1 INTRODUCTION

1.1 Background

- 1.1.1 The Railway Development Strategy 2014 (RDS-2014) announced by the Government of the Hong Kong Special Administrative Region included the conceptual scheme of Tung Chung West (TCW) Extension and a possible Tung Chung East (TCE) Station.
- 1.1.2 This new railway system has been included in the approved Schedule 3 Environmental Impact Assessment (EIA) for Tung Chung New Town Extension (TCNTE), which has included the new stations at TCE area and TCW area and the associated trackwork and tunnel. However, a separate Schedule 2 EIA study for this railway system is conducted to address the associated environmental impacts, taking into account of the latest design.
- 1.1.3 The EIA Report for Tung Chung Line Extension (the Project) was approved on 12 July 2022 (Register No. AEIAR-235/2022). The Environmental Permit (EP) No. EP-614/2022 was then issued on 9 August 2022.

1.2 Project Programme

1.2.1 Two construction Works Contracts of the Project have been awarded since May 2023. The construction of the Project commenced in June 2023 and is expected to complete in 2029. **Table 1.1** summarises the information of the awarded Works Contracts.

Table 1.1 Summary of Awarded Works Contracts

Works Contract	Description	Construction Start Date	Contractor	Environmental Team
1201	Tung Chung West Station and Tunnels	June 2023	Bouygues – Dragages (1201) JV	AECOM Asia Co. Ltd.
1202	Tung Chung East Station and Associated Enabling Works for Track Diversions	July 2023	Paul Y. – CRCC (TUE1202) JV	Acuity Sustainability Consulting Limited

1.3 Purpose of the Report

1.3.1 The Environmental Monitoring and Audit (EM&A) programme for the Project commenced in June 2023. This is the sixth EM&A Report for the Project which summarises the EM&A works undertaken by the respective Contractor's ET during the period from 1 to 30 November 2023.

2 ENVIRONMENTAL MONITORING AND AUDIT

2.1 EM&A Results

- 2.1.1 The EM&A Report for Works Contracts 1201 and 1202 prepared by the Contractor's ET are provided in **Appendix A** and **Appendix B**. The EM&A Report provides details of the project information, EM&A requirements, impact monitoring and audit results for the Contracts.
- 2.1.2 A summary of the major construction activities undertaken by the Contractor of Works Contract during the reporting period are presented in **Table 2.1**.

Table 2.1 Summary of Major Construction Activities in the Reporting Period

l able 2.1	Summary of Major Construction Activities in the Reporting Period

	Area 138			

2.1.3 During the reporting month, impact monitoring for air quality and construction noise were conducted in accordance with the EM&A Manual. No exceedances of the Action / Limit Level of 1-hour TSP and Action / Limit level of construction noise due to the Project construction were recorded. Results of air quality and construction noise are summarised in **Tables 2.2** and **2.3** respectively. Details of the monitoring requirements, locations, equipment and methodology are presented in the EM&A Report (**Appendix A** and **Appendix B**).

Table 2.2 Summary of 1-Hour TSP Monitoring Results in the Reporting Period

Monitoring Station ID	Location	TSP Concentratio n (µg/m³)	Action Level (μg/m³)	Limit Level (µg/m³)	Exceedance due to the Project Construction (Yes/No)
Works Cont	ract 1201				
DM-2	Sheraton Hong Kong Tung Chung Hotel Shopping Mall	73.2 – 181.2	326	500	No
DM-3	Shops at Tung Chung Crescent	68.1 – 201.6	327	500	No
DM-4	Yat Tung Shopping Centre	76.6 – 310.3	312	500	No
DM-5b ⁽²⁾	Ma Wan Chung Village	81.6 – 220.3	333	500	No

Monitoring Station ID	Location	TSP Concentratio n (µg/m³)	Action Level (μg/m³)	Limit Level (µg/m³)	Exceedance due to the Project Construction (Yes/No)
Works Cont	ract 1202				
DM-1b ⁽³⁾	G/F of Ying Yuet House	36.3 – 215.0	327	500	No
DM-1a	TCNTE East - Planned Commercial Development (COM-1/Area 57)	N/A ⁽⁴⁾	342	500	No

Note:

- (1) Impact monitoring to be carried out during the construction period of corresponding activity
- (2) Alternative monitoring location to DM-5 Ma Wan Chung Village in the approved EM&A Manual
- (3) Alternative monitoring location to DM-1 Rosita Yuen Kindergarten in the approved EM&A Manual
- (4) Impact monitoring to be carried out upon the commence of operation and during the construction period of the corresponding activity

Table 2.3 Summary of Construction Noise Monitoring Results in the Reporting Period

	FEIIOU			
Monitoring Station ID	Location	Noise Level (Leq,30mins, dB(A))	Limit Level (Leq,30mins, dB(A))	Exceedance due to the Project Construction (Yes/No)
Works Cont	ract 1201			
NM2	Block 9 of Tung Chung Crescent	Below baseline level – 68.6	75	No
NM3a ⁽²⁾	2/F rooftop of Yat Tung Shopping Centre	62.1 – 68.8	75	No
Works Conti	ract 1202			
NM1	Ying Tung Estate	66.1 – 73.9	75	No
NM4	Tung Chung Area 113	N/A ⁽¹⁾	75	No
NM6	Tung Chung Area 100	N/A ⁽¹⁾	75	No

Note:

- (1) Impact monitoring to be carried out upon the intake of the population and during the construction period of the corresponding activity
- (2) Alternative monitoring location to NM3 Yat Tung Estate in approved EM&A Manual
- 2.1.4 No complaints were record in the reporting period. No notification of summons and successful prosecutions were recorded in the reporting period. Log for environmental complaints, notification of summons and successful prosecutions is provided in **Table 2.4**.

Table 2.4 Log for Environmental Complaints, Notification of Summons and Successful Prosecutions for the Reporting Month

Works Contract	Environmental Complaints	Notification of Summons	Successful Prosecutions
1201	0	0	0
1202	0	0	0

2.1.5 Regular site inspections were conducted by the Contractor's ET on a weekly basis to check the implementation of environmental pollution control and mitigation measures for the Project. No non-conformance was identified in the reporting period.

3 IMPLEMENTATION STATUS ON THE ENVIRONMENTAL PROTECTION REQUIREMENTS

3.1.1 The respective Contractors have implemented all mitigation measures and requirements as stated in the EIA Report, EM&A Manual and EP (EP-614/2022). The status of required submissions under the EP as of the reporting period are summarised in **Table 3.1**.

EXECUTIVE SUMMARY

Tung Chung Line Extension Contract 1201 – Tung Chung West (TCW) Station and Tunnels (hereafter called "Contract 1201") covers part of the Tung Chung Line Extension (hereafter called "the Project") construction.

The Contract 1201 comprises the constructions for extending the existing Tung Chung Line (TCL) from the existing overrun tunnel of Tung Chung Station (TUC) to the new underground TCW Station near Yat Tung Estate including Emergency Access Point (EAP) / Emergency Egress Point (EEP) building, station associated facilities and overrun tunnel.

The EM&A programme commenced on 1 June 2023. The impact EM&A for the Project includes air quality and noise monitoring.

This report documents the findings of EM&A works conducted in the period between 1 and 30 November 2023.

Breaches of Action and Limit Levels for Air Quality

No exceedance of Action and Limit Level of air quality was recorded in the reporting month.

Breaches of Action and Limit Levels for Noise

No exceedance of Action and Limit Level of noise was recorded in the reporting month.

Complaint, Notification of Summons and Successful Prosecution

No Complaint, Notification of Summons or Successful Prosecution was recorded in the reporting month.

Reporting Changes

There was no reporting change in the reporting month.

Future Key Issues

Key issues to be considered in the next three months included:

Location	Site Activities
Tung Chung West (TCW)	Site set up
Area	Temporary Substation Setup
	Ground investigation
	Pretreatment & Guide Wall
	D wall Panel construction
Tung Chung Cresecent	Pipe Pile Wall
(TCC) and Tung Chung	Noise Enclosure
Ancillary Building (TCA)	Temporary Substation Setup
Areas	Slope Formation
	Tree Felling and Transplantation
	Planter removal
Barging Facility Area	Rebar Fabrication

Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality and waste management.

1. Introduction

Bouygues - Dragages (1201) Joint Venture (BDJV) was commissioned by the MTR Corporation (MTRC) as the Civil Contractor for Works Contract 1201. AECOM Asia Company Limited (AECOM) was appointed by BDJV as the Contractor's Environmental Team (ET) to undertake the Environmental Monitoring and Audit (EM&A) programme during construction phase of the Project.

1.1 Propose of the Report

1.1.1 This is the 6th monthly EM&A Report which summaries the impact monitoring results and audit findings for the Project during the reporting period between 1 and 30 November 2023.

1.2 Report Structure

- 1.2.1 This monthly EM&A Report is organized as follows:
 - Section 1: Introduction
 - Section 2: Project Information
 - Section 3: Environmental Monitoring Requirement
 - Section 4: Implementation Status of Environmental Mitigation Measures
 - Section 5: Monitoring Results
 - Section 6: Environmental Site Inspection and Audit
 - Section 7: Environmental Non-conformance
 - Section 8: Future Key Issues
 - Section 9: Conclusions and Recommendations

2. Project Information

2.1 Background

- 2.1.1 Tung Chung Line Extension (TUE) was first initiated in the Railway Development Strategy 2014 (RDS-2014) announced by the Government of the Hong Kong Special Administrative Region, which includes the conceptual scheme of Tung Chung West (TCW) Extension and a possible Tung Chung East (TCE) Station.
- 2.1.2 The Tung Chung Line Extension (TUE) Project is an approximately 1.3km extension of the existing Tung Chung Line (TCL) with two new stations namely TCE Station and TCW Station.
- 2.1.3 The Environmental Impact Assessment (EIA) Reports for TUE (Register No.: AEIAR-235/2022) was approved on 12 July 2022 under the Environmental Impact Assessment Ordinance (EIAO). Following the approval of the EIA Report, an Environmental Permit (EP) was granted on 9 August 2022 (EP No.: EP-614/2022), for the construction and operation.
- 2.1.4 According to the approved EM&A Manual of TUE, the EM&A monitoring for the Project includes air quality and noise monitoring. Baseline monitoring for TUE was carried out from Nov 2022 to Mar 2023.

2.2 General Description of the Project

- 2.2.1 The key elements of this Contract 1201 are comprise below:
 - Extending the existing TCL from the existing overrun tunnel of TUC to the new TCW Station (in the form of a tunnel);
 - Construction of a new TCW Station (underground) and overrun tunnel;
 - Construction of the EAP/EEP building; and
 - Construction of station associated facilities (entrances, vent shaft structures, etc.)
- 2.2.2 The layout plan of the Project is shown in **Figure 2.1**.

2.3 Construction Programme and Activities

2.3.1 The major construction activities undertaken in the reporting month are summarised below:

Table 2-1 Major Construction Activities in the Reporting Month

Location	Site Activities
Tung Chung West (TCW)	Site set up
Area	Temporary Substation Setup
	Ground investigation
	Pretreatment & Guide Wall
	D wall Panel construction
Tung Chung Cresecent	Pipe Pile Wall
(TCC) and Tung Chung	Tree Felling and Transplantation
Ancillary Building (TCA)	Planter removal
Areas	Concrete paving
Barging Facility Area	Rebar Fabrication

2.3.2 The tentative construction programmes for the next three months is presented in Appendix A.

2.4 Project Organization

2.4.1 The project organization structure is shown in **Appendix B**. The key personnel contact names and numbers for the Project are summarized in **Table 2-2**.

Table 2-2 Contact Information of Key Personnel

Party	Role	Position	Name	Telephone	Fax
MTRC	Project Environmental Team	Project Environmental Team Leader	Mr. Edan Li	2688 1179	3761 4610
Meinhardt	Independent Environmental Checker	Independent Environmental Checker	Mr. Adi Lee	2859 5443	2540 1580
BDJV	Contractor	Project's Environmental Officer	Ms. Gena Tsang	9511 2283	2588 1979

Notification Under Air Pollution Control (Construction Dust) Regulation						
492760	18 May 2023	-	Valid	-		

3. Environmental Monitoring Requirement

3.1 Construction Dust Monitoring

Monitoring Requirements

3.1.1 In accordance with the approved EM&A Manual, 1-hour Total Suspended Particulates (TSP) level at the designated air quality monitoring station is required. Impact 1-hour TSP monitoring should be carried out for at least 3 times every 6 days. The Action and Limit level of the air quality monitoring is provided in **Appendix D**.

Monitoring Equipment

3.1.2 1-hour TSP air quality monitoring was performed using High Volume Sampler (HVS) located at the designated monitoring stations. The HVS meets all the requirements of the EM&A Manual. Brand and model of the equipment is given in **Table 3-1**.

Table 3-1 Air Quality Monitoring Equipment

Equipment	Brand and Model
High Volume Sampler (1-hour TSP)	Andersen Total Suspended Particulate Mass Flow Controlled High Volume Air Sampler (Model No. TE-5170 (S/N:1303, 10216, 10373, 3383)
Calibration Kit	TISCH Environmental Orifice (Model TE-5025A (Orifice I.D.: 0843)

Monitoring Locations

3.1.3 The monitoring station for construction dust monitoring pertinent to the Project has been identified based on the approved EM&A Manual for TUE of the Project. As limitations and technical difficulties were identified, the alternative impact monitoring location at DM-5b has been proposed and approved by EPD on 30 May 2023. The location of the construction dust monitoring stations are summarised in **Table 3-2** and shown in **Figure 3.1**.

Table 3-2 Locations of Construction Dust Monitoring Station

Monitoring Location ID	Dust Monitoring Location
DM-2	Sheraton Hong Kong Tung Chung Hotel Shopping Mall
DM-3	Shops at Tung Chung Crescent
DM-4	Yat Tung Shopping Centre
DM-5b*	Ma Wan Chung Village

Remark: * - Alternative impact monitoring location.

Monitoring Methodology

- 3.1.4 1-hour TSP Monitoring
 - (a) The HVS was installed in the vicinity of the air sensitive receivers. The following criteria were considered in the installation of the HVS as far as practicable:-
 - (i) A horizontal platform with appropriate support to secure the sampler against gusty wind was provided.
 - (ii) Two samplers should not be placed less than 2m apart from each others;
 - (iii) The distance between the HVS and any obstacles, such as buildings, was at least twice the height that the obstacle protrudes above the HVS.
 - (iv) A minimum of 2 meters separation from walls, parapets and penthouse for rooftop sampler.
 - A minimum of 2 meters separation from any supporting structure, measured horizontally is required.
 - (vi) No furnace or incinerator flues nearby.
 - (vii) Airflow around the sampler was unrestricted.
 - (viii) The sampler was located more than 20 meters from any dripline.
 - (ix) Any wire fence and gate, required to protect the sampler, did not obstruct the monitoring process.
 - (x) Permission was obtained to set up the samplers and access to the monitoring station.

(xi) A secured supply of electricity was obtained to operate the sampler.

