening	Contractor	All construction sites (Tung Chung East Station and realignment works)	Construction Phase
S2.6.8	The following quieter construction method proposed in Construction Noise Management Plan should be implemented: - Use of quieter type saw; - Use of non-percussive pile types; - Use of Self-compacting concrete; and - Other applicable quieter construction methods will be used as far as practicable.	Reduce the noise levels from plant items	Contractor	All construction sites (Tung Chung East Station and realignment works)	Construction Phase