(b) Preparation of Filter Papers

- Glass fibre filters, G810 were labelled and sufficient filters that were clean and without pinholes were selected.
- (ii) All filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ±3 °C; the relative humidity (RH) was < 50% and not variable by more than ±5%. A convenient working RH was 40%.
- (iii) All filter papers were prepared and analysed by ALS Technichem (HK) Pty Ltd., which is a HOKLAS accredited laboratory and has comprehensive quality assurance and quality control programmes.

(c) Field Monitoring

- (i) The power supply was checked to ensure the HVS works properly.
- (ii) The filter holder and the area surrounding the filter were cleaned.
- (iii) The filter holder was removed by loosening the four bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully.
- (iv) The filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter.
- (v) The swing bolts were fastened to hold the filter holder down to the frame. The pressure applied was sufficient to avoid air leakage at the edges.
- (vi) Then the shelter lid was closed and was secured with the aluminium strip.
- (vii) The HVS was warmed-up for about 5 minutes to establish run-temperature conditions.
- (viii) A new flow rate record sheet was set into the flow recorder.
- (ix) On site temperature and atmospheric pressure readings were taken and the flow rate of the HVS was checked and adjusted at around 1.3 m³/min, and complied with the range specified in the EM&A Manual (i.e. 0.6-1.7 m³/min).
- (x) The programmable digital timer was set for a sampling period of 1 hrs, and the starting time, weather condition and the filter number were recorded.
- (xi) The initial elapsed time was recorded.
- (xii) At the end of sampling, on site temperature and atmospheric pressure readings were taken and the final flow rate of the HVS was checked and recorded.
- (xiii) The final elapsed time was recorded.
- (xiv) The sampled filter was removed carefully and folded in half length so that only surfaces with collected particulate matter were in contact.
- (xv) It was then placed in a clean envelope and sealed.
- (xvi) All monitoring information was recorded on a standard data sheet.
- (xvii) Filters were then sent to ALS Technichem (HK) Pty Ltd. for analysis.

(d) Maintenance and Calibration

- (i) The HVS and its accessories were maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
- (ii) HVSs were calibrated using TE-5025A Calibration Kit upon installation and thereafter at bi-monthly intervals.
- (iii) Calibration certificate of the TE-5025A Calibration Kit and the HVSs are provided in **Appendix E**.

Monitoring Schedule for the Reporting Month

3.1.5 The schedule for environmental monitoring in November 2023 is provided in **Appendix F**.

3.2 Construction Noise Monitoring

Monitoring Requirements

3.2.1 In accordance with the approved EM&A Manual, impact noise monitoring should be conducted for at least once a week during the construction phase of the Project. **Table 3-3** summarises the monitoring

parameters, frequency and duration of impact noise monitoring. The Action and Limit level of the noise monitoring is provided in **Appendix D**.

Table 3-3 Noise Monitoring Parameters, Frequency and Duration

Parameter and Duration	Frequency
30-mins measurement at each monitoring station between 0700 and 1900 on normal weekdays. Leq, L ₁₀ and L ₉₀ would be recorded.	At least once per week

Monitoring Equipment

3.2.2 Noise monitoring was performed using sound level meter at each designated monitoring station. The sound level meters deployed comply with the International Electrotechnical Commission Publications (IEC) 651:1979 (Type 1) and 804:1985 (Type 1) specifications. Acoustic calibrator was deployed to check the sound level meters at a known sound pressure level. Brand and model of the equipment is given in **Table 3-4**.

Table 3-4 Noise Monitoring Equipment for Regular Noise Monitoring

Equipment	Brand and Model
Integrated Sound Level Meter	NTi XL2 (S/N: A2A-17440-EO, A2A-17788-EO)
Acoustic Calibrator	Model No. B&K 4231 (S/N: 3006428)

Monitoring Locations

3.2.3 The monitoring station for construction noise monitoring pertinent to the Project has been identified based on the approved EM&A Manual for TUE of the Project. Alternative impact monitoring location was proposed at NM3a due to safety considerations for monitoring at public accessible areas and was approved by EPD on 30 May 2022. The location of the construction noise monitoring station is summarised in **Table 3-5** and shown in **Figure 3.2**.

Table 3-5 Noise Monitoring Station during Construction Phase

Identification No.	Noise Monitoring Station
NM2	Block 9 of Tung Chung Crescent
NM3a	2/F rooftop of Yat Tung Shopping Centre

Monitoring Methodology

- 3.2.4 Monitoring Procedure
 - (a) Façade measurement was made at NM2 and NM3a.
 - (b) The battery condition was checked to ensure the correct functioning of the meter.
 - (c) Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - (i) frequency weighting: A
 - (ii) time weighting: Fast
 - (iii) time measurement: L_{eq(30-minutes)} during non-restricted hours i.e. 0700 1900 on normal weekdays.
 - (d) Prior to and after each noise measurement, the meter was calibrated using the acoustic calibrator for 94 dB(A) at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1 dB(A), the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
 - (e) During the monitoring period, the L_{eq} , L_{10} and L_{90} were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.

- (f) Noise measurement was paused during periods of high intrusive noise (e.g. dog barking, helicopter noise) if possible. Observations were recorded when intrusive noise was unavoidable.
- (g) Noise monitoring was cancelled in the presence of fog, rain, wind with a steady speed exceeding 5m/s, or wind with gusts exceeding 10m/s.

Maintenance and Calibration

- 3.2.5 Maintenance and Calibration procedures are as follows:
 - (a) The microphone head of the sound level meter and calibrator should be cleaned with a soft cloth at quarterly intervals.
 - (b) The meter and calibrator were sent to the supplier or HOKLAS laboratory to check and calibrate at yearly intervals.
 - (c) Relevant calibration certificates are provided in Appendix E.

Monitoring Schedule for the Reporting Month

3.2.6 The schedule for environmental monitoring in November 2023 is provided in **Appendix F**.

4. Implementation Status of Environmental Mitigation Measures

4.1.1 The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Report, the EP and EM&A Manual. The implementation status of the environmental mitigation measures during the reporting period is summarized in **Appendix C**. Status of required submissions under the EP during the reporting period is summarised in **Table 4-1**.

Table 4-1 Status of Required Submission under Environmental Permit

EP Condition	Submission	Submission Date
Condition 3.4	Monthly EM&A Report (October 2023)	14 November 2023

5. Monitoring Results

5.1 Construction Dust Monitoring

5.1.1 The monitoring results for 1-hour TSP are summarised in **Table 5-1**. Detailed air quality monitoring results and wind monitoring data extracted from the Chek Lap Kok Automatic Weather Station operated by Hong Kong Observatory are presented in **Appendix G**.

Table 5-1 Summary of 1-hour TSP Monitoring Result in the Reporting Period

ID	Average (μg/m³)	Range (μg/m³)	Action Level (μg/m³)	Limit Level (μg/m³)
DM-2	124.7	73.2 – 181.2	326	500
DM-3	116.0	68.1 – 201.6	327	500
DM-4	152.4	76.6 – 310.3	312	500
DM-5b	120.5	81.6 – 220.3	333	500

- 5.1.2 No Action and Limit Level exceedance were recorded for 1-hour TSP monitoring in the reporting month.
- 5.1.3 The event and action plan is annexed in **Appendix I**.
- 5.1.4 Major dust sources during the monitoring included construction dust, nearby traffic emission and other nearby construction sites.

5.2 Regular Construction Noise Monitoring

5.2.1 The monitoring results for noise are summarized in **Table 5-2** and the monitoring data is provided in **Appendix H**.

Table 5-2 Summary of Construction Noise Monitoring Results in the Reporting Period

ID	Range, dB(A), L _{eg (30 mins)}	Limit Level, dB(A), Leq (30 mins)	
NM2	Below baseline level – 68.6	75	
NM3a ^(*)	62.1– 68.8	75	

- (*) Baseline correction will be made to the measured L_{eq} when the measured noise level exceeded the corresponding baseline noise level and presented in the table.
- 5.2.2 No Action and Limit Level exceedance of noise was recorded at the monitoring station in the reporting month.
- 5.2.3 The event and action plan is annexed in **Appendix I**.
- 5.2.4 Major noise sources during the monitoring included construction noise from the Project site, nearby traffic noise and the community.

5.3 Waste Management

- 5.3.1 C&D materials and wastes sorting were carried out on site. Receptacles were available for C&D wastes and general refuse collection.
- 5.3.2 As advised by the Contractor, 1781 m³ inert C&D material was generated and 1711 m³ disposed of as public fill in the reporting month. No inert C&D materials were reused in other projects or in the Contract in the reporting month. 70 m³ fill material was imported in the reporting month. 239.3 tonnes general refuse was generated in the reporting month. 1.4 tonnes other wastes were generated and disposed into Y Park for recycling. 0.097 tonnes paper/cardboard packaging material and no plastic was collected by recycle contractor in the reporting month. No chemical waste was collected by

licensed contractor in the reporting month. No metal was collected by licensed contractor in the reporting month. The waste flow table is annexed in **Appendix L**.

- 5.3.3 The Contractor is advised to properly maintain on site C&D materials and wastes collection, sorting and recording system and maximize reuse / recycle of C&D materials and wastes. The Contractor is reminded to properly maintain the site tidiness and dispose of the wastes accumulated on site regularly and properly.
- 5.3.4 The Contractor is reminded that chemical waste containers should be properly treated and stored temporarily in designated chemical waste storage area on site in accordance with the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes.
- 5.3.5 All dump trucks for C&D materials transportation and disposal had equipped with Global Positioning System (GPS) for real-time tracking and monitoring of their travel routings and parking locations.

 According to the record of travel routings and parking locations of all dump trucks provided by the Contractor, no track deviation or abnormal parking location was observed during the reporting period.

5.4 Landscape and Visual

5.4.1 Bi-weekly inspection of the implementation of landscape and visual mitigation measures was conducted on 13 and 27 November 2023. A summary of the site inspection is provided on Appendix
 C. The observations and recommendations made during the site inspections are presented in Table 6-1.

6. Environmental Site Inspection and Audit

- 6.1.1 Site inspections were carried out on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures for the Project. A summary of the mitigation measures implementation schedule is provided in **Appendix C**.
- 6.1.2 In the reporting month, 4 site inspections were carried out on 6, 13, 20 and 27 November 2023. Joint inspections with the IEC, ER, the Contractor and the ET were conducted on 13 November 2023. No non-compliance was recorded during the site inspection. Details of observations recorded during the site inspections are presented in **Table 6-1**.

Table 6-1 Observation and Recommendations of Site Audit

Parameters	Date	Observations and Recommendations	Follow-up
. dramotors	6 November 2023	Reminder The contractor was reminded to replace the faded NRMM label for the excavator at TCC area.	
	13 November 2023	Reminder The contractor was reminded to replace the faded NRMM labels for the mobile crane and excavator at TCC area.	
Air Quality	20 November 2023	Reminder The contractor was reminded to replace the faded NRMM labels for the and excavator at TCC and TCW area.	
		 Observation Water spraying, or proper cover should be provided for the dusty stockpile at the TCW area and barging facilities area. 	The stockpile at TCW area have been covered on 1 December 2023. The stockpile at barging facilities area have been removed on 4 December 2023.
	27 November 2023	Reminder The contractor was reminded to check and replace the filter for the exhaust of the GI work equipment.	
		Reminder The contractor was reminded to provide sufficient water spraying as dust suppression measures at the barging facilities area.	
Noise	13 November 2023	Reminder The contractor was reminded to provide noise mitigation measures for the GI work at TCW area.	
	20 November 2023	Reminder The contractor was reminded to provide noise mitigation measures for the diesel pump at TCW area.	
Water Quality	13 November 2023	Reminder The contractor was reminded to provide a bunding at the site boundary of TCC and TCW area.	

Parameters	Date	Observations and Recommendations	Follow-up
Waste/ Chemical Management	13 November 2023	Observation • A proper locking system shall be provided for the chemical waste storage area in TCW area, and chemical waste label shall be provided for the chemical waste stored inside.	The proper locking had been provided for the chemical waste storage area, and the chemical waste label had been provided for the chemical waste stored inside on 17 November 2023.
	13 November 2023	The contractor was reminded to provide a cover for the demolition waste at TCW area.	
	20 November 2023	Reminder The contractor was reminded to provide a lock and contact list for the chemical waste storage at TCC area.	
Landscape & Visual	Nil	Nil	Nil
Permits/ Licenses	Nil	Nil	Nil

6.1.3 All follow-up actions requested by Contractor's ET and IEC during the site inspection were undertaken as reported by the Contractor and confirmed in the following weekly site inspection conducted during the reporting period.

7. Environmental Non-Conformance

7.1 Summary of Monitoring Exceedances

- 7.1.1 No Action and Limit Level exceedance was recorded for 1-hour TSP monitoring in the reporting month.
- 7.1.2 No Action and Limit Level exceedance for noise was recorded at all monitoring stations in the reporting month. Summary of Notification of Exceedance is provided in **Appendix K.**

7.2 Summary of Environmental Non-Compliance

7.2.1 No environmental non-compliance was recorded in the reporting month.

7.3 Summary of Environmental Complaints

7.3.1 No environmental complaint was recorded in the reporting month. Cumulative statistics on environmental complaints is provided in **Appendix J.**

7.4 Summary of Environmental Summon and Successful Prosecutions

7.4.1 No environmental related prosecution or notification of summons was received in the reporting month. Cumulative statistics on notification of summons and successful prosecutions is provided in **Appendix J**.

8. Further Key Issues

8.1 Construction Programme for the Next Three Month

8.1.1 The tentative construction programme for the next three months is presented in **Appendix A**. The major construction works between December 2023 to February 2024 will be:

Table 8-1 Major Construction for the Next Three Month

Location	Site Activities	
Tung Chung West (TCW)	Site set up	
Area	Temporary Substation Setup	
	Ground investigation	
	Pretreatment & Guide Wall	
	D wall Panel construction	
Tung Chung Cresecent	Pipe Pile Wall	
(TCC) and Tung Chung	Noise Enclosure	
Ancillary Building (TCA)	Temporary Substation Setup	
Areas	Slope Formation	
	Tree Felling and Transplantation	
	Planter removal	
Barging Facility Area	Rebar Fabrication	

8.2 Key Issues for the Coming Month

8.2.1 Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality and waste management.

8.3 Monitoring Schedule for the Next Month

8.3.1 The tentative schedule for environmental monitoring in December 2023 is provided in **Appendix F**.

9. Conclusions and Recommendation

9.1 Conclusions

- 9.1.1 1-hour TSP and noise monitoring were carried out in the reporting month.
- 9.1.2 No Action and Limit Level exceedance was recorded for 1-hour TSP monitoring in the reporting month.
- 9.1.3 No Action and Limit Level exceedance for noise was recorded at the monitoring stations in the reporting month.
- 9.1.4 4 nos. of environmental site inspections were carried out in November 2023. Recommendations on remedial actions were given to the Contractor for the deficiencies identified during the site audit.
- 9.1.5 No environmental complaint was recorded in the reporting month.
- 9.1.6 No notification of summons and successful prosecution were received in the reporting month.

9.2 Recommendations

9.2.1 According to the environmental site inspections performed in the reporting month, the following recommendations were provided:

Air Quality Impact

- Ensure the NRMM Label conditions were compliance with the requirement of APCO.
- Provide sufficient dust suppression measures at the site area.
- Proper check and replace the filters for the exhaust of the equipment.
- Provide proper cover or water spraying for the dusty stockpile and demolition waste as dust suppression measure.

Construction Noise Impact

Provide noise mitigation measures for the GI works and diesel pump.

Water Quality Impact

Provide bunding at the site boundary.

Chemical and Waste Management

- Provide proper locking system and the contact list for the chemical waste storage area.
- Provide proper chemical waste label for the chemical waste stored in the chemical waste storage
- Provide a cover for the demolition waste

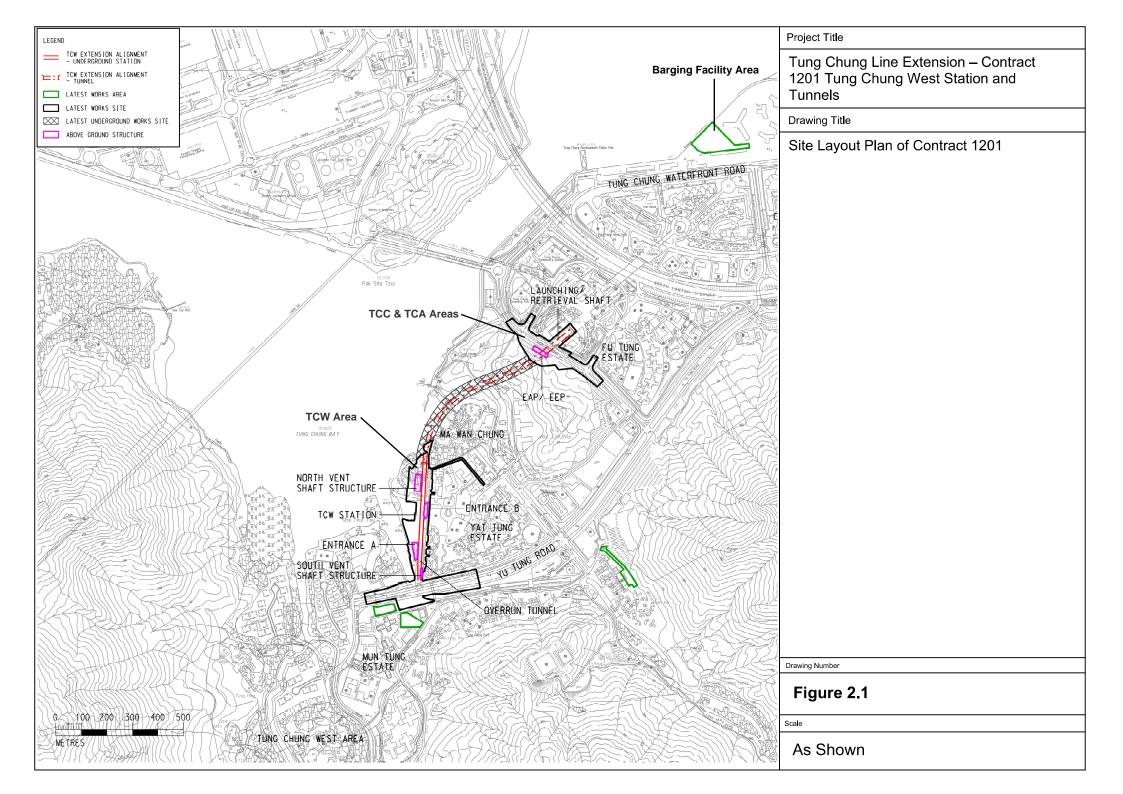

Landscape & Visual Impact

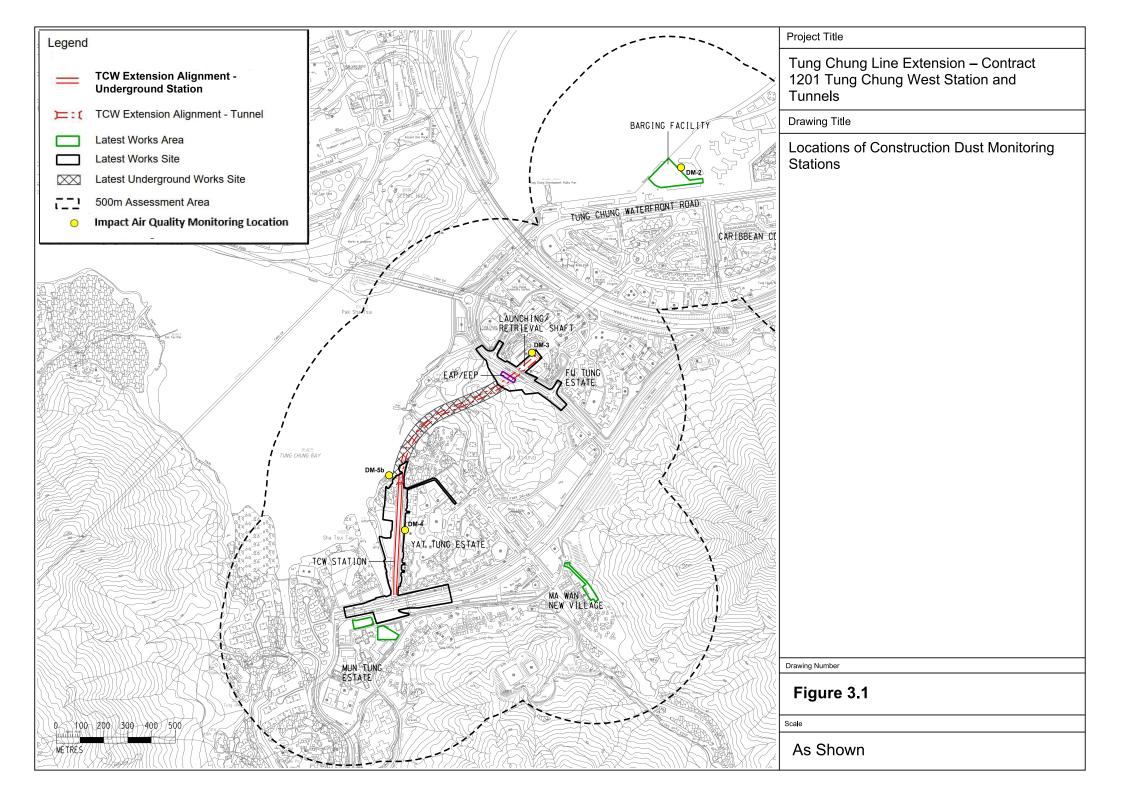

No specific observation was identified in the reporting month.

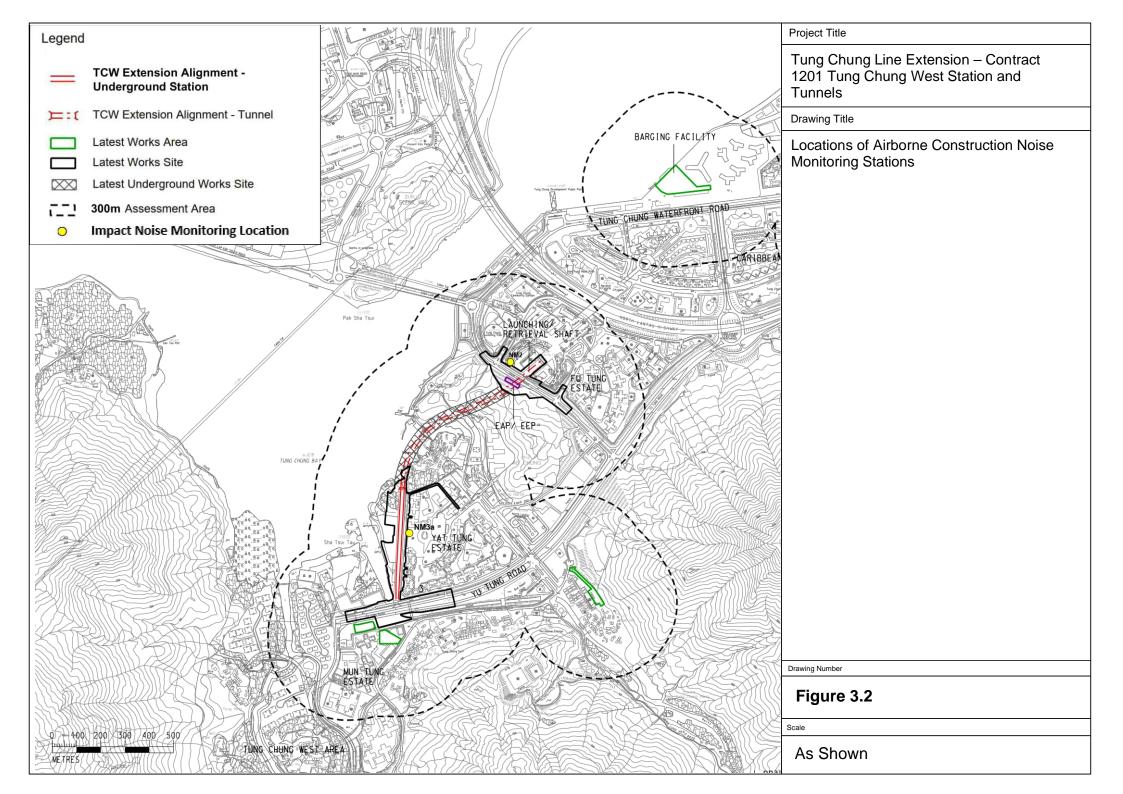

Permits/licenses

• No specific observation was identified in the reporting month.

Appendix B AECOM

APPENDIX C

Implementation Schedule of Environmental Mitigation Measures

Appendix C Implementation Schedule of Environmental Mitigation Measures

EIA Ref.	EM&A log Ref.	Environmental Protection Measures during Construction Phase	
Environmenta	Permit Condition	on	
General Cond	lition		
EP		The Permit Holder shall display conspicuously a copy of this Permit on the construction site(s) at all vehicular site always entrances/exits or at a convenient location for public's information. The Permit Holder shall ensure that the most updated information about this Permit, including any amended Permit, is displayed at such locations.	
ir Quality			
onstruction D	ust Impact		
S3.8.1	D1	Regular watering once per hour on all exposed construction areas with dust emission and haul road will be implemented.	✓
		Vehicle washing facilities should be provided at every designated exit point of the construction worksites.	✓
		Any excavated or stockpile of dusty material should be covered entirely by impervious sheeting or sprayed with water to maintain the entire surface wet and then removed or backfilled or reinstated where practicable for the excavation or unloading.	@
		Any dusty materials remaining after a stockpile is removed should be wetted with water and cleared from the surface of roads.	✓
		A stockpile of dusty material should not be extended beyond the pedestrian barriers, fencing or traffic cones.	✓
		The load of dusty materials on a vehicle leaving a construction site should be covered entirely by impervious sheeting to ensure that the dusty materials do not leak from the vehicle.	✓
		 Where practicable, vehicle washing facilities with high pressure water jet should be provided at every discernible or designated vehicle exit point. The area where vehicle washing takes place and the road section between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores. 	✓
		When there are open excavation and reinstatement works, hoarding of not less than 2.4m high should be provided as far as practicable along the site boundary with provision for public crossing. Good site practice shall also be adopted by the Contractor to ensure the conditions of the hoardings are properly maintained throughout the construction period.	✓
		Surfaces where any pneumatic or power-driven drilling, cutting, polishing or other mechanical breaking operation takes place should be sprayed with water or a dust suppression chemical continuously.	✓
		Any area that involves demolition activities should be sprayed with water or a dust suppression chemical immediately prior to, during and immediately after the activities so as to maintain the entire surface wet.	✓
		 Where scaffolding is erected around the perimeter of a building under construction, effective dust screens, sheeting or netting should be provided to enclose the scaffolding from the ground floor level of the building, or a canopy should be provided from the first floor level up to the highest level of the scaffolding. 	N.A.
		Dusty materials remaining after a stockpile is removed should be wetted with water.	✓
		Any skip hoist for material transport should be totally enclosed by impervious sheeting.	✓
		• Every stock of more than 20 bags of cement or dry pulverised fuel ash (PFA) should be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides.	N.A.
		Cement or dry PFA delivered in bulk should be stored in a closed silo fitted with an audible high level alarm which is interlocked with the material filling line and no overfilling is allowed.	N.A.
		 Loading, unloading, transfer, handling or storage of bulk cement or dry PFA should be carried out in a totally enclosed system or facility, and any vent or exhaust should be fitted with an effective fabric filter or equivalent air pollution control system. 	N.A.
		• Exposed earth should be properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen, shotcrete or other suitable surface stabilisers within six months after the last construction activity on the construction site or part of the construction site where the exposed earth lies.	N.A.

EIA Ref.	EM&A log Ref.	Environmental Protection Measures during Construction Phase	Implementation Status
Drill-&-blast Activities • Any drill-&-blast activities show the strong wind signal Drill-&-blast Activities • Any drill-&-blast activities show the strong wind signal • All neighbouring construction • The areas within 30m from the strong wind signal		 The following measures related to drill-&-blast activities should be incorporated: Drill-&-blast Activities Any drill-&-blast activities should be conducted underneath the concrete slabs for concourses and platforms at the bottom of the TCW Station and underneath a roof cover at the bottom of the shaft between the proposed EAP / EEP and the tunnel. Impermeable blast covers at the mucking out locations should be shut. The blasting should only be carried out in a fully enclosed environment; All neighbouring construction activities should be suspended during blasting; The areas within 30m from the blasting area should be wetted with water prior to blasting and blasting shall not be carried out when the strong wind signal or tropical cyclone warning signal No. 3 or higher is hoisted; Where necessary, mist spraying measures should be installed at the mucking out locations. 	N.A.
		The following measures related to barging facilities should be incorporated: Barging facilities All construction vehicles should be washed at the exit before leaving the construction worksites; The entire area of the barging facility should be paved with concrete, bituminous materials or hardcores; Regular watering once per hour on all exposed stockpiles. The unloading points at the barging facility are recommended to be provided with an enclosed system with a 3-side screen with top cover and provision of water spraying system. After unloading the spoil into barge inside the enclosed system, the trucks should be sprayed by water inside the unloading point. If barges would need to stay overnight at the barging point, spoils on the deck of the barges shall be covered by tarpaulin to avoid dust emission.	√
\$3.8.2	The following good site practices to reduce the exhaust emission from the use of non-road mobile machinery and construction plant and equipment should be implemented: Regulated machines shall be used and exempted NRMMs should be avoided where practicable; Use cleaner fuel such as ULSD in diesel-operated construction plant to reduce sulphur dioxide emission; Use of electric PMEs where practicable; Use power supplied from power utilities when practicable (e.g. to replace generators); Switch off the engine of PMEs when idling; Implement regular and proper maintenance for plant and equipment; Employ plant and equipment of adequate size and power output and avoid overloading of the plant; Locate the PMEs away from sensitive receivers as far as possible; and Erect screen to shield the emission source from sensitive receivers where necessary and practicable.		✓
S3.8.3	D3	Implement regular dust monitoring under EM&A programme during the construction phase.	✓

EIA Ref.	EM&A log Ref.	Environmental Protection Measures during Construction Phase	Implementation Status
Noise			
S4.4.4.4	 N1 The following measures should be implemented: only well-maintained plant should be operated onsite and plant should be serviced regularly during the construction programmed in machines and plant (such as trucks, cranes) that may be in intermittent use should be shut down between work periods should be throttled down to a minimum; plant known to emit noise strongly in one direction, where possible, be orientated so that the noise is directed away from neat NSRs; silencers or mufflers which available on construction equipment should be properly fitted and maintained during the construction 		
		 works; spoil transportation routes should be directed away from NSRs as far as practicable; mobile plant should be sited as far away from NSRs as possible and practicable; material stockpiles, site office and other structures should be effectively utilised, where practicable, to screen noise from on-site construction activities; noise monitoring at selected NSRs should be conducted as far as practicable; and provide designated unloading areas at barging point away from the NSR as far as possible. 	,
S4.4.4.6	N2	Use of quiet plant which should be made reference to the Powered Mechanical Equipment (PME) listed in the Technical Memorandum or the Quality Powered Mechanical Equipment (QPME) / other commonly used PME listed in Environmental Protection Department (EPD) web pages as far as possible which includes the Sound Power Level (SWLs) for specific quiet PME.	
\$4.4.4.7 - \$4.4.4.10	N3	Install movable temporary noise barriers (typical design is wooden framed barrier with a small-cantilevered upper portion of superficial density no less than 7kg/m² on a skid footing with 25mm thick internal sound absorptive lining), and full enclosure, screen the noisy plants including water pump etc.	✓
S4.4.4.11	N4	Use of 3-side temporary movable enclosure to screen trench cutters and concrete lorry mixer near Yat Tung Estate. The design of the enclosure shall include the followings: • Gaps and openings at joints should be avoided; • Enclose the equipment on three sides with cover; and • Absorptive lining should be provided at the sides facing the PME as far as practicable.	✓
S4.4.4.12			✓
S4.4.4.4	N6	Implement an airborne construction noise monitoring under EM&A programme.	✓
Water Quality			
S5.7.1	W1	General Construction Activities Best Management Practices (BMPs) should be implemented as far as practicable according to The Professional Persons Environmental Consultative Committee (ProPECC) Practice Note (PN) 1/94 "Construction Site Drainage". The details of BMPs are presented as follows: • All effluent discharged from the construction site should comply with the standards stipulated in the DSS-TM; • Discharge surface and road runoff from construction sites including barging point into storm drains via adequately designed sand/silt removal facilities such as sand traps, silt traps, and sedimentation tanks with sufficient retention time. Provide channels or earth bunds or sandbag barriers on-site during construction works to properly direct stormwater to such silt removal facilities.	✓

VIOITINI EIVIGA REPORT	&A Report (November 2023)		1201-B-TCW-BDJ-510-000071A-
EIA Ref.	EM&A log Ref.	Environmental Protection Measures during Construction Phase	Implementation Status
\$5.7.1			
S5.7.1	W1	Recondition and reuse the bentonite wherever practicable to minimise the disposal volume of used bentonite slurries. Provide temporary enclosed storage locations on-site for any unused bentonite that needs to be transported away after the related construction activities are completed. The process of handling and disposing of bentonite slurries should follow the requirements as stipulated in ProPECC PN 1/94: Handling and Disposing of Bentonite Slurries • Bentonite slurries used in diaphragm wall and bore-pile construction should be reconditioned and reused wherever practicable. If the disposal of at the marine spoil quantity cannot be avoided, the used slurry may be disposed of at the marine spoil grounds subject to obtaining a marine dumping licence from EPD on a case-by-case basis. • If the used bentonite slurry is intended to be disposed of through the public drainage system, it should be treated to the respective effluent standards applicable to foul sewers, storm drains or the receiving waters as set out in the WPCO Technical Memorandum on Effluent Standards.	N.A.
S5.7.2	W2	 Mitigation measures/ enhancement measures for TCW Area Install a barrier such as sheet pile/hoarding with concrete footing along the western boundary of the construction site/works areas. This barrier shall be able to contain the surface run-off from releasing to the estuary in an uncontrolled manner during heavy rainfall; Contractor should apply for a discharge licence under the WPCO and conduct necessary water quality measurements at the discharge location(s) to demonstrate compliance with the licence conditions; and Maintain the silt removal facilities, channels, and manholes and remove the deposited silt and grit regularly, at the onset of and after each rainstorm to prevent local flooding if necessary. 	✓

EIA Ref.	Ref. EM&A log Ref. Environmental Protection Measures during Construction Phase		Implementation Status	
S5.7.3	W3	Mitigation measures for Barging Point Maintain adequate clearance between vessels and the seabed in all tide conditions to minimise undue turbidity generated by turbulence from vessel movement or propeller wash; and Control the loading of barges and hoppers to prevent the splashing of material into the surrounding water. Barges or hoppers should not be filled to a level that will cause the overflow of materials or polluted water during loading or transportation.		
S5.7.4	W4	 Wastewater Discharge from Tunnelling and Open Cut Excavation Treat the wastewater, especially with a high level of suspended solids, by settling tanks with sufficient retention time before discharging to the stormwater drain; Remove oil, lubricants, and grease from wastewater by oil interceptors whenever necessary; and Apply for a discharge licence under the Water Pollution Control Ordinance (WPCO) for discharging to the stormwater drain. 	N.A.	
\$5.7.5	W5	 Alteration of Groundwater Level Install groundwater monitoring wells as a precautionary measure in the area closed to TBM and other potential underground works; and An action plan is recommended to guide the work arrangement in case of appearing change of groundwater level. 	N.A.	
S5.7.6	W6	 An action plan is recommended to guide the work arrangement in case of appearing change of groundwater level. Sewage Effluent from Construction Workforce No discharge of sewage to the stormwater system and marine water will be allowed; Establish adequate and sufficient portable chemical toilets in the works areas to handle sewage from the construction workforce; Employ a registered waste collector to clean and maintain the chemical toilets on a regular basis; and Notices should be posted at conspicuous locations to remind the workers not to discharge any sewage or wastewater into the surrounding environment. 		
\$5.7.7	W7	 Accidental Spillage Contractor must register as a chemical waste producer if chemical wastes would be produced from the construction activities; Any chemical waste generated shall be managed in accordance with the Waste Disposal (Chemical Waste) (General) Regulation; The Contractor should develop management procedures for chemicals used and prepare an emergency spillage handling procedure to deal with chemical spillage in case of an accident occurs; Any services and maintenance facilities should be located on hard standings within a bunded area, and sumps and oil interceptors should be provided. Maintenance of vehicles and equipment involving activities with the potential for leakage and spillage should only be undertaken within the areas appropriately equipped to control these discharges; The service and maintenance as well as any chemical storage area would be avoided to position near the watercourse as a safe guard; The Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes published under the Waste Disposal Ordinance shall be followed to deal with chemical wastes; Suitable containers should be used to hold the chemical wastes to avoid leakage or spillage during storage, handling, and transport; Chemical waste containers should be suitably labelled, to notify and warn the personnel who are handling the wastes, to avoid accidents; Storage area should be selected at a safe location on-site and adequate space should be allocated to the storage area; Sufficient ground investigation and soil testing should be carried out; All charted drill holes should be checked by engineer to ensure proper seal up prior to the TBM passing; and The Contractor should devise a contingency plan for any accidental spillage and heavy rainfall event. 	✓	

EIA Ref.	EM&A log Ref.	Environmental Protection Measures during Construction Phase	Implementation Status
Waste Manage	ement		
\$6.2.3.2	WM1	 Good Site Practices The following good site practices are recommended to reduce waste generation during construction: Nomination of an approved personnel, such as a site manager, to be responsible for the implementation of good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site; Training of site personnel in site cleanliness, appropriate waste management procedures and concepts of waste reduction, reuse and recycling; Provision of sufficient waste disposal points and regular collection for disposal; Appropriate measures to minimize windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers; Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors; Provision of wheel washing facilities at the site exit before the trucks leave the works areas; and The Contractor should prepare a Waste Management Plan (WMP) as part of the Environmental Management Plan (EMP) in accordance with the ETWB TCW No. 19/2005. The WMP should be submitted to the Engineer for approval. Mitigation measures proposed in the EIA Report and the EM&A Manual should be adopted. 	✓
\$6.2.3.3	WM2	 Waste Reduction Measures The following recommendations are proposed to achieve reduction of waste: Segregate and store different types of waste in different containers, skip or stockpiles to enhance reuse or recycling of materials and their proper disposal; Proper storage and good site practices to minimize the potential for damage and contamination of construction materials; Plan and stock construction materials carefully to minimize amount of waste generated and avoid unnecessary generation of waste; Sort out demolition debris and excavated materials from demolition works to recover reusable/ recyclable portions (i.e. soil, broken concrete, metal etc.); and Provide training to workers on the importance of appropriate waste management procedures, including waste reduction, reuse and recycling. 	1
\$6.2.3.4 – \$6.2.3.8	WM3	Storage, Collection and Transportation of Waste The following recommendation should be implemented to minimise the impacts from storage, collection and transportation of waste: Non-inert C&D materials such as top soil should be handled and stored well to ensure secure containment of the materials; Stockpiling area should be provided with covers and water spraying system to prevent materials from windblown or being washed away; and Different locations should be designated to stockpile each material to enhance reuse. Remove waste in timely manner; Employ the trucks with cover or enclosed containers for waste transportation; Obtain relevant waste disposal permits from the appropriate authorities; Disposal of waste should be done at licensed waste disposal facilities; All dump trucks engaged on site for delivery of inert C&D material from the site to PFRFs should be equipped with GPS or equivalent system for tracking and monitoring of their travel routings and parking locations by the Contractor. The data collected by GPS or equivalent system should be recorded properly for checking and analysis by ET and IEC; A Construction and Demolition Material Management Plan (C&DMMP) should be prepared in accordance with Section 4.1.3 "Construction and Demolition Materials" of the Project Administration Handbook for Civil Engineering Works and will be submitted together with the EIA Report to Public Fill Committee (PFC) for approval; Carry out on-site sorting for C&D materials;	*

EIA Ref.	EM&A log Ref.	Environmental Protection Measures during Construction Phase	Implementation Status	
S6.2.3.4 -	WM3	Make provisions in the Contract documents to allow and promote the use of recycled aggregates where appropriate.		
S6.2.3.8		Implement a trip-ticket system for each works contract in accordance with DEVB TCW No. 06/2010: Trip-Ticket System		
		CHIT in lieu of DDF shall be used at public fill facilities, sorting facilities, outlying island transfer facilities and landfills for disposal tracking purpose shall be used and the associated duties and responsibilities of supervisory staff in enforcing the TTS.		
		are revised.	✓	
		The Contractor shall propose only private construction sites, private recycling facilities, or construction sites of Government,		
		Hong Kong Housing Authority and Mass Transit Railway Corporation as alternative disposal grounds. • In assessing proposal for alternative disposal ground, the Architect/ Engineer/ Supervising Office/ Maintenance Surveyor shall		
		consult the relevant Government department and seek the approval of a D2 officer or above from his/her department.		
S6.2.3.10 -	WM4	On-site Sorting of C&D Materials		
S62.3.12	VIII.4	 Storage areas should be provided in the site for temporary storage of inert C&D materials during construction phase. All C&D materials arising from the construction would be sorted on-site to recover the inert C&D materials and reusable and 		
		recyclable materials prior to disposal off-site as far as practicable.	NI A	
		 Non-inert portion of C&D materials should be reused whenever possible and be disposal of at landfills as a last resort. The Contractor should devise a system to work for on-site sorting of C&D materials and promptly remove all sorted and 	N.A.	
		processed material arising from the construction activities to minimize temporary stockpilling on-site. The system should include		
		the identification of the source of generation, estimated quantity, arrangement for onsite sorting and/ or collection, temporary		
		storage areas, and frequency of collection by recycling contractors or frequency of removal off-site.		
S6.2.3.13	WM5	Reuse of C&D Materials		
		Reuse suitable inert C&D materials on-site as far as practicable;		
		Reuse suitable excavated rock by reworking at approved quarries (e.g. crushed as aggregates); Outlier of the eliting debaits and approved to the eliting debaits and the entire of the eliting debaits.	✓	
		• Sorting of demolition debris and excavated materials from demolition works to recover reusable/ recyclable portions (e.g. soil, broken concrete, metal); and		
		Protect recyclable material to keep it in usable condition.		
S6.2.3.15	WM6	Specification of Inert C&D Materials to be Delivered Off-site		
		In case there are surplus inert C&D materials generated in the Project and are required to delivered to the Public Fill Reception		
		Facilities (PFRFs), the inert C&D materials should fulfil the following requirements:		
		Reclaimed asphalt pavement will not be mixed with other materials when delivered to the public fill reception facilities;	N.A.	
		Moisture content of inert C&D materials will be lowered to 25% max. when delivered to the public fill reception facilities; Death C&D materials delivered to the public fill reception facilities about the public fill reception facilities.		
		 Inert C&D materials delivered to the public fill reception facilities should be a size less than 250mm; and Inert construction waste shall not be in liquid form such that it can be contained and delivered by dump truck as far as possible. 		
		Inert C&D materials in liquid form shall be solidified before delivering to the public fill reception facilities.		
S6.2.3.17	WM7	Use of Standard Formwork and Planning of Construction Materials purchasing		
		Standard formwork should also be used as far as practicable to minimise the arising of non-inert C&D materials;		
		Use of more durable formwork (e.g. metal hoarding) or plastic facing should be encouraged in order to enhance the possibility	N.A.	
		of recycling; and		
66.0.0.40	\A/840	Purchasing of construction materials should be carefully planned in order to avoid over ordering and wastage. Lead based Marine Codingert		
S6.2.3.18 – S6.2.3.20	WM8	 <u>Land-based Marine Sediment</u> Excavated land-based marine sediment should be reused as far as possible within the Project Site before considering disposal. 		
30.2.3.20		Marine disposal option for the land-based marine sediment should only be considered as the last resort upon exhaustion of		
		reuse options.	N.A.	
		• All construction plant and equipment shall be designed and maintained to minimise the risk of sediments being released into the		
		water column or deposited in the locations other than designated location.		

EIA Ref.	Nei.		Implementation Status
\$6.2.3.18 - \$6.2.3.20	, , , , , , , , , , , , , , , , , , , ,		
\$6.2.3.21	WM9	If mixing of land-based marine sediment with cement is to be used for backfilling on-site, the following mitigation measures should be followed. • The loading, unloading, handling, transfer or storage of bulk cement should be carried out in an enclosed system as far as practicable; • Mixing process and other associated material handling activities should be properly scheduled to minimise potential noise impact and dust emission; and • The mixing facilities should be sited as far apart as practicable from the nearby NSRs and to be sited under covers to minimise dust nuisance to the nearby receivers.	
\$6.2.3.22 – \$6.2.3.23	WM10	 Chemical Waste Reduce the generation quantities or select a chemical type of less impact on environment, health and safety as far as possible; and If chemical wastes are produced at the construction site, the Contractors should register with EPD as chemical waste producer. Chemical wastes should be stored in appropriate containers and collected by a licensed chemical waste collector. Chemical wastes (e.g. spent lubricant oil) should be recycled at an appropriate facility as far as possible, while the chemical waste that cannot be recycled should be disposed of at either the Chemical Waste Treatment Centre, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation. 	
\$6.2.3.24 – \$6.2.3.25	WM11	 General Refuse General refuse should be stored in enclosed bins separately from construction and chemical wastes. Recycling bins should also be placed to encourage recycling; Preferably enclosed and covered areas should be provided for general refuse collection and routine cleaning for these areas should also be implemented to keep areas clean; A reputable waste collector should be employed to remove general refuse on a daily basis; Arrangements should be made with the recycling companies to collect the recycle waste as required; The Contractor should implement an education programme for workers relating to avoiding, reducing, reusing and recycling general waste; and Participation in a local collection scheme should be considered by the Contractor to facilitate waste reduction. 	
Ecology			
S8.9.1	E1	Avoidance of marine works.	√
S8.9.1	E3	Avoidance of works within intertidal zone of Tung Chung Bay.	
S8.9.1	E4	Avoidance of country parks, SSSI, CA and CPA.	
S8.9.1	E5	Avoidance of mature woodland.	✓
S8.9.1	E6	Avoidance of re-diversion of Wong Lung Hang Nullah.	✓

violitilly Livid A Report	EM&A Report (November 2023)		1201-B-1CW-BDJ-510-000071A-
EIA Ref.	EM&A log Ref.	Environmental Protection Measures during Construction Phase	Implementation Status
\$8.9.7	E 7	A protection zone should be set up for one individual of Aquilaria sinensis and Canthium Dicoccum on the plantation slope along Shun Tung Road.	N.A.
\$8.9.11	E8	 Minimisation of Human Disturbance during Construction Install site hoarding of appropriate height along site boundaries; Construction activities and material storage should be strictly confined within the construction sites; and For TCW section, dedicated access to the nearby ecologically sensitive areas outside of the construction sites, works areas, and works sites is not allowed due to the proximity to the Wong Lung Hang estuary and Tung Chung Bay. 	N.A.
Landscape an	d Visual		
S10.8.2	LV1	<u>Tree Preservation</u> • Existing trees to be retained within the Project Site shall be protected carefully during construction.	✓
\$10.8.2	LV2	 Tree Transplanting Trees unavoidably affected by the Project works shall be transplanted where practical. Approximately 170 nos. of trees are proposed to be transplanted at Shun Tung Road and Yu Tung Road. 	✓
\$10.8.2	LV3	 Landscape Reinstatement All hard and soft landscape areas disturbed temporarily during construction shall be reinstated on like-to-like basis as far as possible, to the satisfaction of the relevant Government Departments. 	N.A.
\$10.8.2	LV4	Lighting Control • All security floodlights for construction sites should be carefully controlled to minimize light pollution and night time glare to nearby users.	N.A.
\$10.8.2	LV5	 Erection of Screen Hoarding Construction site hoarding should be erected around the work sites and work areas to screen pedestrian level views into the construction area from visual sensitive receivers. Hoarding design shall be compatible with the surrounding context as far as practicable 	√
\$10.8.2	LV6	Optimization of Construction Areas Control of construction areas shall be enforced, where possible, to ensure that the landscape and visual impacts arising from the construction activities are minimised. It includes optimising the extent of working areas and temporary works areas, management on storing and using the construction equipment and materials, and consideration of detailed schedules to shorten the construction period.	
Cultural Herit	age		
S11.5.5	CH1	Terrestrial Archaeology • Conduct field scan, 6 auger tests and 2 test pit excavations within the area of archaeological interest by a qualified archaeologist who obtains a licence under the Antiquities and Monuments Ordinance (Cap. 53). Locations and scope should be agreed with AMO prior to implementation. The exact locations of the auger tests and test pits would be subject to site circumstances and constraints. Subject to the findings of the further archaeological testing, options for mitigation measures such as in-situ preservation, relocation and preservation by record etc would be fully investigated and agreed with AMO.	
S11.5.5	CH2	Terrestrial Archaeology • AMO should be informed immediately in case of discovery of antiquities or supposed antiquities in the course of the project works in accordance with the Antiquities and Monuments Ordinance (Cap. 53), so that appropriate mitigation measures, if needed, can be timely formulated and implemented in agreement with AMO.	N.A.

EIA Ref.	EM&A log Ref.	Environmental Protection Measures during Construction Phase	Implementation Status
Hazard to Life			
S12.3.2.1	Н1	 Design Measures Implement emergency plan for efficient excavation including good practice; Adopt site-sensitised bulk emulsion explosives for blasting; No overnight storage of explosives; Provide impermeable blast covers for the TCW Station and EAP/ EEP; Prior to blasting, all the construction workforce for EAP/EEP and TCW station shall be evacuated and all the impermeable blast covers shall be closed; Limit to one blast per day for each blasting location (i.e. total of two blasts each day for the entire project). 	√
\$12.3.2.2	H2	 Good Site Practices Temporary mitigation measures such as blast doors or heavy duty blast curtains should be installed at the access adits, shafts/ portals and at suitable locations underground to prevent flyrock and control the air overpressure; Blasting at different locations will be carried out for this project. Good communication and control will need to be adopted in ensuring that the works are carried out safely; A Chief Shotfirer and a Blasting Engineer shall be employed in addition to the normal blasting personnel to ensure that the works are coordinated between blasting areas and between adjacent contracts; Shotfirer to be provided with a lightning detector, and appropriate control measures should be in place; Provide full-time supervision and blast checking by Blast Competent Supervisors (BCS) as mentioned in Project Administration Handbook for Civil Engineering Works; Checking (including both document and site checks) for each blast including the installation of protective, precautionary, preventive measures, comply with the Blasting Permit requirements; Inspecting the condition of all sensitive receivers before and after each blast; Inspecting the construction of preventive works, if required, for the sensitive receivers; Monitoring the site operations and working methods to ensure that they meet the safety requirements set out in the Blasting Permit; Inspect consequence-to-life category 1 and 2 slopes that are subjected to significant blasting vibration before and after each blast; Limit blast charge weight based on the allowable Peak Particle Velocity (PPV) for the controlling sensitive receivers surrounding the site; Monitor regularly the condition of all sensitive receivers and carry out inspections and reviews before and after each blast; Resolve any stability concerns observed at the slopes (e.g. persistent adverse discontinuity or other adverse geology, or loose boulde	N.A.

Test specifications

The Sound Level Meter has been calibrated in accordance with the requirements as specified in BS 7580: Part 1: 1997 1, and the lab calibration procedure SMTP004-CA-152.

2, The electrical tests were performed using an electrical signal substituted for the microphone which was removed and replaced by an equivalent capacitance within a tolerance of ±20%.

3. The acoustic calibration was performed using an B&K 4226 sound calibrator and corrections was applied for the difference between the free-field and pressure responsess of the Sound Level Meter.

Test results

This is to certify that the Sound Level Meter conforms to BS 7580: Part 1: 1997 for the conditions under which the test was performed.

Details of the performed measurements are presented on page 2 of this certificate.

1. **Electrical Tests**

> The electrical tests were performed using an equivalent capacitance substituted for the microphone. The results are given in below with test status and the estimated uncertainties. The "Pass" means the result of the test is inside the tolerances stated in the test specifications. The "-" means the result of test is outside these tolerances.

Test:	Subtest:	Status:	Expanded Uncertanity (dB)	Coverage Factor
1000	oubtoot.	otatus.	oncertainty (ub)	ractor
Self-generated noise	Α	Pass	0.3	
	С	Pass	0.8	2.1
	Lin	Pass	1.6	2.2
Linearity range for Leq	At reference range, Step 5 dB at 4 kHz	Pass	0.3	
	Reference SPL on all other ranges	Pass	0.3	
	2 dB below upper limit of each range	Pass	0.3	
	2 dB above lower limit of each range	Pass	0.3	
Linearity range for SPL	At reference range, Step 5 dB at 4 kHz	Pass	0.3	
Frequency weightings	Α	Pass	0.3	
	С	Pass	0.3	
	Lin	Pass	0.3	
Time weightings	Single Burst Fast	Pass	0.3	
	Single Burst Slow	Pass	0.3	
Peak response	Single 100µs rectangular pulse	Pass	0.3	
R.M.S. accuracy	Crest factor of 3	Pass	0.3	
Time weighting I	Single burst 5 ms at 2000 Hz	Pass	0.3	
	Repeated at frequency of 100 Hz	Pass	0.3	
Time averaging	1 ms burst duty factor 1/103 at 4kHz	Pass	0.3	
	1 ms burst duty factor 1/104 at 4kHz	Pass	0.3	
Pulse range	Single burst 10 ms at 4 kHz	Pass	0.4	
Sound exposure level	Single burst 10 ms at 4 kHz	Pass	0.4	
Overload indication	SPL	Pass	0.3	
	Leq	Pass	0.4	

2, Acoustic tests

The complete sound level meter was calibrated on the reference range using a B&K 4226 acoustic calibrator with 1000Hz and SPL 94 dB. The sensitivity of the sound level meter was adjusted. The test result at 125 Hz and 8000 Hz are given in below with test status and the estimated uncertainties.

Test:	Subtest	Status	Expanded Uncertanity (dB)	Coverage Factor
Acoustic response	Weighting A at 125 Hz	Pass	0.3	
	Weighting A at 8000 Hz	Pass	0.5	

3, Response to associated sound calibrator

N/A

The expanded uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95%. A coverage factor of 2 is assumed unless explicitly stated.

Test specifications

- The Sound Calibrator has been calibrated in accordance with the requirements as specified in IEC 60942 1997 Annex B
 and the lab calibration procedure SMTP004-CA-156.
- 2, The calibrator was tested with its axis vertical facing downwards at the specific frequency using insert voltage technique.
- The results are rounded to the nearest 0.01 dB and 0.1 Hz and have not been corrected for variations from a reference
 pressure of 1013.25 hectoPascals as the maker's information indicates that the instrument is insensitive to pressure
 changes.

Test results

This is to certify that the sound calibrator conforms to the requirements of annex B of IEC 60942: 1997 for the conditions under which the test was performed. This does not imply that the sound calibrator meets IEC 60942 under any other conditions.

Details of the performed measurements are presented on page 2 of this certificate.

1. Measured Sound Pressure Level

The output Sound Pressure Level in the calibrator head was measured at the setting and frequency shown using a calibrated laboratory standard microphone and insert voltage technique. The results are given in below with the estimated uncertainties.

			(Output level in dB re 20 µPa
Frequency Shown Hz	Output Sound Pressure Level Setting dB	Measured Output Sound Pressure Level dB	Estimated Expanded Uncertainty dB
1000	94.00	94.22	0.10

2, Sound Pressure Level Stability - Short Term Fluctuations

The Short Term Fluctuations was determined by measuring the maximum and minimum of the fast weighted DC output of the B&K 2610 measuring amplifier over a 20 second time interval as required in the standard. The Short Term Fluctuation was found to be:

At 1000 Hz

STF = 0.016 dB

Estimated expanded uncertainty

0.005 dB

3, **Actual Output Frequency**

The determination of actual output frequency was made using a B&K 4180 microphone together with a B&K 2673 preamplifier connected to a B&K 2610 measuring amplifier. The AC output of the B&K 2610 was taken to an universal counter which was used to determine the frequency averaged over 20 second of operation as required by the standard. The actual output frequency at 1 KHz was:

At 1000 Hz

Actual Frequency = 1000.0 Hz

Estimated expanded uncertainty

0.1 Hz

Coverage factor k = 2.2

4, **Total Noise and Distortion**

For the Total Noise and Distortion measurement, the unfiltered AC output of the B&K 2610 measuring amplifier was connected to an Agilent Type 8903 B distortion analyser. The TND result at 1 KHz was:

At 1000 Hz

TND = 0.7 %

Estimated expanded uncertainty

0.7 %

The expanded uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95%. A coverage factor of 2 is assumed unless explicitly stated.

EXECUTIVE SUMMARY

Tung Chung Line Extension Contract 1202 – Tung Chung East (TCE) Station and Associated Enabling Works for Track Diversions (hereafter called "Contract 1202") covers part of the Tung Chung Line Extension (hereafter called "the Project") construction.

The at-grade TCE Station will be located approximately 2km east of the existing Tung Chung Station (TUC) at the south of the future Tung Chung New Town extension (TCNTE (East)) new reclamation area. The station is bounded by the future roads in the reclamation area and the existing Tung Chung Line (TCL) and Airport Express Line (AEL).

The Environmental Monitoring and Audit (EM&A) programme commenced on 1 July 2023. The impact monitoring for the Project includes air quality and noise monitoring.

This Monthly EM&A Report presents the EM&A works carried out during the reporting period from 1 November to 30 November 2023.

Breaches of Action and Limit Levels for Air Quality

No exceedance of Action and Limit Levels of air quality was recorded in the reporting month.

Breaches of Action and Limit Levels for Construction Noise

No exceedance of Action and Limit Levels of construction noise was recorded in the reporting month.

Complaint, Notification of Summons and Successful Prosecution

No complaint or non-compliance was reported in the reporting period. No notification of summon or prosecution was received in this reporting period.

Reporting changes

There was no reporting change in the reporting month.

Future key issues

A summary of the construction activities provided by the Main Contractor in the next three reporting months is listed below:

Location	Site Activities
TCE	 Site formation works Piling works in TCE and IE Noise barrier removal Retaining wall construction Construction of footing for noise barrier & OHL Mast PM site office construction

Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality and waste management.

1. INTRODUCTION

Paul Y. – CRCC (TUE 1202) Joint Venture (PCJV) was commissioned by the MTR Corporation (MTRC) as the Contractor for Works Contract 1202. Acuity Sustainability Consultant Limited (Acuity) was appointed by PCJV as the Contractor's Environmental Team (ET) to undertake the Environmental Monitoring and Audit (EM&A) programme during construction phase of the Project.

1.1 Propose of the Report

1.1.1. This Monthly EM&A Report presents the EM&A works carried out during the reporting period from 1 November to 30 November 2023.

1.2 Report Structure

- 1.2.1. The monthly EM&A Report is organized as follows:
 - Section 1: Introduction
 - Section 2: Project Information
 - Section 3: Environmental Monitoring Requirement
 - Section 4: Implementation Status of Environmental Mitigation Measures
 - Section 5: Monitoring Results
 - Section 6: Environmental Site Inspection and Audit
 - Section 7: Environmental Non-conformance
 - Section 8: Future Key Issues
 - Section 9 Conclusions and Recommendations

2. PROJECT INFORMATION

2.1 Background

- 2.1.1 Tung Chung Line Extension (TUE) was first initiated in the Railway Development Strategy 2014 (RDS- 2014) announced by the Government of the Hong Kong Special Administrative Region, which includes the conceptual scheme of Tung Chung West (TCW) Extension and a possible Tung Chung East (TCE) Station.
- 2.1.2 The Tung Chung Line Extension (TUE) Project is an approximately 1.3km extension of the existing Tung Chung Line (TCL) with two new stations namely TCE Station and TCW Station.
- 2.1.3 The Environmental Impact Assessment (EIA) Reports for TUE (Register No.: AEIAR-235/2022) was approved on 12 July 2022 under the Environmental Impact Assessment Ordinance (EIAO). Following the approval of the EIA Report, an Environmental Permit (EP) was granted on 9 August 2022 (EP No.: EP-614/2022) for the construction and operation.
- 2.1.4 According to the approved EM&A Manual of TUE, the EM&A monitoring for the Project includes air quality and noise monitoring. Baseline monitoring for TUE was carried out from Nov 2022 to Mar 2023.

2.2 General Description of the Project

- 2.2.1 The key elements of Contract 1202 comprise:
 - Construction of a new TCE Station between Sunny Bay Station and Tung Chung Station.
 - Construction of two footbridges connecting TCE and Area 113 development.
 - Cable containment and associated enabling works for track diversions.
 - Construction of station associated building services and Architectural Builders Works and Finishes (ABWF).
- 2.2.2 The layout plan of the Project is shown in **Figure 2.1**.

2.3 Construction Programme and Activities

2.3.1 The major construction activities undertaken in the reporting month are summarised in **Table 2.1** below:

Table 2.1 Major Construction Activities in the Reporting Month

Location	Site Activities
TCE	 Piling works in TCE Retaining wall construction PM site office construction Piling Works in IE Noise barrier removal Construct gate entrance
Area 138	

2.3.2 The tentative Construction programme for the next three months is presented in **Appendix A**.

2.4 **Project Organization**

2.4.1 The project organization structure is presented in **Appendix B**. The key personal contact names and numbers for the Project are summarized in **Table 2.2**.

Table 2.2 Contact Information of Key Personnel

Party	Role	Position	Name	Telephone
MTRC	Project Environmental Team	Project Environmental Team leader	Mr. Edan Li	2688 1179
Meinhardt	Independent Environmental Checker (IEC)	Independent Environmental Checker (IEC)	Mr. Adi Lee	2859 5443
PCJV	Contractor	Environmental Manager	Mr. Albert Chan	9700 1083
Acuity	Contractor's Environmental Team (ET)	ET Leader	Mr. Tsang, Fan Cheong	2698 8060

2.5 Status of Environmental Licences, Notification and Permits

2.5.1 A summary of the valid permits, licences, and/ or notifications on environmental protection for this Project is presented in **Table 2.3**.

Table 2.3 Summary of the Status of Valid Environmental License Notification, Permit and Documentations

Permit/ Licences/	Valid	Valid Period

3. ENVIRONMENTAL MONITORING REQUIREMENT

3.1 <u>Construction Dust Monitoring</u>

Monitoring Requirements

3.1.1 In accordance with the EM&A Manual, the ET shall carry out impact monitoring during construction phase of the project. For 1-hour Total Suspended Particulates (TSP) monitoring, the sampling frequency of at least three times every six days should be undertaken when the highest dust impact occurs. The Action and Limit levels of the air quality monitoring are provided in **Appendix D**.

Monitoring Equipment

3.1.2 1-hour TSP air quality monitoring was preformed using High Volume Sampler (HVS) located at the designated monitoring station. The HVS meets all the requirements of the EM&A Manual. The equipment used for 1-hour TSP measurement during the reporting month are summarised in **Table 3.1**.

Table 3.1 Construction Dust Monitoring Equipment

Measuring Parameter	Monitoring Equipment	Brand and Model	Serial Number	Expiry Date
1 1 TCD	High Volume Sampler	TE-5170X	1086	7-12-2023
1-hour TSP	Calibration Kit	TE-5028A	3702	31-3-2024

3.1.3 Initial calibration of HVS with mass flow controller was conducted upon installation and will be conducted every six months. Copies of calibration certificates of the HVS is presented in **Appendix E.**

Monitoring Locations

3.1.4 The monitoring station for construction dust monitoring pertinent to the Project has been identified based on the approved EM&A Manual for TUE of the Project. As public safety concerns were identified, the alternative impact monitoring location at DM-1b has been proposed and approved by EPD on 30 May 2023. The location of the construction dust monitoring station during the reporting period is summarised in **Table 3.2** and shown in **Figure 3.1**.

Table 3.2 Location of Construction Dust Monitoring Station

Monitoring Station ID	Monitoring Station
DM-1b	G/F of Ying Yuet House

Monitoring Methodology

- 3.1.5 The 1-hour TSP monitoring equipment, High Volume Sampler (Tisch TE-5170X High Volume Air Sampler), was deployed for the impact monitoring. The HVS was free-standing with no obstruction. The following criteria were considered in the installation of the HVS:
 - A horizontal platform with appropriate support to secure the samples against gusty wind was provided;
 - The distance between the sampler and an obstacle, such as buildings, at least twice the height that the obstacle protrudes above the HVS;
 - A minimum of 2 meters separation from any supporting structure and measured horizontally;
 - No furnace or incinerator flues was nearby;
 - Airflow around the sampler was unrestricted;
 - The sampler was located more than 20 meters from the dripline;
 - Wire fence and gate did not cause any obstruction during monitoring;
 - Permission was obtained to set up the samplers and gain access to the monitoring station; and
 - A secured supply of electricity was obtained to operate the samplers.

3.1.6 Preparation of Filter Papers

- Glass fiber filters were labelled and sufficient filters that were clean and without pinholes were selected;
- All filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not varied by more than ±3 °C; the relative humidity (RH) was 40%; and
- Acumen Laboratory and Testing Limited, as a HOKLAS accredited laboratory, implemented comprehensive quality assurance and quality control programmes on the filters.

3.1.7 Field Monitoring

- The power supply was checked to ensure that the HVS was working properly;
- The filter holder and area surrounding the filter were cleaned;
- The filter holder was removed by loosening the foul bolts, and a new filter, with stamped number upward, on a supporting screen was aligned carefully;
- The filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter;
- The swing bolts were fastened to hold the filter holder down to the frame. The pressure applied should be sufficient to avoid air leakage at the edges;
- The shelter lid was closed and secured with an aluminium strip;
- A new flow rate record sheet was inserted into the flow recorder;
- The flow rates of the HVS was checked and adjusted to between 0.6- 1.7 m³/min, which was within the range specified in the EM&A Manual (i.e. 0.6- 1.7 m³/min);
- The programmable timer was set for a sampling period of 1 hour, and the starting time, weather condition and filter number were recorded;

- The initial elapsed time was recorded;
- At the end of sampling, the sampled filter was removed carefully and folded in half so that only surfaces with collected particulate matter were in contact;
- The filter paper was placed in a clean plastic envelope and sealed; all monitoring information was recorded on a standard data sheet; and
- The filters were sent to Acumen Laboratory and Testing Ltd for analysis.

3.1.8 Maintenance and Calibration

- The HVS and its accessories were maintained in good working condition, such as replacing
 motor brushes routinely and checking electrical wiring to ensure a continuous power
 supply.
- HVS was calibrated using TE-5028A Calibration Kit upon installation.
- Calibration certificate of the TE-5028A Calibration Kit and the HVS is provided in **Appendix E**.

Monitoring Schedule for the Reporting Month

3.1.9 The schedule for environmental monitoring in November 2023 is provided in **Appendix F**.

3.2 Construction Noise Monitoring

Monitoring Requirements

3.2.1 In accordance with the approved EM&A Manual, impact noise monitoring should be conducted for at least once a week during the construction phase of the Project. **Table 3.3** summarises the monitoring parameters, frequency and duration of impact noise monitoring. The Action and Limit levels of the construction noise monitoring are presented in **Appendix D**.

Table 3.3 Noise Monitoring Parameters, Frequency and Duration

Parameter and Duration	Frequency
30-min measurement at each monitoring station between	
0700 and 1900 hours on normal weekdays. L_{eq} , L_{10} and L_{90}	At least once per week
would be recorded	

Monitoring Equipment

3.2.2 Noise monitoring was performed using sound level meter at the designated monitoring station. The sound level meters deployed comply with the International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications. Acoustic calibrator was deployed to check the sound level meters at a known sound pressure level. Brand and model of the equipment is given in **Table 3.4.**

Table 3.4 Noise Monitoring Equipment for Regular Noise Monitoring

Equipment	Model	Serial No.	Calibration Certificate Expiry Date
Sound Level Meter	NTi XL2	A2A-13548-E0	5 February 2024
	NTi XL2	A2A-13663-F0	14 February 2024
	NTi XL2	A2A-17638-E0	3 April 2024
	NTi XL2	A2A-09696-E0	3 April 2024
Acoustic Calibrator	Rion NC-75	34724243	2 August 2024
	Rion NC-74	34615222	20 March 2024

Monitoring Locations

3.2.3 The monitoring station for construction noise monitoring pertinent to the Project has been identified based on the approved EM&A Manual for TUE of the Project. The location of the construction noise monitoring station during the reporting period is summarised in **Table 3.5** and shown in **Figure 3.2**.

Table 3.5 Noise Monitoring Station during Construction Phase

Monitoring Station ID	Monitoring Station	
NM1	Ying Tung Estate	

Monitoring Methodology

3.2.4 Monitoring Procedure

- a. Façade measurement was made at NM1.
- b. The battery condition was checked to ensure the correct functioning of the meter.
- c. Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - I. frequency weighting: A
 - II. time weighting: Fast
 - III. time measurement: $L_{eq(30-minutes)}$ during non-restricted hours i.e. 0700-1900 hours on normal weekdays.
- d. Prior to and after each noise measurement, the meter was calibrated using the acoustic calibrator for 94 dB(A) at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1 dB(A), the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- e. During the monitoring period, the L_{eq} , L_{10} and L_{90} were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.

- f. Noise measurement was paused during periods of high intrusive noise (e.g. dog barking, helicopter noise, etc) if possible. Observations were recorded when intrusive noise was unavoidable.
- g. Noise monitoring was cancelled in the presence of fog, rain, wind with a steady speed exceeding 5m/s, or wind with gusts exceeding 10m/s.

Maintenance and Calibration

- 3.2.5 Maintenance and Calibration procedures are as follows:
 - a. The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.
 - b. The meter and calibrator were sent to the supplier or HOKLAS laboratory to check and calibrate at yearly intervals.
 - c. Relevant calibration certificates of the monitoring equipment are provided in **Appendix E**.

Monitoring Schedule for the Reporting Month

3.2.6 The schedule for environmental monitoring in November 2023 is provided in **Appendix F**.

4. IMPLEMENTATION STATUS OF ENVIRONMENTAL MITIGATION MEASURES

4.1.1 The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Report, the EP and EM&A Manual. The implementation status of the environmental mitigation measures during the reporting period is summarized in **Appendix C**. Status of required submissions under the EP during the reporting period is summarised in **Table 4.1**.

Table 4.1 Status of Required Submission under Environmental Permit

5. MONITORING RESULTS

5.1 Construction Dust Monitoring

5.1.1 The results for 1-hour TSP are summarized in **Table 5.1**. Detailed air quality monitoring results and wind monitoring data extracted from the Chek Lap Kok Automatic Weather Station operated by Hong Kong Observatory are presented in **Appendix G**.

Table 5.1 Summary of 1-hour TSP Monitoring Results

Monitoring Location	Average (μg/m³)	Range (μg/m³)	Action Level (μg/m³)	Limit Level (μg/m³)
DM-1b	121.5	36.3 – 215.0	327.0	500.0

- 5.1.2 No exceedance of Action or Limit Level was recorded for 1-hour TSP monitoring in the reporting month.
- 5.1.3 The Event and Action Plan is annexed in **Appendix I**.
- 5.1.4 Major dust sources during the monitoring included construction dust and other nearby construction sites.

5.2 Regular Construction Noise Monitoring

5.2.1 The monitoring results for construction noise monitoring are summarized in **Table 5.2** and the monitoring data is provided in **Appendix H**.

Table 5.2 Summary of Construction Noise Monitoring Results

Monitoring Station ID	Range, dB(A), Leq(30mins)	Limit Level, dB(A), Leq(30mins)
NM1*	66.1 – 73.9	75

Remark: * Baseline correction will be made to the measured when the measured noise level exceeded the corresponding baseline noise level and presented in the table.

- 5.2.2 No Action Level and Limit Level exceedance was recorded in the reporting month.
- 5.2.3 The Event and Action Plan is annexed in **Appendix I**.
- 5.2.4 Major noise sources during the monitoring included construction noise from the Project site, and other nearby construction sites.

5.3 <u>Waste Management</u>

- 5.3.1 C&D materials and wastes sorting were carried out on site. Receptacles were available for C&D wastes and general refuse collection,
- 5.3.2 As advised by the Contractor, about 1785.015m³ inert C&D material was generated, 1785.015m³ was disposed of as public fill in the reporting month. No inert C&D materials were reused in other projects or in the Contract in the reporting month. No fill material was imported

in the reporting month. About 23.590 tonnes of general refuse was generated in the reporting month. No paper/ cardboard packaging material and plastic was collected by a recycle contractor in the reporting month. 3.611 tonnes metal was collected by a licensed contractor in the reporting month. No chemical waste was collected by a licensed contractor in the reporting month. The waste flow table is annexed in **Appendix L**.

- 5.3.3 The Contractor is advised to properly maintain on site C&D materials and wastes collection sorting and recording system and maximize reuse/ recycle of C&D materials and wastes. The Contractor is reminded to properly maintain the site tidiness and dispose of the wastes accumulated on site regularly and property.
- 5.3.4 The Contractor is reminded that chemical waste containers should be properly treated and stored temporarily in designated chemical waste storage area on site in accordance with the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes.
- 5.3.5 All dump trucks for C&D materials transportation and disposal had equipped with Global Positioning System (GPS) for real-time tracking and monitoring of their travel routings and parking locations. According to the record of travel routings and parking locations of all dump trucks provided by the Contractor, no track deviation or abnormal parking location was observed during the reporting period.

5.4 Landscape and Visual

5.4.1 Bi-weekly inspection of the implementation of landscape and visual mitigation measures was conducted on 6 and 21 November 2023. A summary of the site inspection is provided on **Appendix C**. The observations and recommendations made during the site inspections are presented in **Table 6.1**.

6. ENVIRONMENTAL SITE INSPECTION AND AUDIT

- 6.1.1 Site inspections were carried out on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures for the Project. A summary of the mitigation measures implementation schedule is provided in **Appendix C**.
- 6.1.2 In the reporting month, 4 site inspections were carried out on 6, 14, 21 and 28 November 2023. Joint inspections with the IEC, ER, the Contractor and the ET were conducted on 14 November 2023. No non-compliance was recorded during the site inspection. Details of observations recorded during the site inspections are presented in **Table 6.1**.

Table 6.1 Observations and Reminders of Site Audit

Parameters	Date	Observation/ Reminder	Follow-up Status
	14 November 2023	Reminder 1. The Contractor shall compact or cover the stockpile with dust screen for dust control at area W3. 2. The NRMM label on the equipment was found faded at area W4. The Contractor shall replace it with a new label.	Nil
Air Quality	21 November 2023	Reminder 1. The Contractor shall compact or cover the stockpile with dust screen for dust control at area W3.	Nil
	28 November 2023	 Reminder The Contractor shall compact or cover the stockpile with dust screen for dust control at area W3. The NRMM label on the generator was found faded at PM office. The Contractor shall replace it with a new label. 	Nil
Noise	6 November 2023	Reminder 1. The Contractor shall erect the noise barrier closer to the breaker for noise mitigation at area W3.	Nil

Parameters	Date	Observation/ Reminder	Follow-up Status
Water Quality	14 November 2023	Observation 1. Untreated wastewater was overflowed to DP3. The contractor shall prevent the untreated wastewater overflowing to discharge point. 2. Channels to public drainage system should be fully covered/blocked to avoid untreated site runoffs being discharged.	Observation 1. The channel was blocked on 15 November 2023. 2. Channels to public drainage system was fully covered on 15 November 2023.
	6 November 2023	Observation 1. The contractor shall clear the waste sorting area regularly at area W4.	Observation 1. The waste sorting area was cleared on 9 November 2023.
W / 1 · 1	14 November 2023	Observation 1. The contractor shall use a drip tray for chemicals to prevent chemical leakage at area W3. 2. Oil stain was found at area W3 and in a drip tray. The contractor shall remove the oil stain and keep it as chemical waste.	Observation 1. The chemicals were placed on a drip tray on 15 November 2023. 2. Oil stain was removed and keep it as chemical waste on 16 November 2023.
Waste/chemical management	21 November 2023	Observation 1. The contractor shall use a drip tray for chemicals to prevent chemical leakage at area W3. And the contractor shall store the chemicals in single layer. 2. The contractor shall clear the waste sorting area regularly at area W4. And the contractor shall cover the waste with impervious sheeting.	Observation 1. The chemicals were placed on a drip tray on 22 November 2023. 2. The waste sorting area was covered with the impervious sheeting on 24 November 2023.
	28 November 2023	Observation 1. The contractor shall clear the waste sorting area regularly at PM office.	Observation 1. The waste sorting area was cleared on 1 December 2023.
Landscape & Visual	Nil	Nil	Nil
Permits/licenses	Nil	Nil	Nil

6.1.3 All follow-up actions requested by Contractor's ET and IEC during the site inspection were undertaken as reported by the Contractor and confirmed in the following weekly site inspection conducted during the reporting period.

7. ENVIRONMENTAL NON-CONFORMANCE

7.1 Summary of Monitoring Exceedances

- 7.1.1 No Action or Limit Level exceedance was recorded for 1-hour TSP monitoring in the reporting month.
- 7.1.2 No Action or Limit Level exceedance for construction noise monitoring was recorded at the monitoring station in the reporting month.
- 7.1.3 Summary of Notification of Exceedance is provided in **Appendix K**.

7.2 Summary of Environmental Non-Compliance

7.2.1 No environmental non-compliance was recorded in the reporting month.

7.3 **Summary of Environmental Complaints**

7.3.1 No environmental complaint was received in the reporting month. Cumulative statistics on environmental complaints is provided in **Appendix J**.

7.4 Summary of Environmental Summon and Successful Prosecutions

7.4.1 No environmental related prosecution or notification of summons was received in the reporting month. Cumulative statistics on notification of summons and successful prosecutions is provided in **Appendix J**.

8. FUTURE KEY ISSUES

8.1 Construction Programme for the Next Three Months

8.1.1 The tentative construction programme for the next three months is presented in **Appendix A**.

The major construction works between December 2023 to February 2024 will be:

Table 8.1 Major Construction for the Next Three Months

Location	Site Activities
TCE	Site formation works
	Piling works in TCE and IE
	Noise barrier removal
	Retaining wall construction
	 Construction of footing for noise barrier & OHL Mast
	PM site office construction

8.2 Key Issues for the Coming Month

8.2.1 Potential environmental impacts arising from the above construction activities are mainly associated with construction dust impact, noise impact, water quality and waste management.

8.3 Monitoring Schedule for the Next Month

8.3.1 The monitoring schedule for the next reporting month is presented in **Appendix F**.

9. CONCLUSION AND RECOMMENDATIONS

9.1 Conclusions

- 9.1.1 1-hour TSP and noise monitoring were carried out in the reporting month.
- 9.1.2 No Action or Limit Level exceedance was recorded for 1-hour TSP monitoring in the reporting month.
- 9.1.3 No Action or Limit Level exceedance was recorded for noise monitoring in the reporting month.
- 9.1.4 4 nos. of environmental site inspections were carried out in November 2023. Recommendations on remedial actions were given to the Contractor for the deficiencies identified during the site audit.
- 9.1.5 No complaint or non-compliance was reported in the reporting month.
- 9.1.6 No notification of summons or prosecution was received in the reporting month.

9.2 Comments and Recommendations

9.2.1 According to the environmental site inspections performed in the reporting month, the following recommendations were provided:

Air Quality Impact

- Provide proper mitigation measure to prevent dusty material spread out from the site boundary.
- Display proper NRMM Label.

Construction Noise Impact

• Erect temporary noise barrier properly to breaking works.

Water Quality Impact

• Provide proper mitigation measure to prevent untreated wastewater overflowing.

Chemical and Waste Management

- Provide drip tray for chemicals and equipment to prevent chemical leakage.
- Clear the waste sorting area regularly.
- Remove oil stain and keep as chemical waste properly

Landscape & Visual Impact

• No specific observation was identified in the reporting month.

Permits/licenses

• No specific observation was identified in the reporting month.

Appendix C Implementation Schedule of Environmental Mitigation Measures

Appendix C

Implementation Schedule of Environmental Mitigation Measures

EM&A Log Ref Construct	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
D1	 The following dust suppression measures/practices should be incorporated: Regular watering once per hour on all exposed construction areas with dust emission and haul road will be implemented; Vehicle washing facilities should be provided at every designated exit point of the construction worksites; Any excavated or stockpile of dusty material should be covered entirely by impervious sheeting or sprayed with water to maintain the entire surface wet and then removed or backfilled or reinstated where practicable for the excavation or unloading; 	Minimise dust impact at the nearby sensitive receivers	Contractor	All construction sites	Construction	APCO To control the dust impact to meet HKAQO and EIAO- TM	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 Any dusty materials remaining after a stockpile is removed should be wetted with water and cleared from the surface of roads; A stockpile of dusty material should not be extended beyond the pedestrian barriers, fencing or traffic cones; The load of dusty materials on a vehicle leaving a construction site should be covered entirely by impervious sheeting to ensure that the dusty materials do not leak from the vehicle; Where practicable, vehicle washing facilities with high pressure water jet should be provided at every discernible or designated vehicle exit point. The area where vehicle washing takes place and the road section between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores; 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 When there are open excavation and reinstatement works, hoarding of not less than 2.4m high should be provided as far as practicable along the site boundary with provision for public crossing. Good site practice shall also be adopted by the Contractor to ensure the conditions of the hoardings are properly maintained throughout the construction period; The portion of any road leading only to the construction site that is within 30m of a vehicle entrance or exit should be kept clear of dusty materials; Surfaces where any pneumatic or power-driven drilling, cutting, polishing or other mechanical breaking operation takes place should be sprayed with water or a dust suppression chemical continuously; Any area that involves demolition activities should be sprayed with water or a dust 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	suppression chemical immediately prior to, during and immediately after the activities so as to maintain the entire surface wet; • Where scaffolding is erected around the perimeter of a building under construction, effective dust screens, sheeting or netting should be provided to enclose the scaffolding from the ground floor level of the building, or a canopy should be provided from the first floor level up to the highest level of the scaffolding; • Any skip hoist for material transport should be totally enclosed by impervious sheeting; • Every stock of more than 20 bags of cement or dry pulverised fuel ash (PFA) should be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides; • Cement or dry PFA delivered in bulk should be stored in a closed silo fitted with an						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 audible high level alarm which is interlocked with the material filling line and no overfilling is allowed; Loading, unloading, transfer, handling or storage of bulk cement or dry PFA should be carried out in a totally enclosed system or facility, and any vent or exhaust should be fitted with an effective fabric filter or equivalent air pollution control system; Cement or dry PFA delivered in bulk should be stored in a closed silo fitted with an audible high level alarm which is interlocked with the material filling line and no overfilling is allowed; Loading, unloading, transfer, handling or storage of bulk cement or dry PFA should be carried out in a totally enclosed system or facility, and any vent or exhaust should be fitted with an effective fabric filter or equivalent air pollution control system; and 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	• Exposed earth should be properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen, shotcrete or other suitable surface stabilisers within six months after the last construction activity on the construction site or part of the construction site where the exposed earth lies.						
D2	The following good site practices to reduce the exhaust emission from the use of non-road mobile machinery and construction plant and equipment should be implemented: • Regulated machines shall be used and exempted NRMMs should be avoided where practicable; • Use cleaner fuel such as ULSD in dieseloperated construction plant to reduce sulphur dioxide emission; • Use of electric PMEs where practicable;	Control emissions from non-road mobile machinery	Contractor	All construction sites	Construction	 Air Pollution Control (NRMMs) (Emission) Regulation To control the fuel combustion 	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 Use power supplied from power utilities when practicable (e.g. to replace generators); Switch off the engine of PMEs when idling; Implement regular and proper maintenance for plant and equipment; Employ plant and equipment of adequate size and power output and avoid overloading of the plant; Locate the PMEs away from sensitive receivers as far as possible; and Erect screen to shield the emission source from sensitive receivers where necessary and practicable 					emission from PMEs	

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
D3	Implement regular dust monitoring under EM&A programme during the construction phase.	Monitoring of dust impact		Selected dust monitoring stations	Construction phase	• EIAO-TM	Implemented
Construc	ction Noise						
N1	 The following measures should be implemented: only well-maintained plant should be operated onsite and plant should be serviced regularly during the construction programme; machines and plant (such as trucks, cranes) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; 	Control construction airborne noise		All construction sites	Construction	• Annex 5, EIAO-TM	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 plant known to emit noise strongly in one direction, where possible, be orientated so that the noise is directed away from nearby NSRs; silencers or mufflers which available on construction equipment should be properly fitted and maintained during the construction works; spoil transportation routes should be directed away from NSRs as far as practicable; mobile plant should be sited as far away from NSRs as possible and practicable; material stockpiles, site office and other structures should be effectively utilised, where practicable, to screen noise from onsite construction activities; noise monitoring at selected NSRs should be conducted as far as practicable; and 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	provide designated unloading areas at barging point away from the NSR as far as possible						
N2	Use of quiet plant which should be made reference to the Powered Mechanical Equipment (PME) listed in the Technical Memorandum or the Quality Powered Mechanical Equipment (QPME) / other commonly used PME listed in Environmental Protection Department (EPD) web pages as far as possible which includes the Sound Power Level (SWLs) for specific quiet PME.	Reduce the noise levels from plant items	Contractor	All construction sites where practicable	Construction phase	• Annex 5, EIAO-TM	Implemented
N3	Install movable temporary noise barriers (typical design is wooden framed barrier with a small-cantilevered upper portion of superficial density no less than 7kg/m² on a skid footing with 25mm thick internal sound absorptive lining), and full enclosure, screen the noisy plants including water pump etc.	Minimize the construction noise levels through screening	Contractor	All construction sites	Construction phase	• Annex 5, EIAO-TM	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
N6	Implement an airborne construction noise monitoring under EM&A programme.	Monitor the airborne construction noise levels at the selected representative locations	0 0111111111111111111111111111111111111	Selected noise monitoring stations	Construction phase	• Annex 5, EIAO-TM	Implemented
Water Q	uality (Construction Phase)			,			
W1	General Construction Activities Best Management Practices (BMPs) should be implemented as far as practicable according to The Professional Persons Environmental Consultative Committee (ProPECC) Practice Note (PN) 1/94 "Construction Site Drainage". The details of BMPs are presented as follows: • All effluent discharged from the construction site should comply with the standards stipulated in the DSS-TM;	To reduce water quality impact from construction site runoff and general construction activities	Contractor	All construction sites	Construction	 WPCO ProPECC (PN1/94) EIAO-TM DSS-TM DSD Technical Circular No. 1/2017 	Implemented after observation

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	Discharge surface and road runoff from construction sites including barging point into storm drains via adequately designed sand/silt removal facilities such as sand traps, silt traps, and sedimentation tanks with sufficient retention time. Provide channels or earth bunds or sandbag barriers on-site during construction works to properly direct stormwater to such silt removal facilities. Provide perimeter channels on-site boundaries where necessary to intercept storm runoff from outside the site so that it will not wash across the site. Install catch pits and perimeter channels in advance of site formation works and earthworks;

	immediately after the final surfaces are						
	formed to prevent erosion caused by						
	rainstorms. Install appropriate drainage						
	like intercepting channels where						
	necessary;						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures& Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 If excavation of trenches in wet seasons is necessary, they should be dug and backfilled in short sections as far as practicable to minimize the ingress of rainwater into trenches. Discharge the rainwater pumped out from trenches or foundation excavations into storm drains via silt removal facilities; Recondition and reuse the bentonite wherever practicable to minimise the disposal volume of used bentonite slurries. Provide temporary enclosed storage locations on-site for any unused bentonite that needs to be transported away after the related construction activities are completed. The process of handling and disposing of bentonite slurries should follow the requirements as stipulated in ProPECC PN 1/94; 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation
	 Cover the open stockpiles of construction materials (e.g. aggregates, sand and fill material) on sites with tarpaulin or similar fabric during rainstorms; Cover and temporarily sealed manholes (including newly constructed ones) adequately so as to prevent silt, construction materials, or debris from getting into the drainage system, and to prevent storm runoff from getting into foul sewers. Avoid discharging surface runoff into foul sewers in order not to unduly overload the foul sewerage system; and Clean the construction sites on a regular basis (e.g. remove the rubbish and litter from the construction sites).

W7	 Contractor must register as a chemical waste producer if chemical wastes would be produced from the construction activities; Any chemical waste generated shall be managed in accordance with the Waste Disposal (Chemical Waste) (General) Regulation; The Contractor should develop management procedures for chemicals used and prepare an emergency spillage handling procedure to deal with chemical spillage in case of an accident occurs; Any services and maintenance facilities should be located on hard standings within a bunded area, and sumps and oil interceptors should be provided. 	To minimise water quality impact from accidental spillage of chemicals	Contractor	All construction sites	Construction phase	 WPCO ProPECC (PN1/94) EIAO-TM DSS-TM WDO 	Implemented after observation

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location /	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	Maintenance of vehicles and equipment involving activities with the potential for leakage and spillage should only be undertaken within the areas appropriately equipped to control these discharges; The service and maintenance as well as any chemical storage area would be avoided to position near the watercourse as a safe guard; The Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes published under the Waste Disposal Ordinance shall be followed to deal with chemical wastes; Suitable containers should be used to hold the chemical wastes to avoid leakage or						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location /	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 spillage during storage, handling, and transport; Chemical waste containers should be suitably labelled, to notify and warn the personnel who are handling the wastes, to avoid accidents; Storage area should be selected at a safe location on-site and adequate space should be allocated to the storage area; Sufficient ground investigation and soil testing should be carried out; All charted drill holes should be checked by engineer to ensure proper seal up prior to the TBM passing; and The Contractor should devise a contingency plan for any accidental spillage and heavy rainfall event. 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location /	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
W9	 The following mitigation measures for sewage and other wastewater will be implemented. Standard oil/grit interceptors/chambers should be provided where necessary before discharge to public sewers; A discharge licence for the discharge of commercial and industrial effluent shall be applied; The bleed off water from the freshwater cooling chiller should be recycled for flushing use as far as practical, with any excess bleed off be discharged into the sewerage system; and The practices outlined in ProPECC PN 5/93 for handling, treatment and disposal of effluent should be adopted. 	To minimize the water quality impact from sewage and other wastewater	MTR Corporation	Whole alignment	Operational Phase	 WPCO ProPECC PN 5/93 DSS-TM 	NA

EM&A Log Ref Waste M	Recommended Mitigation Measures Janagement (Construction Phase)	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
WM1	 Good Site Practices The following good site practices are recommended to reduce waste generation during construction: Nomination of an approved personnel, such as a site manager, to be responsible for the implementation of good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site; Training of site personnel in site cleanliness, appropriate waste management procedures and concepts of waste reduction, reuse and recycling; 	throughout the		All construction sites	Construction phase	• WDO • ETWB TCW No. 19/2005	Implemented after observation

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 Provision of sufficient waste disposal points and regular collection for disposal; Appropriate measures to minimize windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers; Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors; Provision of wheel washing facilities at the site exit before the trucks leave the works areas; and The Contractor should prepare a Waste Management Plan (WMP) as part of the Environmental Management Plan (EMP) in accordance with the ETWB TCW No. 19/2005. The WMP should be submitted to 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	the Engineer for approval. Mitigation measures proposed in the EIA Report and the EM&A Manual should be adopted.						
WM2	 Waste Reduction Measures The following recommendations are proposed to achieve reduction of waste: Segregate and store different types of waste in different containers, skip or stockpiles to enhance reuse or recycling of materials and their proper disposal; Proper storage and good site practices to minimize the potential for damage and contamination of construction materials; Plan and stock construction materials carefully to minimize amount of waste generated and avoid unnecessary generation of waste; 	Reduce waste generation	Contractor	All construction sites	Construction phase	• WDO	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 Sort out demolition debris and excavated materials from demolition works to recover reusable/ recyclable portions (i.e. soil, broken concrete, metal etc.); and Provide training to workers on the importance of appropriate waste management procedures, including waste reduction, reuse and recycling. 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
WM3	 Storage, Collection and Transportation of Waste The following recommendation should be implemented to minimise the impacts from storage, collection and transportation of waste: Non-inert C&D materials such as top soil should be handled and stored well to ensure secure containment of the materials; Stockpiling area should be provided with covers and water spraying system to prevent materials from windblown or being washed away; and 	Minimise impact to the environment due to storage, collection and transport of waste		All construction sites	Construction phase	 WDO Land (Miscellaneous Provisions) Ordinance ETWB TCW No. 19/2005 	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 Different locations should be designated to stockpile each material to enhance reuse. Remove waste in timely manner; Employ the trucks with cover or enclosed containers for waste transportation; Obtain relevant waste disposal permits from the appropriate authorities; Disposal of waste should be done at licensed waste disposal facilities; All dump trucks engaged on site for delivery of inert C&D material from the site to PFRFs should be equipped with GPS or equivalent system for tracking and monitoring of their travel routings and parking locations by the Contractor. The data collected by GPS or equivalent system should be recorded properly for checking and analysis by ET and IEC; 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 A Construction and Demolition Material Management Plan (C&DMMP) should be prepared in accordance with Section 4.1.3 "Construction and Demolition Materials" of the Project Administration Handbook for Civil Engineering Works and will be submitted together with the EIA Report to Public Fill Committee (PFC) for approval; Carry out on-site sorting for C&D materials; Make provisions in the Contract documents to allow and promote the use of recycled aggregates where appropriate; and Implement a trip-ticket system for each works contract in accordance with DEVB TCW No. 06/2010. 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation
WM4	 On-site Sorting of C&D Materials Storage areas should be provided in the site for temporary storage of inert C&D materials during construction phase. All C&D materials arising from the construction would be sorted on-site to recover the inert C&D materials and reusable and recyclable materials prior to disposal off-site as far as practicable. Non-inert portion of C&D materials should be reused whenever possible and be disposal of at landfills as a last resort. The Contractor should devise a system to work for on-site sorting of C&D materials and promptly 		Contractor	All construction sites	Construction phase	ETWB TCW No. 19/2005 Land (Miscellaneous Provisions) Ordinance	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	remove all sorted and processed material arising from the construction activities to minimize temporary stockpiling on-site. The system should include the identification of the source of generation, estimated quantity, arrangement for onsite sorting and/or collection, temporary storage areas, and frequency of collection by recycling contractors or frequency of removal off-site.						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation
WM5	 Reuse of C&D Materials Reuse suitable inert C&D materials on-site as far as practicable; Reuse suitable excavated rock by reworking at approved quarries (e.g. crushed as aggregates); Sorting of demolition debris and excavated materials from demolition works to recover reusable/ recyclable portions (e.g. soil, broken concrete, metal); and Protect recyclable material to keep it in usable condition. 	materials handling	Contractor	All construction sites	Construction phase	 WDO ETWB TCW No. 19/2005 Land (Miscellaneous Provisions) Ordinance 	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation
WM6	 Specification of Inert C&D Materials to be Delivered Offsite In case there are surplus inert C&D materials generated in the Project and are required to delivered to the Public Fill Reception Facilities (PFRFs), the inert C&D materials should fulfil the following requirements: Reclaimed asphalt pavement will not be mixed with other materials when delivered to the public fill reception facilities; Moisture content of inert C&D materials will be lowered to 25% max. when delivered to the public fill reception facilities; Inert C&D materials delivered to the public fill reception facilities should be a size less than 250mm; and 	generation	Contractor	All construction sites	Construction phase	ETWB TCW No. 19/2005 Land (Miscellaneous Provisions) Ordinance	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation
	Inert construction waste shall not be in liquid form such that it can be contained and delivered by dump truck as far as possible. Inert C&D materials in liquid form shall be solidified before delivering to the public fill reception facilities.						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation
WM7	 Use of Standard Formwork and Planning of Construction Materials purchasing Standard formwork should also be used as far as practicable to minimise the arising of non-inert C&D materials; Use of more durable formwork (e.g. metal hoarding) or plastic facing should be encouraged in order to enhance the possibility of recycling; and Purchasing of construction materials should be carefully planned in order to avoid over ordering and wastage. 	Reduce waste generation	Contractor	All construction sites	Construction phase	• N.A.	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
WM8	 Excavated land-based marine sediment should be reused as far as possible within the Project Site before considering disposal. Marine disposal option for the land-based marine sediment should only be considered as the last resort upon exhaustion of reuse options. All construction plant and equipment shall be designed and maintained to minimise the risk of sediments being released into the water column or deposited in the locations other than designated location. All vessels should be sized so that adequate clearance is maintained between vessels and the seabed in all tide conditions, to minimise that undue 	Handling excavated sediment	Contractor	All construction sites where applicable	Construction phase	 ETWB TCW No. 34/2002 DASO 	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	turbidity is not generated by turbulence from vessel movement or propeller wash. • Adequate freeboard shall be maintained on barges to ensure that decks are not washed by wave action. • The Contractor shall monitor all vessels transporting the excavated sediment. The Contractor shall keep and produce logs and other records to demonstrate compliance and that journeys are consistent with designated locations and copies of such records shall be submitted to the Engineers. • The Contractor shall comply with the conditions in the dumping permit issued under the Dumping at Sea Ordinance (DASO).						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 The Contractor shall comply with the conditions in the dumping permit issued under the Dumping at Sea Ordinance (DASO). All bottom dumping vessels (hopper barges) shall be fitted with tight fittings seals to their bottom openings to prevent leakage of material. The excavated sediment shall be placed into the disposal pit by bottom dumping. Discharge shall be undertaken rapidly and the hoppers shall be closed immediately. Sediment adhering to the sides of the hopper shall not be washed out of the hopper and the hopper shall remain closed until the barge returns to the disposal site. 						

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
WM9	If mixing of land-based marine sediment with cement is to be used for backfilling on-site, the following mitigation measures should be followed. • The loading, unloading, handling, transfer or storage of bulk cement should be carried out in an enclosed system as far as practicable; • Mixing process and other associated material handling activities should be properly scheduled to minimise potential noise impact and dust emission; and • The mixing facilities should be sited as far apart as practicable from the nearby NSRs and to be sited under covers to minimise dust nuisance to the nearby receivers.	Handling excavated sediment	Contractor	All construction sites where applicable	Construction phase	 ETWB TCW No. 34/2002 DASO 	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
WM10	Reduce the generation quantities or select a chemical type of less impact on environment, health and safety as far as possible; and If chemical wastes are produced at the construction site, the Contractors should register with EPD as chemical waste producer. Chemical wastes should be stored in appropriate containers and collected by a licensed chemical waste collector. Chemical wastes (e.g. spent lubricant oil) should be recycled at an appropriate facility as far as possible, while the chemical waste that cannot be recycled should be disposed of at either the Chemical Waste Treatment Centre, or another licensed facility, in accordance	Control the chemical waste and ensure proper storage, handling and disposal	Contractor	All construction sites	Construction phase	 Waste Disposal (Chemical Waste) (General) Regulation Code of Practice on the Packaging, Labelling and Storage of Chemical Waste 	

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	with the Waste Disposal (Chemical Waste) (General) Regulation.						
WM11	 General Refuse General refuse should be stored in enclosed bins separately from construction and chemical wastes. Recycling bins should also be placed to encourage recycling; Preferably enclosed and covered areas should be provided for general refuse collection and routine cleaning for these areas should also be implemented to keep areas clean; A reputable waste collector should be employed to remove general refuse on a daily basis; 	Minimise production of the general refuse and avoid odour, pest and litter impacts	Contractor	All construction sites	Construction phase	• WDO	Implemented

EM&A Log Ref	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to address	Implementation Agent	Location / Timing	Implementation Phase	Requirements and / or standards to be achieved	Implementation status
	 Arrangements should be made with the recycling companies to collect the recycle waste as required; The Contractor should implement an education programme for workers relating to avoiding, reducing, reusing and recycling general waste; and Participation in a local collection scheme should be considered by the Contractor to facilitate waste reduction.

5. Calibration Results Applied

The results apply to the particular unit-under-test only. All calibration points are within manufacture's specification as IEC 61672 Class 1.

Uncertainties of Applied Value:

94 dB	31.5 Hz	± 0.10
	63 Hz	± 0.10
	125 Hz	± 0.10
	250 Hz	± 0.05
	500 Hz	± 0.10
	1000 Hz	± 0.05
	2000 Hz	± 0.05
	4000 Hz	± 0.05
	8000 Hz	± 0.10
104 dB	1000 Hz	± 0.05
114 dB	1000 Hz	± 0.05

The uncertainties are evaluated for a 95% confidence level.

Note:

The values given in this certification only related to the values measured at the time of the calibration and any uncertainties quoted will not allow for the equipment long-term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the calibration. (A+A)*L shall not be liable for any loss or damage resulting from the use of the equipment.

Certificate No.: APJ22-124-CC001

Manufacturer Calibration Certificate

The following instrument has been tested and calibrated to the manufacturer specifications. The calibration is traceable in accordance with ISO/IEC 17025 covering all instrument functions.

· Calibration Equipment Used:

Agilent Multimeter, Typ 34401A, Serial No. MY 5300 4607
 Last calibration: 15.09.2022, Next calibration: 15.09.2023
 Calibrated by ELCAL to the national standards maintained at Swiss Federal Office of Metrology. SCS 0002

- FX100 Audio Analyzer, Serial No. 10408

Last Calibration: 11.10.2022, Next Calibration: 11.10.2023

Manufacturer calibration based on Agilent 34410, Serial No. MY47014254,

Last Calibration: 26.05.2022, Next Calibration: 26.05.2023 which is calibrated by ELCAL to national standards maintained

at Swiss Federal Office of Metrology. SCS 002

 $^{^{1}}$ The specified tolerance +/-0.1 dB @ 1V = +/- 1.1%

² The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor k=2, providing a level of confidence of approximately 95%. The uncertainty evaluation has been carried out in accordance with the regulations of the GUM.

5. Calibration Results Applied

The results apply to the particular unit-under-test only. All calibration points are within manufacture's specification as IEC 61672 Class 1.

Uncertainties of Applied Value:

94 dB	31.5 Hz	± 0.10
	63 Hz	± 0.10
	125 Hz	± 0.05
	250 Hz	± 0.05
	500 Hz	± 0.05
	1000 Hz	± 0.05
	2000 Hz	± 0.05
	4000 Hz	± 0.05
	8000 Hz	± 0.10
104 dB	1000 Hz	± 0.05
114 dB	1000 Hz	± 0.05

The uncertainties are evaluated for a 95% confidence level.

Note

The values given in this certification only related to the values measured at the time of the calibration and any uncertainties quoted will not allow for the equipment long-term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the calibration. (A+A)*L shall not be liable for any loss or damage resulting from the use of the equipment.

Certificate No.: APJ22-164-CC001

Event/Action Plan for Construction Dust Monitoring

Event	ET	IEC	PM	Contractor
Action level exceedance for one sample	 Repeat measurement to confirm finding; If exceedance is confirmed, inform Contractor, IEC and PM; Identify source, investigate the causes of exceedance and propose remedial measures; Discuss with the Contractor, IEC and PM on the remedial measures required; Increase monitoring frequency to daily. 	 Check monitoring data submitted by ET; Check Contractor's working method; Discuss with ET, PM and Contractor on possible remedial measures; Review and advise the ET and PM on the effectiveness of the proposed remedial measures. 	Confirm receipt of notification of exceedance in writing.	Identify source(s), investigate the causes of exceedance and propose remedial measures; Implement remedial measures; Amend working methods agreed with the PM as appropriate.
Action level exceedance for two or more consecutive samples	 Repeat measurement to confirm finding; If exceedance is confirmed, inform Contractor, IEC and PM; Identify source, investigate the causes of exceedance and propose remedial measures; Advise the Contractor and PM on the effectiveness of the proposed remedial measures; Increase monitoring frequency to daily; Discuss with IEC and Contractor on remedial actions required; If exceedance continues, arrange meeting with IEC and PM to discuss the remedial measures to be taken; If exceedance stops, cease additional monitoring. 	 Check monitoring data submitted by ET; Check Contractor's working method; Discuss with ET, PM and Contractor on possible remedial measures; Review and advise the ET and PM on the effectiveness of the proposed remedial measures. 	Confirm receipt of notification of exceedance in writing; In consultation with the ET and IEC agree with the Contractor on the remedial measures to be implemented; Supervise implementation of remedial measures.	2. Submit proposals for remedial measures to the PM, ET and IEC
